Cloud CDN and Media CDN

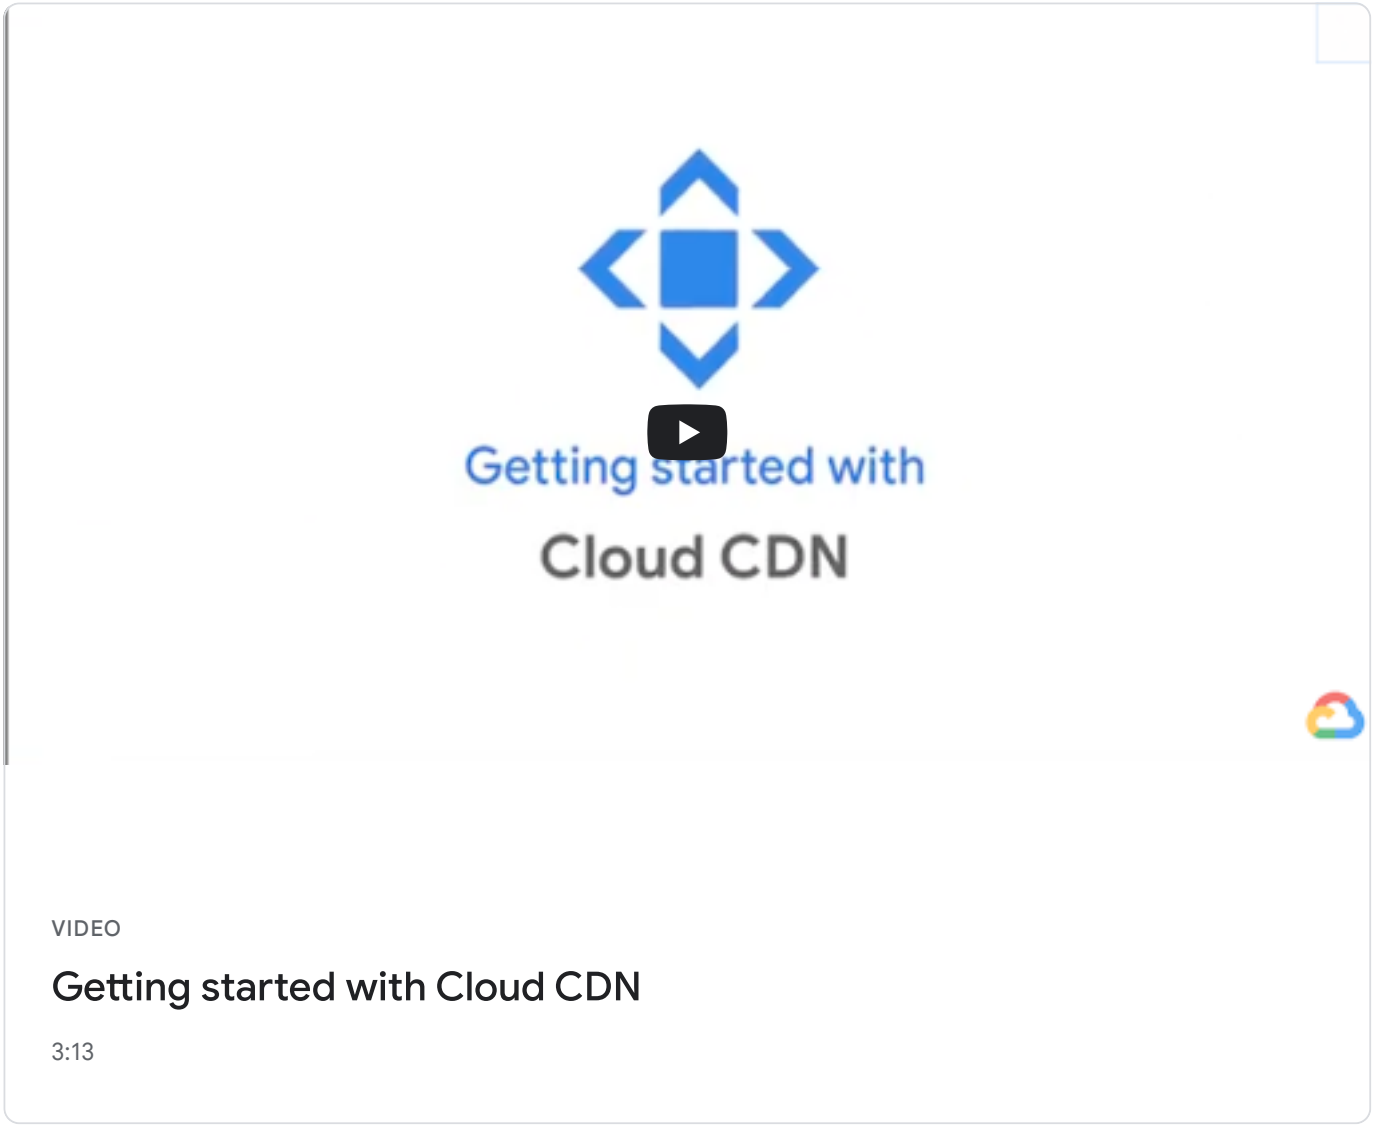
Cloud CDN accelerates web applications using Google's global edge network.

Media CDN uses YouTube's infrastructure to bring video streams (VoD and live) and large file downloads closer to users for fast and reliable delivery.



VIDEO

Getting started with Cloud CDN

3:13

Universal support for any origin and back end

Pull content from any HTTP-capable origin, including Compute Engine, Cloud Storage, and Google Kubernetes Engine back ends and origins outside of Google Cloud, such as storage buckets in other clouds.

VIDEO

Introducing Media CDN

1:41

Security in-depth

Cloud CDN and Media CDN integrate with Cloud Armor. Protect content at the edge with Cloud Armor that has protected companies from some of the largest DDoS attacks.

Fine-grain cache controls

Configure caching behavior by origin that allows you to have fine-grained control over cache keys, TTLs, and other caching features based on the content type being served.

Media CDN origin offload for a higher cache hit rate

Route matching and origin selection

Cloud CDN and Media CDN provide advanced HTTP routing capabilities that allow you to map traffic to specific edge configurations and origins at a fine-grained level.

HOW IT WORKS

Cloud CDN and Media CDN accelerate web and video content delivery by using Google's global edge network to bring content as close to your users as possible. Latency, cost, and load on your backend servers is reduced, making it easy to scale to millions of users.
