Subject: Re: Resonant v. Meta - Meta's identification of claim terms for construction

This message needs your attention

- This is their first mail to some recipients.

Winston & Strawn

Matt and Meta team,

Resonant identifies the following proposed constructions for the terms identified by Meta:

Claim	Term	Resonant Proposed Construction
2	"a driving component that drives the moveable component in each of two opposite directions within the housing"	Plain and ordinary meaning
2	"a control component that controls supply of power from the power supply to the driving component to cause the moveable component to oscillate at a frequency and an amplitude specified by user input received from the user-input features, wherein the control component drives simultaneous oscillation of the moveable component at two or more frequencies to generate complex vibration modes."	Plain and ordinary meaning

My apologies for the delay in getting these to you; this email was inadvertently stuck in my outbox.

We would be happy to meet and confer regarding potential compromises.

Thank you,

Christian W. Conkle

Matt,

Resonant does not identify any terms for construction.

Regards,
Kris

Counsel,

Below are the terms Meta identifies for construction pursuant to the Court's scheduling order. Meta's identification is based upon its current knowledge, its investigations to date, and its current understanding of Resonant's Preliminary Infringement Contentions and corresponding implied claim constructions. Accordingly, Meta reserves the right to modify this list to add, delete, or alter the identified terms and phrases based on, without limitation, Resonant's proposed constructions, any changes to the infringement contentions, or for any other appropriate reason. Meta further reserves the right to seek construction of any claim terms and phrases proposed by Resonant. Meta further reserves the right to separately request construction of (i) portions of any identified term, (ii) the larger context surrounding any identified term, or (iii) one or more of Meta's identified claim terms together as a single term.

Claim	Term
2	"a driving component that drives the moveable component in each of two opposite directions with the housing"
2	"a control component that controls supply of power from the power supply to the driving component cause the moveable component to oscillate at a frequency and an amplitude specified by user input received from the user-input features, wherein the control component drives simultaneous oscillation of the moveable component at two more frequencies to generate complex vibration modes."

Best,
Matt
