"The partnership between PANTA Systems and Oracle is exciting to us and will enable us to utilize both in our offering."

Pat Sifferman

Government alliance
service lead,
Accenture

Implementing a high performance and affordable data warehouse no longer means choosing proprietary hardware and an unfamiliar database engine. PANTA's family of data warehouse appliances has an industry-standard, x64-based, grid architecture and utilizes Oracle, the industry's most widely used enterprise database engine, to deliver best-in-class performance and scalability. No longer is it necessary to acquire new expertise and convert operational data into a specialized data warehouse in order to obtain the rapid response to queries that businesses require in a fast-paced, competitive environment.

The *PANTA Data Warehouse Appliance with Oracle* which provides the ability to utilize the full breadth of data warehouse applications, ranging from star-schema data marts to large-scale enterprise data warehouses to operational data stores. It also means that all of Oracle's Business Intelligence applications and its familiar, enterprise-ready capabilities in the areas of security, availability, backup & recovery, and data replication are available without any restrictions.

This enables Business Intelligence and Data Warehousing staff to focus their efforts on the data analysis and mining tasks rather than the management of the database and the underlying system. It doesn't matter what techniques are required to sift through the vast quantity of data; be it brute force IO, complicated rollups, aggregations or statistical functions, the *PANTA Data Warehouse Appliance with Oracle* has the flexibility to meet all these challenges. It provides a powerful data mining solution with new levels of functionality, business value and processing power for the company's business intelligence community.

Unlike other data warehouse appliances, the *PANTA Data Warehouse Appliance with Oracle* delivers the best performance for a wide range of queries, from simple to complex and from batch to ad-hoc. We have proven this by establishing world record results for the **TPC/H benchmark** and in customer-driven, Proof of Concept tests versus other data warehouse appliances. The PANTA Data Warehouse Appliance with Oracle is the only Data Warehouse Appliance with published benchmark results to prove its price/performance and versatility.
