What is claimed is:

1. A method, comprising:

determining a location inside a vehicle associated with a user;

determining at least one vehicle control associated with the location inside the vehicle;

referring to a user profile memory associated with the user for vehicle control settings; and

determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle.

2. The method of claim 1, further comprising:

providing an adjustment output to a vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle.

3. The method of claim 2, wherein prior to providing the adjustment output, the method further comprises:

determining a presence of the user inside the vehicle, wherein the adjustment output is provided based at least partially on determining the user is present in the location of the vehicle.

4. The method of claim 1, wherein prior to determining the location inside the vehicle associated with the user the method further comprises:

storing, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user;

collecting vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle; and

storing the vehicle control setting data in the user profile memory.

5. The method of claim 1, wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device.

6. The method of claim 5, wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features.

7. The method of claim 3, wherein determining the presence of the user inside the vehicle further comprises:

detecting a person via at least one image sensor associated with the vehicle;

identifying facial features associated with the person detected via the at least one image sensor; and

determining whether the identified facial features associated with the person match user characteristics stored in a memory.

8. The method of claim 3, wherein determining the presence of the user inside the vehicle further comprises:

detecting a device associated with the user in an area of the vehicle.

9. The method of claim 2, further comprising:

determining that the user made a change to the adjusted at least one vehicle control; and

storing the change made to the adjusted at least one vehicle control in the user profile memory.

10. The method of claim 2, wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

11. A non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform a method comprising:

determining a location inside a vehicle associated with a user;

determining at least one vehicle control associated with the location inside the vehicle;

referring to a user profile memory associated with the user for vehicle control settings; and

determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle.

12. The non-transitory computer readable medium of claim 11, wherein the method further comprises:

providing an adjustment output to a vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle.

13. The non-transitory computer readable medium of claim 12, wherein prior to providing the adjustment output, the method further comprises:

determining a presence of the user inside the vehicle, wherein the adjustment output is provided based at least partially on determining the user is present in the location of the vehicle.

14. The non-transitory computer readable medium of claim 11, wherein prior to determining the location inside the vehicle associated with the user the method further comprises:

storing, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user;

collecting vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle; and

storing the vehicle control setting data in the user profile memory.

15. The non-transitory computer readable medium of claim 11, wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device, and wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features.

16. The non-transitory computer readable medium of claim 13, wherein determining the presence of the user inside the vehicle further comprises:

detecting a person via at least one image sensor associated with the vehicle;

identifying facial features associated with the person detected via the at least one image sensor; and

determining whether the identified facial features associated with the person match user characteristics stored in a memory.

17. The non-transitory computer readable medium of claim 12, wherein the method further comprises:

determining that the user made a change to the adjusted at least one vehicle control; and

storing the change made to the adjusted at least one vehicle control in the user profile memory.

18. The non-transitory computer readable medium of claim 12, wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

19. A vehicle control system, comprising:

a profile identification module contained in a memory and executed by a processor of the vehicle control system, the profile identification module configured to determine a location inside a vehicle associated with a user, determine at least one vehicle control associated with the location inside the vehicle, refer to a user profile memory associated with the user for vehicle control settings, and determine, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle.

20. The system of claim 19, wherein the profile identification module is further configured to provide an adjustment output to the vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle.

ABSTRACT

Methods and systems for a complete vehicle ecosystem are provided. Specifically, systems that when taken alone, or together, provide an individual or group of individuals with an intuitive and comfortable vehicular environment. The present disclosure includes a system that provides various outputs based on a user profile and determined context. An output provided by the present disclosure can change a configuration of a vehicle, device, building, and/or a system associated with the user profile. The configurations can include comfort and interface settings that can be adjusted based on the user profile information. Further, the user profiles can track health data related to the user and make adjustments to the configuration to assist the health of the user.

Attorney Docket Number	6583-561	Small Entity Status Claimed	☐
Application Type	Nonprovisional		
Subject Matter	Utility		
Total Number of Drawing Sheets (if any)	41	Suggested Figure for Publication (if any)	

Filing By Reference :

Application Data Sheet 37 CFR 1.76	Attorney Docket Number	6583-561
	Application Number	
Title of Invention	CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA	

Only complete this section when filing an application by reference under 35 U.S.C. 111(c) and 37 CFR 1.57(a). Do not complete this section if application papers including a specification and any drawings are being filed. Any domestic benefit or foreign priority information must be provided in the appropriate section(s) below (i.e., "Domestic Benefit/National Stage Information" and "Foreign Priority Information").

For the purposes of a filing date under 37 CFR 1.53(b), the description and any drawings of the present application are replaced by this reference to the previously filed application, subject to conditions and requirements of 37 CFR 1.57(a).

Application number of the previously filed application	Filing date (YYYY-MM-DD)	Intellectual Property Authority or Country i

Publication Information:

☐ Request Early Publication (Fee required at time of Request 37 CFR 1.219)

☐ **Request Not to Publish.** I hereby request that the attached application not be published under 35 U.S.C. 122(b) and certify that the invention disclosed in the attached application **has not and will not** be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication at eighteen months after filing.

Representative Information:

Representative information should be provided for all practitioners having a power of attorney in the application. Providing this information in the Application Data Sheet does not constitute a power of attorney in the application (see 37 CFR 1.32).
Either enter Customer Number or complete the Representative Name section below. If both sections are completed the customer Number will be used for the Representative Information during processing.

Please Select One:	◉ Customer Number	○ US Patent Practitioner	○ Limited Recognition (37 CFR 11.9)
Customer Number	111285		

Domestic Benefit/National Stage Information:

This section allows for the applicant to either claim benefit under 35 U.S.C. 119(e), 120, 121, or 365(c) or indicate National Stage entry from a PCT application. Providing this information in the application data sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and 37 CFR 1.78.
When referring to the current application, please leave the application number blank.

Foreign Priority Information:

This section allows for the applicant to claim priority to a foreign application. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55(d). When priority is claimed to a foreign application that is eligible for retrieval under the priority document exchange program (PDX) [i]the information will be used by the Office to automatically attempt retrieval pursuant to 37 CFR 1.55(h)(1) and (2). Under the PDX program, applicant bears the ultimate responsibility for ensuring that a copy of the foreign application is received by the Office from the participating foreign intellectual property office, or a certified copy of the foreign priority application is filed, within the time period specified in 37 CFR 1.55(g)(1).

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications

☐ This application (1) claims priority to or the benefit of an application filed before March 16, 2013 and (2) also contains, or contained at any time, a claim to a claimed invention that has an effective filing date on or after March 16, 2013.
NOTE: By providing this statement under 37 CFR 1.55 or 1.78, this application, with a filing date on or after March 16, 2013, will be examined under the first inventor to file provisions of the AIA.

Authorization to Permit Access:

☒ Authorization to Permit Access to the Instant Application by the Participating Offices

If checked, the undersigned hereby grants the USPTO authority to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the World Intellectual Property Office (WIPO), and any other intellectual property offices in which a foreign application claiming priority to the instant patent application is filed access to the instant patent application. See 37 CFR 1.14(c) and (h). This box should not be checked if the applicant does not wish the EPO, JPO, KIPO, WIPO, or other intellectual property office in which a foreign application claiming priority to the instant patent application is filed to have access to the instant patent application.

In accordance with 37 CFR 1.14(h)(3), access will be provided to a copy of the instant patent application with respect to: 1) the instant patent application-as-filed; 2) any foreign application to which the instant patent application claims priority under 35 U.S.C. 119(a)-(d) if a copy of the foreign application that satisfies the certified copy requirement of 37 CFR 1.55 has been filed in the instant patent application; and 3) any U.S. application-as-filed from which benefit is sought in the instant patent application.

In accordance with 37 CFR 1.14(c), access may be provided to information concerning the date of filing this Authorization.

Applicant Information:

Providing assignment information in this section does not substitute for compliance with any requirement of part 3 of Title 37 of CFR to have an assignment recorded by the Office.

PTO/AIA/14 (12-13)

Applicant 1 Remove

If the applicant is the inventor (or the remaining joint inventor or inventors under 37 CFR 1.45), this section should not be completed. The information to be provided in this section is the name and address of the legal representative who is the applicant under 37 CFR 1.43; or the name and address of the assignee, person to whom the inventor is under an obligation to assign the invention, or person who otherwise shows sufficient proprietary interest in the matter who is the applicant under 37 CFR 1.46. If the applicant is an applicant under 37 CFR 1.46 (assignee, person to whom the inventor is obligated to assign, or person who otherwise shows sufficient proprietary interest) together with one or more joint inventors, then the joint inventor or inventors who are also the applicant should be identified in this section.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.

2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.

3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.

4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).

5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.

6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).

7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.

8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.

9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

CROSS REFERENCE TO RELATED APPLICATIONS

[0001] The present application claims the benefits of and priority, under 35 U.S.C. § 119(e), to U.S. Provisional Application Serial Nos. 61/811,981, filed on April 15, 2013, entitled "Functional Specification for a Next Generation Automobile"; 61/865,954, filed on August 14, 2013, entitled "Gesture Control of Vehicle Features"; 61/870,698, filed on August 27, 2013, entitled "Gesture Control and User Profiles Associated with Vehicle Features"; 61/891,217, filed on October 15, 2013, entitled "Gesture Control and User Profiles Associated with Vehicle Features"; 61/904,205, filed on November 14, 2013, entitled "Gesture Control and User Profiles Associated with Vehicle Features"; 61/924,572, filed on January 7, 2014, entitled "Gesture Control and User Profiles Associated with Vehicle Features"; and 61/926,749, filed on January 13, 2014, entitled "Method and System for Providing Infotainment in a Vehicle." The entire disclosures of the applications listed above are hereby incorporated by reference, in their entirety, for all that they teach and for all purposes.

[0002] This application is also related to U.S. Patent Application Nos. 13/420,236, filed on March 14, 2012, entitled, "Configurable Vehicle Console"; 13/420,240, filed on March 14, 2012, entitled "Removable, Configurable Vehicle Console"; 13/462,593, filed on May 2, 2012, entitled "Configurable Dash Display"; 13/462,596, filed on May 2, 2012, entitled "Configurable Heads-Up Dash Display"; 13/679,459, filed on November 16, 2012, entitled "Vehicle Comprising Multi-Operating System" (Attorney Docket No. 6583-228); 13/679,234, filed on November 16, 2012, entitled "Gesture Recognition for On-Board Display" (Attorney Docket No. 6583-229); 13/679,412, filed on November 16, 2012, entitled "Vehicle Application Store for Console" (Attorney Docket No. 6583-230); 13/679,857, filed on November 16, 2012, entitled "Sharing Applications/Media Between Car and Phone (Hydroid)" (Attorney Docket No. 6583-231); 13/679,878, filed on November 16, 2012, entitled "In-Cloud Connection for Car Multimedia" (Attorney Docket No. 6583-232); 13/679,875, filed on November 16, 2012, entitled "Music Streaming" (Attorney Docket No. 6583-233); 13/679,676, filed on November 16, 2012, entitled "Control of Device Features Based on Vehicle State" (Attorney Docket No. 6583-234);

13/678,673, filed on November 16, 2012, entitled "Insurance Tracking" (Attorney Docket No. 6583-235); 13/678,691, filed on November 16, 2012, entitled "Law Breaking/Behavior Sensor" (Attorney Docket No. 6583-236); 13/678,699, filed on November 16, 2012, entitled "Etiquette Suggestion" (Attorney Docket No. 6583-237); 13/678,710, filed on November 16, 2012, entitled "Parking Space Finder Based on Parking Meter Data" (Attorney Docket No. 6583-238); 13/678,722, filed on November 16, 2012, entitled "Parking Meter Expired Alert" (Attorney Docket No. 6583-239); 13/678,726, filed on November 16, 2012, entitled "Object Sensing (Pedestrian Avoidance/Accident Avoidance)" (Attorney Docket No. 6583-240); 13/678,735, filed on November 16, 2012, entitled "Proximity Warning Relative to Other Cars" (Attorney Docket No. 6583-241); 13/678,745, filed on November 16, 2012, entitled "Street Side Sensors" (Attorney Docket No. 6583-242); 13/678,753, filed on November 16, 2012, entitled "Car Location" (Attorney Docket No. 6583-243); 13/679,441, filed on November 16, 2012, entitled "Universal Bus in the Car" (Attorney Docket No. 6583-244); 13/679,864, filed on November 16, 2012, entitled "Mobile Hot Spot/Router/Application Share Site or Network" (Attorney Docket No. 6583-245); 13/679,815, filed on November 16, 2012, entitled "Universal Console Chassis for the Car" (Attorney Docket No. 6583-246); 13/679,476, filed on November 16, 2012, entitled "Vehicle Middleware" (Attorney Docket No. 6583-247); 13/679,306, filed on November 16, 2012, entitled "Method and System for Vehicle Data Collection Regarding Traffic" (Attorney Docket No. 6583-248); 13/679,369, filed on November 16, 2012, entitled "Method and System for Vehicle Data Collection" (Attorney Docket No. 6583-249); 13/679,680, filed on November 16, 2012, entitled "Communications Based on Vehicle Diagnostics and Indications" (Attorney Docket No. 6583-250); 13/679,443, filed on November 16, 2012, entitled "Method and System for Maintaining and Reporting Vehicle Occupant Information" (Attorney Docket No. 6583-251); 13/678,762, filed on November 16, 2012, entitled "Behavioral Tracking and Vehicle Applications" (Attorney Docket No. 6583-252); 13/679,292, filed November 16, 2012, entitled "Branding of Electrically Propelled Vehicles Via the Generation of Specific Operating Output" (Attorney Docket No. 6583-258); 13/679,400, filed November 16, 2012, entitled "Vehicle Climate Control" (Attorney Docket No. 6583-313); 13/840,240, filed on March 15, 2013, entitled "Improvements to Controller Area Network Bus" (Attorney Docket No. 6583-314); 13/678,773, filed on November 16, 2012, entitled "Location Information Exchange Between Vehicle and Device" (Attorney Docket No. 6583-315); 13/679,887, filed on November 16, 2012, entitled "In Car Communication

Between Devices" (Attorney Docket No. 6583-316); 13/679,842, filed on November 16, 2012, entitled "Configurable Hardware Unit for Car Systems" (Attorney Docket No. 6583-317); 13/679,204, filed on November 16, 2012, entitled "Feature Recognition for Configuring a Vehicle Console and Associated Devices" (Attorney Docket No. 6583-318); 13/679,350, filed on November 16, 2012, entitled "Configurable Vehicle Console" (Attorney Docket No. 6583-412); 13/679,358, filed on November 16, 2012, entitled "Configurable Dash Display" (Attorney Docket No. 6583-413); 13/679,363, filed on November 16, 2012, entitled "Configurable Heads-Up Dash Display" (Attorney Docket No. 6583-414); and 13/679,368, filed on November 16, 2012, entitled "Removable, Configurable Vehicle Console" (Attorney Docket No. 6583-415). The entire disclosures of the applications listed above are hereby incorporated by reference, in their entirety, for all that they teach and for all purposes.

BACKGROUND

[0003] Whether using private, commercial, or public transport, the movement of people and/or cargo has become a major industry. In today's interconnected world, daily travel is essential to engaging in commerce. Commuting to and from work can account for a significant portion of a traveler's day. As a result, vehicle manufacturers have begun to focus on making this commute, and other journeys, more enjoyable.

[0004] Currently, vehicle manufacturers attempt to entice travelers to use a specific conveyance based on any number of features. Most of these features focus on vehicle safety or efficiency. From the addition of safety-restraints, air-bags, and warning systems to more efficient engines, motors, and designs, the vehicle industry has worked to appease the supposed needs of the traveler. Recently, however, vehicle manufactures have shifted their focus to user and passenger comfort as a primary concern. Making an individual more comfortable while traveling instills confidence and pleasure in using a given vehicle, increasing an individual's preference for a given manufacturer and/or vehicle type.

[0005] One way to instill comfort in a vehicle is to create an environment within the vehicle similar to that of an individual's home. Integrating features in a vehicle that are associated with comfort found in an individual's home can ease a traveler's transition from home to vehicle. Several manufacturers have added comfort features in vehicles such as the following: leather seats, adaptive and/or personal climate control systems, music and media players, ergonomic controls, and, in some cases, Internet connectivity. However,

because these manufacturers have added features to a conveyance, they have built comfort around a vehicle and failed to build a vehicle around comfort.

SUMMARY

[0006] There is a need for a vehicle ecosystem, which can integrate both physical and mental comforts, while seamlessly communicating with current electronic devices to result in a totally intuitive and immersive user experience. These and other needs are addressed by the various aspects, embodiments, and/or configurations of the present disclosure. Also, while the disclosure is presented in terms of exemplary and optional embodiments, it should be appreciated that individual aspects of the disclosure can be separately claimed.

[0007] Embodiments include a method, comprising: determining a presence of a user inside a vehicle; determining an identity of the user; receiving input provided by the user, the input having a context associated therewith; and retrieving, based at least partially on the input provided by the user, a virtual personality for presentation to at least one device associated with the vehicle. Aspects of the above method include wherein determining the presence of the user inside the vehicle further comprises: detecting a person via at least one image sensor associated with the vehicle. Aspects of the above method include wherein determining the identity of the user further comprises: identifying facial features associated with the person detected via the at least one image sensor; and determining whether the identified facial features associated with the person match user characteristics stored in a memory. Aspects of the above method include wherein the identified facial features associated with the person do not match the user characteristics stored in the memory, and wherein determining the identity of the user further comprises: prompting the user for identification information; receiving identification information from the user; and storing the identification information received from the user in the memory. Aspects of the above method include wherein the identified facial features associated with the person match the user characteristics stored in the memory, and wherein the virtual personality is retrieved from a user profile associated with the user identified. Aspects of the above method include wherein receiving the input provided by the user further comprises: determining the context of the input, wherein the context corresponds to an emotional state of the user. Aspects of the above method include wherein retrieving the virtual personality for presentation to at least one device further comprises: determining, based at least partially on the context of the input, a content of the virtual personality to suit the emotional state of the user. Aspects of the above method further comprise

comparing the determined content of the virtual personality with emotional information in a user profile virtual personality; and generating, when the determined content of the virtual personality differs from the emotional information in the user profile virtual personality, an adjusted user profile virtual personality for presentation, wherein the adjusted user profile includes the content to suit the emotional state of the user. Aspects of the above method further comprise presenting the virtual personality having the content to suit the emotional state of the user, wherein the content of the virtual personality includes an opposite emotional state to the emotional state of the user. Aspects of the above method include wherein the virtual personality includes at least one of an avatar, a voice output, a visual output, a tone, and a volume intensity.

[0008] Embodiments include a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform operations comprising the above methods. Embodiments include a device, means, and/or system configured to perform the above methods.

[0009] Embodiments include a vehicle control system, comprising a personality module contained in a memory and executed by a processor of the vehicle control system, the personality module configured to determine a presence of a user inside a vehicle; determine an identity of the user, receive input provided by the user, the input having a context associated therewith, and retrieve, based at least partially on the input provided by the user, a virtual personality for presentation to at least one device associated with the vehicle. Aspects of the above system include wherein receiving the input provided by the user further comprises determining the context of the input, wherein the context corresponds to an emotional state of the user, and wherein retrieving the virtual personality for presentation to at least one device further comprises determining, based at least partially on the context of the input, a content of the virtual personality to suit the emotional state of the user.

[0010] Embodiments include a method, comprising: referring to a user profile memory associated with a user for vehicle setting information; detecting an identification of at least one area of a building associated with the user; determining that the at least one area of the building includes a configurable comfort setting; and determining, based at least partially on the identification of the at least one area of the building and the vehicle setting information, to adjust the configurable comfort setting of the at least one area of the building. Aspects of the above method further comprise providing an adjustment output to a building comfort control system, wherein the building comfort control system is adapted

to control the configurable comfort setting of the at least one area of the building. Aspects of the above method include wherein prior to providing the adjustment output, the method further comprises: determining a presence of the user inside the at least one area of the building, wherein the adjustment output is provided based at least partially on determining the user is present is inside the at least one are of the building. Aspects of the above method include wherein prior to providing the adjustment output, the method further comprises: determining an expected time of arrival corresponding to an expected time the user is to be inside the at least one area of the building, wherein the expected time of arrival is based on one or more of user location data, historical data, and stored preferences, and wherein the adjustment output is provided based at least partially on the expected time of arrival such that the adjustment output is provided prior to or at the expected time of arrival. Aspects of the above method further comprise determining that the user made a change to the adjusted configurable comfort setting; and storing the change made to the adjusted configurable comfort setting in the user profile memory. Aspects of the above method further comprise determining a presence of the user inside a vehicle, and wherein the adjustment output is provided based at least partially on determining the user is present inside the vehicle. Aspects of the above method include wherein prior to referring to the user profile memory the method further comprises: storing, in the user profile memory, information corresponding to areas of a building occupied by the user; collecting vehicle setting data associated with the user, wherein the vehicle setting data includes at least one of vehicle comfort settings and infotainment settings made by the user; and storing the vehicle setting data in the user profile memory. Aspects of the above method include wherein the vehicle setting information includes an interior temperature of a vehicle, and wherein the configurable comfort setting of the at least one area of the building is a temperature associated with the at least one area. Aspects of the above method include wherein the configurable comfort setting of the at least one area of the building is adjusted to match the vehicle setting information in the user profile memory.

[0011] Embodiments include a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform operations comprising the above methods. Embodiments include a device, means, and/or system configured to perform the above methods.

[0012] Embodiments include a settings control system, comprising a building automation system configured to refer to a user profile memory associated with a user for

vehicle setting information, detect an identification of at least one area of a building associated with the user, determine that the at least one area of the building includes a configurable comfort setting, and determine, based at least partially on the identification of the at least one area of the building and the vehicle setting information, to adjust the configurable comfort setting of the at least one area of the building. Aspects of the above system include wherein the building automation system is contained in a memory and executed by a processor of the settings control system, wherein the building automation system is further configured to provide an adjustment output to a building comfort control system, and wherein the building comfort control system is adapted to control the configurable comfort setting of the at least one area of the building.

[0013] Embodiments include a method, comprising: determining a location inside a vehicle associated with a user; determining at least one vehicle control associated with the location inside the vehicle; referring to a user profile memory associated with the user for vehicle control settings; and determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle. Aspects of the above method further comprise providing an adjustment output to a vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle. Aspects of the above method include wherein prior to providing the adjustment output, the method further comprises: determining a presence of the user inside the vehicle, wherein the adjustment output is provided based at least partially on determining the user is present in the location of the vehicle. Aspects of the above method include wherein prior to determining the location inside the vehicle associated with the user the method further comprises: storing, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user; collecting vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle; and storing the vehicle control setting data in the user profile memory. Aspects of the above method include wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device. Aspects of the above method include wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features. Aspects of the above method include wherein determining the presence of the user inside the vehicle further comprises: detecting a person via at least

one image sensor associated with the vehicle; identifying facial features associated with the person detected via the at least one image sensor; and determining whether the identified facial features associated with the person match user characteristics stored in a memory. Aspects of the above method include wherein determining the presence of the user inside the vehicle further comprises: detecting a device associated with the user in an area of the vehicle. Aspects of the above method further comprise determining that the user made a change to the adjusted at least one vehicle control; and storing the change made to the adjusted at least one vehicle control in the user profile memory. Aspects of the above method include wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

[0014] Embodiments include a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform operations comprising the above methods. Embodiments include a device, means, and/or system configured to perform the above methods.

[0015] Embodiments include a vehicle control system, comprising a profile identification module contained in a memory and executed by a processor of the vehicle control system, the profile identification module configured to determine a location inside a vehicle associated with a user, determine at least one vehicle control associated with the location inside the vehicle, refer to a user profile memory associated with the user for vehicle control settings, and determine, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle. Aspects of the above system include wherein the profile identification module is further configured to provide an adjustment output to the vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle.

[0016] Embodiments include a method, comprising: detecting a presence of at least one user in a vehicle; determining an identity of the at least one user; receiving data associated with the at least one user, wherein the data includes biometric information; detecting a deviation between the received data and an established baseline biometric profile associated with the at least one user; and determining, based at least partially on the detected deviation, to provide an output configured to address the deviation. Aspects of the above method include wherein prior to receiving data associated with the at least one user the method further comprises: determining the baseline biometric profile associated with the at least one user; and storing the determined baseline biometric profile in a user

profile memory associated with the at least one user. Aspects of the above method include wherein determining the presence of the at least one user inside the vehicle further comprises: detecting a person via at least one image sensor associated with the vehicle. Aspects of the above method include wherein determining the identity of the at least one user further comprises: identifying facial features associated with the person detected via the at least one image sensor; and determining whether the identified facial features associated with the person match user characteristics stored in a memory. Aspects of the above method include wherein the data associated with the at least one user is provided by a sensor worn by the at least one user. Aspects of the above method include wherein the output configured to address the deviation is provided by the vehicle, and wherein addressing the deviation includes adjusting one or more settings associated with the vehicle. Aspects of the above method include wherein the one or more settings include at least one of a vehicle interior environment, temperature, air composition, oxygen level, sound level, window position, seat position, and lighting level. Aspects of the above method further comprise detecting a vehicle incident via one or more sensors associated with the vehicle; collecting, based at least partially on the detected vehicle incident, the data associated with the at least one user; and sending the established baseline biometric profile and collected data associated with the at least one user to a third party. Aspects of the above method include wherein the data associated with the at least one user is received at a first data rate in the absence of a detected vehicle incident and collected at a higher second data rate upon detecting the vehicle incident. Aspects of the above method include wherein the collected data associated with the at least one user is sent to the third party in real-time.

[0017] Embodiments include a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform operations comprising the above methods. Embodiments include a device, means, and/or system configured to perform the above methods.

[0018] Embodiments include a vehicle control system, comprising a profile identification module contained in a memory and executed by a processor of the vehicle control system, the profile identification module configured to detect a presence of at least one user in a vehicle, determine an identity of the at least one user, receive data associated with the at least one user, wherein the data includes biometric information, detect a deviation between the received data and an established baseline biometric profile associated with the at least one user, and determine, based at least partially on the detected

deviation, to provide an output configured to address the deviation. Aspects of the above system include wherein prior to receiving data associated with the at least one user the profile identification module is further configured to determine the baseline biometric profile associated with the at least one user, and store the determined baseline biometric profile in a user profile memory associated with the at least one user.

[0019] Embodiments include a method, comprising: detecting a user profile associated with a user, the user profile having infotainment information stored therein; detecting at least one infotainment system associated with the user; and determining to adjust a configuration of the at least one infotainment system based at least partially on the infotainment information in the user profile. Aspects of the above method include wherein the at least one infotainment system is a vehicle infotainment system, and wherein prior to detecting the user profile the method further comprises: identifying the user inside a vehicle via one or more sensors associated with the vehicle; and referring, in response to identifying the user, to a memory associated with the identified user, wherein the memory includes the user profile. Aspects of the above method include wherein identifying the user further comprises: receiving identifying characteristics associated with the user via an image sensor or via a signal provided by a device associated with the user; and determining whether the identifying characteristics associated with the user match unique user characteristics stored in a memory, wherein the unique user characteristics are configured to verify an identity of the user. Aspects of the above method include wherein detecting the at least one infotainment system associated with the user is based at least partially on one or more of a proximity of a user and a user device to the at least one infotainment system. Aspects of the above method include wherein determining to adjust the configuration of the at least one infotainment system further comprises: determining the configuration of the at least one infotainment system; and determining whether the infotainment information matches the determined configuration of the at least one infotainment system, wherein the infotainment information includes at least one infotainment setting, preference, content, and power state. Aspects of the above method further comprise providing, when the infotainment information does not match the determined configuration of the at least one infotainment system, an adjustment output configured to adjust the configuration of the at least one infotainment system. Aspects of the above method include wherein determining to adjust the configuration of the at least one infotainment system further comprises: determining an access priority of the user; and determining whether the access priority of the user allows for the adjustment to the

configuration of the at least one infotainment system. Aspects of the above method include wherein determining whether the access priority of the user allows for the adjustment to the configuration of the at least one infotainment system further comprises: determining a second access priority of a second user associated with the infotainment system; and comparing the access priority of the user to the second access priority of the second user, wherein the adjustment is allowed when the access priority of the user is greater than the second access priority of the second user, and wherein the adjustment is prevented when the access priority of the user is less than the second access priority of the second user. Aspects of the above method further comprise receiving additional infotainment information via at least one device associated with the user; determining whether the additional infotainment information qualifies as user profile data; and storing, based at least partially on determining that the additional infotainment information qualifies as user profile data, the additional infotainment information in the user profile associated with the user. Aspects of the above method further comprise adjusting the configuration of the at least one infotainment system, wherein adjusting the configuration includes at least one of tuning to a station, setting an infotainment input, selecting a content genre, and recording content for playback to the user.

[0020] Embodiments include a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform operations comprising the above methods. Embodiments include a device, means, and/or system configured to perform the above methods.

[0021] Embodiments include an infotainment control system, comprising a profile identification module contained in a memory and executed by a processor of the infotainment control system, the profile identification module configured to detect a user profile associated with a user, the user profile having infotainment information stored therein, detect at least one infotainment system associated with the user, and determine to adjust a configuration of the at least one infotainment system based at least partially on the infotainment information in the user profile. Aspects of the above system include wherein the at least one infotainment system is a vehicle infotainment system, and wherein prior to detecting the user profile the profile identification module is further configured to identify the user inside a vehicle via one or more sensors associated with the vehicle, and refer, in response to identifying the user, to a memory associated with the identified user, wherein the memory includes the user profile.

[0022] The present disclosure can provide a number of advantages depending on the particular aspect, embodiment, and/or configuration. One advantage includes providing user profiles that include one or more settings, configurations, and information, associated with a user. Among other things, the user profiles described herein may follow a user from vehicle-to-vehicle, from communication device-to-communication device, from building-to-vehicle, vehicle-to-building, and/or combinations thereof. The user profiles can act as a repository for user information. This user information can be used by any number of entities and/or devices in tracking a user, providing an output, manipulating controls of a vehicle, controlling features of a building, and/or adjusting infotainment systems. The user profiles can provide adjustment information for a vehicle features position, sensitivity, and/or operational range. These and other advantages will be apparent from the disclosure.

[0023] The phrases "at least one," "one or more," and "and/or" are open-ended expressions that are both conjunctive and disjunctive in operation. For example, each of the expressions "at least one of A, B and C," "at least one of A, B, or C," "one or more of A, B, and C," "one or more of A, B, or C" and "A, B, and/or C" means A alone, B alone, C alone, A and B together, A and C together, B and C together, or A, B and C together.

[0024] The term "a" or "an" entity refers to one or more of that entity. As such, the terms "a" (or "an"), "one or more," and "at least one" can be used interchangeably herein. It is also to be noted that the terms "comprising," "including," and "having" can be used interchangeably.

[0025] The term "automatic" and variations thereof, as used herein, refer to any process or operation done without material human input when the process or operation is performed. However, a process or operation can be automatic, even though performance of the process or operation uses material or immaterial human input, if the input is received before the performance of the process or operation. Human input is deemed to be material if such input influences how the process or operation will be performed. Human input that consents to the performance of the process or operation is not deemed to be "material."

[0026] The term "automotive navigation system" can refer to a satellite navigation system designed for use in vehicles. It typically uses a GPS navigation device to acquire position data to locate the user on a road in the unit's map database. Using the road database, the unit can give directions to other locations along roads also in its database. Dead reckoning using distance data from sensors attached to the drivetrain, a gyroscope

and an accelerometer can be used for greater reliability, as GPS signal loss and/or multipath can occur due to urban canyons or tunnels.

[0027] The term "bus" and variations thereof, as used herein, can refer to a subsystem that transfers information and/or data between various components. A bus generally refers to the collection communication hardware interface, interconnects, bus architecture, standard, and/or protocol defining the communication scheme for a communication system and/or communication network. A bus may also refer to a part of a communication hardware that interfaces the communication hardware with the interconnects that connect to other components of the corresponding communication network. The bus may be for a wired network, such as a physical bus, or wireless network, such as part of an antenna or hardware that couples the communication hardware with the antenna. A bus architecture supports a defined format in which information and/or data is arranged when sent and received through a communication network. A protocol may define the format and rules of communication of a bus architecture.

[0028] The terms "communication device," "smartphone," and "mobile device," and variations thereof, as used herein, can be used interchangeably and may include any type of device capable of communicating with one or more of another device and/or across a communications network, via a communications protocol, and the like. Exemplary communication devices may include but are not limited to smartphones, handheld computers, laptops, netbooks, notebook computers, subnotebooks, tablet computers, scanners, portable gaming devices, phones, pagers, GPS modules, portable music players, and other Internet-enabled and/or network-connected devices.

[0029] A "communication modality" can refer to any protocol- or standard defined or specific communication session or interaction, such as Voice-Over-Internet-Protocol ("VoIP), cellular communications (e.g., IS-95, 1G, 2G, 3G, 3.5G, 4G, 4G/IMT-Advanced standards, 3GPP, WIMAX™, GSM, CDMA, CDMA2000, EDGE, 1xEVDO, iDEN, GPRS, HSPDA, TDMA, UMA, UMTS, ITU-R, and 5G), Bluetooth™, text or instant messaging (e.g., AIM, Blauk, eBuddy, Gadu-Gadu, IBM Lotus Sametime, ICQ, iMessage, IMVU, Lync, MXit, Paltalk, Skype, Tencent QQ, Windows Live Messenger™ or MSN Messenger™, Wireclub, Xfire, and Yahoo! Messenger™), email, Twitter (e.g., tweeting), Digital Service Protocol (DSP), and the like.

[0030] The term "communication system" or "communication network" and variations thereof, as used herein, can refer to a collection of communication components capable of one or more of transmission, relay, interconnect, control, or otherwise manipulate

information or data from at least one transmitter to at least one receiver. As such, the communication may include a range of systems supporting point-to-point or broadcasting of the information or data. A communication system may refer to the collection individual communication hardware as well as the interconnects associated with and connecting the individual communication hardware. Communication hardware may refer to dedicated communication hardware or may refer a processor coupled with a communication means (i.e., an antenna) and running software capable of using the communication means to send and/or receive a signal within the communication system. Interconnect refers some type of wired or wireless communication link that connects various components, such as communication hardware, within a communication system. A communication network may refer to a specific setup of a communication system with the collection of individual communication hardware and interconnects having some definable network topography. A communication network may include wired and/or wireless network having a pre-set to an ad hoc network structure.

[0031] The term "computer-readable medium," as used herein refers to any tangible storage and/or transmission medium that participates in providing instructions to a processor for execution. Such a medium may take many forms, including but not limited to, non-volatile media, volatile media, and transmission media. Non-volatile media includes, for example, non-volatile random access memory (NVRAM), or magnetic or optical disks. Volatile media includes dynamic memory, such as main memory. Common forms of computer-readable media include, for example, a floppy disk, a flexible disk, hard disk, magnetic tape, or any other magnetic medium, magneto-optical medium, a compact disc read only memory (CD-ROM), any other optical medium, punch cards, paper tape, any other physical medium with patterns of holes, a random access memory (RAM), a programmable read only memory (PROM), and erasable programmable read only memory EPROM, a FLASH-EPROM, a solid state medium like a memory card, any other memory chip or cartridge, a carrier wave as described hereinafter, or any other medium from which a computer can read. A digital file attachment to an e-mail or other self-contained information archive or set of archives is considered a distribution medium equivalent to a tangible storage medium. When the computer-readable media is configured as a database, it is to be understood that the database may be any type of database, such as relational, hierarchical, object-oriented, and/or the like. Accordingly, the disclosure is considered to include a tangible storage medium or distribution medium and prior art-recognized equivalents and successor media, in which the software

implementations of the present disclosure are stored. It should be noted that any computer readable medium that is not a signal transmission may be considered non-transitory.

[0032] The terms dash and dashboard and variations thereof, as used herein, may be used interchangeably and can be any panel and/or area of a vehicle disposed adjacent to an operator, user, and/or passenger. Dashboards may include, but are not limited to, one or more control panel(s), instrument housing(s), head unit(s), indicator(s), gauge(s), meter(s), light(s), audio equipment, computer(s), screen(s), display(s), HUD unit(s), and graphical user interface(s).

[0033] The term "module" as used herein refers to any known or later developed hardware, software, firmware, artificial intelligence, fuzzy logic, or combination of hardware and software that is capable of performing the functionality associated with that element.

[0034] The term "desktop" refers to a metaphor used to portray systems. A desktop is generally considered a "surface" that may include pictures, called icons, widgets, folders, etc. that can activate and/or show applications, windows, cabinets, files, folders, documents, and other graphical items. The icons are generally selectable to initiate a task through user interface interaction to allow a user to execute applications and/or conduct other operations.

[0035] The term "display" refers to a portion of a physical screen used to display the output of a computer to a user.

[0036] The term "displayed image" refers to an image produced on the display. A typical displayed image is a window or desktop. The displayed image may occupy all or a portion of the display.

[0037] The term "display orientation" refers to the way in which a rectangular display is oriented for viewing. The two most common types of display orientations are portrait and landscape. In landscape mode, the display is oriented such that the width of the display is greater than the height of the display (such as a 4:3 ratio, which is 4 units wide and 3 units tall, or a 16:9 ratio, which is 16 units wide and 9 units tall). Stated differently, the longer dimension of the display is oriented substantially horizontal in landscape mode while the shorter dimension of the display is oriented substantially vertical. In the portrait mode, by contrast, the display is oriented such that the width of the display is less than the height of the display. Stated differently, the shorter dimension of the display is oriented substantially horizontal in the portrait mode while the longer dimension of the display is oriented substantially vertical. A multi-screen display can have one composite display that

encompasses all the screens. The composite display can have different display characteristics based on the various orientations of the device.

[0038] The term "electronic address" can refer to any contactable address, including a telephone number, instant message handle, e-mail address, Uniform Resource Locator ("URL"), Global Universal Identifier ("GUID"), Universal Resource Identifier ("URI"), Address of Record ("AOR"), electronic alias in a database, etc., combinations thereof.

[0039] The term "gesture" refers to a user action that expresses an intended idea, action, meaning, result, and/or outcome. The user action can include manipulating a device (e.g., opening or closing a device, changing a device orientation, moving a trackball or wheel, etc.), movement of a body part in relation to the device, movement of an implement or tool in relation to the device, audio inputs, etc. A gesture may be made on a device (such as on the screen) or with the device to interact with the device.

[0040] The term "gesture capture" refers to a sense or otherwise a detection of an instance and/or type of user gesture. The gesture capture can be received by sensors in three-dimensional space. Further, the gesture capture can occur in one or more areas of a screen, for example, on a touch-sensitive display or a gesture capture region. A gesture region can be on the display, where it may be referred to as a touch sensitive display, or off the display, where it may be referred to as a gesture capture area.

[0041] The terms "infotainment" and "infotainment system" may be used interchangeably and can refer to the hardware/software products, data, content, information, and/or systems, which can be built into or added to vehicles to enhance driver and/or passenger experience. Infotainment may provide media and/or multimedia content. An example is information-based media content or programming that also includes entertainment content.

[0042] A "multi-screen application" refers to an application that is capable of producing one or more windows that may simultaneously occupy one or more screens. A multi-screen application commonly can operate in single-screen mode in which one or more windows of the application are displayed only on one screen or in multi-screen mode in which one or more windows are displayed simultaneously on multiple screens.

[0043] A "single-screen application" refers to an application that is capable of producing one or more windows that may occupy only a single screen at a time.

[0044] The terms "online community," "e-community," or "virtual community" can mean a group of people that interact via a computer network, for social, professional, educational, and/or other purposes. The interaction can use a variety of media formats,

including wikis, blogs, chat rooms, Internet forums, instant messaging, email, and other forms of electronic media. Many media formats may be used in social software separately and/or in combination, including text-based chat rooms and forums that use voice, video text or avatars.

[0045] The term "satellite positioning system receiver" can refer to a wireless receiver or transceiver to receive and/or send location signals from and/or to a satellite positioning system (SPS), such as the Global Positioning System ("GPS") (US), GLONASS (Russia), Galileo positioning system (EU), Compass navigation system (China), and Regional Navigational Satellite System (India).

[0046] The term "social network service" may include a service provider that builds online communities of people, who share interests and/or activities, or who are interested in exploring the interests and/or activities of others. Social network services can be network-based and may provide a variety of ways for users to interact, such as e-mail and instant messaging services.

[0047] The term "social network" can refer to a network-based social network.

[0048] The term "screen," "touch screen," "touchscreen," or "touch-sensitive display" refers to a physical structure that enables the user to interact with the computer by touching areas on the screen and provides information to a user through a display. The touch screen may sense user contact in a number of different ways, such as by a change in an electrical parameter (e.g., resistance or capacitance), acoustic wave variations, infrared radiation proximity detection, light variation detection, and the like. In a resistive touch screen, for example, normally separated conductive and resistive metallic layers in the screen pass an electrical current. When a user touches the screen, the two layers make contact in the contacted location, whereby a change in electrical field is noted and the coordinates of the contacted location calculated. In a capacitive touch screen, a capacitive layer stores electrical charge, which is discharged to the user upon contact with the touch screen, causing a decrease in the charge of the capacitive layer. The decrease is measured, and the contacted location coordinates determined. In a surface acoustic wave touch screen, an acoustic wave is transmitted through the screen, and the acoustic wave is disturbed by user contact. A receiving transducer detects the user contact instance and determines the contacted location coordinates.

[0049] The term "window" refers to a, typically rectangular, displayed image on at least part of a display that contains or provides content different from the rest of the screen. The window may obscure the desktop. The dimensions and orientation of the window

may be configurable either by another module or by a user. When the window is expanded, the window can occupy substantially all of the display space on a screen or screens.

[0050] The terms "determine," "calculate," and "compute," and variations thereof, as used herein, are used interchangeably and include any type of methodology, process, mathematical operation, or technique.

[0051] It shall be understood that the term "means," as used herein, shall be given its broadest possible interpretation in accordance with 35 U.S.C., Section 112, Paragraph 6 or other applicable law. Accordingly, a claim incorporating the term "means" shall cover all structures, materials, or acts set forth herein, and all of the equivalents thereof. Further, the structures, materials or acts and the equivalents thereof shall include all those described in the summary of the invention, brief description of the drawings, detailed description, abstract, and claims themselves.

[0052] The terms "vehicle," "car," "automobile," and variations thereof may be used interchangeably herein and can refer to a device or structure for transporting animate and/or inanimate or tangible objects (e.g., persons and/or things), such as a self-propelled conveyance. A vehicle as used herein can include any conveyance or model of a conveyance, where the conveyance was originally designed for the purpose of moving one or more tangible objects, such as people, animals, cargo, and the like. The term "vehicle" does not require that a conveyance moves or is capable of movement. Typical vehicles may include but are in no way limited to cars, trucks, motorcycles, busses, automobiles, trains, railed conveyances, boats, ships, marine conveyances, submarine conveyances, airplanes, space craft, flying machines, human-powered conveyances, and the like.

[0053] The term "profile," as used herein, can refer to any data structure, data store, and/or database that includes one or more items of information associated with a vehicle, a vehicle system, a device (e.g., a mobile device, laptop, mobile phone, etc.), or a person.

[0054] The term "in communication with," as used herein, refers to any coupling, connection, or interaction using electrical signals to exchange information or data, using any system, hardware, software, protocol, or format, regardless of whether the exchange occurs wirelessly or over a wired connection.

[0055] The preceding is a simplified summary of the disclosure to provide an understanding of some aspects of the disclosure. This summary is neither an extensive nor exhaustive overview of the disclosure and its various aspects, embodiments, and/or configurations. It is intended neither to identify key or critical elements of the disclosure

nor to delineate the scope of the disclosure but to present selected concepts of the disclosure in a simplified form as an introduction to the more detailed description presented below. As will be appreciated, other aspects, embodiments, and/or configurations of the disclosure are possible utilizing, alone or in combination, one or more of the features set forth above or described in detail below.

BRIEF DESCRIPTION OF THE DRAWINGS

[0056] Fig. 1 depicts an embodiment of a vehicle operating environment;

[0057] Fig. 2 is a block diagram of an embodiment of a vehicle system;

[0058] Fig. 3 is a block diagram of an embodiment of a vehicle control system environment;

[0059] Fig. 4 is a block diagram of an embodiment of a vehicle communications subsystem;

[0060] Fig. 5A is a first block diagram of an embodiment of a vehicle interior environment separated into areas and/or zones;

[0061] Fig. 5B is a second block diagram of an embodiment of a vehicle interior environment separated into areas and/or zones;

[0062] Fig. 5C is a third block diagram of an embodiment of a vehicle interior environment separated into areas and/or zones;

[0063] Fig. 6A depicts an embodiment of a sensor configuration for a vehicle;

[0064] Fig. 6B depicts an embodiment of a sensor configuration for a zone of a vehicle;

[0065] Fig. 7A is a block diagram of an embodiment of interior sensors for a vehicle;

[0066] Fig. 7B is a block diagram of an embodiment of exterior sensors for a vehicle;

[0067] Fig. 8A is a block diagram of an embodiment of a media subsystem for a vehicle;

[0068] Fig. 8B is a block diagram of an embodiment of a user and device interaction subsystem for a vehicle;

[0069] Fig. 8C is a block diagram of an embodiment of a Navigation subsystem for a vehicle;

[0070] Fig. 9 is a block diagram of an embodiment of a communications subsystem for a vehicle;

[0071] Fig. 10 is a block diagram of an embodiment of a software architecture for the vehicle control system;

[0072] Fig. 11A is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0073] Fig. 11B is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0074] Fig. 11C is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0075] Fig. 11D is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0076] Fig. 11E is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0077] Fig. 11F is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0078] Fig. 11G is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0079] Fig. 11H is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0080] Fig. 11I is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0081] Fig. 11J is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0082] Fig. 11K is a graphical representation of an embodiment of a gesture that a user may perform to provide input to a vehicle control system;

[0105] In the appended figures, similar components and/or features may have the same reference label. Further, various components of the same type may be distinguished by following the reference label by a letter that distinguishes among the similar components. If only the first reference label is used in the specification, the description is applicable to

any one of the similar components having the same first reference label irrespective of the second reference letter or label.

DETAILED DESCRIPTION

[0106] Presented herein are embodiments of systems, devices, processes, data structures, user interfaces, etc. The embodiments may relate to an automobile and/or an automobile environment. The automobile environment can include systems associated with the automobile and devices or other systems in communication with the automobile and/or automobile systems. Furthermore, the systems can relate to communications systems and/or devices and may be capable of communicating with other devices and/or to an individual or group of individuals. Further, the systems can receive user input in unique ways. The overall design and functionality of the systems provide for an enhanced user experience making the automobile more useful and more efficient. As described herein, the automobile systems may be electrical, mechanical, electro-mechanical, software-based, and/or combinations thereof.

[0107] A vehicle environment 100 that may contain a vehicle ecosystem is shown in Fig. 1. The vehicle environment 100 can contain areas associated with a vehicle or conveyance 104. The vehicle 104 is shown as a car but can be any type of conveyance. The environment 100 can include at least three zones. A first zone 108 may be inside a vehicle 104. The zone 108 includes any interior space, trunk space, engine compartment, or other associated space within or associated with the vehicle 104. The interior zone 108 can be defined by one or more techniques, for example, geo-fencing.

[0108] A second zone 112 may be delineated by line 120. The zone 112 is created by a range of one or more sensors associated with the vehicle 104. Thus, the area 112 is exemplary of the range of those sensors and what can be detected by those sensors associated with the vehicle 104. Although sensor range is shown as a fixed and continuous oval, the sensor range may be dynamic and/or discontinuous. For example, a ranging sensor (e.g., radar, lidar, ladar, etc.) may provide a variable range depending on output power, signal characteristics, or environmental conditions (e.g., rain, fog, clear, etc.). The rest of the environment includes all space beyond the range of the sensors and is represented by space 116. Thus, the environment 100 may have an area 116 that includes all areas beyond the sensor range 112. The area 116 may include locations of travel that the vehicle 104 may proceed to in the future.

[0109] An embodiment of a vehicle system 200 is shown in Fig. 2. The vehicle system 200 may comprise hardware and/or software that conduct various operations for or with the vehicle 104. The operations can include, but are not limited to, providing information to the user 216, receiving input from the user 216, and controlling the functions or operation of the vehicle 104, etc. The vehicle system 200 can include a vehicle control system 204. The vehicle control system 204 can be any type of computing system operable to conduct the operations as described herein. An example of a vehicle control system may be as described in conjunction with Fig. 3.

[0110] The vehicle control system 204 may interact with a memory or storage system 208 that stores system data. System data 208 may be any type of data needed for the vehicle control system 204 to control effectively the vehicle 104. The system data 208 can represent any type of database or other storage system. Thus, the system data 208 can be a flat file data system, an object-oriented data system, or some other data system that may interface with the vehicle control system 204.

[0111] The vehicle control system 204 may communicate with a device or user interface 212, 248. The user interface 212, 248 may be operable to receive user input either through touch input, on one or more user interface buttons, via voice command, via one or more image sensors, or through a graphical user interface that may include a gesture capture region, as described in conjunction with the other figures provided herein. Further, the symbol 212, 248 can represent a device that is located or associated with the vehicle 104. The device 212, 248 can be a mobile device, including, but not limited to, a mobile telephone, a mobile computer, or other type of computing system or device that is either permanently located in or temporarily associated with, but not necessarily connected to, the vehicle 104. Thus, the vehicle control system 204 can interface with the device 212, 248 and leverage the device's computing capability to provide one or more of the features or functions as described herein.

[0112] The device or user interface 212, 248 can receive input or provide information to a user 216. The user 216 may thus interact with the vehicle control system 204 through the interface or device 212, 248. Further, the device 212, 248 may include or have access to device data 220 and/or profile data 252. The device data 220 can be any type of data that is used in conjunction with the device 212, 248 including, but not limited to, multimedia data, preferences data, device identification information, or other types of data. The profile data 252 can be any type of data associated with at least one user 216 including, but in no way limited to, bioinformatics, medical information, driving history,

personal information (e.g., home physical address, business physical address, contact addresses, likes, dislikes, hobbies, size, weight, occupation, business contacts – including physical and/or electronic addresses, personal contacts – including physical and/or electronic addresses, family members, and personal information related thereto, etc.), other user characteristics, advertising information, user settings and feature preferences, travel information, associated vehicle preferences, communication preferences, historical information (e.g., including historical, current, and/or future travel destinations), Internet browsing history, or other types of data. In any event, the data may be stored as device data 220 and/or profile data 252 in a storage system similar to that described in conjunction with Figs. 12A through 12D.

[0113] As an example, the profile data 252 may include one or more user profiles. User profiles may be generated based on data gathered from one or more of vehicle preferences (e.g., seat settings, HVAC settings, dash configurations, and the like), recorded settings, geographic location information (e.g., provided by a satellite positioning system (e.g., GPS), Wi-Fi hotspot, cell tower data, etc.), mobile device information (such as mobile device electronic addresses, Internet browsing history and content, application store selections, user settings and enabled and disabled features, and the like), private information (such as user information from a social network, user presence information, user business account, and the like), secure data, biometric information, audio information from on board microphones, video information from on board cameras, Internet browsing history and browsed content using an on board computer and/or the local area network enabled by the vehicle 104, geographic location information (e.g., a vendor storefront, roadway name, city name, etc.), and the like.

[0114] The profile data 252 may include one or more user accounts. User accounts may include access and permissions to one or more settings and/or feature preferences associated with the vehicle 104, communications, infotainment, content, etc. In one example, a user account may allow access to certain settings for a particular user, while another user account may deny access to the settings for another user, and vice versa. The access controlled by the user account may be based on at least one of a user account priority, role, permission, age, family status, a group priority (e.g., the user account priority of one or more users, etc.), a group age (e.g., the average age of users in the group, a minimum age of the users in the group, a maximum age of the users in the group, and/or combinations thereof, etc.).

[0115] For example, a user 216 may be allowed to purchase applications (e.g., software, etc.) for the vehicle 104 and/or a device associated with the vehicle 104 based on information associated with the user account. This user account information may include a preferred payment method, permissions, and/or other account information. As provided herein, the user account information may be part of the user profile and/or other data stored in the profile data 252.

[0116] As another example, an adult user (e.g., a user with an age of 18 years old and/or over, etc.) may be located in an area of a vehicle 104, such as a rear passenger area. Continuing this example a child user (e.g., a user with an age of 17 years old and/or less, etc.) may be located in the same, or close, area. In this example, the user account information in the profile data 252 associated with both the adult user and the child user may be used by the vehicle 104 in determining whether content is appropriate for the area given the age of the child user. For instance, a graphic movie containing violence (e.g., a movie associated with a mature rating, such as a Motion Picture Association of America (MPAA) rating of "R," "NC-17," etc.) may be suitable to present to a display device associated with the adult user but may not be acceptable to present to the display device if a 12-year old child user may see and/or hear the content of the movie.

[0117] The vehicle control system 204 may also communicate with or through a communication network 224. The communication network 224 can represent any type of wireless and/or wired communication system that may be included within the vehicle 104 or operable to communicate outside the vehicle 104. Thus, the communication network 224 can include a local area communication capability and a wide area communication capability. For example, the communication network 224 can include a Bluetooth® wireless system, an 802.11x (e.g., 802.11G/ 802.11N /802.11AC, or the like, wireless system), a CAN bus, an Ethernet network within the vehicle 104, or other types of communication networks that may function with or be associated with the vehicle 104. Further, the communication network 224 can also include wide area communication capabilities, including one or more of, but not limited to, a cellular communication capability, satellite telephone communication capability, a wireless wide area network communication capability, or other types of communication capabilities that allow for the vehicle control system 204 to communicate outside the vehicle 104.

[0118] The vehicle control system 204 may communicate through the communication network 224 to a server 228 that may be located in a facility that is not within physical proximity to the vehicle 104. Thus, the server 228 may represent a cloud computing

system or cloud storage that allows the vehicle control system 204 to either gain access to further computing capabilities or to storage at a location outside of the vehicle 104. The server 228 can include a computer processor and memory and be similar to any computing system as understood to one skilled in the art.

[0119] Further, the server 228 may be associated with stored data 232. The stored data 232 may be stored in any system or by any method, as described in conjunction with system data 208, device data 220, and/or profile data 252. The stored data 232 can include information that may be associated with one or more users 216 or associated with one or more vehicles 104. The stored data 232, being stored in a cloud or in a distant facility, may be exchanged among vehicles 104 or may be used by a user 216 in different locations or with different vehicles 104. Additionally or alternatively, the server may be associated with profile data 252 as provided herein. It is anticipated that the profile data 252 may be accessed across the communication network 224 by one or more components of the system 200. Similar to the stored data 232, the profile data 252, being stored in a cloud or in a distant facility, may be exchanged among vehicles 104 or may be used by a user 216 in different locations or with different vehicles 104.

[0120] The vehicle control system 204 may also communicate with one or more sensors 236, 242, which are either associated with the vehicle 104 or communicate with the vehicle 104. Vehicle sensors 242 may include one or more sensors for providing information to the vehicle control system 204 that determine or provide information about the environment 100 in which the vehicle 104 is operating. Embodiments of these sensors may be as described in conjunction with Figs. 6A-7B. Non-vehicle sensor 236 can be any type of sensor that is not currently associated with the vehicle 104. For example, non-vehicle sensor 236 can be sensors in a traffic system operated by a third party that provides data to the vehicle control system 204. Further, the non-vehicle sensor(s) 236 can be other types of sensors which provide information about the distant environment 116 or other information about the vehicle 104 or the environment 100. These non-vehicle sensors 236 may be operated by third parties but provide information to the vehicle control system 204. Examples of information provided by the sensors 236 and that may be used by the vehicle control system 204 may include weather tracking data, traffic data, user health tracking data, vehicle maintenance data, or other types of data, which may provide environmental or other data to the vehicle control system 204. The vehicle control system 204 may also perform signal processing of signals received from one or more sensors 236, 242. Such signal processing may include estimation of a measured parameter from a

single sensor, such as multiple measurements of a range state parameter from the vehicle 104 to an obstacle, and/or the estimation, blending, or fusion of a measured state parameter from multiple sensors such as multiple radar sensors or a combination of a ladar/lidar range sensor and a radar sensor. Signal processing of such sensor signal measurements may comprise stochastic signal processing, adaptive signal processing, and/or other signal processing techniques known to those skilled in the art.

[0121] The various sensors 236, 242 may include one or more sensor memory 244. Embodiments of the sensor memory 244 may be configured to store data collected by the sensors 236, 242. For example, a temperature sensor may collect temperature data associated with a vehicle 104, user 216, and/or environment, over time. The temperature data may be collected incrementally, in response to a condition, or at specific time periods. In this example, as the temperature data is collected, it may be stored in the sensor memory 244. In some cases, the data may be stored along with an identification of the sensor and a collection time associated with the data. Among other things, this stored data may include multiple data points and may be used to track changes in sensor measurements over time. As can be appreciated, the sensor memory 244 can represent any type of database or other storage system.

[0122] The diagnostic communications module 256 may be configured to receive and transmit diagnostic signals and information associated with the vehicle 104. Examples of diagnostics signals and information may include, but is in no way limited to, vehicle system warnings, sensor data, vehicle component status, service information, component health, maintenance alerts, recall notifications, predictive analysis, and the like. Embodiments of the diagnostic communications module 256 may handle warning/error signals in a predetermined manner. The signals, for instance, can be presented to one or more of a third party, occupant, vehicle control system 204, and a service provider (e.g., manufacturer, repair facility, etc.).

[0123] Optionally, the diagnostic communications module 256 may be utilized by a third party (i.e., a party other than the user 216, etc.) in communicating vehicle diagnostic information. For instance, a manufacturer may send a signal to a vehicle 104 to determine a status associated with one or more components associated with the vehicle 104. In response to receiving the signal, the diagnostic communications module 256 may communicate with the vehicle control system 204 to initiate a diagnostic status check. Once the diagnostic status check is performed, the information may be sent via the diagnostic communications module 256 to the manufacturer. This example may be

especially useful in determining whether a component recall should be issued based on the status check responses returned from a certain number of vehicles.

[0124] Wired/wireless transceiver/communications ports 260 may be included. The wired/wireless transceiver/communications ports 260 may be included to support communications over wired networks or links, for example with other communication devices, server devices, and/or peripheral devices. Examples of wired/wireless transceiver/communications ports 260 include Ethernet ports, Universal Serial Bus (USB) ports, Institute of Electrical and Electronics Engineers (IEEE) 1594, or other interface ports.

[0125] An embodiment of a vehicle control environment 300 including a vehicle control system 204 may be as shown in Fig. 3. Beyond the vehicle control system 204, the vehicle control environment 300 can include one or more of, but is not limited to, a power source and/or power control module 316, a data storage module 320, user interface(s)/input interface(s) 324, vehicle subsystems 328, user interaction subsystems 332, Global Positioning System (GPS)/Navigation subsystems 336, sensor(s) and/or sensor subsystems 340, communication subsystems 344, media subsystems 348, and/or device interaction subsystems 352. The subsystems, modules, components, etc. 316-352 may include hardware, software, firmware, computer readable media, displays, input devices, output devices, etc. or combinations thereof. The system, subsystems, modules, components, etc. 204, 316-352 may communicate over a network or bus 356. This communication bus 356 may be bidirectional and perform data communications using any known or future-developed standard or protocol. An example of the communication bus 356 may be as described in conjunction with Fig. 4.

[0126] The vehicle control system 204 can include a processor 304, memory 308, and/or an input/output (I/O) module 312. Thus, the vehicle control system 204 may be a computer system, which can comprise hardware elements that may be electrically coupled. The hardware elements may include one or more central processing units (CPUs) 304; one or more components of the I/O module 312 including input devices (e.g., a mouse, a keyboard, etc.) and/or one or more output devices (e.g., a display device, a printer, etc.).

[0127] The processor 304 may comprise a general purpose programmable processor or controller for executing application programming or instructions. The processor 304 may, optionally, include multiple processor cores, and/or implement multiple virtual processors. Additionally or alternatively, the processor 304 may include multiple physical processors. As a particular example, the processor 304 may comprise a specially configured

application specific integrated circuit (ASIC) or other integrated circuit, a digital signal processor, a controller, a hardwired electronic or logic circuit, a programmable logic device or gate array, a special purpose computer, or the like. The processor 304 generally functions to run programming code or instructions implementing various functions of the vehicle control system 204.

[0128] The input/output module 312 and associated ports may be included to support communications over wired or wireless networks or links, for example with other communication devices, server devices, and/or peripheral devices. Examples of an input/output module 312 include an Ethernet port, a Universal Serial Bus (USB) port, Institute of Electrical and Electronics Engineers (IEEE) 1594, or other interface.

[0129] The vehicle control system 204 may also include one or more storage devices 308. By way of example, storage devices 308 may be disk drives, optical storage devices, solid-state storage devices such as a random access memory ("RAM") and/or a read-only memory ("ROM"), which can be programmable, flash-updateable and/or the like. The vehicle control system 204 may additionally include a computer-readable storage media reader; a communications system (e.g., a modem, a network card (wireless or wired), an infra-red communication device, etc.); and working memory 308, which may include RAM and ROM devices as described above. The vehicle control system 204 may also include a processing acceleration unit, which can include a digital signal processor (DSP), a special-purpose processor, and/or the like.

[0130] The computer-readable storage media reader can further be connected to a computer-readable storage medium, together (and, optionally, in combination with storage device(s)) comprehensively representing remote, local, fixed, and/or removable storage devices plus storage media for temporarily and/or more permanently containing computer-readable information. The communications system may permit data to be exchanged with an external or internal network and/or any other computer or device described herein. Moreover, as disclosed herein, the term "storage medium" may represent one or more devices for storing data, including read only memory (ROM), random access memory (RAM), magnetic RAM, core memory, magnetic disk storage mediums, optical storage mediums, flash memory devices, and/or other machine readable mediums for storing information.

[0131] The vehicle control system 204 may also comprise software elements including an operating system and/or other code, as described in conjunction with Fig. 10. It should be appreciated that alternates to the vehicle control system 204 may have numerous

variations from that described herein. For example, customized hardware might also be used and/or particular elements might be implemented in hardware, software (including portable software, such as applets), or both. Further, connection to other computing devices such as network input/output devices may be employed.

[0132] The power source and/or power control module 316 can include any type of power source, including, but not limited to, batteries, alternating current sources (from connections to a building power system or power line), solar cell arrays, etc. One or more components or modules may also be included to control the power source or change the characteristics of the provided power signal. Such modules can include one or more of, but is not limited to, power regulators, power filters, alternating current (AC) to direct current (DC) converters, DC to AC converters, receptacles, wiring, other converters, etc. The power source and/or power control module 316 functions to provide the vehicle control system 204 and any other system with power.

[0133] The data storage 320 can include any module for storing, retrieving, and/or managing data in one or more data stores and/or databases. The database or data stores may reside on a storage medium local to (and/or resident in) the vehicle control system 204 or in the vehicle 104. Alternatively, some of the data storage capability may be remote from the vehicle control system 204 or automobile, and in communication (e.g., via a network) to the vehicle control system 204. The database or data stores may reside in a storage-area network ("SAN") familiar to those skilled in the art. Similarly, any necessary files for performing the functions attributed to the vehicle control system 204 may be stored locally on the respective vehicle control system 204 and/or remotely, as appropriate. The databases or data stores may be a relational database, and the data storage module 320 may be adapted to store, update, and retrieve data in response to specifically-formatted commands. The data storage module 320 may also perform data management functions for any flat file, object oriented, or other type of database or data store.

[0134] A first data store that may be part of the vehicle control environment 300 is a profile data store 252 for storing data about user profiles and data associated with the users. A system data store 208 can include data used by the vehicle control system 204 and/or one or more of the components 324-352 to facilitate the functionality described herein. The data stores 208 and/or 252 may be as described in conjunction with Figs. 1 and/or 12A-12D.

[0135] The user interface/input interfaces 324 may be as described herein for providing information or data and/or for receiving input or data from a user. Vehicle systems 328 can include any of the mechanical, electrical, electromechanical, computer, or other systems associated with the function of the vehicle 100. For example, vehicle systems 328 can include one or more of, but is not limited to, the steering system, the braking system, the engine and engine control systems, the electrical system, the suspension, the drive train, the cruise control system, the radio, the heating, ventilation, air conditioning (HVAC) system, the windows and/or doors, etc. These systems are well known in the art and will not be described further.

[0136] Examples of the other systems and subsystems 324-352 may be as described further herein. For example, the user interface(s)/input interface(s) 324 may be as described in Figs. 2 and 8B; the vehicle subsystems 328 may be as described in Figs. 6a *et. seq.*; the user interaction subsystem 332 may be as described in conjunction with the user/device interaction subsystem 817 of Fig. 8B; the Navigation subsystem 336 may be as described in Figs. 6A and 8C; the sensor(s)/sensor subsystem 340 may be as described in Figs. 7A and 7B; the communication subsystem 344 may be as described in Figs. 2, 4, 5B, 5C, and 9; the media subsystem 348 may be as described in Fig. 8A; and, the device interaction subsystem 352 may be as described in Fig. 2 and in conjunction with the user/device interaction subsystem 817 of Fig. 8B.

[0137] Fig. 4 illustrates an optional communications channel architecture 400 and associated communications components. Fig. 4 illustrates some of the optional components that can be interconnected via the communication channels/zones 404. Communication channels/zones 404 can carry information on one or more of a wired and/or wireless communications link with, in the illustrated example, there being three communications channels/zones, 408, 412, and 416.

[0138] This optional environment 400 can also include an IP router 420, an operator cluster 424, one or more storage devices 428, one or more blades, such as master blade 432, and computational blades 436 and 440. Additionally, the communications channels/zones 404 can interconnect one or more displays, such as, remote display 1 444, remote display N 448, and console display 452. The communications channels/zones 404 also interconnect an access point 456, a Bluetooth® access point/USB hub 460, a Femtocell 464, a storage controller 468, that is connected to one or more of USB devices 472, DVDs 476, or other storage devices 480. To assist with managing communications within the communication channel, the environment 400 optionally includes a firewall 484

which will be discussed hereinafter in greater detail. Other components that could also share the communications channel/zones 404 include GPS 488, media controller 492, which is connected to one or more media sources 496, and one or more subsystems, such as subsystem switches 498.

[0139] Optionally, the communications channels/zones 404 can be viewed as an I/O network or bus where the communications channels are carried on the same physical media. Optionally, the communication channels 404 can be split amongst one or more physical media and/or combined with one or more wireless communications protocols. Optionally, the communications channels 404 can be based on wireless protocols with no physical media interconnecting the various elements described herein.

[0140] The environment 400 shown in Fig. 4 can include a collection of blade processors that are housed in a "crate." The crate can have a PC-style backplane connector 408 and a backplane Ethernet 408 that allows the various blades to communicate with one another using, for example, an Ethernet.

[0141] Various other functional elements illustrated in Fig. 4 can be integrated into this crate architecture with, as discussed hereinafter, various zones utilized for security. Optionally, as illustrated in Fig. 4, the backplane 404/408 can have two separate Ethernet zones that may or may not be on the same communications channel. Optionally, the zones exist on a single communications channel on the I/O network/bus 408. Optionally, the zones are actually on different communications channels, e.g., 412, 416; however, the implementation is not restricted to any particular type of configuration. Rather, as illustrated in Fig. 4, there can be a red zone 417 and a green zone 413, and the I/O backplane on the network/bus 408 that enables standard I/O operations. This backplane or I/O network/bus 408 also optionally can provide power distribution to the various modules and blades illustrated in Fig. 4. The red and green Ethernet zones, 417 and 413 respectively, can be implemented as Ethernet switches, with one on each side of the firewall 484. Two Ethernets (untrusted and trusted) are not connected in accordance with an optional embodiment. Optionally, the connector geometry for the firewall can be different for the Ethernet zones than for the blades that are a part of the system.

[0142] The red zone 417 only needs to go from the modular connector to the input side of the backplane connector of the firewall 484. While Fig. 4 indicates that there are five external red zone connectors to the firewall 484, provisions can be made for any number of ports with the connections being made at the access point 456, the Bluetooth® access point (combo controller) 460, Femtocell 464, storage controller 468, and/or firewall 484.

Optionally, the external port connections can be made through a manufacturer configurable modular connector panel, and one or more of the red zone Ethernet ports could be available through a customer supplied crate which allows, for example, wired Ethernet connections from a bring-your-own-device (BYOD) to the firewall 484.

[0143] The green zone 413 goes from the output side of the firewall 484 and generally defines the trusted Ethernet. The Ethernet on the backplane 408 essentially implements an Ethernet switch for the entire system, defining the Ethernet backbone of the vehicle 104. All other modules, e.g., blades, etc., can connect to a standard backplane bus and the trusted Ethernet. Some number of switch ports can be reserved to connect to an output modular connector panel to distribute the Ethernet throughout the vehicle 104, e.g., connecting such elements as the console display 452, remote displays 444, 448, GPS 488, etc. Optionally, only trusted components, either provided or approved by the manufacturer after testing, can be attached to the green zone 413, which is by definition in the trusted Ethernet environment.

[0144] Optionally, the environment 400, shown in Fig. 4, utilizes IPv6 over Ethernet connections wherever possible. Using, for example, the Broadcom single-twisted pair Ethernet technology, wiring harnesses are simplified and data transmission speeds are maximized. However, while the Broadcom single-twisted pair Ethernet technology can be used, in general, systems and methods can work comparably well with any type of well-known Ethernet technology or other comparable communications technology.

[0145] As illustrated in Fig. 4 the I/O network/bus 408 is a split-bus concept that contains three independent bus structures:

The red zone 417 - the untrusted Ethernet environment. This zone 417 may be used to connect network devices and customer provided devices to the vehicle information system with these devices being on the untrusted side of the firewall 484.

The green zone 413 - the trusted Ethernet environment, this zone 413 can be used to connect manufacturer certified devices such as GPS units, remote displays, subsystem switches, and the like, to the vehicle network 404. Manufacturer certified devices can be implemented by vendors that allow the vehicle software system to validate whether or not a device is certified to operate with the vehicle 100. Optionally, only certified devices are allowed to connect to the trusted side of the network.

The I/O bus 409 - the I/O bus may be used to provide power and data transmission to bus-based devices such as the vehicle solid state drive, the media controller blade 492, the computational blades 436, 440, and the like.

[0146] As an example, the split-bus structure can have the following minimum configuration:

Two slots for the red zone Ethernet;

One slot for built-in LTE/WiMax access 420 from the car to other network resources such as the cloud/Internet;

One slot for user devices or bring-your-own device access, this slot can implement, for example, WiFi, Bluetooth®, and/or USB connectivity 456, which can be provided in, for example, the customer crate;

One slot for combined red zone and green zone Ethernet, this slot can be reserved for the firewall controller;

Two slots for computational blades. Here the two computation blades are illustratively as shown the optional master blade and the multimedia blade or controller 492 which can be provided as standard equipment; and

The expansion controller that allows the I/O bus to be extended and provides additional Ethernet switch ports for one or more of the red or green zones, which may require that the basic green zone Ethernet switch implementation will support additional ports beyond the initial three that are needed for the basic exemplary system.

It should be possible to build 8 or 16 or more Ethernet switches that allow for the expansion with existing component(s) in a straight-forward manner.

[0147] The red zone 417 can be implemented as an 8-port Ethernet switch that has three actual bus ports within the crate with the remaining five ports being available on the customer crate. The crate implements red zone slots for the firewall controller 484, the combo controller which includes WiFi, Bluetooth®, USB hub (456, 460) and the IP router 420.

[0148] The firewall controller 484 can have a dedicated slot that bridges the red zone 417, green zone 413, and uses the I/O bus for power connections. In accordance with an optional low cost implementation, the firewall 484 can be implemented by a dummy module that simply bridges the red zone 417 and the green zone 413 without necessarily providing any firewall functionality. The combo controller 460 that includes the WiFi, Bluetooth®, and USB hub can be provided for consumer device connections. This controller can also implement the IPv6 (un-routable) protocol to insure that all information is packetized for transmission via IP over the Ethernet in the I/O network/bus 408.

[0149] The combo controller 460 with the USB hub can have ports in the customer crate. The combo controller 460 can implement USB discovery functions and packetizes

the information for transmission via IP over Ethernet. The combo controller 460 can also facilitate installation of the correct USB driver for the discovered device, such as a BYOD from the user. The combo controller 460 and USB hub can then map the USB address to a "local" IPv6 address for interaction with one or more of the computational blades which is generally going to be the media controller 492.

[0150] The IP router 420 can implement Internet access through a manufacturer provided service. This service can allow, for example, a manufacturer to offer value-added services to be integrated into the vehicle information systems. The existence of the manufacturer provided Internet access can also allow the "e-Call" function and other vehicle data recorder functions to be implemented. IP router 420 also allows, for example, WiMax, 4G LTE, and other connections to the Internet through a service provider that can be, for example, contracted by the manufacturer. Internally, the IP router 420 can allow cellular handset connections to the Internet through a Femtocell 464 that is part of the IP router implementation. The IP router 420, with the Femtocell 464, can also allow a cone of silence functionality to be implemented. The IP router 420 can be an optional component for a vehicle provided by, for example, the manufacturer, a dealer, or installed by a user. In the absence of the IP router 420, it is possible to connect a consumer handheld device to the I/O network/bus 408 using, for example, either WiFi or Bluetooth® 456, 460. While functionality may be somewhat reduced when using a handheld device instead of a built-in Ethernet connection, systems and methods of this invention can also work utilizing this consumer handheld device which then connects to the Internet via, for example, WiMax, 4G, 4G LTE, or the like.

[0151] Figs. 5A-5C show configurations of a vehicle 104. In general, a vehicle 104 may provide functionality based at least partially on one or more areas, zones, and distances, associated with the vehicle 104. Non-limiting examples of this functionality are provided herein below.

[0152] An arrangement or configuration for sensors within a vehicle 104 is as shown in Fig. 5A. The sensor arrangement 500 can include one or more areas 508 within the vehicle. An area can be a larger part of the environment inside or outside of the vehicle 104. Thus, area one 508A may include the area within the trunk space or engine space of the vehicle 104 and/or the front passenger compartment. Area two 508B may include a portion of the interior space 108 (e.g., a passenger compartment, etc.) of the vehicle 104. The area N, 508N, may include the trunk space or rear compartment area, when included within the vehicle 104. The interior space 108 may also be divided into other areas. Thus,

one area may be associated with the front passenger's and driver's seats, a second area may be associated with the middle passengers' seats, and a third area may be associated with a rear passenger's seat. Each area 508 may include one or more sensors that are positioned or operate to provide environmental information about that area 508.

[0153] Each area 508 may be further separated into one or more zones 512 within the area 508. For example, area 1 508A may be separated into zone A 512A, and zone B 512B. Each zone 512 may be associated with a particular portion of the interior occupied by a passenger. For example, zone A 512A may be associated with a driver. Zone B 512B, may be associated with a front passenger. Each zone 512 may include one or more sensors that are positioned or configured to collect information about the environment or ecosystem associated with that zone or person.

[0154] A passenger area 508B may include more than two zones as described in conjunction with area 508A. For example, area 508B may include three zones, 512C, 512D, and 512E. These three separate zones 512C, 512D, and 512E may be associated with three passenger seats typically found in the rear passenger area of a vehicle 104. An area 508N and may include a single zone 512N as there may be no separate passenger areas but may include a single trunk area within the vehicle 104. The number of zones 512 is unlimited within the areas as the areas are also unlimited inside the vehicle 104. Further, it should be noted that there may be one or areas 508 or zones 512 that may be located outside the vehicle 104 that may have a specific set of sensors associated therewith.

[0155] Optionally, each area/access point 508, 456, 516, 520, and/or zone 512, associated with a vehicle 104, may comprise one or more sensors to determine a presence of a user 216 and/or device 212, 248 in and/or adjacent to each area 508, 456, 516, 520, and/or zone 512. The sensors may include vehicle sensors 242 and/or non-vehicle sensors 236 as described herein. It is anticipated that the sensors may be configured to communicate with a vehicle control system 204 and/or the diagnostic communications module 256. Additionally or alternatively, the sensors may communicate with a device 212, 248. The communication of sensors with the vehicle 104 may initiate and/or terminate the control of device 212, 248 features. For example, a vehicle operator may be located in a second outside area 520 associated with a vehicle 104. As the operator approaches the first outside area 516, associated with the vehicle 104, the vehicle control system 204 may determine to control features associated with one or more device 212, 248 and diagnostic communications module 256.

[0156] Optionally, the location of the device 212, 248 relative to the vehicle 104 may determine vehicle functionality and/or features to be provided and/or restricted to a user 216. By way of example, a device 212, 248 associated with a user 216 may be located at a second outside area 520 from the vehicle 104. In this case, and based at least partially on the distance of the device 212, 248 from the vehicle 104 (e.g., provided by detecting the device 212, 248 at or beyond the second outside area 520) the vehicle 104 may lock one or more features (e.g., ignition access, vehicle access, communications ability, etc.) associated with the vehicle 104. Optionally, the vehicle 104 may provide an alert based on the distance of the device 212, 248 from the vehicle 104. Continuing the example above, once the device 212, 248 reaches the first outside area 516 of the vehicle 104 at least one of the vehicle features may be unlocked. For instance, by reaching the first outside area 516, the vehicle 104 may unlock a door of the vehicle 104. In some cases, when the device is detected to be inside the vehicle 104, the various sensors 236, 242 may determine that the user 216 is in an area 508 and/or zone 512. As is further described herein, features of the vehicle 104, device 212, 248, and/or other components may be controlled based on rules stored in a memory.

[0157] Fig. 5B illustrates optional internal vehicle communications between one or more of the vehicle and one or more devices or between devices. Various communications can occur utilizing one or more Bluetooth®, NFC, WiFi, mobile hot spot, point-to-point communications, point-to-multipoint other point communications, an ad hoc network, or in general any known communications protocol over any known communications media or media-types.

[0158] Optionally, various types of internal vehicle communications can be facilitated using an access point 456 that utilizes one or more of Bluetooth®, NFC, WiFi, wireless Ethernet, mobile hot spot technology, or the like. Upon being connected with, and optionally authenticated to the access point 456, the connected device is able to communicate with one or more of the vehicle and one or more other devices that are connected to the access point 456. The type of connection to the access point 456 can be based on, for example, the zone 512, in which the device is located.

[0159] The user may identify their zone 512 in conjunction with an authentication procedure to the access point 456. For example, a driver in zone A 512A, upon authenticating to the access point 456, can cause the access point 456 to send a query to the device asking the device user in which zone 512 they are located. As discussed hereinafter, the zone 512 the user device is located in may have an impact on the type of

communications, available bandwidth, the types of other devices or vehicle systems or subsystems the device could communicate with, and the like. As a brief introduction, internal communications with zone A 512A may be given preferential treatment over those communications originating from area 2 508B, which could have in itself, preferential treatment over communications originating within area N 508N.

[0160] Moreover, the device in zone A 512A can include profile information that governs the other devices that are allowed to connect to the access point 456 and what those devices have access to, how they can communicate, how much bandwidth they are allocated, and the like. While, optionally, the device associated with zone A 512A will be considered the "master" controller of the profile that governs the internal vehicle communications, it should be appreciated that this was arbitrarily chosen since it is assumed that there will always be a driver in a car that is present in zone A 512A. However, it should be appreciated the driver in zone A 512A, for example, may not have a communications device in which case a device associated with one of the other areas or zones, such as zone B 512B, area 2 508B, or area N 508N could also be associated with or control this master profile.

[0161] Optionally, various devices located within the various zones 512 can connect using, for example, ports provided by access point 456 or Bluetooth® access point/USB hub 460 as illustrated in Fig 4. Similarly, the device(s) could connect utilizing the Femtocell 464 and optionally be directly connected via, for example, a standard Ethernet port.

[0162] As discussed, each one of the areas, area 1 508A, area 2 508B, and area N 508N, can each have associated therewith a profile that governs, for example, how many and what types of devices can connect from that area 508, bandwidth allocated to that area 508, the types of media or content available to device(s) within that area 508, the interconnection of devices within that area 508 or between areas 508, or, in general, can control any aspect of communication of an associated device with any one or more other associated devices/vehicle systems within the vehicle 104.

[0163] Optionally, area 2 508B devices can be provided with full access to multimedia and infotainment available within the vehicle 104, however, devices in area 2 508B may be restricted from any access to vehicle functions. Only devices in area 1 508A may be able to access vehicle control functions such as when "parents" are located in area 1 508A and the children are located in area 2 508B. Optionally, devices found in zone E 512E of area 2 508B may be able to access limited vehicle control functionality such as climate

control within area 2. Similarly, devices in area N 508N may be able to control climate features within zone N 512N.

[0164] As will be appreciated, profiles can be established that allow management of communications within each of the areas 508, and further optionally within each of the zones 512. The profile can be granular in nature controlling not only what type of devices can connect within each zone 512, but how those devices can communicate with other devices and/or the vehicle and types of information that can be communicated.

[0165] To assist with identifying a location of a device within a zone 512, a number of different techniques can be utilized. One optional technique involves one or more of the vehicle sensors detecting the presence of an individual within one of the zones 512. Upon detection of an individual in a zone 512, communications subsystems 344 and the access point 456 can cooperate to not only associate the device within the zone 512 with the access point 456 but to also determine the location of the device within an area, and optionally within a zone 512. Once the device is established within a zone 512, a profile associated with the vehicle 104 can store information identifying that device and/or a person and optionally associating it with a particular zone 512 as a default. As discussed, there can be a master profile optionally associated with the device in zone A 512A, this master profile can govern communications with the communications subsystems 340 and where communications within vehicle 104 are to occur.

[0166] Some optional profiles are illustrated below where the Master Profile governs other device connectivity:

Master Profile:

Area 1 508A	Area 2 508B	Area N 508N	Other
All Communications	Allow Access to Infotainment	No Access	Master Profile acts as Firewall and Router
All Vehicle Controls	Allow Area 2 Climate Control		

Secondary Profile (e.g., device in Zone B 512B, Area 1 508A)

Area 1 508A	Area 2 508B	Area N 508N	Other
All Communications	Allow Access to Infotainment	Allow Access to Infotainment	Master Profile acts as Firewall and Router
All Vehicle Controls	Allow Area 2 Climate Control	Allow Area 2 Climate Control	

Secondary Profile, Option 2

Area 1 508A	Area 2 508B	Area N 508N	Other
All Communications	Allow Access to Infotainment, Internet	Allow Access to Infotainment	
All Vehicle Controls Except Driver-centric Controls	Allow Area 2 Climate Control	Allow Area 2 Climate Control	

[0167] Some optional profiles are illustrated below where the Area/Zone governs device connectivity:

Area 2 508B Profile:

Area 1 508A	Area 2 508B	Area N 508N	Other
No Communications with Area 1 Devices	Allow Access to Infotainment, Allow Access to Other Area 2 or Zone N Devices, Internet		
No Vehicle Controls	Allow Area 2 Climate Control		

Area N 508N Profile:

Area 1 508A	Area 2 508B	Area N 508N	Other
Communications with Area 1, Zone B Device		Allow Access to Infotainment, Allow Access to Other Area N or Zone N Devices	
No Vehicle Controls		Allow Area N Climate Control	

Area 2 508B Profile:

Area 1 508A	Area 2 508B	Area N 508N	Other
Media Sharing with Area 1, Zone B and Vehicle	Allow Access to Infotainment, Allow Access to Other Area 2 or Zone N Devices, Internet		

	and Femtocell		
No Vehicle Controls			

[0168] Optionally, a user's device, such as a SmartPhone, can store in, for example a profile, with which zone 512 the user's device is associated. Then, assuming the user sits in the same zone 512 and area 508 as previously, the user's device can re-establish the same communications protocols with the access point 456 as were previously established.

[0169] In addition or in the alternative, the areas 508 and zones 512 can have associated therewith restrictions as to which one or more other user's devices with which users' devices can connect. For example, a first user's device can connect with any other user device in area 2 508B or area N 508N, however is restricted from connecting with a user device in area 1 508A, zone A 512A. However, the first user device may be able to communicate with another user's device that is located in area 1 508A, zone B 512B. These communications can include any type of standard communications such as sharing content, exchanging messages, forwarding or sharing multimedia or infotainment, or in general can include any communications that would ordinarily be available between two devices and/or the vehicle and vehicle systems. As discussed, there may be restrictions on the type of communications that can be sent to the device in area 1 508A, zone A 512A. For example, the user's device in area 1 508A, zone A 512A may be restricted from receiving one or more of text messages, multimedia, infotainment, or in general anything that can be envisioned as a potential distraction to the driver. Moreover, it should be appreciated that the communications between the various devices and the various zones 512 need not necessarily occur with the assistance of access point 456, but the communications could also occur directly between the device(s).

[0170] Fig. 5C outlines optional internal vehicle communications between one or more of the vehicle and one or more devices. More specifically, Fig. 5C illustrates an example of vehicle communications where the vehicle 104 is equipped with the necessary transceivers to provide a mobile hot spot functionality to any user device(s) therein, such as user devices 248A and 248N.

[0171] Optionally, and as discussed above, one or more user devices can connect to the access point 456. This access point 456 is equipped to handle communications routing to not only the communication network/buses 224 for intra-vehicle communications, but optionally can also communicate with, for example, the Internet or the cloud, in cooperation with transceiver 260. Optionally included is a firewall 484 that has the

capability of not only blocking certain types of content, such as a malicious content, but can also operate to exclude certain type of communications from emanating from the vehicle 104 and transceiver 260. As will be appreciated, various profiles could be established in the firewall 484 that controls not only the type of communications that can be received at the vehicle 104, but the type of communications that can be sent from the vehicle 104.

[0172] The transceiver 260 can be any type of well-known wireless transceiver that communicates using a known communications protocol such as WiMax, 4G, 4G LTE, 3G, or the like. The user devices can communicate via, for example, WiFi link 248 with the access point 456, with the transceiver 260 providing Internet connectivity to the various user devices. As will be appreciated, there may need to be an account associated with transceiver 260 with a wireless carrier to provide data and/or voice connectivity to enable the user devices to communicate with the Internet. Typically, the account is established on a month-to-month basis with an associated fee but could also be performed based on the amount of data to be transmitted, received, or in any other manner.

[0173] Moreover, one or more of the user's devices and access point 456 can maintain profile information that governs how the user's devices are able to communicate with other devices, and optionally the Internet. Optionally, a profile can exist that only allows the user's devices to communicate with other user's devices and/or the vehicle, multimedia and/or the vehicle infotainment system, and may not be allowed access to the Internet via transceiver 260. The profile can stipulate that the user's device could connect to the Internet via transceiver 260 for a specified period of time and/or up to a certain amount of data usage. The user's device can have full access to the Internet via transceiver 260 with no limit on time or data usage which would reduce the data usage of the user's device since it is connected via WiFi to the access point 456, but however, would increase the data usage by transceiver 260, and therefore, shift the billing for that data usage to the transceiver 260 instead of the user's device. Still further, and as previously discussed, the various profiles may stipulate which user's device has priority for use of the bandwidth provided by the transceiver 260. For example, a user's device located area 1 508A, zone A 512A may be given preferential routing treatment of data above that of a user's device in zone N 512N. In this manner, for example, a driver would be given priority for Internet access above that of the passengers. This could become important, for example, when the driver is trying to obtain traffic or direction information

or, for example, when the vehicle is performing a download to update various software features.

[0174] As will be appreciated, the optional firewall 484 can cooperate with the access point 456 and the various profiles that area 508 associated with the various devices within the vehicle 104 and can fully implement communications restrictions, control bandwidth limits, Internet accessibility, malicious software blocking, and the like. Moreover, the optional firewall 484 can be accessed by an administrator with one or more of these configuration settings edited through an administrator's control panel. For example, in a scenario where parents are always in area 1 508A, it may be appropriate to give all of the user's devices in area 1 508A full access to the Internet utilizing transceiver 260, however, while restricting access and/or bandwidth to any other user devices within the vehicle 104. As the user's device and profile would be known by the firewall 484, upon the user's device being associated with the access point 456, the firewall 484 and transceiver 260 can be configured to allow communications in accordance with the stored profile.

[0175] A set of sensors or vehicle components 600 associated with the vehicle 104 may be as shown in Fig. 6A. The vehicle 104 can include, among many other components common to vehicles, wheels 607, a power source 609 (such as an engine, motor, or energy storage system (e.g., battery or capacitive energy storage system)), a manual or automatic transmission 612, a manual or automatic transmission gear controller 616, a power controller 620 (such as a throttle), a vehicle control system 204, the display device 212, a braking system 636, a steering wheel 640, a power source activation/deactivation switch 644 (e.g., an ignition), an occupant seating system 648, a wireless signal receiver 653 to receive wireless signals from signal sources such as roadside beacons and other electronic roadside devices, and a satellite positioning system receiver 657 (e.g., a Global Positioning System ("GPS") (US), GLONASS (Russia), Galileo positioning system (EU), Compass navigation system (China), and Regional Navigational Satellite System (India) receiver), driverless systems (e.g., cruise control systems, automatic steering systems, automatic braking systems, etc.).

[0176] The vehicle 104 can include a number of sensors in wireless or wired communication with the vehicle control system 204 and/or display device 212, 248 to collect sensed information regarding the vehicle state, configuration, and/or operation. Exemplary sensors may include one or more of, but are not limited to, wheel state sensor 660 to sense one or more of vehicle speed, acceleration, deceleration, wheel rotation, wheel speed (e.g., wheel revolutions-per-minute), wheel slip, and the like, a power source

energy output sensor 664 to sense a power output of the power source 609 by measuring one or more of current engine speed (e.g., revolutions-per-minute), energy input and/or output (e.g., voltage, current, fuel consumption, and torque) (e.g., turbine speed sensor, input speed sensor, crankshaft position sensor, manifold absolute pressure sensor, mass flow sensor, and the like), and the like, a switch state sensor 668 to determine a current activation or deactivation state of the power source activation/deactivation switch 644, a transmission setting sensor 670 to determine a current setting of the transmission (e.g., gear selection or setting), a gear controller sensor 672 to determine a current setting of the gear controller 616, a power controller sensor 674 to determine a current setting of the power controller 620, a brake sensor 676 to determine a current state (braking or non-braking) of the braking system 636, a seating system sensor 678 to determine a seat setting and current weight of seated occupant, if any) in a selected seat of the seating system 648, exterior and interior sound receivers 690 and 692 (e.g., a microphone, sonar, and other type of acoustic-to-electric transducer or sensor) to receive and convert sound waves into an equivalent analog or digital signal. Examples of other sensors (not shown) that may be employed include safety system state sensors to determine a current state of a vehicular safety system (e.g., air bag setting (deployed or undeployed) and/or seat belt setting (engaged or not engaged)), light setting sensor (e.g., current headlight, emergency light, brake light, parking light, fog light, interior or passenger compartment light, and/or tail light state (on or off)), brake control (e.g., pedal) setting sensor, accelerator pedal setting or angle sensor, clutch pedal setting sensor, emergency brake pedal setting sensor, door setting (e.g., open, closed, locked or unlocked) sensor, engine temperature sensor, passenger compartment or cabin temperature sensor, window setting (open or closed) sensor, one or more interior-facing or exterior-facing cameras or other imaging sensors (which commonly convert an optical image into an electronic signal but may include other devices for detection objects such as an electromagnetic radiation emitter/receiver that emits electromagnetic radiation and receives electromagnetic waves reflected by the object) to sense objects, such as other vehicles and pedestrians and optionally determine the distance, trajectory and speed of such objects, in the vicinity or path of the vehicle, odometer reading sensor, trip mileage reading sensor, wind speed sensor, radar transmitter/receiver output, brake wear sensor, steering/torque sensor, oxygen sensor, ambient lighting sensor, vision system sensor, ranging sensor, parking sensor, heating, venting, and air conditioning (HVAC) sensor, water sensor, air-fuel ratio meter, blind spot monitor, hall effect sensor, microphone, radio frequency (RF) sensor, infrared (IR) sensor,

vehicle control system sensors, wireless network sensor (e.g., Wi-Fi and/or Bluetooth® sensor), cellular data sensor, and other sensors either future-developed or known to those of skill in the vehicle art.

[0177] In the depicted vehicle embodiment, the various sensors can be in communication with the display device 212, 248 and vehicle control system 204 via signal carrier network 224. As noted, the signal carrier network 224 can be a network of signal conductors, a wireless network (e.g., a radio frequency, microwave, or infrared communication system using a communications protocol, such as Wi-Fi), or a combination thereof. The vehicle control system 204 may also provide signal processing of one or more sensors, sensor fusion of similar and/or dissimilar sensors, signal smoothing in the case of erroneous "wild point" signals, and/or sensor fault detection. For example, ranging measurements provided by one or more RF sensors may be combined with ranging measurements from one or more IR sensors to determine one fused estimate of vehicle range to an obstacle target.

[0178] The control system 204 may receive and read sensor signals, such as wheel and engine speed signals, as a digital input comprising, for example, a pulse width modulated (PWM) signal. The processor 304 can be configured, for example, to read each of the signals into a port configured as a counter or configured to generate an interrupt on receipt of a pulse, such that the processor 304 can determine, for example, the engine speed in revolutions per minute (RPM) and the speed of the vehicle in miles per hour (MPH) and/or kilometers per hour (KPH). One skilled in the art will recognize that the two signals can be received from existing sensors in a vehicle comprising a tachometer and a speedometer, respectively. Alternatively, the current engine speed and vehicle speed can be received in a communication packet as numeric values from a conventional dashboard subsystem comprising a tachometer and a speedometer. The transmission speed sensor signal can be similarly received as a digital input comprising a signal coupled to a counter or interrupt signal of the processor 304 or received as a value in a communication packet on a network or port interface from an existing subsystem of the vehicle 104. The ignition sensor signal can be configured as a digital input, wherein a HIGH value represents that the ignition is on and a LOW value represents that the ignition is OFF. Three bits of the port interface can be configured as a digital input to receive the gear shift position signal, representing eight possible gear shift positions. Alternatively, the gear shift position signal can be received in a communication packet as a numeric value on the port interface. The throttle position signal can be received as an analog input value, typically in the range

0-5 volts. Alternatively, the throttle position signal can be received in a communication packet as a numeric value on the port interface. The output of other sensors can be processed in a similar fashion.

[0179] Other sensors may be included and positioned in the interior space 108 of the vehicle 104. Generally, these interior sensors obtain data about the health of the driver and/or passenger(s), data about the safety of the driver and/or passenger(s), and/or data about the comfort of the driver and/or passenger(s). The health data sensors can include sensors in the steering wheel that can measure various health telemetry for the person (e.g., heart rate, temperature, blood pressure, blood presence, blood composition, etc.). Sensors in the seats may also provide for health telemetry (e.g., presence of liquid, weight, weight shifts, etc.). Infrared sensors could detect a person's temperature; optical sensors can determine a person's position and whether the person has become unconscious. Other health sensors are possible and included herein.

[0180] Safety sensors can measure whether the person is acting safely. Optical sensors can determine a person's position and focus. If the person stops looking at the road ahead, the optical sensor can detect the lack of focus. Sensors in the seats may detect if a person is leaning forward or may be injured by a seat belt in a collision. Other sensors can detect that the driver has at least one hand on a steering wheel. Other safety sensors are possible and contemplated as if included herein.

[0181] Comfort sensors can collect information about a person's comfort. Temperature sensors may detect a temperature of the interior cabin. Moisture sensors can determine a relative humidity. Audio sensors can detect loud sounds or other distractions. Audio sensors may also receive input from a person through voice data. Other comfort sensors are possible and contemplated as if included herein.

[0182] Fig. 6B shows an interior sensor configuration for one or more zones 512 of a vehicle 104 optionally. Optionally, the areas 508 and/or zones 512 of a vehicle 104 may include sensors that are configured to collect information associated with the interior 108 of a vehicle 104. In particular, the various sensors may collect environmental information, user information, and safety information, to name a few. Embodiments of these sensors may be as described in conjunction with Figs. 7A-8B.

[0183] Optionally, the sensors may include one or more of optical, or image, sensors 622A-B (e.g., cameras, etc.), motion sensors 624A-B (e.g., utilizing RF, IR, and/or other sound/image sensing, etc.), steering wheel user sensors 642 (e.g., heart rate, temperature, blood pressure, sweat, health, etc.), seat sensors 677 (e.g., weight, load cell, moisture,

electrical, force transducer, etc.), safety restraint sensors 679 (e.g., seatbelt, airbag, load cell, force transducer, etc.), interior sound receivers 692A-B, environmental sensors 694 (e.g., temperature, humidity, air, oxygen, etc.), and the like.

[0184] The image sensors 622A-B may be used alone or in combination to identify objects, users 216, and/or other features, inside the vehicle 104. Optionally, a first image sensor 622A may be located in a different position within a vehicle 104 from a second image sensor 622B. When used in combination, the image sensors 622A-B may combine captured images to form, among other things, stereo and/or three-dimensional (3D) images. The stereo images can be recorded and/or used to determine depth associated with objects and/or users 216 in a vehicle 104. Optionally, the image sensors 622A-B used in combination may determine the complex geometry associated with identifying characteristics of a user 216. For instance, the image sensors 622A-B may be used to determine dimensions between various features of a user's face (e.g., the depth/distance from a user's nose to a user's cheeks, a linear distance between the center of a user's eyes, and more). These dimensions may be used to verify, record, and even modify characteristics that serve to identify a user 216. As can be appreciated, utilizing stereo images can allow for a user 216 to provide complex gestures in a 3D space of the vehicle 104. These gestures may be interpreted via one or more of the subsystems as disclosed herein. Optionally, the image sensors 622A-B may be used to determine movement associated with objects and/or users 216 within the vehicle 104. It should be appreciated that the number of image sensors used in a vehicle 104 may be increased to provide greater dimensional accuracy and/or views of a detected image in the vehicle 104.

[0185] The vehicle 104 may include one or more motion sensors 624A-B. These motion sensors 624A-B may detect motion and/or movement of objects inside the vehicle 104. Optionally, the motion sensors 624A-B may be used alone or in combination to detect movement. For example, a user 216 may be operating a vehicle 104 (e.g., while driving, etc.) when a passenger in the rear of the vehicle 104 unbuckles a safety belt and proceeds to move about the vehicle 104. In this example, the movement of the passenger could be detected by the motion sensors 624A-B. Optionally, the user 216 could be alerted of this movement by one or more of the devices 212, 248 in the vehicle 104. In another example, a passenger may attempt to reach for one of the vehicle control features (e.g., the steering wheel 640, the console, icons displayed on the head unit and/or device 212, 248, etc.). In this case, the movement (i.e., reaching) of the passenger may be detected by the motion sensors 624A-B. Optionally, the path, trajectory, anticipated path, and/or some other

direction of movement/motion may be determined using the motion sensors 624A-B. In response to detecting the movement and/or the direction associated with the movement, the passenger may be prevented from interfacing with and/or accessing at least some of the vehicle control features (e.g., the features represented by icons may be hidden from a user interface, the features may be locked from use by the passenger, combinations thereof, etc.). As can be appreciated, the user 216 may be alerted of the movement/motion such that the user 216 can act to prevent the passenger from interfering with the vehicle 104 controls. Optionally, the number of motion sensors in a vehicle 104, or areas of a vehicle 104, may be increased to increase an accuracy associated with motion detected in the vehicle 104.

[0186] The interior sound receivers 692A-B may include, but are not limited to, microphones and other types of acoustic-to-electric transducers or sensors. Optionally, the interior sound receivers 692A-B may be configured to receive and convert sound waves into an equivalent analog or digital signal. The interior sound receivers 692A-B may serve to determine one or more locations associated with various sounds in the vehicle 104. The location of the sounds may be determined based on a comparison of volume levels, intensity, and the like, between sounds detected by two or more interior sound receivers 692A-B. For instance, a first interior sound receiver 692A may be located in a first area of the vehicle 104 and a second interior sound receiver 692B may be located in a second area of the vehicle 104. If a sound is detected at a first volume level by the first interior sound receiver 692A and a second, higher, volume level by the second interior sound receiver 692B in the second area of the vehicle 104, the sound may be determined to be closer to the second area of the vehicle 104. As can be appreciated, the number of sound receivers used in a vehicle 104 may be increased (e.g., more than two, etc.) to increase measurement accuracy surrounding sound detection and location, or source, of the sound (e.g., via triangulation, etc.).

[0187] Seat sensors 677 may be included in the vehicle 104. The seat sensors 677 may be associated with each seat and/or zone 512 in the vehicle 104. Optionally, the seat sensors 677 may provide health telemetry and/or identification via one or more of load cells, force transducers, weight sensors, moisture detection sensor, electrical conductivity/resistance sensor, and the like. For example, the seat sensors 677 may determine that a user 216 weighs 180 lbs. This value may be compared to user data stored in memory to determine whether a match exists between the detected weight and a user 216 associated with the vehicle 104. In another example, if the seat sensors 677 detect

that a user 216 is fidgeting, or moving, in a seemingly uncontrollable manner, the system may determine that the user 216 has suffered a nervous and/or muscular system issue (e.g., seizure, etc.). The vehicle control system 204 may then cause the vehicle 104 to slow down and in addition or alternatively the automobile controller 8104 (described below) can safely take control of the vehicle 104 and bring the vehicle 104 to a stop in a safe location (e.g., out of traffic, off a freeway, etc).

[0188] Health telemetry and other data may be collected via the steering wheel user sensors 642. Optionally, the steering wheel user sensors 642 may collect heart rate, temperature, blood pressure, and the like, associated with a user 216 via at least one contact disposed on or about the steering wheel 640.

[0189] The safety restraint sensors 679 may be employed to determine a state associated with one or more safety restraint devices in a vehicle 104. The state associated with one or more safety restraint devices may serve to indicate a force observed at the safety restraint device, a state of activity (e.g., retracted, extended, various ranges of extension and/or retraction, deployment, buckled, unbuckled, etc.), damage to the safety restraint device, and more.

[0190] Environmental sensors 694, including one or more of temperature, humidity, air, oxygen, carbon monoxide, smoke, and other environmental condition sensors may be used in a vehicle 104. These environmental sensors 694 may be used to collect data relating to the safety, comfort, and/or condition of the interior space 108 of the vehicle 104. Among other things, the data collected by the environmental sensors 694 may be used by the vehicle control system 204 to alter functions of a vehicle. The environment may correspond to an interior space 108 of a vehicle 104 and/or specific areas 508 and/or zones 512 of the vehicle 104. It should be appreciate that an environment may correspond to a user 216. For example, a low oxygen environment may be detected by the environmental sensors 694 and associated with a user 216 who is operating the vehicle 104 in a particular zone 512. In response to detecting the low oxygen environment, at least one of the subsystems of the vehicle 104, as provided herein, may alter the environment, especially in the particular zone 512, to increase the amount of oxygen in the zone 512. Additionally or alternatively, the environmental sensors 694 may be used to report conditions associated with a vehicle (e.g., fire detected, low oxygen, low humidity, high carbon monoxide, etc.). The conditions may be reported to a user 216 and/or a third party via at least one communications module as provided herein.

[0191] Among other things, the sensors as disclosed herein may communicate with each other, with devices 212, 248, and/or with the vehicle control system 204 via the signal carrier network 224. Additionally or alternatively, the sensors disclosed herein may serve to provide data relevant to more than one category of sensor information including, but not limited to, combinations of environmental information, user information, and safety information to name a few.

[0192] Figs. 7A-7B show block diagrams of various sensors that may be associated with a vehicle 104. Although depicted as interior and exterior sensors, it should be appreciated that any of the one or more of the sensors shown may be used in both the interior space 108 and the exterior space of the vehicle 104. Moreover, sensors having the same symbol or name may include the same, or substantially the same, functionality as those sensors described elsewhere in the present disclosure. Further, although the various sensors are depicted in conjunction with specific groups (e.g., environmental 708, 708E, user interface 712, safety 716, 716E, etc.) the sensors should not be limited to the groups in which they appear. In other words, the sensors may be associated with other groups or combinations of groups and/or disassociated from one or more of the groups shown. The sensors as disclosed herein may communicate with each other, the devices 212, 248, and/or the vehicle control system 204 via one or more communications channel(s) 356.

[0193] Fig. 7A is a block diagram of an embodiment of interior sensors 340 for a vehicle 104 is provided. The interior sensors 340 may be arranged into one or more groups, based at least partially on the function of the interior sensors 340. The interior space 108 of a vehicle 104 may include an environmental group 708, a user interface group 712, and a safety group 716. Additionally or alternatively, there may be sensors associated with various devices inside the vehicle (e.g., devices 212, 248, smart phones, tablets, mobile computers, etc.)

[0194] The environmental group 708 may comprise sensors configured to collect data relating to the internal environment of a vehicle 104. It is anticipated that the environment of the vehicle 104 may be subdivided into areas 508 and zones 512 in an interior space 108 of a vehicle 104. In this case, each area 508 and/or zone 512 may include one or more of the environmental sensors. Examples of environmental sensors associated with the environmental group 708 may include, but are not limited to, oxygen/air sensors 724, temperature sensors 728, humidity sensors 732, light/photo sensors 736, and more. The oxygen/air sensors 724 may be configured to detect a quality of the air in the interior space 108 of the vehicle 104 (e.g., ratios and/or types of gasses comprising the air inside the

vehicle 104, dangerous gas levels, safe gas levels, etc.). Temperature sensors 728 may be configured to detect temperature readings of one or more objects, users 216, and/or areas 508 of a vehicle 104. Humidity sensors 732 may detect an amount of water vapor present in the air inside the vehicle 104. The light/photo sensors 736 can detect an amount of light present in the vehicle 104. Further, the light/photo sensors 736 may be configured to detect various levels of light intensity associated with light in the vehicle 104.

[0195] The user interface group 712 may comprise sensors configured to collect data relating to one or more users 216 in a vehicle 104. As can be appreciated, the user interface group 712 may include sensors that are configured to collect data from users 216 in one or more areas 508 and zones 512 of the vehicle 104. For example, each area 508 and/or zone 512 of the vehicle 104 may include one or more of the sensors in the user interface group 712. Examples of user interface sensors associated with the user interface group 712 may include, but are not limited to, infrared sensors 740, motion sensors 744, weight sensors 748, wireless network sensors 752, biometric sensors 756, camera (or image) sensors 760, audio sensors 764, and more.

[0196] Infrared sensors 740 may be used to measure IR light irradiating from at least one surface, user 216, or other object in the vehicle 104. Among other things, the Infrared sensors 740 may be used to measure temperatures, form images (especially in low light conditions), identify users 216, and even detect motion in the vehicle 104.

[0197] The motion sensors 744 may be similar to the motion detectors 624A-B, as described in conjunction with Fig. 6B. Weight sensors 748 may be employed to collect data relating to objects and/or users 216 in various areas 508 of the vehicle 104. In some cases, the weight sensors 748 may be included in the seats and/or floor of a vehicle 104.

[0198] Optionally, the vehicle 104 may include a wireless network sensor 752. This sensor 752 may be configured to detect one or more wireless network(s) inside the vehicle 104. Examples of wireless networks may include, but are not limited to, wireless communications utilizing Bluetooth®, Wi-Fi™, ZigBee, IEEE 802.11, and other wireless technology standards. For example, a mobile hotspot may be detected inside the vehicle 104 via the wireless network sensor 752. In this case, the vehicle 104 may determine to utilize and/or share the mobile hotspot detected via/with one or more other devices 212, 248 and/or components associated with the vehicle 104.

[0199] Biometric sensors 756 may be employed to identify and/or record characteristics associated with a user 216. It is anticipated that biometric sensors 756 can include at least

one of image sensors, IR sensors, fingerprint readers, weight sensors, load cells, force transducers, heart rate monitors, blood pressure monitors, and the like as provided herein.

[0200] The camera sensors 760 may be similar to image sensors 622A-B, as described in conjunction with Fig. 6B. Optionally, the camera sensors may record still images, video, and/or combinations thereof. The audio sensors 764 may be similar to the interior sound receivers 692A-B, as described in conjunction with Figs. 6A-6B. The audio sensors may be configured to receive audio input from a user 216 of the vehicle 104. The audio input from a user 216 may correspond to voice commands, conversations detected in the vehicle 104, phone calls made in the vehicle 104, and/or other audible expressions made in the vehicle 104.

[0201] The safety group 716 may comprise sensors configured to collect data relating to the safety of a user 216 and/or one or more components of a vehicle 104. The vehicle 104 may be subdivided into areas 508 and/or zones 512 in an interior space 108 of a vehicle 104 where each area 508 and/or zone 512 may include one or more of the safety sensors provided herein. Examples of safety sensors associated with the safety group 716 may include, but are not limited to, force sensors 768, mechanical motion sensors 772, orientation sensors 776, restraint sensors 780, and more.

[0202] The force sensors 768 may include one or more sensors inside the vehicle 104 configured to detect a force observed in the vehicle 104. One example of a force sensor 768 may include a force transducer that converts measured forces (e.g., force, weight, pressure, etc.) into output signals.

[0203] Mechanical motion sensors 772 may correspond to encoders, accelerometers, damped masses, and the like. Optionally, the mechanical motion sensors 772 may be adapted to measure the force of gravity (i.e., G-force) as observed inside the vehicle 104. Measuring the G-force observed inside a vehicle 104 can provide valuable information related to a vehicle's acceleration, deceleration, collisions, and/or forces that may have been suffered by one or more users 216 in the vehicle 104. As can be appreciated, the mechanical motion sensors 772 can be located in an interior space 108 or an exterior of the vehicle 104.

[0204] Orientation sensors 776 can include accelerometers, gyroscopes, magnetic sensors, and the like that are configured to detect an orientation associated with the vehicle 104. Similar to the mechanical motion sensors 772, the orientation sensors 776 can be located in an interior space 108 or an exterior of the vehicle 104.

[0205] The restraint sensors 780 may be similar to the safety restraint sensors 679 as described in conjunction with Figs. 6A-6B. These sensors 780 may correspond to sensors associated with one or more restraint devices and/or systems in a vehicle 104. Seatbelts and airbags are examples of restraint devices and/or systems. As can be appreciated, the restraint devices and/or systems may be associated with one or more sensors that are configured to detect a state of the device/system. The state may include extension, engagement, retraction, disengagement, deployment, and/or other electrical or mechanical conditions associated with the device/system.

[0206] The associated device sensors 720 can include any sensors that are associated with a device 212, 248 in the vehicle 104. As previously stated, typical devices 212, 248 may include smart phones, tablets, laptops, mobile computers, and the like. It is anticipated that the various sensors associated with these devices 212, 248 can be employed by the vehicle control system 204. For example, a typical smart phone can include, an image sensor, an IR sensor, audio sensor, gyroscope, accelerometer, wireless network sensor, fingerprint reader, and more. It is an aspect of the present disclosure that one or more of these associated device sensors 720 may be used by one or more subsystems of the vehicle system 200.

[0207] In Fig. 7B, a block diagram of an embodiment of exterior sensors 340 for a vehicle 104 is shown. The exterior sensors may include sensors that are identical, or substantially similar, to those previously disclosed in conjunction with the interior sensors of Fig. 7A. Optionally, the exterior sensors 340 may be configured to collect data relating to one or more conditions, objects, users 216, and other events that are external to the interior space 108 of the vehicle 104. For instance, the oxygen/air sensors 724 may measure a quality and/or composition of the air outside of a vehicle 104. As another example, the motion sensors 744 may detect motion outside of a vehicle 104.

[0208] The external environmental group 708E may comprise sensors configured to collect data relating to the external environment of a vehicle 104. In addition to including one or more of the sensors previously described, the external environmental group 708E may include additional sensors, such as, vehicle sensors 750, biological sensors, and wireless signal sensors 758. Vehicle sensors 750 can detect vehicles that are in an environment surrounding the vehicle 104. For example, the vehicle sensors 750 may detect vehicles in a first outside area 516, a second outside area 520, and/or combinations of the first and second outside areas 516, 520. Optionally, the vehicle sensors 750 may include one or more of RF sensors, IR sensors, image sensors, and the like to detect

vehicles, people, hazards, etc. that are in an environment exterior to the vehicle 104. Additionally or alternatively, the vehicle sensors 750 can provide distance/directional information relating to a distance (e.g., distance from the vehicle 104 to the detected object) and/or a direction (e.g., direction of travel, etc.) associated with the detected object.

[0209] The biological sensors 754 may determine whether one or more biological entities (e.g., an animal, a person, a user 216, etc.) is in an external environment of the vehicle 104. Additionally or alternatively, the biological sensors 754 may provide distance information relating to a distance of the biological entity from the vehicle 104. Biological sensors 754 may include at least one of RF sensors, IR sensors, image sensors and the like that are configured to detect biological entities. For example, an IR sensor may be used to determine that an object, or biological entity, has a specific temperature, temperature pattern, or heat signature. Continuing this example, a comparison of the determined heat signature may be compared to known heat signatures associated with recognized biological entities (e.g., based on shape, locations of temperature, and combinations thereof, etc.) to determine whether the heat signature is associated with a biological entity or an inanimate, or non-biological, object.

[0210] The wireless signal sensors 758 may include one or more sensors configured to receive wireless signals from signal sources such as Wi-Fi™ hotspots, cell towers, roadside beacons, other electronic roadside devices, and satellite positioning systems. Optionally, the wireless signal sensors 758 may detect wireless signals from one or more of a mobile phone, mobile computer, keyless entry device, RFID device, near field communications (NFC) device, and the like.

[0211] The external safety group 716E may comprise sensors configured to collect data relating to the safety of a user 216 and/or one or more components of a vehicle 104. Examples of safety sensors associated with the external safety group 716E may include, but are not limited to, force sensors 768, mechanical motion sensors 772, orientation sensors 776, vehicle body sensors 782, and more. Optionally, the exterior safety sensors 716E may be configured to collect data relating to one or more conditions, objects, vehicle components, and other events that are external to the vehicle 104. For instance, the force sensors 768 in the external safety group 716E may detect and/or record force information associated with the outside of a vehicle 104. For instance, if an object strikes the exterior of the vehicle 104, the force sensors 768 from the exterior safety group 716E may determine a magnitude, location, and/or time associated with the strike.

[0212] The vehicle 104 may include a number of vehicle body sensors 782. The vehicle body sensors 782 may be configured to measure characteristics associated with the body (e.g., body panels, components, chassis, windows, etc.) of a vehicle 104. For example, two vehicle body sensors 782, including a first body sensor and a second body sensor, may be located at some distance apart. Continuing this example, the first body sensor may be configured to send an electrical signal across the body of the vehicle 104 to the second body sensor, or vice versa. Upon receiving the electrical signal from the first body sensor, the second body sensor may record a detected current, voltage, resistance, and/or combinations thereof associated with the received electrical signal. Values (e.g., current, voltage, resistance, etc.) for the sent and received electrical signal may be stored in a memory. These values can be compared to determine whether subsequent electrical signals sent and received between vehicle body sensors 782 deviate from the stored values. When the subsequent signal values deviate from the stored values, the difference may serve to indicate damage and/or loss of a body component. Additionally or alternatively, the deviation may indicate a problem with the vehicle body sensors 782. The vehicle body sensors 782 may communicate with each other, a vehicle control system 204, and/or systems of the vehicle system 200 via a communications channel 356. Although described using electrical signals, it should be appreciated that alternative embodiments of the vehicle body sensors 782 may use sound waves and/or light to perform a similar function.

[0213] Fig. 8A is a block diagram of an embodiment of a media controller subsystem 348 for a vehicle 104. The media controller subsystem 348 may include, but is not limited to, a media controller 804, a media processor 808, a match engine 812, an audio processor 816, a speech synthesis module 820, a network transceiver 824, a signal processing module 828, memory 832, and a language database 836. Optionally, the media controller subsystem 348 may be configured as a dedicated blade that implements the media-related functionality of the system 200. Additionally or alternatively, the media controller subsystem 348 can provide voice input, voice output, library functions for multimedia, and display control for various areas 508 and/or zones 512 of the vehicle 104.

[0214] Optionally, the media controller subsystem 348 may include a local IP address (e.g., IPv4, IPv6, combinations thereof, etc.) and even a routable, global unicast address. The routable, global unicast address may allow for direct addressing of the media controller subsystem 348 for streaming data from Internet resources (e.g., cloud storage, user accounts, etc.). It is anticipated, that the media controller subsystem 348 can provide

multimedia via at least one Internet connection, or wireless network communications module, associated with the vehicle 104. Moreover, the media controller subsystem 348 may be configured to service multiple independent clients simultaneously.

[0215] The media processor 808 may comprise a general purpose programmable processor or controller for executing application programming or instructions related to the media subsystem 348. The media processor 808 may include multiple processor cores, and/or implement multiple virtual processors. Optionally, the media processor 808 may include multiple physical processors. By way of example, the media processor 808 may comprise a specially configured application specific integrated circuit (ASIC) or other integrated circuit, a digital signal processor, a controller, a hardwired electronic or logic circuit, a programmable logic device or gate array, a special purpose computer, or the like. The media processor 808 generally functions to run programming code or instructions implementing various functions of the media controller 804.

[0216] The match engine 812 can receive input from one or more components of the vehicle system 800 and perform matching functions. Optionally, the match engine 812 may receive audio input provided via a microphone 886 of the system 800. The audio input may be provided to the media controller subsystem 348 where the audio input can be decoded and matched, via the match engine 812, to one or more functions available to the vehicle 104. Similar matching operations may be performed by the match engine 812 relating to video input received via one or more image sensors, cameras 878, and the like.

[0217] The media controller subsystem 348 may include a speech synthesis module 820 configured to provide audio output to one or more speakers 880, or audio output devices, associated with the vehicle 104. Optionally, the speech synthesis module 820 may be configured to provide audio output based at least partially on the matching functions performed by the match engine 812.

[0218] As can be appreciated, the coding/decoding, the analysis of audio input/output, and/or other operations associated with the match engine 812 and speech synthesis module 820, may be performed by the media processor 808 and/or a dedicated audio processor 816. The audio processor 816 may comprise a general purpose programmable processor or controller for executing application programming or instructions related to audio processing. Further, the audio processor 816 may be similar to the media processor 808 described herein.

[0219] The network transceiver 824 can include any device configured to transmit and receive analog and/or digital signals. Optionally, the media controller subsystem 348 may

utilize a network transceiver 824 in one or more communication networks associated with the vehicle 104 to receive and transmit signals via the communications channel 356. Additionally or alternatively, the network transceiver 824 may accept requests from one or more devices 212, 248 to access the media controller subsystem 348. One example of the communication network is a local-area network (LAN). As can be appreciated, the functionality associated with the network transceiver 824 may be built into at least one other component of the vehicle 104 (e.g., a network interface card, communications module, etc.).

[0220] The signal processing module 828 may be configured to alter audio/multimedia signals received from one or more input sources (e.g., microphones 886, etc.) via the communications channel 356. Among other things, the signal processing module 828 may alter the signals received electrically, mathematically, combinations thereof, and the like.

[0221] The media controller 804 may also include memory 832 for use in connection with the execution of application programming or instructions by the media processor 808, and for the temporary or long term storage of program instructions and/or data. As examples, the memory 832 may comprise RAM, DRAM, SDRAM, or other solid state memory.

[0222] The language database 836 may include the data and/or libraries for one or more languages, as are used to provide the language functionality as provided herein. In one case, the language database 836 may be loaded on the media controller 804 at the point of manufacture. Optionally, the language database 836 can be modified, updated, and/or otherwise changed to alter the data stored therein. For instance, additional languages may be supported by adding the language data to the language database 836. In some cases, this addition of languages can be performed via accessing administrative functions on the media controller 804 and loading the new language modules via wired (e.g., USB, etc.) or wireless communication. In some cases, the administrative functions may be available via a vehicle console device 248, a user device 212, 248, and/or other mobile computing device that is authorized to access administrative functions (e.g., based at least partially on the device's address, identification, etc.).

[0223] One or more video controllers 840 may be provided for controlling the video operation of the devices 212, 248, 882 associated with the vehicle. Optionally, the video controller 840 may include a display controller for controlling the operation of touch sensitive screens, including input (touch sensing) and output (display) functions. Video data may include data received in a stream and unpacked by a processor and loaded into a

display buffer. In this example, the processor and video controller 840 can optimize the display based on the characteristics of a screen of a display device 212, 248, 882. The functions of a touch screen controller may be incorporated into other components, such as a media processor 808 or display subsystem.

[0224] The audio controller 844 can provide control of the audio entertainment system (e.g., radio, subscription music service, multimedia entertainment, etc.), and other audio associated with the vehicle 104 (e.g., navigation systems, vehicle comfort systems, convenience systems, etc.). Optionally, the audio controller 844 may be configured to translate digital signals to analog signals and vice versa. As can be appreciated, the audio controller 844 may include device drivers that allow the audio controller 844 to communicate with other components of the system 800 (e.g., processors 816, 808, audio I/O 874, and the like).

[0225] The system 800 may include a profile identification module 848 to determine whether a user profile is associated with the vehicle 104. Among other things, the profile identification module 848 may receive requests from a user 216, or device 212, 228, 248, to access a profile stored in a profile database 856 or profile data 252. Additionally or alternatively, the profile identification module 848 may request profile information from a user 216 and/or a device 212, 228, 248, to access a profile stored in a profile database 856 or profile data 252. In any event, the profile identification module 848 may be configured to create, modify, retrieve, and/or store user profiles in the profile database 856 and/or profile data 252. The profile identification module 848 may include rules for profile identification, profile information retrieval, creation, modification, and/or control of components in the system 800.

[0226] By way of example, a user 216 may enter the vehicle 104 with a smart phone or other device 212. In response to determining that a user 216 is inside the vehicle 104, the profile identification module 848 may determine that a user profile is associated with the user's smart phone 212. As another example, the system 800 may receive information about a user 216 (e.g., from a camera 878, microphone 886, etc.), and, in response to receiving the user information, the profile identification module 848 may refer to the profile database 856 to determine whether the user information matches a user profile stored in the database 856. It is anticipated that the profile identification module 848 may communicate with the other components of the system to load one or more preferences, settings, and/or conditions based on the user profile. Further, the profile identification

module 848 may be configured to control components of the system 800 based on user profile information.

[0227] Optionally, data storage 852 may be provided. Like the memory 832, the data storage 852 may comprise a solid state memory device or devices. Alternatively or in addition, the data storage 852 may comprise a hard disk drive or other random access memory. Similar to the data storage 852, the profile database 856 may comprise a solid state memory device or devices.

[0228] An input/output module 860 and associated ports may be included to support communications over wired networks or links, for example with other communication devices, server devices, and/or peripheral devices. Examples of an input/output module 860 include an Ethernet port, a Universal Serial Bus (USB) port, CAN Bus, Institute of Electrical and Electronics Engineers (IEEE) 1594, or other interface. Users may bring their own devices (e.g., Bring Your Own Device (BYOD), device 212, etc.) into the vehicle 104 for use with the various systems disclosed. Although most BYOD devices can connect to the vehicle systems (e.g., the media controller subsystem 348, etc.) via wireless communications protocols (e.g., Wi-Fi™, Bluetooth®, etc.) many devices may require a direct connection via USB, or similar. In any event, the input/output module 860 can provide the necessary connection of one or more devices to the vehicle systems described herein.

[0229] A video input/output interface 864 can be included to receive and transmit video signals between the various components in the system 800. Optionally, the video input/output interface 864 can operate with compressed and uncompressed video signals. The video input/output interface 864 can support high data rates associated with image capture devices. Additionally or alternatively, the video input/output interface 864 may convert analog video signals to digital signals.

[0230] The infotainment system 870 may include information media content and/or entertainment content, informational devices, entertainment devices, and the associated programming therefor. Optionally, the infotainment system 870 may be configured to handle the control of one or more components of the system 800 including, but in no way limited to, radio, streaming audio/video devices, audio devices 880, 882, 886, video devices 878, 882, travel devices (e.g., GPS, navigational systems, etc.), wireless communication devices, network devices, and the like. Further, the infotainment system 870 can provide the functionality associated with other infotainment features as provided herein.

[0231] An audio input/output interface 874 can be included to provide analog audio to an interconnected speaker 880 or other device, and to receive analog audio input from a connected microphone 886 or other device. As an example, the audio input/output interface 874 may comprise an associated amplifier and analog to digital converter. Alternatively or in addition, the devices 212, 248 can include integrated audio input/output devices 880, 886 and/or an audio jack for interconnecting an external speaker 880 or microphone 886. For example, an integrated speaker 880 and an integrated microphone 886 can be provided, to support near talk, voice commands, spoken information exchange, and/or speaker phone operations.

[0232] Among other things, the system 800 may include devices that are part of the vehicle 104 and/or part of a device 212, 248 that is associated with the vehicle 104. For instance, these devices may be configured to capture images, display images, capture sound, and present sound. Optionally, the system 800 may include at least one of image sensors/cameras 878, display devices 882, audio input devices/microphones 886, and audio output devices/speakers 880. The cameras 878 can be included for capturing still and/or video images. Alternatively or in addition, image sensors 878 can include a scanner or code reader. An image sensor/camera 878 can include or be associated with additional elements, such as a flash or other light source. In some cases, the display device 882 may include an audio input device and/or an audio output device in addition to providing video functions. For instance, the display device 882 may be a console, monitor, a tablet computing device, and/or some other mobile computing device.

[0233] Fig. 8B is a block diagram of an embodiment of a user/device interaction subsystem 817 in a vehicle system 800. The user/device interaction subsystem 817 may comprise hardware and/or software that conduct various operations for or with the vehicle 104. For instance, the user/device interaction subsystem 817 may include at least one user interaction subsystem 332 and device interaction subsystem 352 as previously described. These operations may include, but are not limited to, providing information to the user 216, receiving input from the user 216, and controlling the functions or operation of the vehicle 104, etc. Among other things, the user/device interaction subsystem 817 may include a computing system operable to conduct the operations as described herein.

[0234] Optionally, the user/device interaction subsystem 817 can include one or more of the components and modules provided herein. For instance, the user/device interaction subsystem 817 can include one or more of a video input/output interface 864, an audio input/output interface 874, a sensor module 814, a device interaction module 818, a user

identification module 822, a vehicle control module 826, an environmental control module 830, and a gesture control module 834. The user/device interaction subsystem 817 may be in communication with other devices, modules, and components of the system 800 via the communications channel 356.

[0235] The user/device interaction subsystem 817 may be configured to receive input from a user 216 and/or device via one or more components of the system. By way of example, a user 216 may provide input to the user/device interaction subsystem 817 via wearable devices 802, 806, 810, video input (e.g., via at least one image sensor/camera 878, etc.) audio input (e.g., via the microphone, audio input source, etc.), gestures (e.g., via at least one image sensor 878, motion sensor 888, etc.), device input (e.g., via a device 212, 248 associated with the user, etc.), combinations thereof, and the like.

[0236] The wearable devices 802, 806, 810 can include heart rate monitors, blood pressure monitors, glucose monitors, pedometers, movement sensors, wearable computers, and the like. Examples of wearable computers may be worn by a user 216 and configured to measure user activity, determine energy spent based on the measured activity, track user sleep habits, determine user oxygen levels, monitor heart rate, provide alarm functions, and more. It is anticipated that the wearable devices 802, 806, 810 can communicate with the user/device interaction subsystem 817 via wireless communications channels or direct connection (e.g., where the device docks, or connects, with a USB port or similar interface of the vehicle 104).

[0237] A sensor module 814 may be configured to receive and/or interpret input provided by one or more sensors in the vehicle 104. In some cases, the sensors may be associated with one or more user devices (e.g., wearable devices 802, 806, 810, smart phones 212, mobile computing devices 212, 248, and the like). Optionally, the sensors may be associated with the vehicle 104, as described in conjunction with Figs. 6A-7B.

[0238] The device interaction module 818 may communicate with the various devices as provided herein. Optionally, the device interaction module 818 can provide content, information, data, and/or media associated with the various subsystems of the vehicle system 800 to one or more devices 212, 248, 802, 806, 810, 882, etc. Additionally or alternatively, the device interaction module 818 may receive content, information, data, and/or media associated with the various devices provided herein.

[0239] The user identification module 822 may be configured to identify a user 216 associated with the vehicle 104. The identification may be based on user profile information that is stored in profile data 252. For instance, the user identification module

822 may receive characteristic information about a user 216 via a device, a camera, and/or some other input. The received characteristics may be compared to data stored in the profile data 252. Where the characteristics match, the user 216 is identified. As can be appreciated, where the characteristics do not match a user profile, the user identification module 822 may communicate with other subsystems in the vehicle 104 to obtain and/or record profile information about the user 216. This information may be stored in a memory and/or the profile data storage 252.

[0240] The vehicle control module 826 may be configured to control settings, features, and/or the functionality of a vehicle 104. In some cases, the vehicle control module 826 can communicate with the vehicle control system 204 to control critical functions (e.g., driving system controls, braking, accelerating, etc.) and/or noncritical functions (e.g., driving signals, indicator/hazard lights, mirror controls, window actuation, etc.) based at least partially on user/device input received by the user/device interaction subsystem 817.

[0241] The environmental control module 830 may be configured to control settings, features, and/or other conditions associated with the environment, especially the interior environment, of a vehicle 104. Optionally, the environmental control module 830 may communicate with the climate control system (e.g. changing cabin temperatures, fan speeds, air direction, etc.), oxygen and/or air quality control system (e.g., increase/decrease oxygen in the environment, etc.), interior lighting (e.g., changing intensity of lighting, color of lighting, etc.), an occupant seating system 648 (e.g., adjusting seat position, firmness, height, etc.), steering wheel 640 (e.g., position adjustment, etc.), infotainment/entertainment system (e.g., adjust volume levels, display intensity adjustment, change content, etc.), and/or other systems associated with the vehicle environment. Additionally or alternatively, these systems can provide input, set-points, and/or responses, to the environmental control module 830. As can be appreciated, the environmental control module 830 may control the environment based at least partially on user/device input received by the user/device interaction subsystem 817.

[0242] The gesture control module 834 is configured to interpret gestures provided by a user 216 in the vehicle 104. Optionally, the gesture control module 834 may provide control signals to one or more of the vehicle systems 300 disclosed herein. For example, a user 216 may provide gestures to control the environment, critical and/or noncritical vehicle functions, the infotainment system, communications, networking, and more. Optionally, gestures may be provided by a user 216 and detected via one or more of the sensors as described in conjunction with Figs. 6B-7A. As another example, one or more

motion sensors 888 may receive gesture input from a user 216 and provide the gesture input to the gesture control module 834. Continuing this example, the gesture input is interpreted by the gesture control module 834. This interpretation may include comparing the gesture input to gestures stored in a memory. The gestures stored in memory may include one or more functions and/or controls mapped to specific gestures. When a match is determined between the detected gesture input and the stored gesture information, the gesture control module 834 can provide a control signal to any of the systems/subsystems as disclosed herein.

[0243] Fig. 8C illustrates a GPS/Navigation subsystem(s) 336. The Navigation subsystem(s) 336 can be any present or future-built navigation system that may use location data, for example, from the Global Positioning System (GPS), to provide navigation information or control the vehicle 104. The Navigation subsystem(s) 336 can include several components or modules, such as, one or more of, but not limited to, a GPS Antenna/receiver 892, a location module 896, a maps database 8100, an automobile controller 8104, a vehicle systems transceiver 8108, a traffic controller 8112, a network traffic transceiver 8116, a vehicle-to-vehicle transceiver 8120, a traffic information database 8124, etc. Generally, the several components or modules 892-8124 may be hardware, software, firmware, computer readable media, or combinations thereof.

[0244] A GPS Antenna/receiver 892 can be any antenna, GPS puck, and/or receiver capable of receiving signals from a GPS satellite or other navigation system, as mentioned hereinbefore. The signals may be demodulated, converted, interpreted, etc. by the GPS Antenna/receiver 892 and provided to the location module 896. Thus, the GPS Antenna/receiver 892 may convert the time signals from the GPS system and provide a location (e.g., coordinates on a map) to the location module 896. Alternatively, the location module 896 can interpret the time signals into coordinates or other location information.

[0245] The location module 896 can be the controller of the satellite navigation system designed for use in automobiles. The location module 896 can acquire position data, as from the GPS Antenna/receiver 892, to locate the user or vehicle 104 on a road in the unit's map database 8100. Using the road database 8100, the location module 896 can give directions to other locations along roads also in the database 8100. When a GPS signal is not available, the location module 896 may apply dead reckoning to estimate distance data from sensors 242 including one or more of, but not limited to, a speed sensor attached to the drive train of the vehicle 104, a gyroscope, an accelerometer, etc. GPS signal loss

and/or multipath can occur due to urban canyons, tunnels, and other obstructions. Additionally or alternatively, the location module 896 may use known locations of Wi-Fi hotspots, cell tower data, etc. to determine the position of the vehicle 104, such as by using time difference of arrival (TDOA) and/or frequency difference of arrival (FDOA) techniques.

[0246] The maps database 8100 can include any hardware and/or software to store information about maps, geographical information system information, location information, etc. The maps database 8100 can include any data definition or other structure to store the information. Generally, the maps database 8100 can include a road database that may include one or more vector maps of areas of interest. Street names, street numbers, house numbers, and other information can be encoded as geographic coordinates so that the user can find some desired destination by street address. Points of interest (waypoints) can also be stored with their geographic coordinates. For example, a point of interest may include speed cameras, fuel stations, public parking, and "parked here" (or "you parked here") information. The map database contents can be produced or updated by a server connected through a wireless system in communication with the Internet, even as the vehicle 104 is driven along existing streets, yielding an up-to-date map.

[0247] An automobile controller 8104 can be any hardware and/or software that can receive instructions from the location module 896 or the traffic controller 8112 and operate the vehicle 104. The automobile controller 8104 receives this information and data from the sensors 242 to operate the vehicle 104 without driver input. Thus, the automobile controller 8104 can drive the vehicle 104 along a route provided by the location module 896. The route may be adjusted by information sent from the traffic controller 8112. Discrete and real-time driving can occur with data from the sensors 242. To operate the vehicle 104, the automobile controller 8104 can communicate with a vehicle systems transceiver 8108.

[0248] The vehicle systems transceiver 8108 can be any present or future-developed device that can comprise a transmitter and/or a receiver, which may be combined and can share common circuitry or a single housing. The vehicle systems transceiver 8108 may communicate or instruct one or more of the vehicle control subsystems 328. For example, the vehicle systems transceiver 8108 may send steering commands, as received from the automobile controller 8104, to an electronic steering system, to adjust the steering of the vehicle 100 in real time. The automobile controller 8104 can determine the effect of the

commands based on received sensor data 242 and can adjust the commands as need be. The vehicle systems transceiver 8108 can also communicate with the braking system, the engine and drive train to speed or slow the car, the signals (e.g., turn signals and brake lights), the headlights, the windshield wipers, etc. Any of these communications may occur over the components or function as described in conjunction with Fig. 4.

[0249] A traffic controller 8112 can be any hardware and/or software that can communicate with an automated traffic system and adjust the function of the vehicle 104 based on instructions from the automated traffic system. An automated traffic system is a system that manages the traffic in a given area. This automated traffic system can instruct cars to drive in certain lanes, instruct cars to raise or lower their speed, instruct a car to change their route of travel, instruct cars to communicate with other cars, etc. To perform these functions, the traffic controller 8112 may register the vehicle 104 with the automated traffic system and then provide other information including the route of travel. The automated traffic system can return registration information and any required instructions. The communications between the automated traffic system and the traffic controller 8112 may be received and sent through a network traffic transceiver 8116.

[0250] The network traffic transceiver 8116 can be any present or future-developed device that can comprise a transmitter and/or a receiver, which may be combined and can share common circuitry or a single housing. The network traffic transceiver 8116 may communicate with the automated traffic system using any known or future-developed, protocol, standard, frequency, bandwidth range, etc. The network traffic transceiver 8116 enables the sending of information between the traffic controller 8112 and the automated traffic system.

[0251] The traffic controller 8112 can also communicate with another vehicle, which may be in physical proximity (i.e., within range of a wireless signal), using the vehicle-to-vehicle transceiver 8120. As with the network traffic transceiver 8116, the vehicle-to-vehicle transceiver 8120 can be any present or future-developed device that can comprise a transmitter and/or a receiver, which may be combined and can share common circuitry or a single housing. Generally, the vehicle-to-vehicle transceiver 8120 enables communication between the vehicle 104 and any other vehicle. These communications allow the vehicle 104 to receive traffic or safety information, control or be controlled by another vehicle, establish an alternative communication path to communicate with the automated traffic system, establish a node including two or more vehicle that can function as a unit, etc. The vehicle-to-vehicle transceiver 8120 may communicate with the other

vehicles using any known or future-developed, protocol standard, frequency, bandwidth range, etc.

[0252] The traffic controller 8112 can control functions of the automobile controller 8104 and communicate with the location module 896. The location module 896 can provide current location information and route information that the traffic controller 8112 may then provide to the automated traffic system. The traffic controller 8112 may receive route adjustments from the automated traffic system that are then sent to the location module 896 to change the route. Further, the traffic controller 8112 can also send driving instructions to the automobile controller 8104 to change the driving characteristics of the vehicle 104. For example, the traffic controller 8112 can instruct the automobile controller 8104 to accelerate or decelerate to a different speed, change lanes, or perform another driving maneuver. The traffic controller 8112 can also manage vehicle-to-vehicle communications and store information about the communications or other information in the traffic information database 8124.

[0253] The traffic information database 8124 can be any type of database, such as relational, hierarchical, object-oriented, and/or the like. The traffic information database 8124 may reside on a storage medium local to (and/or resident in) the vehicle control system 204 or in the vehicle 104. The traffic information database 8124 may be adapted to store, update, and retrieve information about communications with other vehicles or any active instructions from the automated traffic system. This information may be used by the traffic controller 8112 to instruct or adjust the performance of driving maneuvers.

[0254] Fig. 9 illustrates an optional communications architecture where, the host device 908 may include one more routing profiles, permission modules, and rules that control how communications within the vehicle 104 are to occur. This communications architecture can be used in conjunction with the routing tables, rules and permissions associated with access point 456 and optional firewall 484, or can be in lieu thereof. For example, the host device 908 acts as a mobile hot spot to one or more other devices within vehicle 104, such as, other device 1 912, other device 2 916, other device 3 920, and other device N 924. Optionally, one or more of the other devices 912 can communicate directly with the host device 908 which then provides Internet access to those devices 912 via the device 908. The host device 908 can act as a mobile hot spot for any one or more of the other devices 912, which may not need to communicate over the network/communications buses 224/404, but could instead connect directly to the host device 908 via, for example, NFC, Bluetooth®, WiFi, or the like. When the device 908 is acting as the host device, the

device 908 can include one or more routing profiles, permissions, rules modules, and can also act as a firewall for the various inter and intra vehicle communications.

[0255] As will be appreciated, there could be alternative host devices, such as, host 904 which could also act as, for example, a co-host in association with device 908. Optionally, one or more of the routing profile, permission information, and rules could be shared between the co-host devices 904, 908, both of those devices being usable for Internet access for one or more of the other devices, 912-924. As will be appreciated, the other devices 912-924 need not necessarily connect to one or more of host device 908 and the other device 904 via a direct communications link, but could also interface with those devices 904, 908 utilizing the network /communications buses 224/404 associated with the vehicle100. As previously discussed, one or more of the other devices can connect to the network/communications buses 224/404 utilizing the various networks and/or buses discussed herein which would therefore enable, for example, regulation of the various communications based on the Ethernet zone that the other device 912 is associated with.

[0256] An embodiment of one or more modules that may be associated with the vehicle control system 204 may be as shown in Fig. 10. The modules can include a communication subsystem interface 1008 in communication with an operating system 1004. The communications may pass through a firewall 1044. The firewall 1044 can be any software that can control the incoming and outgoing communications by analyzing the data packets and determining whether the packets should be allowed through the firewall, based on applied rule set. A firewall 1044 can establish a "barrier" between a trusted, secure internal network and another network (e.g., the Internet) that is not assumed to be secure and trusted.

[0257] In some situations, the firewall 1044 may establish security zones that are implemented by running system services and/or applications in restricted user groups and accounts. A set of configuration files and callbacks may then be linked to an IP table firewall. The IP table firewall can be configured to notify a custom filter application at any of the layers of the Ethernet packet. The different users/group rights to access the system may include: system users, which may have exclusive right over all device firewall rules and running software; a big-brother user, which may have access to on board device (OBD) control data and may be able to communicate with the vehicle subsystem 328 and may be able to alter the parameters in the vehicle control system 204; a dealer user, which can have rights to read OBD data for diagnostics and repairs; a dashboard user, which can have rights to launch dashboard applications and/or authenticate guest users and change

their permissions to trusted/friend/family, and can read but cannot write into OBD diagnostic data; a world wide web (WWW) data user, which can have HTTP rights to respond to HTTP requests (the HTTP requests also can target different user data, but may be filtered by default user accounts); a guest user, which may have no rights; a family/friend user, which may have rights to play media from the media subsystem 348 and/or to stream media to the media subsystem 348.

[0258] The operating system 1004 can be a collection of software that manages computer hardware resources and provides common services for applications and other programs. The operating system 1004 may schedule time-sharing for efficient use of the system. For hardware functions, such as input, output, and memory allocation, the operating system 1004 can act as an intermediary between applications or programs and the computer hardware. Examples of operating systems that may be deployed as operating system 1004 include Android, BSD, iOS, Linux, OS X, QNX, Microsoft Windows, Windows Phone, IBM z/OS, etc.

[0259] The operating system 1004 can include one or more sub-modules. For example, a desktop manager 1012 can manage one or more graphical user interfaces (GUI) in a desktop environment. Desktop GUIs can help the user to easily access and edit files. A command-line interface (CLI) may be used if full control over the operating system (OS) 1004 is required. The desktop manager 1012 is described further hereinafter.

[0260] A kernel 1028 can be a computer program that manages input/output requests from software and translates them into data processing instructions for the processor 304 and other components of the vehicle control system 204. The kernel 1028 is the fundamental component of the operating system 1004 that can execute many of the functions associated with the OS 1004.

[0261] The kernel 1028 can include other software functions, including, but not limited to, driver(s) 1056, communication software 1052, and/or Internet Protocol software 1048. A driver 1056 can be any computer program that operates or controls a particular type of device that is attached to a vehicle control system 204. A driver 1056 can communicate with the device through the bus 356 or communications subsystem 1008 to which the hardware connects. When a calling program invokes a routine in the driver 1056, the driver 1056 may issue one or more commands to the device. Once the device sends data back to the driver 1056, the driver 1056 may invoke routines in the original calling program. Drivers can be hardware-dependent and operating-system-specific. Driver(s)

1056 can provide the interrupt handling required for any necessary asynchronous time-dependent hardware interface.

[0262] The IP module 1048 can conduct any IP addressing, which may include the assignment of IP addresses and associated parameters to host interfaces. The address space may include networks and sub-networks. The IP module 1048 can perform the designation of network or routing prefixes and may conduct IP routing, which transports packets across network boundaries. Thus, the IP module 1048 may perform all functions required for IP multicast operations.

[0263] The communications module 1052 may conduct all functions for communicating over other systems or using other protocols not serviced by the IP module 1048. Thus, the communications module 1052 can manage multicast operations over other busses or networks not serviced by the IP module 1048. Further, the communications module 1052 may perform or manage communications to one or more devices, systems, data stores, services, etc. that are in communication with the vehicle control system 204 or other subsystems through the firewall 1044. Thus, the communications module 1052 can conduct communications through the communication subsystem interface 1008.

[0264] A file system 1016 may be any data handling software that can control how data is stored and retrieved. The file system 1016 can separate the stored data into individual pieces, and giving each piece a name, can easily separate and identify the pieces of data. Each piece of data may be considered a "file". The file system 1016 can construct data structure and logic rules used to manage the information and the identifiers for the information. The structure and logic rules can be considered a "file system."

[0265] A device discovery daemon 1020 may be a computer program that runs as a background process that can discover new devices that connect with the network 356 or communication subsystem 1008 or devices that disconnect from the network 356 or communication subsystem 1008. The device discovery daemon 1020 can ping the network 356 (the local subnet) when the vehicle 104 starts, when a vehicle door opens or closes, or upon the occurrence of other events. Additionally or alternatively, the device discovery daemon 1020 may force Bluetooth®, USB, and/or wireless detection. For each device that responds to the ping, the device discovery daemon 1020 can populate the system data 208 with device information and capabilities, using any of one or more protocols, including one or more of, but not limited to, IPv6 Hop-by-Hop Option (HOPOPT), Internet Control Message Protocol (ICMP), Internet Group Management Protocol (IGMP), Gateway-to-Gateway Protocol (GGP), Internet Protocol (IP), Internet

Stream Protocol (ST), Transmission Control Protocol (TCP), Exterior Gateway Protocol (EGP), CHAOS, User Datagram Protocol (UDP), etc.

[0266] For example, the device discovery daemon 1020 can determine device capabilities based on the opened ports the device exposes. If a camera exposes port 80, then the device discovery daemon 1020 can determine that the camera is using a Hypertext Transfer Protocol (HTTP). Alternatively, if a device is supporting Universal Plug and Play (UPnP), the system data 208 can include more information, for example, a camera control universal resource locator (URL), a camera zoom URL, etc. When a scan stops, the device discovery daemon 1020 can trigger a dashboard refresh to ensure the user interface reflects the new devices on the desktop.

[0267] A desktop manager 1012 may be a computer program that manages the user interface of the vehicle control system 204. The desktop environment may be designed to be customizable and allow the definition of the desktop configuration look-and-feel for a wide range of appliances or devices from computer desktops, mobile devices, computer tablets, etc. Launcher(s), panels, desktop areas, the desktop background, notifications, panes, etc., can be configured from a dashboard configuration file managed by the desktop manager 1012. The graphical elements in which the desktop manager 1012 controls can include launchers, the desktop, notification bars, etc.

[0268] The desktop may be an area of the display where the applications are running. The desktop can have a custom background. Further, the desktop may be divided into two or more areas. For example, the desktop may be divided into an upper half of a display and a lower half of the display. Each application can be configured to run in a portion of the desktop. Extended settings can be added to the desktop configuration file, such that, some objects may be displayed over the whole desktop or in custom size out of the context of the divided areas.

[0269] The notification bar may be a part of a bar display system, which may provide notifications by displaying, for example, icons and/or pop-up windows that may be associated with sound notifications. The notification mechanism can be designed for separate plug-ins, which run in separate processes and may subscribe to a system Intelligent Input Bus (IBUS)/D-BUS event service. The icons on the notifications bar can be accompanied with application short-cuts to associated applications, for example, a Bluetooth® manager, a USB manager, radio volume and or tone control, a security firewall, etc.

[0270] The desktop manager 1012 may include a windows manager 1032, an application launcher 1036, and/or a panel launcher 1040. Each of these components can control a different aspect of the user interface. The desktop manager 1012 can use a root window to create panels that can include functionality for one or more of, but not limited to: launching applications, managing applications, providing notifications, etc.

[0271] The windows manager 1032 may be software that controls the placement and appearance of windows within a graphical user interface presented to the user. Generally, the windows manager 1032 can provide the desktop environment used by the vehicle control system 204. The windows manager 1032 can communicate with the kernel 1028 to interface with the graphical system that provides the user interface(s) and supports the graphics hardware, pointing devices, keyboard, touch-sensitive screens, etc. The windows manager 1032 may be a tiling window manager (i.e., a window manager with an organization of the screen into mutually non-overlapping frames, as opposed to a coordinate-based stacking of overlapping objects (windows) that attempts to fully emulate the desktop metaphor). The windows manager 1032 may read and store configuration files, in the system data 208, which can control the position of the application windows at precise positions.

[0272] An application manager 1036 can control the function of any application over the lifetime of the process. The process or application can be launched from a panel launcher 1040 or from a remote console. The application manager 1036 can intercept the process name and may take appropriate action to manage that process. If the process is not running, the application manager 1036 can load the process and may bring the process to a foreground in a display. The application manager 1036 may also notify the windows manager 1032 to bring the associated window(s) to a top of a window stack for the display. When a process starts from a shell or a notification out of the context of the desktop, the application manager 1036 can scan files to match the process name with the entry name provided. When a match is found, the application manager 1036 can configure the process according to a settings file.

[0273] In some situations, the application manager 1036 may restrict an application as singleton (i.e., restricts the instantiation of a class to one object). If an application is already running and the application manager 1036 is asked to run the application again, the application manager 1036 can bring the running process to a foreground on a display. There can be a notification event exchange between the windows manager 1032 and the application manager 1036 for activating the appropriate window for the foreground

process. Once an application is launched, the application may not be terminated or killed. The application can be sent to the background, except, possibly, for some applications (e.g., media player, Bluetooth®, notifications, etc.), which may be given a lowest process priority.

[0274] The panel launcher 1040 can be a widget configured to be placed along a portion of the display. The panel launcher 1040 may be built from desktop files from a desktop folder. The desktop folder location can be configured by a configuration file stored in system data 208. The panel launcher 1040 can allow for the launching or executing of applications or processes by receiving inputs from a user interface to launch programs.

[0275] A desktop plugin 1024 may be a software component that allows for customization of the desktop or software interface through the initiation of plug-in applications.

[0276] One or more gestures used to interface with the vehicle control system 204 may be as described in conjunction with Fig. 11A through 11K. Figs. 11A through 11H depict various graphical representations of gesture inputs that may be recognized by the devices 212, 248. The gestures may be performed not only by a user's body part, such as a digit, but also by other devices, such as a stylus, that may be sensed by the contact sensing portion(s) of a screen associated with the device 212, 248. In general, gestures are interpreted differently, based on where the gestures are performed (either directly on a display or in a gesture capture region). For example, gestures in a display may be directed to a desktop or application, and gestures in a gesture capture region may be interpreted as for the system.

[0277] With reference to Figs. 11A-11H, a first type of gesture, a touch gesture 1120, is substantially stationary on a portion (e.g., a screen, a display, etc.) of a device 212, 248 for a selected length of time. A circle 1128 represents a touch or other contact type received at particular location of a contact sensing portion of the screen. The circle 1128 may include a border 1132, the thickness of which indicates a length of time that the contact is held substantially stationary at the contact location. For instance, a tap 1120 (or short press) has a thinner border 1132A than the border 1132B for a long press 1124 (or for a normal press). The long press 1124 may involve a contact that remains substantially stationary on the screen for longer time period than that of a tap 1120. As will be appreciated, differently defined gestures may be registered depending upon the length of time that the touch remains stationary prior to contact cessation or movement on the screen.

[0278] With reference to Fig. 11C, a drag gesture 1100 on the screen is an initial contact (represented by circle 1128) with contact movement 1136 in a selected direction. The initial contact 1128 may remain stationary on the screen for a certain amount of time represented by the border 1132. The drag gesture typically requires the user to contact an icon, window, or other displayed image at a first location followed by movement of the contact in a drag direction to a new second location desired for the selected displayed image. The contact movement need not be in a straight line but have any path of movement so long as the contact is substantially continuous from the first to the second locations.

[0279] With reference to Fig. 11D, a flick gesture 1104 on the screen is an initial contact (represented by circle 1128) with truncated contact movement 1136 (relative to a drag gesture) in a selected direction. A flick may have a higher exit velocity for the last movement in the gesture compared to the drag gesture. The flick gesture can, for instance, be a finger snap following initial contact. Compared to a drag gesture, a flick gesture generally does not require continual contact with the screen from the first location of a displayed image to a predetermined second location. The contacted displayed image is moved by the flick gesture in the direction of the flick gesture to the predetermined second location. Although both gestures commonly can move a displayed image from a first location to a second location, the temporal duration and distance of travel of the contact on the screen is generally less for a flick than for a drag gesture.

[0280] With reference to Fig. 11E, a pinch gesture 1108 on the screen is depicted. The pinch gesture 1108 may be initiated by a first contact 1128A to the screen by, for example, a first digit and a second contact 1128B to the screen by, for example, a second digit. The first and second contacts 1128A,B may be detected by a common contact sensing portion of a common screen, by different contact sensing portions of a common screen, or by different contact sensing portions of different screens. The first contact 1128A is held for a first amount of time, as represented by the border 1132A, and the second contact 1128B is held for a second amount of time, as represented by the border 1132B. The first and second amounts of time are generally substantially the same, and the first and second contacts 1128A,B generally occur substantially simultaneously. The first and second contacts 1128A,B generally also include corresponding first and second contact movements 1136A,B, respectively. The first and second contact movements 1136A,B are generally in opposing directions. Stated another way, the first contact movement 1136A is towards the second contact 1136B, and the second contact movement 1136B is towards

the first contact 1136A. More simply stated, the pinch gesture 1108 may be accomplished by a user's digits touching the screen in a pinching motion.

[0281] With reference to Fig. 11F, a spread gesture 1110 on the screen is depicted. The spread gesture 1110 may be initiated by a first contact 1128A to the screen by, for example, a first digit, and a second contact 1128B to the screen by, for example, a second digit. The first and second contacts 1128A,B may be detected by a common contact sensing portion of a common screen, by different contact sensing portions of a common screen, or by different contact sensing portions of different screens. The first contact 1128A is held for a first amount of time, as represented by the border 1132A, and the second contact 1128B is held for a second amount of time, as represented by the border 1132B. The first and second amounts of time are generally substantially the same, and the first and second contacts 1128A,B generally occur substantially simultaneously. The first and second contacts 1128A,B generally also include corresponding first and second contact movements 1136A,B, respectively. The first and second contact movements 1136A,B are generally in an opposing direction. Stated another way, the first and second contact movements 1136A,B are away from the first and second contacts 1128A,B. More simply stated, the spread gesture 1110 may be accomplished by a user's digits touching the screen in a spreading motion.

[0282] The above gestures may be combined in any manner, such as those shown by Figs. 11G and 11H, to produce a determined functional result. For example, in Fig. 11G a tap gesture 1120 is combined with a drag or flick gesture 1112 in a direction away from the tap gesture 1120. In Fig. 11H, a tap gesture 1120 is combined with a drag or flick gesture 1116 in a direction towards the tap gesture 1120.

[0283] The functional result of receiving a gesture can vary depending on a number of factors, including a state of the vehicle 104, display, or screen of a device, a context associated with the gesture, or sensed location of the gesture, etc. The state of the vehicle 104 commonly refers to one or more of a configuration of the vehicle 104, a display orientation, and user and other inputs received by the vehicle 104. Context commonly refers to one or more of the particular application(s) selected by the gesture and the portion(s) of the application currently executing, whether the application is a single- or multi-screen application, and whether the application is a multi-screen application displaying one or more windows. A sensed location of the gesture commonly refers to whether the sensed set(s) of gesture location coordinates are on a touch sensitive display or a gesture capture region of a device 212, 248, whether the sensed set(s) of gesture

location coordinates are associated with a common or different display, or screen, or device 212, 248, and/or what portion of the gesture capture region contains the sensed set(s) of gesture location coordinates.

[0284] A tap, when received by a touch sensitive display of a device 212, 248, can be used, for instance, to select an icon to initiate or terminate execution of a corresponding application, to maximize or minimize a window, to reorder windows in a stack, and/or to provide user input such as by keyboard display or other displayed image. A drag, when received by a touch sensitive display of a device 212, 248, can be used, for instance, to relocate an icon or window to a desired location within a display, to reorder a stack on a display, or to span both displays (such that the selected window occupies a portion of each display simultaneously). A flick, when received by a touch sensitive display of a device 212, 248 or a gesture capture region, can be used to relocate a window from a first display to a second display or to span both displays (such that the selected window occupies a portion of each display simultaneously). Unlike the drag gesture, however, the flick gesture is generally not used to move the displayed image to a specific user-selected location but to a default location that is not configurable by the user.

[0285] The pinch gesture, when received by a touch sensitive display or a gesture capture region of a device 212, 248, can be used to minimize or otherwise increase the displayed area or size of a window (typically when received entirely by a common display), to switch windows displayed at the top of the stack on each display to the top of the stack of the other display (typically when received by different displays or screens), or to display an application manager (a "pop-up window" that displays the windows in the stack). The spread gesture, when received by a touch sensitive display or a gesture capture region of a device 212, 248, can be used to maximize or otherwise decrease the displayed area or size of a window, to switch windows displayed at the top of the stack on each display to the top of the stack of the other display (typically when received by different displays or screens), or to display an application manager (typically when received by an off-screen gesture capture region on the same or different screens).

[0286] The combined gestures of Fig. 11G, when received by a common display capture region in a common display or screen of a device 212, 248, can be used to hold a first window location constant for a display receiving the gesture while reordering a second window location to include a window in the display receiving the gesture. The combined gestures of Fig. 11H, when received by different display capture regions in a common display or screen of a device 212, 248 or in different displays or screens of one more

devices 212, 248, can be used to hold a first window location for a display receiving the tap part of the gesture while reordering a second window location to include a window in the display receiving the flick or drag gesture. Although specific gestures and gesture capture regions in the preceding examples have been associated with corresponding sets of functional results, it is to be appreciated that these associations can be redefined in any manner to produce differing associations between gestures and/or gesture capture regions and/or functional results.

[0287] Gestures that may be completed in three-dimensional space and not on a touch sensitive screen or gesture capture region of a device 212, 248 may be as shown in Figs. 11I-11K. The gestures may be completed in an area where a sensor, such as an optical sensor, infrared sensor, or other type of sensor, may detect the gesture. For example, the gesture 1140 in Fig. 11I may be executed by a person when the person opens their hand 1164 and moves their hand in a back and forth direction 1148 as a gesture 1140 to complete some function with the vehicle 104. For example gesture 1140 may change the station of the radio in the vehicle 104. The sensors 242 may both determine the configuration of the hand 1164 and the vector of the movement. The vector and hand configuration can be interpreted to mean certain things to the vehicle control system 204 and produce different results.

[0288] In another example of a gesture 1152 in Fig. 11J, a user may configure their hand 1164 to extend two fingers and move the hand 1164 in an up and down operation 1156. This gesture 1152 may control the volume of the radio or some other function. For instance, this gesture 1152 may be configured to place the vehicle in a "valet" mode to, among other things, restrict access to certain features associated with the vehicle. Again, the sensors 242 may determine how the person has configured their hand 1164, and the vector of the movement. In another example of a gesture 1160 shown in Fig. 11K, a user may extend their middle three fingers at an angle that is substantially 45° for vertical from straight vertical and circle the hand in a counter-clockwise motion 1166. This gesture 1160 may cause the automobile to change the heat setting or do some other function. As can be understood by one skilled in the art, the configurations of the hand and the types of movement are variable. Thus, the user may configure the hand 1164 in any way imaginable and may also move that hand 1164 in any direction with any vector in three-dimensional space.

[0289] The gestures 1140, 1152, 1160, as shown in Figs. 11I-11K, may occur in a predetermined volume of space within the vehicle 104. For example, a sensor may be

configured to identify such gestures 1140, 1152, 1160 between the front passenger's and front driver's seats over a console area within the passenger compartment of the vehicle 104. The gestures 1140, 1152, 1160 may be made within area 1 508A between zones A 512A and B 512B. However, there may be other areas 508 where a user may use certain gestures, where sensors 242 may be able to determine a certain function is desired. Gestures that may be similar but used in different areas within the vehicle 104 may cause different functions to be performed. For example, the gesture 1140 in Fig. 11I, if used in zone E 512E, may change the heat provided in zone E 512E, but may change the station of a radio if used in zone A 512A and/or zone B 512B. Further, the gestures may be made with other body parts or, for example, different expressions of a person's face and may be used to control functions in the vehicle 104. Also, the user may use two hands in some circumstances or do other types of physical movements that can cause different reactions in the vehicle 104.

[0290] Figs. 12A-12D show various embodiments of a data structure 1200 to store different settings. The data structure 1200 may include one or more of data files or data objects 1204, 1250, 1270, 1280. Thus, the data structure 1200 may represent different types of databases or data storage, for example, object-oriented data bases, flat file data structures, relational database, or other types of data storage arrangements. Embodiments of the data structure 1200 disclosed herein may be separate, combined, and/or distributed. As indicated in Figs. 12A-12D, there may be more or fewer portions in the data structure 1200, as represented by ellipses 1244. Further, there may be more or fewer files in the data structure 1200, as represented by ellipses 1248.

[0291] Referring to Fig. 12A, a first data structure is shown. The data file 1204 may include several portions 1208-1242 representing different types of data. Each of these types of data may be associated with a user, as shown in portion 1208.

[0292] There may be one or more user records 1240 and associated data stored within the data file 1204. As provided herein, the user can be any person that uses or rides within the vehicle or conveyance 104. The user may be identified in portion 1212. For the vehicle 104, the user may include a set of one or more features that may identify the user. These features may be the physical characteristics of the person that may be identified by facial recognition or some other type of system. In other situations, the user may provide a unique code to the vehicle control system 204 or provide some other type of data that allows the vehicle control system 204 to identify the user. The features or characteristics of the user are then stored in portion 1212.

[0293] Each user, identified in portion 1208, may have a different set of settings for each area 508 and/or each zone 512 within the vehicle 104. Thus, each set of settings may also be associated with a predetermined zone 512 or area 508. The zone 512 is stored in portion 1220, and the area 508 is stored in portion 1216.

[0294] One or more settings may be stored in portion 1224. These settings 1224 may be the configurations of different functions within the vehicle 104 that are specified by or for that user. For example, the settings 1224 may be the position of a seat, the position of a steering wheel, the position of accelerator and/or brake pedals, positions of mirrors, a heating/cooling setting, a radio setting, a cruise control setting, or some other type of setting associated with the vehicle 104. Further, in vehicles adapted to have a configurable console or a configurable dash or heads-up display, the settings 1224 may also provide for how that heads-up display, dash, or console are configured for this particular user.

[0295] Each setting 1224 may be associated with a different area 508 or zone 512. Thus, there may be more settings 1224 for when the user is the driver and in zone A 512A, 512A, of area 1, 508A. However, there may be similar settings 1224 among the different zones 512 or areas 508 as shown in portion 1224. For example, the heating or radio settings for the user may be similar in every zone 512.

[0296] The sensors 242 within the vehicle 104 may be able to either obtain or track health data in portion 1228. Health data 1228 may include any type of physical characteristic associated with the user. For example, a heart rate, a blood pressure, a temperature, or other types of heath data may be obtained and stored in portion 1228. The user may have this health data tracked over a period of time to allow for statistical analysis of the user's health while operating the vehicle 104. In this way, if some function of the user's health deviates from a norm (e.g., a baseline measurement, average measurements taken over time, and the like), the vehicle 104 may be able to determine there is a problem with the person and react to that data.

[0297] One or more gestures may be stored in portion 1232. Thus, the gestures used and described in conjunction Fig. 11A through 11K may be configurable. These gestures may be determined or created by the user and stored in portion 1132. A user may have different gestures for each zone 512 or area 508 within the vehicle. The gestures that do certain things while driving may do other things while in a different area 508 of the vehicle 104. Thus, the user may use a first set of gestures while driving and a second set while a passenger. Further, one or more users may share gestures as shown in portion

1232. Each driver may have a common set of gestures that they use in zone A 512A, 512A. Each of these gestures may be determined or captured and then stored with their characteristics (e.g., vector, position of gesture, etc.) in portion 1232.

[0298] One or more sets of safety parameters may be stored in portion 1236. Safety parameters 1236 may be common operating characteristics for this driver/passenger or for all drivers/passengers that if deviated from may determine there is a problem with the driver/passenger or the vehicle 104. For example, a certain route may be taken repeatedly and an average speed or mean speed may be determined. If the mean speed deviates by some number of standard deviations, a problem with the vehicle 104 or the user may be determined. In another example, the health characteristics or driving experience of the user may be determined. If the user drives in a certain position where their head occupies a certain portion of three-dimensional space within the vehicle 104, the vehicle control system 204 may determine that the safety parameter includes the users face or head being within this certain portion of the vehicle interior space. If the user's head deviates from that interior space for some amount of time, the vehicle control system 204 can determine that something is wrong with the driver and change the function or operation of the vehicle 104 to assist the driver. This may happen, for example, when a user falls asleep at the wheel. If the user's head droops and no longer occupies a certain three dimensional space, the vehicle control system 204 can determine that the driver has fallen asleep and may take control of the operation of the vehicle 204 and the automobile controller 8104 may steer the vehicle 204 to the side of the road. In other examples, if the user's reaction time is too slow or some other safety parameter is not nominal, the vehicle control system 204 may determine that the user is inebriated or having some other medical problem. The vehicle control system 204 may then assume control of the vehicle to ensure that the driver is safe.

[0299] Information corresponding to a user and/or a user profile may be stored in the profile information portion 1238. For example, the profile information 1238 may include data relating to at least one of current data, historical data, a user preference, user habit, user routine, observation, location data (e.g., programmed and/or requested destinations, locations of parking, routes traveled, average driving time, etc.), social media connections, contacts, brand recognition (e.g., determined via one or more sensors associated with the vehicle 104, a device 212, 248, etc.), audible recording data, text data, email data, political affiliation, preferred retail locations/sites (e.g., physical locations, web-based locations, etc.), recent purchases, behavior associated with the aforementioned data, and the like. The data in the profile information portion 1238 may be stored in one or more of the data

structures 1200 provided herein. As can be appreciated, these one or more data structures may be stored in one or more memory locations. Examples of various memory locations are described in conjunction with Fig. 2.

[0300] One or more additional data fields may be stored in the linked data portion 1242 as data and/or locations of data. The linked data 1242 may include at least one of pointers, addresses, location identification, data source information, and other information corresponding to additional data associated with the data structure 1200. Optionally, the linked data portion 1242 may refer to data stored outside of a particular data structure 1200. For example, the linked data portion 1242 may include a link/locator to the external data. Continuing this example, the link/locator may be resolved (e.g., via one or more of the methods and/or systems provided herein, etc.) to access the data stored outside of the data structure 1200. Additionally or alternatively, the linked data portion 1242 may include information configured to link the data objects 1204 to other data files or data objects 1250, 1270, 1280. For instance, the data object 1204 relating to a user may be linked to at least one of a device data object 1250, a vehicle system data object 1270, and a vehicle data object 1280, to name a few.

[0301] An embodiment of a data structure 1200 to store information associated with one or more devices is shown in Fig. 12B. The data file 1250 may include several portions 1216-1262 representing different types of data. Each of these types of data may be associated with a device, as shown in portion 1252.

[0302] There may be one or more device records 1250 and associated data stored within the data file 1250. As provided herein, the device may be any device that is associated with the vehicle 104. For example, a device may be associated with a vehicle 104 when that device is physically located within the interior space 108 of the vehicle 104. As another example, a device may be associated with a vehicle 104 when the device registers with the vehicle 104. Registration may include pairing the device with the vehicle 104 and/or one or more of the vehicle systems (e.g., as provided in Fig. 3). In some cases, the registration of a device with a vehicle 104 may be performed manually and/or automatically. An example of automatic registration may include detecting, via one or more of the vehicle systems, that a device is inside the vehicle 104. Upon detecting that the device is inside the vehicle 104, the vehicle system may identify the device and determine whether the device is or should be registered. Registration may be performed outside of a vehicle 104 via providing a unique code to the vehicle 104 and/or at least one of the vehicle systems.

[0303] The device may be identified in portion 1256. Among other things, the device identification may be based on the hardware associated with the device (e.g., Media Access Control (MAC) address, Burned-In Address (BIA), Ethernet Hardware Address (EHA), physical address, hardware address, and the like).

[0304] Optionally, a device may be associated with one or more users. For example, a tablet and/or graphical user interface (GUI) associated with the vehicle 104 may be used by multiple members of a family. For instance, the GUI may be located in a particular area 508 and/or zone 512 of the vehicle 104. Continuing this example, when a family member is located in the particular area 508 and/or zone 512, the device may include various settings, features, priorities, capabilities, and the like, based on an identification of the family member. The user may be identified in portion 1254. For the device, the user identification portion 1254 may include a set of one or more features that may identify a particular user. These features may be the physical characteristics of the person that may be identified by facial recognition, or some other type of system, associated with the device and/or the vehicle 104. Optionally, the user may provide a unique code to the device, or provide some other type of data, that allows the device to identify the user. The features or characteristics of the user are then stored in portion 1254.

[0305] Each device identified in the device identification portion 1256 may have a different set of settings for each area 508 and/or each zone 512, and/or each user of the device. Thus, each set of settings may also be associated with a predetermined zone 512, area 508, and/or user. The zone 512 is stored in portion 1220 and the area 508 is stored in portion 1216.

[0306] One or more settings may be stored in portion 1224. These settings 1224 may be similar and/or identical to those previously described. Further, the settings 1224 may also provide for how a device is configured for a particular user. Each setting 1224 may be associated with a different area 508 or zone 512. Thus, there may be more restrictive settings 1224 (e.g., restricted multimedia, texting, limited access to device functions, and the like) for the device when the user is the driver and in zone A 512A, 512A, of area 1, 508A. However, when the user is in another zone 512 or area 508, for example, where the user is not operating a vehicle 104, the settings 1224 may provide unrestricted access to one or more features of the device (e.g., allowing texting, multimedia, etc.).

[0307] Optionally, the capabilities of a device may be stored in portion 1258. Examples of device capabilities may include, but are not limited to, a communications ability (e.g., via wireless network, EDGE, 3G, 4G, LTE, wired, Bluetooth®, Near Field

Communications (NFC), Infrared (IR), etc.), hardware associated with the device (e.g., cameras, gyroscopes, accelerometers, touch interface, processor, memory, display, etc.), software (e.g., installed, available, revision, release date, etc.), firmware (e.g., type, revision, etc.), operating system, system status, and the like. Optionally, the various capabilities associated with a device may be controlled by one or more of the vehicle systems provided herein. Among other things, this control allows the vehicle 104 to leverage the power and features of various devices to collect, transmit, and/or receive data.

[0308] One or more priorities may be stored in portion 1260. The priority may correspond to a value, or combination of values, configured to determine how a device interacts with the vehicle 104 and/or its various systems. The priority may be based on a location of the device (e.g., as stored in portions 1216, 1220). A default priority can be associated with each area 508 and/or zone 512 of a vehicle 104. For example, the default priority associated with a device found in zone 1 512A of area 1 508A (e.g., a vehicle operator position) may be set higher than an (or the highest of any) alternative zone 512 or area 508 of the vehicle 104. Continuing this example, the vehicle 104 may determine that, although other devices are found in the vehicle, the device, having the highest priority, controls features associated with the vehicle 104. These features may include vehicle control features, critical and/or non-critical systems, communications, and the like. Additionally or alternatively, the priority may be based on a particular user associated with the device. Optionally, the priority may be used to determine which device will control a particular signal in the event of a conflict.

[0309] Registration data may be stored in portion 1262. As described above, when a particular device registers with a vehicle 104, data related to the registration may be stored in the registration data portion 1262. Such data may include, but is not limited to, registration information, registration codes, initial registration time, expiration of registration, registration timers, and the like. Optionally, one or more systems of the vehicle 104 may refer to the registration data portion 1262 to determine whether a device has been previously registered with the vehicle 104. As shown in Fig. 12B, User 4 of Device 2 has not been registered. In this case, the registration data field 1262, for this user, may be empty, contain a null value, or other information/indication that there is no current registration information associated with the user.

[0310] Additionally or alternatively, the data structure 1200 may include a profile information portion 1238 and/or a linked data portion 1242. Although the profile information portion 1238 and/or the linked data portion 1242 may include different

information from that described above, it should be appreciated that the portions 1238, 1242 may be similar, or identical, to those as previously disclosed.

[0311] An embodiment of a data structure 1200 to store information associated with one or more vehicle systems is shown in Fig. 12C. The data file 1270 may include several portions 1216-1279 representing different types of data. Each of these types of data may be associated with a vehicle system, as shown in portion 1272.

[0312] There may be one or more system records 1270 and associated data stored within the data file 1270. As provided herein, the vehicle systems may be any system and/or subsystem that is associated with the vehicle 104. Examples of various systems are described in conjunction with Fig. 3 and other related figures (e.g., systems 324-352, etc.). One example of a system associated with the vehicle 104 is the vehicle control system 204. Other systems may include communications subsystems 344, vehicle subsystems 328, and media subsystems 348, to name a few. It should be appreciated that the various systems may be associated with the interior space 108 and/or the exterior of the vehicle 104.

[0313] Each system may include one or more components. The components may be identified in portion 1274. Identification of the one or more components may be based on hardware associated with the component. This identification may include hardware addresses similar to those described in conjunction with the devices of Fig. 12B. Additionally or alternatively, a component can be identified by one or more signals sent via the component. Such signals may include an Internet Protocol (IP), or similar, address as part of the signal. Optionally, the signal may identify the component sending the signal via one or more of a header, a footer, a payload, and/or an identifier associated with the signal (e.g., a packet of a signal, etc.).

[0314] Each system and/or component may include priority type information in portion 1276. Among other things, the priority type information stored in portion 1276 may be used by the various methods and systems provided herein to differentiate between critical and non-critical systems. Non-limiting examples of critical systems may correspond to those systems used to control the vehicle 104, such as, steering control, engine control, throttle control, braking control, and/or navigation informational control (e.g., speed measurement, fuel measurement, etc.) Non-critical systems may include other systems that are not directly related to the control of the vehicle 104. By way of example, non-critical systems may include media presentation, wireless communications, comfort settings systems (e.g., climate control, seat position, seat warmers, etc.), and the like.

Although examples of critical and/or non-critical systems are provided above, it should be appreciated that the priority type of a system may change (e.g., from critical to non-critical, from non-critical to critical, etc.) depending on the scenario. For instance, although the interior climate control system may be classified as a non-critical system at a first point in time, it may be subsequently classified as a critical system when a temperature inside/outside of the vehicle 104 is measured at a dangerous level (e.g., sub-zero Fahrenheit, greater than 90-degrees Fahrenheit, etc.). As such, the priority type may be associated with temperature conditions, air quality, times of the day, condition of the vehicle 104, and the like.

[0315] Each system may be associated with a particular area 508 and/or zone 512 of a vehicle 104. Among other things, the location of a system may be used to assess a state of the system and/or provide how the system interacts with one or more users of the vehicle 104. As can be appreciated each system may have a different set of settings for each area 508 and/or each zone 512, and/or each user of the system. Thus, each set of settings may also be associated with a predetermined zone 512, area 508, system, and/or user. The zone 512 is stored in portion 1220 and the area 508 is stored in portion 1216.

[0316] One or more settings may be stored in portion 1224. These settings 1224 may be similar and/or identical to those previously described. Further, the settings 1224 may also provide for how a system is configured for a particular user. Each setting 1224 may be associated with a different area 508 or zone 512. For instance, a climate control system may be associated with more than one area 508 and/or zone 512. As such, a first user seated in zone 1 512A of area 1 508A may store settings related to the climate control of that zone 512A that are different from other users and/or zones 512 of the vehicle 104. Optionally, the settings may not be dependent on a user. For instance, specific areas 508 and/or zones 512 of a vehicle 104 may include different, default, or the same settings based on the information stored in portion 1224.

[0317] The various systems and/or components may be able to obtain or track health status data of the systems and/or components in portion 1278. The health status 1278 may include any type of information related to a state of the systems. For instance, an operational condition, manufacturing date, update status, revision information, time in operation, fault status, state of damage detected, inaccurate data reporting, and other types of component/system health status data may be obtained and stored in portion 1278.

[0318] Each component and/or system may be configured to communicate with users, systems, servers, vehicles, third parties, and/or other endpoints via one or more

communication type. At least one communication ability and/or type associated with a system may be stored in the communication type portion 1279. Optionally, the communication types contained in this portion 1279 may be ordered in a preferential order of communication types. For instance, a system may be configured to preferably communicate via a wired communication protocol over one or more wired communication channels (e.g., due to information transfer speeds, reliability, and the like). However, in this instance, if the one or more wired communication channels fail, the system may transfer information via an alternative communication protocol and channel (e.g., a wireless communication protocol and wireless communication channel, etc.). Among other things, the methods and systems provided herein may take advantage of the information stored in the communication type portion 1279 to open available communication channels in the event of a communication channel failure, listen on other ports for information transmitted from the systems, provide a reliability rating based on the number of redundant communication types for each component, and more. Optionally, a component or system may be restricted from communicating via a particular communication type (e.g., based on rules, traffic, critical/non-critical priority type, and the like). In this example, the component or system may be forced by the vehicle control system 204 to use an alternate communication type where available, cease communications, or store communications for later transfer.

[0319] Additionally or alternatively, the data structure 1200 may include a profile information portion 1238 and/or a linked data portion 1242. Although the profile information portion 1238 and/or the linked data portion 1242 may include different information from that described above, it should be appreciated that the portions 1238, 1242 may be similar, or identical, to those as previously disclosed.

[0320] Referring now to Fig. 12D, a data structure 1200 is shown optionally. The data file 1280 may include several portions 1216-1286 representing different types of data. Each of these types of data may be associated with a vehicle, as shown in portion 1282.

[0321] There may be one or more vehicle records 1280 and associated data stored within the data file 1282. As provided herein, the vehicle 104 can be any vehicle or conveyance 104 as provided herein. The vehicle 104 may be identified in portion 1282. Additionally or alternatively, the vehicle 104 may be identified by one or more systems and/or subsystems. The various systems of a vehicle 104 may be identified in portion 1284. For example, various features or characteristics of the vehicle 104 and/or its systems may be

stored in portion 1284. Optionally, the vehicle 104 may be identified via a unique code or some other type of data that allows the vehicle 104 to be identified.

[0322] Each system may be associated with a particular area 508 and/or zone 512 of a vehicle 104. Among other things, the location of a system may be used to assess a state of the system and/or provide how the system interacts with one or more users of the vehicle 104. As can be appreciated each system may have a different set of settings for each area 508 and/or each zone 512, and/or each user of the system. Thus, each set of settings may also be associated with a predetermined zone 512, area 508, system, and/or user. The zone 512 is stored in portion 1220 and the area 508 is stored in portion 1216.

[0323] One or more settings may be stored in portion 1224. These settings 1224 may be similar and/or identical to those previously described. Further, the settings 1224 may also provide for how a vehicle and/or its systems are configured for one or more users. Each setting 1224 may be associated with a different area 508 or zone 512. Optionally, the settings may not be dependent on a particular user. For instance, specific areas 508 and/or zones 512 of a vehicle 104 may include different, default, or the same settings based on the information stored in portion 1224.

[0324] The various systems and/or components may be able to obtain or track health status data of the systems and/or components in portion 1278. The health status 1278 may include any type of information related to a state of the systems. For instance, an operational condition, manufacturing date, update status, revision information, time in operation, fault status, state of damage detected, inaccurate data reporting, and other types of component/system health status data may be obtained and stored in portion 1278.

[0325] One or more warnings may be stored in portion 1286. The warnings data 1286 may include warning generated by the vehicle 104, systems of the vehicle 104, manufacturer of the vehicle, federal agency, third party, and/or a user associated with the vehicle. For example, several components of the vehicle may provide health status information (e.g., stored in portion 1278) that, when considered together, may suggest that the vehicle 104 has suffered some type of damage and/or failure. Recognition of this damage and/or failure may be stored in the warnings data portion 1286. The data in portion 1286 may be communicated to one or more parties (e.g., a manufacturer, maintenance facility, user, etc.). In another example, a manufacturer may issue a recall notification for a specific vehicle 104, system of a vehicle 104, and/or a component of a vehicle 104. It is anticipated that the recall notification may be stored in the warning data

field 1286. Continuing this example, the recall notification may then be communicated to the user of the vehicle 104 notifying the user of the recall issued by the manufacturer.

[0326] Additionally or alternatively, the data structure 1200 may include a profile information portion 1238 and/or a linked data portion 1242. Although the profile information portion 1238 and/or the linked data portion 1242 may include different information from that described above, it should be appreciated that the portions 1238, 1242 may be similar, or identical, to those as previously disclosed.

[0327] An embodiment of a method 1300 for storing settings for a user 216 associated with vehicle 104 is shown in Fig. 13. While a general order for the steps of the method 1300 is shown in Fig. 13, the method 1300 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 13. Generally, the method 1300 starts with a start operation 1304 and ends with an end operation 1336. The method 1300 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1300 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-12.

[0328] A person may enter the vehicle space 108. One or more sensors 242 may then identify that a person is sitting within the vehicle 104, in step 1308. For example, sensors 242 in a seat, may determine that some new amount of weight has been registered. The amount of weight may fall within predetermined parameters (e.g., over a threshold, in a specific range, etc.). This weight may then be determined to be a person by one or more optical or other sensors 242. The vehicle control system 204 may then determine that a person is in a certain zone 512 or area 508. For example, the sensors 242 may send signals to the vehicle controls system 204 that an event has occurred. This information may be sent to the vehicle control system processor 304 to determine the zone 512 and area 508 where the event occurred. Further, the vehicle control system 204 may then identify the person, in step 1312.

[0329] The vehicle control system 204 can receive the information from the sensors 242 and use that information to search the database 1200 that may be stored within the system data 208. The sensor data may be compared to ID characteristics 1212 to determine if the person has already been identified. The vehicle control system 204 may also send the characteristic data from the sensors to the communication network 224 to a server 228 to compare the sensor data to stored data 232 that may be stored in a cloud system. The

person's features can be compared to stored features 1212 to determine if the person in the vehicle 104 can be identified.

[0330] If the person has been identified previously and their characteristics stored in portion 1212, the method 1300 proceeds YES to step 1316 where that person may be identified. In identifying a person, the information associated with that person 1240 may be retrieved and provided to the vehicle control system 204 for further action. If a person cannot be identified by finding their sensor characteristics in portion 1212, the method 1300 proceeds NO to step 1320. In step 1320, the vehicle control system 204, using an application, may create a new record in table 1200 for the user. This new record may store a user identifier and their characteristics 1212. It may also store the area 508 and zone 512 in data portions 1216 and 1220. The new record may then be capable of receiving new settings data for this particular user. In this way, the vehicle 104 can automatically identify or characterize a person so that settings may be established for the person in the vehicle 104.

[0331] The input module 312 may then determine if settings are to be stored, in step 1324. Settings might be any configuration of the vehicle 104 that may be associated with the user. The determination may be made after receiving a user input from the user. For example, the user may make a selection on a touch sensitive display indicating that settings currently made are to be stored. In other situations, a period of time may elapse after the user has made a configuration. After determining that the user is finished making changes to the settings, based on the length of the period of time since the setting was established, the vehicle control system 204 can save the setting. Thus, the vehicle control system 204 can make settings automatically based on reaching a steady state for settings for user.

[0332] The vehicle control system 204 may then store the settings for the person, in step 1328. The user interaction subsystem 332 can make a new entry for the user 1208 in data structure 1204. The new entry may be either a new user or a new settings listed in 1224. The settings may be stored based on the area 508 and zone 512. As explained previously, the settings can be any kind of configuration of the vehicle 104 that may be associated with the user in that area 508 and the zone 512.

[0333] The settings may also be stored in cloud storage, in step 1332. Thus, the vehicle control system 204 can send the new settings to the server 228 to be stored in storage 232. In this way, these new settings may be ported to other vehicles for the user. Further, the

settings in storage system 232 may be retrieved, if local storage does not include the settings in storage system 208.

[0334] Additionally or alternatively, the settings may be stored in profile data 252. As provided herein, the profile data 252 may be associated with one or more devices 212, 248, servers 228, vehicle control systems 204, and the like. Optionally, the settings in profile data 252 may be retrieved in response to conditions. For instance, the settings may be retrieved from at least one source having the profile data if local storage does not include the settings in storage system 208. As another example, a user 216 may wish to transfer settings stored in profile data 252 to the system data 208. In any event, the retrieval and transfer of settings may be performed automatically via one or more devices 204, 212, 248, associated with the vehicle 104.

[0335] An embodiment of a method 1400 to configure the vehicle 104 based on stored settings is shown in Fig. 14. A general order for the steps of the method 1400 is shown in Fig. 14. Generally, the method 1400 starts with a start operation 1404 and ends with an end operation 1428. The method 1400 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 14. The method 1400 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1400 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-13.

[0336] The vehicle control system 204 can determine if a person is in a zone 512 or area 508, in step 1408. This determination may be made by receiving data from one or more sensors 242. The vehicle 104 can use facial recognition, weight sensors, heat sensors, or other sensors to determine whether a person is occupying a certain zone 512.

[0337] Using the information from the sensors 242, the vehicle control system 204 can identify the person, in step 1412. The vehicle control system 204 can obtain characteristics for the user currently occupying the zone 512 and compare those characteristics to the identifying features in portion 1212 of data structure 1204. Thus, the settings in portion 1224 may be retrieved by identifying the correct zone 512, area 508, and characteristics for the user.

[0338] The vehicle control system 204 can first determine if there are settings associated with the identified person for that zone 512 and/or area 508, in step 1416. After identifying the user by matching characteristics with the features in portion 1212, the vehicle control system 204 can determine if there are settings for the user for the area 1216

and zone 1220 the user currently occupies. If there are settings, then the vehicle control system 204 can make the determination that there are settings in portion 1224, and the vehicle control system 204 may then read and retrieve those settings, in step 1420. The settings may be then used to configure or react to the presence of the user, in step 1424. Thus, these settings may be obtained to change the configuration of the vehicle 104, for example, how the position of the seats or mirrors are set, how the dash, console, or heads up display is configured, how the heat or cooling is configured, how the radio is configured, or how other different configurations are made.

[0339] Embodiments of a method 1500 for storing settings in cloud storage are shown in Fig. 15. A general order for the steps of the method 1500 is shown in Fig. 15. Generally, the method 1500 starts with a start operation 1504 and ends with an end operation 1540. The method 1500 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 15. The method 1500 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1500 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-14.

[0340] The vehicle control system 204 can determine if a person is in a zone 512 or area 508, in step 1508. As explained previously, the vehicle control system 204 can receive vehicle sensor data from vehicle sensors 242 that show a person has occupied a zone 512 or an area 508 of the vehicle 104. Using the vehicle sensor data, the vehicle control system 204 can determine characteristics of the person, in step 1512. These characteristics are compared to the features in portion 1212 of the data structure 1204. From this comparison, the vehicle control system 204 can determine if the person is identified within the data structure 1204, in step 1516. If there is a comparison and the person can be identified, the method 1500 proceeds YES to step 1520. However, if the person cannot be identified, the method 1500 proceeds NO, to step 1524.

[0341] In step 1520, the person is identified in portion 1208 by the successful comparison of the characteristics and the features. It should be noted that there may be a degree of variability between the characteristics and the features in portion 1212. Thus, the comparison may not be an exact comparison but may use methods known in the art to make a statistically significant comparison between the characteristics received from the sensors 242 and the features stored in portion 1212. In step 1524, the characteristics received from sensors 242 are used to characterize the person. In this way, the received

characteristics may be used as an ID, in portion 1212, for a new entry for a new user in portion 1208.

[0342] The user may make one or more settings for the vehicle 104. The vehicle control system 204 may determine if the settings are to be stored, in step 1528. If the settings are to be stored, the method 1500 proceeds YES to step 1536. If the settings are not to be stored or if there are no settings to be stored, the method 1500 proceeds NO to step 1532. In step 1532, the vehicle control system 204 can retrieve the settings in the portion 1224 of the data structure 1204. Retrieval of the settings may be as described in conjunction with Fig. 14. If settings are to be stored, the vehicle control system 204 can send those settings to server 228 to be stored in data storage 232, in step 1536. Data storage 232 acts as cloud storage that can be used to retrieve information on the settings from other vehicles or from other sources. Thus, the cloud storage 232 allows for permanent and more robust storage of user preferences for the settings of the vehicle 104.

[0343] An embodiment of a method 1600 for storing gestures associated with the user is shown in Fig. 16. A general order for the steps of the method 1600 is shown in Fig. 16. Generally, the method 1600 starts with a start operation 1604 and ends with an end operation 1640. The method 1600 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 16. The method 1600 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1600 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-15.

[0344] Vehicle control system 204 may receive sensor data from sensors 242 to determine a person is occupying a zone 512 in an area 508 of the vehicle 104, in step 1608. The sensor data may provide characteristics for the person, in step 1612. The vehicle control system 204 may then use the characteristics to determine if the person can be identified, in step 1616. The vehicle control system 204 may compare the characteristics to the features in portion 1212 for the people having been recognized and having data associated therewith. If a comparison is made between the characteristics and the features in portion 1212, the person can be identified, and the method 1600 proceeds YES to step 1620. If there is no comparison, the method 1600 may proceed NO to step 1624. In step 1620, the person may be identified by the vehicle control system 204. Thus, the person's features and associated data record 1240 may be determined and the user identified in portion 1208. If the person is not identified, the vehicle control system 204

can characterize the person in step 1624 by establishing a new record in data structure 1204 using the characteristics, received from the sensors 242, for the features in portion 1212.

[0345] Thereinafter, the vehicle control system 204 may determine if gestures are to be stored and associated with the user, in step 1628. The vehicle control system 204 may receive user input on a touch sensitive display or some other type of gesture capture region which acknowledges that the user wishes to store one or more gestures. Thus, the user may create their own gestures such as those described in conjunction with Figs. 11A-11K. These gestures may then be characterized and stored in data structure 1204. If there are gestures to be stored, the method 1600 proceeds YES to step 1636. If gestures are not to be stored the method 1600 may proceed NO to step 1632.

[0346] In step 1632, the vehicle control system 204 can retrieve current gestures from portion 1232, which are associated with user 1240. These gestures may be used then to configure how the vehicle 104 will react if a gesture is received. If gestures are to be stored, the vehicle control system 204 may store characteristics, in step 1636, as received from sensor 242 or from one more user interface inputs. These characteristics may then be used to create the stored gestures 1232, in data structure 1204. The characteristics may include what the gesture looks like or appears and also what affect the gesture should have. This information may then be used to change the configuration or operation of the vehicle 104 based on the gesture if it is received at a later time.

[0347] An embodiment of a method 1700 for receiving a gesture and configuring the vehicle 104 based on the gesture may be as provided in Fig. 17. A general order for the steps of the method 1700 is shown in Fig. 17. Generally, the method 1700 starts with a start operation 1704 and ends with an end operation 1728. The method 1700 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 17. The method 1700 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1700 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-16.

[0348] A vehicle control system 204 can receive sensor data from vehicle sensors 242. The vehicle sensor data can be used by the vehicle control system 204 to determine that a person is in a zone 512 or area 508, in step 1708. The vehicle sensor data may then be used to compare against feature characteristics 1212 to identify a person, in step 1712.

The vehicle control system 204 thereinafter may receive a gesture, in step 1716. The gesture may be perceived by vehicle sensors 242 or received in a gesture capture region. The gesture may be as described in conjunction with Figs. 11A-11K. Upon receiving the gesture, the vehicle control system 204 can compare the gesture to gesture characteristics in portion 1232, in step 1720. The comparison may be made so that a statistically significant coorelation between the sensor data or gesture data and the gesture characteristic 1232 is made. Upon identifying the gesture, the vehicle control system 204 can configure the vehicle 104 and/or react to the gesture, in step 1724. The configuration or reaction to the gesture may be as prescribed in the gesture characteristic 1232.

[0349] An embodiment of a method 1800 for storing health data may be as shown in Fig. 18. A general order for the steps of the method 1800 is shown in Fig. 18. Generally, the method 1800 starts with a start operation 1804 and ends with an end operation 1844. The method 1800 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 18. The method 1800 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1800 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-17.

[0350] Vehicle control system 204 can receive sensor data from sensors 242. The sensor data may be used to determine that a person is in a zone 512 or area 508, in step 1808. The sensor data may then be used to determine characteristics of the person, in step 1812. From the characteristics, the vehicle control system 204 can determine if a person may be identified in data structure 1204, in step 1816. If it is determined that the person can be identified in step 1816, the method 1800 proceeds YES to step 1820. If the person cannot be identified, the method 1800 proceeds NO to step 1824. A person may be identified by matching the characteristics of a person from the sensor data to the features shown in portion 1212. If these comparisons are statistically significant, the person may be identified in portion 1208, in step 1820. However, if the person is not identified in portion 1208, the vehicle control system 204 can characterize the person using the vehicle sensor data, in step 1824. In this way, the vehicle control system 204 can create a new record for a new user in data structure 1204.

[0351] Thereinafter, the vehicle control system 204 may receive health and/or safety data from the vehicle sensors 242, in step 1828. The vehicle control system 204 can determine if the health or safety data is to be stored, in step 1832. The determination is

made as to whether or not there is sufficient health data or safety parameters, in portion 1228 and 1236, to provide a reasonable baseline data pattern for the user 1240. If there is data to be received and stored, the vehicle control system 204 can store the data for the person in portions 1228 and 1236 of the data structure 1204, in step 1832.

[0352] The vehicle control system 204 may then wait a period of time, in step 1836. The period of time may be any amount of time from seconds to minutes to days. Thereinafter, the vehicle control system 204 can receive new data from vehicle sensors 242, in step 1828. Thus, the vehicle control system 204 can receive data periodically and update or continue to refine the health data and safety parameters in data structure 1204. Thereinafter, the vehicle control system 204 may optionally store the health and safety data in cloud storage 232 by sending it through the communication network 224 to the server 228, in step 1840.

[0353] An embodiment of a method 1900 for monitoring the health of a user may be as shown in Fig. 19. A general order for the steps of the method 1900 is shown in Fig. 19. Generally, the method 1900 starts with a start operation 1904 and ends with an end operation 1928. The method 1900 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 19. The method 1900 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 1900 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-18.

[0354] The vehicle control system 204 can receive health data from sensors 242. The health data may be received in step 1908. The vehicle control system 204 may then compare the received health data to stored health parameters in portion 1228 or portion 1236, in step 1912. The comparison may check if there is statistically significant separation or disagreement between the received health data and the stored health data. Thus, the vehicle control system 204 can make a health comparison of the user based on a baseline of health data previously stored. A statistically significant comparison may include determining if there are any parameters more than three standard deviations from the average or norm, any parameter that is increasing or decreasing over a period of eight different measurements, a measurement that is more than two standard deviations from the norm more than three measurements consecutively, or other types of statistical comparisons.

[0355] If the vehicle control system 204 determines that measured health parameter does deviate from the norm, the vehicle control system 204 can determine whether the health data is within acceptable limits, in step 1916. If the health data is within acceptable limits, the method 1900 proceeds YES back to receiving new health data, in step 1908. In this way, the health data is periodically or continually monitored to ensure that the driver is in a healthy state and able to operate the vehicle. If the health data is not within acceptable parameters, the method 1900 may proceed NO to step 1924 where the vehicle control system 204 may react to the change in the health data. The reaction may include any measure to provide for the safety of the user, such as stopping the vehicle, beginning to drive the vehicle, driving the vehicle to a new location, such as a hospital, waking the driver with an alarm or other noise, or performing some other function that may help maintain the health or safety of the user.

[0356] The health data received may be a reaction from the driver. For example, the driver may call for help or ask the vehicle for assistance. For example, the driver or passenger may say that they are having a medical emergency and ask the car to perform some function to help. The function to help may include driving the person to a hospital or stopping the car and calling for emergency assistance.

[0357] Fig. 20 is a block diagram of an embodiment of a personality subsystem 2000 for a vehicle 104. The personality subsystem 2000 may include a personality module 2004, a personality matching module 2008, a personality data memory 2028, and a memory 2032. The subsystems, modules, components, etc. 2004-2028 may communicate over a network or bus 356. This communication bus 356 may be bidirectional and perform data communications using any known or future-developed standard or protocol. An example of the communication bus 356 may be as described in conjunction with Fig. 4. As one example of the communication, the personality module 2004 and/or the personality matching module 2008, aside from communicating with each other, may communicate with profile data 252, vehicle sensors 242, and/or non-vehicle sensors via the communication bus 356.

[0358] The personality module 2004 may be configured to present a virtual personality to a user 216 associated with a vehicle 104 via one or more displays, screens, speakers, and/or devices, associated with the vehicle 104. As can be appreciated, the virtual personality may be presented to a user 216 in at least one of an audible, visual, and tactile form. The personality module 2004 may be configured to interact with one or more users 216 of a vehicle 104. In some cases, input may be received and interpreted by the

personality module 2004. Input corresponding to personality information may be stored in the personality data memory 2028 and/or memory 2032. Additionally or alternatively, virtual personalities created by the personality module 2004 may be stored in the personality data memory 2028. As can be appreciate, the stored virtual personalities may be retrieved from at least one personality module 2004 for presentation to a user 216.

[0359] The personality matching module 2008 may include a matching engine 2012 and rules 2016 for matching a virtual personality with a personality of a user 216. The rules can include behavior rules 2020 and preferences 2024. Among other things, behavior rules 2020 may be used by the matching engine 2012 to interpret a user's 216 behavior observed via the vehicle and/or non-vehicle sensors 242, 236. Behavior rules 2020 may include instructions on detecting a context associated with a behavior of the user 216. For instance, the context may correspond to an emotional state of the user 216. Preferences 2024 can be associated with a user 216 and may include data relating to one or more of preferred virtual personalities, the presentation of a virtual personality, timing associated with the presentation of a virtual personality, permissions and access to information, and the like.

[0360] The personality matching module 2008 may communicate with a user profile stored in profile data memory 252. The user profile may have a corresponding user interface or personality defined or configured by the user 216. In some embodiments, the virtual personality can be an animated character that follows the user from vehicle-to-vehicle and/or from communication device-to-communication device. In other words, the virtual personality may include at least one of artificial intelligence, virtual traits, voice, tone, behavior, and predictive behavior based on a defined personality. In some embodiments, this virtual personality may be refined and/or modified over time to match suit a personality of a user 216. Suiting the personality of the user 216 may include matching a personality to the user 216 based on a context associated with the personality of the user 216. This matching may include providing a personality that mirrors and/or tempers the personality of the user 216. For example, in the case where a user 216 is determined to have an impulsive personality, the virtual personality may be configured to present a more rational virtual personality (e.g., providing more non-impulsive, or rational, responses, etc.). As can be appreciated, if the user 216 is determined to have an analytical personality, the virtual personality may be configured to provide impulsive responses and behavioral output. Additionally or alternatively, the virtual personality may be configured to match a personality to what a user 216 desires by monitoring input made by a user 216

(e.g., voice commands, content, context, etc.). In some cases, a user 216 may wish to interface with a virtual personality that is identical to the personality of the user 216. This desire may be determined by the one or more vehicle sensors recording user responses, interactions with a virtual personality, spoken tone, and/or context to refine the virtual personality to meet the preferences of the user 216. Additionally or alternatively, the profile matching module 2008 may refer to preferences 2024 to determine the virtual personality desired by the user 216. The profile matching module 2008 may refer to a personality data memory 2028 for stored virtual personalities (e.g., standard virtual personalities, user-defined virtual personalities, etc.). In some cases, the profile matching module 2008 may refer to a user profile associated with a user 216 (e.g., stored in a profile data memory 252, etc.).

[0361] As provided herein, a user profile may be created, modified, stored, copied, transferred, and/or transported. Additionally, the user profile can be accessed by one or more devices. In some cases, the user profile may be copied from one user to another user, transferred from one memory to another memory, and/or transported from one vehicle to another vehicle, to name a few. A user profile can be stored in a memory associated with a user and may include one or more data records. For example, the user profile may be stored in at least one data file or data object of a data structure 1200 as previously described in conjunction with Figs. 12A-12D.

[0362] User profiles can be compiled and/or modified based on a number of factors and/or information/input received by one or more sensors (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.). In some embodiments, these sensors can be associated with a user 216, a user device 212, and/or a vehicle 104. The sensors may include at least one of environmental sensors 708, user interface sensors 712, associated device sensors 720, and the like. In one example, the associated device sensors 720 can include any sensors of a mobile device (e.g., a smart phone, tablet, mobile computer, etc.) that is connected, either wired or wirelessly, to a vehicle 104 and/or vehicle control system 204.

[0363] Information received by the one or more sensors may include inquiries made and/or input provided by a user (e.g., web browsing history, stored data cookies, voice commands, gesture input, intelligent personal assistant history, knowledge navigator, etc.), geographic location data (e.g., satellite positioning system, Wi-Fi hotspot, cell tower data, indoor positioning system, etc.) associated with a user 216 and/or a vehicle 104, and the like. In some cases, the information may be evaluated to determine whether the received information qualifies as user profile data. This evaluation may include referring to rules

stored in a memory and/or comparing terms in the received information to a list of key terms associated with user profile data.

[0364] An embodiment of a method 2100 for presenting a virtual personality to a user 216 of a vehicle 104 is shown in Fig. 21. A general order for the steps of the method 2100 is shown in Fig. 21. Generally, the method 2100 starts with a start operation 2104 and ends with an end operation 2132. The method 2100 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 21. The method 2100 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. One example of the computer readable medium may include, but is not limited to, the memory 2032 described in conjunction with the personality subsystem 2000 of Fig. 20. Hereinafter, the method 2100 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-20.

[0365] The method 2100 begins at step 2104 and proceeds when a user 216 is detected (step 2108). This detection and/or identification may be based on information received from the user 216. For example, a user 216 may be recognized based on information detected by at least one image sensor, such as the camera sensors 760 of a vehicle 104. Where a user 216 is recognized, a user profile associated with the user 216 can be accessed and/or modified.

[0366] In some embodiments, the detection step of the method 2100 may include an identification of the user 216. This identification may be based on a facial recognition of the user 216. For instance, the user identification module 822 may collect facial recognition information from a user 216 associated with the vehicle 104. Facial recognition information may be collected from one or more of sites, sources, cameras 878, user profile data 252, vehicle user 216 data, vehicle passenger data, and/or other sensors. The collection of facial recognition information may include recording information via one or more sensors (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.). These one or more sensors may be associated with a vehicle 104. In one example, the one or more sensors may include at least one image sensor, such as a camera 878. Continuing this example, the cameras 878 may be positioned inside and/or outside of a vehicle 104. As can be appreciated, facial recognition information can be collected from one or more users 216 inside the vehicle 104 and/or from one or more users 216 outside the vehicle 104.

[0367] Facial recognition information may include facial features, and information about facial features, that can identify a user 216. For instance, the facial features can include

measurement information that defines a position and/or arrangement of the facial features. In some cases, one or more sensors may be used to determine a measurement between at least one of the facial features of a user 216. Typical facial features can include, but are not limited to, at least one eye, eyebrow, nose, nostril, cavity, socket, tooth, bone, mouth, lip, chin, ear, hairline, forehead, facial hair, mole, birthmark, scar, and/or other distinguishing mark associated with the face of a user 216. The collected facial recognition information can be stored in a memory and may include pointers to a memory. These pointers can be stored in one or more other memory locations.

[0368] The recognition of facial features may include comparing identified facial features associated with a user 216 with one or more identification characteristics stored in a memory. The one or more identification characteristics can be stored in a memory of a social networking site, facial recognition data memory, profile data memory 252 and/or other memory location. When the at least some of the identified facial features match at least one identification characteristic stored in the memory, a successful match, or facial recognition, may be determined. The more identified facial features that match the identification characteristics, the more successful the facial recognition. In other words, the facial recognition may be associated with a confidence level, or accuracy rating. This rating may be based on the number of features that are determined to match.

[0369] In the event that a user 216 is detected, the method 2100 continues by determining whether a user profile associated with the detected user 216 is available and/or accessible (step 2112). This determination may be based on a positive (e.g., matching) facial recognition of the user 216 during the detection step. Where a user 216 is identified, the personality module 2004 may communicate with the profile data memory 252 to access a user profile associated with the identified user 216. In some cases, a user 216 may not be identified, and as such, the user profile associated with that user 216 cannot be retrieved or accessed from memory.

[0370] Next, the method 2100 may continue by determining whether any virtual personality information is stored in the accessed user profile (step 2116). The virtual personality information may include, but is not limited to, at least one of a virtual personality, a personality type of the user, personality preferences, and virtual personality presentation information. The virtual personality may include one or more of an avatar, a voice output, a visual output, a tone, and a volume intensity. If the user profile includes a virtual personality, the personality module 2004 may retrieve and/or access the virtual personality from the user profile for use in the vehicle 104.

[0371] Once the virtual personality is retrieved, and/or accessed, the virtual personality may be presented to the user 216. In some cases, presenting the virtual personality to a user 216 may include altering one or more features of the vehicle 104. For instance, one or more features of the vehicle 104 may be altered to change a mood associated with the virtual personality. Continuing this example, the personality module 2004 may communicate with the vehicle control system 204 to change an internal lighting, an infotainment setting, a temperature, an oxygen level, an air composition, a comfort setting, a seat position, a transmission setting (e.g., automatic to manual, paddle shifting, and more), a navigation output, etc., and/or combinations thereof. In presenting the virtual personality the method 2100 may include interacting with the user 216. One example of interaction may include asking the user 216 questions. Another example may include providing comments to the user 216. The user 216 may respond to the questions and/or comments by providing visual, audible, and/or touch input responses. The personality module 2004 can respond to the user 216 based on a tone, context, and/or volume associated with the user 216 responses.

[0372] In the event that no virtual personality is associated with the user profile in step 2116, the method 2100 may continue by generating a virtual personality to suit the user 216 (step 2136). The virtual personality may be generated by the personality module 2004 in conjunction with the personality matching module 2008. For example, the personality matching module 2008 may receive user input via a user profile associated with the user 216, voice input, visual input, tactile input, manual input, etc., and/or combinations thereof. Continuing this example, the matching engine 2012 may determine a virtual personality that suits the user input received. In some cases, suiting the virtual personality to a user 216 may be based at least partially on rules 2016. If it is determined from the user input that the user 216 is agitated (e.g., angry, frustrated, annoyed, has little patience, is shouting, making fast sharp gestures, frowning, etc.), the matching engine 2012 may determine that a virtual personality should be generated to reduce the user's 216 agitation (e.g., the virtual personality may be generated as an opposite personality to that determined with the user 216). Additionally or alternatively, if it is determined (e.g., via the personality matching module 2008, etc.) from the user input that the user 216 is happy (e.g., whistling, singing, smiling, waving, is talking softly, etc.), the matching engine 2012 may determine that the virtual personality should be generated to match the user's 216 happiness. In any event, the virtual personality is generated by the personality module

2004 in communication with the personality matching module 2008. The method 2100 can then present the generated virtual personality in step 2124, as previously described.

[0373] If no user profile is associated with the user 216 in step 2112, or if the user profile cannot be accessed, the method 2100 may continue by providing a standard virtual personality to the user (step 2140). In some embodiments, while the standard virtual personality is provided to a user 216, and as profile data is collected, the standard virtual personality may be refined to suit the user 216. The standard virtual personality may include a virtual personality stored in a memory (e.g., personality data memory 2028, memory 2032, etc.). This standard virtual personality can be created by at least one of a user 216, company, group, institution, personality module 2004, etc. The method 2100 may continue to present the personality at step 2124 or proceed at step 2144.

[0374] The method 2100 continues by collecting profile data associated with the user 216 (step 2144). In some embodiments, collecting profile data may include determining whether any of the information received qualifies as user profile data. In one embodiment, this determination may be made by the profile identification module 848. For instance, the profile identification module 848 may refer to rules stored in a memory to determine whether a match exists between at least some of the received information and matching information corresponding to user profile and/or virtual personality data. Matching information may include keywords, key terms, input types, context-sensitive data, match indicators, etc., and combinations thereof.

[0375] Next, the method 2100 may proceed by refining the virtual personality (step 2148). Refining the virtual personality, may include using data to custom suit the virtual personality to a user 216 (e.g., based at least partially on rules 2016). This custom suiting operation may be similar, if not identical, to suiting the virtual personality to the user 216 as described in conjunction with step 2136. For instance, the data collected in step 2144 may be used by the personality matching module 2004 in altering the virtual personality to suit the user 216. Continuing this example, as the user 216 continues to provide more information and/or input, the virtual personality may be refined to best suit the user 216. In some embodiments, the virtual personality may be refined while the virtual personality is being presented to a user 216. The virtual personality may be refined in real-time (e.g., as the input is happening, is provided, etc.) and/or near-real-time (e.g., as the input is happening including any system and/or communication delays, etc.). Additionally or alternatively, as the virtual personality is altered, the altered personality may be presented to the user in real-time and/or near-real-time. Additionally or alternatively, the virtual

personality may be refined (e.g., altered) when the user 216 is not being presented the virtual personality. In other words, the virtual personality may be refined in non-real-time (e.g., when the virtual personality is not being used, etc.). As provided herein, a standard personality and/or a virtual personality associated with a user 216 can be refined. The method 2100 continues at step 2124 by presenting the virtual personality and/or refined virtual personality.

[0376] The method 2100 continues by determining whether the user 216 is still present (step 2128). In some embodiments, the presence of a user 216 may include an existing association of the user 216 with a vehicle 104. For instance, the user 216 may be associated with the vehicle 104, although the user 216 may not be physically located inside the vehicle 104. An example of this association may include when the user steps outside of the vehicle 104 (e.g., to maintain the vehicle 104, refuel, temporarily visit a location outside of the vehicle 104, etc.). The detection and/or determination of whether a user 216 is present may include one or more of the detection steps described in conjunction with step 2108. Additionally or alternatively, determining whether a user 216 is present may include determining whether the user 216 is physically inside the vehicle 104. For example, a user 216 may be determined to be present inside a vehicle 140 based on information detected by at least one image sensor, such as the camera sensors 760 of the vehicle 104. In any event, when a user 216 can no longer be detected by at least one sensor (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.) associated with the vehicle 104, the user 216 may be determined as not being present. If the user 216 is determined to still be present, the method 2100 may continue by collecting more profile data (step 2144). If the user is determined not to be present, the method 2100 ends at step 2132.

[0377] In one example, a virtual personality may be represented by an avatar. The avatar may be an intelligent assistant, a virtual assistant, and/or an intelligent virtual assistant as described in application PCT/US14/_____, filed on April 15, 2014, entitled "Vehicle-Based Multimode Discovery" (Attorney Docket No. 6583-585-PCT), which is hereby incorporated herein by reference, in its entirety, for all that it teaches and for all purposes. The avatar may be presented as a theme, color, specific sound output, other user preference, etc., and/or combinations thereof. For instance, the avatar may be configured as one or more icons, figures, colors, and/or themes that are configured to represent the virtual personality.

[0378] In some embodiments the avatar may be configured to follow a user 216 from vehicle-to-vehicle and/or from communication device-to-communication device. The

avatar may be stored in the user profile associated with a user 216. The user profile may be accessed, as provided herein, via one or more vehicle 104 and/or device 212, 248. Avatars may be synchronized, or synced, between vehicles 104 and/or communication devices 212, 248. The synchronization can include a communication of the avatar from one vehicle to another vehicle. The synchronization can include a communication of the avatar from one device 212 to another device 248. Additionally or alternatively, the avatar may be stored in profile data 252 (e.g., in the user profile) accessible across a communication network 224. One example of profile data 252 located across a network 224 may include a cloud-based system (e.g., a server 228 and profile data memory 252). In yet another example, a vehicle 104 may include an avatar associated with a user 216. In this example, the vehicle 104 may synchronize with another vehicle, a device 212, 248, and/or a building automation system 2304. As part of the synchronization communication, the vehicle 104 may transfer the avatar associated with the user 216. As can be appreciated, this operation may be performed in reverse (e.g., the other vehicle, device 212, 248, and/or building automation system 2304 may transfer the avatar associated with the user 216 to the vehicle 104 as part of the synchronization communication).

[0379] An embodiment of a method 2200 for matching a virtual personality to a context of a user 216 of a vehicle 104 is shown in Fig. 22. A general order for the steps of the method 2200 is shown in Fig. 22. Generally, the method 2200 starts with a start operation 2204 and ends with an end operation 2232. The method 2200 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 22. The method 2200 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. One example of the computer readable medium may include, but is not limited to, the memory 2032 described in conjunction with the personality subsystem 2000 of Fig. 20. Hereinafter, the method 2200 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-21.

[0380] The method 2200 begins at step 2204 and proceeds when user input is received from a user 216 (step 2208). User input can be received by the one or more sensors (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.) associated with the vehicle, as previously described. Additionally or alternatively, the user input may be received by the personality module 2004 and/or the personality matching module 2008. User input may include input provided from one or more users 216. In one embodiment, where two or

more users 216 provide input, a group user input may be received by the modules 2004/2008.

[0381] The method 2200 continues by determining a context of the user input received (step 2212). As previously described in conjunction with Fig. 20, a context may include an emotional state of the user 216. Context may be determined via the personality matching module 2008 based at least partially on rules 2016 stored in memory. In some embodiments, determining the context of the user input may correspond to determining at least one other user-related consideration. For example, the personality matching module 2008 may refer to at least one of a schedule, email, text message, phone call, search engine result, etc., and other content related to the user 216. In some embodiments, determining the context of the user input may correspond to determining at least one non-user consideration. Non-user considerations may include, but are not limited to at least one of, environment (e.g., temperature, humidity, air composition, oxygen level, etc.), weather (e.g., rain, sun, snow, etc.), calendar, traffic, unemployment rate, stock market value, economic index, social unrest, and the like. For instance, a user 216 may be quiet, with a neutral, or sad, expression inside a vehicle 104. In this example, an image sensor (e.g., camera 878, etc.) may detect the facial expressions of the user 216, while an audio sensor (e.g., microphone 886, etc.) may detect audio output, or lack thereof, from the user 216. The personality matching module 2008 may communicate with other systems (e.g., a device 212, 248, etc.) associated with the vehicle 104 to check the user's 216 email, messages, calls, and/or schedule. Continuing this example, the personality matching module 2008 may communicate across a network 224 to determine at least one non-user considerations, such as a low employment rate and/or a severe drop in stock market value. Alone, or together, this input and information may define the context of the user input.

[0382] In some cases, determining a context associated with the user input may include determining a context of a group user input (e.g., two or more users 216, etc.). Determining group user context may include detecting whether any of the users in the group of users have an avatar in user profile data 252. In some cases, two or more users 216 may have avatars that have been created based on profile information associated with the two or more users 216. In other words, each user 216 may have an avatar in user profile data 252, corresponding to that individual user 216.

[0383] Next, the method 2200 proceeds by determining whether the determined context matches a virtual personality of the user 216 (step 2216). This match can be based on rules 2016 stored in memory. As provided herein, a context of user input may match a

virtual personality when the virtual personality is suited to the user 216 based at least partially on the context of the user input provided by the user 216. In some cases, matching a context of the user input may include providing a virtual personality having an opposite context. For instance, a user 216 may provide input having a context determined to be "sad," and a virtual personality identified as "happy" (e.g., having a "happy" or opposite context) may match the "sad" user input context. Additionally or alternatively, a user 216 may provide input having a context determined to be "happy," and a virtual personality identified as "happy" may match the "happy" user input context. In any event, the match is similar to the suiting the virtual personality as described in conjunction with Fig. 21 (e.g., steps 2136 and 2148). In the event that a match is determined, the method 2200 continues by presenting the matching virtual personality to the user 216 (step 2224).

[0384] In embodiments where two or more users 216 have avatars in profile data 252, the context matching may determine whether the avatar of at least one of the two or more users 216 matches an avatar of another user 216 of the two or more users 216. The context matching operation may include determining whether at least one theme, color, specific sound output, other user preference, etc., and/or combinations thereof, of the avatars match. In the event that a match is determined, the method 2200 may continue by presenting the matching avatar to the user 216 (step 2224).

[0385] If a virtual personality does not match the context of the user input, the method 2200 may continue by altering and/or generating a virtual personality to match the context (step 2220). Altering and/or generating a virtual personality to match the context is similar, if not identical, to the refining of and/or generating the virtual personality as described in conjunction with Fig. 21 (e.g., step 2148 and step 2136, respectively). Once a matching virtual personality has been refined and/or generated, the method 2200 continues by presenting the matching virtual personality to the user 216 (step 2224). As can be appreciated, presenting the matching virtual personality in step 2228 may be similar, if not identical to, the presentation of the virtual personality as described in conjunction with Fig. 21. Additionally or alternatively, the output provided by the matching virtual personality may be in the form of at least one avatar, voice output, visual output, tone, and volume intensity, and configured to suit the user 216.

[0386] In another embodiment, if no direct or exact match is determined to exist between the avatars from the group user input, the method 2200 may continue by generating a group avatar that represents two or more users 216 in the group of two or more users (step 2220). This group avatar may include at least one common setting and/or

preference shared between the avatars of the group of users 216. For example, a brother and sister may be seated in a passenger area (e.g., area 2 508B) of a vehicle 104. The brother may like rock music and dark colors (e.g., stored in the brother's user profile), while the sister may like pop music and pastel colors (e.g., stored in the sister's user profile). As provided above, a group avatar may be created to appeal to both users (e.g., without alienating at least one user 216). The group avatar may include secondary and/or tertiary settings and/or preferences associated with the brother and sister's user profiles to find common themes, preferences, settings, etc. In this example, both the brother and sister may like country music (but not necessarily prefer it over other kinds of music). Moreover, the brother and sister may like greyscale color schemes (but they may not prefer them). In this example, the group avatar generated for the group of users 216 (e.g., the brother and sister) for presentation to the passenger area of the vehicle 104 can include greyscale color schemes and may even suggest and/or present country music to the passenger area. When a group avatar is generated, the method 2200 continues by presenting the group avatar to the group of users 216 (step 2224).

[0387] The method 2200 continues by determining whether the user 216 is still present (step 2228). In some embodiments, the presence of a user 216 may include an existing association of the user 216 with a vehicle 104. For instance, the user 216 may be associated with the vehicle 104, although the user 216 may not be physically located inside the vehicle 104. An example of this association may include when the user steps outside of the vehicle 104 (e.g., to maintain the vehicle 104, refuel, temporarily visit a location outside of the vehicle 104, etc.). The detection and/or determination of whether a user 216 is present may include one or more of the detection steps described in conjunction with step 2108 of Fig. 21. Additionally or alternatively, determining whether a user 216 is present may include determining whether the user 216 is physically inside the vehicle 104. For example, a user 216 may be determined to be present inside a vehicle 140 based on information detected by at least one image sensor, such as the camera sensors 760 of the vehicle 104. In any event, when a user 216 can no longer be detected by at least one sensor (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.) associated with the vehicle 104, the user 216 may be determined as not being present. If the user 216 is determined to still be present, the method 2200 may continue to receive user input at step 2208. If the user is determined not to be present, the method 2200 ends at step 2232.

[0388] Fig. 23 is a block diagram of an embodiment of an automation control system 2300. The automation control system 2300 may include a building automation system

2304 having at least one of an HVAC module 2308, an energy module 2312, a security module 2316, an infotainment module 2320, a utilities module 2324, and more. The subsystems, modules, components, etc. 212, 216, 252, 2304 may communicate over a network or bus 356 and/or a communication network 224. The communication bus 356 may be bidirectional and perform data communications using any known or future-developed standard or protocol. An example of the communication bus 356 may be as described in conjunction with Fig. 4. As one example of the communication, the building automation system 2304 may communicate with vehicles 104, devices 212, 248, profile data 252, vehicle sensors 242, and/or non-vehicle sensors 235 via the communication bus 356 and/or the communication network 224. Additionally or alternatively, the building automation system 2304 may communicate across a communication network 224 with at least one of an emergency agency 2328, energy provider 2332, security provider 2336, group 2340, and company 2344.

[0389] For example, building automation systems 2304 may communicate with a user profile to predictively adjust climate and other settings based on user 216 settings associated with a vehicle 104. The user profile may be stored in at least one profile data memory 252. A user 216 may set the inside cabin temperature of a vehicle 104 to a specific value (e.g., 72 degrees Fahrenheit, etc.). Based on this temperature setting, the building automation system 2304 may share the temperatures setting for one or more areas of a home, office, and/or other environmentally controlled space. The building automation system 2304 may be configured to analyze the behavior of a user 216 associated with a vehicle 104. The behavioral analysis of a user's preferred temperature settings may include a consideration of ambient temperature, environmental factors, and/or solar radiation in determining shared settings.

[0390] As provided above, the building automation system 2304 may determine preferred building (e.g., rooms, areas, spaces, etc., associated with the building) temperatures of a user 216 based on information stored in a user profile. For example, the building automation system 2304 may refer to vehicle temperatures set by a user 216 and stored in the user profile. Based on the vehicle temperatures stored in the user profile, the building automation system 2304 may adjust certain areas of a home to match the vehicle temperatures. In some embodiments, the building automation system 2304 may determine that areas of the building may be adjusted based on a combination of the vehicle temperatures, time of day, recorded images and/or sounds from the vehicle, and mood of the user, as provided herein.

[0391] The HVAC module 2308 may be configured to control HVAC settings associated with one or more areas of a building. The one or more areas described herein may include, but are not limited to, rooms, floors, cubicles, an entire building space, subdivisions thereof, and/or the like. Among other things, the HVAC module 2308 can monitor at least one HVAC system and control an operation of the HVAC system based on at least one input, such as, setpoints, timers, schedules, building area temperatures, building area humidity, user profile information, and more. In any event, the HVAC module 2308 may determine an actual state (e.g., an actual temperature, humidity, pressure, etc.) of one or more areas of a building, compare the actual state with a target state (e.g., a desired or goal temperature, humidity, pressure, etc.) of the one or more areas of the building, and regulate the HVAC system at least partially in response to the comparison.

[0392] The energy module 2312 can be configured to control and/or monitor at least one energy feature and/or setting associated with one or more areas of a building. Energy features and/or settings can include, but is in no way limited to, lighting, powered circuits, ionization devices, communications equipment, and/or the like. In some cases, power to the energy features and/or a power setting of the energy features may be controlled by the energy module 2312. For example, when a user 216 is not present in one or more areas of a building, the energy of the one or more areas may be "turned off," disabled, and/or at least partially limited. Continuing this example, when a user 216 is no longer present in a room of a home, the lighting may be turned off in that room. Presence of the user 216 can be detected in a number of ways. For instance, one or more motion sensors, image sensors, signal detectors, etc. may be used in the building to detect the presence of a user 216. The presence of the user 216 can include an identification of a particular user 216. This identification may include referring to a user profile associated with the detected user 216.

[0393] The security module 2316 may be configured to control and/or monitor at least one security system, security component, and/or state thereof. Security systems may include any type of security service equipment associated with one or more areas of a building. Security systems may be residential, commercial, and/or externally monitored (e.g., by a security provider 2332, etc.). The security systems may include one or more surveillance components, locking elements, alarm features, and communication features. In some cases, a security event may be detected by the security system and reported (e.g., via a communication feature such as a phone line, wireless signal, etc.) to a security

provider 2336 and/or an emergency agency 2328 (e.g., police, fire, emergency medical service (EMS), and/or governmental agency, etc.). Additionally or alternatively, the security module can activate, deactivate, monitor, and/or otherwise control the security system of a building.

[0394] The infotainment module 2320 can be configured to communicate with one or more infotainment devices associated with one or more areas of a building. Infotainment systems associated with the one or more areas of a building may include, but are not limited to, radios (e.g., analog, digital, and/or satellite, etc.), home entertainment systems, streaming content players, intercom systems, cable boxes, satellite boxes, set-top boxes (STB), digital video recorders, background music systems, emergency alert system (EAS) devices, over-the-air receiver, speakers, etc. Among other things, the infotainment module 2320 may control a state of the infotainment systems, such as power state (e.g., on, off, standby, etc.), recording content (e.g., content selection, tuning, etc.), playing content (e.g., speed of playback, volume output, etc.), receiving content, presenting content, scheduling the receiving and/or presentation of content, and the like. Additionally or alternatively, the infotainment module 2320 may monitor the state of the infotainment systems.

[0395] Similar to the energy module 2312, the utilities module 2324 can be configured to control and/or monitor at least one utility feature and/or setting associated with one or more areas of a building. Utility features and/or settings can include, but is in no way limited to, electricity, water, gas, telephone, Internet access, etc. In some cases, the utility features may be "turned off," disabled, and/or at least partially disabled. For example, when a user 216 is not present in one or more areas of a building, the utilities of the one or more areas may be controlled as provided above. Continuing this example, when a user 216 is no longer present in a room of a home, the Internet access may be turned off, or limited, in that room. In some cases, the utilities module 2324 may turn off, and/or limit, utilities, in response to detecting an emergency condition and/or security event. For instance, a criminal may have forcefully entered a home at night with the intent to commit a felony therein. In this case, the utilities module 2324 may limit, or turn off, one or more utilities associated with the home to prevent the unlawful use by the criminal. As another example, a gas leak may be detected in the home. In this instance, the utilities module 2324 may shut off the gas supplied to the home.

[0396] In any of the aforementioned modules 2308-2324, a presence of the user 216 may be used by the modules 2308-2324 to control and/or monitor their respective features

and/or settings. The presence of the user 216 can be detected in a number of ways. For instance, one or more motion sensors, image sensors, signal detectors, etc. may be used in the building to detect the presence of a user 216. The presence of the user 216 can include an identification of a particular user 216. This identification may include referring to a user profile associated with the detected user 216.

[0397] In some embodiments, the building automation system 2304 may be controlled and/or monitored by one or more of the user 216, an emergency agency 2328, an energy provider 2332, a security provider 2336, a group 2340, and a company 2344. For example, an emergency agency 2328 may need access to the one or more areas of the building. In this case, the emergency agency 2328 (e.g., police) may communicate with the building automation system 2304 and deactivate, and/or override, a security system (e.g., via the security module 2316). Similarly, in the event of a fire, the emergency agency 2328 (e.g., fire department, etc.) may shut off one or more utilities, such as gas (e.g., via the utilities module 2324). As another example, an owner of one or more areas of a building may have a contract with an energy provider 2332 to limit HVAC output during peak energy usage periods. In this example, the energy provider 2332 may communicate with the building automation system 2304 and turn off, or limit, an HVAC output via the HVAC module 2308. Additionally or alternatively, the energy provider 2332 may throttle an energy usage of the owner by communicating with the energy module 2312, and directing the energy module 2312 to limit, or turn off, power in the one or more areas of the building. The group can represent any other entity not represented by one or more of the other agencies 2328, providers 2332, 2336, or company 2344. The company 2344 can include an owner (or group of owners) of the one or more areas of the building, a business, and/or an entity recognized by a locality to serve others and/or conduct business.

[0398] An embodiment of a method 2400 for determining and adjusting settings of one or more areas of a building based at least partially on user profile information may be as shown in Fig. 24. A general order for the steps of the method 2400 is shown in Fig. 24. Generally, the method 2400 starts with a start operation 2404 and ends with an end operation 2420. The method 2400 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 24. The method 2400 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 2400 shall be

explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-23.

[0399] The method 2400 begins at step 2404 and continues by storing one or more areas of a building associated with a user 216 in a user profile (2408). The user profile may be associated with the user 216. In some of the many embodiments described herein the user profile may be specific to only one user 216. As a user 216 moves about a building, information corresponding to the movement of the user 216 may be collected. This information may be provided by location information associated with a device 212 of user 216. For instance, the device 212 may determine a physical location of the device using one or more of an SPS, Wi-Fi hotspot, cell tower data, indoor positioning system, and the like. Additionally or alternatively, the location of a user 216 may be determined from position information collected by one or more sensors associated with the building. These sensors may include at least one of image sensors, motion sensors, signal detectors (e.g., key card readers, electronic key station, wireless communication signal detector, etc.) and the like. In one embodiment, a user 216 can be associated with one or more areas of a building via data entered into the user profile corresponding to associated areas. This data may be entered by a user 216, an administrator, a manager, a building owner, and/or some other entity.

[0400] It is anticipated that the one or more areas of the building associated with the user 216 can be stored (in user profile associated with the user) in the profile data memory 252. The profile data memory 252 can be found on a device 212, a vehicle 104, attached to a communication network 224, and/or some other location.

[0401] Next, the method 2400 continues by collecting comfort and/or infotainment information associated with the user 216 (step 2412). In some cases, the infotainment information may correspond to the infotainment settings of a vehicle 104 and/or one or more areas of a building, that are associated with a user 216. Infotainment settings may include, but are not limited to, preferred radio stations, content applications, listening content, viewing content, content playback settings (e.g., volume, speed, quality, etc.), genres, content consumption habits (e.g., including listening times, associated content, trends, etc.), recording preferences, and/or the like. The comfort information may correspond to one or more comfort settings of the user 216. Comfort settings can include, but are in no way limited to, at least one preference such as lighting, temperature, air composition, humidity, oxygen levels, background music/noise, etc.

[0402] Similar to the building area information, this collected comfort and/or infotainment information may be stored in the user profile associated with the user 216. The comfort and/or infotainment information can be stored (in user profile associated with the user) in the profile data memory 252. The profile data memory 252 can be found on a device 212, a vehicle 104, attached to a communication network 224, and/or some other location (e.g., associated with a building, etc.).

[0403] The method 2400 proceeds by using the collected and/or stored information to adjust settings based on the stored information (step 2416). For instance, the building automation system 2304 can alter at least one setting of one or more areas of the building to match information stored in the user profile associated with a user 216. In other words, the settings of a building may be adjusted to match the settings of a vehicle 104 associated with a user 216. Additionally or alternatively, a vehicle 104 may adjust the settings of the vehicle 104 based on information stored in the user profile associated with the user 216. In other words, the settings of a vehicle 104 may be adjusted to match the settings of one or more areas of a building associated with a user 216. The method 2400 ends at step 2420.

[0404] An embodiment of a method 2500 for determining and adjusting settings of a system based on user profile information is shown in Fig. 25. A general order for the steps of the method 2500 is shown in Fig. 25. Generally, the method 2500 starts with a start operation 2504 and ends with an end operation 2536. The method 2500 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 25. The method 2500 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 2500 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-24.

[0405] The method 2500 begins at step 2504 and proceeds by detecting the presence of setting information in a user profile associated with a user 216 (step 2508). The presence of setting information may be provided via the user profile reporting the setting information to at least one of the vehicle 104 and/or the building automation system 2304. In some embodiments, the detection of the setting information may be made by the building automation system 2304 detecting a user profile and reading at least one data record of the user profile, the data record containing the setting information. The user profile may be detected in response to identifying a user 216. For example, a user 216

may register with a building automation system 2304. As part of the registration, the user 216 may provide access to at least a portion of the user profile associated with the user 216 via the building automation system 2304. The building automation system 2304 may be configured to retrieve the setting information from the user profile on a periodic basis. Additionally or alternatively, the building automation system 2304 may be configured to retrieve the setting information from the user profile based on detecting the presence of a user 216 (e.g., in one or more areas of a building and/or a vehicle 104).

[0406] The method 2500 may continue by determining user areas associated with the building (step 2512). This determination may be made by referring to a data location of the user profile stored in the profile data memory 252. In one embodiment, the user areas may correspond to the one or more areas of a building associated with the user 216 as described in conjunction with Fig. 24. For example, the user areas may be a space where a user 216 works, lives, and/or plays. User areas can be determined from location information associated with the user 216 and a time the user 216 spends in the user area. As can be appreciated, various thresholds may be set for an area/space to qualify as a user area. For instance, a user 216 may be required to spend a minimum amount of time in a space or area for that space or area to qualify as a user area. Additionally or alternatively, a frequency associated with the time a user 216 spends in a space or area can qualify the space or area as a user area. By way of example, a user 216 may visit a space every day for a week, this frequency may qualify the space as a user area associated with that user 216. In some cases, the user areas may be associated with a work personality, home personality, and/or other rating/rank.

[0407] Next, the method 2500 continues by determining whether a user 216 is present in the user area (step 2516). Presence of a user 216 may include actual physical presence, anticipated presence (e.g., expected time of arrival, based on historical data, planned presence, etc.), and/or a programmed presence (e.g., set by one or more administrative preferences, user-configured, and/or the like) in at least one area of the building. The presence of the user 216 may be determined by one or more sensors of the building, a device 212, etc., as described above. If the user 216 is not determined to be present, the method 2500 ends at step 2536.

[0408] In the event that the user is determined to be present in the user area, the method 2500 proceeds by adjusting at least one setting of the building based on the settings information in the user profile (step 2520). The adjustment may be caused by the building automation system 2304 providing an adjustment output to one or more components (e.g.,

building comfort control systems, modules, etc.) associated with the one or more areas of the building. Adjusting settings may correspond to changing at least one setting of comfort and/or infotainment settings. For instance, a radio may be tuned to a specific station, the lighting may be adjusted to a certain level, the temperature in a home, or area of the home, may be changed, and/or the like. The settings may be adjusted to match the settings stored in the user profile. In some cases, the adjustments may include a scaling factor to compensate for differences between vehicle settings and building settings.

[0409] The method 2500 may continue by determining whether a user 216 changes settings after the settings have been adjusted via the building automation system 2304 (step 2524). For example, a user 216 may change a temperature after the temperature is adjusted via the building automation system 2304. This change may occur where vehicle settings may differ slightly from building settings. Continuing this example, the user 216 may have the inside cabin temperature of a vehicle 104 set to 74 degrees Fahrenheit. When the user 216 is present in the user area of the building, the building automation system 2304 may adjust the user area to match the 74 degrees Fahrenheit. In this example, the user may reduce the user area temperature to 72 degrees after it has been set at 74 degrees Fahrenheit by the building automation system 2304. This user 216 change may indicate that there is a comfort difference in the settings. The comfort difference may be stored in the user profile of the user 216 and used in subsequent matching operations performed by the building automation system 2304 (step 2528). Among other things, the comfort difference may be used to fine-tune, or refine, the matching of settings adjustments provided herein. If no settings have been adjusted, the method 2500 ends at step 2536.

[0410] In the event that the settings have been adjusted by the user 216, and the user 216 change, or comfort difference, is stored in the user profile associated with the user 216, the method 2500 may continue by adjusting the vehicle settings to match the settings of the building automation system 2304. Similar to refining the adjustment matching provided in conjunction with the description of steps 2524 and 2528, the method 2500 may determine whether the user 216 makes any changes to the vehicle settings in response to the settings being adjusted by the vehicle 104 based on the building automation system 2304 settings stored in the user profile associated with the user. The method ends at step 2536.

[0411] Referring to Fig. 26, a block diagram of an embodiment of a vehicle control setup for at least one zone 512 of a vehicle 104 is shown. In some embodiments, the sensitivity, dimension, and even location of typical vehicle controls may be adjusted

according to a preference and/or ability of a user 216. It is anticipated that vehicle control functionality (e.g., including sensitivity, and/or placement, etc.) may be adjusted and stored with a user profile. As can be appreciated, this vehicle control functionality can follow a user 216 from one vehicle 104 to another vehicle 104.

[0412] As shown in Fig. 26, the interior space 108 of a vehicle 104 is shown having one or more controls, actuators, systems, and components, etc. For example, the vehicle 104 may include at least one feature of vehicle 104 including, but not limited to, a speed control pedal 2608, steering wheel 640, occupant seating system 648, and other features 2604, to name a few. These features may each have a feature origin 2628 connecting a positional reference datum 2632 with a feature positional reference 2636. In other words, the position of at least one of the features may be adjusted in reference to the reference datum 2632 and feature origin 2628 associated with the at least one feature. Additionally or alternatively, the feature origin 2628 of each feature may be adjusted according to one or more feature ranges 2612, 2616, 2624. The feature origin may be moved relative to a base origin 2620. At least one feature may be moved, and/or positioned, in one or more directions including, but not limited to, a forward direction 2606 (e.g., away from a user 216 in some cases), a backward direction 2610 (e.g., toward a user 216 in some cases), an upward direction 2614 (e.g., away from the base origin 2620), and/or a downward direction 2618 (e.g., toward the base origin 2620). The directions may include side-to-side positioning (e.g., leftward direction and rightward direction, with reference to a user 216 and/or the base origin 2620).

[0413] In some embodiments, at least one feature may be adjusted according to angular measurements. These angular adjustments can include an angle 2640, 2644, 2648, 2652 between at least one reference datum 2632 and the feature positional reference 2636 of the at least one feature. For example, a user 216 may have configured a vehicle 104 to include control settings having a position of a steering wheel 640 in a steering positional range 2616 and at a steering wheel angle 2648. The origin 2628 of the steering wheel 640 may be adjusted in an upward direction 2614 or downward direction 2618 to adjust a height of the steering wheel 640 in the interior space 108 of the vehicle 104. As another example, the occupant seating system 648 may be adjusted for various positions. These various positions can include a height of the occupant seating system 648 (e.g., as measured from the base origin 2620 across a seating positional range 2624), a forward/backward position, and a seating angle 2640, to name a few. As can be appreciated, the occupant seating system may include lumbar support adjustments, side-to-side settings, seat base angles,

and more. As yet another example, the position of one or more control pedals 2608 may be adjusted according to orientation and/or angle. For instance, a user 216 may have configured a vehicle 104 to include control settings having a position of the control pedal 2608 in a pedal positional range 2612 and at a pedal angle 2644. The origin 2628 of the control pedal 2608 may be adjusted in an upward direction 2614 or downward direction 2618 to adjust a height of the control pedal 2608 in the interior space 108 of the vehicle 104. Additionally or alternatively, a side-to-side position of the control pedal 2608 may be set.

[0414] In some embodiments, the feature ranges 2612, 2616, may include an operational range. For instance, the steering wheel 640 may have an angular operational range corresponding to the rotation of a steering wheel 640 about an axis. Additionally or alternatively, the control pedal 2608 may include an operational range within the control pedal range 2612. The operational range can correspond to an amount of movement of the feature 640, 2608 within the range 2612, 2616. In some embodiments, the operational range can include a sensitivity associated with the movement in the range. The sensitivity may be set to limit and/or restrict movement of the feature 640, 2608 within the operational range. It is anticipated that this restriction may be adjusted between various levels to provide greater or lesser operational force as required from a user 216.

[0415] For instance a user 216 may wish to have sensitive controls in a vehicle 104. In this example, the restriction associated with the sensitivity may be reduced from a default, or mid-level, value to allow less restrictive movement of the feature. Continuing this example, a default value of sensitivity associated with the control pedal 2608 may require 3-4 pounds of force to overcome the restriction and move the control pedal 2608 in the operational range of the feature 2608. Increasing the sensitivity may include reducing the restriction to require less than 3-4 pounds of force (e.g., 4 ounces of force, 1 pound of force, 2 pounds of force, and/or values in between these forces, etc.). In some cases (e.g., where the user 216 may have a "heavy" foot), the sensitivity of the features may be decreased from the default value (e.g., by increasing the restrictive force required to move the feature 2608). This restriction and sensitivity may apply to the steering wheel 640 and/or other features of the vehicle 104.

[0416] Other features 2604, including, but not limited to, mirrors, cameras, sensors, microphones, speakers, and/or controls/instruments may be adjusted/set in a similar, if not identical, manner to that described above.

[0417] An embodiment of a method 2700 for determining and adjusting a vehicle feature control based on user profile information is shown in Fig. 27. A general order for the steps of the method 2700 is shown in Fig. 27. Generally, the method 2700 starts with a start operation 2704 and ends with an end operation 2724. The method 2700 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 27. The method 2700 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 2700 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-26.

[0418] The method 2700 begins at step 2704 and proceeds by recording settings of vehicle controls, or features, in a user profile associated with the user 216 (step 2708). Recording settings may include at least one of collecting settings information and storing settings information associated with the features of a vehicle 104. In some cases, these settings may have been preset and/or configured by a user 216. In one embodiment, the settings may be predefined, or default, settings configured by a manufacturer of the vehicle 104. In some embodiments, the profile identification module 848 may be configured to perform one or more of the steps as provided herein. When recording the settings, the profile identification module 848 may communicate with one or more components of the vehicle 104 to determine a position, angle, and/or other measurement of the features of the vehicle 104 as described above in conjunction with Fig. 26.

[0419] The profile identification module 848 may communicate with the various features of the vehicle 104, including vehicle sensors 242, to determine a sensitivity associated with at least one feature (e.g., vehicle controls, etc.) of the vehicle 104 (step 2712). Sensitivity can include at least one of movement restriction, movement range, operational range, and other control related aspects of the features, as described above.

[0420] The method 2700 continues by detecting vehicle feature information stored in a user profile associated with a user 216 of the vehicle 104 (step 2716). In some embodiments, the detection of the vehicle feature setting information may be made by the profile identification module 848 detecting a user profile and reading at least one data record of the user profile, the data record containing the vehicle feature setting information. The user profile may be detected in response to identifying a user 216 as provided herein. For example, a user 216 may register with a vehicle 104. As part of the registration, the user 216 may provide access to at least a portion of the user profile

associated with the user 216 via the one or more components of the vehicle 104. The one or more components of the vehicle 104 may be configured to retrieve the vehicle feature setting information from the user profile on a periodic basis. Additionally or alternatively, the one or more components of the vehicle 104 (e.g., the profile identification module 848, etc.) may be configured to retrieve the setting information from the user profile based on detecting the presence of a user 216 (e.g., in one or more areas of a vehicle 104). The detection and/or determination of whether a user 216 is present may include one or more of the detection steps described in conjunction with step 2108. Additionally or alternatively, determining whether a user 216 is present may include determining whether the user 216 is physically inside the vehicle 104. For example, a user 216 may be determined to be present inside a vehicle 140 based on information detected by at least one image sensor, such as the camera sensors 760 of the vehicle 104.

[0421] Next, the method 2700 may proceed by adjusting the vehicle features (e.g., controls, settings, etc.) to match the settings stored in the user profile associated with the user 216 (step 2720). In some cases, the adjustments may include a scaling factor to compensate for differences between vehicle settings stored for a particular vehicle 104 and the settings of another vehicle. The vehicle features may be adjusted based on the presence of a user 216 in a vehicle 104. Presence of a user 216 may include actual physical presence, anticipated presence (e.g., expected time of arrival, based on historical data, planned presence, etc.), and/or a programmed presence (e.g., set by one or more administrative preferences, user-configured, and/or the like) in the vehicle 104. The presence of the user 216 may be determined by one or more sensors of the vehicle 104, a device 212, etc., as described above. If the user 216 is not determined to be present, or if the adjustments have been made to the features of the vehicle 104, the method 2700 ends at step 2724.

[0422] Referring now to Figs. 28 and 29, methods concerning the health of a user 216 and various outputs are provided. The methods 2800, 2900 may utilize one or more sensors to measure heart rate, weight, vital signs, etc. The measurements collected by these sensors may be used to detect heart attack, seizures, and the like associated with a user 216, and in certain situations provide action to the vehicle 104. For example, the various sensors (e.g., user interface 712, non-vehicle sensors 236, vehicle sensors 242, and/or other sensors, etc.) may communicate with the vehicle control system to stop the vehicle 104, pull over to the shoulder, notify hospitals nearby (e.g., EMS, police, fire departments, etc.). Examples of these sensors may include, but are not limited to, vehicle

sensors 242, non-vehicle sensors 236, associated device sensors 720, sensors associated with a user's device 212, 248 (e.g., cell phone, tablet, smart-phone, etc.), wearable sensors and/or devices (e.g., heart rate monitors, health monitors, Fitbit® health and/or activity sensors, oxygen level sensors, diabetes sensors, etc.), and the like.

[0423] The sensors may at least one of detect, record, and track resting heart rate, maximum heart rate, aerobic heart rate. For example, if a user's heart rate moves into a resting heart rate, the vehicle 104 may respond by altering oxygen levels, providing haptic feedback, etc. In one embodiment, health statistics, vitals, and/or other user 216 information may be sent to a third party (e.g., police, emergency responders, doctors, etc.). This example may be especially useful in the event of an accident where vital statistics are of the utmost importance in providing healthcare assistance and/or emergency aid to those involved in an accident.

[0424] An embodiment of a method 2800 for providing an output based on health information associated with a user 216 is shown in Fig. 28. A general order for the steps of the method 2800 is shown in Fig. 28. Generally, the method 2800 starts with a start operation 2804 and ends with an end operation 2824. The method 2800 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 28. The method 2800 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 2800 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-27.

[0425] The method 2800 begins at step 2804 and proceeds by recording data about a user 216 (step 2808). The data may include, but is not limited to, one or more health data, such as heart rate, oxygen levels, glucose levels, blood composition, weight, movement, eye dilation, eye movement, gaze direction, speech pattern, temperature, breathing rate, voluntary body movements (e.g., coughing, spitting, vomiting, etc.), involuntary bodily movements (e.g., sneezing, seizures, twitching, ticks, etc.), skin color changes (e.g., due to lack of blood, lack of oxygen, abundance of blood, sickness, etc.). In some embodiments, the health data may be stored in a user profile associated with a user 216.

[0426] Next, the method 2800 may continue by establishing baseline health levels of a user 216 associated with a vehicle 104 (step 2812). The baseline health levels may be established using the health data recorded in step 2808. Additionally or alternatively, the baseline health levels may be established by monitoring the recorded health data of a user

216 over a period of time. As can be appreciated, this recorded health data may be averaged and/or analyzed to remove statistical health outliers. In other words, if at least some of the measured data does not generally fit with previous and/or subsequent health measurements, that data may be discarded as an outlier. In one embodiment, the baseline health levels may be established by prompting a user 216 to provide baseline health levels. The vehicle 104 may present one or more prompts to a user 216 to collect the health data, while the user 216 is determined to be at a state of average health. The baseline health levels may be used by the profile identification module 848 to create a baseline biometric profile of the user 216. This baseline biometric profile may be stored in a user profile associated with the user 216.

[0427] The method 2800 may proceed by determining whether there is any deviation between the established baseline health levels of a user 216 and a current state of health associated with the user 216 (step 2816). In some embodiments, the sensors may collect health data of user 216 periodically or continually. This health data may be used to detect a state of health associated with the user 216 at any given point in time. Additionally or alternatively, the health data associated with a user 216 may be tracked during travel and/or for a length of time that the user 216 is associated with a vehicle 104.

[0428] The method 2800 continues by providing an output based at least partially on any deviation in health data determined in step 2816 (step 2820). In some cases, a graphical output of a user's health during travel may be output via the profile identification module 848. For example, a user 216 may have multiple routes to a specific location, but it may be determined that one of the routes provides a greater level of stress (e.g., based on the tracked health data) than other routes. In some embodiments, multiple routes may be provided to a user 216 (e.g., via a GPS device, navigation system, etc.) for comparison and/or selection, based on tracked health data (e.g., user stress, emotion, etc.).

[0429] In some embodiments, the output provided may adjust one or more settings of a vehicle 104. For example, the output may be configured to adjust at least one of the vehicle interior environment, temperature, air composition, oxygen level, sound level, window position, seat position, and lighting level. As another example, the output may be configured to adjust a position and/or sensitivity of features of the vehicle 104. This example may be especially useful when a user 216 has lost the ability to accurately control a portion of the user's 216 body (e.g., due to a stroke and/or seizure etc.). For instance, the sensitivity associated with a feature of the vehicle 104 may be decreased, and as such

small movements from the user 216 would not translate into large movements of the vehicle 104.

[0430] In another example, the method 2800 may provide an output that directs the vehicle control system 204 to control at least one aspect of the vehicle 104. For instance, the vehicle control system 204 may maneuver a vehicle 104 into a safe area from a potentially harmful area. In some cases, the vehicle control system 204 can shut off power to the vehicle 104, activate emergency lights, notify others, and more. The method 2800 ends at step 2824.

[0431] An embodiment of a method 2900 for providing health information associated with a user 216 to a third party is shown in Fig. 29. A general order for the steps of the method 2900 is shown in Fig. 29. Generally, the method 2900 starts with a start operation 2904 and ends with an end operation 2924. The method 2900 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 29. The method 2900 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 2900 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-28.

[0432] The method 2900 begins at step 2904 and proceeds by detecting an incident (step 2908). In some cases, the incident may act as a trigger to collect and/or determine health data and/or statistics associated with one or more user 216 of a vehicle 104. An incident may correspond to one or more conditions detected by the vehicle and/or non-vehicle sensors 242, 236. For instance, an impact, or collision, may be detected by the vehicle body sensors 762, orientation sensors 776, mechanical motion sensors 772, force sensors 768, and/or other safety sensors 716, 716E associated with the interior and/or exterior of the vehicle 104. Additionally or alternatively, an incident may correspond to a health condition associated with a user 216. For example, a user 216 may suffer from a heart attack in which case, the user's heart rate would deviate from established baseline levels. This deviation may qualify as an incident that can be detected by the various sensors of the vehicle 104.

[0433] Next, the method 2900 may proceed by determining the health data and/or statistics of one or more users 216 associated with the vehicle 104 (step 2912). This determination may be made in response to detecting the incident from step 2908. Similar to the health data collection described above, the health data and/or statistics may be made by the various sensors provided herein. In some embodiments, the health data may be

collected at a greater rate of speed, or sampling rate (e.g., samples per minute, samples per second, etc.), in response to detecting the incident. Additionally or alternatively, the health data may collected from the users 216 of a vehicle 104, and if no health issues are detected (e.g., over a predetermined period of measurement time) then the health data collection may return to a normal sampling rate.

[0434] The method 2900 continues by communicating with at least one third party (step 2916). The communication may include a message, text message, email, phone call, emergency signal, etc., and/or combinations thereof. In some cases, the communication may be made by the transceiver 260 of the vehicle 104. In one embodiment, the communication may be made by at least one device 212, 248 associated with a user 216 and/or a vehicle 104. For instance, the communication may be made by a mobile phone of a user 216. The third party can be a loved one, a friend, a company, a group, an emergency service (e.g., police, fire, EMS, etc.), or other entity.

[0435] The communication may include the collected health data associated with one or more users 216 of the vehicle 104 and/or an identification of the one or more users 216 (step 2920). The identification may be provided based, on device 212 identification, user 216 identification via facial recognition (e.g., as described above), and/or user 216 registration with a vehicle 104. In some embodiments, the communication may provide health data in real-time (e.g., as the health data is collected, etc.), near-real-time (e.g., as the health data is collected including any system and/or communication delays, etc.), and/or in non-real-time (e.g., after the data is collected, etc.). The method 2900 ends at step 2924.

[0436] Fig. 30 provides adjusting an infotainment system 870 based on infotainment information stored in memory. In some embodiments, the infotainment system 870 of a vehicle 104 can record and/or track infotainment information, such as a user's 216 music preferences, favorite morning show, content, genres, and/or the like. The infotainment system 870 can automatically record one or more shows based at least partially on this infotainment information. For example, the user 216 may select and consume content recorded by the infotainment system 870 at any time. The infotainment information and/or any preferences associated therewith may be stored in a user profile associated with the user 216, as disclosed herein. In another example, the infotainment system 870 may know what the user 216 has been watching in the home. In this example, if the user leaves the home to go shopping (e.g., during a football game, etc.), the infotainment system 870 may already be tuned to a station playing the football game. In some embodiments, the

infotainment system 870 may communicate with, or receive communications from, a cable provider, STB, satellite provider, or other content consumption service provider.

[0437] Continuing the example provided above, a user 216 may be watching a game, television show, listening to a radio, or consuming some other content while at home. At least one device (e.g., TV, set-top box, smart-phone, tablet, computer, etc.) associated with the user 216 may record this information to memory (e.g., locally or remotely on the cloud). In some cases this memory may be associated with a user profile of the user 216. When the user 216 moves from home to a vehicle 104, or vice versa, the infotainment system 870 may access the user profile to determine recent entertainment consumption (e.g., consumed by the user 216, etc.). The infotainment system 870 may then tune at least one infotainment component to present a source of entertainment that at least partially matches the entertainment consumption recorded in the user profile.

[0438] An embodiment of a method 3000 for determining and adjusting infotainment settings associated with an infotainment system is shown in Fig. 30. A general order for the steps of the method 3000 is shown in Fig. 30. Generally, the method 3000 starts with a start operation 3004 and ends with an end operation 3028. The method 3000 can include more or fewer steps or can arrange the order of the steps differently than those shown in Fig. 30. The method 3000 can be executed as a set of computer-executable instructions executed by a computer system and encoded or stored on a computer readable medium. Hereinafter, the method 3000 shall be explained with reference to the systems, components, modules, software, data structures, user interfaces, etc. described in conjunction with Figs. 1-29.

[0439] The method 3000 begins at step 3004 and proceeds by collecting infotainment information (step 3008). In some embodiments, the infotainment information may include infotainment settings. As provided above, the infotainment settings may include, but are not limited to, preferred radio stations, content applications, listening content, viewing content, content playback settings (e.g., volume, speed, quality, etc.), genres, content consumption habits (e.g., including listening times, associated content, trends, etc.), recording preferences, and/or the like. This infotainment information may be stored in a user profile associated with a user 216. In one embodiment, the user profile may be stored in a profile data memory 252 that can be found on a device 212, in a vehicle 104, attached to a communication network 224, on the cloud (e.g., a server 228, etc.) and/or some other location.

[0440] Next, the method 3000 may continue when user profile infotainment settings are detected (step 3012). Detecting the presence of infotainment information may be provided via the user profile reporting the infotainment information to at least one of the vehicle 104 and/or the infotainment system 870. In some embodiments, the detection of the infotainment information may be made by the infotainment system 870 detecting a user profile and reading at least one data record of the user profile, the data record containing the infotainment information. The user profile may be detected in response to identifying a user 216. For example, a user 216 may register with an infotainment system 870. As part of the registration, the user 216 may provide access to at least a portion of the user profile associated with the user 216 via the infotainment system 870. The infotainment system 870 may be configured to retrieve the setting information from the user profile on a periodic basis. Additionally or alternatively, the infotainment system 870 may be configured to retrieve the setting information from the user profile based on detecting the presence of a user 216 (e.g., in one or more areas of a building and/or a vehicle 104).

[0441] The method 3000 may continue by detecting an available infotainment system 870 (step 3016). In some embodiments the infotainment system 870 may be associated with a vehicle 104, a home, a building, or other location. For example, a profile identification module can detect one or more infotainment system 870 that has been registered with a device 212 and/or user 216. The vehicle 104 may detect an available infotainment system 870 based on a communication with across a bus 356 or communication network 224. The detection of an available infotainment system 870 may be provided via device discovery on a network (e.g., wired and/or wireless). Additionally or alternatively, the detection may include determining a configuration of the infotainment system 870. Configurations may include settings, preferences, content, tuners, power state, associated users 216 and/or devices 212, 248, access priorities, and/or the like.

[0442] The method 3000 proceeds by using the collected and/or stored infotainment information to adjust settings based on the infotainment information (step 3020). For instance, the infotainment system 870 can alter at least one setting of one or more components of the infotainment system 870 to match information stored in the user profile associated with a user 216. In other words, the settings of an infotainment system 870 may be adjusted to match the settings of an infotainment system of a building, another vehicle 104, or other device 212 associated with a user 216.

[0443] In some cases, the adjustment of one or more settings associated with the infotainment system 870 may be allowed, denied, and/or limited based on one or more

access priorities. Users 216 may have an access priority assigned by the infotainment system 870. High access priorities have precedence to access of the infotainment system 870 over lower access priorities. For example, a parent may have a high access priority (e.g., AP1), and a child may have a lower access priority (e.g., AP3) when compared to the parent's access priority. In the event that an access conflict arises (e.g., where the child wishes to play music via the infotainment system 870 while the parent is currently playing content via the infotainment system 870, the access priority serves to deny access to the child (e.g., because the parent's access priority is greater than, or a higher priority, than the child's access priority). In determining the ability to adjust infotainment settings, the access priorities may be compared by the infotainment system 870.

[0444] The method 3000 continues by determining whether the infotainment system 870 is online or offline (step 3000). An infotainment system 870 may be turned off, or may have no communications ability in which case, the infotainment system 870 would be determined to be offline. The determination may be made by the vehicle control system 204, media subsystems 348, a device 212, 248, and/or other systems of the vehicle 104. If it is determined that the infotainment system 870 is online, or not offline, the method 3000 may continue at step 3008 by continuing to collect infotainment information for the user profile associated with a user 216. In the event that the infotainment system 870 is determined to be offline, the method 3000 ends at step 3028.

[0445] It should be appreciated that the user profiles as described herein can be associated with a single user 216. In some embodiments, each user profile may be unique to the user 216 with whom the user profile is associated. Additionally or alternatively, one or more user profiles associated with one or more users 216 may be stored in a profile data memory 252. In some cases, the one or more user profiles may be stored in the profile data memory separately from one another. In other words, the one or more user profiles may be stored according to an identification of a unique user 216 associated with each user profile.

[0446] The exemplary systems and methods of this disclosure have been described in relation to configurable vehicle consoles and associated devices. However, to avoid unnecessarily obscuring the present disclosure, the preceding description omits a number of known structures and devices. This omission is not to be construed as a limitation of the scopes of the claims. Specific details are set forth to provide an understanding of the present disclosure. It should however be appreciated that the present disclosure may be practiced in a variety of ways beyond the specific detail set forth herein.

[0447] Furthermore, while the exemplary aspects, embodiments, options, and/or configurations illustrated herein show the various components of the system collocated, certain components of the system can be located remotely, at distant portions of a distributed network, such as a LAN and/or the Internet, or within a dedicated system. Thus, it should be appreciated, that the components of the system can be combined in to one or more devices, such as a Personal Computer (PC), laptop, netbook, smart phone, Personal Digital Assistant (PDA), tablet, etc., or collocated on a particular node of a distributed network, such as an analog and/or digital telecommunications network, a packet-switch network, or a circuit-switched network. It will be appreciated from the preceding description, and for reasons of computational efficiency, that the components of the system can be arranged at any location within a distributed network of components without affecting the operation of the system. For example, the various components can be located in a switch such as a PBX and media server, gateway, in one or more communications devices, at one or more users' premises, or some combination thereof. Similarly, one or more functional portions of the system could be distributed between a telecommunications device(s) and an associated computing device.

[0448] Furthermore, it should be appreciated that the various links connecting the elements can be wired or wireless links, or any combination thereof, or any other known or later developed element(s) that is capable of supplying and/or communicating data to and from the connected elements. These wired or wireless links can also be secure links and may be capable of communicating encrypted information. Transmission media used as links, for example, can be any suitable carrier for electrical signals, including coaxial cables, copper wire and fiber optics, and may take the form of acoustic or light waves, such as those generated during radio-wave and infra-red data communications.

[0449] Also, while the flowcharts have been discussed and illustrated in relation to a particular sequence of events, it should be appreciated that changes, additions, and omissions to this sequence can occur without materially affecting the operation of the disclosed embodiments, configuration, and aspects.

[0450] A number of variations and modifications of the disclosure can be used. It would be possible to provide for some features of the disclosure without providing others.

[0451] It should be appreciated that the various processing modules (e.g., processors, vehicle systems, vehicle subsystems, modules, etc.), for example, can perform, monitor, and/or control critical and non-critical tasks, functions, and operations, such as interaction with and/or monitoring and/or control of critical and non-critical on board sensors and

vehicle operations (e.g., engine, transmission, throttle, brake power assist/ brake lock-up, electronic suspension, traction and stability control, parallel parking assistance, occupant protection systems, power steering assistance, self-diagnostics, event data recorders, steer-by-wire and/or brake-by-wire operations, vehicle-to-vehicle interactions, vehicle-to-infrastructure interactions, partial and/or full automation, telematics, navigation/SPS, multimedia systems, audio systems, rear seat entertainment systems, game consoles, tuners (SDR), heads-up display, night vision, lane departure warning, adaptive cruise control, adaptive headlights, collision warning, blind spot sensors, park/reverse assistance, tire pressure monitoring, traffic signal recognition, vehicle tracking (e.g., LoJack™), dashboard/instrument cluster, lights, seats, climate control, voice recognition, remote keyless entry, security alarm systems, and wiper/window control). Processing modules can be enclosed in an advanced EMI-shielded enclosure containing multiple expansion modules. Processing modules can have a "black box" or flight data recorder technology, containing an event (or driving history) recorder (containing operational information collected from vehicle on board sensors and provided by nearby or roadside signal transmitters), a crash survivable memory unit, an integrated controller and circuitry board, and network interfaces.

[0452] Critical system controller(s) can control, monitor, and/or operate critical systems. Critical systems may include one or more of (depending on the particular vehicle) monitoring, controlling, operating the ECU, TCU, door settings, window settings, blind spot monitor, monitoring, controlling, operating the safety equipment (e.g., airbag deployment control unit, collision sensor, nearby object sensing system, seat belt control unit, sensors for setting the seat belt, etc.), monitoring and/or controlling certain critical sensors such as the power source controller and energy output sensor, engine temperature, oil pressure sensing, hydraulic pressure sensors, sensors for headlight and other lights (e.g., emergency light, brake light, parking light, fog light, interior or passenger compartment light, and/or tail light state (on or off)), vehicle control system sensors, wireless network sensor (e.g., Wi-Fi and/or Bluetooth sensors, etc.), cellular data sensor, and/or steering/torque sensor, controlling the operation of the engine (e.g., ignition, etc.), head light control unit, power steering, display panel, switch state control unit, power control unit, and/or brake control unit, and/or issuing alerts to a user and/or remote monitoring entity of potential problems with a vehicle operation.

[0453] Non-critical system controller(s) can control, monitor, and/or operate non-critical systems. Non-critical systems may include one or more of (depending on the particular

vehicle) monitoring, controlling, operating a non-critical system, emissions control, seating system controller and sensor, infotainment/entertainment system, monitoring certain non-critical sensors such as ambient (outdoor) weather readings (e.g., temperature, precipitation, wind speed, and the like), odometer reading sensor, trip mileage reading sensor, road condition sensors (e.g., wet, icy, etc.), radar transmitter/receiver output, brake wear sensor, oxygen sensor, ambient lighting sensor, vision system sensor, ranging sensor, parking sensor, heating, venting, and air conditioning (HVAC) system and sensor, water sensor, air-fuel ratio meter, hall effect sensor, microphone, radio frequency (RF) sensor, and/or infrared (IR) sensor.

[0454] It is an aspect of the present disclosure that one or more of the non-critical components and/or systems provided herein may become critical components and/or systems, and/or vice versa, depending on a context associated with the vehicle.

[0455] Optionally, the systems and methods of this disclosure can be implemented in conjunction with a special purpose computer, a programmed microprocessor or microcontroller and peripheral integrated circuit element(s), an ASIC or other integrated circuit, a digital signal processor, a hard-wired electronic or logic circuit such as discrete element circuit, a programmable logic device or gate array such as PLD, PLA, FPGA, PAL, special purpose computer, any comparable means, or the like. In general, any device(s) or means capable of implementing the methodology illustrated herein can be used to implement the various aspects of this disclosure. Exemplary hardware that can be used for the disclosed embodiments, configurations and aspects includes computers, handheld devices, telephones (e.g., cellular, Internet enabled, digital, analog, hybrids, and others), and other hardware known in the art. Some of these devices include processors (e.g., a single or multiple microprocessors), memory, nonvolatile storage, input devices, and output devices. Furthermore, alternative software implementations including, but not limited to, distributed processing or component/object distributed processing, parallel processing, or virtual machine processing can also be constructed to implement the methods described herein.

[0456] In yet another embodiment, the disclosed methods may be readily implemented in conjunction with software using object or object-oriented software development environments that provide portable source code that can be used on a variety of computer or workstation platforms. Alternatively, the disclosed system may be implemented partially or fully in hardware using standard logic circuits or VLSI design. Whether software or hardware is used to implement the systems in accordance with this disclosure

is dependent on the speed and/or efficiency requirements of the system, the particular function, and the particular software or hardware systems or microprocessor or microcomputer systems being utilized.

[0457] In yet another embodiment, the disclosed methods may be partially implemented in software that can be stored on a storage medium, executed on programmed general-purpose computer with the cooperation of a controller and memory, a special purpose computer, a microprocessor, or the like. In these instances, the systems and methods of this disclosure can be implemented as program embedded on personal computer such as an applet, JAVA® or CGI script, as a resource residing on a server or computer workstation, as a routine embedded in a dedicated measurement system, system component, or the like. The system can also be implemented by physically incorporating the system and/or method into a software and/or hardware system.

[0458] Although the present disclosure describes components and functions implemented in the aspects, embodiments, and/or configurations with reference to particular standards and protocols, the aspects, embodiments, and/or configurations are not limited to such standards and protocols. Other similar standards and protocols not mentioned herein are in existence and are considered to be included in the present disclosure. Moreover, the standards and protocols mentioned herein and other similar standards and protocols not mentioned herein are periodically superseded by faster or more effective equivalents having essentially the same functions. Such replacement standards and protocols having the same functions are considered equivalents included in the present disclosure.

[0459] The present disclosure, in various aspects, embodiments, and/or configurations, includes components, methods, processes, systems and/or apparatus substantially as depicted and described herein, including various aspects, embodiments, configurations embodiments, subcombinations, and/or subsets thereof. Those of skill in the art will understand how to make and use the disclosed aspects, embodiments, and/or configurations after understanding the present disclosure. The present disclosure, in various aspects, embodiments, and/or configurations, includes providing devices and processes in the absence of items not depicted and/or described herein or in various aspects, embodiments, and/or configurations hereof, including in the absence of such items as may have been used in previous devices or processes, e.g., for improving performance, achieving ease and\or reducing cost of implementation.

[0460] The foregoing discussion has been presented for purposes of illustration and description. The foregoing is not intended to limit the disclosure to the form or forms disclosed herein. In the foregoing Detailed Description for example, various features of the disclosure are grouped together in one or more aspects, embodiments, and/or configurations for the purpose of streamlining the disclosure. The features of the aspects, embodiments, and/or configurations of the disclosure may be combined in alternate aspects, embodiments, and/or configurations other than those discussed above. This method of disclosure is not to be interpreted as reflecting an intention that the claims require more features than are expressly recited in each claim. Rather, as the following claims reflect, inventive aspects lie in less than all features of a single foregoing disclosed aspect, embodiment, and/or configuration. Thus, the following claims are hereby incorporated into this Detailed Description, with each claim standing on its own as a separate preferred embodiment of the disclosure.

[0461] Moreover, though the description has included description of one or more aspects, embodiments, and/or configurations and certain variations and modifications, other variations, combinations, and modifications are within the scope of the disclosure, e.g., as may be within the skill and knowledge of those in the art, after understanding the present disclosure. It is intended to obtain rights which include alternative aspects, embodiments, and/or configurations to the extent permitted, including alternate, interchangeable and/or equivalent structures, functions, ranges or steps to those claimed, whether or not such alternate, interchangeable and/or equivalent structures, functions, ranges or steps are disclosed herein, and without intending to publicly dedicate any patentable subject matter.

[0462] This application is also related to PCT Patent Application Nos. PCT/US14/_____, filed on April 15, 2014, entitled, "Building Profiles Associated with Vehicle Users" (Attorney Docket No. 6583-543-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Access and Portability of User Profiles Stored as Templates" (Attorney Docket No. 6583-544-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "User Interface and Virtual Personality Presentation Based on User Profile" (Attorney Docket No. 6583-547-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Creating Targeted Advertising Profiles Based on User Behavior" (Attorney Docket No. 6583-549-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Behavior Modification via Altered Map Routes Based on User Profile Information" (Attorney Docket No. 6583-550-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Vehicle Location-Based Home

Automation Triggers" (Attorney Docket No. 6583-556-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Vehicle Initiated Communications with Third Parties via Virtual Personalities" (Attorney Docket No. 6583-559-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Vehicle Intruder Alert Detection and Indication" (Attorney Docket No. 6583-562-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Driver Facts Behavior Information Storage System" (Attorney Docket No. 6583-565-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Synchronization Between Vehicle and User Device Calendar" (Attorney Docket No. 6583-567-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "User Gesture Control of Vehicle Features" (Attorney Docket No. 6583-569-PCT); PCT/US14/_____, filed on April 15, 2014, entitled "Central Network for the Automated Control of Vehicular Traffic" (Attorney Docket No. 6583-574-PCT); and PCT/US14/_____, filed on April 15, 2014, entitled "Vehicle-Based Multimode Discovery" (Attorney Docket No. 6583-585-PCT). The entire disclosures of the applications listed above are hereby incorporated by reference, in their entirety, for all that they teach and for all purposes.

[0463] Examples of the processors as described herein may include, but are not limited to, at least one of Qualcomm® Snapdragon® 800 and 801, Qualcomm® Snapdragon® 610 and 615 with 4G LTE Integration and 64-bit computing, Apple® A7 processor with 64-bit architecture, Apple® M7 motion coprocessors, Samsung® Exynos® series, the Intel® Core™ family of processors, the Intel® Xeon® family of processors, the Intel® Atom™ family of processors, the Intel Itanium® family of processors, Intel® Core® i5-4670K and i7-4770K 22nm Haswell, Intel® Core® i5-3570K 22nm Ivy Bridge, the AMD® FX™ family of processors, AMD® FX-4300, FX-6300, and FX-8350 32nm Vishera, AMD® Kaveri processors, Texas Instruments® Jacinto C6000™ automotive infotainment processors, Texas Instruments® OMAP™ automotive-grade mobile processors, ARM® Cortex™-M processors, ARM® Cortex-A and ARM926EJ-S™ processors, other industry-equivalent processors, and may perform computational functions using any known or future-developed standard, instruction set, libraries, and/or architecture.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Early Publication Request: No
Title

CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

Preliminary Class

361

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

NOTICE

OC000000068196315

Date Mailed: 05/05/2014

INFORMATIONAL NOTICE TO APPLICANT

Applicant is notified that the above-identified application contains the deficiencies noted below. No period for reply is set forth in this notice for correction of these deficiencies. However, if a deficiency relates to the inventor's oath or declaration, the applicant must file an oath or declaration in compliance with 37 CFR 1.63, or a substitute statement in compliance with 37 CFR 1.64, executed by or with respect to each actual inventor no later than the expiration of the time period set in the "Notice of Allowability" to avoid abandonment. See 37 CFR 1.53(f).

The item(s) indicated below are also required and should be submitted with any reply to this notice to avoid further processing delays.

- A properly executed inventor's oath or declaration has not been received for the following inventor(s):
  Christopher P. Ricci

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)

Title of Invention	CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

As the below named inventor, I hereby declare that:

This declaration is directed to:

☐ The attached application, or

☒ United States application or PCT international application number 14/253,204 filed on April 15, 2014.

The above-identified application was made or authorized to be made by me.

I believe that I am the original inventor or an original joint inventor of a claimed invention in the application.

I hereby acknowledge that any willful false statement made in this declaration is punishable under 18 U.S.C. 1001 by fine or imprisonment of not more than five (5) years, or both.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

LEGAL NAME OF INVENTOR

Inventor: Christopher P. Ricci Date (Optional) :

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

PATENT COOPERATION TREATY

From the INTERNATIONAL SEARCHING AUTHORITY

To: RICHARD E. ZELENKA
SHERIDAN ROSS P.C.
1560 BROADWAY, SUITE 1200
DENVER, CO 80202

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 22 AUG 2014
Applicant's or agent's file reference 6583-562-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US2014/034101	International filing date *(day/month/year)* 15 April 2014
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-562-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034101	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

   a. With regard to the **language**, the international search was carried out on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

   b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

   c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

   a. the figure of the **drawings** to be published with the abstract is Figure No. 24

   ☒ as suggested by the applicant.

   ☐ as selected by this Authority, because the applicant failed to suggest a figure.

   ☐ as selected by this Authority, because this figure better characterizes the invention.

   b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034101

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G07C 5/08 (2014.01)
USPC - 701/33.4
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) - B60N 2/02; G07C 5/00, 5/08 (2014.01)
USPC - 700/17, 701/29.6, 33.4, 36, 49

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
CPC - B60N 2/0248, 2/0296; G07C 5/0808 (2014.02)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
PatBase, Google Patents, Google

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 6,557,752 B1 (YACOOB) 06 May 2003 (06.05.2003) entire document	1-15
A	US 2004/0153356 A1 (LOCKWOOD et al) 05 August 2004 (05.08.2004) entire document	1-15
A	US 2012/0316720 A1 (HYDE et al) 13 December 2012 (13.12.2012) entire document	1-15
A	US 2011/0077808 A1 (HYDE et al) 31 March 2011 (31.03.2011) entire document	1-15

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- [X] Box No. I Basis of the opinion
- [ ] Box No. II Priority
- [ ] Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- [ ] Box No. IV Lack of unity of invention
- [X] Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- [ ] Box No. VI Certain documents cited
- [ ] Box No. VII Certain defects in the international application
- [ ] Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034101

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

   ☐ on paper

   ☐ in electronic form

   b. (time)

   ☐ in the international application as filed

   ☐ together with the international application in electronic form

   ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034101

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	None	YES
	Claims	1-15	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-15 lack novelty under PCT Article 33(2) as being anticipated by Lockwood et al., hereinafter referred to as Lockwood.

Regarding claims 1,14,15, Lockwood teaches a method [claim 1], a non-transitory computer readable medium having instructions stored thereon [claim 14] and a vehicle maintenance and warranty compliance detection system comprising a vehicle control system [claim 15] (systems and methods for automation and enhancement of customer service in vehicle distress situations, [abstract]; application logic, [0031]), comprising: receiving sensor data from one or more vehicle sensors (report when vehicle being driven by other than identified driver as well as distance travelled by the vehicle, [0023]); identifying, from the sensor data, an identity of a user of a vehicle (report when vehicle being driven by other than identified driver using voice, eye, fingerprint, etc., [0023]; a police report of a driving under the influence or excessive speed violation in connection with the vehicle while being driven by a particular driver [identifying a driver] could trigger an automated customer service response, [0026]); determining, from the sensor data, if a user is not in compliance with a user vehicle operating term (monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]); and taking action if the user is not in compliance with a user vehicle operating term (surcharges may apply based on distress events, [0035]).

Regarding claim 2, Lockwood teaches the user vehicle operating term is at least one of a maintenance standard, a warranty requirement and a user operating restriction (a police report of a driving under the influence or excessive speed violation in connection with the vehicle while being driven by a particular driver [identifying a driver] could trigger an automated customer service response, [0026]; monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]).

Regarding claim 3, Lockwood teaches comparing the sensor data to at least one of vehicle maintenance standards, vehicle warranty requirements and user profile operating restrictions (a police report of a driving under the influence or excessive speed violation in connection with the vehicle while being driven by a particular driver [identifying a driver] could trigger an automated customer service response, [0026]; monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]).

Regarding claim 4, Lockwood teaches the user is not in compliance with a user vehicle operating term if the comparison results in one or more characteristics of vehicle maintenance standards (monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]), vehicle warranty requirements and user profile operating restrictions not satisfied.

Regarding claim 5, Lockwood teaches the taking action comprises noticing a third party if the user is not in compliance with a user vehicle operating term (vehicle leasing agency, [0035]).

Regarding claim 6, Lockwood teaches the third party is at least one of an insurance provider, warranty provider, authorized monitor (vehicle leasing agency, [0035]) and user.

Regarding claim 7, Lockwood teaches comprising updating a user profile database regarding the user vehicle not in compliance (warranty information associated with the vehicle or a customer profile connected with either the usual driver of the vehicle and/or the vehicle itself, [0008]; monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage, [0035]; [therefore it is interpreted that a lessee profile is updated in a database]).

Regarding claim 8, Lockwood teaches the one or more vehicle sensors include an odometer (excessive mileage traveled, [0035]), a tachometer, an oil level meter and an image sensor.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034101

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Regarding claim 9, Lockwood teaches the taking action comprises providing an alert (electronic notification, [0063]).

Regarding claim 10, Lockwood teaches the providing an alert comprises a visual alert, an audio alert, emergency responder alert, and alert to an authorized monitor (vehicle leasing agency, [0035]).

Regarding claim 11, Lockwood teaches identifying the one or more characteristics of vehicle maintenance standards, vehicle warranty requirements and user profile operating restrictions not satisfied (monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]).

Regarding claim 12, Lockwood teaches the taking action comprises noticing a third party if the user is not in compliance with a user vehicle operating term (vehicle leasing agency, [0035]).

Regarding claim 13, Lockwood teaches receiving a query from a warranty provider if a user is not in compliance with a vehicle warranty requirement (the response plan may also be impacted by other criteria such as insurance coverage connected with the vehicle, warranty information associated with the vehicle or a customer profile connected with either the usual driver of the vehicle and/or the vehicle itself, [0008]; retrieval of customer warranty information, [0096]; monitoring of distress events, or lack thereof, may be utilized by a leasing agency to provide credits or surcharges to the lessee based upon actual usage rather than estimated usage wherein such distress events may include, without limitation, speeding, excessive mileage traveled, improper or proper compliance with suggested regular maintenance, unreported collisions or bumps, ABS deployment, numbers of instances of hard breaking and/or rapid acceleration, [0035]).

Claims 1-15 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Applicant's or agent's file reference 6583-547-PCT	Date of mailing *(day/month/year)* 22 AUG 2014 **FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US2014/034087	International filing date *(day/month/year)* 15 April 2014
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

- [ ] Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034087

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034087

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	7, 8 and 14	YES
	Claims	1-6, 9-13 and 15	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1-6, 9-13 and 15 lack novelty under PCT Article 33(2) as being anticipated by Perttunen et al (US 2004/0217850 A1), hereinafter, "Perttunen".

Regarding claims 1 and 9, Perttunen discloses a method (Fig 2A and 2B method) and a non-transitory computer readable medium having instructions stored thereon that (Fig 1 #22 controller), when executed by a processor, perform a method comprising:
detecting a presence of at least one user in a vehicle ([0015] detecting the presence of the user 13; Fig 2A #106);
determining an identity of the at least one user ([0015] stage two unlocks the doors if the user is authorized to enter the vehicle);
receiving data associated with the at least one user, wherein the data includes biometric information ([0024] checks for a match between the biometric characteristic detected by the sensor 18);
detecting a deviation between the received data and an established baseline biometric profile associated with the at least one user; ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored... if there is no match between the detected biometric characteristic and the stored value);
and determining, based at least partially on the detected deviation, to provide an output configured to address the deviation ([0024] then the controller 22 disables all features of the vehicle 20).

Regarding claims 2 and 10, Perttunen further discloses, wherein prior to receiving data associated with the at least one user the method further comprises: determining the baseline biometric profile associated with the at least one user ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored); and storing the determined baseline biometric profile in a user profile memory associated with the at least one user ([0024] that of an authorized user stored, for example, in the memory of the controller 22).

Regarding claims 3 and 11, Perttunen further discloses, wherein determining the presence of the at least one user inside the vehicle further comprises: detecting a person via at least one image sensor associated with the vehicle ([0016] the biometric sensor 18 can be one or more of a number of different types of sensors. For example, the biometric sensor 18 may be a voice recognition sensor, a fingerprint identification sensor, or a sensor for iris identification, retina scanning, handprint, lightprint, or face recognition).

Regarding claims 4 and 12, Perttunen further discloses, wherein determining the identity of the at least one user further comprises: identifying facial features associated with the person detected via the at least one image sensor ([0016] the biometric sensor 18 can be one or more of a number of different types of sensors. For example, the biometric sensor 18 may be...face recognition); and determining whether the identified facial features associated with the person match user characteristics stored in a memory ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored in the memory of the controller 22).

Regarding claims 5 and 13, Perttunen further discloses, wherein the output configured to address the deviation is provided by the vehicle, and wherein addressing the deviation includes adjusting one or more settings associated with the vehicle ([0024] then the controller 22 disables all features of the vehicle 20 [disable is adjustment]).

Regarding claim 6, Perttunen further discloses, wherein the one or more settings include at least one of a vehicle interior environment, temperature, air composition, oxygen level, sound level, window position, seat position, and lighting level ([0022] For example, the desired function may be the operation of certain comfort features, such as the seat settings, the climate control).

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034087

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Regarding claim 15, Perttunen discloses a vehicle control system ([0013] multistage vehicle security system), comprising:
a profile identification module contained in a memory and executed by a processor of the vehicle control system ([0024] memory of the controller 22),
the profile identification module configured to
detect a presence of at least one user in a vehicle ([0015] detecting the presence of the user 13; Fig 2A #106),
determine an identity of the at least one user ([0015] stage two unlocks the doors if the user is authorized to enter the vehicle),
receive data associated with the at least one user, wherein the data includes biometric information ([0024] checks for a match between the biometric characteristic detected by the sensor 18),
detect a deviation between the received data and an established baseline biometric profile associated with the at least one user ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored... if there is no match between the detected biometric characteristic and the stored value),
and determine, based at least partially on the detected deviation, to provide an output configured to address the deviation ([0024] then the controller 22 disables all features of the vehicle 20),
and wherein prior to receiving data associated with the at least one user the profile identification module is further configured to determine the baseline biometric profile associated with the at least one user ([0024] biometric characteristic detected by the sensor 18 and that of an authorized user stored),
and store the determined baseline biometric profile in a user profile memory associated with the at least one user ([0024] that of an authorized user stored, for example, in the memory of the controller 22).

Claims 7, 8 and 14 lack an inventive step under PCT Article 33(3) as being obvious over Perttunen, in view of, Hale et al (US 2006/0036358 A1), hereinafter, "Hale".

Regarding claims 7 and 14, Perttunen does not explicitly disclose: detecting a vehicle incident via one or more sensors associated with the vehicle; collecting, based at least partially on the detected vehicle incident, the data associated with the at least one user; and sending the established baseline biometric profile and collected data associated with the at least one user to a third party.
However Perttunen teaches detecting a vehicle incident via one or more sensors associated with the vehicle ([0024] checks for a match between the biometric characteristic detected by the sensor 18); collecting, based at least partially on the detected vehicle incident, the data associated with the at least one user ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored); and sending the established baseline biometric profile and collected data associated with the at least one user to the controller ([0024] If the controller 22 determines that there is a match, the process 100 enables all high level operational features of the vehicle 20).
Hale et al is also in the field of vehicle control systems ([0003] systems, devices, and methods for inhibiting potential impaired operators and unauthorized persons from operating a motor vehicle) and discloses detecting a vehicle incident via one or more sensors associated with the vehicle ([0060] system 110 is designed to biometrically identify the operator through fingerprint, thumbprint, iris, voice or any other form of biometric recognition; [0064] and the selected vehicle function devices be energized in the predetermined sequence, but the sequence must be performed within a predetermined time period as well); collecting, based at least partially on the detected vehicle incident, the data associated with the at least one user ([0067] After the operator as has been identified, the time frame for the operator to complete the sequence of vehicle inputs is controlled by microcontroller 34. The timing is calculated by microcontroller 34 using the average time of the last five successful starts by that individuals); and sending the established baseline biometric profile and collected data associated with the at least one user to a third party ([0075] Such operator data can be stored and/or downloaded to another computer via connection ports for a variety of uses. For example, if the disclosed system were used as part of a law enforcement program, compliance with a court order could be readily monitored).
Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate sending the data to a third party, as taught in Hale, within the invention of Perttunen because it adds robustness to the system.

Regarding claim 8, Perttunen does not explicitly disclose, wherein the data associated with the at least one user is received at a first data rate in the absence of a detected vehicle incident and collected at a higher second data rate upon detecting the vehicle incident.
However Perttunen teaches data associated with the at least one user being received ([0024] checks for a match between the biometric characteristic detected by the sensor 18 and that of an authorized user stored).
Hale discloses wherein the data associated with the at least one user is received at a first data rate in the absence of a detected vehicle incident (the time frame for the operator to complete the sequence of vehicle inputs is controlled by microcontroller 34. The timing is calculated by microcontroller 34 using the average time of the last five successful starts by that individuals); and collected at a higher second data-rate upon detecting the vehicle incident ([0069] If the timer mechanism times out before the potential operator performs the proper vehicle functions in sequence; [0064] thus, an impaired potential operator, who knows the proper sequence, may be inhibited from starting the motor vehicle due to the presence of timer mechanism within microcontroller 34. A potential operator, whose motor skills are diminished due to excessive alcohol consumption, or drug use, or lack of sleep, or onset of dementia may not be able to properly perform the function sequence within the predetermined time period).
Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate data, as taught in Hale, within the invention of Perttunen because it adds robustness to the system.

Claims 1-15 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 15 SEP 2014
Applicant's or agent's file reference 6583-569-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US14/34125	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)
Applicant Flextronics AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-569-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34125	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant Flextronics AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

   a. With regard to the **language**, the international search was carried out on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

   b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

   c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

   a. the figure of the **drawings** to be published with the abstract is Figure No. 20

   ☒ as suggested by the applicant.

   ☐ as selected by this Authority, because the applicant failed to suggest a figure.

   ☐ as selected by this Authority, because this figure better characterizes the invention.

   b. ☐ none of the figures is to be published with the abstract.

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☒ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 *bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34125

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

   ☐ on paper

   ☐ in electronic form

   b. (time)

   ☐ in the international application as filed

   ☐ together with the international application in electronic form

   ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34125

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	2-9, 12, 13	YES
	Claims	1, 10, 11, 14, 15	NO
Inventive step (IS)	Claims	2-9, 12, 13	YES
	Claims	1, 10, 11, 14, 15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1, 10, 11, 14, 15 lack novelty under PCT Article 33(2) as being anticipated by US 2012/0105613 A1 to WENG et al. (hereinafter 'Weng').

As to Claim 1, Weng teaches a method for receiving a gesture in a conveyance, comprising: a vehicle control system (in-vehicle information and command entry may use a surface anywhere within the operator's proximity; paragraph [0041]), including a processor, receiving a gesture from a user (finger movements sensed by module 16 may be digitized, and these digitized movements are transmitted as an input to a gesture recognition module 18; Figure 2; paragraph [0046]); the vehicle control system identifying the received gesture (gesture recognition module 18 may determine which of the twenty-six letters or ten numerals is best represented by the movement made by the user's finger or hand; Figure 2; paragraph [0046]); the vehicle control system sending a verification of the received gesture to the user (gesture confirmation module 20 may seek and/or receive feedback from the user to confirm that the output of gesture recognition module 18 is correct; paragraph [0050]); the vehicle control system determining if a confirmation is received in response to the verification (confirmation module 20 may audibly ask the driver to "please re-write the previous entry; confirmation module 20 receives confirmation that it recognized the gesture correctly; paragraph [0050]); and if the confirmation is received, the vehicle control system controlling a function associated with the gesture (after receiving confirmation of correct recognition of the user's gesture, confirmation module 20 may then forward the recognized gesture to a vehicle system, such as navigation system 30, audio system 32 or HVAC system 34; Figure 1; paragraph [0050]).

As to Claim 10, Weng teaches the method of claim 1, further comprising: the vehicle control system receiving a denial of the verification (If the user did not write "defrost", then he may speak "no" or write "n" on surface 12; paragraph [0050]); and based on the denial, the vehicle control system not completing the function associated with the gesture (in response, confirmation module 20 may audibly ask the driver to "please re-write the previous entry". The cycle continues with gesturing capturing module 16 interpreting the user's gestures until confirmation module 20 receives confirmation that it recognized the gesture correctly; paragraph [0050]).

As to Claim 11, Weng teaches a conveyance comprising: a processor operable to execute one or more modules, the modules comprising: a gesture recognition module operable to: receive a gesture from a user (finger movements sensed by module 16 may be digitized, and these digitized movements are transmitted as an input to a gesture recognition module 18; Figure 1; paragraph [0046]); identify the received gesture (gesture recognition module 18 may determine which of the twenty-six letters or ten numerals is best represented by the movement made by the user's finger or hand; paragraph [0046]); a verification module operable to: send a verification of the received gesture to the user (gesture confirmation module 20 may seek and/or receive feedback from the user to confirm that the output of gesture recognition module 18 is correct; paragraph [0050]); determine if a confirmation is received in response to the verification (confirmation module 20 may audibly ask the driver to "please re-write the previous entry; confirmation module 20 receives confirmation that it recognized the gesture correctly; paragraph [0050]); and a function control module operable to, if the confirmation is received, control a function associated with the gesture (after receiving confirmation of correct recognition of the user's gesture, confirmation module 20 may then forward the recognized gesture to a vehicle system, such as navigation system 30, audio system 32 or HVAC system 34; Figure 1; paragraph [0050]).

As to Claim 14, Weng teaches the conveyance of claim 11, wherein the verification is one of an audible message presented to the user, a user interface message presented on a screen, or a preview of the function associated with the gesture (then confirmation module 20 may audibly ask the driver "Did you write 'defrost?'"; Figure 1; paragraph [0050]).

As to Claim 15, Weng teaches the conveyance of claim 11, wherein the confirmation is one of a second gesture, a selection of a user interface device on the screen, or an audible confirmation (In order to confirm that he did indeed say "defrost", the user may speak "yes", which may be received by a microphone 26 and may be input into confirmation module 20; Figure 1; paragraph [0050]).

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

Claim 2 meets the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest: if the confirmation is not received, the vehicle control system determining if the gesture should be completed; and if the gesture should be completed, the vehicle control system controlling the function associated with the gesture. In the closest prior art found, US 2010/0125811 A1 to MOORE et al. (hereinafter 'Moore') discloses, if the user types the characters "goo," the device may recommend going to the Google search engine as an action completion. Thereafter, activating hybrid purpose key 5063, by a finger tap gesture on key 5063, will cause the device to open a browsing module 147 and display a Web page for the Google search engine; Figure 5G; paragraph [0187]. However, the prior art fails to disclose the limitations as discussed above, since it waits for user's tap before opening Google.

Claims 3-9 also meet the criteria set out in PCT Article 33(2)-(3), because they depend upon Claim 2.

Claim 12 meets the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest: the conveyance of claim 11, wherein the verification module further operable to, if the confirmation is not received, determine if the gesture should be completed. In the closest prior art found, Moore, discloses if the user types the characters "goo," the device may recommend going to the Google search engine as an action completion. Thereafter, activating hybrid purpose key 5063, by a finger tap gesture on key 5063, will cause the device to open a browsing module 147 and display a Web page for the Google search engine; paragraph [0187]. However, the prior art fails to disclose the limitations as discussed above, since it waits for user's tap before opening Google.

Claim 13 also meets the criteria set out in PCT Article 33(2)-(3), because it depends upon Claim 12.

Claims 1-15 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing *(day/month/year)*	15 SEP 2014
Applicant's or agent's file reference: 6583-567-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No.: PCT/US14/34114	International filing date *(day/month/year)*: 15 April 2014 (15.04.2014)
Applicant: FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-567-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34114	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

   a. With regard to the **language**, the international search was carried out on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

   b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

   c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

   a. the figure of the **drawings** to be published with the abstract is Figure No. 25

   ☒ as suggested by the applicant.

   ☐ as selected by this Authority, because the applicant failed to suggest a figure.

   ☐ as selected by this Authority, because this figure better characterizes the invention.

   b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34114

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G06Q 10/10; H04W 68/12, 8/08 (2014.01)
CPC - G01C 21/362; G06Q 10/1093; H04L 67/1095
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) Classification(s): G06Q 50/30; G01C 21/36; G06Q 10/10; H04W 4/02, 68/12, 8/08 (2014.01)
CPC Classification(s): G01C 21/362; G06Q 10/025, 10/1093; H04L 67/22, 67/18, 67/1095

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
MicroPatent (US-G, US-A, EP-A, EP-B, WO, JP-bib, DE-C, B, DE-A, DE-T, DE-U, GB-A, FR-A); ProQuest; IEEE/IEEEXplore; Google/Google Scholar; KEYWORDS: synchronize, vehicle, calendar, alarm, notice, factor

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X --- Y	US 2012/0197523 A1 (KIRSCH) 02 August 2012; Figures 1-4, 10; Paragraphs [0043], [0053], [0056], [0064], [0086].	1, 2, 8-10 --- 3-7, 11-15
Y	EP 1909069 B1 (BAUER, L et al.) 08 December 2010; Paragraphs [0027]-[0028].	3, 11
Y	US 2011/0090078 A1 (KIM, F et al.) 21 April 2011; Figure 3; Paragraphs [0029], [0041].	4-7, 12-15
Y	US 2012/0254804 A1 (SHEHA, M et al.) 04 October 2012; Paragraphs [0849]-[0851].	15

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☒ Box No. VII Certain defects in the international application
- ☒ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 *bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34114

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

   ☐ on paper

   ☐ in electronic form

   b. (time)

   ☐ in the international application as filed

   ☐ together with the international application in electronic form

   ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34114

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	3-7, 11-15 –	YES
	Claims	1, 2, 8-10	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1, 2, and 8-10 lack novelty under PCT Article 33(2) as being anticipated by US 2012/0197523 A1 (KIRSCH).

As per claim 1, Kirsch discloses a vehicle system comprising: a vehicle (vehicle 110; Figure 1); a vehicle control system coupled to said vehicle (an in-vehicle system 112 (a vehicle control system) with a short-range communication link; Abstract; Figure 3; Paragraph [0043]) and a communications unit coupled to said vehicle control system (a vehicle-connect application 212 facilitates communication using Bluetooth connecting the mobile device and in-vehicle system; Figure 2; Paragraph [0053]), wherein said vehicle control system synchronizes a calendar with said vehicle control system (the in-vehicle control system calendar module 214 converts data to a vehicle format for transfer (synchronizes a calendar) and display in the vehicle at block 418; Figures 2, 4; Paragraph [0056]) and generates a notice for a first user based on an event in said calendar and a supplemental factor (interface screen 1002 automatically displays the notification to the user based on a calendar entry and matching calendar metadata (a supplemental factor); Figure 10; Paragraphs [0064], [0086]).

As per claim 2, Kirsch discloses the vehicle system of claim 1. Kirsch additionally discloses wherein said first user is associated with said vehicle (user interface screen of the in-vehicle display notifies the user, within the vehicle, that vehicle service is due soon; Figure 7A; Paragraphs [0021], [0040]).

As per claim 8, Kirsch discloses the vehicle system of claim 1. Kirsch additionally discloses, wherein said communications unit is one or more of a sensor, transceiver, or transmitter (the vehicle connect, VC, application communicates wirelessly (a transmitter) using Bluetooth protocols; Paragraph [0053]).

As per claim 9, Kirsch discloses a method comprising: receiving authorization from a first device to synchronize a calendar associated with said first device with a vehicle control system coupled to a vehicle (device 120 pairs with an in-vehicle system 112 (receiving authorization from a first device) to push calendar information from device 120 via vehicle connect application 212 (synchronize a calendar) to the in-vehicle system 112 (vehicle control system); Abstract; Figures 2, 3; Paragraphs [0043], [0053]); synchronizing said calendar with said vehicle control system (calendar module 214 converts data to a vehicle format for transfer (synchronizing said calendar) and display in the vehicle at block 418; Figures 2, 4; Paragraph [0056]); and generating a smart alarm to a first user based on an event in said calendar and a supplemental factor (interface screen 1002 automatically displays the notification of options (a smart alarm) to the user based on a calendar entry (an event) and matching calendar metadata (supplemental factor); Figure 10; Paragraphs [0064], [0086]).

As per claim 10, Kirsch discloses the method of claim 9. Kirsch additionally discloses, wherein said first device is associated with said vehicle (device 120 (said first device) is paired with the in-vehicle system; Figure 2; Paragraph [0043]).

Claims 3 and 11 lack an inventive step under PCT Article 33(3) as being obvious over Kirsch in view of EP 1,909,069 B1, to BAUER et al. (hereinafter 'Bauer').

As per claim 3, Kirsch discloses the vehicle system of claim 1. Kirsch does not disclose, wherein said supplemental factor is based on an amount of traffic from a departure point to an arrival point. Bauer discloses wherein said supplemental factor is based on an amount of traffic from a departure point to an arrival point (a message is displayed for scheduled appointments based on the actual traffic situation (an amount of traffic) in computing a route to a connecting destination (a departure point to an arrival point); Paragraphs [0027], [0028]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kirsch with the teaching of Bauer, because by doing so, the system of Kirsch would provide enhanced notifications to the user on route to a scheduled appointment destination based on actual traffic conditions.

As per claim 11, Kirsch discloses the method of claim 10. Kirsch does not disclose, wherein said supplemental factor is based on an amount of time corresponding to traffic from a departure point to an arrival point. Bauer discloses wherein said supplemental factor is based on an amount of time corresponding to traffic from a departure point to an arrival point (a message is displayed for scheduled appointments based on the actual traffic situation and an estimated time interval to reach the destination (a departure point to an arrival point); Paragraphs [0027], [0028]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the method of Kirsch with the teaching of Bauer, because by doing so, the method of Kirsch would provide enhanced notifications to the user on route to destinations of scheduled appointments based on temporal order and actual traffic conditions.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34114

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

Claim 11 is objected to under PCT Rule 66.2(a)(iii) as containing the following defects in the form or contents thereof: Claim 11, lines 1-2 recite "wherein said supplemental factor based on an amount of time". As best understood, this limitation is considered to be a typographical error and will be interpreted as "wherein said supplemental factor is based on an amount of time".

Form PCT/ISA/237 (Box No. VII) (July 2011)

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34114

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claim 7 is objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claim 7 is indefinite for the following reason(s): Claim 7 refers to "The vehicle system of claim 5, wherein at least one of said set of conditions" in line 1. There is a lack of antecedent basis for this limitation in the claim. As best understood, the claim is interpreted to read "The vehicle system of claim 6, wherein at least one of said set of conditions".

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34114

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

Claims 4-7, and 12-14 lack an inventive step under PCT Article 33(3) as being obvious over Kirsch in view of US 2011/0090078 A1, to KIM et al. (hereinafter 'Kim').

As per claims 4 and 12, Kirsch discloses the vehicle system of claim 1 and the method of claim 10, respectively. Kirsch does not disclose, wherein said supplemental factor is based on an amount of time required for said first user to arrive at said vehicle from a departure site. Kim discloses wherein said supplemental factor is based on an amount of time required for said first user to arrive at said vehicle from a departure site (a user has transportation options between locations, including walking, a personal vehicle or a public vehicle and a departure alert is generated according to an event (supplemental factor) depending on a user departure buffer, which is the amount of time between the current time value and departure time value (amount of time required for said first user to arrive at said vehicle); Abstract; Figure 3; Paragraphs [0029], [0040], [0045]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system and method of Kirsch with the teaching of Kim, because by doing so, the system and method of Kirsch would provide the capability of configuring departure alerts dependent upon a threshold criteria to remind the user of the necessary time buffer to arrive at the location of the scheduled appointment at the intended time.

As per claim 5, Kirsch discloses the vehicle system of claim 1. Kirsch does not disclose wherein said notice is provided to a second user. Kim discloses, wherein said notice is provided to a second user (a conflict alert (notice) is generated for notifying another event participant (a second user); Paragraph [0041]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kirsch with the teaching of Kim, because by doing so, the system of Kirsch would provide a contextual alert dependent on multiple event participants' estimated travel times.

As per claim 6, Kirsch discloses the vehicle system of claim 1. Kirsch does not disclose wherein said notice is provided to a second user based on at least one of a set of conditions. Kim discloses, wherein said notice is provided to a second user based on at least one of a set of conditions (a conflict alert (notice) is generated for notifying another event participant (a second user) based on estimated travel times (conditions); Paragraph [0041]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kirsch with the teaching of Kim, because by doing so, the system of Kirsch would provide a contextual alert dependent on multiple event participants' estimated travel times.

As per claim 7, Kirsch in combination with Kim discloses the vehicle system of claim 6. Kirsch does not disclose wherein at least one of said set of conditions is based on said second user being one or more of a colleague of said first user, another meeting attendee, a meeting moderator, and a meeting invitee. Kim discloses, wherein at least one of said set of conditions is based on said second user being one or more of a colleague of said first user, another meeting attendee, a meeting moderator, and a meeting invitee (a user schedules a meeting and the estimated travel times (at least one of a set of conditions) are based on another event participant's travel time (second user being another meeting attendee); Paragraphs [0029], [0041]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kirsch with the teaching of Kim, because by doing so, the system of Kirsch would provide a contextual alert dependent on multiple event participants' estimated travel times.

As per claim 13, Kirsch discloses the method of claim 9. Kirsch does not disclose, wherein said smart alarm is provided to a second user. Kim discloses, wherein said smart alarm is provided to a second user (a conflict alert (smart alarm) is generated for notifying another event participant (a second user); Paragraph [0041]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the method of Kirsch with the teaching of Kim, because by doing so, the method of Kirsch would provide a contextual alert dependent on multiple event participants' estimated travel times.

As per claim 14, Kirsch discloses the method of claim 9. Kirsch does not disclose wherein said smart alarm is provided to a second user based on at least one of a set of conditions. Kim discloses, wherein said smart alarm is provided to a second user based on at least one of a set of conditions (a conflict alert (smart alarm) is generated for notifying another event participant (a second user) based on estimated travel times (at least one of a set of conditions); Paragraph [0041]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the method of Kirsch with the teaching of Kim, because by doing so, the method of Kirsch would provide a contextual alert dependent on multiple event participants' estimated travel times.

Claim 15 lacks an inventive step under PCT Article 33(3) as being obvious over Kirsch in view of Kim, and further in view of US 2012/0254804 A1 to SHEHA et al. (hereinafter 'Sheha').

As per claim 15, Kirsch in combination with Kim discloses the method of claim 14. Kirsch and Kim do not disclose wherein said condition is based on said second user being a colleague of said first user. Sheha discloses wherein said condition is based on said second user being a colleague of said first user (the personal wireless navigation system lists (said conditions) to user (a first user) content queries, including traffic alerts, next meeting alerts, including time and place, and partner (said second user being a colleague of said first user) defined events; Paragraphs [0849]-[0851]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the method of Kirsch and Kim with the teaching of Sheha, because by doing so, the method of Kirsch and Kim would provide the integration of detected conditions from colleagues to share calendar information utilized for generating contextual alerts.

Claims 1-15 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

Description

Field of Invention

[0001] The present invention relates to vehicle navigation systems. In particular, the invention relates to an automatic input of the destination for route guidance by the navigation system.

Background of the Invention

[0002] The use of navigation systems in vehicles becomes increasingly prevalent. Usually on board navigation computer systems analyze the combined data provided by GPS (Global Positioning System), motion sensors as ABS wheel sensors as well as a digital map and thereby determine the actual position and velocity of a vehicle with increasing preciseness.

[0003] Known navigation systems typically use electronic maps to represent cartographic features, as streets, buildings and rivers, and make use of a medium such as a compact disk, a digital video disc or a hard disk to store the data that relates to the cartographic features. After map matching the actual position of the user is indicated in the digital map. By acoustic and/or visualized information the user is guided to the predetermined destination.

[0004] The input of the destination, e.g., an address, by a user is still a relatively time-consuming and rather cumbersome process. For example, the user has to scroll through large lists of possible destinations. Even if the navigation system is provided with a speech input, selection of the desired destination is time-consuming due to the need for working through different levels of data organization and also error-prone due to the possibility of faulty speech recognition.

[0005] On the other hand, nowadays a great variety of possible destinations are electronically stored in mobile devices as, e.g., smartphones and Personal Digital Assistants (PDA), in form of entries in address books or vCards that are input and stored in the mobile devices. Recently, PDAs have been developed that are provided with navigation function. It possible to connect a PDA operating as a navigation aid with a vehicle information/navigation system and to have the route guidance carried out by the navigation module of the PDA. The multimodal dialog system called SmartKom, for example, addresses the problem of connecting a mobile device to a vehicle navigation system and also to continue route guidance that previously has been carried out by the vehicle navigation system by means of the mobile device.

[0006] Such solutions, however, demand for the implementation of navigation software in the mobile devices (e.g., PDAs or smartphones). In particular, the input of the desired destination is not sufficiently facilitated or improved by such recent developments.

[0007] Documents US 2002/0030698A1, DE10134-108A1, WO 02/42718A1, EP 1178286A2, and EP 0684592 disclose methods for inputting destinations from a mobile organiser to a navigation device.

[0008] Therefore, there is a need for a more convenient intelligent input of destinations in vehicle navigation systems.

Description of the Invention

[0009] The above-mentioned drawbacks of the art are solved by the method for entering (inputting) a destination for route guidance in a vehicle navigation system according to claim 1.

[0010] If a location stored in the mobile electronic device is selected as the destination, the location is fed into the vehicle navigation system and selected as the destination. Storing a location and feeding it into the vehicle navigation system means storing and feeding/inputting of data related to / identifying a physical location, e.g., the name of an address or geographical coordinates or arbitrary coordinates corresponding to a physical location etc.

[0011] The vehicle in which the vehicle navigation system is installed by any motor vehicle, e.g., an automobile, a motorcycle, a boat, an airplane, etc.

[0012] The mobile electronic device can, e.g., be a Personal Digital Assistant (PDA) or a smartphone (PDA phone) both comprising a Personal Information Manager including a scheduler module (appointment calendar) and an address book. The mobile electronic device can be an electronic organizer and, in particular, it may be a Palm Top or a BlackBerry. The address book and the scheduler module, which comprises data representing scheduled appointments, may advantageously be synchronized with the vehicle navigation system, i.e. with the corresponding data stored in a database of the navigation system. Synchronization can be achieved by standard synchronization software as, e.g., HotSync or ActiveSync.

[0013] The connection between the mobile electronic device and the vehicle navigation system can be performed wirelessly, e.g., via a Bluetooth, an infrared link (as IrDA), Wireless Local Area Network (WLAN) or by wire, e.g., using a USB connection.

[0014] The inventive method allows for a simple, reliable and fast input of a destination for route guidance in the vehicle navigation system. No manual input, e.g., by a touch screen or keyboard, and no spelling of a destination name in the case of a navigation system equipped with a speech control are necessary any longer. Moreover, the functionality of some electronic Personal Information Manager can be integrated in the navigation system providing synergetic effects with respect to the scheduling of tasks and guidance to the locations associated with appointments.

[0015] If, e.g., an appointment is associated with a location (meeting someone somewhere), the associated location can be fed into the vehicle navigation system. The navigation system can localize an address given by

a city name and a street name/number by means of stored geographical data that includes, e.g., geographical coordinates. According to another example, an appointment may be a demand for refueling the vehicle. In this case, the destination selected on the basis of the scheduled appointment can be a gas station the geographic position of which is stored in the navigation system (i.e. a location database of the navigation system). In particular, the gas station of a number of stored gas stations that is closest to the actual position of the vehicle can be selected as a destination for route guidance.

[0016] In particular, the scheduled appointment can be associated with a person whose address is stored in the mobile electronic device (e.g., in an electronic address book of a PDA or a smartphone) or the vehicle navigation system and it is this address that can represent the location that is associated with the scheduled appointment. For example, the scheduler module may include an entry indicating an appointment with a particular person. Then, the address may be looked-up by means of a relational database including data relating the name of the person to a vCard (or other kind of data including the address of the respective person) also stored in the mobile electronic device. The data that is necessary for locating the address in a digital map and for calculating a route to the destination are provided by the vehicle navigation system that usually comprises a GPS receiver and a database for storing digital map data.

[0017] According to the inventive method it is automatically determined whether a scheduled appointment stored in the scheduler module of the mobile electronic device and associated with a location stored in the mobile electronic device or in the vehicle navigation system is coming up within a predetermined time interval and if it is determined that such a scheduled appointment is coming up within the predetermined time interval, i.e. the appointment is scheduled for some future point of time within some predetermined time range, the associated location is selected as the destination for route guidance.

[0018] The predetermined time interval may comprise any point of time in the future. The method may also comprise checking whether there was an appointment scheduled at some time before the connection of the mobile electronic device to the vehicle navigation system has been established and informing the user about such an appointment if it is detected.

[0019] Either automatically or on demand by a user in response to a prompt given by the vehicle navigation system the associated location is selected as the destination and/or a route to the destination is calculated.

[0020] Thus, it is possible that a destination is automatically chosen without a need for any operation by the user (e.g., the driver of the vehicle). The destination is automatically chosen in response to information about appointments stored in the mobile electronic device which not only assists the driver in entering the next destination for a travel but also in remembering important appointments.

[0021] However, it might be preferred to have the navigation system output a prompt, e.g., a synthetic speech output or a text display on a display device asking for acknowledgement of the selected destination as well as calculation of a route to the selected destination. In this case calculation of a route the user might not be interested in can be avoided and he can faster initiate route calculation to an alternative destination. If more than one scheduled appointment is found within the predetermined time interval, the user may particularly skip the temporarily next appointment to have, e.g., a location associated with the following appointment selected as the destination for route guidance.

[0022] In one embodiment a location stored in the mobile electronic device or a location stored in the vehicle navigation system is selected as the destination for route guidance based on the at least one scheduled appointment in response to a speech input by a user. In this case, the address book and the scheduler module of the mobile electronic device may preferably be synchronized with the vehicle navigation system, i.e. with the corresponding data stored in a database of the navigation system, and the user may initiate selection of a destination for route guidance by a verbal command. Automatic entering of an appropriate destination and/or calculation of a route to the destination can, thus, be carried out when a user is ready for driving to a location of a next scheduled appointment stored in his PDA or smartphone, etc.

[0023] In particular, the user may simply utter a name of a person associated with an upcoming appointment and, subsequently, the associated location that might be looked-up in an address book or a vCard is automatically selected as the destination for route guidance.

[0024] The speech input may alternatively represent some predetermined keyword. After recognition of the keyword uttered by a user the selection of a location stored in the mobile electronic device or a location stored in the vehicle navigation system as the destination for route guidance can be performed.

[0025] According to the method all scheduled appointments stored in the scheduler module of the mobile electronic device and associated with locations stored in the mobile electronic device or the vehicle navigation system that are coming up within the predetermined time interval are determined automatically and subsequently all or some of the locations that are associated with the scheduled appointments stored in the scheduler module of the mobile electronic device or the vehicle navigation system that are determined to come up within the predetermined time interval are selected as destinations for route guidance.

[0026] Those locations stored in the mobile electronic device and associated with upcoming appointments are fed into the vehicle navigation system and selected as destinations. A list of all destinations might be displayed to the user, whereby he is informed about the entire set of appointments within the predetermined time interval that may, e.g., represent the whole present day.

[0027] Again, automatically or on demand by a user in response to a prompt given by the vehicle navigation system (e.g., an acoustic or optical message) the associated locations are selected as the destinations and a route to some or all of the destinations may be calculated. In particular, irrespective of the actual temporal order of the scheduled appointments an optimal route connecting all or some of the destinations is calculated. The optimal route may be, e.g., the shortest or the fastest route. The fastest route might be determined with respect to the category of streets (highways, major streets, etc.) and/or may be determined taking into account the actual traffic situation. After calculation of the optimum route the user is asked whether he wants to be guided the optimum route or a route connecting destinations corresponding to locations associated with appointments in temporal order.

[0028] In one embodiment of the inventive method it is estimated whether a selected destination cannot be reached within a predetermined time interval (that may be identical to the above-mentioned predetermined time interval) or until the point of time of the appointment associated with the location that is selected as the destination, and if it is estimated that the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination, an event is generated, e.g., a warning is prompted or a message is displayed or announced. The message may offer establishment of a telephone connection to a person associated with the scheduled appointment. The telephone number may, e.g., be looked-up from a vCard of a person associated with the appointment that is stored in the mobile electronic device.

[0029] The user is informed about an appointment he cannot keep in due time and he, thus, can take appropriate measures. A typical measure would be to make a telephone call to the person he cannot meet in time. This embodiment of the inventive method efficiently assists the user in dealing with such a situation.

[0030] The information, that a meeting cannot be kept in time can be made available immediately after entering the destination or even during the travel on the grounds of real-time traffic information e.g. from traffic announcements or Traffic Message Channel (TMC) messages. The TMC is typically digitally coded using the FM Radio Data System (FM-RDS) on conventional FM radio broadcasts. It can also be transmitted on Digital Audio Broadcasting or satellite radio. Each traffic incident can be sent as a TMC message. One message consists of an event code and a location code in addition to time details.

[0031] In order to solve the above-mentioned drawbacks it is also provided a vehicle navigation system configured for route guidance to a destination, according to claim 9.

[0032] The inventive vehicle navigation system is particularly useful as a navigation system installed in an automobile.

[0033] Herein, it is to be understood that the expression "the control unit is configured to do .." covers the meaning that the control unit causes a separate logical or physical means to do something, e.g., to read data (locations, appointments) from the mobile electronic device.

[0034] It is also provided a vehicle navigation system as mentioned above that further comprises a database storing at least one location and wherein the control means is configured to read a location stored in the mobile electronic device or in the database based on the at least one read scheduled appointment and to select the read location as the destination for route guidance.

[0035] The control means of the vehicle navigation system is configured to automatically determine whether a scheduled appointment stored in the scheduler module of the mobile electronic device and associated with a location stored in the mobile electronic device or in the database is coming up within a predetermined time interval and to read the associated location, if it is determined that such a scheduled appointment is coming up within the predetermined time interval. The scheduled appointment can, in particular, be associated with a person whose address is stored in the mobile electronic device or in the vehicle navigation system and represents the location that is associated with the scheduled appointment.

[0036] The vehicle navigation system further comprises a route calculation means and the control means is configured to automatically read the locations associated with the scheduled appointments and to cause the route calculation means to calculate a route to the destination.

[0037] The vehicle navigation system according to the present invention further comprises

an input means, e.g., a speech input or a keyboard or a touch screen,

an output means, e.g., a speech output or a display device, as well as

a route calculation means, and

the control means is configured to instruct the output means to output a prompt to a user and to read the associated location and/or to cause the route calculation means to calculate a route to the destination in response to an input by the user that is input by the input means.

[0038] The control means is configured to

automatically determine all scheduled appointments stored in the scheduler module of the mobile electronic device and associated with stored locations that are coming up within the predetermined time interval;

read all or some of the locations associated with the scheduled appointments stored in the scheduler module of the mobile electronic device that are determined to come up within the predetermined time interval; and

select all or some of the read locations as destinations.

[0039] In this case the vehicle navigation system further comprises a route calculation means and the control means is configured to automatically read the associated locations and to cause the route calculation means to

calculate a route to the destinations.

[0040] In particular, the route calculation means is configured to calculate an optimal route, in particular, the shortest or the fastest route, to all or some of the destinations irrespective of the temporal order of the appointments.

[0041] According to a further embodiment the control means in one of the above-described examples of the inventive vehicle navigation system is configured to

estimate whether a selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination; and to

generate an event, in particular a warning or a message offering establishment of a telephone connection to a person associated with the appointment associated with the location that is selected as the destination, if it is estimated that the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination.

[0042] In this case the control means may also be configured to estimate whether the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination on the basis of traffic information, in particular, Traffic Message Channel messages, received by the navigation system.

[0043] Additional features and advantages of the present invention will be described with reference to the drawings. In the description, reference is made to the accompanying figures that are meant to illustrate preferred embodiments of the invention. It is understood that such embodiments do not represent the full scope of the invention and are not taken to limit the scope of protection that is exclusively defined by the appended claims.

[0044] Figure 1 illustrates an embodiment of the herein disclosed method for entering a destination in a vehicle navigation system comprising the steps of synchronization of an address book and a scheduler module of a PDA with a vehicle navigation system and determining an upcoming appointment from the entries of the scheduler module.

[0045] Figure 2 illustrates another embodiment of the herein disclosed method for entering a destination in a vehicle navigation system wherein an address found in the address book of a smartphone is used to select a destination for route guidance.

[0046] Figure 3 illustrates an embodiment similar to the one of Figure 3 but considering a case in which an upcoming appointment cannot be kept.

[0047] Figure 4 illustrates an embodiment of the herein disclosed method for entering a destination in a vehicle navigation system wherein a number of appointments stored in a PDA are detected by a vehicle navigation system and an optimum route to all of the detected appointments is automatically calculated.

[0048] Figure 1 shows basic steps of an embodiment of the method for entering a destination for route guidance in a vehicle navigation system according to the present invention. According to this embodiment a Personal Digital Assistant (PDA) is connected to a vehicle navigation system 1 by a person entering a vehicle and carrying the PDA. The connection can be established wirelessly, e.g., by means of a Bluetooth link, a WLAN link or by an infrared connection.

[0049] After connection of the PDA and the vehicle navigation system an address book and a scheduler module comprising scheduled appointments are automatically synchronized with the corresponding database of the navigation system 2. Therefore, the navigation system learns about one or more scheduled appointments that have been entered in the PDA by the user, e.g., the driver of the vehicle in which the vehicle navigation system is installed.

[0050] Next, the navigation system checks whether there is some upcoming appointment within a predetermined time interval that is associated with some location 3. The predetermined interval may, e.g., represent the actual day of connection of the PDA to the vehicle navigation system. The user might also be enabled to choose a suitable time interval by manual or verbal input facilitated by a manual or speech input means of the navigation system. According to the present example an appointment is determined that is associated with a location that is stored in the PDA. The location is given by an address including a city name and a street name and street number. The address can be part of the stored appointment entry or may be related to the appointment entry. The appointment entry can, e.g., include a name of a person to be met and the name can be related to an entry in an address book stored in the PDA.

[0051] The location associated with the determined upcoming appointment is selected as a destination for route guidance by the vehicle navigation system 4. Geographical data stored in a database of the navigation system is used for localization of the destination. The destination can, thus, be indicated on a digital map shown to the user /driver. The selection of the destination may be performed automatically without interaction with the user. It may be preferred that the user is asked by the navigation system whether the associated location shall be used as a destination for route guidance. The human-machine interaction can, in principle, be performed by means of a display device, a touch screen, push buttons, a speech input/output etc.

[0052] Once the location associated with the upcoming appointment is selected as the destination, a route from the present location to the destination, preferably the shortest or fastest route, is calculated 5 by the vehicle navigation system. The route can be indicated on a digital map. Again, the user may be prompted to initiate calculation of the route to the destination or alternatively route calculation is performed without further human-machine interaction. Optical and/or acoustical route guidance can subsequently be performed by the navigation system

based on the calculated route to the selected destination.

[0053] Figure 2 illustrates steps of another embodiment of the inventive method disclosed herein. A user enters 1 the "text meeting with Mr. X" in an appropriate place of an appointment calendar representing date and time, say, August 1, 11 am, of a meeting. The appointment calendar is part of a Personal Information Manager of a smartphone. Assume that the user enters his vehicle equipped with the navigation system of the present invention on August 1 at 9 am. He connects the smartphone to the vehicle navigation system 11. The navigation system automatically reads the appointment calendar and determines the upcoming appointment with Mr. X 12. The navigation system also automatically looks-up the address of Mr. X in an address book 13. The address book may be also stored in the smartphone. It is also considered that the address may be stored in a database of the navigation system.

[0054] After having determined the address of Mr. X, the navigation system is, in principle, ready for calculating a route to the address and to perform route guidance. In the present example, the navigation system prompts a message asking the user whether he wants to be guided to the address of Mr. X 14. In some detail, the navigation system may announce a message with the content that an appointment with Mr. X is scheduled for 11 am and may subsequently ask whether or not to perform route guidance to this address. Steps 13 and 14 can be carried out in reversed order.

[0055] The navigation system may prompt the message immediately after the appointment is detected or when an estimated time for travel to the location that is associated with the appointment is comparable to the time interval from the present time to the time of the appointment.

[0056] The user may approve that he wants to be guided to the address of Mr. X by means of a speech input, a keyboard a touch panel or any other input means known in the art of vehicle navigation systems 15. For example, he may utter a keyword to approve the selected destination for route guidance, i.e., the address of Mr. X.

[0057] In an alternative embodiment, the user is prompted to input manually or by speech input the destination after an upcoming appointment is detected in step 12. In any case, after the destination was selected the route to the destination, i.e. the address of Nr. X, is calculated 16 and route guidance to the destination can be started.

[0058] With reference to Figure 3 a case is described in which a detected upcoming appointment cannot be kept, since the traveling time from the present position would be too long to arrive at the location associated with the appointment in time. As in Figure 2 a meeting with Mr. X is entered in the smartphone 20, the smartphone is connected to the vehicle navigation system 21 and an upcoming appointment is automatically determined 22 by the vehicle navigation system after the connection has been established.

[0059] The location associated with the appointment, i.e. in the present example the address of Mr. X, is looked-up from an address book or a vCard stored in the smartphone. By means of geographical data stored in a database of the vehicle navigation system the distance from the present location of the vehicle and the address of Mr. X is estimated 23. Based on the estimated distance the traveling time to the address of Mr. X is estimated 24. This estimation may take into account any available traffic information provided, e.g., by some radio station.

[0060] Assume that the navigation system determines that the meeting with Mr. X cannot be kept, since the estimated traveling time is too long. In this case, a warning is prompted to the user / driver 25. For example, a synthesized speech output can be provided: "Meeting with Mr. X cannot be kept". Then, establishment of a telephone connection with Mr. X is offered by the vehicle navigation system 26. The corresponding telephone number can be looked up from the address book or vCard stored in the smartphone or in a database of the vehicle navigation system.

[0061] If the user agrees, a telephone connection is established. After the telephone conversation with Mr. X the navigation system may offer to delete the mentioned appointment or to postpone it to a later time/date.

[0062] The step of estimating the traveling time to the destination 24 can be performed continuously during the travel taken into account the actual traffic by real time traffic information, e.g. from radio traffic announcements or TMC messages. If during the travel the navigation system is informed about a traffic jam on the route to the destination, the system may prompt the warning that the appointment cannot be kept 25.

[0063] Figure 4 illustrates another aspect of the present invention. A PDA is wirelessly connected to a vehicle navigation system 30. Of course any other mobile electronic device including some kind of a Personal Information Manager can be used in this example (as in the examples above). The connection may be established via a Bluetooth link or a WLAN link, for example. The address book and the scheduler module of the PDA are automatically synchronized 31 with the corresponding database of the navigation system.

[0064] By synchronization of the scheduler module the navigation system detects 32 a number of appointments stored in the PDA. The appointments are usually stored and managed in temporal order in scheduler module. Assume that four appointments are stored, in the order 1, 2, 3, and 4, in the PDA for the present day. As in the previous examples the navigation system may automatically or on demand by the user select a location associated with an appointment, preferably, with that appointment that comes up next in time, as the destination for route guidance and may calculate the route to the destination automatically or on demand.

[0065] In the present example, the navigation system prompts the user, e.g., a commercial traveler, to acknowledge calculation of an optimum route to all locations as-

sociated with the four appointments 33. In response to a positive input by the user the navigation system, i.e. a route calculation means incorporated in the navigation system, calculates 34 an optimum route connecting the locations associated with the four appointments. In particular, each of the appointments may be linked to an address and the address can be related to geographical data stored in a database of the navigation system. The optimum route may be the shortest or fastest route from the present position to all of the locations. Assume that it turns out, however, that for an optimum route the appointments should be kept in some order different from the temporal one stored in the PDA, say, 1, 3, 2, 4. Consequently, calculation of the optimum route includes reordering of the appointments 34 in accordance with the optimum route.

[0066] Next, the navigation system informs the user about the optimal route, in particular, about the fact that the optimal route differs from a route connecting the locations associated with the appointments in temporal order and prompts the user to decide whether he wants to follow the optimal route or not 35.

[0067] If the user wants to be guided along the optimal route the navigation system offers the user to establish a telephone connection to one or more persons involved in appointments that cannot be kept in time when the optimal route is followed 36. This is possible, if the stored appointments are associated with persons whose telephone numbers are found in an address book or a vCard, etc. stored in the PDA or in a database of the navigation system. If, on the other hand, the user prefers to keep the four appointments in temporal order, the navigation system calculates 37 a route including the locations associated with the appointments that are, thus, selected as destinations for route guidance corresponding to the temporal order of the appointments (i.e., 1, 2, 3 and 4).

Claims

1. Method for entering a destination for route guidance in a vehicle navigation system, comprising
providing a mobile electronic device storing locations and comprising a scheduler module storing scheduled appointments;
connecting the mobile electronic device to the vehicle navigation system; and automatically determining all scheduled appointments stored in the scheduler module of the mobile electronic device and associated with locations stored in the mobile electronic device or the vehicle navigation system that are coming up within the predetermined time interval;
selecting all or some of the locations associated with the scheduled appointments stored in the scheduler module of the mobile electronic device or the vehicle navigation system that are determined to come up within the predetermined time interval as destinations based on the scheduled appointments;
characterised by
automatically or on demand by a user in response to a prompt given by the vehicle navigation system calculating the optimal route to at least some of the destinations irrespective of the temporal order of the appointments;
after calculation of the optimal route prompting the user to decide on whether he wants to be guided either

a) the optimal route; or
b) a route connecting destinations corresponding to locations associated with scheduled appointments in temporal order.

2. The method according to claim 1, wherein at least one of the scheduled appointments is associated with a person whose address is stored in the mobile electronic device or in the vehicle navigation system and represents the location that is associated with the scheduled appointment.

3. The method according to one of the preceding claims, further comprising
estimating whether a selected destination cannot be reached within a predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination; and
generating an event, if it is estimated that the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination.

4. The method according to claim 3, wherein the estimating whether the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination is based on traffic information, in particular, Traffic Message Channel messages, received by the navigation system.

5. The method according to claim 3 or 4, wherein the generated event is a warning prompted to a user or a message offering establishment of a telephone connection to a person associated with the appointment associated with the location that is selected as the destination that cannot be reached within the predetermined time interval or until the point of time of the appointment.

6. The method according to one of the preceding claims, wherein the mobile electronic device comprises an address book and comprising the step of synchronizing the scheduler module and the address book with the vehicle navigation system.

7. The method according to one of the preceding claims, wherein the mobile electronic device is connected to the vehicle navigation system by wire or wirelessly, in particular, by a Bluetooth link or a WLAN link.

8. The method according to one of the preceding claims, wherein the mobile electronic device is a Personal Digital Assistant or a smartphone or an electronic organizer.

9. Vehicle navigation system configured for route guidance to a destination, comprising
a connection unit configured for connection to a mobile electronic device storing at least one location and comprising a scheduler module storing at least one scheduled appointment;
a database storing at least one location;
a control means configured to
automatically determine all scheduled appointments stored in the scheduler module of the mobile electronic device and associated with stored locations that are coming up within the predetermined time interval;
read all or some of the locations associated with the scheduled appointments stored in the scheduler module of the mobile electronic device that are determined to come up within the predetermined time interval; and
select all or some of the read locations as destinations;
characterised by
a route calculation means configured to calculate the optimal route to all or some of the destinations irrespective of the temporal order of the appointments and to calculate a route connecting destinations corresponding to locations associated with scheduled appointments in temporal order;
an input means;
an output means configured to output a prompt; and wherein
the control means is configured to instruct the output means to
output a prompt to a user and to read the associated location and to cause the route calculation means to calculate the optimal route to the destination in response to an input by the user that is input by the input means; and
output a prompt to the user to decide on whether he wants to be guided either

a) the optimal route; or
b) the route connecting destinations corresponding to locations associated with scheduled appointments in temporal order.

10. The vehicle navigation system according to claim 9, wherein the control means is configured to estimate whether a selected destination cannot be reached within a predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination; and to generate an event, in particular a warning or a message offering establishment of a telephone connection to a person associated with the appointment associated with the location that is selected as the destination, if it is estimated that the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination.

11. The vehicle navigation system according to claim 10, wherein the control means is configured to estimate whether the selected destination cannot be reached within the predetermined time interval or until the point of time of the appointment associated with the location that is selected as the destination on the basis of traffic information, in particular, Traffic Message Channel messages, received by the navigation system.

Patentansprüche

1. Verfahren zum Eingeben eines Ziels zur Routenführung in ein Fahrzeugnavigationssystem, umfassend
Bereitstellen einer mobilen elektronischen Einrichtung, die Orte speichert und ein Planermodul umfasst, das geplante Verabredungen speichert;
Verbinden der mobilen elektronischen Einrichtung mit dem Fahrzeugnavigationssystem; und
automatisches Bestimmen sämtlicher geplanter Verabredungen, die in dem Planermodul der mobilen elektronischen Einrichtung gespeichert und mit Orten assoziiert sind, die in der mobilen elektronischen Einrichtung oder in dem Fahrzeugnavigationssystem gespeichert sind und die innerhalb eines vorbestimmten Zeitintervalls fällig werden;
auf der Grundlage der geplanten Verabredungen Auswählen sämtlicher oder einiger der Orte, die mit den geplanten Verabredungen, die in dem Planermodul der mobilen elektronischen Einrichtung oder in dem Fahrzeugnavigationssystem gespeichert sind, assoziiert sind, und von denen bestimmt wird, dass sie innerhalb des vorbestimmten Zeitintervalls fällig werden, als Ziele;
gekennzeichnet durch
automatisches oder auf einen Befehl eines Nutzers in Reaktion auf eine Eingabeanforderung, die von dem Fahrzeugnavigationssystem ausgegeben wird, erfolgendes Berechnen der optimalen Route zu zumindest einigen der Ziele ohne Berücksichtigung der zeitlichen Reihenfolge der Verabredungen;
Auffordern des Nutzers nach der Berechnung der optimalen Route, darüber zu entscheiden, ob er ent-

weder

a) die optimale Route; oder
b) eine Route, die Ziele entsprechend Orten verbindet, die mit geplanten Verabredungen in zeitlicher Reihenfolge assoziiert sind,

geführt werden will.

2. Das Verfahren gemäß Anspruch 1, in dem zumindest eine der geplanten Verabredungen mit einer Person assoziiert ist, deren Adresse in der mobilen elektronischen Einrichtung oder in dem Fahrzeugnavigationssystem gespeichert ist und den Ort darstellt, der mit der geplanten Verabredung assoziiert ist.

3. Das Verfahren gemäß einem der vorhergehenden Ansprüche, das weiterhin umfasst
Abschätzen, ob ein ausgewähltes Ziel innerhalb eines vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als das Ziel ausgewählt worden ist, nicht erreicht werden kann; und
Erzeugen eines Ereignisses, wenn abgeschätzt wird, dass das ausgewählte Ziel nicht innerhalb des vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als das Ziel ausgewählt worden ist, erreicht werden kann.

4. Das Verfahren gemäß Anspruch 3, in dem das Abschätzen, ob das ausgewählte Ziel innerhalb des vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als Ziel ausgewählt worden ist, nicht erreicht werden kann, auf der Grundlage von Verkehrsinformationen, insbesondere Nachrichten von einem Verkehrsnachrichtenkanal, die von dem Fahrzeugnavigationssystem empfangen werden.

5. Das Verfahren gemäß Anspruch 3 oder 4, in dem das erzeugte Ereignis eine Warnung, die an eine Nutzer ausgegeben wird, oder eine Nachricht ist, die den Aufbau einer Telefonverbindung mit einer Person anbietet, die mit der Verabredung, die mit dem Ort assoziiert ist, der als Ziel ausgewählt worden ist, der nicht innerhalb des vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung erreicht werden kann, assoziiert ist.

6. Das Verfahren gemäß einem der vorhergehenden Ansprüche, in dem die mobile elektronische Einrichtung ein Adressbuch umfasst und den Schritt des Synchronisierens des Planermoduls und des Adressbuchs mit dem Fahrzeugnavigationssystem umfassend.

7. Das Verfahren gemäß einem der vorhergehenden Ansprüche, in dem die mobile elektronische Einrichtung über Draht oder Funk, insbesondere eine Bluetooth-Verbindung oder eine WLAN-Verbindung, mit dem Fahrzeugnavigationssystem verbunden ist.

8. Das Verfahren gemäß einem der vorhergehenden Ansprüche, in dem die mobile elektronische Einrichtung ein Personal Digital Assistant oder ein Smartphone oder ein elektronischer Organizer ist.

9. Fahrzeugnavigationssystem, das zur Routenführung zu einem Ziel ausgebildet ist, umfassend
eine Verbindungseinheit, die für eine Verbindung mit einer mobilen elektronischen Einrichtung, die zumindest einen Ort speichert und ein Planermodul umfasst, das zumindest eine geplante Verabredung speichert, ausgebildet ist;
eine Datenbank, die zumindest einen Ort speichert;
eine Steuereinrichtung, die dazu ausgebildet ist,
automatisch sämtliche geplante Verabredungen zu bestimmen, die in dem Planermodul der mobilen elektronischen Einrichtung gespeichert und mit den gespeicherten Orten assoziiert sind, die innerhalb eines vorbestimmten Zeitintervalls fällig werden;
Auslesen sämtlicher oder einiger der Orte, die mit den geplanten Verabredungen assoziiert sind, die in dem Planermodul der mobilen elektronischen Einrichtung gespeichert sind und von denen bestimmt wird, dass sie innerhalb des vorbestimmten Zeitintervalls fällig werden;
Auswählen sämtlicher oder einiger der ausgelesenen Orte als Ziele;
gekennzeichnet durch
eine Routenberechnungseinrichtung, die dazu ausgebildet ist, die optimale Route zu sämtlichen oder einigen der Ziele ohne Berücksichtigung der zeitlichen Reihenfolge der Verabredungen zu berechnen und eine Route zu berechnen, die Ziele entsprechend Orten verbindet, die mit den geplanten Verabredungen in zeitlicher Reihenfolge assoziiert sind;
eine Eingabeeinrichtung;
eine Ausgabeeinrichtung, die dazu ausgebildet ist, eine Anforderung auszugeben;
und in der
die Steuereinrichtung dazu ausgebildet ist, die Ausgabeeinrichtung dazu anzuweisen
eine Anforderung an einen Nutzer auszugeben und den assoziierten Ort auszulesen und die Routenberechnungseinrichtung dazu zu veranlassen, die optimale Route zu dem Ziel in Reaktion auf eine Eingabe **durch** den Nutzer, die über die Eingabeeinrichtung eingegeben wird, zu berechnen; und
eine Aufforderung an den Nutzer, zu entscheiden, ob er entweder

a) die optimale Route; oder
b) eine Route, die Ziele entsprechend Orten ver-

bindet, die mit geplanten Verabredungen in zeitlicher Reihenfolge assoziiert sind,

geführt werden will, auszugeben.

10. Das Fahrzeugnavigationssystem gemäß Anspruch 9, in dem die Steuereinrichtung dazu ausgebildet ist, abzuschätzen, ob ein ausgewähltes Ziel innerhalb eines vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als das Ziel ausgewählt worden ist, nicht erreicht werden kann; und
ein Ereignis, insbesondere eine Warnung oder eine Nachricht, die den Aufbau einer Telefonverbindung mit einer Person anbietet, die mit der Verabredung, die mit dem Ort assoziiert ist, der als Ziel ausgewählt worden ist, assoziiert ist, zu erzeugen, wenn abgeschätzt wird, dass das ausgewählte Ziel nicht innerhalb des vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als das Ziel ausgewählt worden ist, erreicht werden kann.

11. Das Fahrzeugnavigationssystem gemäß Anspruch 10, in dem die Steuereinrichtung dazu ausgebildet ist, auf der Grundlage von Verkehrsinformationen, insbesondere Nachrichten von einem Verkehrsnachrichtenkanal, die von dem Fahrzeugnavigationssystem empfangen werden, abzuschätzen, ob das ausgewählte Ziel innerhalb des vorbestimmten Zeitintervalls oder bis zu dem Zeitpunkt der Verabredung, die mit dem Ort assoziiert ist, der als Ziel ausgewählt worden ist, nicht erreicht werden kann.

Revendications

1. Procédé d'introduction d'une destination de guidage routier dans un système de navigation pour véhicule, comprenant
la mise à disposition d'un dispositif électronique mobile stockant des emplacements et comprenant un module d'ordonnancement qui enregistre des rendez-vous planifiés ;
la connexion du dispositif électronique mobile au système de navigation pour véhicule ; et
la détermination automatique de tous les rendez-vous planifiés stockés dans le module d'ordonnancement du dispositif électronique mobile et associés à des emplacements stockés dans le dispositif électronique mobile ou dans le système de navigation pour véhicule qui apparaissent dans l'intervalle de temps prédéterminé ;
la sélection, en tout ou en partie, des emplacements associés aux rendez-vous planifiés stockés dans le module d'ordonnancement du dispositif électronique mobile ou dans le système de navigation pour véhicule et qui sont déterminés pour apparaître dans l'intervalle de temps prédéterminé comme destinations, sur la base des rendez-vous planifiés ;
caractérisé par
de manière automatique ou sur demande d'un utilisateur, en réponse à une invite fournie par le système de navigation pour véhicule, le calcul de l'itinéraire optimal à au moins une partie des destinations, indépendamment de l'ordre chronologique des rendez-vous ;
une fois l'itinéraire optimal calculé, l'envoi d'une invite à l'utilisateur pour décider s'il veut être guidé selon soit

a) l'itinéraire optimal ; soit
b) un itinéraire reliant des destinations correspondant à des emplacements associés à des rendez-vous planifiés en ordre chronologique.

2. Procédé selon la revendication 1, dans lequel au moins un des rendez-vous planifiés est associé à une personne dont l'adresse est stockée dans le dispositif électronique mobile ou dans le système de navigation pour véhicule et représente l'emplacement associé au rendez-vous planifié.

3. Procédé selon l'une des revendications précédentes, comprenant en outre
l'estimation du fait qu'une destination sélectionnée peut être atteinte ou non dans un intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination ; et
la génération d'un événement, s'il est estimé que la destination sélectionnée ne peut pas être atteinte dans l'intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination.

4. Procédé selon la revendication 3, dans lequel l'estimation du fait que la destination sélectionnée peut être atteinte ou non dans l'intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination est basée sur des informations de trafic, et en particulier sur des messages TMC, soit Traffic Message Channel, reçus par le système de navigation.

5. Procédé selon la revendication 3 ou 4, dans lequel l'événement généré est un avertissement envoyé comme invite à l'utilisateur ou un message offrant l'établissement d'une connexion téléphonique avec une personne associée au rendez-vous associé à l'emplacement sélectionné comme la destination qui ne peut pas être atteinte dans l'intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous.

6. Procédé selon l'une des revendications précéden-

tes, dans lequel le dispositif électronique mobile comporte un carnet d'adresses et comprenant l'étape consistant à synchroniser le module d'ordonnancement et le carnet d'adresses avec le système de navigation pour véhicule.

7. Procédé selon l'une des revendications précédentes, dans lequel le dispositif électronique mobile est connecté au système de navigation pour véhicule par fil ou sans fil, en particulier par une liaison Bluetooth ou WLAN.

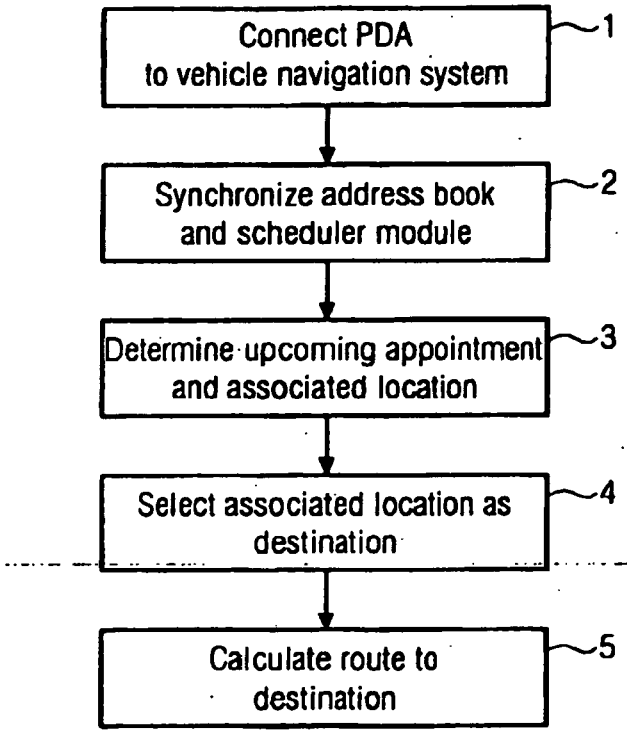
8. Procédé selon l'une des revendications précédentes, dans lequel le dispositif électronique mobile est soit un assistant numérique personnel ou PDA - Personal Digital Assistant, soit un téléphone intelligent ou smartphone, soit un agenda électronique.

9. Système de navigation pour véhicule configuré pour le guidage routier vers une destination, comprenant une unité de connexion configurée pour la connexion à un dispositif électronique mobile stockant au moins un emplacement et comprenant un module d'ordonnancement stockant au moins un rendez-vous planifié ;
une base de données stockant au moins un emplacement ;
un moyen de contrôle configuré pour
déterminer automatiquement tous les rendez-vous planifiés stockés dans le module d'ordonnancement du dispositif électronique mobile et associés à des emplacements stockés qui apparaissent dans l'intervalle de temps prédéterminé ;
lire, en tout ou en partie, les emplacements associés aux rendez-vous planifiés stockés dans le module d'ordonnancement du dispositif électronique mobile, qui sont déterminés pour apparaître dans l'intervalle de temps prédéterminé ; et
sélectionner, en tout ou en partie, les emplacements lus comme destinations ;
caractérisé par
un moyen de calcul d'itinéraire configuré pour calculer l'itinéraire optimal aux destinations en tout ou en partie, indépendamment de l'ordre chronologique des rendez-vous, et pour calculer un itinéraire reliant des destinations correspondant aux emplacements associés aux rendez-vous planifiés en ordre chronologique ;
un moyen d'introduction ;
un moyen de sortie configuré pour sortir une invite ;
et dans lequel
le moyen de contrôle est configuré pour commander le moyen de sortie de façon à
sortir une invite pour un utilisateur, à lire l'emplacement associé et à faire exécuter, par le moyen de calcul d'itinéraire, le calcul de l'itinéraire optimal vers la destination en réponse à une entrée de l'utilisateur introduite par le moyen d'introduction ; et
sortir une invite pour l'utilisateur de manière à ce qu'il décide s'il veut ou non être guidé selon soit

a) l'itinéraire optimal ; soit
b) l'itinéraire connectant des destinations correspondant aux emplacements associés aux rendez-vous planifiés en ordre chronologique.

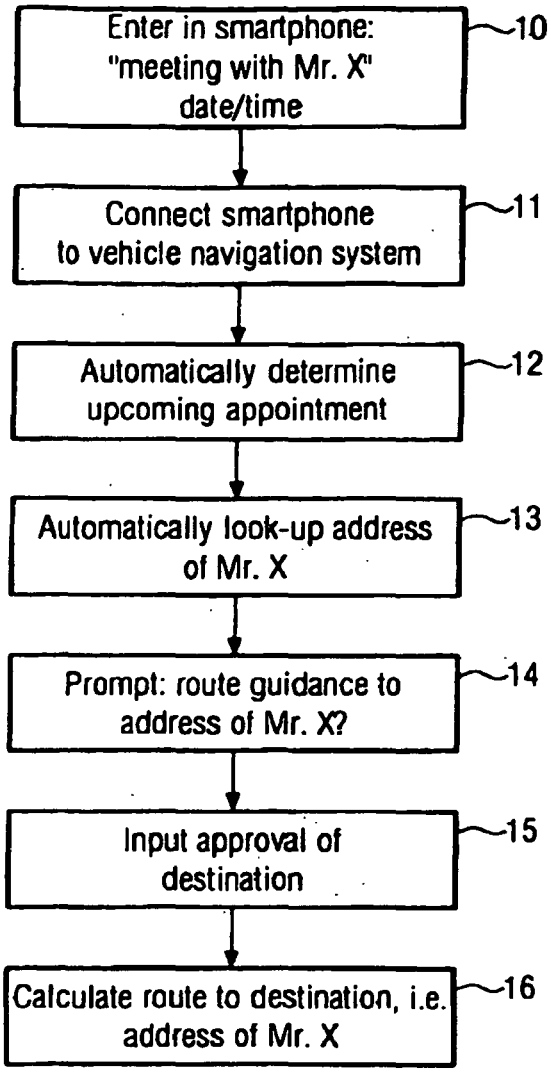
10. Système de navigation pour véhicule selon la revendication 9, dans lequel le moyen de contrôle est configuré pour
estimer si une destination sélectionnée peut ou non être atteinte dans un intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination ; et pour
générer un événement, en particulier un avertissement ou un message proposant l'établissement d'une liaison téléphonique avec une personne associée au rendez-vous associé à l'emplacement sélectionné comme destination, s'il est estimé que la destination sélectionnée ne peut pas être atteinte dans l'intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination.

11. Système de navigation pour véhicule selon la revendication 10, dans lequel le moyen de contrôle est configuré pour estimer si la destination sélectionnée peut ou non être atteinte dans l'intervalle de temps prédéterminé ou avant le moment fixé du rendez-vous associé à l'emplacement sélectionné comme destination sur la base d'informations de trafic, et en particulier sur des messages TMC reçus par le système de navigation.



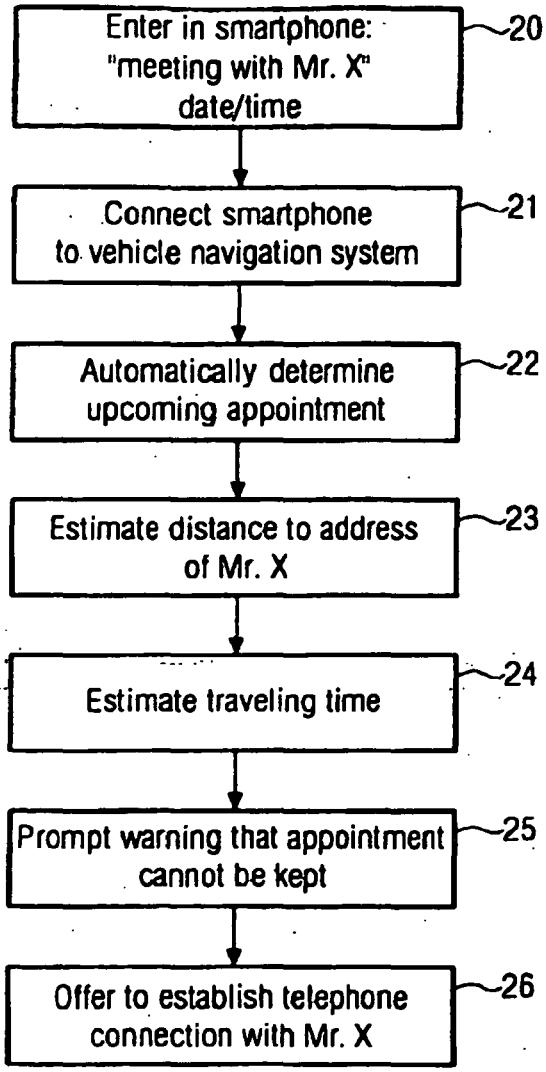
Connect PDA to vehicle navigation system
1
Synchronize address book and scheduler module
2
Determine upcoming appointment and associated location
3
Select associated location as destination
4
Calculate route to destination
5

FIG. 1



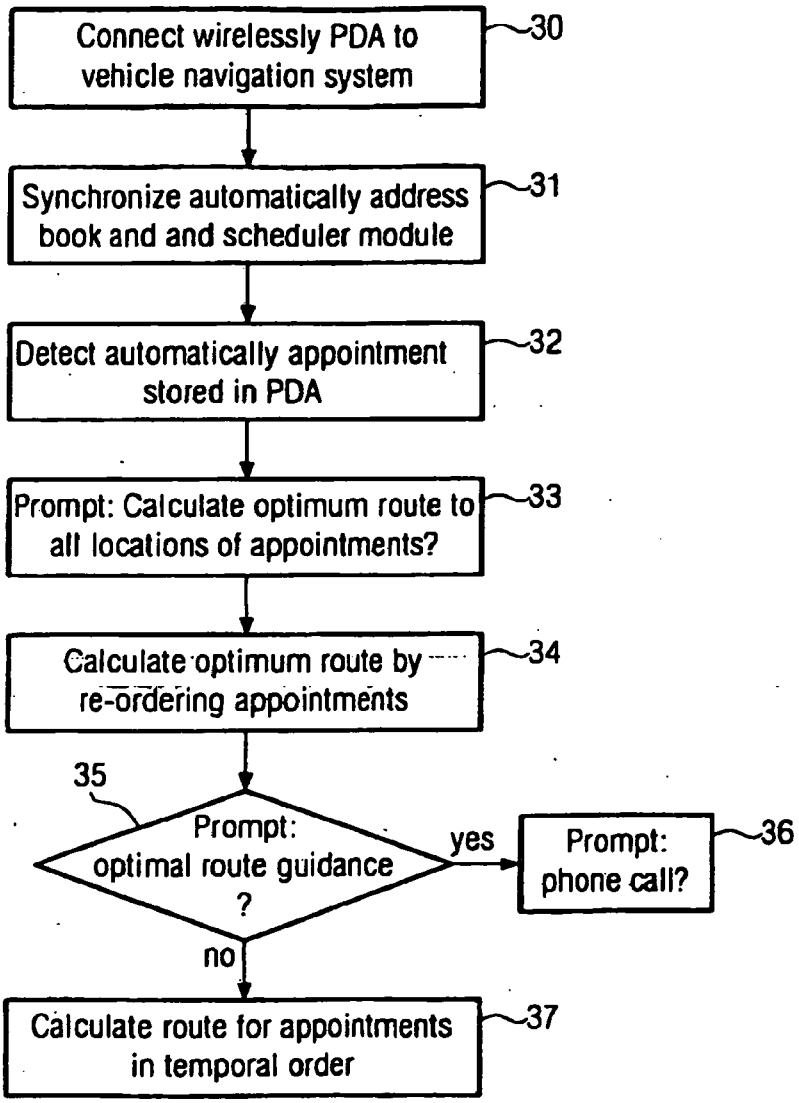
Enter in smartphone: "meeting with Mr. X" date/time
10
Connect smartphone to vehicle navigation system
11
Automatically determine upcoming appointment
12
Automatically look-up address of Mr. X
13
Prompt: route guidance to address of Mr. X?
14
Input approval of destination
15
Calculate route to destination, i.e. address of Mr. X
16

FIG. 2



Enter in smartphone: "meeting with Mr. X" date/time
20
Connect smartphone to vehicle navigation system
21
Automatically determine upcoming appointment
22
Estimate distance to address of Mr. X
23
Estimate traveling time
24
Prompt warning that appointment cannot be kept
25
Offer to establish telephone connection with Mr. X
26

FIG. 3



Connect wirelessly PDA to vehicle navigation system
30
Synchronize automatically address book and and scheduler module
31
Detect automatically appointment stored in PDA
32
Prompt: Calculate optimum route to all locations of appointments?
33
Calculate optimum route by re-ordering appointments
34
35
Prompt: optimal route guidance ?
yes
Prompt: phone call?
36
no
Calculate route for appointments in temporal order
37

FIG. 4

(54) **Title**: CALENDAR SHARING FOR THE VEHICLE ENVIRONMENT USING A CONNECTED CELL PHONE

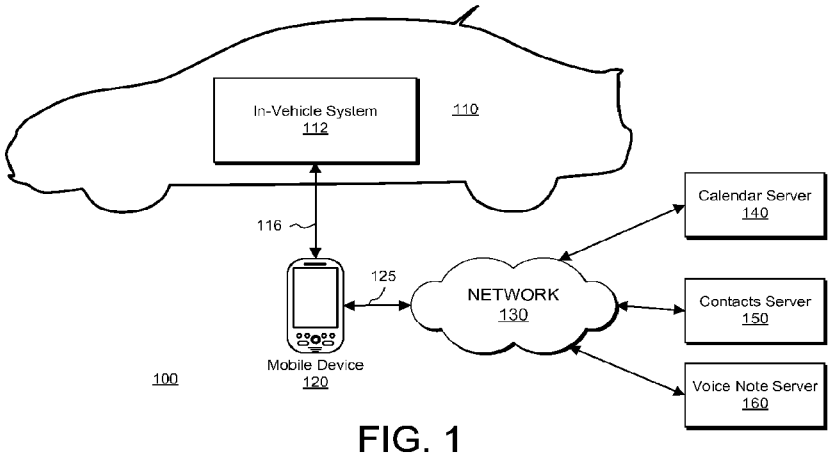

FIG. 1

(57) **Abstract**: A mobile device communicates with an in- vehicle system to provide a network-based calendar and related features for viewing and/or editing within a vehicle. The mobile device executes a specialized application that retrieves calendar data from one or more calendar sources in a native calendar format, and converts the calendar data to a customized vehicle format designed specifically for convenient transfer and viewing within the vehicle. The user may record spoken voice notes that can be processed to automatically create new calendar entries. An alert feature schedules visual and/or audio alerts to notify the user in advance of scheduled calendar events. When a scheduled calendar event time is reached, the in- vehicle system may automatically place a call to an event invitee or generating a route to an event destination.

WO 2012/102879 A1

CALENDAR SHARING FOR THE VEHICLE ENVIRONMENT USING A CONNECTED CELL PHONE

BACKGROUND OF THE INVENTION

1. Field of the Invention

[0001] The present invention relates to in-vehicle electronics and, more specifically, to displaying calendar information within a vehicle.

2. Description of the Related Arts

[0002] The personal electronic calendar has been represented in many forms on many devices, and its use has become increasingly widespread. The prevalence of internet connected devices such as mobile phones and connected computers has allowed for "cloud-based" calendars to become practical. In this architecture, various devices can access a cloud-based calendar and synchronize calendar data. Thus, the user can easily view, add, and edit calendar information from any connected node of the network. If a calendar item is changed at one node, the rest of the connected nodes will automatically update so that the calendar always provides current information.

[0003] Despite the widespread use of electronic calendars, current calendar systems do not provide any convenient mechanism for accessing the electronic calendar from within an automotive vehicle environment. While drivers may bring their portable devices into the car, usability problems and new safety laws make this usage undesirable. Particularly, in the automotive environment, the driver's primary focus should be on piloting the vehicle. The small screen of mobile devices and the attention required to operate them prevents a driver from being able to drive safely while accessing calendar data.

[0004] Some modern vehicles come equipped with dashboard computer systems that can provide direct access to electronic calendars. However, such systems require that the vehicle have internet connectivity, which is usually available only at considerable extra cost to the vehicle owner. Furthermore, even when an in-vehicle system is equipped with internet connectivity, current systems only provide access to calendar information that is intended for viewing on a computer screen or mobile

device, rather than on an in-vehicle display. Such conventional calendar interfaces typically include complicated displays and interfaces that require substantial attention from the user to view and control. Such systems are therefore impractical for use by the driver whose attention must instead be occupied with safely navigating the vehicle.

SUMMARY OF THE INVENTION

A mobile device provides an electronic calendar for display within a vehicle. The mobile device receives calendar data from a calendar source (e.g., a network-based calendar server or a synchronized calendar stored internally by the mobile device) that stores the calendar data in a native calendar format specific to the calendar source. The mobile device converts the calendar data from the native calendar format to a vehicle calendar format suitable for transfer to an in-vehicle system. The mobile device then transfers the converted calendar data to an in-vehicle system using a short-range communication protocol.

In one embodiment, the mobile device receives the calendar data from two different calendar sources (e.g., two different network-based calendar servers or an internal calendar and a network-based calendar server), each storing the calendar data in different native formats. The mobile device aggregates the calendar data from the two different calendar sources into the vehicle format, and processes the calendar data to remove duplicate entries. Furthermore, the mobile device may time scale the received calendar data and/or apply filters to the calendar data to remove data types not suitable for use within the vehicle.

[0005] In one embodiment, the mobile device receives voice notes from the in-vehicle system comprising an audio recording of spoken words. The mobile device obtains dictated speech corresponding to the spoken words and processes the dictated speech to add or update calendar entries. Additionally, the mobile device may store the audio recordings for later retrieval.

[0006] An in-vehicle system displays and manages the electronic calendar within a vehicle environment. The in-vehicle system receives calendar data from the mobile device via the short-range communication protocol. The calendar data comprises a plurality of calendar entries. The in-vehicle system generates a user interface for displaying the calendar data. In one embodiment, the user interface comprises an events window for displaying a representation of scheduled calendar

events and a notifications window for displaying a representation of calendar notifications. The in-vehicle system then outputs the user interface to an in-vehicle display.

[0007] In one embodiment, the in-vehicle system correlates the calendar entries with contacts entries and/or a points-of-interest database to find potential matches. When a scheduled event time for a calendar entry is reached, the in-vehicle system may automatically take an action based on the potential matches. For example, the in-vehicle system may automatically place a call to a contact whose name at least partially matches the name of an event invitee for the calendar event. Alternatively, the in-vehicle system may generate a route to an address of a contact or a point-of-interest that at least partially matches the event location for the scheduled calendar event.

[0008] In one embodiment, the in-vehicle system processes the calendar data and stores alerts related to scheduled calendar events. When a scheduled alert time is reached, the in-vehicle system may trigger a visual and/or audio alert. A snooze function allows the user to reschedule the alert for a later time.

[0009] The features and advantages described in the specification are not all inclusive and, in particular, many additional features and advantages will be apparent to one of ordinary skill in the art in view of the drawings, specification, and claims. Moreover, it should be noted that the language used in the specification has been principally selected for readability and instructional purposes, and may not have been selected to delineate or circumscribe the inventive subject matter.

BRIEF DESCRIPTION OF THE DRAWINGS

[0010] The teachings of the embodiments of the present invention can be readily understood by considering the following detailed description in conjunction with the accompanying drawings.

[0011] Figure (FIG.) 1 illustrates a vehicle environment in accordance with an embodiment of the invention.

[0012] Figure 2 is a block diagram illustrating a mobile device in accordance with an embodiment of the invention.

[0013] Figure 3 is a block diagram illustrating an in-vehicle system in accordance with an embodiment of the invention.

[0014] Figure 4 is a flowchart illustrating a process for providing calendar data to a vehicle in accordance with an embodiment of the invention.

[0015] Figure 5 is a flowchart illustrating a process for converting calendar information in accordance with an embodiment of the invention.

[0016] Figure 6 illustrates a user interface screen for displaying calendar entries in a vehicle in accordance with an embodiment of the invention.

[0017] Figure 7A illustrates a first set of user interface screens for displaying calendar entries in a vehicle in accordance with an embodiment of the invention.

[0018] Figure 7B illustrates a second set of user interface screens for displaying calendar entries in a vehicle in accordance with an embodiment of the invention.

[0019] Figure 8 is a flowchart illustrating a process for utilizing voice notes in accordance with an embodiment of the invention.

[0020] Figure 9 is a flowchart illustrating a process for taking actions based on calendar entries in accordance with an embodiment of the invention.

[0021] Figure 10 illustrates user interface screens for taking actions based on calendar entries in accordance with an embodiment of the invention.

[0022] Figure 11 is a flowchart illustrating a process for managing calendar alerts in accordance with an embodiment of the invention.

[0023] Figure 12A illustrates a first user interface screen for managing a calendar alert in a vehicle in accordance with an embodiment of the invention.

[0024] Figure 12B illustrates a second user interface screen for managing a calendar alert in a vehicle in accordance with an embodiment of the invention.

DETAILED DESCRIPTION OF EMBODIMENTS

[0025] Embodiments are now described with reference to the figures where like reference numbers indicate identical or functionally similar elements. Also in the figures, the left most digit of each reference number corresponds to the figure in which the reference number is first used.

[0026] Reference in the specification to "one embodiment" or to "an embodiment" means that a particular feature, structure, or characteristic described in connection with the embodiments is included in at least one embodiment. The appearances of the phrase "in one embodiment" or "an embodiment" in various places in the specification are not necessarily all referring to the same embodiment.

[0027] Some portions of the detailed description that follows are presented in terms of algorithms and symbolic representations of operations on data bits within a computer memory. These algorithmic descriptions and representations are the means used by those skilled in the data processing arts to most effectively convey the substance of their work to others skilled in the art. An algorithm is here, and generally, conceived to be a self-consistent sequence of steps (instructions) leading to a desired result. The steps are those requiring physical manipulations of physical quantities. Usually, though not necessarily, these quantities take the form of electrical, magnetic or optical signals capable of being stored, transferred, combined, compared and otherwise manipulated. It is convenient at times, principally for reasons of common usage, to refer to these signals as bits, values, elements, symbols, characters, terms, numbers, or the like. Furthermore, it is also convenient at times, to refer to certain arrangements of steps requiring physical manipulations or transformation of physical quantities or representations of physical quantities as modules or code devices, without loss of generality.

[0028] However, all of these and similar terms are to be associated with the appropriate physical quantities and are merely convenient labels applied to these quantities. Unless specifically stated otherwise as apparent from the following discussion, it is appreciated that throughout the description, discussions utilizing terms such as "processing" or "computing" or "calculating" or "determining" or "displaying" or "determining" or the like, refer to the action and processes of a computer system, or similar electronic computing device (such as a specific computing machine), that manipulates and transforms data represented as physical (electronic) quantities within the computer system memories or registers or other such information storage, transmission or display devices.

[0029] Certain aspects of the embodiments include process steps and instructions described herein in the form of an algorithm. It should be noted that the process steps and instructions of the embodiments could be embodied in software, firmware or hardware, and when embodied in software, could be downloaded to reside on and be operated from different platforms used by a variety of operating systems. The embodiments can also be in a computer program product which can be executed on a computing system.

[0030] The embodiments also relates to an apparatus for performing the operations herein. This apparatus may be specially constructed for the purposes, e.g., a specific computer, or it may comprise a general-purpose computer selectively activated or reconfigured by a computer program stored in the computer. Such a computer program may be stored in a computer readable storage medium, such as, but is not limited to, any type of disk including floppy disks, optical disks, CD-ROMs, magnetic-optical disks, read-only memories (ROMs), random access memories (RAMs), EPROMs, EEPROMs, magnetic or optical cards, application specific integrated circuits (ASICs), or any type of media suitable for storing electronic instructions, and each coupled to a computer system bus. The memory/storage can be transitory or non-transitory. Memory can include any of the above and/or other devices that can store information/data/programs. Furthermore, the computers referred to in the specification may include a single processor or may be architectures employing multiple processor designs for increased computing capability.

[0031] The algorithms and displays presented herein are not inherently related to any particular computer or other apparatus. Various general-purpose systems may also be used with programs in accordance with the teachings herein, or it may prove convenient to construct more specialized apparatus to perform the method steps. The structure for a variety of these systems will appear from the description below. In addition, the embodiments are not described with reference to any particular programming language. It will be appreciated that a variety of programming languages may be used to implement the teachings of the embodiments as described herein, and any references below to specific languages are provided for disclosure of enablement and best mode.

[0032] In addition, the language used in the specification has been principally selected for readability and instructional purposes, and may not have been selected to delineate or circumscribe the inventive subject matter. Accordingly, the disclosure of the embodiments are intended to be illustrative, but not limiting, of the scope of the embodiments, which are set forth in the claims.

OVERVIEW

[0033] A system, method, and computer-readable storage medium is described for obtaining, managing, and displaying an electronic calendar within a vehicle and for carrying out various features related to the electronic calendar. An application

executing on a mobile device obtains calendar data pertaining to a user from one or more network-based calendar systems such as iCal, Google Calendar, Microsoft Outlook Calendar, and Yahoo Calendar. The application aggregates the calendar data and converts the calendar data to a vehicle format that is suitable for transfer and display within a vehicle. The mobile device then transfers the calendar information in the vehicle format to an in-vehicle display system. Unlike conventional calendar formats which are designed for viewing on computer screens or mobile device screens, the vehicle calendar format is designed specifically for viewing within a vehicle. Thus, the vehicle calendar format arranges the calendar information such that the user can view and/or edit calendar entries with minimal distraction. As a result, a driver can maintain focus on navigating the vehicle. Methods and example interfaces for processing and displaying calendar data within a vehicle are described in further detail below with respect to FIGS. 4-7.

[0034] Additional features related to the electronic calendar are also provided to improve the user's experience in the vehicle. First, the calendar system includes a "voice note" feature that allows the user to record a spoken message. The spoken message is then processed to extract particular words or phrases, and where appropriate, create a new calendar entry or address book entry based on the recorded voice note. This feature allows the user to easily add or modify calendar or address book entries with minimal distraction while navigating the vehicle. The voice note feature is described in further detail below with respect to FIG. 8.

[0035] Second, the system may be configured to process calendar data and take a particular action based on the content. For example, the system may process calendar entries and automatically configure a hands free telephone unit to place a call to an invitee of a scheduled calendar event, or configure a navigation unit to generate a route to an address of the scheduled calendar event. This relieves the user of having to manually perform such tasks, and thus further minimizes distractions to the driver. The calendar action feature is described in further detail below with respect to FIGS. 9-10.

[0036] Third, the system may be configured to process alerts associated with scheduled calendar events in order to notify users of a calendar event prior to, or concurrently with, its scheduled time. Alerts are displayed in a manner that is suitable for viewing and managing within a vehicle with minimal distraction to the driver.

The calendar alert feature is described in further detail below with respect to FIGS. 11-12.

SYSTEM ARCHITECTURE

[0037] FIG. 1 illustrates an exemplary operating environment 100 for various embodiments. The operating environment 100 includes a vehicle 110 having an in-vehicle system 112, a mobile device 120, a short-range communication link 116 for communication between the in-vehicle system 112 and the mobile device 120, a network 130, a wireless networking communication link 125 between the mobile device 120 and the network 130, and various servers (e.g., a calendar server 140, a contacts server 150, and a voice note server 160) connected to the network 120. The communication links 116, 125 described herein can directly or indirectly connect these devices.

[0038] The in-vehicle system 112 comprises a computing device that may be part of the vehicle's telematics system. An embodiment of the in-vehicle system 112 is described in further detail below with reference to FIG. 3. In general, the in-vehicle system 112 is configured to display information to the user via a display screen and accept inputs from the user to control various functions. The in-vehicle system 112 includes short-range communication technology to allow the in-vehicle system 112 to exchange information with other devices, such as the mobile device 120. This allows, for example, the in-vehicle system 112 to obtain calendar information from the mobile device, display the calendar information on the in-vehicle system 112, and provide controls that enable the user to manage various calendar features.

[0039] The short-range communication link 116 between the in-vehicle system 112 and the mobile device 120 may use a wireless short-range communication technology, such as, for example, Bluetooth® technology or WiFi technology, or a wired short-range communication technology such as, for example, Universal Serial Bus (USB). The in-vehicle system 112 and mobile device 120 may connect, or pair, with each other via the short-range communication link 116.

[0040] Examples of a mobile device 120 include a cellular phone, personal device assistant (PDA), smart phone, pocket personal computer (PC), laptop computer, smart watch, or other transportable devices having a processor and communications ability. An embodiment of the mobile device 120 is described in further detail below with reference to FIG. 2. In general, the mobile device 120 is

configured to execute one or more software applications that enable the mobile device 120 to communicate with the in-vehicle system 112 and carry out a number of different features and interactions that will be described in further detail below. For example, the mobile device 120 can manage and transfer calendar entries, calendar alerts, contacts data, and voice notes.

[0041] The mobile device 120 can also communicate over a network 130 with various servers such as a calendar server 140, a contacts server 150, and a voice note server 160. The network 130 may include a wireless communication network, for example, a cellular telephony network, as well as one or more other networks, such as the Internet, a public-switched telephone network (PSTN), a packet-switching network, a frame-relay network, a fiber-optic network, a Wifi network, a WiMAX network, a CDMA network, a GSM network, a 3G network, a 4G network, or other wireless networks.

[0042] The servers 140, 150, 160 comprise computing devices that communicate over the network 130 to carry out various functions and/or to store data accessible to other devices on the network 130. The calendar server 140 can comprise one or more network-based calendar servers such as, for example, an iCal Server, a Google Calendar Server, a Microsoft Exchange Server, or a Yahoo Calendar Server. The calendar server 140 stores, for a particular user, a set of calendar entries and provides calendar data pertaining to these entries to requesting devices on the network 130. Each calendar entry corresponds to a scheduled event (e.g., a meeting, an appointment, a reminder, etc.) schedule for a particular event time. Various other metadata may also be included with each calendar entry such as, for example, event title, event invitees, event description, event location, event end time, etc. Furthermore, one or more alerts may be associated with a calendar entry in order to remind the user of the event prior to, or concurrently with, the scheduled event time. Calendar entries may be added, modified, or removed by a user from any device on the network 130 that has direct or indirect access to the calendar server 140.

[0043] The contacts server 150 stores, for a particular user, a set of contacts entries and provides contacts data pertaining to these entries to requesting devices on the network 130. Each contact entry includes various metadata associated with persons or business such as, for example, name, address, phone number, email address, website, etc. The contacts server 150 may be part of the calendar server 140.

For example, many network-based calendar servers such as iCal Server, Google Calendar Server, Microsoft Exchange Server, and Yahoo Calendar Server include an address book feature that may act as the contacts server 150. Alternatively, the contacts server 150 may be entirely separate from the calendar server 140.

[0044] The voice note server 160 stores and processes voice notes, i.e., a spoken memo recorded by a user. For example, the voice note server 160 may perform speech-to-text conversion on voice notes received from the mobile device 120 and return dictated text to the mobile device 120. Furthermore, the voice note server 160 may store the recorded audio files and/or deliver the audio files to the user via an email or text messaging service. Furthermore, the voice note server 160 may communicate with the calendar server 140 and the contacts server 150 to associate audio files with calendar or contacts entries.

[0045] Although only one of each type of server 140, 150, 160 is illustrated for clarity, in practice, multiple servers of each type may be present on the network 130. Furthermore, two or more of the servers 140, 150, 160 may be combined in a single computing device.

[0046] In operation, the in-vehicle system 112 and mobile device 120 communicate with each other via the short-range communication link 116. The mobile device 120 stores information received from the in-vehicle system 112, and/or may provide the information to a remote processing device, such as, for example, the calendar server 140, the contacts server 150, or the voice note server 160 via the network 130. Similarly, the mobile device 120 may store information from the remote servers 140, 150, 160, and/or may provide the information to the in-vehicle system 112. The in-vehicle system 112 thus leverages the mobile device 120 to indirectly communicate via the network 130, even if the in-vehicle system 112 is not equipped to access the network 130 directly.

Mobile Device

[0047] FIG. 2 is a block diagram illustrating an embodiment of the mobile device 120. In one embodiment, the mobile device 120 comprises a memory 210 and a processor 220. Other conventional components of the mobile device 120 such as a display, input keys, microphone, and speakers are omitted for clarity of description.

[0048] The processor 220 processes data and may comprise various computing architectures. Although only a single processor 220 is shown in FIG. 2, multiple

processors may be included. The memory 210 may be a dynamic random access memory (DRAM) device, a static random access memory (SRAM) device, Flash RAM (non-volatile storage), combinations of the above, or some other memory device known in the art. The memory 210 may be used for data storage and for storing various applications that can execute on the mobile device 120. For example, the memory 210 may store iPhone™ or Android™-based applications that are available for download to the mobile device 120 via a wired or wireless system. In general, the applications include computer-executable program instructions for carrying out various functions. In operation, the instructions are loaded from the memory 210 and executed by the processor 220. In alternative embodiments, the applications can part of any of a variety of software paradigms, e.g., software as a service (SaaS), cloud computing.

[0049] In one embodiment, the memory 210 stores a vehicle connect (VC) application 212. The VC application 212 facilitates communication between the mobile device 120 and the in-vehicle system 112 and formats data for transfer to the in-vehicle system 112. The VC application 212 can communicate with the in-vehicle system 112 according to either a push or pull mechanism. Data may communicated between the mobile device 120 and the in-vehicle system 112 using, for example, a PBAP Bluetooth method or using OBEX Bluetooth protocols. The VC application 212 furthermore communicates with the various internet servers (e.g., servers 140, 150, 160) to aggregate and synchronize calendar entries and alerts, contact information, and/or voice note information.

[0050] In addition to the handling transfer of data, the VC application 212 may also manage the connection timings for access to both the network 130 and the in-vehicle system 112. For example, the VC application 212 may control the refresh timing for updating calendar and/or contacts information. In one embodiment, the VC application 212 may obtain data updates from the servers 140, 150, 160 and store them to the mobile device 120 even when the application 212 is not connected to the vehicle 110. Then, the VC application 212 can transfer these pre-acquired updates to the in-vehicle system 112 at a later time. This would allow, for example, the VC application 212 to acquire the updates whenever it is within coverage range of the network 130 (even if the mobile device 120 is not connected to the vehicle 110), and transfer the updates to the in-vehicle system 112 at a later time. When receiving data

from the servers 140, 150, 160, the VC application 212 can apply filters to the data and cache the data prior to sending the information to the in-vehicle system 112. In this manner, collection and processing tasks performed by the VC application 212 may alleviate the processing requirements of the in-vehicle system 112. Furthermore, the in-vehicle system 112 need not have any direct access to the network 130.

[0051] The VC application 212 may also process data received from in-vehicle system 112. For example, the VC application 212 may receive changes to calendar or contacts data made by a user using the in-vehicle system 112, or may receive voice notes from the in-vehicle system 112 for processing. The VC application 212 compares and processes calendar and contacts modifications in order to provide calendar updates back to the calendar server 140 and provide contacts updates to the contacts server 150.

[0052] In one embodiment, the VC application 212 comprises a calendar module 214, a contacts module 216, and a voice note module 218. The calendar module 214 communicates with the calendar server 140 to obtain calendar data and transmit calendar updates back to the server 140. The calendar module 214 communicates using an Application Programming Interface (API) specific to the calendar server 140 (e.g., a CalDAV protocol or an MS Exchange protocol). The calendar module 214 may also include a calendar application that executes on the mobile device, which may include its own native calendar format. The calendar module 214 processes the calendar data to aggregate the data and convert the data from its native format specific to the calendar server 140 to a vehicle format suitable for transfer and display in the vehicle. Furthermore, the calendar module 214 communicates with the in-vehicle system 112 to transmit the formatted calendar data and receive updates.

[0053] The contacts module 216 communicates with the contacts server 150 via an API to obtain contacts data from the contacts server 150. The contacts module 216 processes and/or aggregates contacts data to convert it from its native format to a vehicle format and transmit the contacts data to the vehicle. The contacts module 216 may also receive updates from the in-vehicle system 112 and relay these updates to the contacts server 150.

[0054] The voice note module 218 receives recorded voice notes from the in-vehicle system 112 and transmits them to the voice note server 160. The voice note

module 218 also receives dictated text from the voice note server 160 corresponding to the processed audio. The voice note module 218 may further process the dictated text to extract keywords or phrases and use these to create or modify calendar or contacts entries. The voice note feature is discussed in further detail below with respect to FIG. 8.

In-Vehicle System

[0055] FIG. 3 is a block diagram illustrating an embodiment of the in-vehicle system 112. In one embodiment, the in-vehicle system 112 comprises a memory 310, a processor 340, a navigation unit 350, and a telephone unit 360. Other conventional components of the in-vehicle system 112 such as a display, clock, input keys, microphone, speakers, and short-range communication unit are omitted for clarity of description.

[0056] The memory 310 stores a mobile connect (MC) application 320. The MC application 320 interfaces with the VC application 212 on the mobile device 120 using the short range communication link 116. The MC application 320 can push or pull data exchanged with the mobile device 120. Generally, data received by the MC application 212 has already been processed on the mobile device 120, thus reducing the amount of processing performed by the in-vehicle system 112. Upon receiving data, the MC application 212 stores the data (e.g., in an ASCII XML file) and accesses it as needed. The MC application 320 may receive refresh requests from a user and transmit these requests to the mobile device 120. Furthermore, the MC application 320 may receive data inputs from the user (e.g., to add, delete, or modify a calendar entry, a contacts entry, or a voice note), and transfer these updates back to the mobile device 120.

[0057] The MC application 320 generates a user interface that enables interaction between the user and the in-vehicle system 112. For example, the user interface may provide various displays, menus, controls, and other conventional user interface features. In one embodiment, the user interface displays data in a predefined format. In this embodiment, the display format is not entirely determined by the data received, but rather by a "skin" associated with the user interface. If the skin changes, the appearance changes. For example, a skin may specify display attributes such as font, font color, font size, background color, etc. Furthermore, various skins may

cause different types of data to be included or excluded from display, or displayed in a different format.

[0058] The MC application 320 interacts with various databases including a calendar database 332, a contacts database 334, and an alert database 336. The calendar database 332 and contacts database 334 store calendar entries and contacts entries respectively received by the in-vehicle system 112 from the mobile device 120, or inputted or modified by the user using the in-vehicle system 112. In one embodiment, calendar and contacts entries are stored according to a data schema (e.g., an ASCII XML format) that includes various fields related to different aspects of the event. For example, a calendar data schema for each calendar entry may include the following fields: event date, event start time, event stop time, event title, event location, event description, event people, and event notification time. A contacts data schema for each contacts entry may include fields corresponding to contact name, contact address, contact phone number, contact fax number, and contact email address. One or more of the metadata fields may be blank if the data is unknown or inapplicable for the particular entry. For example, some calendar entries may omit an "event location" if the entry merely corresponds to a reminder rather than an appointment or meeting (e.g., Mom's birthday).

[0059] The MC application 320 may process calendar entries to create and manage alerts based on the event notification time and store the alerts to the alert database 336. Using the alert database 336, the MC application 320 may monitor the current time and trigger an alert when the current time matches an alert time for a scheduled alert. The notification time may be prior to the event time (e.g., to provide a reminder), or may correlate directly to the event time of a calendar entry.

[0060] In one embodiment, the MC application 320 processes entries in the calendar database 332 and contacts database 334 to compare and cross correlate entries. For example, the MC application 320 may locate matching metadata between calendar and contacts entries. This would allow, for example, the MC application 320 to automatically determine a phone number or address of an event invitee (e.g., by finding a match between the event person field of a calendar entry and the contact name field of a contacts entry). The MC application 320 could then take an action based on this match, such as placing a call to the invitee using a hands-free telephone unit 360 or generating a route to the address using the navigation unit 350. The MC

application 320 may additional correlate calendar or contacts entries with points of interest (POIs) in a POI database 352 that may be included as part of the in-vehicle navigation unit 350. A processing for generating actions based on calendar events is described in more detail below with respect to FIGs. 9-10.

OPERATION AND USE

In-Vehicle Electronic Calendar

[0061] FIG. 4 illustrates an embodiment of a process for providing an electronic calendar for use within a vehicle environment 100. Various steps of the process are illustrated as being performed by the calendar server 140, the mobile device 120, and the in-vehicle system 112. In alternative embodiments, steps may be performed by different entities, or more than one entity may collectively carry out the described step.

[0062] Transfer of the calendar data to the in-vehicle system 112 is generally initiated when the mobile device 120 detects 402 a refresh trigger event. The refresh trigger event may be a manual refresh request initiated by a user, or the refresh trigger event may occur automatically when specified refresh conditions are met. For example, in one embodiment, the mobile device 120 is configured to provide a calendar refresh to the in-vehicle system 112 after a fixed amount of time has elapsed since the last refresh (e.g., every 10 minutes). In another embodiment, the refresh trigger event comprises receipt of a signal from the in-vehicle system 112 initiated by, for example, ignition of the vehicle 110 or another detectable event.

[0063] Upon detecting the refresh trigger event, the mobile device 120 requests 404 calendar information from the calendar server 140 according to a specified date range using the appropriate calendar API. Alternatively, the mobile device 120 may request the calendar information from a different calendar source, or load the information from an internally stored calendar. The request may include requests to multiple calendar servers 140 utilizing different calendar systems (e.g., iCal, MS Outlook Calendar, Google Calendar, Yahoo Calendar, etc.). The specified date range is typically substantially smaller the full range of dates stored by the calendar server 140. For example, the calendar server 140 may store calendar entries for many years before and after the current date, but the mobile device 120 may request calendar data for only the next 30 days. The requested date range may comprise a greater timeframe than the timeframe that the in-vehicle system 112 is configured to display.

This would allow, for example, the mobile device 120 and/or the in-vehicle system 112 to cache the extra data until it is needed. Furthermore, this allows the in-vehicle system 112 to display "upcoming events" to the user that occur outside the standard date range of the in-vehicle calendar display, or to schedule an alert in advance of the actual event.

[0064] The calendar server 140 receives 406 the request and provides 408 the requested calendar information to the mobile device 120. The mobile device 120 receives 410 the requested calendar information from the server 140, and converts 412 the received calendar information from the calendar server format to the vehicle calendar format. A process for converting 412 the calendar information to the vehicle format is described in further detail below with reference to FIG. 5. The converted calendar information is then transferred 414 to the in-vehicle system 112. The in-vehicle system 112 receives 416 the calendar information and updates 418 the in-vehicle display accordingly.

[0065] FIG. 5 illustrates an embodiment of a process performed by the mobile device 120 (e.g., using the calendar module 214 of the VC application 212) for converting 412 the calendar information from the calendar server format to the vehicle format (or from an internally stored calendar format to the vehicle format). The mobile device 120 identifies 502 the native calendar format(s) of the received calendar information. For example, the mobile device 120 may receive calendar information in one or more of a CalDAV format, an MS Exchange format, a Google calendar format, or another standard calendar format, or may use a format native to a calendar application that executes on the mobile device 120. The mobile device 120 then applies 504 conversion rules to the calendar information received in each of the native formats to convert all the calendar data to a common format (e.g., an ASCII XML format) such that calendar data from different calendar systems can be compared and aggregated. The mobile device 120 then aggregates 506 the calendar data to identify and remove duplicate entries. Duplicate entries may be detected by comparing metadata fields and finding matches. For example, duplicate entries may be detected if two entries have the same event start time and the same event title, event people, or event location. The mobile device 120 modifies 508 the calendar data according to predefined time frame rules. For example, the mobile device 120 may receive calendar data covering a first time frame (e.g., 30 days), but scale the

data to cover only a second shorter time frame (e.g., 7 days). The mobile device 120 then processes and filters 510 the data for transfer to the in-vehicle system 112. Processing and filtering may include removing certain data types that are not suitable for display in the vehicle such as, for example, hyperlinks, unusually characters, and attachment artifacts. This step may also include processing the data into a uniform data type and container size. For example, in one embodiment, calendar entries are converted to an ASCII format for transfer to the in-vehicle system 112. In one embodiment, processing and filtering may also include characterizing calendar entries as either "events" or "notifications." Events may include, for example, meetings, appointments, or activities. Typically, calendar entries are characterized as an event if the entry specifies a set time period (e.g., between a time *x* and a time *y*, where time *x* is before time *y*). In contrast, an entry may be characterized as a notification if the entry does not specify a non-zero time period. For example, the calendar entry may indicate a start time and end time that are the same, or may not indicate any start time or end time. These types of entries may be created, for example, for all day events or as reminders about birthdays, holidays, items on a to-do list, etc. that do not specify a specific non-zero time window. In alternative embodiments, the characterization of entries as "events" or "notifications" may be performed by either the mobile device 120 or the in-vehicle system 112. In other alternative embodiments, different or additional criteria may be used for characterizing calendar entries as notifications or events.

[0066] FIG. 6 is an example of a calendar interface screen 600 for displaying calendar information within a vehicle. In the illustrated embodiment, the calendar interface screen 600 includes a notifications window 605 and an events window 610. The events window 610 comprises an ordered lists of upcoming calendar events (e.g., event N, event N+1, event N+2, etc), typically listed chronologically. The notifications window 605 provides a list of notifications. Notifications and events typically remain on display until cleared by the user, or may be configured to clear automatically after a specified time period. In one embodiment, both the notifications window 605 and the events window 610 include a "more" function that, when selected, cause the display to show additional events and /or notifications beyond those presently displayed.

[0067] FIG. 7A-B illustrate specific examples of a calendar user interface and operation of the "more" function described above. FIG. 7A illustrates a user interface screen 702 showing a set of notifications and a set of events. The "..." below the list of events indicates that there are more events for the day following the events presently appearing in the events window. If the user selects the "more" function (designated by "..."), the display is updated to show the user interface screen 704. Interface screen 704 shows the additional events for the day (e.g., 4:30 PM Follow up Call, 7:30 PM Dinner with wife). Furthermore, the "..." above the list of events in interface screen 704 indicates that there are more events for the day prior to the events appearing in the events window. If the user selects the more function in user interface screen 704, the display returns to user interface screen 702.

[0068] FIG. 7B illustrates a user interface screen 706 showing another set of notifications and a set of events. The "..." below the list of notifications indicates that there are more notifications for the day following than those presently appearing in the events window. If the user selects the "more" function (designated by "..."), the display is updated to show user interface screen 708. Interface screen 708 shows the additional notifications for the day (e.g., Donna's Birthday). Furthermore, the "..." above the list of notifications in interface screen 708 indicates that there are additional notifications for the day prior to those appearing in the notifications window. If the user selects the more function in user interface screen 708, the display returns to user interface screen 706.

Voice Note Function

[0069] In one embodiment, a voice note feature allows a user to record a voice memo from within the vehicle 110. For example, the user may want to set a reminder for a newly scheduled appointment, document a new phone number or address, or record other important information for later retrieval. Beneficially, the driver can use the voice note function with minimal distraction and can therefore maintain his focus on navigating the vehicle.

[0070] FIG. 8 illustrates an exemplary process for processing a voice note in the vehicle environment. Various steps of the process are illustrated as being performed by the voice note server 160, the mobile device 120, and the in-vehicle system 112. In alternative embodiments, steps may be performed by different entities, or more than one entity may collectively carry out the described step.

[0071] The in-vehicle system 112 detects and records 802 audio corresponding to a spoken voice note. In one embodiment, the user selects a voice note feature on the in-vehicle system 112 by, for example, manually selecting a menu option or providing a predefined voice command. The in-vehicle system 112 then prompts the user to speak and records the audio. In some embodiments, the in-vehicle system 112 divides the prompts into multiple parts to provide additional clarity. For example, for a calendar voice note, the in-vehicle 112 system may separately prompt the user to provide the event time, the event people, the event title, etc. according to the various metadata fields used for calendar entries. For a contacts voice note, the in-vehicle system 112 may separately prompt the user for the contact name, the contact address, the contact phone number, the contact email address, etc. according to the various metadata fields used for contacts entries. In other embodiments, the in-vehicle system 112 does not provide any prompt, but instead automatically begins recording when it detects the user speaking. In one embodiment, rather than the in-vehicle system 112 providing specific prompts for different metadata fields, the user may speak predefined tag words in order to separate different fields of the entry. For example, the user may speak the prompt "time" prior to speaking the time of the event, so that the system recognizes that the subsequent speech is a time entry and correlate the speech to the appropriate metadata fields. In another mode of operation, a user can edit a current calendar or contacts entry. For example, the user may select the entry to edit using menus on the in-vehicle system 112, or may use predefined voice commands to identify an entry. The user may then edit various fields using further voice commands.

[0072] Once the voice note is recorded to the in-vehicle system 112, the in-vehicle system 112 transfers 804 the recorded audio to the mobile device 120. The mobile device 120 receives 806 the voice note recording and uploads 808 the voice note recording to the voice note server 160 for processing. The voice note server 160 receives 801 the voice note and performs 812 speech-to-text conversion to convert the audio recording to text. The speech-to-text conversion may be achieved using conventional dictation software. The voice note server 160 then delivers 814 the dictated text back to the mobile device 120. Optionally, the voice note server 160 may also deliver 816 the audio file to the user via various services such as, for example, Short Message Service (SMS) or email, or the voice note server 160 may

store the audio recording in association with a calendar entry or contacts entry of the user. Alternatively, the voice note server 160 may instead deliver a hyperlink to the user from which the audio file can be downloaded or streamed. This provides the user with the original sound file should the dictation not be available later on, or in case the dictation is not accurate.

[0073] The mobile device 120 receives the dictated text from the voice note server 160 and extracts 818 useful data from the dictated text. In this step, the mobile device 120 processes the dictated text to locate text relevant to a calendar entry and/or a contacts entry. For example, for a calendar voice note, the text may be searched for an event time, the participating parties, subject of the event, or other relevant fields. For a contacts voice note, the text may be searched for a contact name, a phone number, an address, or an email address, or other relevant fields. The data extraction can be simplified if the dictated text includes appropriate field tags separating the text into the various data fields.

[0074] The mobile device 120 then updates 820 the entries (e.g., calendar or contacts) according to the extracted text. These updates are then provided 822 to the vehicle in the manner described above. The in-vehicle system 112 receives 824 the updated calendar or contacts entries and updates 826 the display as appropriate.

[0075] The voice note feature thus allows a user to add or edit calendar or contacts entries within the vehicle 110 with little distraction. Furthermore, the feature maintains the original recorded speech and can provide to the user in case the dictation is not satisfactory.

Calendar Actions

[0076] Calendar entries generally identify an event's invitees and/or a location of the event. Commonly, the user will want to contact the invitees shortly before the scheduled event time, find an address of an invitee where the event may be held, or find a different address of the event referenced in the calendar entry. Thus, in one embodiment, the in-vehicle system 112 includes a feature for performing an action based on calendar metadata at the scheduled time of the event or at the scheduled notification time prior to the event. For example, the in-vehicle system 112 can dial a phone number of an invitee using the hands-free telephone unit 360. Additionally, the in-vehicle system 112 can input the address to the navigation unit 350 in order to generate a route to the meeting location.

[0077] In order to determine the desired action, the in-vehicle system 112 performs a comparison and cross-linking of information between the calendar database 332 and the contacts database 334. Optionally, the in-vehicle system 112 may also correlate calendar and contacts data with POIs stored in the POI database 352 of the navigation unit 350. By automatically performing this cross-correlation of data, the user is relieved of manually performing this task and can therefore better focus on safely driving the vehicle.

[0078] FIG. 9 illustrates one embodiment of a process performed by the in-vehicle system 112 (e.g., using the MC application 320) for generating an action based on a calendar entry. The in-vehicle system 112 reads 902 the calendar data for a calendar entry. The in-vehicle system 112 then searches 904 the contacts database 334 and the POI database for possible matches to terms in the calendar entry. Matching weights are then assigned 906 to the matches based on the strength of the match. Various types of matching and ranking metrics may be used. For example, in one embodiment, a fuzzy search method is used that applies weights based on a similarity between text fields. Then, the matching metric is compared to a threshold, and entries above the threshold are accepted as matches.

[0079] The in-vehicle system 112 prompts 908 the user to select to call a contact or route to a destination. If the user selects 910 to call a contact, the in-vehicle system 112 displays 912 a list of potential contact matches ordered according to the matching weights (e.g., beginning with the strongest match). The user may then select a contact to call, and the telephone system 360 places the call 914 to the selected contact. In one embodiment, the list of matches may be limited those exceeding a minimum matching weight. Furthermore, if only one contact exceeds the minimum matching weight, the in-vehicle system 112 may automatically call the contact without first displaying the list.

[0080] Alternatively, if the user selects 916 to generate a route, the in-vehicle system display 918 a list of potential location matches ordered according to the matching weights (e.g., beginning with the strongest match). The location matches may either be an address associated with a matching contact from the contacts database 334 or a POI (or address of a POI) from the POI database 352. The user may then select an address or POI, and the navigation unit 350 generates 920 a route to the selected destination. In one embodiment, the list of matches may be limited

those exceeding a minimum matching weight. Furthermore, if only one destination exceeds the minimum matching weight, the in-vehicle system 112 may automatically configure the navigation unit 350 to generate a route to the destination without first displaying the list.

[0081] In one embodiment, steps 902-908 are pre-processing steps that occur in advance of the scheduled event time. For example, steps 902-908 may be performed whenever calendar updates are received from the mobile device 120. Then steps 910-920 occur when a scheduled event time is reached, or a scheduled notification time prior to the event time. Alternatively, the in-vehicle system 112 may perform all steps (including steps 902-908) for each calendar entry as the calendar events occur rather than pre-processing them in advance. In yet another embodiment, one or more of the steps 902-920 may instead be performed by the mobile device 120.

[0082] FIG. 10 illustrates examples of user interface screens that the in-vehicle system 112 may display while executing the process described above. Interface screen 1002 comprises a display screen associated with a calendar entry. This calendar entry may be displayed, for example, when the user selects to view the entry from a list of calendar entries, or the entry may be displayed automatically when the notification time or event time is reached. The interface screen 1002 includes a route option 1004 and a call option 1006. If the user selects the call option 1006, interface screen 1008 is displayed. Interface screen 1008 shows a list of contacts (e.g., name and phone number) matching at least a portion of the calendar data. Here, items (1) and (2) in interface screen 1008 are displayed in bold indicating that those contacts are exact matches with the calendar metadata. If the user instead selects the route option 1004, interface screen 1010 is displayed. Interface screen 1010 shows a list of destinations (e.g., name and addresses) matching at least a portion of the calendar data. Items (1) and (2) in interface screen 1010 are displayed in bold indicating that they are those destinations are exact matches with the calendar metadata.

Calendar Alerts

[0083] The in-vehicle system 112 may include a calendar alert feature that provides visual alerts and/or audible alarms to notify the user about calendar events. Alerts are useful, for example, to remind the user of an upcoming event or the need to perform some action (e.g., an item on a "to-do list"). In one embodiment, calendar alerts are generated by the in-vehicle system 112 from calendar data stored in the

vehicle's calendar database 332. Alternatively, the alerts may be generated by the mobile device 120 and transmitted to the vehicle system 112 as they occur. Unlike conventional calendar alerts which are designed for display on computer screens or mobile devices, the in-vehicle system 112 instead generates calendar alerts specifically designed for the vehicle environment. As a result, the alerts can be viewed and managed by the driver with minimal distraction.

[0084] FIG. 11 illustrates an embodiment of a process for providing in-vehicle alerts based on calendar entries. The in-vehicle system 112 processes 1102 calendar entries in the calendar database 332 to add alerts to the alert database 336. Each entry in the alert database 336 may include various metadata fields that include information related to the alert such as, for example, alert time, alert message, alert audio, and alert action. The alert time field indicates the time (e.g., day, hour, minute) at which the alert will be triggered. Alert times can be extracted from the notification time included with calendar entry. For example, an alert may be set to trigger 15 minutes before an event time, 30 minutes before an event time, 24 hours before an event time, or another fixed time period. Alternatively, the alert may be set to trigger at the same time as the event time for the calendar entry. The alert message field indicates a message that will be displayed when the alert is triggered. This may correspond to information in the related calendar entry, or may be an entirely different message. The alert audio field identifies an audible alert, if any, that will be played when the alert triggers. The user may choose the alert audio when setting the alert from one of a stored set of possible audible alerts, or a default alert audio may be used. The alert action field identifies an action to be taken when the alert is triggered such as, for example, dialing a particular phone number, generating a route to a particular destination, or loading a particular website.

[0085] The in-vehicle system 112 continuously monitors 1106 the current time to determine when the current time matches an alert time in one of the stored alerts in the alert database 336. If the current time does not match any alert time, the in-vehicle system 112 continues monitoring 1106. If an alert is triggered 1108 (i.e., when the current time matches an alert time), the in-vehicle system 112 displays 1110 a visual alert (which may include the alert message) and activates 1112 an audible alert (which may include the selected alert audio). When an alert is activated, the user may have the option of selecting a snooze function. The snooze function allows the

user to delay the alert for a predefined time period (i.e., a "snooze time"). The snooze time may be a default value (e.g., 10 minutes) or the in-vehicle system 112 may present the user the option of selecting a desired snooze time. If the snooze function is not activated at step 1114, the alert is completed and the alert is removed 1116 from the alert database 336. If the snooze function is active at step 1114, the display is updated 1118 to indicate that the alert has been "snoozed." The in-vehicle system 112 then updates 1120 the alert time for the snoozed alert according to the snooze time (e.g., by adding the snooze time to the previously configured alert time). The in-vehicle system 112 then continues to monitor 1106 alerts. This includes monitoring for when the current time matches the updated alert time of a snoozed alert.

[0086] FIGS. 12A and 12B illustrate examples of user interface screens displayed by the in-vehicle system 112 when carrying out the alert process described above. FIG. 12A illustrates an example of an interface screen 1204 that is displayed when an alert is triggered. A notification window 1202 includes information from the calendar entry including the time and subject of the scheduled event (in this example, "9:30AM: Meet with John to discuss new interface"). The notification window 1202 also indicates an estimated time until the scheduled event (in this example, less than 50 minutes). The notification window 1202 includes a snooze button 1206, that when selected, activates the snooze function described above. Furthermore, the notification window 1202 includes route button 1208 and call button 1210 that when selected, causes the in-vehicle system 112 to take the selected action as described above. Additionally, the notification window 1202 includes an icon 1212 and a Multiple Information Display (MID) bar 1204. In one embodiment, the notification window 1202 automatically pops up on the display screen when the alert is triggered. The icon 1212 can comprise any icon designated by the in-vehicle system 1212 or by the notification parameters. For example, in the case of an alert for a meeting, the icon 1212 could symbolize a meeting. In the case of an alert for a person's birthday, the icon 1212 could be a picture of the person. The MID bar 1204 typically displays information for various gauges such as odometer information and other related item. In one embodiment, the MID bar 1204 may be displayed on any of the display screens so that the information is continuously available to the user.

[0087] FIG. 12B illustrates an example of an interface screen that is displayed when the user selects the snooze function. A notification bar 1222 is displayed

indicating that a previous alert has been snoozed. In one embodiment, the notification bar 1222 could instead display the next scheduled event as a convenient reminder to the user. While the alert is snoozed, the user can view other screens in the "any screen" window 1224 (e.g., audio control screen, navigations screen, etc.) In one embodiment, when the snooze function is activated, the any screen window 1224 automatically returns to the screen previously displayed prior to activation of the alert. The MID bar 1226 is also displayed as described above.

[0088] The features described herein thus allow a user to view and manage an electronic calendar and related functions within a vehicle 110. Beneficially, by utilizing a mobile device 120 connected to the vehicle 110, the in-vehicle system 112 itself need not be equipped with direct internet connectivity, and much of the data processing can be performed by the VC application 212 on the mobile device 120 rather than by the in-vehicle system 112. This therefore reduces the cost of the vehicle 110 to buyers, and allows current vehicle owners to simply download an application to their mobile device 120 without having to install a new in-vehicle system 112. Furthermore, because the calendar data and related features are specifically formatted for use in a vehicle, a driver can safely view and manage the electronic calendar with minimal distraction.

[0089] Upon reading this disclosure, those of skill in the art will appreciate still additional alternative designs for calendar sharing in the vehicle environment using a connected phone, having the features described herein. Thus, while particular embodiments and applications of the present invention have been illustrated and described, it is to be understood that the invention is not limited to the precise construction and components disclosed herein and that various modifications, changes and variations which will be apparent to those skilled in the art may be made in the arrangement, operation and details of the method and apparatus of the present invention disclosed herein without departing from the spirit and scope of the invention as defined in the appended claims.

WHAT IS CLAIMED IS:

1. A method for providing an electronic calendar for display within a vehicle, the method comprising:

receiving, by a mobile device, first calendar data from a first calendar source the first calendar source storing the first calendar data in a first native calendar format specific to the first calendar source;

converting the first calendar data formatted in the first native calendar format to a vehicle calendar format suitable for transfer to an in-vehicle system; and

transferring, using a short-range communication protocol, the converted calendar data from the mobile device to the in-vehicle system.

2. The method of claim 1, further comprising:

receiving, by the mobile device, calendar data from a second calendar source the second calendar source storing the calendar data in a second native calendar format specific to the second calendar source, the second native calendar format different than the first native calendar format;

converting the second calendar data formatted in the second native calendar format to the vehicle calendar format suitable for transfer to the in-vehicle system; and

aggregating the first and second calendar data to remove duplicate calendar entries.

3. The method of claim 2, wherein the first calendar source comprises a first network-based calendar server and the second calendar source comprises a second network-based calendar server.

4. The method of claim 2, wherein the first calendar source comprises a first network-based calendar server and the second calendar source comprises a calendar application executable by the mobile device.

5. The method of claim 1, further comprising:

scaling the first calendar data to extract calendar entries falling within a predefined time range, the predefined time range smaller than a time range of the first calendar data received in the first native calendar format.

6. The method of claim 1, further comprising;

filtering the first calendar data to remove at least one of hyperlinks, special characters, and attachments from calendar entries.

7. The method of claim 1, further comprising:

receiving, from the in-vehicle system, updated calendar data reflecting a change to a calendar entry made using the in-vehicle system, the updated calendar data in the vehicle calendar format;

converting the updated calendar data in the vehicle calendar format to the first native calendar format; and

providing the updated calendar data to the first calendar source in the first native calendar format.

8. The method of claim 1, further comprising:

detecting a refresh trigger event; and

responsive to the detecting the refresh trigger event, requesting a refresh of the first calendar data from the first calendar source.

9. The method of claim 8, wherein detecting the refresh trigger event comprises receiving a signal from the in-vehicle system indicating vehicle ignition.

10. The method of claim 8, wherein detecting the refresh trigger event comprises detecting that a predefined time period has elapsed since a last refresh.

11. The method of claim 1, further comprising:

receiving a voice note from the in-vehicle system, the voice note comprising an audio recording of spoken words;

obtaining dictated text comprising a speech-to-text conversion of the spoken words;

creating a new calendar entry scheduling an event described in the dictated text; and

transferring the new calendar entry to the in-vehicle system.

12. The method of claim 10, wherein obtaining the dictated text comprises:

uploading the voice note to a voice note server for processing; and

receiving the dictated text from the voice note server.

13. A computer-readable storage medium storing instructions executable by a processor, the instructions when executed cause the processor to perform steps including:

receiving first calendar data from a first calendar source the first calendar source storing the first calendar data in a first native calendar format specific to the first calendar source;

converting the first calendar data formatted in the first native calendar format to a vehicle calendar format suitable for transfer to an in-vehicle system; and

transferring, using a short-range communication protocol, the converted calendar data from the mobile device to the in-vehicle system.

14. The computer-readable storage medium of claim 13, wherein the instruction when executed further cause the processor to perform steps including:

receiving calendar data from a second calendar source the second calendar source storing the calendar data in a second native calendar format specific to the second calendar source, the second native calendar format different than the first native calendar format;

converting the second calendar data formatted in the second native calendar format to the vehicle calendar format suitable for transfer to the in-vehicle system; and

aggregating the first and second calendar data to remove duplicate calendar entries.

15. A method for managing an electronic calendar within a vehicle environment, the method comprising:

receiving, by an in-vehicle computing system, calendar data comprising a plurality of calendar entries, the calendar data received from a mobile device via a short-range communication protocol;

generating a user interface for displaying the calendar data, the user interface comprising an events window for displaying a representation of scheduled calendar events, and a notifications window for displaying a representation of calendar notifications; and

outputting the user interface to a in-vehicle display.

16. The method of claim 15, wherein the calendar events comprise calendar entries having a non-zero time period and wherein the calendar notifications comprise calendar entries without a non-zero time period.

17. The method of claim 15, wherein the user interface further comprises:

a more events function that when selected by a user updates the user interface to display additional events scheduled before or after the scheduled calendar events in the events window;

18. The method of claim 15, wherein the user interface further comprises:

a more notifications function that when selected by a user updates the user interface to display additional notifications scheduled before or after the scheduled calendar notifications in the notifications window.

19. The method of claim 15, further comprising:

correlating the calendar entries with contacts entries to locate potential matches between metadata of the calendar entries and metadata of the contacts entries; and

responsive to reaching a scheduled time for a calendar entry, initiating an action using the potential matches.

20. The method of claim 19, wherein initiating the action comprises:

displaying a list of contact entries that include a contact name matching at least a portion of an event invitee in the calendar entry or a contact address matching at least a portion of the event location in the calendar entry.

21. The method of claim 20, further comprising:

responsive to a receiving a selection of one of the list of contact entries, placing a telephone call using a telephone number associated with the selected contact entry.

22. The method of claim 20, further comprising:

responsive to a receiving a selection of one of the list of contact entries, generating a navigation route to an address associated with the selected contact entry.

23. The method of claim 19, wherein initiating the action comprises:

displaying a list of point of interest that match at least a portion of an event location in the calendar entry; and

responsive to a receiving a selection of one of the list of points of interest, generating a navigation route to an address associated with the selected point of interest.

24. The method of claim 15, further comprising:

storing to an alert database one more scheduled calendar alerts, each calendar alert associated with a calendar entry and comprising a scheduled alert time;

determining when a current time matches the scheduled alert time;

responsive to the current time matching the scheduled alert time, triggering an alert.

25. The method of claim 24, wherein triggering the alert comprises at least one of:

displaying a visual message on the vehicle display; and

activating and audible alert.

26. The method of claim 24, further comprising:

receiving a snooze request for the triggered alert;

updating the alert time by adding a predefined snooze time to the alert time; and

storing the updated alert time to the alert database.

27. A system for managing an electronic calendar within a vehicle environment, the system comprising:

a short-range communication device for receiving calendar data comprising a plurality of calendar entries from a mobile device via a short-range communication protocol; and

an in-vehicle display for displaying a user interface showing the received calendar data, the user interface comprising an events window displaying a representation of scheduled calendar events, and a notifications window displaying a representation of calendar notifications.

FIG. 11

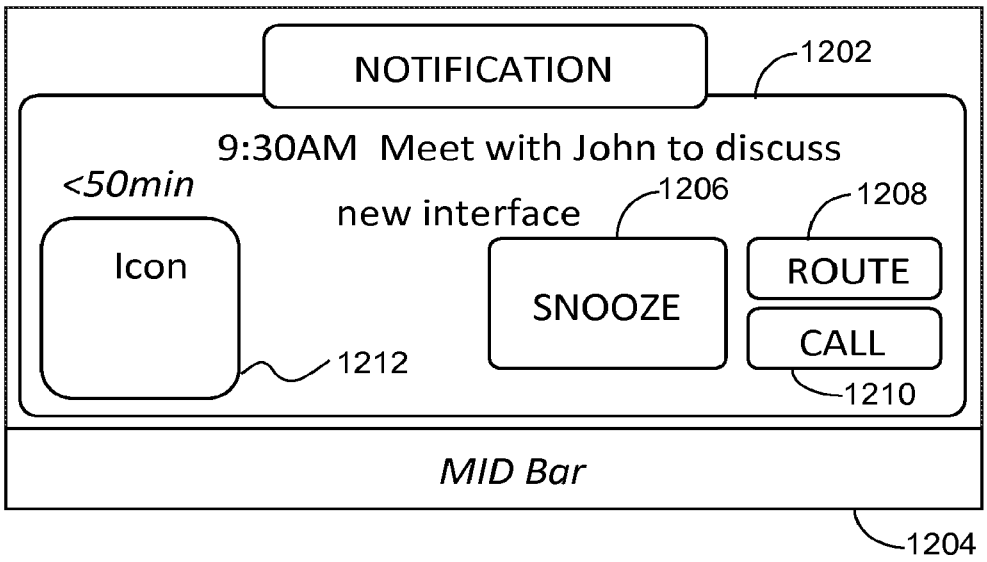

FIG. 12A

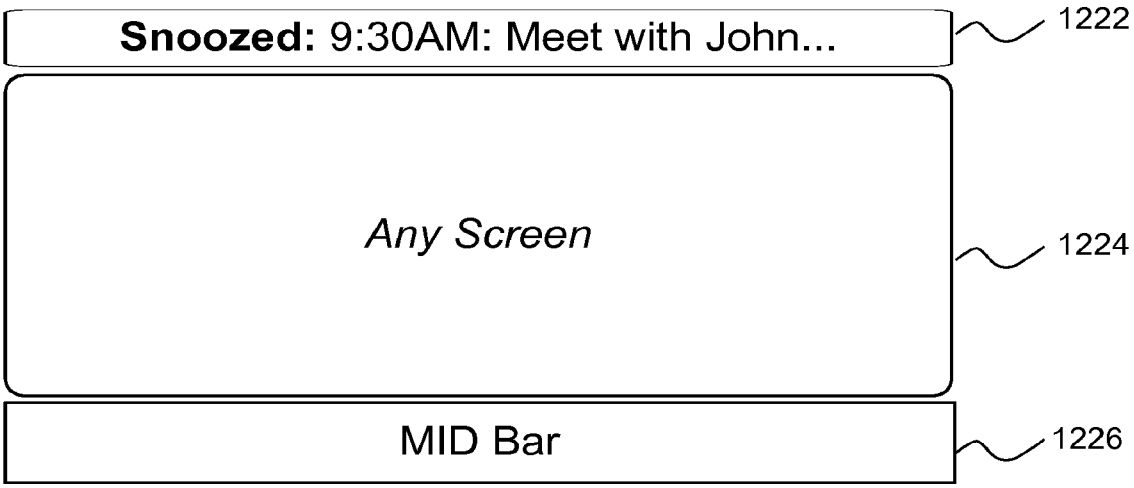

FIG. 12B

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US 12/21314

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G06Q 50/00 (2012.01)
USPC - 705/6
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8): G06Q 50/00 (2012.01)
USPC: 705/6

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
USPC: 701/1, 7.13, 7.15, 7.16, 7.18, 32.4, 36, 49, 55, 409, 412, 468; 368/10, 28; 709/203, 220; 719/318, 328 (view search terms below)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
PubWEST: (PGPB, USPT, EPAB, JPAB); Google Scholar
Search Terms: vehicle calendar, in-car calendar, mobile device, calendar, receive calendar, calendar source, format, reformat, convert, transform, short-range communication, Bluetooth, wi-fi, display, second calendar, aggregate, merge, join, remove duplicate

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X --- Y	US 2010/0306309 A1 (SANTORI et al.) 02 December 2010 (02.12.2010) entire document, especially abstract; para [0010], [0012], [0014], [0030]-[0038], [0041]-[0044], [0047]-[0051], [0053]-[0055], [0057]-[0058], [0062], [0064]-[0065], [0070], [0073]-[0080], [0089], [0094].	1-8, 10-18, 24, 25, 27 --- 9, 19-23, 26
Y	US 2009/0106036 A1 (TAMURA et al.) 23 April 2009 (23.04.2009) entire document, especially abstract; para [0064], [0070].	9
Y	US 2009/0177745 A1 (DAVIS et al.) 09 July 2009 (09.07.2009) entire document, especially abstract; para [0038]-[0040], [0082], [0099], [0136]-[0146].	19-23
Y	US 2006/0010206 A1 (APACIBLE et al.) 12 January 2006 (12.01.2006) entire document, especially abstract; para [0143], [0172], [0203], [0208], [0234].	26
A	US 2009/0157513 A1 (BONEV et al.) 18 June 2009 (18.06.2009) entire document.	1-27

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report

Examiner Signature		Date Considered	

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. [1] Applicant's unique citation designation number (optional). [2] See Kinds Codes of USPTO Patent Documents at www.uspto.gov or MPEP 901.04. [3] Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). [4] For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. [5] Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. [6] Applicant is to place a check mark here if English language Translation is attached.

1560 Broadway, Suite 1200
Denver, CO 80202
United States of America

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Applicant's or agent's file reference 6583-550-PCT	Date of mailing *(day/month/year)* 15 SEP 2014 **FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US14/34232	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

PATENT COOPERATION TREATY

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-550-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34232	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

   a. With regard to the **language**, the international search was carried out on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

   b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

   c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

   ☐ the text is approved as submitted by the applicant.

   ☒ the text has been established by this Authority to read as follows:

ALTERED MAP ROUTES BASED ON USER PROFILE INFORMATION

5. With regard to the **abstract**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

   a. the figure of the **drawings** to be published with the abstract is Figure No. 20

   ☒ as suggested by the applicant.

   ☐ as selected by this Authority, because the applicant failed to suggest a figure.

   ☐ as selected by this Authority, because this figure better characterizes the invention.

   b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34232

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G01C 21/34; B60W 40/08; G06K 9/62 (2014.01)
CPC - G08G 1/09, 1/143; B60W 40/09
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) Classification(s): G01C 21/34; B60W 40/08; G06N 3/08; B60W 40/08; G06K 9/62 (2014.01)
CPC Classification(s): G08G 1/09, 1/143; G06Q 30/0265; G06N 5/02; B60W 40/09; B60T 2220/02; G06K 9/00818

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
MicroPatent (US-G, US-A, EP-A, EP-B, WO, JP-bib, DE-C, B, DE-A, DE-T, DE-U, GB-A, FR-A); ProQuest; IEEE/IEEEXplore; Google/Google Scholar; KEYWORDS: pattern, route, context, plan, behavior, track

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X --- Y	US 2008/0104227 A1 (BIRNIE, P et al.) 01 May 2008; Figures 1-5, 10, 12, 13; Paragraphs [0036], [0065], [0076], [0077], [0089], [0105], [0108], [0115], [0132], [0139], [0140], [0162].	1-7, 11-14, 16-19 --- 8-10, 15, 20
Y	US 2013/0079964 A1 (SUKKARIE, A et al.) 28 March 2013; Abstract; Paragraph [0125].	8-10, 15, 20
A	US 2009/0157312 A1 (BLACK, N et al.) 18 June 2009; entire document.	1-20

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report
6 August 2014 (06.08.2014)	15 SEP 2014

- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 *bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to th IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Fom PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34232

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:
   - ☒ the international application in the language in which it was filed.
   - ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
   a. (means)
      - ☐ on paper
      - ☐ in electronic form
   b. (time)
      - ☐ in the international application as filed
      - ☐ together with the international application in electronic form
      - ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34232

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	8-10, 15, 20	YES
	Claims	1-7, 11-14, 16-19	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-20	NO
Industrial applicability (IA)	Claims	1-20	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1-7, 11-14, and 16-19 lack novelty under PCT Article 33(2) as being anticipated by US 2008/0104227 A1 to BIRNIE et al. (hereinafter 'Birnie').

As per claim 1, Birnie discloses a method for providing navigation information for a conveyance (providing location information over a social network and determining a route to provide to a client device; Abstract), comprising: a vehicle control system, including a processor, receiving route information for two or more routes (central processing unit 312 (processor), a route mapper module, RM 357, provides route information from a given start and end location takes into account intermediate locations (two or more routes); Figure 3; paragraphs [0065], [0105]); the vehicle control system determining the context associated with route information (RM 357 requests from a location information service, LIS 354, location descriptions such as location names for determining a location of interest (context); Figures 3, 10; paragraphs [0036], [0105]); the vehicle control system storing the route information and the context (the networked client device receives and stores data in mass memory 230, including location information, route data and social networking data of the user account used as context; Figure 2; paragraphs [0077], [0139]); the vehicle control system identifying a pattern associated with the route information and context (searches and filters results to determine relevancy corresponding to the representation (pattern) of start and end locations as GPS coordinates and retrieved location name; Figures 4, 12; paragraph [0115]); and the vehicle control system providing pattern information to plan a next route (based in part on patterns identified in the social networks, a route is provided (for next route) at step 512 along with reviews, schedules, or sponsored messages; Figures 5, 13; paragraphs [0132], [0140]).

As per claim 11, Birnie discloses a conveyance comprising: a processor operable to execute one or more modules, the modules comprising: a route integration module operable to: receive route information for two or more routes (system distributed across a plurality of computing devices, includes a central processing unit 312 (processor) to execute a route mapper module, RM 357 (a route integration module), that accesses a street map from a data store and provides route information from a given start and end location through intermediate locations (two or more routes); Figure 3; paragraphs [0065], [0076]); determine the context associated with route information (RM 357 requests from a location information service, LIS 354, location descriptions such as location names for determining a location of interest (determine the context associated with route information); Figures 3, 10; paragraphs [0036], [0105]); store the route information and the context (the networked client device receives and stores data in mass memory 230, including location information, route data and social networking data of the user account used as context; Figure 2; paragraphs [0077], [0139]); a pattern recognition module operable to identify a pattern associated with the route information and context (GSS 106 (a pattern recognition module) searches and filters results to determine relevancy (pattern) corresponding to the representation of start and end locations as GPS coordinates and retrieved location name; Figures 1, 4; paragraphs [0108], [0115]); and a route suggestion module operable to provide a next route based on pattern information (based in part on patterns identified in the social networks, a (next) route is provided in process 500 implemented within GSS 106 (a route suggestion module) along with reviews, schedules, or sponsored messages; Figures 5, 13; paragraphs [0132], [0140]).

As per claim 16, Birnie discloses a non-transitory computer readable medium stored on a storage medium and having instructions that when executed by a processor cause the processor to perform a method (non-volatile computer-readable storage media as mass memory storing computer readable instructions provided to a processor to implement actions (instructions); paragraphs [0089], [0162]), the instructions comprising: instructions to receive route information for two or more routes (the module implementation RM 357, accesses a street map from a data store and provides route information from a given start and end location through intermediate locations (instructions to receive route information for two or more routes); Figure 3; paragraphs [0065], [0076]); instructions to determine the context associated with route information (RM 357 requests from a location information service, LIS 354, location descriptions such as location names for determining a location of interest (to determine the context associated with route information); Figures 3, 10; paragraphs [0036], [0105]); instructions to store the route information and the context (the networked client device is configured to receive and store data in mass memory 230, including location information, route data and social networking data of the user account used as context; Figure 2; paragraphs [0077], [0139]); instructions to identify a pattern associated with the route information and context (GSS 106 searches and filters results to determine relevancy (pattern) corresponding to the representation of start and end locations as GPS coordinates and retrieved location name; Figures 1, 4; paragraphs [0108], [0115]); and instructions to provide a next route based on pattern information (based in part on patterns identified in the social networks, a (next) route is provided in process 500 implemented within GSS 106, along with reviews, schedules, or sponsored messages; Figures 5, 13; paragraphs [0132], [0140]).

As per claim 2, Birnie discloses the method of claim 1. Birnie additionally discloses, wherein the route information includes at least an origin location and a destination (the received information includes a start and end location at step 502 (the route information includes at least an origin location and a destination); Abstract; Figure 5).

-***-Continued Within the Next Supplemental Box-***-

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34232

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

-***-Continued from Previous Supplemental Box-***-

As per claim 3, Birnie discloses the method of claim 2. Birnie additionally discloses, wherein at least one route was generated by a navigation system (the route is provided at step 512 of process 500 by the geo-location search server (at least one route was generated by a navigation system); Figure 5; paragraph [0132]).

As per claim 4, Birnie discloses the method of claim 3. Birnie additionally discloses, wherein the context includes information indicating a reason why a driver followed the route (the location of interest that provides context (the context includes information) indicates the user searched a location name or members of the user's community share the interest (indicating a reason why a driver followed the route); paragraphs [0036], [0134]).

As per claim 5, 13, and 18, Birnie discloses the method of claim 4, the conveyance of claim 12, and the computer readable medium of claim 17, respectively. Birnie additionally discloses, wherein two or more drivers in two or more conveyances provided the route information (members in a social network using client devices 102 and 103 to update location information as GPS coordinates while traveling on a route from A to B (two or more drivers in two or more conveyances provided the route information); Figures 1, 10; paragraphs [0140], [0141]).

As per claim 6, 14, and 19, Birnie discloses the method of claim 5, the conveyance of claim 13, and the computer readable medium of claim 18, respectively. Birnie additionally discloses, wherein the pattern information includes one or more of destinations arrived at certain time periods, routes driven on certain days, or ofte•Ltraveled routes (the display 1200 of destinations is pushed to the client device based on input conditions (the pattern information) includes a time period (destinations arrived at certain time periods); Figure 12; paragraph [0197]).

As per claim 7, Birnie discloses the method of claim 6. Birnie discloses, wherein the pattern information is provided to a third driver to plan a route (the location information included in a search result record is provided to any member of the social network or third-party user who paid for the description to be included in the search results (the pattern information is provided to a third driver to plan a route); paragraph [0116]).

As per claim 12 and 17, Birnie discloses the conveyance of claim 11 and the computer readable medium of claim 16, respectively. Birnie additionally discloses, wherein the route information includes at least an origin location and a destination (the received information includes a start and end location at step 502 (the route information includes at least an origin location and a destination); Abstract; Figure 5), wherein at least one route was generated by a navigation system (the route is provided at step 512 of process 500 by the geo-location search server (at least one route was generated by a navigation system); Figure 5; paragraph [0132]), and wherein the context includes information indicating a reason why a driver followed the route wherein the context includes information indicating a reason why a driver followed the route (the location of interest that provides context (the context includes information) indicates the user searched a location name or members of the user's community share the interest (indicating a reason why a driver followed the route); paragraphs [0036], [0134]).

Claims 8-10, 15, and 20 lack an inventive step under PCT Article 33(3) as being obvious over Birnie in view of US 2013/0079964 A1 to SUKKARIE et al. (hereinafter 'Sukkarie').

As per claim 8, Birnie discloses the method of claim 7. Birnie does not disclose, wherein the third driver is unfamiliar with an area surrounding the planned route. Sukkarie discloses, wherein the third driver is unfamiliar with an area surrounding the planned route (a vehicle centric system on a planned route path in a communication network that utilizes specific user patterns and integrates with shared features to enable the driver previously unfamiliar with an area to take an efficient route (wherein the third driver is unfamiliar with an area surrounding the planned route); Abstract; paragraph [0125]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the method of Birnie with the teaching of Sukkarie, because by doing so, the method of Birnie would provide a communication network for the driver that integrates shared features and uses clustering·analysis to provide interactive and adaptive routing.

As per claim 9, Birnie in combination with Sukkarie discloses the method of claim 8. Birnie additionally discloses, wherein the route information and context are stored remotely (member information travels between client devices over the network 145 and is stored in database tables (the route information and context are stored remotely); Figure 1; paragraphs [0148], [0159]).

As per claim 10, Birnie in combination with Sukkarie discloses the method of claim 9. Birnie additionally discloses, wherein the planned route is associated with information in a user profile of the third driver (the end location is determined based on the identity of the member of the social network such as by member interests or preferences (wherein the planned route is associated with information in a user profile of the third driver); paragraphs [0116], [0134]).

-***-Continued Within the Next Supplemental Box-***-

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34232

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

As per claim 15 and 20, Birnie discloses the conveyance of claim 14 and the computer readable medium of claim 19, respectively. Birnie additionally discloses, wherein the pattern information is provided to a third driver to plan a route (the location information included in a search result record is provided to any member of the social network or third-party who paid for the description to be included in the search results (the pattern information is provided to a third driver to plan a route); paragraph [0116]). Birnie does not disclose, and wherein the third driver is unfamiliar with an area surrounding the planned route. Sukkarie discloses, and wherein the third driver is unfamiliar with an area surrounding the planned route (a vehicle centric system on a planned route path in a communication network that utilizes specific user patterns and integrates with shared features to enable the driver previously unfamiliar with an area to take an efficient route (and wherein the third driver is unfamiliar with an area surrounding the planned route); Abstract; paragraph [0125]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the conveyance of Birnie with the teaching of Sukkarie, because by doing so, the conveyance of Birnie would provide a communication network for the driver that integrates shared features and clustering analysis to provide interactive and adaptive routing.

Claims 1-20 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Applicant's or agent's file reference 6583-574-PCT	Date of mailing *(day/month/year)* 15 SEP 2014 **FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US14/34254	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-574-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34254	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 3 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☐ the text is approved as submitted by the applicant.

☒ the text has been established by this Authority to read as follows:

CENTRAL NETWORK FOR AUTOMATED CONTROL OF VEHICULAR TRAFFIC

5. With regard to the **abstract**,

☐ the text is approved as submitted by the applicant.

☒ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20A

☐ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☒ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34254

Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

Methods and systems for a traffic control system provide arrangements and processes for managing automated vehicles. The traffic control system can register vehicles and then control the operation of the vehicles through a section of roadway. The automated control includes the communication of directions and other messages that ensure the proper function of the vehicle while under the guidance of the traffic control system.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34254

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G08G 1/0968; G01C 21/20; G05D 1/02 (2014.01)
CPC - G08G 1/0125, 1/164; G05D 1/0088
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) Classification(s): G06F 3/0484; G01C 21/26, 21/20; G08G 1/0968, 1/133, 1/09; G05D 1/02 (2014.01)
CPC Classification(s): G08G 1/0125, 1/164; G05D 1/0088

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
MicroPatent (US-G, US-A, EP-A, EP-B, WO, JP-bib, DE-C, B, DE-A, DE-T, DE-U, GB-A, FR-A); ProQuest; IEEE/IEEEXplore; Google/Google Scholar; KEYWORDS: automate, control, vehicular, traffic, server, message

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 2008/0161986 A1 (BREED, D) 03 July 2008; Figures 5, 27; Paragraphs [0032], [0334], [0355], [0375], [0407], [0418], [0435], [0487], [0492], [0593].	1-15
A	US 2010/0125387 A1 (SEHYUN, P et al.) 20 May 2010; entire document.	1-15
A	US 2009/0125174 A1 (DELEAN, B) 14 May 2009; entire document.	1-15

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34254

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:
   - ☒ the international application in the language in which it was filed.
   - ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
   a. (means)
      - ☐ on paper
      - ☐ in electronic form
   b. (time)
      - ☐ in the international application as filed
      - ☐ together with the international application in electronic form
      - ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34254

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	NONE	YES
	Claims	1-15	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1-15 lack novelty under PCT Article 33(2) as being anticipated by US 2008/0161986 A1 (BREED).

As per claim 1, Breed discloses a method for controlling a vehicle (enabling autonomous vehicle travel; Abstract), comprising: a control server, including a processor and associated with a traffic control system (a network server of a central data facility 300 (control server) including a microprocessor that communicates with traffic control devices controlled collectively to convey instructions for vehicular control (a traffic control system); Figures 5, 27; Paragraphs [0281], [0375], [0407], [0492]), receiving a registration of a vehicle (identifying the vehicle by a code based on the vehicle ID (a registration); Paragraph [0355]); the control server receiving travel information from the vehicle (information received by the network server (the control server) from the vehicle includes a picture to be interpreted for map updating (travel information); Paragraph [0375]); the control server determining a control arrangement for the vehicle (the central server checks a potential route and repeats the process based on GPS coordinates, road network sensors, and feedback from the driver; Paragraphs [0418], [0593]); and the control server sending a control message to control the vehicle in the traffic control system (the central server generates instructions to send to the vehicle for autonomous operation of the vehicle (a control message to control the vehicle) traveling in dedicated lanes with the surrounding traffic control devices (the traffic control system); Paragraphs [0435], [0487]).

As per claim 2, Breed discloses the method of claim 1. Breed additionally discloses, wherein the vehicle automatically, without driver input, follows instructions in the control message (the generated instructions sent to the vehicle allow the vehicle to be operated autonomously (without driver input) by converting the received instructions into operational commands (vehicle automatically follows instructions in the control message); Paragraph [0435]).

As per claim 3, Breed discloses the method of claim 2. Breed additionally discloses, wherein the travel information includes a current location and a destination (information transmitted from the vehicle (travel information) includes data about its location and destination of the vehicle; Figure 20; Paragraphs [0201], [0202]).

As per claim 4, Breed discloses the method of claim 3. Breed additionally discloses, wherein the control arrangement includes a speed and a position within traffic to which the vehicle must adhere (the information required for control of the vehicle (control arrangement) includes the local speed limit and restricted points of interest based on position of the vehicle and traffic information (a speed and a position within traffic to which the vehicle must adhere); Paragraph [0360]).

As per claim 5, Breed discloses the method of claim 4. Breed additionally discloses, wherein the vehicle generates a route based on the control arrangement (the vehicle resident system determines an alternate route the vehicle should take based on road conditions and traffic information (generates a route based on the control arrangement); Paragraph [0418]).

As per claim 6, Breed discloses the method of claim 5. Breed additionally discloses, wherein the vehicle follows the route automatically without driver input (the autonomous operation of the vehicle (without drive input) is arranged as the vehicle is controlled based on data about its travel lanes; Paragraph [0279]).

As per claim 7, Breed discloses the method of claim 6. Breed additionally discloses, wherein the control server sends a second control message to change a behavior of the vehicle (the central server (control server) informs vehicles of an emergency (a second control message) signaling to and controlling vehicles approaching an emergency to reduce vehicle speed (change a behavior of the vehicle); Paragraphs [0356], [0358]).

As per claim 8, Breed discloses the method of claim 7. Breed additionally discloses, wherein the second control message instructs the vehicle to exit from a roadway (while informing vehicles of an emergency (the second control message), the system guides the vehicle to leave the roadway when its speed is below a certain level (instructs the vehicle to exit from a roadway); Paragraph [0077]).

As per claim 9, Breed discloses the method of claim 8. Breed additionally discloses, wherein the control message includes a lane designation (the instructions generated (control message) optimize usage of dedicated lanes; Paragraph [0435]).

-***-Continued Within the Next Supplemental Box-***-

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34254

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

Claims 8 and 13 are objected to under PCT Rule 66.2(a)(iii) as containing the following defects in the form or contents thereof: Claims 8 and 13, in line 1 and in lines 2-3, respectively, recite "message is instructs the vehicle". As best understood, this is considered to be a typographical error and will be interpreted as "message instructs the vehicle".

Claim 10 is objected to under PCT Rule 66.2(a)(iii) as containing the following defects in the form or contents thereof: Claim 10, in lines 1-2, recites "a second the control message". As best understood, this is considered to be a typographical error and will be interpreted as "a second control message".

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34254

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claims 4 and 14 are objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claims 4 and 14 are indefinite for the following reason(s): Claims 4 and 14 refer to "the control information" in line 1. There is a lack of antecedent basis for these limitations in these claims. As best understood, the limitation is interpreted to read "the control arrangement".

Claims 8 and 13 are objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claims 8 and 13 are indefinite for the following reason(s): Claims 8 and 13 refer to "the second message" in line 1 and line 2, respectively. There is a lack of antecedent basis for theses limitations in these claims. As best understood, the limitation is interpreted to read "the second control message".

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34254

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

As per claim 10, Breed discloses the method of claim 9. Breed additionally discloses, wherein a second vehicle receives a second control message (the emergency data transfers signals to another vehicle approaching the emergency to reduce vehicle speed (a second vehicle receives a second control message); Paragraph [0358]), wherein the second control message is different from the control message sent to the vehicle (which differs from the control message sent to the vehicle during normal autonomous operation which includes acceleration (different from the control message sent to the vehicle); Paragraph [0435]).

As per claim 11, Breed discloses a control server associated with a traffic control system (a central data and storage facility 300 (a control server) that communicates with traffic control devices controlled collectively to convey instructions for vehicular control (a traffic control system); Figure 27; Paragraphs [0281], [0375], [0407]) comprising: a processor operable to execute one or more modules (a processor or controller performs various operations (execute one or more modules); Figure 5; Paragraphs [0032], [0492]), the modules comprising: a registration module operable to: receive a registration of a vehicle (a receiver that rectifies bits (a registration module) from a 64 bit code transmitted by the vehicle that includes the vehicle identification number (a registration of a vehicle); Paragraph [0334]); a traffic control module operable to: receive travel information from the vehicle (a communications entity, or network server (traffic control module), receives from the vehicle a picture to be interpreted for map updating (travel information from the vehicle); Paragraph [0375]); determine a control arrangement for the vehicle (the server determines a route based on GPS coordinates and checking road network sensors (a control arrangement for the vehicle); Paragraphs [0418], [0593]); and send a control message to control the vehicle in the traffic control system (the central data facility server generates instructions to send to the vehicle for autonomous operation of the vehicle (a control message to control the vehicle) traveling in dedicated lanes with surrounding traffic control devices (the traffic control system); Paragraphs [0435], [0487]).

As per claim 12, Breed discloses the control server of claim 11. Breed additionally discloses, wherein the vehicle generates a route based on the control arrangement (the vehicle resident system determines an alternate route the vehicle should take based on road conditions and traffic information (generates a route based on the control arrangement); Paragraph [0418]), and wherein the vehicle follows the route automatically without driver input (the autonomous operation of the vehicle (without driver input) is arranged as the vehicle is controlled based on data about travel lanes (the vehicle follows the route automatically); Paragraph [0279]).

As per claim 13, Breed discloses the control server of claim 12. Breed additionally discloses, wherein the control server sends a second control message to change a behavior of the vehicle (the central server (control server) informs the vehicles of an emergency (a second control message) that signals to and controls vehicles approaching an emergency to reduce vehicle speed (change a behavior of the vehicle); Paragraphs [0356], [0358]), and wherein the second control message instructs the vehicle to exit from a roadway (a vehicle is guided to leave the roadway when its speed is below a certain level (the second control message instructs the vehicle to exit from a roadway); Paragraph [0077]).

As per claim 14, Breed discloses the control server of claim 13. Breed additionally discloses, wherein the control arrangement includes one or more of a lane, a speed, and a position within traffic to which the vehicle must adhere (the information required for control of the vehicle (control arrangement) includes the local speed limit (a speed within traffic to which the vehicle must adhere); Paragraph [0360]).

As per claim 15, Breed discloses the control server of claim 14. Breed additionally discloses, wherein the travel information includes a current location and a destination (information transmitted from the vehicle (travel information) includes data about its location and destination of the vehicle; Figure 20; Paragraphs [0201], [0202]).

Claims 1-15 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 15 SEP 2014
Applicant's or agent's file reference 6583-559-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US14/34108	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:

☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.

☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-559-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34108	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☐ the text is approved as submitted by the applicant.

☒ the text has been established by this Authority to read as follows:

VIRTUAL PERSONALITY VEHICLE COMMUNICATIONS WITH THIRD PARTIES

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34108

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G01C 21/36; G10L 13/00 (2014.01)
CPC - H04L 67/12; G06F 17/30654; G06Q 50/30
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) Classification(s): G10L 15/26; G01C 21/36; G10L 13/00; B60Q 1/26 (2014.01)
CPC Classification(s): H04L 67/12, 67/18, 67/306; G06F 17/30654; B60R 16/0373; G06Q 50/30

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
MicroPatent (US-G, US-A, EP-A, EP-B, WO, JP-bib, DE-C, B, DE-A, DE-T, DE-U, GB-A, FR-A); ProQuest; IEEE/IEEEXplore; Google/Google Scholar; KEYWORDS: vehicle, communication, personal, profile, context

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X --- Y	US 2010/0145700 A1 (KENNEWICK, R et al.) 10 June 2010; Abstract; Figures 1, 5; Paragraphs [0011], [0012], [0034], [0094], [0121], [0122].	1-6, 10-15 --- 7-9
Y	US 2012/0289253 A1 (HAAG, S et al.) 15 November 2012; Paragraphs [0062], [0063].	7
Y	US 2010/0137037 A1 (BASIR, O) 03 June 2010; Paragraphs [0006], [0007], [0024].	8, 9

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report
18 August 2014 (18.08.2014)	15 SEP 2014

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 *bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34108

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

   ☐ on paper

   ☐ in electronic form

   b. (time)

   ☐ in the international application as filed

   ☐ together with the international application in electronic form

   ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34108

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	7-9	YES
	Claims	1-6, 10-15	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1-6, and 10-15 lack novelty under PCT Article 33(2) as being anticipated by US 2010/0145700 A1 to KENNEWICK et al. (hereinafter 'Kennewick').

As per claim 1, Kennewick discloses a system for vehicle to another party communications (communication between a vehicle system and remote devices (another party); Abstract) comprising: a vehicle personality module adapted to create a vehicle personality (a personality module attached to the vehicle enabling vehicle personalities to be created; Paragraph [0012]); a communications system that utilizes the created vehicle personality for one or more communications instead of a user's profile (invoking the vehicle personalities by a speech unit that simulates human characteristics (utilizes the created vehicle personality) when presenting results to user's questions based on responses from probabilistic or fuzzy set decision sources (instead of a user's profile); Paragraphs [0012], [0034], [0094]).

As per claim 2, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein the vehicle personality is based on one or more user profiles (the invoked personality of the vehicle uses a user history and preferences (based on one or more user profiles); Paragraph [0034]).

As per claim 3, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein the vehicle personality utilizes a vehicle communications module to send and receive communications (the system personality 108 (vehicle personality) interfaces with network interface 116 (a vehicle communications module) to query data sources and return responses using the speech unit; Figure 5; Paragraphs [0121], [0122]).

As per claim 4, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein the vehicle personality utilizes a user's communication device to send and receive communications (the system personality 108 (vehicle personality) communicates through the handheld device 36 speech unit interface (user's communication device) over a wireless link (send and receive communications); Figures 1, 5; Paragraphs [0011]).

As per claim 5, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein one or more of an identifier and an icon is associated with the vehicle personality and sent with at least one communication (a symbol (icon) is translated by a domain agent of the personality 108 (the vehicle personality) to present to the user using the communication link; Figure 5; Paragraphs [0120], [0177]).

As per claim 6, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein the vehicle personality is automatically utilized based on a determined context (the domain agent selects the personality 108 to be used (vehicle personality is automatically utilized) based on the context; Figure 5; Paragraph [0175]).

As per claim 10, Kennewick discloses the system of claim 1. Kennewick additionally discloses, wherein the one or more communications are for any user associated with the vehicle (for multiple users within a vehicle, the system determines which user is stating a command and applies the correct context; Paragraphs [0036], [0037]).

As per claim 11, Kennewick discloses a method for vehicle to another party communications (communication between a vehicle system and remote devices (another party); Abstract) comprising: creating a vehicle personality (a personality module attached to the vehicle enables personalities to be created; Paragraph [0012]); utilizing the created vehicle personality for one or more communications instead of a user's profile (invoking the vehicle personalities by a speech unit that simulates human characteristics (utilizes the created vehicle personality) when presenting results to user's questions based on responses from probabilistic or fuzzy set decision sources (instead of a user's profile); Paragraphs [0012], [0034], [0094]).

As per claim 12, Kennewick discloses the method of claim 11. Kennewick additionally discloses, wherein the vehicle personality is based on one or more user profiles (the invoked personality of the vehicle uses a user history and preferences (based on one or more user profiles); Paragraph [0034]).

As per claim 13, Kennewick discloses the method of claim 11. Kennewick additionally discloses, wherein the vehicle personality utilizes a vehicle communications module to send and receive communications (the system personality 108 (vehicle personality) interfaces with network interface 116 (a vehicle communications module) to query data sources and return responses using the speech unit; Figure 5; Paragraphs [0121], [0122]).

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34108

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

As per claim 14, Kennewick discloses the method of claim 11. Kennewick additionally discloses, wherein the vehicle personality utilizes a user's communication device to send and receive communications (the system personality 108 (vehicle personality) communicates through the handheld device 36 speech unit interface (user's communication device) over a wireless link (send and receive communications); Figures 1, 5; Paragraphs [0011]).

As per claim 15, Kennewick discloses the method of claim 11. Kennewick additionally discloses, wherein one or more of: an identifier and an icon is associated with the vehicle personality and sent with at least one communication, the vehicle personality is automatically utilized based on a determined context, the determined context is a geographic area that prohibits phone usage while driving, the vehicle personality communicates directly with the another party, the vehicle personality intercepts one or more communications for a user of the vehicle, and the one or more communications are for any user associated with the vehicle (for multiple users within a vehicle (any user associated with the vehicle), the domain agent selects the personality 108 based on the correct context (the vehicle personality is automatically utilized based on a determined context) and user profile; Figure 5; Paragraphs [0036], [0175]).

Claim 7 lacks an inventive step under PCT Article 33(3) as being obvious over Kennewick in view of US 2012/0289253 A1 to HAAG et al. (hereinafter 'Haag').

As per claim 7, Kennewick discloses the system of claim 6. Kennewick does not disclose, wherein the determined context is a geographic area that prohibits phone usage while driving. Haag discloses wherein the determined context is a geographic area that prohibits phone usage while driving (based on locations, text to a travelling mobile device is delayed or prevented (prohibits phone usage while driving); Paragraphs [0062], [0063]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kennewick with the teaching of Haag, because by doing so, the system of Kennewick would provide improved safety by automatically inhibiting dangerous activities while driving based on vehicle location.

Claims 8 and 9 lack an inventive step under PCT Article 33(3) as being obvious over Kennewick in view of US 2010/0137037 A1 to (BASIR).

As per claim 8, Kennewick discloses the system of claim 1. Kennewick does not disclose wherein the vehicle personality communicates directly with the another party. Basir discloses, wherein the vehicle personality communicates directly with the another party (a vehicle integrated intelligent information manager (vehicle personality) automatically sends a response, without driver intervention, to a third-party; Paragraphs [0006], [0007], [0024]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kennewick with the teaching of Basir, because by doing so, the system of Kennewick would provide intelligent, automated responses for the driver to send based on the driver's user profile and without distracting the driver from navigation.

As per claim 9, Kennewick discloses the system of claim 1. Kennewick does not disclose, wherein the vehicle personality intercepts one or more communications for a user of the vehicle. Basir discloses, wherein the vehicle personality intercepts one or more communications for a user of the vehicle (a vehicle integrated intelligent information manager (vehicle personality) filters emails (intercepts) and automatically sends a response, without driver intervention, to a third-party; Paragraphs [0006], [0007], [0024]). It would have been obvious to a person of ordinary skill in the art, at the time of the invention, to modify the system of Kennewick with the teaching of Basir, because by doing so, the system of Kennewick would provide automated filtering of incoming messages to reduce driver interruptions and summarize communications.

Claims 1-15 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Commissioner:

The references cited on attached Form PTO/SB08 are being called to the attention of the Examiner.

☒ Copies of the cited non-patent and/or foreign references are enclosed herewith.

☐ Copies of the cited U.S. patents and/or patent applications are enclosed herewith.

☒ Copies of the cited U.S. patents/unpublished patent applications/patent application publications are not enclosed in accordance with 37 C.F.R. § 1.98(a).

☐ Copies of the cited references are not enclosed, in accordance with 37 C.F.R. § 1.98(d), because the references were cited by or submitted to the U.S. Patent and Trademark Office in prior application Serial No. _____ filed _____, which is relied upon for an earlier filing date under 35 U.S.C. § 120.

☐ To the best of applicants' belief, the pertinence of the foreign-language references is believed to be summarized in the attached English abstracts and/or in the figures, although applicants do not necessarily vouch for the accuracy of the translation.

☒ Examiner's attention is drawn to the following related applications:

- Serial No. 14/253,843 filed 04/15/2014 (Attorney's Ref. No. 6583-530)
- Serial No. 14/253,836 filed 04/15/2014 (Attorney's Ref. No. 6583-537)

☐ Other:_____

Submission of the above information is not intended as an admission that any item is citable under the statutes or rules to support a rejection, that any item disclosed represents analogous art, or that those skilled in the art would refer to or recognize the pertinence of any reference without the benefit of hindsight, nor should an inference be drawn as to the pertinence

of the references based on the order in which they are presented. Submission of this statement should not be taken as an indication that a search has been conducted, or that no better art exists.

It is respectfully requested that the cited information be expressly considered during the prosecution of this application and the references made of record therein.

FEES

☒	**37 CFR 1.97(b)**: No fee is believed due in connection with this submission, because the information disclosure statement submitted herewith is satisfied by one of the following conditions ("X" indicates satisfaction): ☐ Within three months of the filing date of a national application other than a continued prosecution application under 37 CFR 1.53(d), or ☐ Within three months of the date of entry of the national stage as set forth in § 1.491 in an international application, or ☒ Before the mailing date of a first Office Action on the merits, or ☐ Before the mailing of a first Office action after the filing of a request for continued examination under 37 CFR 1.114. Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970.
☐	**37 CFR 1.97(c)**: The information disclosure statement transmitted herewith is being filed after all the above conditions (37 CFR 1.97(b)), but before the mailing date of any one of the following conditions: (1) a final action under 37 C.F.R. 1.113, or (2) a notice of allowance under 37 C.F.R. 1.311, or (3) an action that otherwise closes prosecution in the application. This Information Disclosure Statement is accompanied by: ☐ A Certification (below) as specified by 37 C.F.R. 1.97(e). Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970. OR ☐ Please charge Deposit Account 19-1970 in the amount of $180.00 for the fee set forth in 37 C.F.R. 1.17(p) for submission of an information disclosure statement. Please credit any overpayment or charge any underpayment to Deposit Account 19-1970.
☐	**37 CFR 1.97(d)**: This Information Disclosure Statement is being submitted after the period specified in 37 CFR 1.97(c). ☐ This information Disclosure Statement includes a Certification (below) as specified by 37 C.F.R. 1.97(e) AND ☐ Applicants hereby requests consideration of the reference(s) disclosed herein. Please charge Deposit Account 19-1970 in the amount of $180.00 under 37 C.F.R. 1.17(p). Please credit any overpayment or charge any underpayment to Deposit Account 19-1970. Election to pay the fee should not be taken as an indication that applicant(s) cannot execute a certification.

Certification (37 C.F.R. 1.97(e))
(Applicable only if checked)

☐ The undersigned certifies that:

☐ Each item of information contained in the Information Disclosure Statement submitted herewith was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(1).

☐ A copy of the communication from the foreign patent office is enclosed.

OR

☐ No item of information contained in the Information Disclosure Statement submitted herewith was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, no item of information contained in the Information Disclosure Statement was known to any individual designated in 37 C.F.R. 1.56(c) more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(2).

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing *(day/month/year)*	15 SEP 2014
Applicant's or agent's file reference: 6583-556-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No.: PCT/US14/34098	International filing date *(day/month/year)*: 15 April 2014 (15.04.2014)
Applicant: Flextronics AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-556-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US14/34098	International filing date *(day/month/year)* 15 April 2014 (15.04.2014)	(Earliest) Priority Date *(day/month/year)* 15 April 2013 (15.04.2013)
Applicant Flextronics AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

   a. With regard to the **language**, the international search was carried out on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

   b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

   c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

   ☒ the text is approved as submitted by the applicant.

   ☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

   a. the figure of the **drawings** to be published with the abstract is Figure No. 20A

   ☒ as suggested by the applicant.

   ☐ as selected by this Authority, because the applicant failed to suggest a figure.

   ☐ as selected by this Authority, because this figure better characterizes the invention.

   b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US14/34098

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G05B 15/02; G05D 23/19; G06F 15/177 (2014.01)
CPC - H04L 12/2803, 12/2807, 12/2812
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) Classification(s): G05B 15/02; G05D 23/19; G06F 15/177 (2014.01)
CPC Classification(s): H04L 12/2803, 12/2807, 12/2812 ; USPC Classification(s): 700/19; 715/733, 744

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
MicroPatent (US-G, US-A, EP-A, EP-B, WO, JP-bib, DE-C,B, DE-A, DE-T, DE-U, GB-A, FR-A); Google; Google/Scholar; ProQuest; Keywords: vehicle*, car*, automo*, software*, *processor*, CPU, comput*, home*, residen*, server*, connect*, access*, home*, automation*, occupant*, person*, user*, driver*, passenger*, ident*, profil*, subscription*, registration*, credential*, authentication*, login

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X ------- Y	US 2010/0289643 A1 (TRUNDLE SS et al.) November 18, 2010; figures 2, 6, 10, 12; paragraphs [0043], [0049], [0054], [0064], [0065], [0073], [0075], [0076], [0114], [0125], [0130], [0131], [0139]-[0141], [0148], [0149], [0154]	1-7, 9-15 --------- 8
X	US 2013/0083805 A1 (LU J et al.) April 4, 2013; paragraphs [0123]-[0125], [0165], [0205], [0232], [0233], [0241]-[0245]	1, 4
Y	Meet Samsung's version of Apple AirPlay. CNET.com; October 10, 2012 [retrieved on 2014-08-14]; retrieved from the Internet: <URL: http://www.cnet.com/products/samsung-allshare-cast-hub-eadt10jdegsta/>	8
P/X	US 2013/0231784 A1 (ROVIK CL et al.) September 5, 2013; entire document	1, 12

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Applicant Flextronics AP, LLC

1. This opinion contains indications relating to the following items:

- [x] Box No. I Basis of the opinion
- [ ] Box No. II Priority
- [ ] Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- [ ] Box No. IV Lack of unity of invention
- [x] Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- [x] Box No. VI Certain documents cited
- [ ] Box No. VII Certain defects in the international application
- [ ] Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1 *bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to th IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Fom PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34098

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:
   - ☒ the international application in the language in which it was filed.
   - ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
   a. (means)
      - ☐ on paper
      - ☐ in electronic form

   b. (time)
      - ☐ in the international application as filed
      - ☐ together with the international application in electronic form
      - ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34098

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	6, 8, 11	YES
	Claims	1-5, 7, 9, 10, 12-15	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	NONE	NO

2. Citations and explanations:

Claims 1-5, 7, 9-10, and 12-15 lack novelty under PCT Article 33(2) as being anticipated by US 2010/0289643 A1 (TRUNDLE).

As per claim 1, Trundle discloses a method, comprising: receiving, by a microprocessor executable home automation module (monitoring application 242; paragraph [0075]), an identity (permission system based on user-specific passcodes, i.e., receiving an identity; paragraph [0075]) of at least one occupant (user; paragraph [0075]) of a vehicle (automobile (vehicle); paragraph [0139]); accessing, by the microprocessor executable home automation module (242), an account of the at least one vehicle occupant, the account defining at least one home location for the vehicle occupant (method includes monitoring a user (occupant) associated with monitored properties (home location), i.e., an account; paragraph [0011]); connecting, by the microprocessor executable home automation module (242), to a home automation system of one of the at least one home locations (mobile devices 240, i.e., having native monitoring application 242 thereon, communicate with control unit 210 (home automation system), at a monitored property (home location); figure 2; paragraphs [0055], [0062]); receiving, by the microprocessor executable home automation module (242), a state of features of the home automation system (enables users to monitor energy consuming appliances (i.e., monitoring the state of features; paragraph [0063]); retrieving, by the microprocessor executable home automation module (242), from the account of the at least one vehicle occupant, arrival settings for features of the home automation system (tracks mobile device's physical location for use to control settings (arrival settings) when user is going toward home; paragraph [0065]); generating, by the microprocessor executable home automation module (242), commands to implement the arrival settings (tracks mobile device's physical location for use to control (generating commands) settings (arrival settings) when user is going toward home; paragraph [0065]); and sending, by the microprocessor executable home automation module (242), the commands to the home automation system (mobile devices 240, i.e., having native monitoring application 242 thereon, communicate with (send commands to) control unit 210 (home automation system); figure 2; paragraphs [0055], [0062]).

As per claim 2, Trundle discloses the method of claim 1, and further discloses wherein the microprocessor executable home automation module (242) sends a first set of commands to the home automation system at a first time (system maintains (first set of commands) appliances in an off state at a first time; figure 12; paragraph [0140]) and a second set of commands to the home automation system at a second time (system turns (second set of commands) the thermostat 1216 to an on state at a second time; figure 12; paragraph [0141]); and wherein the first time and the second time are determined by one of the account of the at least one occupant and the microprocessor executable home automation module (monitoring system determines the first and second time via monitoring application 242; paragraphs [0140], [0141]) based at least in part on the state of features of the home automation system (at first and second time, based on the geographic location of the user, the monitoring system controls the state of lighting device 1212, the oven 1214, and the thermostat 1216; paragraphs [0140], [0141]).

As per claim 3, Trundle discloses the method of claim 2, and further discloses wherein the microprocessor executable home automation module (242) sends the first set of commands to the home automation system when the vehicle is a first distance from the home location (system maintains (first set of commands) appliances in an off state when user, i.e., in a vehicle, is at a first distance from the property 1210 (home location); figure 12; paragraph [0140]) wherein the microprocessor executable home automation module sends the second set of commands when the vehicle is a second distance from the home location (system turns (second set of commands) the thermostat 1216 to an on state when user, i.e., in a vehicle, is at a second distance from the property 1210 (home location); figure 12; paragraph [0140]); and wherein the first distance is greater than the second distance (second distance is closer to the property (home location); figure 12; paragraph [0141]).

As per claim 4, Trundle discloses the method of claim 1, and further discloses wherein the settings comprise at least one of activating, deactivating, and changing a setting of at least one of an interior light, an exterior light, a security system, an interior entertainment system, an exterior entertainment system, a thermostat, and a door lock of the home automation system (user defined mode (settings) controls temperature (thermostat), light (interior and exterior light); paragraphs [0073], [0140], [0141]).

International application No.
PCT/US14/34098

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

-***-Continued from Previous Supplemental Box-***-

As per claim 5, Trundle discloses the method of claim 1, and further discloses wherein the at least one vehicle occupant comprises a first vehicle occupant (parent user; paragraph [0076]) and a second vehicle occupant (child user; paragraph [0076]), and further comprising: determining, by the microprocessor executable home automation module (242), a conflict between at least one setting of the first vehicle occupant and at least one setting of the second vehicle occupant (conflicting input (conflict) may occur between first action (setting) of parent user (first vehicle occupant) and second action (setting) of child user (second vehicle occupant); paragraph [0076]); determining, by the microprocessor executable home automation module (242), a first priority of the first vehicle occupant and a second priority of the second vehicle occupant (parent user (first vehicle occupant) has a higher priority (first priority) than child user, i.e. having lower priority (second priority); paragraph [0076]); when the first priority is greater than the second priority, generating, by the microprocessor executable home automation module (242), commands to implement the at least one setting of the first vehicle occupant (native monitoring application 242 may perform only the first action (setting) of parent user (first vehicle occupant); paragraph [0076]); and when the second priority is greater than the first priority, generating, by the microprocessor executable home automation module (242), commands to implement the at least one setting of the second vehicle occupant (system 200 resolves the conflict based on user priority, i.e., when child user has a higher priority, the action (setting) of child user is performed ; paragraphs [0076], [0154]).

As per claim 7, Trundle discloses the method of claim 1, and further discloses further comprising: receiving, by the microprocessor executable home automation module (242), a number of occupants in the home location from the home automation system (alert 1040 indicating a number of occupant is sent to users, i.e., via mobile device 240 and native monitoring application 242; figures 2, 10; paragraph [0125]); determining, by the microprocessor executable home automation module (242), that the home location is occupied (presence of pet 1018 in the home is determined from alert 1040, i.e., via native monitoring application 242; figure 10; paragraph [0124]), wherein: during the retrieving, the microprocessor executable home automation module (242) retrieves alternate settings from the account of the at least one vehicle occupant (alert 1040 includes input control 1050 (alternate setting) that automatically control the thermostat 1014 for the pet's comfort, i.e., retrieving input control 1050 by native monitoring application 242 from user's account; figure 10; paragraph [0130]); and during the generating, the microprocessor executable home automation module (242) generates commands to implement the alternate settings (when the user activates input control 1050, i.e., generating commands, thermostat 1014 maintains a temperature comfortable for the pet; paragraph [0130]).

As per claim 9, Trundle discloses the method of claim 1, and further discloses further comprising: receiving, by the home automation system (control unit 210), the commands; and configuring features of the home automation system in response to receiving the commands (communicate with module 230 to perform thermostat control, i.e., receiving commands to configure thermostat; figure 2; paragraph [0049]).

As per claim 10, Trundle discloses the method of claim 1, and further discloses further comprising determining, by the microprocessor executable home automation module (242), that the vehicle is leaving the one of the at least one home locations (detects when user is moving away (leaving) from a home, i.e., automobile leaving home; paragraphs [0065], [0139]); connecting, by the microprocessor executable home automation module (242), to the home automation system of the one of the at least one home locations (mobile devices 240, i.e., having native monitoring application 242 thereon, communicate with control unit 210 (home automation system), at a monitored property (home location); figure 2; paragraphs [0055], [0062]); receiving, by the microprocessor executable home automation module (242), the state of features of the home automation system (enables users to monitor; paragraph [0063]); retrieving, by the microprocessor executable home automation module (242), from the account of the at least one vehicle occupant, departure settings for features of the home automation system (tracks mobile device's physical location for use to control settings (departure setting) when user is going away from home; paragraph [0065]); generating, by the microprocessor executable home automation module (242), commands to implement the departure settings (tracks mobile device's physical location for use to control (generating commands) settings (departure settings) when user is going away from home; paragraph [0065]); and sending, by the microprocessor executable home automation module, the commands to the home automation system (mobile devices 240, i.e., having native monitoring application 242 thereon, communicate with (send commands to) control unit 210 (home automation system); figure 2; paragraphs [0055], [0062]).

As per claim 12, Trundle discloses a non-transitory computer readable medium having instructions stored thereon that, when executed by a microprocessor executable home automation module (242), perform a method comprising: receiving an identity (permission system based on user-specific passcodes, i.e., receiving an identity; paragraph [0075]) of at least one occupant (user; paragraph [0075]) of a vehicle (automobile (vehicle); paragraph [0139]); accessing an account of the at least one vehicle occupant, the account defining at least one home location for the identified vehicle occupant (communicating with control unit 210 (home automation system), at a monitored property (home location), i.e., an account; figure 2; paragraphs [0055], [0062]); connecting to a home automation system of one of the at least one home locations (communicating with control unit 210 (home automation system), at a monitored property (home location); figure 2; paragraphs [0055], [0062]); receiving a state of features of the home automation system (native monitoring application 242 enables users to monitor; paragraph [0063]); retrieving, from the account of the at least one vehicle occupant, arrival settings for features of the home automation system (tracking mobile device's physical location for use to control settings (arrival settings) when user is going toward home; paragraph [0065]); generating commands to implement the arrival settings (tracking mobile device's physical location for use to control (generating commands) settings when user is going toward home; paragraph [0065]); and sending the commands to the home automation system (communicating with (send commands to) control unit 210 (home automation system); figure 2; paragraphs [0055], [0062]).

-***-Continued Within the Next Supplemental Box-***-

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34098

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

-***-Continued from Previous Supplemental Box-***-

As per claim 13, Trundle discloses the non-transitory computer readable medium of claim 12, and further discloses further comprising: sending a first set of commands to the home automation system when the vehicle is a first distance from the home location (system maintains (first set of commands) appliances in an off state when user, i.e., in a vehicle, is at a first distance from the property 1210 (home location); figure 12; paragraph [0140]); and sending a second set of commands to the home automation system when the vehicle is a second distance from the home location (system turns (second set of commands) the thermostat 1216 to an on state when user, i.e., in a vehicle, is at a second distance from the property 1210 (home location); figure 12; paragraph [0140]), wherein the first distance is greater than the second distance (second distance is closer to the property (home location); figure 12; paragraph [0141]).

As per claim 14, Trundle discloses the non-transitory computer readable medium of claim 12, and further discloses further comprising: receiving an identity of a first vehicle occupant and a second vehicle occupant (system identifies parent user (first vehicle occupant) and child user (second vehicle occupant); paragraph [0076]) determining a conflict between at least one setting of the first vehicle occupant and at least one setting of the second vehicle occupant (conflicting input (conflict) may occur between first action (setting) of parent user (first vehicle occupant) and second action (setting) of child user (second vehicle occupant); paragraph [0076]); determining a first priority of the first vehicle occupant and a second priority of the second vehicle occupant (parent user (first vehicle occupant) has a higher priority (first priority) than child user, i.e. having lower priority (second priority); paragraph [0076]); when the first priority is greater than the second priority, generating commands to implement the at least one setting of the first vehicle occupant (native monitoring application 242 may perform only the first action (setting) of parent user (first vehicle occupant); paragraph [0076]); and when the second priority is greater than the first priority, generating commands to implement the at least one setting of the second vehicle occupant (system 200 resolves the conflict based on user priority, i.e., when child user has a higher priority, the action (setting) of child user is performed ; paragraphs [0076], [0154]).

As per claim 15, Trundle discloses a vehicle control system of a vehicle, comprising: a memory; and a microprocessor (mobile devices 240; paragraph [0043]) in communication with the memory (mobile devices 240 is a smart phone; paragraph [0054]), the microprocessor operable to execute a home automation module (mobile devices 240 can host native monitoring applications 242 (home automation module); figure 2; paragraph [0054]), the home automation module operable to: receive an identity (permission system based on user-specific passcodes, i.e., receiving an identity; paragraph [0075]) of at least one occupant (user; paragraph [0075]) of the vehicle (automobile (vehicle); paragraph [0139]); access an account of the at least one vehicle occupant, the account defining at least one home location for the identified vehicle occupant (communicating with control unit 210 (home automation system), at a monitored property (home location), i.e., an account; figure 2; paragraphs [0055], [0062]); connect to a home automation system of one of the at least one home locations (communicating with control unit 210 (home automation system), at a monitored property (home location); figure 2; paragraphs [0055], [0062]); receive a state of features of the home automation system (native monitoring application 242 enables users to monitor; paragraph [0063]); retrieve, from the account of the at least one vehicle occupant, arrival settings for features of the home automation system (tracking mobile device's physical location for use to control settings (arrival settings) when user is going toward home; paragraph [0065]); generate a first set of commands and a second set of commands to implement the arrival settings (a first set and second set of settings are shown at times 1 and 2, i.e., generating commands; figure 12; paragraphs [0073], [0140], [0141]); send the first set of commands to the home automation system (at time 1, monitoring system maintains thermostat 1216 in an off setting, i.e., sending first set of commands to control unit 210; figure 12; paragraph [0140]) when the vehicle is a first distance from the home location (time 1, figure 12); and send the second set of commands to the home automation system (monitoring system turns the thermostat 1216 on, i.e., sending second set of commands to controller unit 210; figure 12; paragraph [0141]) when the vehicle is a second distance from the home location (time 2, figure 12), wherein the first distance is greater than the second distance (time 1 is greater than time 2; figure 12).

Claims 6 and 11 lack an inventive step under PCT Article 33(3) as being obvious over Trundle.

As per claim 6, Trundle discloses the method of claim 5. Trundle does not disclose wherein when the first vehicle occupant is identified as a driver, the first priority is greater than the second priority. Trundle does disclose wherein when the first vehicle occupant is identified as a parent (parent user (first vehicle occupant) is identified by permission system; paragraph [0075]), the first priority is greater than the second priority (parent user has higher priority (first priority) than the child user having lower priority (second priority); paragraph [0076]). In order to control a home system based on automobile occupancy (Trundle, paragraphs [0139], [0159]), it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify Trundle's home automation module to incorporate identifying the driver because it is commonly known in the art that parents in a vehicle are frequently the driver, as opposed to the children. Furthermore, one of ordinary skill in the art would have recognized that identifying the driver of a vehicle is the functional equivalent of identifying the parent, and only routine skill in the art is needed to select from known and functionally equivalent structures.

-***-Continued Within the Next Supplemental Box-***-

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US14/34098

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:
-***-Continued from Previous Supplemental Box-***-

As per claim 11, Trundle discloses the method of claim 1, and further discloses wherein identifying the at least one vehicle occupant comprises: identifying facial features associated with the at least one vehicle occupant via at least one image sensor (system 200 may process the image data (i.e., via an image sensor) using facial type recognition technique to identify an user; paragraph [0148]); determining whether the identified facial features associated with the at least one vehicle occupant match user characteristics stored in a memory (system 200 may process the image data (identified facial features) using facial type recognition technique, i.e., matching user characteristics, to identify an user; paragraph [0148]), and identifying the at least one vehicle occupant further comprises: prompting the at least one vehicle occupant for identification information; receiving identification information from the at least one vehicle occupant; and storing the identification information received from the at least one vehicle occupant in the memory (system 200 determines an identity of an user based on a user-specific code (identification information), i.e., prompting, receiving, and storing user-specific code; paragraph [0149]). Trundle does not disclose when the identified facial features associated with the at least one vehicle occupant do not match the user characteristics stored in the memory, identifying the at least one vehicle occupant further. In order to determine an identity of the user (Trundle, paragraph [0149]), it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Trundle's method to incorporate further identification using identification information when the identified facial features do not match the user characteristics stored in the memory, since it was known in the art facial recognition identification can fail due to inconsistent appearance of the user such as wearing eyeglasses and hats, and different codes can be assigned to different users to detect user identity (Trundle, paragraph [0149]).

Claims 1, 4 lack an inventive step under PCT Article 33(3) as being obvious over US 2013/0083805 A1 (LU).

As per claim 1, Lu discloses a method, comprising: receiving, by a microprocessor executable home automation module (web page of a Smart Gateway Power Controller (SGPC); paragraph [0123]), an identity of at least one occupant of a vehicle (user (vehicle occupant) opens SGPC with a smartphone using security information (identity); paragraph [0123]); accessing, by the microprocessor executable home automation module, an account of the at least one occupant (SGPC requests Home-bound content (HBC) server (account) with the context of the interactions with consumers (occupant); paragraph [0241]), the account defining at least one home location for the vehicle occupant (context of interaction includes the location (home location) of the device, i.e., of the consumer; paragraphs [0241]-[0245]); connecting, by the microprocessor executable home automation module, to a home automation system of one of the at least one home locations (SGPC is connected with a consumer device (home automation system), i.e., at home location; paragraph [0233]) ; receiving, by the microprocessor executable home automation module, a state of features of the home automation system (SGPC shows switch status (state of features) of the connected consumer devices (home automation system); paragraph [0124]); retrieving, by the microprocessor executable home automation module, from the account of the at least one vehicle occupant, arrival settings for features of the home automation system (user (vehicle occupant) clicks a button to choose a time based or event based schedule (arrival setting); paragraphs [0125], [0232]); generating, by the microprocessor executable home automation module, commands to implement the arrival settings; and sending, by the microprocessor executable home automation module, the commands to the home automation system (user clicks a button to turn on or off a switch, i.e., generating and sending commands to SGPC; paragraph [0125]). Lu does not disclose wherein the occupant is a occupant of a vehicle. In order to access the SGPC outside the home's WiFi network (Lu; paragraph [0205]), it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to utilize Lu's smartphone from within a car, since it was known in the art that smartphones are operable inside a vehicle.

As per claim 4, Lu discloses the method of claim 1, and further discloses wherein the settings comprise at least one of activating, deactivating, and changing a setting of at least one of an interior light, an exterior light, a security system, an interior entertainment system, an exterior entertainment system, a thermostat, and a door lock of the home automation system (SGPC controls a TV (interior entertaining system) and light (interior light); paragraph [0165]).

Claim 8 lacks an inventive step under PCT Article 33(3) as being obvious over Trundle in view of the article "Meet Samsung's version of Apple AirPlay" from CNET (hereinafter "CNET").

As per claim 8, Trundle discloses the method of claim 1. Trundle does not disclose determining, by the microprocessor executable home automation module, one of an audio channel and a video channel presenting a media item to the at least one vehicle occupant; and during the generating, generating commands to tune an entertainment system of the home automation system to one of the audio channel and the video channel presenting the media item to the at least one vehicle occupant. CNET discloses determining, by the microprocessor executable home automation module (Samsung Galaxy S III; page 7, paragraph 2), one of an audio channel and a video channel presenting a media item to the at least one vehicle occupant (I (vehicle occupant) successfully listened to music (audio channel) and HD video streamed (video channel), i.e., determining audio and video channel; page 8, paragraph 1); and during the generating, generating commands to tune an entertainment system of the home automation system to one of the audio channel and the video channel presenting the media item to the at least one vehicle occupant (AllShare Cast Hub (home automation system) mirrors what is displayed (media item) on Samsung handset's screen to a compatible HDTV (entertainment system), i.e., tuning video channel; page 4, paragraph 1). In order to play music and video (Trundle; paragraph [0054]), it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Trundle's home automation module to incorporate CNET's video mirroring functionality because, as CNET discloses, videos on a mobile device can be played on a 55-inch HDTV, to increase video and audio quality and entertainment (CNET, page 8, paragraph 1).

Claims 1-15 have industrial applicability as defined by PCT Article 33(4) because the subject matter can be made or used in industry.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing *(day/month/year)*	03 SEP 2014
Applicant's or agent's file reference: 6583-565-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No.: PCT/US2014/034103	International filing date *(day/month/year)*: 15 April 2014
Applicant: FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-565-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034103	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

International application No.
PCT/US2014/034103

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G07C 5/08 (2014.01)
USPC - 701/33.4
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) - G07C 5/00, 5/08 (2014.01)
USPC - 701/32.1, 33.4, 533

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
CPC - G07C 5/008, 5/08 (2014.02)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
PatBase, Google Patents, Google

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 2010/0087984 A1 (JOSEPH) 08 April 2010 (08.04.2010) entire document	1-15
A	US 2011/0184642 A1 (ROTZ et al) 28 July 2011 (28.07.2011) entire document	1-15
A	US 2004/0225557 A1 (PHELAN et al) 11 November 2004 (11.11.2004) entire document	1-15
A	US 2004/0153356 A1 (LOCKWOOD et al) 05 August 2004 (05.08.2004) entire document	1-15
A	US 2005/0065716 A1 (TIMKO et al) 24 March 2005 (24.03.2005) entire document	1-15

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

USPC - 701/33.4

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- [X] Box No. I Basis of the opinion
- [ ] Box No. II Priority
- [ ] Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- [ ] Box No. IV Lack of unity of invention
- [X] Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- [ ] Box No. VI Certain documents cited
- [ ] Box No. VII Certain defects in the international application
- [ ] Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034103

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034103

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	5,10,13	YES
	Claims	1-4,6-9,11,12,14,15	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-4,6-9,11,12,14,15 lack novelty under PCT Article 33(2) as being anticipated by Joseph.

Regarding claims 1,11,14,15, Joseph teaches a driver facts system [claim 1], a driver facts management method [claims 11,14] (Systems, devices, and techniques for remotely tracking vehicle and driver behavior, [abstract]) and a non-transitory computer readable information storage media, having stored thereon instructions [claim 15] (central host computer system, [0026]) comprising: one or more systems that track user behavior, the user behavior including one or more of: one or more user actions and one or more user interactions with a vehicle (on-board vehicle monitoring device to gather information on vehicle diagnostics, location, and/or acceleration/deceleration and wirelessly transmit some or all of the data to a central host computer system, [0026]); and a storage system adapted to store the user behavior (central host computer system, [0026]), wherein the tracked user behavior is associated with a driver and the storage system is capable of storing the tracked behavior for the driver from a plurality of vehicles (Information received at the host may be stored and compiled to create metrics for one or many drivers and/or vehicles, [0026]; fig.10; fig.11).

Regarding claim 2, Joseph teaches the one or more systems include one or more of: a vehicle control recognition module, an environmental control module, an object detection module (proximity sensor may be used to determine how close the vehicle is to another vehicle or another object in front of the vehicle, [0026]), a gesture recognition module and an infotainment monitoring module.

Regarding claim 3, Joseph teaches the storage system is stored on one or more of a user device, a remote device and a central repository (central host computer system, [0026]).

Regarding claim 4, Joseph teaches information from one or more vehicle sensors is also used to track user behavior (proximity sensor may be used to determine how close the vehicle is to another vehicle or another object in front of the vehicle wherein such information may be useful in determining whether a driver is following the preceding vehicle in traffic too closely, [0026]).

Regarding claim 6, Joseph teaches the storage system that stores the user behavior is interrogatable by one or more of law enforcement, a vehicle manufacturer, a vehicle dealer, a vehicle repair shop, an insurance company, a warranty company, and another user (Following the driver and vehicle data being compiled at block 1130, some or all these statistics may be displayed to the user, at block 1140, [0077]).

Regarding claim 7, Joseph teaches the user behavior is used as input to determine whether an intended vehicle route should be modified (a driver may take meandering Routes, [0003]; [therefore it is interpreted that the system may recognize meandering routes and recognize better routes]).

Regarding claim 8, Joseph teaches the user behavior is used as input to determine whether an intended vehicle route should be modified in conjunction with one or more of: traffic information, weather information, prior routes, purchase information, patterns (a driver may take meandering Routes, [0003]; [therefore it is interpreted that the system may recognize meandering routes and recognize better routes]), preferences, prior route modification decisions, and user input.

Regarding claim 9, Joseph teaches the tracked user behavior is automatically forwarded to one or more of law enforcement, a vehicle manufacturer, a vehicle dealer, a vehicle repair shop, an insurance company, a warranty company, and another user (Following the driver and vehicle data being compiled at block 1130, some or all these statistics may be displayed to the user, at block 1140, [0077]).

Regarding claim 12, Joseph teaches the tracking is performed by one or more of: a vehicle control recognition module, an environmental control module, an object detection module (proximity sensor may be used to determine how close the vehicle is to another vehicle or another object in front of the vehicle, [0026]), a gesture recognition module and an infotainment monitoring module.

Claims 5,10,13 lack an inventive step under PCT Article 33(3) as being obvious over Joseph.

Regarding claim 5, Joseph does not disclose disabling of the tracking of user behavior is prohibited. However, Joseph does disclose the invention may be used to prevent misuse of a vehicle by a driver ([0003]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to prohibit disabling of the tracking systems in order to ensure a driver cannot circumvent the safeguards.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034103

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Regarding claim 10, Joseph does not disclose the user behavior is not modifiable by the user. However, Joseph does disclose the invention may be used to prevent misuse of a vehicle by a driver ([0003]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to ensure a user cannot modify user behavior in order to ensure a driver cannot circumvent the safeguards.

Regarding claim 13, Joseph teaches the storage system is stored on one or more of a user device, a remote device and a central repository (central host computer system, [0026]), information from one or more vehicle sensors is also used to track user behavior (Information received at the host may be stored and compiled to create metrics for one or many drivers and/or vehicles, [0026]; fig.10; fig.11), the storage system that stores the user behavior is interrogatable by one or more of law enforcement, a vehicle manufacturer, a vehicle dealer, a vehicle repair shop, an insurance company, a warranty company, and another user (Following the driver and vehicle data being compiled at block 1130, some or all these statistics may be displayed to the user, at block 1140, [0077]), the user behavior is used as input to determine whether an intended vehicle route should be modified, the user behavior is used as input to determine whether an intended vehicle route should be modified in conjunction with one or more of: traffic information, weather information, prior routes, purchase information, patterns (a driver may take meandering Routes, [0003]; [therefore it is interpreted that the system may recognize meandering routes and recognize better routes]), preferences, prior route modification decisions, and user input, and/or the tracked user behavior is automatically forwarded to one or more of law enforcement, a vehicle manufacturer, a vehicle dealer, a vehicle repair shop, an insurance company, a warranty company, and another user (Following the driver and vehicle data being compiled at block 1130, some or all these statistics may be displayed to the user, at block 1140, [0077]), but does not explicitly teach disabling of the tracking of user behavior is prohibited. However, Joseph does disclose the invention may be used to prevent misuse of a vehicle by a driver ([0003]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to prohibit disabling of the tracking systems in order to ensure a driver cannot circumvent the safeguards.

Claims 1-15 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing *(day/month/year)*	25 AUG 2014
Applicant's or agent's file reference: 6583-544-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No.: PCT/US2014/034099	International filing date *(day/month/year)*: 15 April 2014
Applicant: FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-544-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034099	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034099

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - B60N 2/02 (2014.01)
USPC - 701/36
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) - B60N 2/02 (2014.01)
USPC - 700/17; 701/36, 49

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
CPC - B60N 2/0248, 2/0296 (2014.02)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
PatBase, Google Patents, Google

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X ----- Y	US 2009/0284359 A1 (HUANG et al) 19 November 2009 (19.11.2009) entire document	1-4,6,7,11,12,14,15 ----- 5,8-10,13
Y	US 2005/0283284 A1 (GRENIER et al) 22 December 2005 (22.12.2005) entire document	5,8,13
Y	US 2010/0222939 A1 (NAMBURU et al) 02 September 2010 (02.09.2010) entire document	9,10,13
A	US 2003/0204290 A1 (SADLER et al) 30 October 2003 (30.10.2003) entire document	1-15
A	US 2011/0093438 A1 (POULSEN) 21 April 2011 (21.04.2011) entire document	1-15

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034099

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034099

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	4-6,8-10,13	YES
	Claims	1-3,7,11,12,14,15	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-3,7,11,12,14,15 lack novelty under PCT Article 33(2) as being anticipated by Huang et al., hereinafter referred to as Huang.

Regarding claims 1,11, Huang teaches a system [claim 1] and a method [claim 11] to access one or more user profiles that govern one or more vehicle functions (system and method for identifying a person as an authorized driver of a vehicle, [abstract]; list of drivers authorized to drive the vehicle, [0034]; list of driver profiles, [0007]) comprising: a processor and verification module (HVI 14 includes a processing unit that processes signals from the controller 10 and signals provided by a driver intending to enter or drive the vehicle, [0022]) adapted to verify, using one or more of biometric information, gesture recognition, facial recognition and device identification information, that a user has authority to access the one or more user profiles, the one or more profiles being stored in one or more of a vehicle, a cloud and a communications device (the driver reselection page can provide the driver with an option to select a new driver from a list of drivers authorized to drive the vehicle wherein the HVI 14 provides the driver with an option to validate the selection of the driver using an identification code input wherein the identification code cam be in the form of biometric characteristic recognition, [0034]); and an edit module adapted to allow the user to make one or more edits to the one or more user profiles (the driver profile identified by the driver ID controller 10 is updated with the changed set of attributes, i.e. the stored set of attributes is replaced by the changed set of attributes, [0046]).

Regarding claims 14,15, Huang teaches a system [claim 14] and a non-transitory computer readable information storage media, having stored thereon instructions [claim 15] to access one or more user profiles that govern one or more vehicle functions (system and method for identifying a person as an authorized driver of a vehicle, [abstract]; list of drivers authorized to drive the vehicle, [0034]; list of driver profiles, [0007]; HVI 14 includes a processing unit that processes signals from the controller 10 and signals provided by a driver intending to enter or drive the vehicle, [0022]) comprising: means for verifying, using a processor, one or more of biometric information, gesture recognition, facial recognition and device identification information, that a user has authority to access the one or more user profiles, the one or more profiles being stored in one or more of a vehicle, a cloud and a communications device (the driver reselection page can provide the driver with an option to select a new driver from a list of drivers authorized to drive the vehicle wherein the HVI 14 provides the driver with an option to validate the selection of the driver using an identification code input wherein the identification code cam be in the form of biometric characteristic recognition, [0034]); and means for allowing the user to make one or more edits to the one or more user profiles (the driver profile identified by the driver ID controller 10 is updated with the changed set of attributes, i.e. the stored set of attributes is replaced by the changed set of attributes, [0046]).

Regarding claims 2,12, Huang teaches one or more templates on which the one or more user profiles are based (the HVI 14 provides the set of predefined fields to the driver ID controller 10, [0040]; the driver ID controller 10 creates a temporary driver profile to temporarily store the changed set of attributes, [0043]; the driver ID controller 10 also retrieves a driver ID corresponding to a last-known authorized driver or one default authorized driver of the vehicle or a "guest" driver with default settings, [0030]).

Regarding claim 3, Huang teaches the verification module further receives a request to access a specific user profile, the user profile storing preferences for the user that govern one or more of vehicle functions, vehicle preferences and vehicle infotainment settings (the LCM 18 retrieves a set of attributes stored for the corresponding driver ID and the LCM 18 adjusts the corresponding components of the vehicle according to the set of attributes retrieved, [0036]; Each LCM 18 controls an associated component of the vehicle, such as door locks 20, rear-view mirrors 22, a driving seat 24, a hand wheel 26, a radio 28 and a climate control system 30, [0022]).

Regarding claim 7, Huang teaches the one or more user profiles include one or more of: vehicle preferences, seat settings, HVAC settings, recorded settings, geographic location information, mobile device information, mobile device electronic addresses, Internet browsing history and content, application store selections, user settings, enabled features, disabled features, private information, social network information, user presence information, user business account information, secure data, biometric information, audio information from on board microphones, video information from on board cameras, Internet browsing history and browsed content from using an on board computer, local area network settings, electronic map information, user purchasing preferences, user driving behavior and preferences, user behavior with respect to a selected object, user socioeconomic status, user residence and business addresses, user communication devices and electronic addresses therefor, user biometric information and other user identification information, user family members and, for each family member, the foregoing information (Each LCM 18 controls an associated component of the vehicle, such as door locks 20, rear-view mirrors 22, a driving seat 24, a hand wheel 26, a radio 28 and a climate control system 30, [0022]).

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/US2014/034099

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Claims 4,6 lack an inventive step under PCT Article 33(3) as being obvious over Huang.

Regarding claims 4,6, Huang does not disclose an encryption module adapted to perform authentication of the user [claim 4] wherein the one or more user profiles are at least partially encrypted [claim 6]. However, it is extremely well known to perform encryption during user authentication. It would have been obvious to one of ordinary skill in the art at the time of the invention to encrypt a user profile and use an encryption module to authenticate a user since the provision of adjustability, where needed, is a matter of routine skill in the art and in order to ensure the security of a vehicle is not compromised.

Claims 5,8 lack an inventive step under PCT Article 33(3) as being obvious over Huang in view of Grenier et al., hereinafter referred to as Grenier.

Regarding claim 5, Huang does not disclose a profile subsystem adapted to resolve conflicts between the one or more edits and the one or more user profiles. However, Grenier is in the field of managing a fleet of vehicles and user profiles ([abstract]) and further teaches a profile subsystem adapted to resolve conflicts between one or more edits and one or more user profiles (Conflict resolution data assists the system 100 manage technological as well as operational conflicts between different services 106 and devices 104, [0056-0057]; [0079]). It would have been obvious to one of ordinary skill in the art at the time of the invention to provide conflict resolution services as taught by Grenier in the invention of Huang in order to ensure two services which require the use of the same device do not overlap (Grenier, [0079]).

Regarding claim 8, Huang teaches at least one of the one or more user templates (the HVI 14 provides the set of predefined fields to the driver ID controller 10, [0040]; the driver ID controller 10 creates a temporary driver profile to temporarily store the changed set of attributes, [0043]; the driver ID controller 10 also retrieves a driver ID corresponding to a last-known authorized driver or one default authorized driver of the vehicle or a "guest" driver with default settings, [0030]), but does not explicitly teach the template is based on a global standard template, wherein the global standard template is common among one or more of vehicle manufacturers, company vehicles and a geographic area. However, Grenier does disclose services for a vehicle or fleet of vehicles can be ordered, renewed, modified, managed, configured, and/or cancelled through a common interface ([abstract]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide a global standard template common to company vehicles in order to allow a fleet of vehicles to be managed (Grenier, [abstract]).

Claims 9,10 lack an inventive step under PCT Article 33(3) as being obvious over Huang in view of Namburu et al., hereinafter referred to as Namburu.

Regarding claims 9,10, Huang teaches device-to-car transfer (transceiver 12 receives an entry signal from an entry device associated with the vehicle, such as a key fob, an RFID device, etc., and sends the received signal to the driver ID controller 10 for identification, [0022]; local controller 36, in turn, reports to the driver ID controller 10 via the BCM 16 through a communications network 34 wherein the controller 10 stores the driver ID and setting information in a table, where each set of attributes corresponds to an authorized driver of the vehicle, [0025]), but does not disclose the one or more user profiles can be transferred from one or more of car-to-car, device-to-car, car-to-device, car-to-cloud, and cloud-to-car [claim 9] wherein the device is a mobile communications device [claim 10]. However, Namburu is in the field of managing a vehicle ([abstract]) and further teaches one or more user profiles can be transferred from one or more of car-to-car, device-to-car, car-to-device, car-to-cloud, and cloud-to-car wherein the device is a mobile communications device (in addition to the ID code, the remote device may transmit user profile data to the vehicle, [0031]). It would have been obvious to one of ordinary skill in the art at the time of the invention to perform device-to-car transfer as taught by Namburu in the invention of Huang in order to allow a user to transfer profile information to multiple vehicles.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/US2014/034099

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Claim 13 lacks an inventive step under PCT Article 33(3) as being obvious over Huang in view of Grenier and further in view of Namburu.

Regarding claim 13, modified Huang teaches the one or more user profiles are at least partially encrypted, as per above discussion, and Huang further teaches receiving a request to access a specific user profile (the driver reselection page can provide the driver with an option to select a new driver from a list of drivers authorized to drive the vehicle wherein the HVI 14 provides the driver with an option to validate the selection of the driver using an identification code input wherein the identification code cam be in the form of biometric characteristic recognition, [0034]), the user profile storing preferences for the user that govern one or more of vehicle functions, vehicle preferences and vehicle infotainment settings (the LCM 18 retrieves a set of attributes stored for the corresponding driver ID and the LCM 18 adjusts the corresponding components of the vehicle according to the set of attributes retrieved, [0036]; Each LCM 18 controls an associated component of the vehicle, such as door locks 20, rear-view mirrors 22, a driving seat 24, a hand wheel 26, a radio 28 and a climate control system 30, [0022]), performing authentication of the user (the driver reselection page can provide the driver with an option to select a new driver from a list of drivers authorized to drive the vehicle wherein the HVI 14 provides the driver with an option to validate the selection of the driver using an identification code input wherein the identification code cam be in the form of biometric characteristic recognition, [0034]), wherein the one or more user profiles include one or more of: vehicle preferences, seat settings, HVAC settings, recorded settings, geographic location information, mobile device information, mobile device electronic addresses, Internet browsing history and content, application store selections, user settings, enabled features, disabled features, private information, social network information, user presence information, user business account information, secure data, biometric information, audio information from on board microphones, video information from on board cameras, Internet browsing history and browsed content from using an on board computer, local area network settings, electronic map information, user purchasing preferences, user driving behavior and preferences, user behavior with respect to a selected object, user socioeconomic status, user residence and business addresses, user communication devices and electronic addresses therefor, user biometric information and other user identification information, user family members and, for each family member, the foregoing information (Each LCM 18 controls an associated component of the vehicle, such as door locks 20, rear-view mirrors 22, a driving seat 24, a hand wheel 26, a radio 28 and a climate control system 30, [0022]), but does not disclose resolving conflicts between the one or more edits and the one or more user profiles wherein in at least one of the one or more user templates is based on a global standard template, wherein the global standard template is common among one or more of vehicle manufacturers, company vehicles and a geographic area, wherein the one or more user profiles can be transferred from one or more of car-to-car, device-to-car, car-to-device, car-to-cloud, and cloud-to-car, and/or wherein the device is a mobile communications device. However, Grenier is in the field of managing a fleet of vehicles and user profiles ([abstract]) and further teaches a profile subsystem adapted to resolve conflicts between one or more edits and one or more user profiles (Conflict resolution data assists the system 100 manage technological as well as operational conflicts between different services 106 and devices 104, [0056-0057]; [0079]). It would have been obvious to one of ordinary skill in the art at the time of the invention to provide conflict resolution services as taught by Grenier in the invention of Huang in order to ensure two services which require the use of the same device do not overlap (Grenier, [0079]). Modified Huang still does not disclose at least one of the one or more user templates is based on a global standard template, wherein the global standard template is common among one or more of vehicle manufacturers, company vehicles and a geographic area, wherein the one or more user profiles can be transferred from one or more of car-to-car, device-to-car, car-to-device, car-to-cloud, and cloud-to-car, and/or wherein the device is a mobile communications device. However, Namburu is in the field of managing a vehicle ([abstract]) and further teaches one or more user profiles can be transferred from one or more of car-to-car, device-to-car, car-to-device, car-to-cloud, and cloud-to-car, and/or wherein the device is a mobile communications device (in addition to the ID code, the remote device may transmit user profile data to the vehicle, [0031]). It would have been obvious to one of ordinary skill in the art at the time of the invention to perform device-to-car transfer as taught by Namburu in the invention of Huang in order to allow a user to transfer profile information to multiple vehicles. Modified Huang still does not disclose at least one of the one or more user templates is based on a global standard template, wherein the global standard template is common among one or more of vehicle manufacturers, company vehicles and a geographic area. However, Grenier does disclose services for a vehicle or fleet of vehicles can be ordered, renewed, modified, managed, configured, and/or cancelled through a common interface ([abstract]). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide a global standard template common to company vehicles in order to allow a fleet of vehicles to be managed (Grenier, [abstract]).

Claims 1-15 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing *(day/month/year)*	22 AUG 2014
Applicant's or agent's file reference: 6583-543-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No.: PCT/US2014/034092	International filing date *(day/month/year)*: 15 April 2014
Applicant: FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   - ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   - ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-543-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034092	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 2 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☐ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 2

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034092

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - B60R 22/00 (2014.01)
USPC - 701/49
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) - B60R 22/00; E05F 15/00; G05D 1/00, 3/00 (2014.01)
USPC - 701/1, 36, 45, 49

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
CPC - B60N 2/0248, 2/0244, 2/0232, 2/0252 (2014.02)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
Orbit, Google Scholar,

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 2005/0261815 A1 (COWELCHUK et al) 24 November 2005 (24.11.2005) entire document	1-15
A	US 2010/0036560 A1 (WRIGHT et al) 11 February 2010 (11.02.2010) entire document	1-15
A	US 2010/0087987 A1 (HUANG et al) 08 April 2010 (08.04.2010) entire document	1-15
A	US 2012/0053793 A1 (SALA et al) 01 March 2012 (01.03.2012) entire document	1-15

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

USPC - 701/49

Applicant FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034092

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034092

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	3 and 12	YES
	Claims	1-2, 4-11 and 13-15	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-15	NO
Industrial applicability (IA)	Claims	1-15	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-2, 4-11 and 13-15 lack novelty under PCT Article 33(2) as being anticipated by Cowelchuk et al. (US 2005/0261815 A1; hereinafter Cowelchuk).

Regarding claim 1, Cowelchuk discloses a method, comprising: receiving information associated with a user (Paragraph [0012]-[0013] and [0029]; The invention is to a system of receiving and storing custom user vehicle settings into one of multiple user profiles); determining whether at least some of the received information qualifies as user profile data (Paragraphs [0022]-[0023] and [0028]-[0029]; the system is equipped with various sensors for sensing driving conditions. Some of this sensed information such as mirror and seat positions can be stored in user profile settings); and storing, based at least partially on determining that the at least some of the received information qualifies as user profile data, the user profile data in a profile data memory associated with the user (Paragraph [0028]-[0030]; some of the sensed data can be saved in user profile settings. With the information being stored and associated with a driver number (e.g. "Driver 1" through "Driver ") through a memory preset button).

Regarding claim 2. Cowelchuk discloses the method of claim 1, wherein the user profile data includes at least one of vehicle settings, user preferences, user speech, data input at a device associated with a vehicle, and stored information (Paragraphs [0015] and [0030]; the vehicle settings that can be stored and customized include mirror and seat positions, audio data, voice matching and temperature controls).

Regarding claim 4. Cowelchuk discloses the method of claim 1, further comprising: receiving a request to access the user profile data associated with the user from the profile data memory (Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number (e.g., Driver 1 through Driver n)); determining whether the request is made by an authorized source (Paragraph [0030]; the system can use voice, fingerprint, or retinal matching or other biometric identification technology to associate a user profile with a particular user); and providing access to the user profile data stored in the profile data memory when the request is made by the authorized source (Paragraph [0030]; the system can use voice, fingerprint, or retinal matching or other biometric identification technology to associate a user profile with a particular user. An authorized user can change, reset, delete or recall customizable settings as previously mentioned).

Regarding claim 5. Cowelchuk discloses the method of claim 1, further comprising: receiving modifying information associated with the user (Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number (e.g., Driver 1 through Driver n)); modifying the user profile data in the profile data memory associated with the user to include the modifying information associated with the user (Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number (e.g., Driver 1 through Driver n)); and storing the modified user profile data in the profile data memory associated with the user (Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number (e.g., Driver 1 through Driver n)).

Regarding claim 6. Cowelchuk discloses the method of claim 5, wherein modifying the user profile data includes at least one of overwriting data, deleting data, and adding data (Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number (e.g., Driver 1 through Driver n)).

Regarding claim 7. Cowelchuk discloses the method of claim 1, wherein prior to storing the user profile data the method further comprises: determining at least one category associated with information in the user profile data (Paragraphs [0011]-[0012]; the settings categories include driver seat positions, audio and video presets, rearview and side mirror positions, temperature control settings, seat belt height, steering wheel positions, accelerator/brake positions, light colors and intensity, airbag activation and many other categories of settings.); and selecting, based at least partially on the determined at least one category, a specific data field in the profile data memory for storing the user profile data, wherein the specific data field corresponds to the determined at least one category (Paragraphs [0011]-[0012] and Paragraph [0029]; the system has a control unit interface which stores one or more of the various settings for the one or more above mentioned parameters (categories) into a user profile).

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034092

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Regarding claim 8. Cowelchuk discloses the method of claim 1, further comprising: recognizing the user via one or more sensors associated with a vehicle (Paragraph [0030]; users can be recognized through voice, fingerprint, retinal, or other biometric sensors as well as through a key fob sensors or simply through a button sensor); and retrieving, from the profile data memory and based on the recognition, information in the user profile data associated with the user (Paragraphs [0030] and [0035]; the system can use voice, fingerprint, or retinal matching or other biometric identification technology to associate a user profile with a particular user. An authorized user can change, reset, delete or recall customizable settings stored in memory as previously mentioned).

Regarding claim 9. Cowelchuk discloses the method of claim 8, further comprising: configuring at least one setting of the vehicle based on the information retrieved from the profile data memory (Paragraph [0030]; through the driver identification device a user can depress a memory preset button to alert the control unit as to which settings the customizable parameters are to be recalled).

Regarding claim 10. Cowelchuk discloses a non-transitory computer readable medium having instructions stored thereon that, when executed by a processor (Paragraphs [0017] and [0033]; the system has processing means which are configured to read data from data sources (memory) or input devices to accomplish the invention means), perform a method comprising: receiving information associated with a user (Paragraph [0012]-[0013] and [0029]; The invention is to a system of receiving and storing custom user vehicle settings into one of multiple user profiles); determining whether at least some of the received information qualifies as user profile data (Paragraphs [0022]-[0023] and [0028]-[0029]; the system is equipped with various sensors for sensing driving conditions. Some of this sensed information such as mirror and seat positions can be stored in user profile settings); and storing, based at least partially on determining that the at least some of the received information qualifies as user profile data, the user profile data in a profile data memory associated with the user (Paragraph [0028]-[0030]; some of the sensed data can be saved in user profile settings. With the information being stored and associated with a driver number (e.g. "Driver 1" through "Driver ") through a memory preset button).

Regarding claim 11. Cowelchuk discloses the non-transitory computer readable medium of claim 10, wherein the user profile data includes at least one of vehicle settings, user preferences, user speech, data input at a device associated with a vehicle, and stored information (Paragraphs [0015] and [0030]; the vehicle settings that can be stored and customized include mirror and seat positions, audio data, voice matching and temperature controls).

Regarding claim 13. Cowelchuk discloses the non-transitory computer readable medium of claim 10, wherein prior to storing the user profile data the method further comprises: determining at least one category associated with information in the user profile data (Paragraphs [0011]-[0012]; the settings categories include driver seat positions, audio and video presets, rearview and side mirror positions, temperature control settings, seat belt height, steering wheel positions, accelerator/brake positions, light colors and intensity, airbag activation and many other categories of settings.); and selecting, based at least partially on the determined at least one category, a specific data field in the profile data memory for storing the user profile data, wherein the specific data field corresponds to the determined at least one category (Paragraphs [0011]-[0012] and Paragraph [0029]; the system has a control unit interface which stores one or more of the various settings for the one or more above mentioned parameters (categories) into a user profile).

Regarding claim 14. Cowelchuk discloses the non-transitory computer readable medium of claim 10, wherein the method further comprises: recognizing the user via one or more sensors associated with a vehicle (Paragraph [0030]; users can be recognized through voice, fingerprint, retinal, or other biometric sensors as well as through a key fob sensors or simply through a button sensor); retrieving, from the profile data memory and based on the recognition, information in the user profile data associated with the user (Paragraphs [0030] and [0035]; the system can use voice, fingerprint, or retinal matching or other biometric identification technology to associate a user profile with a particular user. An authorized user can change, reset, delete or recall customizable settings stored in memory as previously mentioned); and configuring at least one setting of the vehicle based on the information retrieved from the profile data memory (Paragraph [0030]; through the driver identification device a user can depress a memory preset button to alert the control unit as to which settings the customizable parameters are to be recalled).

Regarding claim 15. Cowelchuk discloses a user profile system (Paragraph [0012]-[0013] and [0029]; The invention is to a system of receiving and storing custom user vehicle settings into one of multiple user profiles), comprising: a profile identification module contained in a memory and executed by a processor of the user profile system Paragraphs [0028]-[0030]; users can depress a memory preset button associated with a driver number to change, reset or delete any settings, with the settings being stored in a driver number profile (e.g., Driver 1 through Driver n). Additionally Paragraphs [0017] and [0033]; the system has processing means which are configured to read data from data sources (memory) or input devices to accomplish the invention means), the profile identification module configured to receive information associated with a user (Paragraph [0012]-[0013] and [0029]; The invention is to a system of receiving and storing custom user vehicle settings into one of multiple user profiles), determine whether at least some of the received information qualifies as user profile data (Paragraphs [0022]-[0023] and [0028]-[0029]; the system is equipped with various sensors for sensing driving conditions. Some of this sensed information such as mirror and seat positions can be stored in user profile settings), and store, based at least partially on determining that the at least some of the received information qualifies as user profile data, the user profile data in a profile data memory associated with the user (Paragraph [0028]-[0030]; some of the sensed data can be saved in user profile settings. With the information being stored and associated with a driver number (e.g. "Driver 1" through "Driver ") through a memory preset button), wherein the information associated with the user includes input received at a device associated with a vehicle (Paragraphs [0028]-[0030]; through the driver identification device a user can depress a memory preset button to alert the control unit as to which settings the customizable parameters are to be recalled, changed, reset or deleted), and wherein the profile identification module is further configured to receive modifying information associated with the user, modify the user profile data in the profile data memory associated with the user to include the modifying information associated with the user, and store the modified user profile data in the profile data memory associated with the user (Paragraphs [0028]-[0030]; through the driver identification device a user can depress a memory preset button to alert the control unit as to which settings the customizable parameters are to be recalled, changed, reset or deleted).

Supplemental Box

In case **the space in any of the preceding boxes is not sufficient.**
Continuation of:

Claims 3 and 12 lack an inventive step under PCT Article 33(3) as being obvious over Cowelchuk et al. (US 2005/0261815 A1; hereinafter Cowelchuk).

Regarding claim 3. Cowelchuk discloses the method of claim 1, wherein determining whether at least some of the received information qualifies as user profile data further comprises: referring to rules stored in a memory, wherein the rules include matching information corresponding to user profile data (Paragraph [0030]; the user can input physical characteristics such as height, etc. and seat, pedal and mirror positions can be "matched" to preset positioning data that matches the input characteristic). Cowelchuk does not explicitly disclose determining, based at least partially on the rules, whether a match exists between the received information and the matching information corresponding to user profile data; and indicating, when the match exists, that the received information qualifies as user profile data. However it would be necessary that the system would need to match up the received parameter inputs to a corresponding profile memory area for storing settings related to each vehicle parameter (Paragraphs [0015] and [0030]; the vehicle settings that can be stored and customized include mirror and seat positions, audio data, voice matching and temperature controls among others). Further Cowelchuk does disclose playing a sound which is assigned to the various customized parameters and therefore a sound can indicate a customized parameter has been set/matched to the profile data (Paragraph [0036]; the user can select and assign a audio sound to each of the various customizable parameters). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to include determining, based at least partially on the rules, whether a match exists between the received information and the matching information corresponding to user profile data; and indicating, when the match exists, that the received information qualifies as user profile data in the invention of Cowelchuk, so the system can provide feedback to a driver or user that an action of operating a control is being carried out (Cowelchuk; Paragraph [0002]).

Regarding claim 12. Cowelchuk discloses the non-transitory computer readable medium of claim 10, wherein determining whether at least some of the received information qualifies as user profile data further comprises: referring to rules stored in a memory, wherein the rules include matching information corresponding to user profile data (Paragraph [0030]; the user can input physical characteristics such as height, etc. and seat, pedal and mirror positions can be "matched" to preset positioning data that matches the input characteristic). Cowelchuk does not explicitly disclose determining, based at least partially on the rules, whether a match exists between the received information and the matching information corresponding to user profile data; and indicating, when the match exists, that the received information qualifies as user profile data. However it would be necessary that the system would need to match up the received parameter inputs to a corresponding profile memory area for storing settings related to each vehicle parameter (Paragraphs [0015] and [0030]; the vehicle settings that can be stored and customized include mirror and seat positions, audio data, voice matching and temperature controls among others). Further Cowelchuk does disclose playing a sound which is assigned to the various customized parameters and therefore a sound can indicate a customized parameter has been set/matched to the profile data (Paragraph [0036]; the user can select and assign a audio sound to each of the various customizable parameters). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to include determining, based at least partially on the rules, whether a match exists between the received information and the matching information corresponding to user profile data; and indicating, when the match exists, that the received information qualifies as user profile data in the invention of Cowelchuk, so the system can provide feedback to a driver or user that an action of operating a control is being carried out (Cowelchuk; Paragraph [0002]).

Claims 1-15 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Commissioner:

The references cited on attached Form PTO/SB08 are being called to the attention of the Examiner.

☒ Copies of the cited non-patent and/or foreign references are enclosed herewith.

☐ Copies of the cited U.S. patents and/or patent applications are enclosed herewith.

☒ Copies of the cited U.S. patents/unpublished patent applications/patent application publications are not enclosed in accordance with 37 C.F.R. § 1.98(a).

☐ Copies of the cited references are not enclosed, in accordance with 37 C.F.R. § 1.98(d), because the references were cited by or submitted to the U.S. Patent and Trademark Office in prior application Serial No. _____ filed _____, which is relied upon for an earlier filing date under 35 U.S.C. § 120.

☐ To the best of applicants' belief, the pertinence of the foreign-language references is believed to be summarized in the attached English abstracts and/or in the figures, although applicants do not necessarily vouch for the accuracy of the translation.

☒ Examiner's attention is drawn to the following related applications:

- Serial No. 14/253,843 filed 04/15/2014 (Attorney's Ref. No. 6583-530)
- Serial No. 14/253,836 filed 04/15/2014 (Attorney's Ref. No. 6583-537)
- Serial No. 14/253,840 filed 04/15/2014 (Attorney's Ref. No. 6583-538)
- Serial No. 14/253,213 filed 04/15/2014 (Attorney's Ref. No. 6583-543)
- Serial No. 14/252,863 filed 04/15/2014 (Attorney's Ref. No. 6583-544)

☐ Other:_____

Submission of the above information is not intended as an admission that any item is citable under the statutes or rules to support a rejection, that any item disclosed represents analogous art, or that those skilled in the art would refer to or recognize the pertinence of any reference without the benefit of hindsight, nor should an inference be drawn as to the pertinence

ALL REFERENCES CONSIDERED EXCEPT WHERE LINED THROUGH. /A.D

of the references based on the order in which they are presented. Submission of this statement should not be taken as an indication that a search has been conducted, or that no better art exists.

It is respectfully requested that the cited information be expressly considered during the prosecution of this application and the references made of record therein.

FEES

☒	**37 CFR 1.97(b)**: No fee is believed due in connection with this submission, because the information disclosure statement submitted herewith is satisfied by one of the following conditions ("X" indicates satisfaction): ☐ Within three months of the filing date of a national application other than a continued prosecution application under 37 CFR 1.53(d), or ☐ Within three months of the date of entry of the national stage as set forth in § 1.491 in an international application, or ☒ Before the mailing date of a first Office Action on the merits, or ☐ Before the mailing of a first Office action after the filing of a request for continued examination under 37 CFR 1.114. Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970.
☐	**37 CFR 1.97(c)**: The information disclosure statement transmitted herewith is being filed after all the above conditions (37 CFR 1.97(b)), but before the mailing date of any one of the following conditions: (1) a final action under 37 C.F.R. 1.113, or (2) a notice of allowance under 37 C.F.R. 1.311, or (3) an action that otherwise closes prosecution in the application. This Information Disclosure Statement is accompanied by: ☐ A Certification (below) as specified by 37 C.F.R. 1.97(e). Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970. OR ☐ Please charge Deposit Account 19-1970 in the amount of $180.00 for the fee set forth in 37 C.F.R. 1.17(p) for submission of an information disclosure statement. Please credit any overpayment or charge any underpayment to Deposit Account 19-1970.
☐	**37 CFR 1.97(d)**: This Information Disclosure Statement is being submitted after the period specified in 37 CFR 1.97(c). ☐ This information Disclosure Statement includes a Certification (below) as specified by 37 C.F.R. 1.97(e) AND ☐ Applicants hereby requests consideration of the reference(s) disclosed herein. Please charge Deposit Account 19-1970 in the amount of $180.00 under 37 C.F.R. 1.17(p). Please credit any overpayment or charge any underpayment to Deposit Account 19-1970. Election to pay the fee should not be taken as an indication that applicant(s) cannot execute a certification.

Certification (37 C.F.R. 1.97(e))
(Applicable only if checked)

☐ The undersigned certifies that:

☐ Each item of information contained in the Information Disclosure Statement submitted herewith was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(1).

☐ A copy of the communication from the foreign patent office is enclosed.

OR

☐ No item of information contained in the Information Disclosure Statement submitted herewith was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, no item of information contained in the Information Disclosure Statement was known to any individual designated in 37 C.F.R. 1.56(c) more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(2).

Respectfully submitted,

SHERIDAN ROSS P.C.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

flexpatents@sheridanross.com
edocket@sheridanross.com

Office Action Summary	Application No. 14/253,204	Applicant(s) RICCI, CHRISTOPHER P.	
	Examiner ALEX C. DUNN	Art Unit 3663	AIA (First Inventor to File) Status Yes

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE *3* MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *4/15/2014*.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5)☒ Claim(s) *1-20* is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6)☐ Claim(s) _____ is/are allowed.

7)☒ Claim(s) *1-7,9,11-17,19 and 20* is/are rejected.

8)☒ Claim(s) *8,10 and 18* is/are objected to.

9)☐ Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☒ The drawing(s) filed on *4/15/2014* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☐ All b)☐ Some** c)☐ None of the:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

2) ☒ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date _____.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .

4) ☐ Other: _____.

1. The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

DETAILED ACTION

Claim Rejections - 35 USC § 102

2. In the event the determination of the status of the application as subject to AIA 35 U.S.C. 102 and 103 (or as subject to pre-AIA 35 U.S.C. 102 and 103) is incorrect, any correction of the statutory basis for the rejection will not be considered a new ground of rejection if the prior art relied upon, and the rationale supporting the rejection, would be the same under either status.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (a)(2) the claimed invention was described in a patent issued under section 151, or in an application for patent published or deemed published under section 122(b), in which the patent or application, as the case may be, names another inventor and was effectively filed before the effective filing date of the claimed invention.

4. Claims 1 – 20 are rejected under 35 U.S.C. 102(a)(2) as being anticipated by Lovitt et al., (20140028542).

5. (Claims 1 - 6, 11 - 15, 19 and 20): Lovitt discloses a method and system, comprising: determining a location inside a vehicle associated with a user (fig. 4; [0005 - 0006]); determining at least one vehicle control associated with the location inside the vehicle ([0010]); referring to a user profile memory associated with the user for vehicle control settings (abstract; figs. 1 and 5); and determining, based at least partially on the

vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle ([0019 - 0021]; [0027 - 0029]).

6. (Claims 7 and 16): Lovitt discloses a method and system, wherein determining the presence of the user inside the vehicle further comprises: detecting a person via at least one image sensor associated with the vehicle (fig. 1); identifying facial features associated with the person detected via the at least one image sensor ([0005 - 0007]); and determining whether the identified facial features associated with the person match user characteristics stored in a memory ([0025]).

7. (Claims 9 and 17): Lovitt discloses a method and system further comprising: determining that the user made a change to the adjusted at least one vehicle control ([0030]); and storing the change made to the adjusted at least one vehicle control in the user profile memory ([0027 - 0028]).

Allowable Subject Matter

8. Claims 8, 10 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please refer to form 892 for cited references.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALEX C. DUNN whose telephone number is (571)270-5323. The examiner can normally be reached on Flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Tarcza can be reached on 26979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

	Total Files Size (in bytes):	121288	

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

ARGUMENTS/REMARKS

Applicant submits this Amendment and Response to respond to the Office Action dated January 26, 2015 ("*Office Action*"). Claims 4, 5, 7-10, 13-15, and 17-19 have been amended without intending to abandon or to dedicate to the public any patentable subject matter. 1-3, 11, 12, and 20 have been canceled without intending to abandon or to dedicate to the public any patentable subject matter. Claims 21-26 have been added. Accordingly, claims 4-10, 13-19, and 21-26 are currently pending.

Allowable Subject Matter

Applicant would like to thank the Examiner for indicating that claims 8, 10, and 18 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 8, 10, and 18 have been amended to include all of the limitations of the base claim and any intervening claims and without intending to abandon or to dedicate to the public any patentable subject matter. Applicant respectfully submits that amended claim 19 and new claims 21-26 are also in condition for allowance.

Claim Rejections Under 35 U.S.C. §102

Claims 1-20 have been rejected under 35 U.S.C. §102 as anticipated by U.S. Patent Publication No. 2014/0028542 to Lovitt et al. ("*Lovitt*"). In order for a rejection under 35 U.S.C. § 102 to be proper, each and every claim element must be found in a single prior art reference. *Verdegaal Bros. v. Union Oil Co. of California*, 814 F.2d 628, 631 (Fed. Cir. 1987). *Lovitt*, however, fails to at least teach, suggest, or describe several features disclosed in the currently amended claims.

Applicant respectfully requests reconsideration of this application as amended. To the extent that *Lovitt* fails to at least teach, suggest, or disclose all of the elements recited in the pending independent claims, Applicant submits that the rejections of the independent claims and the dependent claims therefrom should be reconsidered and withdrawn.

The application now appearing to be in form for allowance, early notification of same is respectfully requested. Applicant does not acquiesce to any objection, rejection, or argument not

specifically addressed herein. Rather, Applicant believes the amendments and arguments contained herein overcome all objections, rejections, or arguments.

In the event that a telephone conversation would further prosecution and/or expedite allowance, the Examiner is invited to contact the undersigned.

The Commissioner is hereby authorized to charge to deposit account number 19-1970 any fees under 37 CFR § 1.16 and 1.17 that may be required by this paper and to credit any overpayment to that Account. If any extension of time is required in connection with the filing of this paper and has not been separately requested, such extension is hereby Petitioned.

Respectfully submitted,

SHERIDAN ROSS P.C.

For: "CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA"

AMENDMENT AND RESPONSE

Mail Stop Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Commissioner:

Applicant submits this Amendment and Response to address the non-final Office Action having a mailing date of January 26, 2015. Submitted herewith is payment in the amount of $420.00 for one independent claim in excess of three. Although Applicant believes that no additional fees are due in connection with the filing of this Amendment and Response, please charge any fees deemed necessary to Deposit Account No. 19-1970.

Please amend the above-identified patent application as follows:

Amendments to the Specification begin on page **2** of this paper.

Amendments to the Claims are shown in the listing of claims which begins on page **3** of this paper.

Remarks begin on page **9** of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Canceled)

2. (Canceled)

3. (Canceled)

4. (Currently Amended) The method of ~~claim 1~~claim 8, wherein prior to determining the location inside the vehicle associated with the user the method further comprises:

storing, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user;

collecting vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle; and

storing the vehicle control setting data in the user profile memory.

5. (Currently Amended) The method of ~~claim 1~~claim 8, wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device.

6. (Original) The method of claim 5, wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features.

7. (Currently Amended) The method of ~~claim 3~~claim 8, wherein determining the presence of the user inside the vehicle further comprises:

detecting a person via at least one image sensor associated with the vehicle;

identifying facial features associated with the person detected via the at least one image sensor; and

determining whether the identified facial features associated with the person match user characteristics stored in a memory.

8. (Currently Amended) A method, comprising:

determining a location inside a vehicle associated with a user;

determining at least one vehicle control associated with the location inside the vehicle;

determining a presence of the user inside the vehicle, wherein determining the presence of the user comprises detecting a device associated with the user in an area of the vehicle;

referring to a user profile memory associated with the user for vehicle control settings;

determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle; and

providing an adjustment output to a vehicle control system, wherein the adjustment output is provided based at least partially on determining the user is present in the location inside the vehicle, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle~~The method of claim 3, wherein determining the presence of the user inside the vehicle further comprises:~~

~~detecting a device associated with the user in an area of the vehicle~~.

9. (Currently Amended) The method of ~~claim 2~~claim 8, further comprising:

determining that the user made a change to the adjusted at least one vehicle control; and

storing the change made to the adjusted at least one vehicle control in the user profile memory.

10. (Currently Amended) A method, comprising:

determining a location inside a vehicle associated with a user;

determining at least one vehicle control associated with the location inside the vehicle;

referring to a user profile memory associated with the user for vehicle control settings;

determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle; and

providing an adjustment output to a vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle~~The method of claim 2~~, wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

11. (Canceled)

12. (Canceled)

13. (Currently Amended) The non-transitory computer readable medium of ~~claim 12~~ claim 18, wherein prior to providing the adjustment output, the method further comprises:

determining a presence of the user inside the vehicle, wherein the adjustment output is provided based at least partially on determining the user is present in the location of the vehicle.

14. (Currently Amended) The non-transitory computer readable medium of ~~claim 11~~ claim 18, wherein prior to determining the location inside the vehicle associated with the user the method further comprises:

storing, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user;

collecting vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle; and

storing the vehicle control setting data in the user profile memory.

15. (Currently Amended) The non-transitory computer readable medium of ~~claim 11~~ claim 18, wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device, and wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features.

16. (Original) The non-transitory computer readable medium of claim 13, wherein determining the presence of the user inside the vehicle further comprises:

detecting a person via at least one image sensor associated with the vehicle;

identifying facial features associated with the person detected via the at least one image sensor; and

determining whether the identified facial features associated with the person match user characteristics stored in a memory.

17. (Currently Amended) The non-transitory computer readable medium of ~~claim 12~~claim 18, wherein the method further comprises:

determining that the user made a change to the adjusted at least one vehicle control; and

storing the change made to the adjusted at least one vehicle control in the user profile memory.

18. (Currently Amended) A non-transitory computer readable medium having instructions stored thereon that, when executed by a processor, perform a method comprising:

determining a location inside a vehicle associated with a user;

determining at least one vehicle control associated with the location inside the vehicle;

referring to a user profile memory associated with the user for vehicle control settings;

determining, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle; and

providing an adjustment output to a vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle~~The non-transitory computer readable medium of claim 12~~, wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

19. (Currently Amended) A vehicle control system, comprising:

a profile identification module contained in a memory and executed by a processor of the vehicle control system, the profile identification module configured to determine a location inside a vehicle associated with a user, determine at least one vehicle control associated with the

location inside the vehicle, refer to a user profile memory associated with the user for vehicle control settings, and determine, based at least partially on the vehicle control settings, to adjust the at least one vehicle control associated with the location inside the vehicle, provide an adjustment output to the vehicle control system, wherein the vehicle control system is adapted to control the at least one vehicle control associated with the location inside the vehicle, wherein the at least one vehicle control is adjusted via the adjustment output to match the vehicle control settings in the user profile memory.

20. (Canceled)

21. (New) The vehicle control system of claim 19, wherein prior to providing the adjustment output, the profile identification module is further configured to determine a presence of the user inside the vehicle, wherein the adjustment output is provided based at least partially on determining the user is present in the location of the vehicle.

22. (New) The vehicle control system of claim 19, wherein prior to determining the location inside the vehicle associated with the user the profile identification module is further configured to store, in the user profile memory, information corresponding to locations inside the vehicle occupied by the user, collect vehicle control setting data associated with the user, wherein the vehicle control setting data includes at least one vehicle control setting made by the user in at least one of the locations inside the vehicle, and store the vehicle control setting data in the user profile memory.

23. (New) The vehicle control system of claim 19, wherein the at least one vehicle control includes one or more vehicle features such as a seat system, a steering control, a foot pedal control, a mirror position, and a display device, and wherein the vehicle control settings include at least one of a position, a sensitivity, an angle, and a movement, associated with the one or more vehicle features.

24. (New) The vehicle control system of claim 21, wherein, in determining the presence of the user inside the vehicle, the user the profile identification module is further

configured to detect a person via at least one image sensor associated with the vehicle, identify facial features associated with the person detected via the at least one image sensor, and determine whether the identified facial features associated with the person match user characteristics stored in a memory.

25. (New) The vehicle control system of claim 19, wherein the profile identification module is further configured to determine that the user made a change to the adjusted at least one vehicle control, and store the change made to the adjusted at least one vehicle control in the user profile memory.

26. (New) The vehicle control system of claim 19, wherein the profile identification module is further configured to determine a presence of the user inside the vehicle based at least partially on detecting a device associated with the user in an area of the vehicle, and wherein the adjustment output is provided based at least partially on determining the user is present in the location inside the vehicle.

Amendments to the Specification:

Please replace paragraph [0462] with the following amended paragraph:

[0462] This application is also related to PCT Patent Application Nos. PCT/US14/34092, filed on April 15, 2014, entitled, "Building Profiles Associated with Vehicle Users" (Attorney Docket No. 6583-543-PCT); PCT/US14/34099, filed on April 15, 2014, entitled "Access and Portability of User Profiles Stored as Templates" (Attorney Docket No. 6583-544-PCT); PCT/US14/34087, filed on April 15, 2014, entitled "User Interface and Virtual Personality Presentation Based on User Profile" (Attorney Docket No. 6583-547-PCT); PCT/US14/34088, filed on April 15, 2014, entitled "Creating Targeted Advertising Profiles Based on User Behavior" (Attorney Docket No. 6583-549-PCT); PCT/US14/34232, filed on April 15, 2014, entitled "Behavior Modification via Altered Map Routes Based on User Profile Information" (Attorney Docket No. 6583-550-PCT); PCT/US14/34098, filed on April 15, 2014, entitled "Vehicle Location-Based Home Automation Triggers" (Attorney Docket No. 6583-556-PCT); PCT/US14/34108, filed on April 15, 2014, entitled "Vehicle Initiated Communications with Third Parties via Virtual Personalities" (Attorney Docket No. 6583-559-PCT); PCT/US14/34101, filed on April 15, 2014, entitled "Vehicle Intruder Alert Detection and Indication" (Attorney Docket No. 6583-562-PCT); PCT/US14/34103, filed on April 15, 2014, entitled "Driver Facts Behavior Information Storage System" (Attorney Docket No. 6583-565-PCT); PCT/US14/34114, filed on April 15, 2014, entitled "Synchronization Between Vehicle and User Device Calendar" (Attorney Docket No. 6583-567-PCT); PCT/US14/34125, filed on April 15, 2014, entitled "User Gesture Control of Vehicle Features" (Attorney Docket No. 6583-569-PCT); PCT/US14/34254, filed on April 15, 2014, entitled "Central Network for the Automated Control of Vehicular Traffic" (Attorney Docket No. 6583-574-PCT); and PCT/US14/34194, filed on April 15, 2014, entitled "Vehicle-Based Multimode Discovery" (Attorney Docket No. 6583-585-PCT). The entire disclosures of the applications listed above are hereby incorporated by reference, in their entirety, for all that they teach and for all purposes.

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Commissioner:

The references cited on attached Form PTO/SB08 are being called to the attention of the Examiner.

☒ Copies of the cited non-patent and/or foreign references are enclosed herewith.

☐ Copies of the cited U.S. patents and/or patent applications are enclosed herewith.

☒ Copies of the cited U.S. patents/patent application publications are not enclosed in accordance with 37 C.F.R. § 1.98(a).

☐ Copies of the cited references are not enclosed, in accordance with 37 C.F.R. § 1.98(d), because the references were cited by or submitted to the U.S. Patent and Trademark Office in prior application Serial No. _____ filed _____, which is relied upon for an earlier filing date under 35 U.S.C. § 120.

☒ To the best of applicants' belief, the pertinence of the foreign-language references is believed to be summarized in the attached English abstracts and/or in the figures, although applicants do not necessarily vouch for the accuracy of the translation.

☐ Examiner's attention is drawn to the following related applications:

Serial No. _____ filed _____ (Attorney Ref. No. _____)

Serial No. _____ filed _____ (Attorney Ref. No. _____)

☐ Other:_____

Submission of the above information is not intended as an admission that any item is citable under the statutes or rules to support a rejection, that any item disclosed represents analogous art, or that those skilled in the art would refer to or recognize the pertinence of any reference without the benefit of hindsight, nor should an inference be drawn as to the pertinence

of the references based on the order in which they are presented. Submission of this statement should not be taken as an indication that a search has been conducted, or that no better art exists.

It is respectfully requested that the cited information be expressly considered during the prosecution of this application and the references made of record therein.

FEES

☐	**37 CFR 1.97(b)**: No fee is believed due in connection with this submission, because the information disclosure statement submitted herewith is satisfied by one of the following conditions ("X" indicates satisfaction): ☐ Within three months of the filing date of a national application other than a continued prosecution application under 37 CFR 1.53(d), or ☐ Within three months of the date of entry of the national stage as set forth in § 1.491 in an international application, or ☐ Before the mailing date of a first Office Action on the merits, or ☐ Before the mailing of a first Office action after the filing of a request for continued examination under 37 CFR 1.114. Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970.
☒	**37 CFR 1.97(c)**: The information disclosure statement transmitted herewith is being filed after all the above conditions (37 CFR 1.97(b)), but before the mailing date of any one of the following conditions: (1) a final action under 37 C.F.R. 1.113, or (2) a notice of allowance under 37 C.F.R. 1.311, or (3) an action that otherwise closes prosecution in the application. This Information Disclosure Statement is accompanied by: ☐ A Certification (below) as specified by 37 C.F.R. 1.97(e). Although no fee is believed due, if any fee is deemed due in connection with this submission, please charge such fee to Deposit Account 19-1970. OR ☒ Please charge Deposit Account 19-1970 in the amount of $180.00 for the fee set forth in 37 C.F.R. 1.17(p) for submission of an information disclosure statement. Please credit any overpayment or charge any underpayment to Deposit Account 19-1970.
☐	**37 CFR 1.97(d)**: This Information Disclosure Statement is being submitted after the period specified in 37 CFR 1.97(c). ☐ This information Disclosure Statement includes a Certification (below) as specified by 37 C.F.R. 1.97(e) AND ☐ Applicants hereby requests consideration of the reference(s) disclosed herein. Please charge Deposit Account 19-1970 in the amount of $180.00 under 37 C.F.R. 1.17(p). Please credit any overpayment or charge any underpayment to Deposit Account 19-1970. Election to pay the fee should not be taken as an indication that applicant(s) cannot execute a certification.

Certification (37 C.F.R. 1.97(e))
(Applicable only if checked)

☐ The undersigned certifies that:

☐ Each item of information contained in the Information Disclosure Statement submitted herewith was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(1).

☐ A copy of the communication from the foreign patent office is enclosed.

OR

☐ No item of information contained in the Information Disclosure Statement submitted herewith was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, no item of information contained in the Information Disclosure Statement was known to any individual designated in 37 C.F.R. 1.56(c) more than three months prior to the filing of this statement. 37 C.F.R. 1.97(e)(2).

Respectfully submitted,

SHERIDAN ROSS P.C.

PATENT COOPERATION TREATY

From the INTERNATIONAL SEARCHING AUTHORITY

To: RAQUEL F. BUCKLEY
SHERIDAN ROSS P.C.
1560 BROADWAY, SUITE 1200
DENVER, CO 80202

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 24 DEC 2014
Applicant's or agent's file reference 6583-549-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US2014/034088	International filing date *(day/month/year)* 15 April 2014
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 – 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 6583-549-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034088	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 4 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. ☐ **Certain claims were found unsearchable** (see Box No. II).

3. ☒ **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

☒ the text is approved as submitted by the applicant.

☐ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 20

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034088

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:
See extra sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of additional fees.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
1-7

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.

☐ The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.

☐ No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (2)) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034088

A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - G06Q 30/02 (2014.01)
USPC - 705/14.62
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC(8) - G06F 17/30; G06Q 30/00, 30/02 (2014.01)
USPC - 705/14.4, 14.49, 14.53, 14.62, 14.66

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched
CPC - G06Q 30/02, 0241, 0251, 0255, 0265, 0269 (2014.02) (keyword delimited)

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
PatBase, Google Patents, Google Scholar
Search Terms Used: vehicular advertising, creating targeted advertising profiles based on user behavior, contextual advertising

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X -- Y	US 2011/0078024 A1 (MESSIER et al) 31 March 2011 (31.03.2011) entire document	1-3, 5-7 --- 4
Y	US 2003/0101451 A1 (BENTOLILA et al) 29 May 2003 (29.05.2003) entire document	4
A	US 2007/0061057 A1 (HUANG et al) 15 March 2007 (15.03.2007) entire document	1-7
A	US 2012/0047530 A1 (SHKEDI) 23 February 2012 (23.02.2012) entire document	1-7

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report
08 December 2014	24 DEC 2014

Form PCT/ISA/210 (second sheet) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034088

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claims 1-7, drawn to a method comprising recording information associated with at least one user.
Group II, claims 8-15, drawn to a vehicular advertising system comprising listening for a user response to a presented advertisement.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: presenting an advertisement based at least partially on the stored advertising as claimed therein is not present in the invention of Group II. The special technical feature of the Group II invention: listen for a user response to the presented advertisement; determine that at least some of the user response includes information associated with the presented advertisement; and send at least one advertiser the information associated with the presented advertisement as claimed therein is not present in the invention of Group I.

Groups I and II lack unity of invention because even though the inventions of these groups require the technical feature of recording information associated with at least one user in a vehicle; determining that at least some of the recorded information includes advertising information; associating, the advertising information with the at least one user; storing, in a memory, the advertising information; and presenting an advertisement based at least partially on the stored advertising information, to the at least one user in the vehicle, this technical feature is not a special technical feature as it does not make a contribution over the prior art.

Specifically, US 2011/0078024 A1 (MESSIER et al) 31 March 2011 (31.03.2011) teaches recording information associated with at least one user in a vehicle (telematics device records one or more transactions made by a user of a vehicle, Para. 39); determining that at least some of the recorded information includes advertising information (telematics device determines whether the user has utilized one or more advertisements for carrying out the one or more transactions, Para. 39); associating, the advertising information with the at least one user (the advertising module provisions the one or more advertisements based on the user behavior, Para. 38); storing, in a memory, the advertising information (data collected by telematics device, including one or more advertisements, are stored in storage, Paras. 44 and 46); and presenting an advertisement based at least partially on the stored advertising information, to the at least one user in the vehicle (advertising module determines which advertisements to be provisioned to the user of the vehicle based on data collected by telematics device, including one or more advertisements, which are stored in storage, Paras. 37, 44, and 46).

Since none of the special technical features of the Group I or II inventions are found in more than one of the inventions, unity of invention is lacking.

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☐ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☒ Box No. IV Lack of unity of invention
- ☒ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034088

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

   a. (means)

      ☐ on paper

      ☐ in electronic form

   b. (time)

      ☐ in the international application as filed

      ☐ together with the international application in electronic form

      ☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034088

Box No. IV Lack of unity of invention

1. ☒ In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has, within the appicable time limit:

   ☐ paid additional fees

   ☐ paid additional fees under protest and, where applicable, the protest fee

   ☐ paid additional fees under protest but the applicable protest fee was not paid

   ☒ not paid additional fees

2. ☐ This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.

3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is

   ☐ complied with

   ☒ not complied with for the following reasons:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claims 1-7, drawn to a method comprising recording information associated with at least one user.
Group II, claims 8-15, drawn to a vehicular advertising system comprising listening for a user response to a presented advertisement.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: presenting an advertisement based at least partially on the stored advertising as claimed therein is not present in the invention of Group II. The special technical feature of the Group II invention: listen for a user response to the presented advertisement; determine that at least some of the user response includes information associated with the presented advertisement; and send at least one advertiser the information associated with the presented advertisement as claimed therein is not present in the invention of Group I.

Groups I and II lack unity of invention because even though the inventions of these groups require the technical feature of recording information associated with at least one user in a vehicle; determining that at least some of the recorded information includes advertising information; associating, the advertising information with the at least one user; storing, in a memory, the advertising information; and presenting an advertisement based at least partially on the stored advertising information, to the at least one user in the vehicle, this technical feature is not a special technical feature as it does not make a contribution over the prior art.

Specifically, US 2011/0078024 A1 (MESSIER et al) 31 March 2011 (31.03.2011) teaches recording information associated with at least one user in a vehicle (telematics device records one or more transactions made by a user of a vehicle, Para. 39); determining that at least some of the recorded information includes advertising information (telematics device determines whether the user has utilized one or more advertisements for carrying out the one or more transactions, Para. 39); associating, the advertising information with the at least one user (the advertising module provisions the one or more advertisements based on the user behavior, Para. 38); storing, in a memory, the advertising information (data collected by telematics device, including one or more advertisements, are stored in storage, Paras. 44 and 46); and presenting an advertisement based at least partially on the stored advertising information, to the at least one user in the vehicle (advertising module determines which advertisements to be provisioned to the user of the vehicle based on data collected by telematics device, including one or more advertisements, which are stored in storage, Paras. 37, 44, and 46).

Since none of the special technical features of the Group I or II inventions are found in more than one of the inventions, unity of invention is lacking.

4. Consequently, this opinion has been established in respect of the following parts of the international application:

   ☐ all parts

   ☒ the parts relating to claims Nos. 1-7

Form PCT/ISA/237 (Box No. IV) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034088

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	4	YES
	Claims	1-3, 5-7	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-7	NO
Industrial applicability (IA)	Claims	1-7	YES
	Claims	None	NO

2. Citations and explanations:

Claims 1-3 and 5-7 lack novelty under PCT Article 33(2) as being anticipated by Messier et al., hereinafter referred to as Messier.

Regarding claim 1, Messier discloses a method (Para. 6), comprising: recording information associated with at least one user in a vehicle (telematics device records one or more transactions made by a user of a vehicle, Para. 39); determining that at least some of the recorded information includes advertising information (telematics device determines whether the user has utilized one or more advertisements for carrying out the one or more transactions, Para. 39); associating, the advertising information with the at least one user (the advertising module provisions the one or more advertisements based on the user behavior, Para. 38); storing, in a memory, the advertising information (data collected by telematics device, including one or more advertisements, are stored in storage, Paras. 44 and 46); and presenting an advertisement based at least partially on the stored advertising information, to the at least one user in the vehicle (advertising module determines which advertisements to be provisioned to the user of the vehicle based on data collected by telematics device, including one or more advertisements, which are stored in storage, Paras. 37, 44, and 46).

Regarding claim 2, Messier discloses wherein recording is associated with an information receiving system, wherein the information receiving system comprises at least one of a plurality of vehicle sensors, user interface devices, and information exchange devices (recording the one or more transactions by the user is associated with a telematics device which is configured to monitor, aggregate, send and/or receive information to and from the vehicle, Para. 19).

Regarding claim 3, Messier discloses wherein the recordings are based at least partially on a plurality of observations made by the vehicle, where in the plurality of observations include a user behavior (telematics device integrated with the vehicle's on board diagnostics system records one or more transactions by the user, Paras. 19 and 39).

Regarding claim 5, Messier discloses wherein the advertising information may include at least one of preferred brands, purchasing decisions, advertisement effectiveness, and predictive advertisement measures (telematics device determines whether the user has utilized one or more advertisements for carrying out the one or more transactions, Para. 39).

Regarding claim 6, Messier discloses wherein an advertisement management module is configured to associate an advertisement based at least in part on the advertising information (advertising module determines which advertisements to be provisioned to the user of the vehicle based on data collected by telematics device, including one or more advertisements used by the user for one or more transactions, Paras. 37, 44, and 46).

Regarding claim 7, Messier discloses wherein the advertisement is presented to the at least one user via a broadcast system (the one or more advertisements are provisioned to the user on a mobile device connected to a wireless network, Paras. 20 and 38).

Claim 4 lacks an inventive step under PCT Article 33(3) as being obvious over Messier in view of Bentolila et al., hereinafter referred to as Bentolila.

Regarding claim 4, Messier discloses determining whether a user profile exists (the telematics device 122 is configured for determining the iris profile of the user, Para. 19). Messier fails to explicitly disclose retrieving the user profile, when the user profile is determined to exist; and creating the user profile, when the user profile is determined not exist. Bentolila is in the field of targeted advertising (abstract) and further teaches retrieving the user profile, when the user profile is determined to exist (the preference agent retrieves the demographic profiles of the viewers and the meta data contained in each advertisement to describe the target audience for the particular advertisement, Para. 336); and creating the user profile, when the user profile is determined not exist (the preference agent further contains software that allows it to create a demographic profile for each viewer, Para. 335). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine retrieving the user profile, when the user profile is determined to exist; and creating the user profile, when the user profile is determined not exist with the invention of Messier, based on the teachings of Bentolila, for the purpose of custom tailoring narrowly focused, targeted advertisements (Bentolila, Para. 335).

Claims 1-7 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Abstract of KR20060128484 (A)

An active route searching and information guiding system according to driver's tendency is provided to supply the search information of the driver about a corresponding region if necessary, by storing the travel routes every time when the driver drives on a travel route except the supplied route and determining the priority order of the travel routes according to the frequency. In a navigation system, a driver tendency information detecting unit(50) comprises a searched route detecting unit(51) storing a searched route if a user searches the route; a user travel route detecting unit (52) storing the travel route when the user gets out of the searched route and researches another route; and a travel route learning and detecting unit(53) analyzing and storing the priority order of the searched roads and traveling patterns by analyzing the stored travel route.; A driver tendency information database(60) stores the analysis information and route information detected by the driver tendency information detecting unit. A learning route applying and searching unit(70) judges whether the analysis information stored in the driver tendency information database is applied to the present search range or not and searches the route suitable for the user travel route by regulating searching elements.

(54) 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템

(57) 요약

본 발명은 네비게이션 시스템에 있어서, 운전자 성향을 고려하여 능동적인 경로탐색 정보를 제공하기 위한 알고리즘이 적용되는 경로탐색 정보 안내 시스템에 관한 것이다.

본 발명에서는 차량이 이동위치를 고려하여 운전자의 취향을 데이터 베이스화하여 운전자 성향정보로서 저장하고, 추후 경로 탐색시 상기한 운전자 성향정보를 고려하여 사용자의 의도와 일치하는 효율적인 경로탐색 및 안내가 가능하도록 하는 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템을 제공하고자 한다.

대표도

도 1

특허청구의 범위

청구항 1.

네비게이션 시스템에 있어서,

사용자에 의해 경로 탐색이 이루어질 경우 탐색된 경로를 저장하는 탐색경로 검출부와, 탐색된 경로를 이탈하고 재탐색이 이루어지는 경우 기존 탐색과의 비교를 통해 주행 경로를 저장하는 사용자 주행경로검출부와, 저장된 사용자의 주행경로를 분석하여 탐색도로의 우선순위 및 주행패턴을 분석하여 저장하는 주행경로학습검출부를 포함하는 운전자 성향정보 검출수단;

상기 운전자 성향정보 검출수단을 통해 검출된 경로 정보 및 분석정보가 저장되는 운전자 성향정보 데이터베이스;

운전자 성향정보 데이터 베이스에 저장된 분석정보를 이용하여 현재 탐색구간에서 적용가능성을 판단하고, 탐색요소를 조정하여 사용자 주행경로에 적합한 경로를 탐색하여 제공하는 학습경로 적용 탐색수단;을 포함하여 구성되되,

상기 주행경로 학습 검출부에서 생성되어 운전자 성향정보 데이터 베이스에 저장되는 분석정보는,

(A). 가장 자주 이용되는 주행 경로순으로 궤적 우선 순위정보,

(B). 사용자의 출발지, 목적지, 권역별 주요 (유,무료) 도로 이용 패턴 정보

(C). 사용자의 주행 경로중 주요 통과점 패턴 정보

(D). 사용자가 이용하는 주요 우회 도로 패턴 구간 정보

인 것을 특징으로 하는 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템.

명세서

발명의 상세한 설명

발명의 목적

발명이 속하는 기술 및 그 분야의 종래기술

본 발명은 네비게이션 시스템에 있어서, 운전자 성향을 고려하여 능동적인 경로탐색 정보를 제공하기 위한 알고리즘이 적용되는 경로탐색 정보 안내 시스템에 관한 것이다.

지도를 저장매체에 담아 컴퓨터와 같은 단말기수단을 이용하여 사용자들이 쉽게 지도를 표시하여 살펴볼 수 있도록 하는 지리정보시스템(GIS ; Geographic Information System)을 시작으로, 근래에 이르러서는 인공위성을 이용하는 범용지구측위시스템(GPS ; Global Positioning System) 정보를 이용하여 자신의 위치를 검출, 확인하고, 이의 위치로부터 원하는 위치까지의 거리 및 최단거리 루트(route)를 쉽게 찾아 볼 수 있도록 하는 네비게이션 시스템의 기술이 급속도로 발전하고 상용화되어 많은 부가적인 서비스가 가능하게 되었다.

GPS는 표준 좌표계에서의 위치, 속도, 시간 측정을 가능하게 해주는 인공위성을 이용한 첨단 항법체계로써, 20,183km 상공에서 1일 2회 지구를 공전하며 현재 위치에 대한 좌표신호와 좌표신호를 송신한 시각에 대한 신호를 송신하는 GPS 위성을 6개의 궤도면에서 각각 3개씩 총 18개(각 궤도에 대한 예비 위성을 포함하면 총 24개)를 등간 격으로 배치한 후, GPS 수신기를 사용하여 상기 GPS 위성에서 송신된 신호를 수신, 처리함으로써, GPS 수신기가 존재할 수 있는 위치를 검출할 수 있는 장치이며, GPS 안테나와 GPS 수신회로로 이루어지는 GPS 수신기를 사용하여 3개 이상의 GPS 위성에서 송신되는 신호를 검출하여 자기의 신호를 검출하는 장치이다.

현재 많은 네비게이션 시스템에서 채용하여 사용하고 있으며, 일반적으로 네비게이션 시스템이라 함은 GIS와 GPS의 결합된 형태로써, 지도로 제작된 지리정보에서 위치 정보인 GPS정보를 이용하여 사용자가 원하는 위치를 쉽게 찾을 수 있도록 하는 것이라 할 수 있다.

최근들어 네비게이션의 대중화로 인하여 다양한 네비게이션 장치가 출시되고 있는 바, 종래의 네비게이션 장치는 목적지의 설정에 따라 지도 데이터 베이스에 의존한 최소 비용을 계산하고 이에 따라 산출된 경로를 운전자에게 제공하여 경로 안내를 수행하고 있다.

그러나 이와 같은 방법은 지도 데이터 베이스에 매우 의존적이라서, 단순히 최단 경로만을 고려하여 경로 탐색정보를 운전자에게 제공하게 되므로, 운전자의 불만이 야기되고 있다.

이러한 종래 네비게이션 시스템에서 사용자가 원하는 경로를 설정하기 위해서는 매번 수동으로 많은 설정을 해야하는 불편함이 뒤따른다.

발명이 이루고자 하는 기술적 과제

본 발명에서는 차량이 이동위치를 고려하여 운전자의 취향을 데이터 베이스화하여 운전자 성향정보로서 저장하고, 추후 경로 탐색시 상기한 운전자 성향정보를 고려하여 사용자의 의도와 일치하는 효율적인 경로탐색 및 안내가 가능하도록 하는 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템을 제공하고자 한 것이다.

발명의 구성

본 발명은 네비게이션 시스템에 있어서,

사용자에 의해 경로 탐색이 이루어질 경우 탐색된 경로를 저장하는 탐색경로 검출수단과, 탐색된 경로를 이탈하고, 재탐색이 이루어지는 경우 기존 탐색과의 비교를 통해 주행 경로를 저장하는 사용자 주행경로검출수단과, 저장된 사용자의 주행경로를 분석하여 탐색도로의 우선순위 및 주행패턴을 분석하여 저장하는 주행경로학습검출수단을 포함하는 운전자 성향정보 검출수단과,

상기 운전자 성향정보 검출수단을 통해 검출된 경로 정보 및 분석정보가 저장되는 데이터베이스와,

데이터 베이스에 저장된 분석정보를 이용하여 현재 탐색구간에서 적용가능성을 판단 및 그 탐색요소를 조정하여 사용자 주행경로에 적합한 경로를 탐색하여 사용자에게 제공하는 학습경로 적용 탐색수단을 포함하여 구성되는 것을 특징으로 한다.

이와 같은 특징을 갖는 본 발명을 첨부된 도면에 도시된 실시예를 참조하여 그 구성 및 작용을 설명하면 다음과 같다.

도 1에 도시된 바와 같이, GPS 위성으로부터 송출되는 신호를 수신하여 차량의 자기 위치좌표를 검출하기 위한 GPS 수신부(10)와, 위치 좌표에 대하여 사용자에게 제공할 지리정보가 저장된 지리정보 데이터베이스(20)와, GPS 수신부(10)로부터 인식된 차량의 현재 위치에 대하여 지리정보 저장부(20)의 지리정보에 따라서 음성 또는 영상을 통해 사용자의 탐색경로 및 주행경로에 따른 안내정보를 제공하는 네비게이션 제어부(30)와, 사용자 키이입력부(40)를 포함하는 네비게이션 시스템에 있어서,

사용자에 의해 경로 탐색이 이루어질 경우 탐색된 경로를 저장하는 탐색경로 검출부(51)와, 탐색된 경로를 이탈하고 재탐색이 이루어지는 경우 기존 탐색과의 비교를 통해 주행 경로을 저장하는 사용자 주행경로검출부(52)와, 저장된 사용자의 주행경로를 분석하여 탐색도로의 우선순위 및 주행패턴을 분석하여 저장하는 주행경로학습검출부(53)를 포함하는 운전자 성향정보 검출부(50)와,

상기 운전자 성향정보 검출부(50)를 통해 검출된 경로 정보 및 분석정보가 저장되는 운전자 성향정보 데이터베이스(60)와,

데이터 베이스(60)에 저장된 분석정보를 이용하여 현재 탐색구간에서 적용가능성을 판단하고, 탐색요소를 조정하여 사용자 주행경로에 적합한 경로를 탐색하여 제공하는 학습경로 적용 탐색부(70)를 포함하여 구성된다.

이와 같은 본 발명 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템은, GPS시스템에 운전자 주행정보를 수집하고, 이로부터 운전자의 주행 성향을 파악하여, 이에 적합한 탐색경로를 제공할 수 있도록 네비게이션 시스템에 운전자 성향 검출부(50)를 구성한다.

운전자 성향 검출부(50)는 탐색경로 검출부(51), 주행경로검출부(52), 주행경로 학습 검출부(53)로 구성된다.

먼저, 탐색경로 검출부(51)는 운전자가 탐색한 경로를 검출하여 운전자 성향정보 데이터 베이스(60)에 저장하여, 운전자가 자주하는 탐색경로를 파악할 수 있도록 한다.

상기 주행경로 검출부(52)는 네비게이션 시스템에서 제공한 탐색경로에서 이탈한 후, 다시 재탐색을 요구할 경우에 기존 탐색과의 비교를 통해 주행경로를 운전자 성향정보 데이터 베이스(60)에 저장하여, 운전자의 주행경로를 파악할 수 있도록 한다.

주행경로 학습 검출부(53)는 저장된 운전자의 주행경로를 분석하여 탐색 도로의 우선 순위 및 주행패턴을 분석하여 저장한다.

(A). 가장 자주 이용되는 주행 경로순으로 궤적 우선 순위를 저장

(B). 사용자의 출발지, 목적지, 권역별 주요 (유,무료) 도로 이용 패턴 저장

(C). 사용자의 주행 경로중 주요 통과점 패턴 저장

(D). 사용자가 이용하는 주요 우회 도로 패턴 및 구간 저장

이와 같이 분석정보를 생성할 수 있으며, 분석정보는 이에 국한되지 않고, 다양하게 세분화하여 지정할 수 있다.

이와 같은 분석정보를 이용하여 운전자가 탐색 요구시 현재 탐색 구간에서 적용가능성을 판단하고, 또한 해당 분석정보에 따라 탐색요소를 조정하여 사용자 주행 경로에 적합한 경로 탐색을 제공하도록 학습경로 적용 탐색부(70)가 구성된다.

이와 같은 본 발명 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템의 동작과정을 설명하면 다음과 같다.

따라서 제어부(30)에서는 GPS 수신부(10)를 통해 파악된 차량의 현위치정보로 사용자가 요구한 탐색정보를 지리정보 데이터 베이스(20)에 저장된 정보를 이용하여 영상 또는 음성을 통해 운전자에게 알려주게 된다.

이때 탐색경로 검출부(51)에서는 탐색된 경로를 운전자 성향정보 데이터 베이스(60)에 저장한다.

이후, 운전자가 주행을 시작하여 제공한 탐색경로를 이탈하게 될 때, 운전자가 재 탐색을 요구하게 되면, 운전자 성향정보 검출부(50)의 주행경로검출부(52)는 기존 탐색과 비교하여 주행경로를 운전자 성향정보 데이터 베이스(60)에 저장한다.

이와 같이 저장된 운전자 주행정보를 이용하여 주행경로 학습검출부(53)에서는 탐색정보로 제공할 도로의 우선순위를 결정하여 운전자 성향정보 데이터 베이스(60)에 저장하는 바,

도 2는 이의 과정을 나타낸 플로우챠트이다.

탐색된 정보로부터 탐색경로열 저장, 출발지, 목적지, 권역을 저장한다.

이후, 재탐색이 요구되면, 재탐색지점을 등록(저장)하고, 재탐색 구간을 저장(도로 등급 및 경로열), 그리고 운전자의 주행경로를 저장한다.

이와 같은 정보로서 주행경로 학습검출부(53)에서 재탐색 지점 통과점을 저장하고, 이용 빈도수를 판단하여 주행경로의 우선순위를 판단하여 저장하고, 출발지, 목적지에 대한 도로의 등급(유료, 무료, 일반도로 등)을 결정하여 우선순위를 분석정보로 저장한다.

즉, 출발지, 목적지가 선택되어 경로탐색이 이루어진 후, 출발지, 목적지의 권역 및 탐색 경로열을 저장하고, 주행중 재탐색이 발생할 때마다 재탐색 지점 및 주행경로를 저장하고, 이에 대한 정보를 통과점 등록, 이용 빈도에 따른 주행경로 우선순위 설정, 주행도로 등급의 우선 순위 설정을 통하여 다음 탐색 알고리즘 수행시 이용할 수 있는 데이터를 생성하는 것이다.

한편, 학습경로 적용 탐색부(70)에서는 운전자가 목적지를 입력하여 탐색정보를 요구하게 되면, 운전자 성향 정보 데이터베이스(60)에 저장된 분석정보를 이용하여, 현재 운전자 요구한 탐색구간에 적용가능한지를 판단한다.

판단결과 적용한 가능한 경우 운전자에게 제공할 탐색요소를 분석된 정보에 맞게 조정하여 운전자 주행경로에 적합한 경로탐색 정보를 제공한다.

즉, 출발지, 목적지 권역분석, 학습된 주요 도로이용 패턴 적용, 주요 통과점 적용 여부 판단 및 탐색 적용, 주요 우회도로 구간 적용 여부 판단 및 탐색 적용 등에 관하여 판단하고, 가능한 부분에 대하여 해당 정보로부터 탐색요소를 수정하여 운전자에게 제공하는 것이다.

도 3은 이의 과정을 나타낸 플로우챠트이다.

운전자가 요구한 출발지,목적지 권역이 일치하는 가를 판단한다.

즉, 운전자 성향정보 데이터 베이스(60)에 이전에 이와 같은 출발지와 목적지에 대하여, 탐색 제공후 재탐색에 의해 주행경로가 저장되고, 이에대한 분석정보가 생성된 정보가 있는 가를 판단하는 단계를 의미한다.

권역이 일치할 경우 운전자 성향정보 데이터 베이스(60)에 저장된 분석정보를 이용하여 도로 등급 우선순위에 따라 팩터를 수정하여 각 통과점(안내정보를 제공하기 위한 지점)을 경유할 때마다 저장된 주행경로 우선 순위에 따라 경로를 수정하여 운전자의 주행경로를 안내하게 된다.

즉, 출발지, 목적지 권역이 기존에 저장된 데이터와 일치하는 것이 있는 지를 검색하고, 일치하는 경우 저장된 도로 등급 우선순위를 적용하고, 생성된 경로중 통과점에 등록된 지점과 일치하는 지점이 존재하는 경우 해당 구간을 저장된 경로열로 대치하고 경로 안내가 되도록 한다.

이와 같은 과정을 통해 운전자가 선호하는 주행경로를 능동적으로 안내하게 된다.

발명의 효과

이와 같은 본 발명은, 제공된 탐색 경로외의 주행경로를 운전자가 탐색하여 주행하게 될 때마다 운전자의 주행경로를 저장하고, 이의 빈도수에 따라 우선순위(등급)을 결정하여 분석정보로 저장하고, 이후 해당 구간에 대한 탐색정보가 필요한 경우 해당하는 분석정보를 이용하여 운전자의 탐색정보를 제공하도록 한 것으로, 이에 따르면 운전자의 성향에 따른 능동적인 경로 탐색정보를 제공할 수 있게 된다.

도면의 간단한 설명

도 1은 본 발명 운전자 성향에 따른 능동적 경로탐색 정보 안내 시스템의 구성을 보인 블록도.

도 2는 본 발명에 있어서, 운전자의 주행경로 저장 및 분석정보생성 알고리즘을 나타낸 플로우챠트.

도 3은 본 발명에 있어서, 분석정보를 이용하여 운전자의 경로 탐색정보를 제공하는 알고리즘을 나타낸 플로우챠트.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 31 DEC 2014
Applicant's or agent's file reference 6583-585-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US2014/034194	International filing date *(day/month/year)* 15 April 2014
Applicant FLEXTRONICS AP, LLC	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   How? Directly to the International Bureau of WIPO preferably through ePCT or on paper to, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 - 9.011.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   The applicant may **submit comments on an informal basis on the written opinion of the International Searching Authority** to the International Bureau. These comments will be made available to the public after international publication. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established.

   Shortly after the expiration of **18 months from the priority date, the international application will be published** by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before the completion of the technical preparations for international publication (Rules 90*bis*.1 and 90*bis*.3).

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for **entry into the national phase** before those designated Offices. In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months. For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

   Within **19 months from the priority date, the applicant may request that a supplementary international search be carried out** by a different International Searching Authority that offers this service (Rule 45*bis*.1). The procedure for requesting supplementary international search is described in the *PCT Applicant's Guide*, International Phase, paragraphs 8.006-8.032.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 8583-585-PCT	FOR FURTHER ACTION	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2014/034194	International filing date *(day/month/year)* 15 April 2014	(Earliest) Priority Date *(day/month/year)* 15 April 2013
Applicant FLEXTRONICS AP, LLC		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 5 sheets.

☐ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

a. With regard to the language, the international search was carried out on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

b. ☐ This international search report has been established taking into account the rectification of an obvious mistake authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).

c. ☐ With regard to any nucleotide and/or amino acid sequence disclosed in the international application, see Box No. I.

2. ☐ Certain claims were found unsearchable (see Box No. II).

3. ☒ Unity of invention is lacking (see Box No. III).

4. With regard to the title,

☒ the text is approved as submitted by the applicant.

☐ the text has been established by this Authority to read as follows:

5. With regard to the abstract,

☐ the text is approved as submitted by the applicant.

☒ the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the drawings,

a. the figure of the drawings to be published with the abstract is Figure No. 4

☒ as suggested by the applicant.

☐ as selected by this Authority, because the applicant failed to suggest a figure.

☐ as selected by this Authority, because this figure better characterizes the invention.

b. ☐ none of the figures is to be published with the abstract.

INTERNATIONAL SEARCH REPORT

International application No
PCT/US2014/034194

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:
See extra sheet.

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of additional fees.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
1-23

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.

☐ The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.

☐ No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (2)) (July 2009)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2014/034194

Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

Methods, systems, and a computer readable medium are provided for maintaining a persona of a vehicle occupant and, based on the persona of the vehicle occupant and vehicle-related information, performing an action assisting the vehicle occupant. Methods, systems, and a computer readable medium are also provided for a vehicle containing multiple blade processors for performing vehicle and/or infotainment tasks, functions, and operations

☐ Further documents are listed in the continuation of Box C. ☐

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report

Form PCT/ISA/210 (second sheet) (July 2009)

Continuation of Box III.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claims 1-23, drawn to a method, vehicle and tangible non-transient computer readable medium; maintaining a persona of a vehicle occupant; and based on the persona and vehicle-related information, perform an action assisting the vehicle occupant.
Group II, claims 24-31, drawn to a vehicle comprising: a backplane having a first communication zone defining a trusted network; the backplane having a second communication zone defining an untrusted network; the backplane having a third communication zone providing power and data transmission to the plurality of blade processors.
Group III, claims 32-38, drawn to a vehicle wherein the plurality of blade processors comprises a master blade processor operable to assign a component and/or module requiring a blade processor for execution to a selected blade processor.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: maintaining a persona of a vehicle occupant; and based on the persona and vehicle-related information, perform an action assisting the vehicle occupant as claimed therein is not present in the invention of Groups II and III. The special technical feature of the Group II invention: a backplane having a first communication zone defining a trusted network; the backplane having a second communication zone defining an untrusted network; the backplane having a third communication zone providing power and data transmission to the plurality of blade processors as claimed therein is not present in the invention of Groups I or III. The special technical feature of the Group III invention: the plurality of blade processors comprises a master blade processor operable to assign a component and/or module requiring a blade processor for execution to a selected blade processor as claimed therein is not present in the invention of Groups I or II.

Groups I, II and III lack unity of invention because even though the inventions of these groups require the technical feature of a vehicle having a plurality of blade processors, each blade processor performing a function that is at least one of a vehicle task, function, or operation and an infotainment task, function or operation, this technical feature is not a special technical feature as it does not make a contribution over the prior art. Specifically, US 2010/0106344 A1 (EDWARDS et al) 29 April 2010 (29.04.2010), abstract, paragraph 16.

Since none of the special technical features of the Group I, II or III inventions are found in more than one of the inventions, unity of invention is lacking.

International Patent Classification (IPC) or both national classification and IPC
IPC(8) - B60W 10/00 (2014.01)
USPC - 701/48

Applicant: FLEXTRONICS AP, LLC

1. This opinion contains indications relating to the following items:

- ☒ Box No. I — Basis of the opinion
- ☐ Box No. II — Priority
- ☐ Box No. III — Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☒ Box No. IV — Lack of unity of invention
- ☒ Box No. V — Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI — Certain documents cited
- ☐ Box No. VII — Certain defects in the international application
- ☐ Box No. VIII — Certain observations on the international application

2. FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

Form PCT/ISA/237 (cover sheet) (July 2011)

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034194

Box No. I Basis of this opinion

1. With regard to the language, this opinion has been established on the basis of:

☒ the international application in the language in which it was filed.

☐ a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the rectification of an obvious mistake authorized by or notified to this Authority under Rule 91 (Rule 43*bis* 1(a)).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:

a. (means)

☐ on paper

☐ in electronic form

b. (time)

☐ in the international application as filed

☐ together with the international application in electronic form

☐ subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

Form PCT/ISA/237 (Box No. I) (July 2011)

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034194

Box No. IV Lack of unity of invention

1. ☒ In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has, within the appicable time limit.

   ☐ paid additional fees

   ☐ paid additional fees under protest and, where applicable, the protest fee

   ☐ paid additional fees under protest but the applicable protest fee was not paid

   ☒ not paid additional fees

2. ☐ This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.

3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is

   ☐ complied with

   ☒ not complied with for the following reasons:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claims 1-23, drawn to a method, vehicle and tangible non-transient computer readable medium; maintaining a persona of a vehicle occupant; and based on the persona and vehicle-related information, perform an action assisting the vehicle occupant.
Group II, claims 24-31, drawn to a vehicle comprising: a backplane having a first communication zone defining a trusted network; the backplane having a second communication zone defining an untrusted network; the backplane having a third communication zone providing power and data transmission to the plurality of blade processors.
Group III, claims 32-39, drawn to a vehicle wherein the plurality of blade processors comprises a master blade processor operable to assign a component and/or module requiring a blade processor for execution to a selected blade processor.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the Group I invention: maintaining a persona of a vehicle occupant, and based on the persona and vehicle-related information, perform an action assisting the vehicle occupant as claimed therein is not present in the invention of Groups II and III. The special technical feature of the Group II invention: a backplane having a first communication zone defining a trusted network; the backplane having a second communication zone defining an untrusted network; the backplane having a third communication zone providing power and data transmission to the plurality of blade processors as claimed therein is not present in the invention of Groups I or III. The special technical feature of the Group III invention: the plurality of blade processors comprises a master blade processor operable to assign a component and/or module requiring a blade processor for execution to a selected blade processor as claimed therein is not present in the invention of Groups I or II.

Groups I, II and III lack unity of invention because even though the inventions of these groups require the technical feature of a vehicle having a plurality of blade processors, each blade processor performing a function that is at least one of a vehicle task, function, or operation and an infotainment task, function or operation, this technical feature is not a special technical feature as it does not make a contribution over the prior art. Specifically, US 2010/0106344 A1 (EDWARDS et al) 29 April 2010 (29.04.2010), abstract, paragraph 16.

Since none of the special technical features of the Group I, II or III inventions are found in more than one of the inventions, unity of invention is lacking.

4. Consequently, this opinion has been established in respect of the following parts of the international application:

   ☐ all parts

   ☒ the parts relating to claims Nos. 1-23

Form PCT/ISA/237 (Box No. IV) (July 2011)

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US2014/034194

Box No. V **Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

1. Statement

Novelty (N)	Claims	3, 6, 7, 10, 13, 14, 17, 20, 21, 23	YES
	Claims	1-2, 4-5, 8-9, 11-12, 15-16, 18-19, 22	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-23	NO
Industrial applicability (IA)	Claims	1-23	YES
	Claims	None	NO

2. Citations and explanations

Claims 1-2, 4-5, 8-9, 11-12, 15-16, 18-19, 22 lack novelty under PCT Article 33(2) as being anticipated by Benedikt.

Regarding claims 1, 8, 15, Benedikt discloses a method, vehicle (para 86, Fig. 2), and tangible and non-transient computer readable medium comprising microprocessor executable instructions that (para 21), when executed, perform functions comprising: maintaining, by a microprocessor executable profile identification module (see Fig. 2), a persona of a vehicle occupant (profile of each driver stored, para 38); and based on the persona of the vehicle occupant and vehicle-related information (system used driver profile information and trip information and geographic information of vehicle, para 38; see para 101-106), performing, by a microprocessor executable vehicle control system, an action assisting the vehicle occupant (the situation awareness system includes an automatic vehicle control system that controls a parameter to assist the driver, see para 49-51, 118).

Regarding claims 2, 9, 16, Benedikt discloses wherein the vehicle-related information comprises at least one of a current and/or future vehicle location and path of vehicle travel (para 97).

Regarding claims 4, 11, 18, Benedikt discloses wherein the persona comprises one or more of bioinformatics, medical information, driving history (para 98), personal information, private information, travel information, and Internet browsing history and/or browsed content, wherein vehicle related information comprises one or more of vehicle context, state, external surroundings (para 94), location (para 97-98), past, current, and/or intended path of travel, waypoint, and destination, and wherein the action is one or more of making an appointment, making a reservation, purchasing an item on line, adding a waypoint or destination to path of travel on a navigation system of the vehicle, adding an entry into the occupant's electronic calendar, changing a destination or path of travel on the navigation system, warning the occupant (para 113, 118), notifying the occupant, and sending a message to a person at a waypoint or destination of the vehicle regarding an arrival time.

Regarding claims 5, 12, 19, Benedikt discloses determining, by the vehicle control system, relevant information other than the persona of the vehicle occupant and the vehicle-related information, the relevant information comprising one or more of a persona of a selected person not currently in the vehicle, a message from a friend or family member of the vehicle occupant, a current activity of the friend and/or family member, a location, hours of operation, and/or descriptive information about a point and/or location of interest near the vehicle and/or the vehicle's path of travel, a location, hours of operation, and/or descriptive information about a vehicle service facility near the vehicle and/or the vehicle's path of travel, a location, hours of operation, and/or descriptive information about a hotel and/or motel near the vehicle and/or the vehicle's path of travel, a current location of the friend or family member near the vehicle and/or the vehicle's path of travel, and a road condition along a path of travel of the vehicle (para 102).

Regarding claim 22, Benedikt discloses wherein the maintaining of the persona comprises collecting information from one or more vehicle sensors and/or from a remote information source (see para 44, 100) and wherein a type of information collected depends on one or more of an identity of the occupant, an age of the occupant, and an association of the occupant with the vehicle (para 96, 38).

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

PCT/US2014/034194

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of

Claims 3, 6, 7, 10, 13, 14, 17, 20, 21, 23 lack an inventive step under PCT Article 33(3) as being obvious over Benedikt in view of Sala et al., hereinafter referred to as Sala.

Regarding claims 3, 10, 17, Benedikt lacks wherein the action performed depends on a seating position of the vehicle occupant. However, Sala is in the field of occupant recognition systems used in vehicles (abstract, para 14) and teaches wherein the action performed depends on a seating position of the vehicle occupant (occupant recognition and verification system 12, the identification and adjustment algorithm 60 resides in the wireless module 32. The identification and adjustment algorithm 60 uses remote keyless entry key fob information, along with seat position, occupant weight, and other data, to attempt to verify the identity of the driver 28 and/or the front seat passenger 30. If identity is verified, then the identification and adjustment algorithm 60 commands the adjustment of components, such as the driver seat 14, the headrest 16, the outside rearview mirrors 18, the shoulder belt height adjuster 20, the steering wheel and column 22, and the pedals 24, to optimum position, para 24-25). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the seat position identification features as taught in Sala with the invention of Benedikt in order to verify the driver identification before personalizing the vehicle action (see Sala, para 22, 25).

Regarding claims 6, 13, 20, Benedikt lacks wherein the vehicle obtains the persona from one or more of a different vehicle driven by the occupant and a home computer and wherein the vehicle synchronizes with the different vehicle and/or home computer when the vehicle is parked in proximity thereto and an ignition of the vehicle is turned off.
However, Sala is in the field of occupant recognition systems used in vehicles (abstract, para 14) and teaches wherein the vehicle obtains the persona from one or more of a different vehicle driven by the occupant and a home computer (vehicle can receive driver profile information through wireless module 32, para 14, 17; the driver's profile data could be wirelessly transmitted from a smart card or smart phone device (not shown) in the possession of the driver 28, para 29-30) and wherein the vehicle synchronizes with the different vehicle and/or home computer when the vehicle is parked in proximity thereto (para 29-30). Furthermore, transferring data only when the ignition of a vehicle is turned off would have been a matter of design choice, to ensure the driver is not distracted during the operation. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the driver profile features as taught in Sala with the invention of Benedikt in order to ensure the driver profile is updated on the vehicle (see Sala, para 14, 29-30).

Regarding claims 7, 14, 21, Benedikt discloses wherein the maintaining of the persona comprises collecting information from one or more vehicle sensors and/or from a remote information source (see para 44, 100), but does not disclose wherein a type of information collected depends on a seating position of the occupant.
However, Sala is in the field of occupant recognition systems used in vehicles (abstract, para 14) and teaches wherein a type of information collected depends on a seating position of the occupant (occupant recognition and verification system 12, the identification and adjustment algorithm 60 resides in the wireless module 32. The identification and adjustment algorithm 60 uses remote keyless entry key fob information, along with seat position, occupant weight, and other data, to attempt to verify the identity of the driver 28 and/or the front seat passenger 30. If identity is verified, then the identification and adjustment algorithm 60 commands the adjustment of components, such as the driver seat 14, the headrest 16, the outside rearview mirrors 18, the shoulder belt height adjuster 20, the steering wheel and column 22, and the pedals 24, to optimum position, para 24-25). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the seat position identification features as taught in Sala with the invention of Benedikt in order to verify the driver identification before personalizing the vehicle action (see Sala, para 22, 25).

Regarding claim 23, Benedikt lacks wherein the persona is defined in a format that can be processed by vehicles of different manufacturers.
However, Sala is in the field of occupant recognition systems used in vehicles (abstract, para 14) and teaches transferring the persona to a vehicle (vehicle can receive driver profile information through wireless module 32, para 14, 17; the driver's profile data could be wirelessly transmitted from a smart card or smart phone device (not shown) in the possession of the driver 28, para 29-30). Furthermore, specifying the profile data can be used by different vehicles would have been a matter of design choice. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the driver profile features as taught in Sala with the invention of Benedikt in order to allow the system to transfer user profile data to any vehicle by standardizing the file format.

Claims 1-23 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

TITLE OF INVENTION: CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

APPLN. TYPE	ENTITY STATUS	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	UNDISCOUNTED	$960	$0	$0	$960	08/11/2015

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

111285 7590 05/11/2015
Sheridan Ross P.C.
1560 Broadway
Suite 1200
Denver, CO 80202

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
- ❑ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
- ❑ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. **Use of a Customer Number is required.**

2. For printing on the patent front page, list
(1) The names of up to 3 registered patent attorneys or agents OR, alternatively,
(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.
1 _____
2 _____
3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent) : ❑ Individual ❑ Corporation or other private group entity ❑ Government

4a. The following fee(s) are submitted:
- ❑ Issue Fee
- ❑ Publication Fee (No small entity discount permitted)
- ❑ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**
- ❑ A check is enclosed.
- ❑ Payment by credit card. Form PTO-2038 is attached.
- ❑ The director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)
- ❑ Applicant certifying micro entity status. See 37 CFR 1.29 — NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
- ❑ Applicant asserting small entity status. See 37 CFR 1.27 — NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
- ❑ Applicant changing to regular undiscounted fee status. — NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No. 14/253,204	Applicant(s) RICCI, CHRISTOPHER P.	
	Examiner ALEX C. DUNN	Art Unit 3663	AIA (First Inventor to File) Status Yes

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to *4/27/2015*.
   ☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on_____.
2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
3. ☒ The allowed claim(s) is/are *4-10,13-19 and 21-26*. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov .
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

   Certified copies:

   a) ☐ All b) ☐ Some *c) ☐ None of the:
   1. ☐ Certified copies of the priority documents have been received.
   2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
   3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)
2. ☐ Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date _____
3. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
4. ☐ Interview Summary (PTO-413), Paper No./Mail Date _____ .
5. ☐ Examiner's Amendment/Comment
6. ☐ Examiner's Statement of Reasons for Allowance
7. ☐ Other _____.

Corrected Notice of Allowability	Application No. 14/253,204	Applicant(s) RICCI, CHRISTOPHER P.	
	Examiner ALEX C. DUNN	Art Unit 3663	AIA (First Inventor to File) Status Yes

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to *5/7/2015*.
   ☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on_____.
2. ☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
3. ☐ The allowed claim(s) is/are _____. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov .
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

   Certified copies:

   a) ☐ All b) ☐ Some *c) ☐ None of the:
   1. ☐ Certified copies of the priority documents have been received.
   2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
   3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

AMENDMENT AFTER ALLOWANCE PURSUANT TO 37 CFR § 1.312

Dear Sir/Madam:

Applicants submit this Amendment After Allowance pursuant to 37 CFR § 1.312 in response to the Notice of Allowance and Fee(s) Due having a mailing date of May 11, 2015. An amendment may be entered after the mailing of a Notice of Allowance but prior to payment of the issue fee upon the recommendation of the primary examiner. Therefore, it is respectfully requested that the above-referenced application be amended as follows:

Amendments to the Specification begin on page **2** of this paper.
Remarks/Arguments begin on page **3** of this paper.

REMARKS/ARGUMENTS

The amendments to paragraph [0377] of the specification insert an application serial number and correct an application title. These amendments do not introduce any new matter.

Accordingly, Applicant believes that the requirements of 37CFR§1.312 and MPEP§714.16 have been satisfied and entry of this amendment is respectfully requested. Although no fees are believed to be due with the filing of this paper, please charge any deficiency or credit any overpayment to Deposit Account 19-1970.

Respectfully submitted,

SHERIDAN ROSS P.C.

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph **[0377]** with the following amended paragraph:

[0377] In one example, a virtual personality may be represented by an avatar. The avatar may be an intelligent assistant, a virtual assistant, and/or an intelligent virtual assistant as described in application PCT/US14/34194~~PCT/US14/_____~~, filed on April 15, 2014, entitled "Intelligent Vehicle for Assisting Vehicle Occupants and Incorporating Vehicle Crate for Blade Processors~~Vehicle-Based Multimode Discovery~~" (Attorney Docket No. 6583-585-PCT), which is hereby incorporated herein by reference, in its entirety, for all that it teaches and for all purposes. The avatar may be presented as a theme, color, specific sound output, other user preference, etc., and/or combinations thereof. For instance, the avatar may be configured as one or more icons, figures, colors, and/or themes that are configured to represent the virtual personality.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Commissioner:

The references cited on attached Form PTO/SB08 are being called to the attention of the Examiner.

☒ Copies of the cited non-patent and/or foreign references are enclosed herewith.

☐ Copies of the cited U.S. patents and/or patent applications are enclosed herewith.

☒ Copies of the cited U.S. patents/patent application publications are not enclosed in accordance with 37 C.F.R. § 1.98(a).

☐ Copies of the cited references are not enclosed, in accordance with 37 C.F.R. § 1.98(d), because the references were cited by or submitted to the U.S. Patent and Trademark Office in prior application Serial No. _____ filed _____, which is relied upon for an earlier filing date under 35 U.S.C. § 120.

☒ To the best of applicants' belief, the pertinence of the foreign-language references is believed to be summarized in the attached English abstracts and/or in the figures, although applicants do not necessarily vouch for the accuracy of the translation.

☐ Examiner's attention is drawn to the following related applications:

Serial No. _____ filed _____ (Attorney Ref. No. _____)

Serial No. _____ filed _____ (Attorney Ref. No. _____)

☐ Other:_____

Submission of the above information is not intended as an admission that any item is citable under the statutes or rules to support a rejection, that any item disclosed represents analogous art, or that those skilled in the art would refer to or recognize the pertinence of any reference without the benefit of hindsight, nor should an inference be drawn as to the pertinence

of the references based on the order in which they are presented. Submission of this statement should not be taken as an indication that a search has been conducted, or that no better art exists.

It is respectfully requested that the cited information be expressly considered during the prosecution of this application and the references made of record therein.

Respectfully submitted,

SHERIDAN ROSS P.C.

Also published as: JP3843958 (B2)

Abstract of JP2004284450 (A)

PROBLEM TO BE SOLVED: To provide a seat temperature adjustment system capable of mitigating fatigue or suppressing the fatigue increase of a seated occupant. ;SOLUTION: A heart beat signal is detected from an occupant seated in a driver's seat. A normal heart rate is calculated thereby, and a present heart rate is calculated at a cycle of about two minutes. The ratio of reduction of the present heart rate to the normal heart rate is calculated as a fatigue degree TD. If the fatigue degree is >= 2%, it is determined that the occupant is in fatigue, and the driver's seat is temporarily heated by an electric heater. If the fatigue degree TD is >= 2% and < 5%, a target temperature is set to be 41[deg.]C in Step 410, and a heating time is set to be 10 seconds in a Step 420. If the fatigue degree is >= 5% and < 10%, the target temperature is set to be 42 [deg.]C in a Step 440, and the heating time is set to be 20 seconds in a Step 450.; If the fatigue degree TD is >= 10%, the target temperature is set to be 44[deg.]C in a Step 460, and the heating time is set to be 30 seconds in a Step 470. ;COPYRIGHT: (C)2005,JPO&NCIPI

(54)【発明の名称】シート温度調節システム

(57)【要約】
【課題】着座者の疲労軽減または疲労増加の抑制が可能なシート温度調節システムを提供する。
【解決手段】運転席の乗員から心拍信号を検出し、これにより、まず通常時心拍数を算出し、その後、２分ほどの周期で現在心拍数を算出する。現在心拍数が通常時心拍数に対して低下した割合を疲労度ＴＤとして算出し、これが２％以上である場合には乗員が疲労していると判断して、電気ヒータにより運転席を一時的に加温する。疲労度ＴＤが２％以上５％未満である場合には、ステップ４１０においてヒータ目標温度を４１℃に、ステップ４２０において加温時間を１０秒に設定し、疲労度ＴＤが５％以上１０％未満である場合には、ステップ４４０において目標温度を４２℃に、ステップ４５０において加温時間を２０秒に設定し、疲労度ＴＤが１０％以上である場合には、ステップ４６０において目標温度を４４℃に、ステップ４７０において加温時間を３０秒に設定する。

【請求項1】
シート（８）を加温する加温手段（３、３７）と、
前記シート（８）に着座している着座者（７）に関する着座者情報を検出する着座者情報検出手段（２、１５０、１６０）と、
前記着座者情報に基づいて前記着座者（７）が疲労しているか否かを判定する疲労判定手段（１６５、１７０）と、
前記疲労判定手段（１６５、１７０）による判定結果に基づいて前記加温手段（３、３７）による加温を制御する加温制御手段（１８０、１８５、１９０、１９５）とを備えたシート温度調節システム。
【請求項2】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、前記加温手段（３、３７）に前記シート（８）を加温させることを特徴とする請求項１記載のシート温度調節システム。
【請求項3】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、前記加温手段（３、３７）に前記シート（８）を所定継続時間だけ加温させることを特徴とする請求項２記載のシート温度調節システム。
【請求項4】
前記疲労判定手段（１６５、１７０）は、前記着座者（７）が疲労しているか否かを判定する基準として、前記着座者情報に基づいて前記着座者（７）の疲労の程度を示す疲労度を算出し、
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記所定継続時間を前記疲労度に基づいて決定することを特徴とすることを請求項３記載のシート温度調節システム。
【請求項5】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労判定手段（１６５、１７０）による前記判定結果に基づいて前記シート（８）の目標温度を設定して、前記シート（８）が前記目標温度に近づくように前記加温手段（３、３７）による加温を制御することを特徴とする請求項１記載のシート温度調節システム。
【請求項6】
前記疲労判定手段（１６５、１７０）は、前記着座者（７）が疲労しているか否かを判定する基準として、前記着座者情報に基づいて前記着座者（７）の疲労の程度を示す疲労度を算出し、
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記目標温度を前記疲労度に基づいて決定することを特徴とすることを特徴とする請求項５記載のシート温度調節システム。
【請求項7】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労度が第１所定値以上第２所定値未満である場合は、前記目標温度を第１所定温度に設定し、前記疲労度が第２所定値以上である場合は、前記目標温度を前記第１所定温度より高い第２所定温度に設定することを特徴とする請求項６記載のシート温度調節システム。
【請求項8】
前記第１所定温度は、人間の皮膚温度に近い温度であることを特徴とする請求項７記載のシート温度調節システム。
【請求項9】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、所定継続時間だけ、前記シート（８）が前記疲労度に基づいて決定した前記目標温度に近づくよう前記加温手段

（３、３７）による加温を制御することを特徴とする請求項６ないし８のいずれか１項に記載のシート温度調節システム。
【請求項10】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記所定継続時間を前記疲労度に基づいて決定することを特徴とする請求項９記載のシート温度調節システム。
【請求項11】
前記加温制御手段（１８０、１８５、１９０、１９５）は、前記疲労度が第３所定値以上第４所定値未満である場合は、前記所定継続時間を第１所定時間に設定し、前記疲労度が第４所定値以上である場合は、前記所定継続時間を前記第１所定時間より長い第２所定時間に設定することを特徴とする請求項４または１０記載のシート温度調節システム。
【請求項12】
前記シート（８）を冷却する冷却手段（３７）と、
前記疲労判定手段（１６５、１７０）による判定結果に基づいて前記冷却手段（３７）による冷却を制御する冷却制御手段（１８５、１９５）とを備えたことを特徴とする請求項１記載のシート温度調節システム。
【請求項13】
前記冷却制御手段（１８５、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、前記冷却手段（３７）による前記シート（８）の冷却を停止させることを特徴とする請求項１２記載のシート温度調節システム。
【請求項14】
前記冷却制御手段（１８５、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、前記冷却手段（３７）による前記シート（８）の冷却を所定継続時間だけ停止させることを特徴とする請求項１３記載のシート温度調節システム。
【請求項15】
前記疲労判定手段（１６５、１７０）は、前記着座者（７）が疲労しているか否かを判定する基準として、前記着座者情報に基づいて前記着座者（７）の疲労の程度を示す疲労度を算出し、
前記冷却制御手段（１８５、１９５）は、前記所定継続時間を前記疲労度に基づいて決定することを特徴とする請求項１４記載のシート温度調節システム。
【請求項16】
前記冷却制御手段（１８５、１９５）は、前記疲労判定手段（１６５、１７０）による前記判定結果に基づいて前記シート（８）の目標温度を設定して、前記シート（８）が前記目標温度に近づくように前記冷却手段（３７）による冷却を制御することを特徴とする請求項１２記載のシート温度調節システム。
【請求項17】
前記疲労判定手段（１６５、１７０）は、前記着座者（７）が疲労しているか否かを判定する基準として、前記着座者情報に基づいて前記着座者（７）の疲労の程度を示す疲労度を算出し、
前記冷却制御手段（１８５、１９５）は、前記目標温度を前記疲労度に基づいて決定することを特徴とする請求項１６記載のシート温度調節システム。
【請求項18】
前記冷却制御手段（１８５、１９５）は、前記疲労度が第１所定値以上第２所定値未満である場合は、前記目標温度を第１所定温度に設定し、前記疲労度が第２所定値以上である場合は、前記目標温度を前記第１所定温度より高い第２所定温度に設定することを特徴とする請求項１７記載のシート温度調節システム。
【請求項19】
前記第１所定温度は、人間の皮膚温度に近い温度であることを特徴とする請求項１８記載のシート温度調節システム。
【請求項20】

前記冷却制御手段（１８５、１９５）は、前記疲労判定手段（１６５、１７０）により前記着座者（７）が疲労していると判定されたら、所定継続時間だけ、前記シート（８）が前記疲労度に基づいて決定した前記目標温度に近づくように前記冷却手段（３７）による冷却を制御することを特徴とする請求項１７ないし１９のいずれか１項に記載のシート温度調節システム。
【請求項21】
前記冷却制御手段（１８５、１９５）は、前記所定継続時間を前記疲労度に基づいて決定することを特徴とする請求項２０記載のシート温度調節システム。
【請求項22】
前記冷却制御手段（１８５、１９５）は、前記疲労度が第３所定値以上第４所定値未満である場合は、前記所定継続時間を第１所定時間に設定し、前記疲労度が第４所定値以上である場合は、前記所定継続時間を前記第１所定時間より長い第２所定時間に設定することを特徴とする請求項１５または２１記載のシート温度調節システム。
【請求項23】
前記着座者情報検出手段は、前記着座者（７）の生理情報、動作情報、着座継続時間の少なくとも１つを前記着座者情報として検出することを特徴とする請求項１ないし２２のいずれか１項に記載のシート温度調節システム。
【請求項24】
前記着座者情報検出手段は、前記着座者情報として前記着座者（７）から心拍信号を検出し、
前記疲労判定手段（１６５、１７０）は、前記心拍信号に基づいて前記疲労度を算出することを特徴とする請求項４、６、１５、１７のいずれか１項に記載のシート温度調節システム。
【請求項25】
前記疲労判定手段（１６５、１７０）は、前記心拍信号から前記着座者（７）の通常時心拍数と現在の心拍数を算出し、前記現在の心拍数が前記通常時心拍数に比較して低下した割合を前記疲労度として算出することを特徴とする請求項２４記載のシート温度調節システム。
【請求項26】
前記シート（８）は車室内に配設されている座席であることを特徴とする請求項１ないし２５のいずれか１項に記載のシート温度調節システム。

【発明の詳細な説明】
【０００１】
【発明の属する技術分野】
本発明は、椅子や座席などのシートの温度を調節するシート温度調節システムに関する。
【０００２】
【従来の技術】
従来より、車両用シートなどにおいて、シートヒータやシート空調装置などを用いて、シートの温度を調節することが提案されている（例えば、特許文献１参照。）。シートヒータの場合は、例えばシート内部に埋め込んだ電気ヒータにより、シート温度を乗員により設定された設定温度に近づけるように加温する。シート空調装置は、空気を加熱・冷却する装置を用いて、シートに設けられた複数のエア吹出孔から温風や冷風を吹き出すことにより、シート温度を設定温度に近づけるように調節する。

【０００４】
【発明が解決しようとする課題】
しかしながら、上記従来技術においては、シートに着座している着座者が疲労している場合でも、シート温度を設定温度に近づける制御が行われるため、特にシート温度が設定温

度に比較して高いような状況においては、着座者が疲労している場合でもシートが冷却されていたり、あるいはシートの加温が停止されていることにより、着座者の背中、腰、ふくらはぎなど、シートと接触している部分が冷えて、血液の流れが悪くなるということがあった。このような状態でさらに着座が長時間継続されると、血管が圧迫されることにより、さらに血液の流れが悪くなり、疲労物質が蓄積して、疲労が解消されなかったり、疲労が増加したりすることになる。

【０００５】

本発明は、上記点に鑑みなされたものであり、着座者の疲労軽減または疲労増加の抑制が可能なシート温度調節システムを提供することを目的としている。

【０００６】

【課題を解決するための手段】

上記課題を解決するため、請求項１記載のシート温度調節システムは、シートを加温する加温手段と、シートに着座している着座者に関する着座者情報を検出する着座者情報検出手段と、着座者情報に基づいて前記着座者が疲労しているか否かを判定する疲労判定手段と、疲労判定手段による判定結果に基づいて加温手段による加温を制御する加温制御手段とを備えている。

【０００７】

このような構成によると、疲労判定手段により着座者が疲労していると判定されたか否かの判定結果に基づいて加温手段を制御することにより、着座者の疲労を軽減したり、あるいは疲労の増加を抑制することが可能である。

【０００８】

特に、請求項２記載のように、疲労判定手段により着座者が疲労していると判定されたら、加温制御手段により加温手段にシートを加温させるようにすると、着座者の血液の流れを促進させて、疲労軽減または疲労増加の抑制を効果的に行うことができる。

【０００９】

また、この場合の加温は、請求項３記載のように、所定継続時間だけ行うようにするとよい。このように、加温を所定継続時間だけ行うようにすると、連続的に加温する場合に比較して、着座者がシートを熱く感じたり不快に感じたりすることが少なくなる。

【００１０】

さらに、請求項４記載のように、疲労判定手段は、着座者が疲労しているか否かを判定する基準として、前記着座者情報に基づいて着座者の疲労の程度を示す疲労度を算出し、加温制御手段は、加温の所定継続時間を疲労度に基づいて決定するようにするとよい。このような構成によると、加温の継続時間が疲労度に基づいて適切に設定されるため、必要以上の時間継続して加温を行うことにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００１１】

請求項１記載のシート温度調節システムにおいて、加温制御手段は、請求項５記載のように、疲労判定手段による判定結果に基づいてシートの目標温度を設定して、シートがこの目標温度に近づくように加温手段による加温を制御するようにするとよい。このようにして、着座者の疲労が検出された場合は、疲労軽減あるいは疲労増加の抑制のために適切な目標温度を設定して、シートがこの目標温度に近づくように加温手段による加温を制御すると、必要以上の加温を行うことにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００１２】

この場合、加温制御手段は、請求項６記載のように、疲労判定手段により算出された疲労度に基づいて目標温度を決定するようにすると、着座者の疲労軽減あるいは疲労増加の抑制のために、より適切に目標温度を設定することができる。

【００１３】

さらに、請求項７記載のように、疲労度が第１所定値以上第２所定値未満である場合は、目標温度を第１所定温度に設定し、疲労度が第２所定値以上である場合には、目標温度を

第１所定温度より高い第２所定温度に設定するようにするとよく、特に、請求項８記載のように、第１所定温度として人間の皮膚温度に近い温度を用いるようにするとよい。このように、着座者の疲労が検出されたら、シートが人間の皮膚温度に近い温度に近づくように加温手段による加温を制御し、より高い程度の疲労が検出された場合には目標温度を高めるようにすると、着座者の疲労度に応じて適切な加温を行うことができる。

【００１４】

また、加温制御手段は、請求項９記載のように、着座者の疲労が検出された場合に、シートを疲労度に基づいて決定した目標温度に近づけるための加温が所定継続時間だけ行われるように制御するとよく、さらにこの所定継続時間を、請求項１０記載のように、疲労度に基づいて決定するようにするとよい。このように、加温を疲労度に基づいて決定した所定継続時間だけ行うようにすると、必要以上の時間継続して加温を行うことにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００１５】

この場合、請求項１１記載のように、疲労度が第３所定値以上第４所定値未満である場合は、加温の所定継続時間を第１所定時間に設定し、疲労度が第４所定値以上である場合は、所定継続時間を第１所定時間より長い第２所定時間に設定するようにするとよい、このように、着座者から、より高い程度の疲労が検出された場合には、加温の所定継続時間を長く設定するようにすると、着座者の疲労度に応じた適切な継続時間での加温を行うことができる。

【００１６】

請求項１記載のシート温度調節システムにおいて、請求項１２記載のように、シートを冷却する冷却手段を備えている場合には、この冷却手段による冷却を制御する冷却制御手段は、疲労判定手段による判定結果に基づいて制御を行うようにするとよい。このように、疲労判定手段により着座者が疲労していると判定されたか否かの判定結果に基づいて冷却手段を制御すると、これにより、着座者の疲労を軽減したり、あるいは疲労の増加を抑制することが可能である。

【００１７】

特に、請求項１３記載のように、疲労判定手段により着座者が疲労していると判定されたら、冷却制御手段により冷却手段によるシートの冷却を停止させるようにすると、着座者の疲労軽減あるいは疲労増加の抑制を効果的に行うことができる。

【００１８】

また、この場合の冷却停止は、請求項１４記載のように、所定継続時間だけ行うようにするとよく、さらにこの所定継続時間は、請求項１５記載のように、疲労判定手段により算出された疲労度に基づいて決定するようにするとよい。このような構成によると、着座者の疲労が検出された場合に、疲労度に基づいて決定された適切な継続時間だけ冷却が停止されるため、冷却を連続的に停止する場合に比較して、必要以上に長い時間冷却を停止することにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００１９】

請求項１２記載のシート温度調節システムにおいて、冷却制御手段は、請求項１６記載のように、疲労判定手段による判定結果に基づいてシートの目標温度を設定して、シートがこの目標温度に近づくように冷却手段による冷却を制御するようにするとよい。このようにして、着座者の疲労が検出された場合は、疲労軽減あるいは疲労増加の抑制のために適切な目標温度を設定して、シートがこの目標温度に近づくように冷却手段による冷却を制御すると、必要以上に冷却を弱めたり停止したりすることにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００２０】

この場合、冷却制御手段は、請求項１７記載のように、疲労判定手段により算出された疲労度に基づいて目標温度を決定するようにすると、着座者の疲労軽減あるいは疲労増加の抑制のために、より適切に目標温度を設定することができる。

【００２１】

さらに、請求項１８記載のように、疲労度が第１所定値以上第２所定値未満である場合は、目標温度を第１所定温度に設定し、疲労度が第２所定値以上である場合には、目標温度を第１所定温度より高い第２所定温度に設定するようにするとよく、特に、請求項１９記載のように、第１所定温度として人間の皮膚温度に近い温度を用いるようにするとよい。このように、着座者の疲労が検出されたら、シートが人間の皮膚温度に近い温度に近づくように冷却手段による冷却を制御し、より高い程度の疲労が検出された場合には目標温度を高めるようにすると、着座者の疲労度に応じて適切な冷却の軽減あるいは停止を行うことができる。

【００２２】

また、冷却制御手段は、請求項２０記載のように、着座者の疲労が検出された場合に、シートを疲労度に基づいて決定した目標温度に近づけるための冷却制御が所定継続時間だけ行われるようにするとよく、さらにこの所定継続時間を、請求項２１記載のように、疲労度に基づいて決定するようにするとよい。このように、疲労軽減のための冷却制御を、疲労度に基づいて決定した所定継続時間だけ行うようにすると、必要以上に冷却を弱めたり停止することにより着座者がシートを熱く感じたり不快に感じたりすることを回避できる。

【００２３】

特に、請求項２２記載のように、疲労度が第３所定値以上第４所定値未満である場合は、疲労軽減のための冷却制御の所定継続時間を第１所定時間に設定し、疲労度が第４所定値以上である場合は、所定継続時間を第１所定時間より長い第２所定時間に設定するようにするとよい、このように、着座者から、より高い程度の疲労が検出された場合には、疲労軽減のための冷却制御の継続時間を長く設定するようにすると、着座者の疲労度に応じた適切な継続時間で疲労軽減のための冷却制御を行うことができる。

【００２４】

本発明のシート温度調節システムにおいて、着座者情報検出手段は、請求項２３記載のように、着座者の生理情報、動作情報、着座継続時間の少なくとも１つを着座者情報として検出するようにするとよい。着座者が疲労しているか否かは、このような着座者の生理情報、動作情報、着座継続時間に基づいて判定すると、正確な判定が可能である。

【００２５】

また、請求項４、６、１５、１７のいずれかに記載のシート温度調節システムおいて、請求項２４記載のように、着座者情報検出手段により着座者の心拍信号を着座者情報として検出し、疲労判定手段は、この心拍信号に基づいて疲労度を算出するとよく、特に、請求項２５記載のように、疲労判定手段は、心拍信号から着座者の通常時心拍数と現在の心拍数を算出し、現在の心拍数が通常時心拍数に比較して低下した割合を疲労度として算出するようにするとよい。心拍信号は着座者から比較的簡単に検出することができるため、このように、心拍信号に基づいて疲労度を算出すると、簡単に、しかも正確に疲労度を算出することが可能である。

【００２６】

また、本発明のシート温度調節システムは、請求項２６記載のように、車室内に配設されている座席の温度調節に用いると特に有効である。このような車両の座席の着座者はある程度の時間継続して着座していることを強いられることが多く、特に運転席に着座している運転手は運転により疲労しやすいため、本発明のシート温度調節システムにより疲労軽減のためのシート温度調節を行うと、このような着座者の疲労を軽減したり、あるいは疲労の増加を抑制したりすることができる。

【００２７】

【発明の実施の形態】

（第１実施形態）

本発明の第１実施形態に係るシート温度調節システムは、車両に搭載されて、運転席の温度を調節する。図１は、シート温度調節システム１の全体構成を示している。車両のステアリングホイール上には、運転席（シート）８に着座している乗員（着座者）７から心拍

情報ＢＳを検出するための金属電極２が組み込まれており、運転席８には、シートを加温するための電気ヒータ３が埋め込まれている。乗員７は、車室内に設けられた設定スイッチ６により、電気ヒータ３を「強」と「弱」との間で切り替えることができる。

【００２８】

シート温度調節ＥＣＵ４は、設定スイッチ６から乗員による設定に基づく設定温度ＴＳＥＴを示す信号を受け取り、さらにヒータ温度センサ５から電気ヒータ３の温度を示す信号ＨＴを受け取って、通常は、設定温度ＴＳＥＴおよびヒータ温度ＨＴに基づいて、ヒータ温度が設定温度ＴＳＥＴに調節されるように、電気ヒータ３をＯＮ／ＯＦＦする制御信号ＣＴＬを出力する。乗員が設定スイッチ６により「強」を選択した場合の設定温度ＴＳＥＴは例えば５０℃であり、「弱」を選択した場合の設定温度ＴＳＥＴは例えば４０℃である。また、電気ヒータ３が４０℃のときのシート８の温度は３３℃くらいである。

【００２９】

シート温度調節ＥＣＵ４は、さらに、金属電極２により検出した乗員の心拍情報ＢＳに基づいて、乗員の疲労を検出し、乗員が疲労していると判断した場合には、上記通常の制御に優先させて、疲労度に基づく制御を行う。

【００３０】

シート温度調節ＥＣＵ４は、その内部に、図示しないＣＰＵ、ＲＯＭ、ＲＡＭ等からなるマイクロコンピュータを備えており、車両のイグニションスイッチ（図示せず）がＯＮであるときに、車載バッテリ（図示せず）からの電力が供給されて作動するように構成されている。シート温度調節ＥＣＵ４は、ＲＯＭに記憶されているプログラムを実行することにより、つぎのように動作する。

【００３１】

乗員７が車両のイグニションスイッチをＯＮにして、最初に運転を開始してから所定時間（例えば５分）が経過したら、その時点から所定時間（例えば１０分）、乗員７の心拍信号ＢＳを金属電極２により検出して、この１０分間に得られた心拍情報から、乗員７の運転時の通常の心拍数ＢＥＡＴｎを算出する。その後、継続して乗員７の心拍信号ＢＳを検出して蓄積し、２分ごとに、蓄積した心拍情報から乗員７の現在の心拍数ＢＥＡＴｃを算出する。この現在の心拍数ＢＥＡＴｃが通常時の心拍数ＢＥＡＴｎから低下している割合を乗員７の疲労度ＴＤとして算出する。

【００３２】

疲労度ＴＤが所定値を超えているときには、乗員７は疲労していると判断して、疲労度ＴＤの値に基づいて電気ヒータ３の目標温度および加温時間を決定し、決定した加温時間の間だけ目標温度での加温が一時的に実行されるように、電気ヒータ３に制御信号ＣＴＬを出力する。

【００３３】

一方、疲労度ＴＤが所定値未満であるときには、通常制御を実行し、これにより、ヒータ温度が乗員７による設定に応じた設定温度ＴＳＥＴに連続的に維持されるように、電気ヒータ３に制御信号ＣＴＬを出力する。

【００３４】

図２は、シート温度調節ＥＣＵ４により実行される処理の手順を示している。シート温度調節ＥＣＵ４は、車両のイグニションスイッチがＯＮにされると作動を開始し、まずステップ１００でデータ処理用メモリ（ＲＡＭ）の記憶内容などの初期化を行う。このとき、後のステップで用いる運転開始フラグＳＦおよび一時加温時間ＳＤが０に初期化される。

【００３５】

運転開始フラグＳＦは、車両のイグニションスイッチがＯＮにされて、最初に運転が開始されると１に設定され、その後、イグニションスイッチがＯＦＦにされてシート温度調節ＥＣＵ４が作動を終了するまで、継続して１に設定されている。また、一時加温時間ＳＤは、疲労度に基づいて一時的に加温を行う場合の加温継続時間を表しており、後のステップ１８０において設定される。

【００３６】

つぎに、ステップ１１０で各種センサ信号およびスイッチ信号を読み込む。このとき、車速センサ（図示せず）からの車速信号ＳＰＤ、設定スイッチ６からの設定温度信号ＴＳＥＴ、ヒータ温度センサ５からのヒータ温度信号ＨＴなどが読み込まれる。

【００３７】

ステップ１２０では、電気ヒータ３の目標温度ＳＴ１を設定温度ＴＳＥＴに設定する。

【００３８】

ステップ１３０で、条件「ＳＦ＝０　＆　ＳＰＤ＞０」が満足されているか否か判定する。ＹＥＳと判定した場合は、乗員７により運転が開始されたと判断して、ステップ１３５において、運転開始フラグＳＦを１に設定し、タイマＤＤをスタートさせる。タイマＤＤにより、イグニションスイッチがＯＮにされてから最初に運転開始後、経過した時間を測定する。ステップ１３５の実行が終了したら、ステップ１９０に進む。

【００３９】

ステップ１３０でＮＯと判定した場合は、ステップ１４０において、タイマＤＤが５分未満であるか否か判定する。ＹＥＳと判定した場合は、ステップ１９０に進む。

【００４０】

ステップ１４０においてＮＯと判定した場合は、ステップ１４５において、タイマＤＤが１５分未満であるか否か判定する。ＹＥＳと判定した場合は、ステップ１５０において通常時心拍数ＢＥＡＴｎを検出し、その後、ステップ１６０に進む。ステップ１５０における通常時心拍数ＢＥＡＴｎの検出処理の詳細は後述する。ステップ１４５においてＮＯと判定した場合は、ステップ１５０を迂回して、ステップ１６０に進む。

【００４１】

ステップ１６０では、現在の心拍数ＢＥＡＴｃを検出する。この処理の詳細については後述する。ステップ１６５では、通常時心拍数ＢＥＡＴｎと現在心拍数ＢＥＡＴｃに基づいて、乗員の疲労度ＴＤを算出する。具体的には、乗員は疲労してくると心拍数が低下する傾向があるため、つぎのような式を用いて、通常時心拍数ＢＥＡＴｎに対して現在心拍数ＢＥＡＴｃが低下した割合を疲労度として算出する。

【００４２】

【数１】

ＴＤ＝（ＢＥＡＴｎ－ＢＥＡＴｃ）／ＢＥＡＴｎ

つぎに、ステップ１７０で、疲労度ＴＤが第１所定値（例えば２％）未満であるか否か判定する。ＹＥＳと判定した場合は、乗員は疲労していないと判断して、そのままステップ１９０に進む。

【００４３】

ステップ１７０でＮＯと判定した場合は、ステップ１８０において、疲労度ＴＤの値に基づいて、シート８を一時的に加温するためのヒータ目標温度ＳＴ１および加温時間ＳＤを決定し、ステップ１９０に進む。ステップ１８０における処理の詳細は後述する。

【００４４】

ステップ１９０では、ステップ１２０またはステップ１８０において設定された目標温度ＳＴ１、ステップ１８０において設定された加温時間ＳＤに基づいて、電気ヒータ３に制御信号ＣＴＬを出力する。具体的には、一時加温時間ＳＤが０より大きい場合には、この加温時間ＳＤの間だけ電気ヒータ３を一時的に目標温度ＳＴ１に維持するように制御され、加温時間ＳＤが終了すると加温を停止する。加温時間ＳＤが０である場合は、電気ヒータ３を目標温度ＳＴ１に維持するように連続的に制御される。

【００４５】

また、電気ヒータ３を目標温度ＳＴ１に制御する場合は、ヒータ温度ＨＴが目標温度ＳＴ１より低いならば、制御信号ＣＴＬにより電気ヒータ３をＯＮにし、ヒータ温度ＨＴが目標温度ＳＴ１以上であるならば、制御信号ＣＴＬにより電気ヒータ３をＯＦＦにする。

【００４６】

ステップ１９０の実行後は、ステップ１１０に戻って、以下のステップが繰り返し実行される。ステップ１６０における現在心拍数ＢＥＡＴｃの検出処理に２分ほどの時間を要す

るため、ステップ１５０における通常時心拍数の検出が実行された後は、つまり、乗員による運転が開始されてから１５分ほど経過した後は、ステップ１１０～１９０は、２分ほどの周期で実行されることになる。

【００４７】

従って、乗員７の疲労が検出された場合（疲労度ＴＤが２％以上である場合）には、疲労度ＴＤが２％未満に軽減されるまで、２分ほどの周期で加温が断続的に繰り返されることになる。

【００４８】

図３はステップ１５０において実行される通常時心拍数検出処理の手順を示している。まず、ステップ２００においてタイマＢＤをスタートさせる。ステップ２０５において、金属電極２から乗員の心拍信号ＢＳを読込み、記憶する。このとき、心拍信号ＢＳは、所定の周波数（例えば１００Ｈｚ以上）でサンプリングされ、さらに、例えば６～３０Ｈｚのバンドパスフィルタで、フィルター処理が施されてから、記憶される。ステップ２１０において、タイマＢＤが１０分を超えたか否か判定し、ＮＯと判定した場合は、ステップ２０５に戻って、心拍信号の読込み・記憶を繰り返し実行する。このようにして、１０分間の心拍信号を蓄積する。ただし、この場合、心拍信号を蓄積する時間は、１０分に限らず、乗員の運転通常時の心拍数ＢＥＡＴｎを正確に算出するのに必要なデータが得られるような時間に設定することができる。

【００４９】

ステップ２１０でＹＥＳと判定した場合は、ステップ２２０において、１０分間の心拍データから、通常時心拍数ＢＥＡＴｎを算出する。具体的には、図４に示すように、所定の閾値を超えた波をＲ波とし、その時間間隔（心拍間隔）をＲＲＩとしてＲＲＩデータを算出する。算出したＲＲＩデータから、心拍間隔ＲＲＩの平均値ＲＲＩａｖｇを算出し、これを用いて運転通常時の平均心拍数ＢＥＡＴｎを次の式により求める。

【００５０】

【数２】

ＢＥＡＴｎ＝６０／ＲＲＩａｖｇ

ステップ２２０の実行を終了したら、メインルーチンに戻る。

【００５１】

図５は、図２に示すステップ１６０において実行される現在心拍数検出処理の手順を示している。まず、ステップ３００においてタイマＢＤをスタートさせる。ステップ３０５において、上記ステップ２０５と同様にして、金属電極２から乗員の心拍信号ＢＳを読込み、記憶する。ステップ３１０において、タイマＢＤが２分を超えたか否か判定し、ＮＯと判定した場合は、ステップ３０５に戻って、心拍信号ＢＳの読込み・記憶を繰り返し実行する。このようにして、２分間の心拍信号ＢＳを蓄積する。ただし、この場合、心拍信号ＢＳを蓄積する時間は、２分に限らず、乗員の現在の心拍数ＢＥＡＴｃを正確に算出するのに必要なデータが得られるような時間に設定することができる。

【００５２】

ステップ３１０でＹＥＳと判定した場合は、ステップ３２０において、２分間の心拍データから、上記ステップ２２０と同様にして、現在心拍数ＢＥＡＴｃを算出する。ステップ３２０の実行を終了したら、メインルーチンに戻る。

【００５３】

図６は、図２に示すステップ１８０において実行される疲労度ＴＤに基づく目標温度ＳＴ１および加温時間ＳＤの決定処理の手順を示している。まず、ステップ４００において疲労度ＴＤが第２所定値（例えば５％）以上であるか否か判定する。ＮＯと判定した場合には、つまり疲労度ＴＤが２％以上５％未満である場合には、疲労は少ないと判断して、ステップ４１０において、シート温度が人間の皮膚温度と同じ程度の温度（例えば３４℃）になるようにヒータ目標温度ＳＴ１を例えば４１℃に設定する。また、ステップ４２０において、加温時間ＳＤを比較的短く、例えば１０秒に設定する。その後、メインルーチンに戻る。

【００５４】
一方、ステップ４００においてＹＥＳと判定した場合は、ステップ４３０において、疲労度ＴＤが、第２所定値（５％）より大きい所定値（例えば１０％）以上であるか否か判定する。ＮＯと判定した場合は、つまり、疲労度ＴＤが５％以上１０％未満である場合は、疲労は中程度であると判断して、ステップ４４０において、シート温度が人間の皮膚温度より少し高めの温度（例えば３５℃）になるように、ヒータ目標温度ＳＴ１を例えば４２℃に設定する。また、ステップ４５０において、加温時間ＳＤを少し長く、例えば２０秒に設定する。その後、メインルーチンに戻る。
【００５５】
ステップ４３０においてＹＥＳと判定した場合は、つまり疲労度ＴＤが１０％以上である場合は、疲労が大きいと判断して、ステップ４６０において、シート温度がさらに高い温度（例えば３７℃）になるように、ヒータ目標温度ＳＴ１を例えば４４℃に設定する。またステップ４７０において、加温時間ＳＤをさらに長く、例えば３０秒に設定する。その後、メインルーチンに戻る。
【００５６】
このようにして、疲労度ＴＤが２％未満である場合は、電気ヒータ３は乗員７による設定温度ＴＳＥＴを目標温度として連続的に制御され、疲労度ＴＤが２％以上５％未満である間は、４１℃を目標温度とした１０秒の加温が２分ほどの周期で断続的に繰り返される。疲労度ＴＤが５％以上１０％未満である間は、４２℃を目標温度とした２０秒の加温が２分ほどの周期で断続的に繰り返され、疲労度ＴＤが１０％以上である間は、４４℃を目標温度とした３０秒の加温が２分ほどの周期で断続的に繰り返される。
【００５７】
このように、本実施形態のシート温度調節システムでは、乗員７の疲労が検出されたときには、電気ヒータ３によりシート８の加温を行うため、乗員７の血管を刺激して拡張させ、血液の流れを促進させることができる。これにより、乗員７の疲労が軽減されたり、あるいは疲労の増加が抑制されたりする。また、疲労が検出された場合のシート８の加温は、疲労度に応じた適切な目標温度、加温時間で行うため、必要以上の加温を行うことにより乗員が不快に感じたり熱く感じたりすることを回避できる。
【００５８】
また、心拍信号は脳波などのような他の生理情報に比較して簡単に検出することができるため、上記のように、通常時心拍数ＢＡＥＴｎに対する現在心拍数ＢＥＡＴｃの低下した割合を乗員の疲労度ＴＤとして用いると、比較的に簡単に、しかも正確に疲労度を算出することができる。
【００５９】
本実施形態における金属電極２は本発明の着座者情報検出手段に対応しており、電気ヒータ３は本発明の加温手段に対応している。また、ステップ１５０および１６０は、本発明の着座者情報検出手段に対応しており、ステップ１６５および１７０は、本発明の疲労判定手段に対応しており、ステップ１８０および１９０は、本発明の加温制御手段に対応している。本実施形態における加温時間ＳＤは本発明の所定継続時間に対応している。ステップ１７０において用いる第１所定値は本発明の第１所定値および第３所定値に対応しており、ステップ４００において用いる第２所定値は本発明の第２所定値および第４所定値に対応している。
【００６０】
（第２実施形態）
本発明の第２実施形態に係るシート温度調節システムは、上記第１実施形態と同様、車両に搭載されて、運転席の温度を調節する。図７は、本実施形態のシート温度調節システム３０の全体構成を示している。車両のステアリングホイール上には、運転席８の乗員７から心拍情報を検出するための金属電極２が組み込まれており、運転席（シート）８には、その着座部および背当て部に複数のエア吹出孔４０が形成されている。
【００６１】

これらのエア吹出孔４０は、着座部内部に形成された連通路４１ならびに背当て部内部に形成された連通路４２にそれぞれ連通しており、連通路４１、４２はエア供給管４３を介して、シート加温・冷却装置３７の吹出口４４に接続されている。

【００６２】

シート加温・冷却装置３７は、その吹出口４４からシート８へ温風または冷風を供給することにより、シート８の空調を行う。シート加温・冷却装置３７は、電動ファン３８と加温・冷却部３９とを備えており、加温・冷却部３９は、ペルチェ効果による熱の発生・吸収を利用した素子により構成されている。

【００６３】

乗員７は車室内に設けられた設定スイッチ６により、例えば、「暖房」３レベル、「中立」、「冷房」３レベルの間で、シート加温・冷却装置３７によるシート空調の温度設定を切り替えることができる。

【００６４】

シート温度調節ＥＣＵ３４は、設定スイッチ６から乗員による設定に基づく設定温度ＴＳＥＴを示す信号を受け取り、さらにシート８に埋め込まれたシート温度センサ３５からシート温度ＡＳＴを示す信号を受け取って、通常は、設定温度ＴＳＥＴおよびシート温度ＡＳＴに基づいて、シート８が設定温度ＴＳＥＴに調節されるように、シート加温・冷却装置３７に制御信号ＣＴＬ１、ＣＴＬ２を出力する。乗員７が設定スイッチ６により「中立」を選択した場合の設定温度ＴＳＥＴは、例えば３４℃である。「暖房」を選択した場合はこれより高い温度に設定され、「冷房」を選択した場合はこれより低い温度に設定される。

【００６５】

さらに、シート温度調節ＥＣＵ３４は、金属電極２により検出した乗員の心拍情報に基づいて、乗員の疲労を検出し、乗員が疲労していると判断した場合には、上記通常の制御に優先させて、疲労度に基づく制御を行う。

【００６６】

シート温度調節ＥＣＵ３４は、その内部に、図示しないＣＰＵ、ＲＯＭ、ＲＡＭ等からなるマイクロコンピュータを備えており、車両のイグニションスイッチ（図示せず）がＯＮであるときに、車載バッテリ（図示せず）からの電力が供給されて作動するように構成されている。シート温度調節ＥＣＵ３４は、ＲＯＭに記憶されているプログラムを実行することにより、つぎのように動作する。

【００６７】

まず、上記第１実施形態と同様の方法により、金属電極２により検出した乗員の心拍情報に基づいて乗員の疲労度ＴＤを算出する。疲労度ＴＤが所定値未満であるときには、通常制御を実行し、これにより、設定温度ＴＳＥＴに基づいて、加温・冷却装置３７の吹出口４４から吹き出す空気の目標吹出温度（目標温度）および風量を決定し、この目標吹出温度および風量で連続的に吹き出しが行われるように、電動ファン３８および加温・冷却部３９にそれぞれ制御信号ＣＴＬ１、ＣＴＬ２を出力する。

【００６８】

一方、疲労度ＴＤが所定値を超えているときには、乗員７は疲労していると判断して、疲労度ＴＤに応じて決定される設定温度に基づいて目標吹出温度および風量を決定し、さらに加温時間を決定する。そして、決定した加温時間の間だけ目標吹出温度での加温が一時的に実行されるように、電動ファン３８および加温・冷却部３９にそれぞれ制御信号ＣＴＬ１、ＣＴＬ２を出力する。

【００６９】

但し、この場合、疲労度ＴＤに応じた設定温度より乗員７により設定された設定温度ＴＳＥＴの方が高い場合には、乗員７による設定温度ＴＳＥＴに基づく通常制御により、連続的な空気の吹き出しが行われるように制御される。また、吹き出される空気が冷風になる場合、つまり疲労度ＴＤに応じた設定温度または乗員７による設定温度ＴＳＥＴのうち高い方（低くない方）がシート温度ＡＳＴより低い場合には、空気の吹き出しが停止される

。
【００７０】
図８は、シート温度調節ＥＣＵ３４により実行される処理の手順を示している。シート温度調節ＥＣＵ３４は、車両のイグニションスイッチがＯＮにされると作動を開始し、まずステップ１０５でデータ処理用メモリ（ＲＡＭ）の記憶内容などの初期化を行う。このとき、後のステップで用いる運転開始フラグＳＦおよび一時加温時間ＳＤが０に初期化される。運転開始フラグＳＦは、上記第１実施形態と同様に設定されて用いられる。また、一時加温時間ＳＤは、疲労度に基づいて一時的に温風を吹き出すことにより加温を行う場合の加温継続時間を表しており、後のステップ１８５において設定される。
【００７１】
つぎに、ステップ１１５で、各種センサ信号およびスイッチ信号を読み込む。このとき、車速センサ（図示せず）からの車速信号ＳＰＤ、シート温度センサ３５からのシート温度信号ＡＳＴ、設定スイッチ６からの設定温度信号ＴＳＥＴなどが読み込まれる。
【００７２】
ステップ１２５では、設定温度ＴＳＥＴに基づき、目標吹出温度ＳＴ２および風量ＳＢを決定する。具体的には、設定温度ＴＳＥＴとシート温度ＡＳＴに基づいて、シート温度を設定温度ＴＳＥＴに近づけるため必要な吹出温度が目標吹出温度ＳＴ２として算出される。
【００７３】
つぎに、ステップ１３５～１７０を上記第１実施形態と同様に実行する。但し、ステップ１３５の実行終了後はステップ１９５に進む。ステップ１４０においてＹＥＳと判定した場合およびステップ１７０においてＹＥＳと判定した場合にも、ステップ１９５に進む。また、ステップ１７０でＮＯと判定した場合は、ステップ１８５に進む。
【００７４】
ステップ１８５では、疲労度ＴＤの値に基づいて、目標吹出温度ＳＴ２、風量ＳＢ、および加温時間ＳＤを決定し、その後ステップ１９５に進む。ステップ１８５における処理の詳細は後述する。
【００７５】
ステップ１９５では、ステップ１２５あるいはステップ１８５において決定した目標吹出温度ＳＴ２および風量ＳＢ、ステップ１８５において決定した加温時間ＳＤに基づいて、電動ファン３８および加温・冷却部３９に制御信号ＣＴＬ１、ＣＴＬ２をそれぞれ出力する。具体的には、加温時間ＳＤが０より大きい場合には、加温時間ＳＤの間だけ目標温度ＳＴ２および風量ＳＢでの空気の吹き出しが一時的に行われ、その後、空気の吹き出しが停止されるように、制御信号ＣＴＬ１、ＣＴＬ２が出力される。加温時間ＳＤが０である場合は、目標吹出温度ＳＴ２および風量ＳＢでの吹き出しが連続的に行われるように、制御信号ＣＴＬ１、ＣＴＬ２が出力される。
【００７６】
ステップ１９５の実行後は、ステップ１１５に戻って、以下のステップが繰り返し実行され、実際には、ステップ１５０における通常時心拍数ＢＥＡＴｎ検出処理の実行後は、ステップ１１５～１９５が２分ほどの周期で実行されることになる。
【００７７】
図９および１０は、ステップ１８５において実行される疲労度ＴＤに基づく目標吹出温度ＳＴ２、風量ＳＢおよび加温時間ＳＤの決定処理の手順を示している。まず、ステップ６１０において、疲労度ＴＤが５％以上であるか否か判定する。ＮＯと判定した場合は、つまり疲労度ＴＤが２％以上５％未満である場合は、ステップ６１２において、設定温度ＴＳＥＴと３４℃のうち高い方（低くない方）がシート温度ＡＳＴより低いか否か判定する。ＹＥＳと判定した場合は、ステップ６１３において風量ＳＢを空気の吹き出しを行わないＬＥＶＥＬ０に設定して、メインルーチンに戻る。
【００７８】
ステップ６１２においてＮＯと判定した場合は、ステップ６１４において、設定温度ＴＳ

ＥＴが３４℃以下であるか否か判定する。ＮＯと判定した場合はメインルーチンに戻る。

【００７９】

ステップ６１４においてＹＥＳと判定した場合は、ステップ６２０において、３４℃を設定温度として目標吹出温度ＳＴ２を算出し、ステップ６２５において、風量ＳＢを最低風量であるＬＥＶＥＬ１に設定する。さらにステップ６３０において、加温時間ＳＤを１０秒に設定する。その後、メインルーチンに戻る。

【００８０】

一方、ステップ６１０においてＹＥＳと判定した場合は、ステップ６３５において疲労度ＴＤが１０％以上であるか否か判定する。ＮＯと判定した場合は、つまり疲労度ＴＤが５％以上１０％未満である場合は、ステップ６３７において、設定温度ＴＳＥＴと３５℃のうち高い方（低くない方）がシート温度ＡＳＴより低いか否か判定する。ＹＥＳと判定した場合は、ステップ６３８において風量ＳＢをＬＥＶＥＬ０に設定して、メインルーチンに戻る。

【００８１】

ステップ６３７においてＮＯと判定した場合は、ステップ６３９において、設定温度ＴＳＥＴが３５℃以下であるか否か判定する。ＮＯと判定した場合はメインルーチンに戻る。

【００８２】

ステップ６３９においてＹＥＳと判定した場合は、ステップ６４０において、設定温度を３５℃として目標吹出温度ＳＴ２を算出し、ステップ６４５において、風量ＳＢをＬＥＶＥＬ１より一段階高いＬＥＶＥＬ２に設定する。さらに、ステップ６５０において、加温時間ＳＤを２０秒に設定する。その後、メインルーチンに戻る。

【００８３】

ステップ６３５においてＹＥＳと判定した場合は、つまり疲労度ＴＤが１０％以上である場合は、ステップ６５２において、設定温度ＴＳＥＴと３７℃のうち高い方（低くない方）がシート温度ＡＳＴより低いか否か判定する。ＹＥＳと判定した場合は、ステップ６５３において風量ＳＢをＬＥＶＥＬ０に設定して、メインルーチンに戻る。

【００８４】

ステップ６５２においてＮＯと判定した場合は、ステップ６５４において、設定温度ＴＳＥＴが３７℃以下であるか否か判定する。ＮＯと判定した場合はメインルーチンに戻る。

【００８５】

ステップ６５４においてＹＥＳと判定した場合は、ステップ６５５において、設定温度と３７℃として目標吹出温度ＳＴ２を算出し、ステップ６６０において、風量ＳＢをＬＥＶＥＬ２より一段階高いＬＥＶＥＬ３に設定する。さらに、ステップ６６５において、加温時間ＳＤを３０秒に設定する。その後、メインルーチンに戻る。

【００８６】

このようにして、乗員７の疲労度ＴＤが２％以上である場合には疲労度ＴＤの値に応じた設定温度に基づいて目標吹出温度ＳＴ２および風量ＳＢを設定し、この目標吹出温度ＳＴ２および風量ＳＢで所定時間ＳＤだけ空気が吹き出され、所定時間経過後は空気の吹き出しが停止されるように制御される。実際には、疲労度ＴＤが２％未満に下がるまで、２分ほどの周期で、空気の吹き出しが断続的に繰り返される。

【００８７】

但し、乗員７の疲労度ＴＤが２％以上である場合でも、乗員による設定温度ＴＳＥＴが疲労度ＴＤの値に応じた設定温度より高い場合には、乗員による設定温度ＴＳＥＴに基づく通常の制御が実行される。

【００８８】

また、目標吹出温度ＳＴ２の算出に用いられる設定温度、つまり乗員による設定温度ＴＳＥＴと疲労度ＴＤの値に応じた設定温度のうち高い方（低くない方）がシート温度ＡＳＴより低い場合には、シート８を冷却するための冷風が吹き出されることになるため、この場合は風量ＳＢをＬＥＶＥＬ０に設定することにより、冷風の吹き出しを停止させる。冷風の吹き出しは、疲労度ＴＤが２％未満に軽減されるまで連続的に停止される。このよう

にして、冷風により乗員７の体が冷えて血液の流れが悪くなるようなことを回避できる。
【００８９】
このように、本実施形態のシート温度調節システムにおいては、運転席８に着座している乗員７の疲労が検出されたときには、シート加温・冷却装置３７によりシート８から乗員７に対して冷風ではない空気の吹き出しを行うため、乗員の血管を拡張させ、血液の流れを促進させることができる。これにより、乗員の疲労が軽減されたり、あるいは疲労の増加が抑制されたりする。また、この場合の空気の吹き出しは、疲労度ＴＤに応じた適切な吹出温度、加温時間で行うため、必要以上に高い温度や長い時間での吹き出しを行うことにより乗員が熱く感じたり不快に感じたりすることを回避できる。
【００９０】
本実施形態におけるシート加温・冷却装置３７は、本発明の加温手段および冷却手段に対応している。本実施形態におけるステップ１８５および１９５は、本発明の加温制御手段および冷却制御手段に対応している。
【００９１】
（他の実施形態）
本発明は上記実施形態に限定されることなく、つぎのように種々の変形が可能である。
【００９２】
上記実施形態では、乗員からの心拍信号をステアリングホイール上に組み込まれた金属電極により検出したが、乗員に金属電極を直接装着して、この電極により心拍信号を検出してもよく、また、電極は金属電極に限らず、導電性のものであればよく、例えばジェル状の導電性物質の電極などであってもよい。さらに、乗員の心拍信号は、シート内に組み込んだ超音波センサや加速度センサなどにより検出してもよい。
【００９３】
上記実施形態では、乗員の心拍数の低下に基づいて疲労を検出したが、心拍間隔の減少や心拍波形における振幅の減少に基づいて疲労を検出してもよい。また、心拍情報ではなく、その他の生理情報に基づいて疲労を検出してもよい。例えば、脳波情報、血圧情報、皮膚電気活動情報、眼球情報（瞬き、視線など）などの生体信号や、分泌物（汗，唾液などの生体物質）に関する情報に基づいて疲労を検出することができる。乗員が疲労している場合には、脳波におけるα波の増加、血圧の上昇などがみられ、さらに皮膚の電位差は０に近づき、目の開きや瞬きが少なくなったり、視線の動きがゆるやかになったりする。さらに、汗の分泌が減少し、唾液内のコルチゾールが減少する。
【００９４】
また、生理情報ではなく、乗員の動作情報や着座時間情報（着座継続時間）などに基づいて疲労を検出してもよい。乗員が疲労している場合には、上体を前後左右に動かしたり、腰をうかすなどの動作が見られるため、このような動作が検出された場合には、乗員が疲労していると判定することができる。着座時間情報に基づいて疲労を検出する場合は、例えば、着座継続時間が１時間を超えたら乗員は疲労していると判断することができる。その後、着座継続時間が所定値（例えば２時間）を超えたら、さらに疲労度が増加したと判断してもよい。
【００９５】
さらに、より正確に乗員の疲労度を算出するために、上記のような生理情報、動作情報、着座時間情報を組み合わせて用いてもよい。
【００９６】
上記第１実施形態では、運転席の加温手段として電気ヒータを用いたが、これに限らず、運転席への温風送風装置を用いてもよく、また化学変化により発熱する媒体を利用した加温装置を用いてもよい。温風送風装置は、上記第２実施形態における加温・冷却装置の加温・冷却部を、加温のみ行う加温部で置き換えた装置によって実現することができる。加温手段として温風送風装置を用いる場合、疲労度に応じて加温するときには、疲労度に応じた設定温度に基づいて算出された目標吹出温度の温風を、疲労度に応じて決定された加温時間だけ吹き出すことにより加温し、加温が終了したら、温風を停止させてもよいし、

あるいは送風に切り替えてもよい。

【００９７】

上記第１実施形態では、乗員７の疲労が検出された場合には、ユーザによる設定が「弱」であるか「強」であるかに拘わらず、疲労度ＴＤに基づいて目標温度ＳＴ１を設定したが、ユーザによる設定が「強」である場合は、疲労が検出された場合でも、目標温度ＳＴ１は設定温度ＴＳＥＴ（５０℃）に設定してもよい。また、ユーザによる設定が「強」である場合は、このように目標温度ＳＴ１を５０℃に設定するだけでなく、疲労が検出された場合でも「強」に設定されている場合の通常制御を行って、ヒータ目標温度を５０℃とした連続的な加温を行うようにしてもよい。

【００９８】

上記第２実施形態では、疲労度に応じて算出された吹出温度で所定時間空気の吹き出しを行う場合には、所定時間経過後は空気の吹き出しを停止させたが、所定時間経過後は乗員による設定温度に基づいて算出した目標吹出温度での吹き出しを行うようにしてもよい。また、上記第２実施形態では、目標吹出温度での吹き出しを行うと冷風が吹き出されるような場合は、この冷風の吹き出しを連続的に停止させたが、所定時間だけ冷風の吹き出しを停止させて、所定時間経過後は乗員による設定温度に基づいて算出した目標吹出温度あるいは疲労度に応じて算出された目標吹出温度での吹き出しを行うようにしてもよい。

【００９９】

上記実施形態では、乗員の疲労が検出された場合に、疲労度に応じた設定温度に基づいて算出された一定の目標温度（あるいは目標吹出温度）での加温を所定時間行ったが、目標温度にゆらぎをもたせてもよい。例えば、第２実施形態において、疲労度がＴＤが２％以上５％未満である場合に、図１１に示すように、１０秒の加温時間の間に吹出温度をＳＴ２±０．３℃の範囲内でゆらがせることができる。また、上記実施形態では、疲労が検出されてから疲労が２％未満に軽減されるまでの間は、２分ほどの周期で加温が断続的に繰り返されることになるが、この場合の加温時間と加温休止時間を所定の範囲でゆらがせるようにしてもよい。このように加温の温度や加温時間にゆらぎをもたせると、乗員は不快感を覚えにくい。

【０１００】

上記実施形態では、乗員の疲労が検出されると、疲労度ＴＤが２％未満に軽減されるまで、電気ヒータ３による加温あるいはシート加温・冷却装置３７による空気の吹き出しが断続的に行われたが、これを連続的に行うようにしてもよい。

【０１０１】

上記実施形態では、疲労度ＴＤを「２％以上５％未満」「５％以上１０％未満」「１０％以上」の３段階の範囲に分けて疲労度ＴＤに基づく制御を行ったが、これと異なる範囲に区切ってもよく、また３段階に限らず、２段階や４段階以上に区切ってもよい。また、疲労が検出された場合の疲労度ＴＤの範囲を１段階として、つまり、疲労が検出された場合（例えば疲労度ＴＤが２％以上）と疲労が検出されない場合（疲労度ＴＤが２％未満）のみ区別して、疲労が検出された場合は疲労度ＴＤの値に拘わらず同様の制御を行うようにしてもよい。

【０１０２】

また、上記実施形態では、乗員７の疲労を検出した場合の目標温度（あるいは目標吹出温度）と加温時間を、同じ３段階の疲労度範囲に対してそれぞれ設定したが、例えば、疲労度ＴＤが２％以上５％未満のとき、および５％以上１０％未満のときはいずれも加温時間を１５秒に設定するなど、目標温度と加温時間を異なる区切りで区切った疲労度範囲に対して設定するようにしてもよい。

【０１０３】

上記第２実施形態では、設定温度がシート温度より低い場合に吹き出される空気を冷風として、乗員７の疲労が検出された場合にはこれを停止したが、目標吹出温度ＳＴ２が２５℃未満である場合に吹き出される空気を冷風として、このような場合には風量ＳＢをＬＥＶＥＬ０に設定することにより、空気の吹き出しを停止するようにしてもよい。

【０１０４】
上記第２実施形態では、ステップ１３５およびステップ１８５において、加温・冷却装置３７からの空気の目標吹出温度ＳＴ２をシート温度ＡＳＴと設定温度に基づいて決定したが、さらにシートの周囲の空気温度などを加味して決定するようにしてもよい。
【０１０５】
上記第２実施形態では、加温・冷却装置３７の加温・冷却部３９はペルチェ効果による熱の発生・吸収を利用した素子を用いて構成されていたが、熱電変換機能を有する熱電素子により構成されていてもよく、また、電子冷却素子により構成されていてもよい。
【０１０６】
上記実施形態において、シート温度調節のための制御は専用のシート温度制御ＥＣＵにより実行したが、エアコンＥＣＵなどにより実行するようにしてもよい。
【０１０７】
上記実施形態では、車両の運転席の温度調節を疲労度に応じて行ったが、助手席の温度調節も疲労度に応じて行うようにしてもよい。あるいは、疲労度に応じたシート温度調節は助手席のみとし、運転席は着座者の眠気を覚ますための制御を行うようにしてもよい。また、後部座席の温度調節を疲労度に応じて行ってもよく、後部座席に主に人が着座するような車両においては、後部座席のみ疲労度に応じた温度調節を行ってもよい。
【０１０８】
上記実施形態では、本発明を車両の座席の温度調節システムに適用したが、これに限らず、飛行機の座席や、歯科の椅子、床屋の椅子など、着座者が自由に立ち上ることができない状況で着座するシート、あるいは作業場や家庭での事務椅子、家庭用リクライニングシートなど、さまざまなシートのための温度調節システムに本発明を適用することができる。

NOTICE OF NON-COMPLIANT INFORMATION DISCLOSURE STATEMENT

An Information Disclosure Statement (IDS) filed 07-31-15 in the above-identified application fails to meet the requirements of 37 CFR 1.97(d) for the reason(s) specified below. Accordingly, the IDS will be placed in the file, but the information referred to therein has not been considered.

The IDS is not compliant with 37 CFR 1.97(d) because:

☒ The IDS lacks a statement as specified in 37 CFR 1.97(e).

☐ The IDS lacks the fee set forth in 37 CFR 1.17(p).

☐ The IDS was filed after the issue fee was paid. Applicant may wish to consider filing a petition to withdraw the application from issue under 37 CFR 1.313(c) to have the IDS considered. See MPEP 1308.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

111285 7590 05/11/2015
Sheridan Ross P.C.
1560 Broadway
Suite 1200
Denver, CO 80202

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

3

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE: Flextronics AP, LLC

(B) RESIDENCE: (CITY and STATE OR COUNTRY): San Jose, CA

Please check the appropriate assignee category or categories (will not be printed on the patent) : ☐ Individual ☒ Corporation or other private group entity ☐ Government

4a. The following fee(s) are submitted:
- ☒ Issue Fee
- ☐ Publication Fee (No small entity discount permitted)
- ☐ Advance Order - # of Copies _____

4b. Payment of Fee(s): **(Please first reapply any previously paid issue fee shown above)**
- ☐ A check is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☒ The director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number 19-1970 (enclose an extra copy of this form).

5. **Change in Entity Status** (from status indicated above)
- ☐ Applicant certifying micro entity status. See 37 CFR 1.29
  NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
- ☐ Applicant asserting small entity status. See 37 CFR 1.27
  NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
- ☐ Applicant changing to regular undiscounted fee status.
  NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph **[0377]** with the following amended paragraph:

[0377] In one example, a virtual personality may be represented by an avatar. The avatar may be an intelligent assistant, a virtual assistant, and/or an intelligent virtual assistant as described in application PCT/US14/34194~~PCT/US14/_____~~, filed on April 15, 2014, entitled "Intelligent Vehicle for Assisting Vehicle Occupants and Incorporating Vehicle Crate for Blade Processors~~Vehicle-Based Multimode Discovery~~" (Attorney Docket No. 6583-585-PCT), which is hereby incorporated herein by reference, in its entirety, for all that it teaches and for all purposes. The avatar may be presented as a theme, color, specific sound output, other user preference, etc., and/or combinations thereof. For instance, the avatar may be configured as one or more icons, figures, colors, and/or themes that are configured to represent the virtual personality.

1. ☒ The amendment filed on *30 July 2015* under 37 CFR 1.312 has been considered, and has been:

a) ☐ entered.

b) ☒ entered as directed to matters of form not affecting the scope of the invention.

c) ☐ disapproved because the amendment was filed after the payment of the issue fee.
Any amendment filed after the date the issue fee is paid must be accompanied by a petition under 37 CFR 1.313(c)(1) and the required fee to withdraw the application from issue.

d) ☐ disapproved. See explanation below.

e) ☐ entered in part. See explanation below.

/THOMAS TARCZA/ Supervisory Patent Examiner, Art Unit 3663	/A. C. D./ Examiner, Art Unit 3663

personality may be refined (e.g., altered) when the user 216 is not being presented the virtual personality. In other words, the virtual personality may be refined in non-real-time (e.g., when the virtual personality is not being used, etc.). As provided herein, a standard personality and/or a virtual personality associated with a user 216 can be refined. The method 2100 continues at step 2124 by presenting the virtual personality and/or refined virtual personality.

[0376] The method 2100 continues by determining whether the user 216 is still present (step 2128). In some embodiments, the presence of a user 216 may include an existing association of the user 216 with a vehicle 104. For instance, the user 216 may be associated with the vehicle 104, although the user 216 may not be physically located inside the vehicle 104. An example of this association may include when the user steps outside of the vehicle 104 (e.g., to maintain the vehicle 104, refuel, temporarily visit a location outside of the vehicle 104, etc.). The detection and/or determination of whether a user 216 is present may include one or more of the detection steps described in conjunction with step 2108. Additionally or alternatively, determining whether a user 216 is present may include determining whether the user 216 is physically inside the vehicle 104. For example, a user 216 may be determined to be present inside a vehicle 140 based on information detected by at least one image sensor, such as the camera sensors 760 of the vehicle 104. In any event, when a user 216 can no longer be detected by at least one sensor (e.g., vehicle sensors 242, non-vehicle sensors 236, etc.) associated with the vehicle 104, the user 216 may be determined as not being present. If the user 216 is determined to still be present, the method 2100 may continue by collecting more profile data (step 2144). If the user is determined not to be present, the method 2100 ends at step 2132.

[0377] In one example, a virtual personality may be represented by an avatar. The avatar may be an intelligent assistant, a virtual assistant, and/or an intelligent virtual assistant as described in application ~~PCT/US14/~~PCT/US14/34194, filed on April 15, 2014, entitled "Vehicle-Based Multimode Discovery" (Attorney Docket No. 6583-585-PCT), which is hereby incorporated herein by reference, in its entirety, for all that it teaches and for all purposes. The avatar may be presented as a theme, color, specific sound output, other user preference, etc., and/or combinations thereof. For instance, the avatar may be configured as one or more icons, figures, colors, and/or themes that are configured to represent the virtual personality.

Change(s) applied to document, /M.I.G./ 6/23/2015

[0378] In some embodiments the avatar may be configured to follow a user 216 from vehicle-to-vehicle and/or from communication device-to-communication device. The

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

REQUEST FOR CERTIFICATE OF CORRECTION OF PATENT FOR PTO MISTAKE PURSUANT TO 37 C.F.R. § 1.322(a)

Dear Commissioner:

This Request for a Certificate of Correction of Patent for PTO Mistake is made pursuant to 37 C.F.R. § 1.322(a). Attached is Form PTO SB/44 containing the text of the corrections which are requested herein. The error in claim 14 of the patent is a typographical error and support for the correction may be found in the Response dated April 27, 2015, at page 7, claim 19.

Respectfully submitted,

SHERIDAN ROSS P.C.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

DENIAL OF REQUEST FOR POWER OF ATTORNEY

The request for Power of Attorney filed 06/23/2017 is acknowledged. However, the request cannot be granted at this time for the reason stated below.

- ☐ The Power of Attorney you provided did not comply with the new Power of Attorney rules that became effective on June 25, 2004. See 37 CFR 1.32.
- ☐ The revocation is not signed by the applicant, the assignee of the entire interest, or one particular principal attorney having the authority to revoke.
- ☑ The Power of Attorney is from an assignee and the Certificate required by 37 CFR 3.73 has not been received.
- ☐ The person signing for the assignee has omitted their empowerment to sign on behalf of the assignee.
- ☐ The inventor(s) is without authority to appoint attorneys since the assignee has intervened as provided by 37 CFR 3.71.
- ☐ The signature(s) of _____, a co-inventor in this application, has been omitted. The Power of Attorney will be entered upon receipt of confirmation signed by said co-inventor(s).
- ☐ The person(s) appointed in the Power of Attorney is not registered to practice before the U.S. Patent and Trademark Office.
- ☐ Only one Customer Number can be designated for the Power of Attorney in an application. The Customer Number that was captured is the first Customer Number provided on the Power of Attorney document.

UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE
United States Patent and Trademark Office
Address: COMMISSIONER FOR PATENTS
P.O. Box 1450
Alexandria, Virginia 22313-1450
www.uspto.gov

- ☐ A request under 37 CFR 1.48 to add an inventor was granted in this application, however, no power of attorney consistent with the power of attorney granted by the originally named inventive entity has been received. Thus, the addition of the inventor has resulted in the loss of power of attorney in the application. See 37 CFR 1.32(e).

- ☐ The power of attorney has not been accepted because the party who is giving power of attorney has not been identified. Power of attorney may only be signed by the applicant for patent (37 CFR 1.42) or the patent owner. A patent owner who was not the applicant must appoint any power of attorney in compliance with 37 CFR 3.71 and 3.73. See 37 CFR 1.32(b)(4).

- ☐ The power of attorney from the inventors has not been accepted because it is a copy from a prior national application for which benefit is claimed and the continuing application names an inventor who was not named as an inventor in the prior application.

- ☐ The power of attorney from the inventors has not been accepted because the power of attorney must be signed by the applicant for patent. See 37 CFR 1.32(b)(4).

- ☐ Any request to correct or update the name of the applicant must include an application data sheet (ADS) in compliance with 37 CFR 1.76 specifying the correct or updated name of the applicant in the applicant information section. Any request to change the applicant after an original applicant has been specified under 37 CFR 1.46(b) must include a new ADS in compliance with 37 CFR 1.76 specifying the applicant in the applicant information section and comply with 37 CFR 3.71 and 3.73. See 37 CFR 1.46(c).

Any inquiries regarding this notice should be directed to the Application Assistance Unit at 571-272-4200.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

STATEMENT UNDER 37 CFR 3.73(c)

Applicant/Patent Owner: AUTOCONNECT HOLDINGS LLC

Application No./Patent No.: 9,147,296 Filed/Issue Date: September 29, 2015

Titled: CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

AUTOCONNECT HOLDINGS LLC, a CORPORATION

(Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that, for the patent application/patent identified above, it is (choose **one** of options 1, 2, 3 or 4 below):

1. ☑ The assignee of the entire right, title, and interest.

2. ☐ An assignee of less than the entire right, title, and interest (check applicable box):

   ☐ The extent (by percentage) of its ownership interest is _____%. Additional Statement(s) by the owners holding the balance of the interest must be submitted to account for 100% of the ownership interest.

   ☐ There are unspecified percentages of ownership. The other parties, including inventors, who together own the entire right, title and interest are:

   Additional Statement(s) by the owner(s) holding the balance of the interest must be submitted to account for the entire right, title, and interest.

3. ☐ The assignee of an undivided interest in the entirety (a complete assignment from one of the joint inventors was made). The other parties, including inventors, who together own the entire right, title, and interest are:

   Additional Statement(s) by the owner(s) holding the balance of the interest must be submitted to account for the entire right, title, and interest.

4. ☐ The recipient, via a court proceeding or the like (*e.g.*, bankruptcy, probate), of an undivided interest in the entirety (a complete transfer of ownership interest was made). The certified document(s) showing the transfer is attached.

The interest identified in option 1, 2 or 3 above (not option 4) is evidenced by either (choose **one** of options A or B below):

A. ☐ An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.

B. ☑ A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: CHRISTOPHER P. RICCI To: FLEXTRONICS AP, LLC

   The document was recorded in the United States Patent and Trademark Office at

   Reel 033226, Frame 0643, or for which a copy thereof is attached.

2. From: FLEXTRONICS AP, LLC To: AUTOCONNECT HOLDINGS LLC

   The document was recorded in the United States Patent and Trademark Office at

   Reel 036503, Frame 0062, or for which a copy thereof is attached.

This collection of information is required by 37 CFR 3.73(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

STATEMENT UNDER 37 CFR 3.73(c)

3. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

4. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

5. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

6. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at

Reel _____, Frame _____, or for which a copy thereof is attached.

☐ Additional documents in the chain of title are listed on a supplemental sheet(s).

☑ As required by 37 CFR 3.73(c)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PETITION TO ACCEPT UNINTENTIONALLY DELAYED PAYMENT OF MAINTENANCE FEE IN AN EXPIRED PATENT (37 CFR 1.378(b))

Docket Number (Optional)

51263-00180

Mail to: **Mail Stop Petition**
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450
Fax: (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact the Office of Petitions at (571) 272-3282.

Patent No. 9,147,296 Application Number 14/253,204

Issue Date 09-29-2015 Filing Date 04-15-2014

CAUTION: Maintenance fee payment must correctly identify: (1) the patent number (or reissue patent number, if a reissue) and (2) the application number of the actual U.S. application (or reissue application) leading to issuance of that patent to ensure the fee(s) is/are associated with the correct patent. 37 CFR 1.366(c) and (d).

Also complete the following information, if applicable.

The above-identified patent

☐ is a reissue of original Patent No. _____ original issue date _____

original application number _____

original filing date _____.

☐ resulted from the entry into the U.S. under 35 U.S.C. 371 of international application _____

filed on _____.

NOTE: A grantable petition requires the following items:

(1) Petition fee;
(2) Maintenance fee; and
(3) Statement that the delay in payment of the maintenance fee was unintentional.

CERTIFICATE OF MAILING OR TRANSMISSION (37 CFR 1.8(a))

I hereby certify that this paper (* along with any paper referred to as being attached or enclosed) is being deposited with the United States Postal Service on the date shown below with sufficient postage as first class mail in an envelope addressed to Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, or being transmitted to the U.S. Patent and Trademark Office by EFS-Web, or by facsimile to (571) 273-8300, on the date shown below.

PETITION TO ACCEPT UNINTENTIONALLY DELAYED PAYMENT OF MAINTENANCE FEE IN AN EXPIRED PATENT (37 CFR 1.378(b))

1. SMALL ENTITY

☑ Patentee asserts, or has previously asserted, small entity status. See 37 CFR 1.27.

2. LOSS OF ENTITLEMENT TO SMALL ENTITY STATUS

☐ Patentee is no longer entitled to small entity status. See 37 CFR 1.27(g).

3. MICRO ENTITY

☐ Patentee certifies, or has previously certified, micro entity status. See 37 CFR 1.29
Form PTO/SB/15A or B or equivalent must either be enclosed or have been submitted previously.

4. LOSS OF ENTITLEMENT TO MICRO ENTITY STATUS

☐ Patentee is no longer entitled to micro entity status. See 37 CFR 1.29(i).

5. MAINTENANCE FEE (37 CFR 1.20(e)-(g))

The appropriate maintenance fee must be submitted with this petition, unless it was paid earlier.

Undiscounted			Small Entity			Micro Entity		
Amount	Fee	(Code)	Amount	Fee	(Code)	Amount	Fee	(Code)
☐ $ _____	3½ yr fee	(1551)	☑ $ 1000	3½ yr fee	(2551)	☐ $ _____	3½ yr fee	(3551)
☐ $ _____	7½ yr fee	(1552)	☐ $ _____	7½ yr fee	(2552)	☐ $ _____	7½ yr fee	(3552)
☐ $ _____	11½ yr fee	(1553)	☐ $ _____	11½ yr fee	(2553)	☐ $ _____	11½ yr fee	(3553)

MAINTENANCE FEE BEING SUBMITTED $ 1000

6. PETITION FEE

The petition fee required by 37 CFR 1.17(m) of:

$ _____ Undiscounted (Fee Code 1558); or
$ 1050 Small Entity (Fee Code 2558); or
$ _____ Micro Entity (Fee Code 3558)

must be paid as a condition of accepting an unintentionally delayed payment of a maintenance fee.

PETITION FEE BEING SUBMITTED $ 1050

7. MANNER OF PAYMENT

☐ Enclosed is a check for the sum of $ _____
☐ Please charge Deposit Account No. _____ the sum of $ _____
☑ Payment by credit card. Form PTO-2038 is attached.
☑ Payment made via EFS-Web.

8. AUTHORIZATION TO CHARGE ANY FEE DEFICIENCY

☐ The Director is hereby authorized to charge any maintenance fee or petition deficiency to Deposit Account No. _____

PETITION TO ACCEPT UNINTENTIONALLY DELAYED PAYMENT OF MAINTENANCE FEE IN AN EXPIRED PATENT (37 CFR 1.378(b))

9. OVERPAYMENT

As to any overpayment made, please

☐ Credit to Deposit Account No. _____

OR

☐ Send refund check

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information, such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form (PTO-2038) submitted for payment purposes), is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioner/applicant should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms (PTO-2038) submitted for payment purposes are not retained in the application file and therefore are not publicly available.

10. STATEMENT

The delay in payment of the maintenance fee for this patent was unintentional.

Petitioner is reminded that a delay resulting from a deliberately chosen course of action or a change in circumstance is not an unintentional delay.

Petitioner is further reminded that a person seeking reinstatement of an expired patent should not make a statement that the delay in payment of the maintenance fee was unintentional unless the entire delay was unintentional, including the period from discovery that the maintenance fee was not timely paid until payment of the maintenance fee. For example, a statement that the delay in payment of the maintenance fee was unintentional would not be proper when the patentee becomes aware of an unintentional failure to timely pay the maintenance fee and then intentionally delays filing a petition for reinstatement of the patent under 37 CFR 1.378. See MPEP 2590.

NOTE: Where the petition under 37 CFR 1.378 is filed more than two years after the date the patent expired for nonpayment of the maintenance fee, the United States Patent and Trademark Office requires an additional explanation of the circumstances surrounding the delay that establishes the entire delay was unintentional. This requirement is in addition to the requirement to provide a statement that the entire delay was unintentional. See *Clarification of the Practice for Requiring Additional Information in Petitions Filed in Patent Applications and Patents Based on Unintentional Delay*, 85 FR 12222 (March 2, 2020). See MPEP 711.03(c)(II)(C)-(F) for additional guidance on the information required to establish that the entire delay was unintentional.

☑ Because this petition under 37 CFR 1.378 is being filed more than two years after the date the patent expired for nonpayment of the maintenance fee, additional explanation of the circumstances surrounding the delay that establishes the entire delay was unintentional is enclosed herewith.

PTO/SB/66 (11-21)

DECLARATION OF GREGG HERSHENSON
IN SUPPORT OF PETITION UNDER 37 CFR 1.378

I, Gregg Hershenson, hereby declare and state as follows:

1. I am the Chief Executive Officer of AutoConnect Holdings, LLC, and have held that role since the company's inception.

2. AutoConnect focuses on the development of technology for improving vehicular connectivity, including through mobile device integration, remote configuration, formation of vehicle-to-vehicle safety networks, and improved infotainment platforms. AutoConnect's patent portfolio, which currently includes over 70 issued patents in the United States, is a key asset of the company. I have been responsible for ensuring that maintenance fees have been paid on AutoConnect's patent portfolio, which includes **Patent Nos. 9,140,560; 9,142,071; 9,142,072; 9,147,296; 9,147,297; 9,147,298; 9,153,084; 9,159,232; 9,173,100; 9,176,924;** and **9,183,685** ("the Subject Patents").

3. On May 15, 2019, AutoConnect entered into a Patent Purchase Agreement ("PPA") with IP Optimum Limited, under which title to AutoConnect's patent portfolio, including the Subject Patents, was assigned to IP Optimum. The agreement included provisions

governing the payment of maintenance fees and, specifically, required that IP Optimum pay any maintenance fees due and payable on the Subject Patents for the period commencing after the closing date for the PPA on May 15, 2019. Based on this provision, it was AutoConnect's understanding that IP Optimum was required to pay maintenance fees for the Subject Patents.

4. The PPA was structured so that AutoConnect had various ongoing interests in the assigned patents, including the Subject Patents. Specifically, AutoConnect had a reversionary right to reacquire the patents for no compensation if certain conditions were not satisfied.

5. On March 27, 2020, AutoConnect exercised its right to reacquire the patents, including the Subject Patents.

6. The Subject Patents all expired during the period between September 23, 2019, and November 12, 2019. This was several months after the execution of the PPA and before AutoConnect required the patents. Maintenance fees for AutoConnect patents that were due after this time frame were timely paid and those patents remain in effect.

7. IP Optimum never requested nor did AutoConnect ever authorize, IP Optimum to abandon any patents for any reason, including through a failure to pay maintenance fees.

8. At no point in time, either before or after execution of the PPA, did AutoConnect intend, or otherwise elect, to abandon the Subject Patents. At all times it was AutoConnect's belief and understanding that all maintenance fees had been paid and the Subject Patents (as with all other patents that were the subject of the PPA) remained in full force and effect.

9. Recently, it was brought to our attention that, despite our belief that the Subject Patents remained in full force and effect, that they had expired due to failure to pay maintenance fees. After learning that the Subject Patents had expired, I promptly undertook efforts to confirm that this was not an intentional decision.

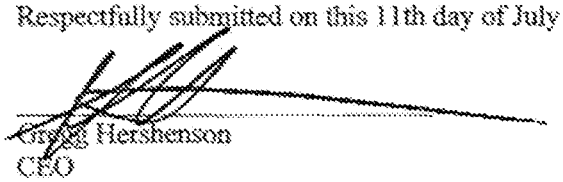
10. My investigation included discussions with my AutoConnect colleagues, who confirmed there was never any decision or intent to allow the Subject Patents to expire. The investigation also included discussions with AutoConnect's patent counsel to confirm there was never an instruction to let the Subject Patents expire. In addition, working with our legal counsel, we received confirmation from persons associated with IP Optimum, including those responsible for the payment of maintenance fees, that IP Optimum was not aware the Subject Patents had expired and never made any decisions to allow any patents, including the Subject Patents, to expire. This was further confirmed by IP Optimum's patent counsel.

11. The expiration of all the Subject Patents during the September through November 2019 time frame is consistent with the fact the neither AutoConnect nor IP Optimum intended for the Subject Patents to expire. Instead, upon information and belief, it appears that the failure to pay maintenance fees was an accident resulting from a misunderstanding between AutoConnect and IP Optimum about who was responsible for paying the maintenance fees for the assigned patents during the September to November 2019 time frame under the PPA.

12. I prepared this declaration immediately upon completion of my investigation.

13. I declare that all statements made herein are true to the best of my knowledge, or if made upon information and belief, are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Respectfully submitted on this 11th day of July 2022,



Gregg Hershenson
CEO

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Madam/Sir:

Patent Owner, AutoConnect Holdings LLC, hereby requests that the Office reinstate the issued patent associated with the above-referenced application. The patent expired in September 2019 due to an unintentional delay in the payment of the required maintenance fee. As this Petition is filed more than two years after the expiration for failure to pay maintenance fees, Patent Owner has attached herewith a declaration from Gregg Hershenson, the Chief Executive Officer of Patent Owner, in which Mr. Hershenson provides additional information concerning the unintentional failure to pay the required maintenance fee.

Filed along with this additional statement are Petition Form SB66 and the associated USPTO fees.

The maintenance fees are paid via PTO-SB45 and PTO-2038. The forms PTO-SB45 and PTO-2038 are faxed to the USPTO.

Patent Owner requests that the Office consider the above explanation and reinstate the patent.

Respectfully submitted,

/Unisha Patel/

In re Patent No. 9,147,296	:	
Issued: September 29, 2015	:	
Application No. 14/253,204	:	
Filed: 15 Apr 2014	:	DECISION ON PETITION
For: CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA	:	

This is a decision on the petition under 37 CFR 1.378(b), filed August 2, 2022, to accept the delayed payment of a maintenance fee for the above-identified patent.

The petition under 37 CFR 1.378(b) is **DISMISSED**.

If reconsideration of this decision is desired, a petition for reconsideration under 37 CFR 1.378(d) must be filed within TWO (2) MONTHS from the mail date of this decision. No extension of this two-month time limit can be granted under 37 CFR 1.136(a) or (b). This is **not** a final agency action within the meaning of 5 U.S.C. § 704.

The petition for reconsideration must include the lacking item(s) noted below, since, after a decision on the petition for reconsideration, no further reconsideration or review of the matter will be undertaken by the Director.

This patent expired on September 1, 2019 for failure to pay the 3.5-year maintenance fee. A petition to accept the unintentionally delayed payment of a maintenance fee under 35 U.S.C. 41(c) and 37 CFR 1.378(b) must be accompanied by: (1) a statement that the delay was unintentional; (2) payment of the appropriate maintenance fee, unless previously submitted; (3) payment of the petition fee forth in 37 CFR 1.17(m).

The petition fails to satisfy requirement (1) set forth above as the petition does not satisfy 37 CFR 1.378(b)(3). Petitioner has submitted the required statement of unintentional delay. However, this petition was filed more than two years after the patent expired for nonpayment of a maintenance fee.

With respect to the delay, the declaration of Gregg Hershenson asserts *inter alia*:

- He the Chief Executive Officer of AutoConnect Holdings, LLC.

- Petitioner has been responsible for ensuring that maintenance fees have been paid on AutoConnect's patent portfolio, which includes Patent Nos. 9,140,560; 9,142,071; 9,142,072; 9,147,296; 9,147,297; 9,147,298; 9,153,084; 9,159,232; 9,173,100; 9,176,924; and 9,183,685 ("the Subject Patents").

- On May 15, 2019, AutoConnect entered into a Patent Purchase Agreement ("PPA") with IP Optimum Limited, under which title to AutoConnect's patent portfolio, including the Subject Patents, was assigned to IP Optimum. Effective May 5, 2019, the agreement required IP Optimum to pay any maintenance fees due and payable on the Subject Patents. In view of the purchase agreement, AutoConnect's understanding that IP Optimum was required to pay maintenance fees for the Subject Patents.

- AutoConnect had a reversionary right to reacquire the patents for no compensation if certain conditions were not satisfied.

- On March 27, 2020, AutoConnect exercised its right to reacquire the patents, including the Subject Patents.

- The Subject Patents all expired during the period between September 23, 2019, and November 12, 2019. This was several months after the execution of the PPA and before AutoConnect reacquired the patents. Maintenance fees for AutoConnect patents that were due after this time frame were timely paid and those patents remain in effect.

- IP Optimum never requested nor did AutoConnect ever authorize, IP Optimum to abandon any patents for any reason, including through a failure to pay maintenance fees.

- At no point in time, either before or after execution of the PPA, did AutoConnect intend, or otherwise elect, to abandon the Subject Patents. At all times it was AutoConnect's belief and understanding that all maintenance fees had been paid and the Subject Patents (as with all other patents that were the subject of the PPA) remained in full force and effect.

- Recently, it was brought to our attention that, despite our belief that the Subject Patents remained in full force and effect, that they had expired due to failure to pay maintenance fees. After learning that the Subject Patents had expired, I promptly undertook efforts to confirm that this was not an intentional decision.

- My investigation included discussions with my AutoConnect colleagues, who confirmed there was never any decision or intent to allow the Subject Patents to expire. The investigation also included discussions with AutoConnect's patent counsel to confirm there was never an instruction to let the Subject Patents expire. In addition, working with

our legal counsel, we received confirmation from persons associated with IP Optimum, including those responsible for the payment of maintenance fees, that IP Optimum was not aware the Subject Patents had expired and never made any decisions to allow any patents, including the Subject Patents, to expire. This was further confirmed by IP Optimum's patent counsel.

- The expiration of all the Subject Patents during the September through November 2019 time frame is consistent with the fact the neither AutoConnect nor IP Optimum intended for the Subject Patents to expire. Instead, upon information and belief, it appears that the failure to pay maintenance fees was an accident resulting from a misunderstanding between AutoConnect and IP Optimum about who was responsible for paying the maintenance fees for the assigned patents during the September to November 2019 time frame under the PPA.

- Petitioner's declaration was prepared immediately upon completion of his investigation.

The USPTO requires additional information concerning whether a delay in seeking acceptance of a delayed maintenance fee payment was unintentional where the petition to accept such maintenance fee payment was filed more than two years after the date the patent expired for nonpayment. See, Clarification of the Practice for Requiring Additional Information in Petitions Filed in Patent Applications and Patents Based on Unintentional Delay, 85 FR 12222 (March 2, 2020). Therefore, additional information that provides an explanation of the circumstances surrounding the delay that establishes the entire delay was unintentional is required.

The USPTO is concerned with three periods of delay. Petitioner is reminded the burden of proof to establish that the delay from the due date for the payment of the maintenance fee until the filing of a grantable petition was unintentional within the meaning of 35 U.S.C. 41(c)(1) and 37 CFR 1.378 rests with the petitioner.

The first period of delay petitioner must address on renewed petition is the delay in payment of the maintenance fee that resulted in the expiration of this patent. Petitioner must explain the delay between when the maintenance fee was due and when the maintenance fee was paid.

Hershenson asserts that AutoConnect was responsible for timely submitting the maintenance fee for the instant patent. The petition, however, provides no explanation for why AutoConnect did not timely submit the maintenance fee. Accordingly, it cannot be found that the entire period of time, from the time that the maintenance fee was due until the filing of a grantable petition, was unintentional.

Petitioner should note that the party whose delay is relevant is the party having the right or authority to make the timely maintenance fee payment in the above-identified patent. When the entire right, title, and interest in patent have been assigned to a third party (and thus does not retain any legal or equitable interest in the invention), the delay of the patentee to whom the

patent was issued is irrelevant in evaluating whether the delay was unintentional. See, Kim v. Quigg, 718 F. Supp. 1280, 1284, 12 USPQ2d 1604, 1607-08 (E.D. Va. 1989). See, MPEP 711.03(c)(II)(C)-(F) for additional guidance on the information required to establish that the entire delay was unintentional.

Any request for reconsideration of this decision must establish that the failure to timely submit the maintenance, from the time that the maintenance fee was due until the filing of a grantable petition, has been unintentional.

The second period of delay petitioner must address on renewed petition is the delay in filing the initial petition pursuant to 37 CFR 1.78. Petitioner must explain why the initial petition was not filed until August 2, 2022.

Hershenson declares that it was "recently" brought to his attention that the patent was expired. Hershenson does not set forth the circumstances surrounding the discovery that the patent was expired.

The petitioner does not indicate when it was discovered that the patent was expired or indicate who made the discovery that the patent was expired. The petition has provided no details of the circumstances surrounding the discovery that the patent was expired. It is noted that Hershenson references an investigation into the circumstances surrounding the expiration of various patents, including that which is the subject of the instant petition. However, neither petitioner nor Hershenson indicate when this investigation commenced and ended.

As it is not known when or how it became known that the patent was expired and when and what action commenced thereafter to seek reinstatement of the patent, it cannot be found that the filing of the instant petition has been unintentionally delayed.

Any request for further consideration of this matter must establish that the delay in filing the initial petition to reinstate the patent was unintentional.

The third period of delay petitioner must address on renewed petition is the delay in filing a *grantable* petition pursuant to 37 CFR 1.378(b). Petitioner is reminded that the burden of establishing that the entire period of delay, from the time that the maintenance fee was due until the filing of a grantable petition, remains with patentee.

When addressing each of these three periods of delay, petitioner is reminded that an intentional course of action is not rendered unintentional when, upon reconsideration, the petitioner changes his or her mind as to the course of action that should have been taken. See, In re Maldague, 10 USPQ2d 1477, 1478 (Comm'r Pat. 1988). Petitioner's failure to carry the burden of proof to establish that the "entire" delay was "unintentional" may lead to the denial of a petition under 37 CFR 1.378, regardless of the circumstances that originally resulted in the failure to timely pay the maintenance fee.

When seeking reinstatement of an expired patent, a petitioner should not make a statement that the delay in payment of the maintenance fee was unintentional unless the entire delay was unintentional, including the period from discovering the maintenance fee was not timely paid until payment of the maintenance fee. For example, a statement that the delay in payment of the maintenance fee was unintentional would not be proper when the petitioner becomes aware of an unintentional failure to timely pay the maintenance fee and then intentionally delays filing a petition for reinstatement of the patent under 37 CFR 1.378. See, MPEP 2590(I).

DECLARATION OF GREGG HERSHENSON
IN SUPPORT OF PETITION UNDER 37 CFR 1.378

I, Gregg Hershenson, hereby declare and state as follows:

1. I am the Chief Executive Officer of AutoConnect Holdings, LLC, and have held that role since the company's inception. On June 15, 2022, AutoConnect submitted petitions under 37 CFR 1.378(b) to accept unintentionally delayed payments of the 3 ½ year maintenance fee for several patents owned by AutoConnect. An October 28, 2022, communication dismissed one of the petitions relating to U.S. Patent No. 9,123,058 (application 13/678,710) and requested additional information regarding the delay in a renewed petition. Additional facts concerning when AutoConnect discovered maintenance fees were not paid and the filing of petitions to revive are addressed herein.

2. AutoConnect focuses on the development of technology for improving vehicular connectivity, including through mobile device integration, remote configuration, formation of vehicle-to-vehicle safety networks, and improved infotainment platforms. AutoConnect's patent portfolio, which currently includes over 70 issued patents in the United States, is a key asset of the company. I have been responsible for ensuring that maintenance

fees have been paid on AutoConnect's patent portfolio, which includes **Patent Nos. 9,140,560; 9,142,071; 9,142,072; 9,147,296; 9,147,297; 9,147,298; 9,153,084; 9,159,232; 9,173,100; 9,176,924;** and **9,183,685**

("the Subject Patents").

3. On May 15, 2019, before any of the Subject Patents had expired for failure to pay maintenance fees, AutoConnect entered into a Patent Purchase Agreement ("PPA") with IP Optimum Limited, under which title to AutoConnect's patent portfolio, including the Subject Patents, was assigned to IP Optimum. AutoConnect and IP Optimum included provisions in the PPA to ensure the payment of any maintenance fees due and payable on the Subject Patents for the period commencing after the closing date for the PPA on May 20, 2019. Specifically, Section 5.5 of the agreement states that "Purchaser will pay any maintenance fees, annuities, and the like due and payable on the Patents for the period commencing after the [May 20, 2019] Closing Date." Based on this provision, AutoConnect understood that IP Optimum was required to pay maintenance fees for the Subject Patents.

4. The PPA was structured so that AutoConnect had various ongoing interests in the assigned patents, including the Subject Patents. Specifically, AutoConnect secured a reversionary right to reacquire the patents for no compensation if certain conditions were not satisfied. On March 27, 2020, AutoConnect exercised its right to reacquire the patents, including the Subject Patents.

5. The Subject Patents all expired during the period between September 23, 2019, and November 12, 2019. This was several months after the execution of the PPA and before AutoConnect required the patents. Maintenance fees for AutoConnect patents that were due after this time frame were timely paid and those patents remain in effect.

6. Earlier this year, around May 6, 2022, outside counsel discovered and brought to our attention that the Subject Patents had expired due to failure to pay maintenance fees. Until this date, AutoConnect was unaware that any the Subject Patents had expired as a result of a failure to pay maintenance fees, and so had no reason to pay the outstanding maintenance fees or file a petition under 37 CFR 1.378(b) seeking to revive them. After learning that the Subject Patents had expired, I immediately undertook efforts to investigate the missing maintenance fee payments. Consistent with the provisions in the PPA where both AutoConnect and IP Optimum agreed that all maintenance fees on the patent should be paid, I have confirmed that the failure to pay maintenance fees on the Subject Patents was unintentional.

7. During my investigation, I confirmed with the co-owners of AutoConnect, Christopher Ricci and Peter Sousa, that there was never any decision or intent to allow the Subject Patents to expire. Similarly, I confirmed that AutoConnect never authorized or instructed IP Optimum to abandon any patents for any reason, including through a failure to pay maintenance fees.

8. My investigation also included discussions with AutoConnect's patent counsel, who confirmed there was never an intention or instruction to let the Subject Patents expire.

9. In addition, upon learning of the expiration of the Subject Patents, I contacted several persons that were either employed by or associated with IP Optimum during the relevant time frame, including those who would have been knowledgeable about decisions to pay maintenance fees. I confirmed that IP Optimum's outside patent counsel, Darrin Auito, Esq., never received instructions not to pay maintenance fees or any instruction to otherwise abandon the Subject Patents. I also spoke with Kathy Grubbs, Esq., who was also involved

with IP Optimum in the relevant time frame. Ms. Grubbs also confirmed she was unaware of any decisions or instructions not to pay maintenance fees. More recently, I contacted Pascal Asselot and Erich Spangenberg, who were also involved with IP Optimum during the relevant time frame. Both confirmed they were unaware of intention or any decision to abandon patents. These discussions with individuals formerly associated with IP Optimum are consistent with the requirement to pay maintenance fees by the PPA and further confirm that the nonpayment of maintenance fees was unintentional.

10. In summary, at no point in time, either before or after execution of the PPA, did AutoConnect or IP Optimum intend, or otherwise elect, to abandon the Subject Patents. At all times it was AutoConnect's belief and understanding that all maintenance fees had been paid and the Subject Patents (as with all other patents that were the subject of the PPA) remained in full force and effect.

11. Based on our investigation, the failure to pay maintenance fees was accidental and appears to have resulted from confusion over provisions of the PPA that covered the payment of maintenance fees with a final deadline in the September to November 2019 time frame. For example, in addition to Section 5.5 of the agreement, which states that "Purchaser will pay any maintenance fees, annuities, and the like due and payable on the Patents for the period commencing after the [May 20, 2019] Closing Date," Section 6.11 of the PPA also addressed the payment of maintenance fees:

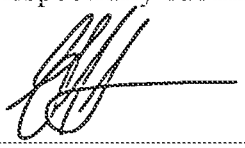
6.11 Prosecution Obligations; Fees. No undisclosed actions must be taken by Seller before any governmental entity (including the United States Patent and Trademark Office or equivalent authority anywhere in the world) within ninety (90) days of the Closing Date with respect to any of the Assigned Patent Rights. All maintenance fees, annuities, and the like due or payable on the Patents until the lapse of ninety (90) days following the Closing Date have been timely paid. For the avoidance of doubt, such timely payment includes payment of registration, maintenance, and renewal fees for which the fee payment window has opened even if the surcharge date is in the future. Notwithstanding the forgoing, responsibility for obligation to respond to prosecution matters, and associated expenses, will transfer to Purchaser immediately upon closing. At least sixty (60) days prior to the date by which action must be taken to avoid abandonment of a pending application, Purchaser shall provide Seller with notice if it intends to abandon such application and provide Seller an opportunity to reacquire the application at no cost ("Reacquired Applications"). Purchaser shall retain a non-exclusive license to Reacquired Applications with the right to grant a sublicense to any third party who receives a license to part or all of the remaining Patents.

Under Section 6.11, AutoConnect (Seller) agreed it has paid all maintenance fees "due or payable . . . within ninety (90) days following the [May 20, 2019] Closing Date." The agreement then states that "For the avoidance of doubt, such timely payment includes payment of . . . maintenance . . . fees for which the fee payment window has opened even if the surcharge date is in the future." AutoConnect misapplied this Section of the PPA and used *the deadline* for payment of maintenance fees as the operative date for determining which of Seller and Purchaser was responsible for paying maintenance fees. Section 6.11 appears to indicate that the operative date for payment by AutoConnect was when *the window for the payment of maintenance fees first opened*, not the payment deadline, which was several months after the parties executed the PPA.

12. My investigation began immediately after May 6, 2022, when I first learned that the Subject Patents had expired and finished just before our original petition to revive on July 11, 2022. I completed my investigation and AutoConnect filed its petition to revive as diligently as possible. The only reason for the passage of time between May 6, 2022, and the date AutoConnect filed petitions to revive under 37 CFR 1.378 was to perform an investigation into the issue and prepare the paperwork necessary to support the petition.

13. I declare that all statements made herein are true to the best of my knowledge, or if made upon information and belief, are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Respectfully submitted on this 28th day of December 2022.



Gregg Hershenson

Title: CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA

Renewed Petition Under 37 CFR 1.378(b)

Mail Stop Petitions
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Madam/Sir:

This Renewed Petition is filed in response to the December 22, 2022, Decision on Patent Owner's Petition under 37 CFR 1.378 to revive Patent No. 9,147,296 for the unintentional failure to pay maintenance fees. Patent Owner respectfully submits that this Petition should be granted because the delayed payment of maintenance fees was unintentional and Petitioner has diligently worked to resolve the mistake since it was first discovered. At no time did anyone with an ownership interest in the patent intend to abandon the patent for failure to pay maintenance fees. This Request for Reconsideration is supported by (1) the December 28, 2022 Declaration from Mr. Gregg Hershenson, CEO of AutoConnect, and (2) the January 27, 2023 Declaration from Mr. Pascal Asselot, the person responsible for managing the commercialization of the AutoConnect patent portfolio while it was held by IP Optimum.

1. Patent Owner Discovered that the Patent Expired for Failure to Pay Maintenance Fees on About May 6, 2022

As confirmed in the December 28, 2022 Hershenson Declaration, on about May 6, 2022, Patent Owner learned from outside legal counsel that the patent had been declared abandoned for failure to pay the 3.5 year maintenance fees. Outside counsel notified AutoConnect immediately after discovering the patent had expired. Thereafter, Patent Owner diligently investigated the facts surrounding the untimely payment of maintenance fees and filed a renewed petition to revive without delay.

2. Patent Owner Conducted an Investigation Immediately Upon Discovery of the Expiration of the Patent, Which Confirmed that the Failure to Pay Maintenance Fees Was Unintentional

Mr. Hershenson immediately started his investigation after learning from outside counsel about the expiration of the patent on about May 6, 2022. He completed that investigation on about July 11, 2022, when he signed a declaration summarizing the results of his investigation.

As part of Mr. Hershenson's investigation, he looked into activities at AutoConnect as well as activities that occurred at IP Optimum. IP Optimum held title to the AutoConnect patent portfolio, including the patent at issue, from May 15, 2019, until March 27, 2020. Specifically, on May 15, 2019, AutoConnect and IP Optimum entered into a Patent Purchase Agreement ("PPA"), under which AutoConnect's patent portfolio, including the patent at issue, was assigned to IP Optimum. The parties structured the PPA so that AutoConnect had various ongoing interests in the patent at issue, including the right to reacquire its patents under certain conditions. On March 27, 2020, AutoConnect exercised its right to reacquire the patents, including the patent at issue.[1]

During his investigation, Mr. Hershenson confirmed with his AutoConnect co-owners that no one ever intentionally failed to pay maintenance fees or otherwise intended to let the patent lapse. As for IP Optimum, Mr. Hershenson spoke with three different people who supported IP Optimum's efforts to commercialize the AutoConnect patent portfolio, including the patent at issue. He spoke with IP Optimum's outside patent counsel, Darrin Auito, Esq., who confirmed that he never received an instruction not to pay the patent's maintenance fees (or any instruction to otherwise abandon the patent). He also spoke with Kathy Grubbs, Esq., who was involved with IP Optimum in the relevant time frame, and she too was unaware of any decisions or instructions not to pay maintenance fees. In addition, Mr. Hershenson spoke with Pascal Asselot, who was involved with the commercialization of the patent portfolio while held by IP Optimum, and he was also unaware of intention or any decision to abandon the patent, whether to avoid paying maintenance fees or for any other reason. Mr. Asselot's Declaration confirms this fact and further explains that there would not "have been any reason to abandon those applications because we were actively trying to commercialize them."

3. The Failure to Pay Maintenance Fees Was A Mistake

Patent Owner's investigation confirmed that the failure to pay maintenance fees was not an intentional decision but instead the result of a mistaken application of a contract.

---

[1] Patent Owner understands that IP Optimum is no longer a going concern.

AutoConnect and IP Optimum included provisions in the PPA to ensure payment of any maintenance fees due and payable on the assigned patents. AutoConnect, however, misapplied the provisions in the PPA governing the parties' respective obligations to pay maintenance fees. Section 5.5 of the agreement states that "[IP Optimum] will pay any maintenance fees, annuities, and the like due and payable on the Patents for the period commencing after the [May 20, 2019] Closing Date." Based on this provision, AutoConnect understood that IP Optimum was required to pay maintenance fees for the Subject Patents. But in its investigation, AutoConnect discovered another provision, Section 6.11, which states that AutoConnect, as the Seller, agreed it has paid all maintenance fees "due or payable . . . within ninety (90) days following the [May 20, 2019] Closing Date" which "includes payment of . . . maintenance . . . fees for which the fee payment window has opened even if the surcharge date is in the future." AutoConnect misapplied the terms of the PPA, using the *deadline for payment of maintenance fees* as the operative date for determining which of Seller and Purchaser was responsible for paying maintenance fees while it appears that the *date on which the window for payment first opened* was the operative date. It was this misunderstanding that appears to have caused the failure to timely pay the maintenance fees.

Thus, as established by the December 28, 2022 Hershenson Declaration and the January 27, 2023 Asselot Declaration, (1) there was no intentional failure or delay in paying the 3.5 year maintenance fee or submitting a petition to revive, and (2) promptly upon discovering the fact the patent had expired for failure to pay maintenance fees, Patent Owner thoroughly investigated the issue and confirmed there was no intent to allow the patent to go abandoned for failure to pay maintenance fees, and (3) promptly prepared and submitted a renewed petition to revive. For this reason, Applicant requests that the Office revive the patent.

4. Patent Owner Diligently Completed and Filed the Petition to Revive

Petitioner filed its original petition to revive promptly after the completion of Mr. Hershenson's investigation and the preparation of the petition and supporting documents for submission to PTO.

5. Patent Owner Diligently Completed and Filed the Request for Reconsideration

The decision denying the petition to revive was mailed on December 22, 2022 and sets forth requests for additional information. This Renewed Petition is being filed within the two-month deadline identified therein.

6. No Further Payment of Fees Required

The Decision on Petition indicates that the appropriate fees have been paid and that "no further fees are due on renewed petition."

In view of the foregoing, Patent Owner respectfully requests that the Office deem the identified patent revived.

Respectfully submitted,

DECLARATION OF PASCAL ASSELOT
IN SUPPORT OF PETITION UNDER 37 CFR 1.378

I, Pascal Asselot, hereby declare and state as follows:

1. I co-founded IPwe in January 2018 and served as Managing Director from then until September 2021. I was responsible for the commercialization of patent portfolios. In particular, I managed the commercialization of a vehicular technology patent portfolio brought by an entity called IP Optimum and acquired from AutoConnect Holdings, LLC. I understand that IP Optimum is no longer a going concern.

2. In my role commercializing the patent portfolio, I am unaware of any decisions to abandon any patents in the AutoConnect patent portfolio, whether to avoid paying maintenance fees or for any other reason. Nor would there have been any reason to abandon those applications because we were actively trying to commercialize them.

3. I declare that all statements made herein are true to the best of my knowledge, or if made upon information and belief, are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United

States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Respectfully submitted on this 27th day of January 2023.

In re Patent No. 9,147,296	:	
Issued: September 29, 2015	:	
Application No. 14/253,204	:	
Filed: 15 Apr 2014	:	DECISION ON PETITION
For: CUSTOMIZATION OF VEHICLE CONTROLS AND SETTINGS BASED ON USER PROFILE DATA	:	

This is a decision on the petition under 37 CFR 1.378(b), filed February 15, 2023, to accept the delayed payment of a maintenance fee for the above-identified patent.

The petition is **GRANTED**.

This patent expired on September 29, 2019 for failure to pay the 3.5-year maintenance fee. A petition to accept the unintentionally delayed payment of a maintenance fee under 35 USC 41(c) and 37 CFR 1.378(b) must be accompanied by: (1) a statement that the delay was unintentional; (2) payment of the appropriate maintenance fee, unless previously submitted; (3) payment of the petition fee forth in 37 CFR 1.17(m).

The petition has been carefully considered and found in compliance with the provisions set forth above. The required petition fee, 3.5-year maintenance fee, and statement, including explanation, of unintentional delay have been provided.

In view thereof, the maintenance fee is hereby accepted and the above-identified patent is reinstated as of the mail date of this decision.

Patentee is advised as a courtesy that the window for timely submission of the 7.5-year maintenance fee opened September 29, 2022. Timely submission of the 7.5-year maintenance fee is required to avoid expiration of the patent.

Telephone inquiries should be directed to the undersigned at (571) 272-3205.
