AMD's AI Chips Gain Ground in Data Centers: A Sign for More Upside?

July 16, 2025 — 01:00 pm EDT

Written by **Zacks Equity Research** for **Zacks** →

Advanced Micro Devices AMD is strengthening its footprint in the artificial intelligence (AI) market through an expanding portfolio tailored for data center applications. The latest MI300 series accelerator family strengthens its competitive position in the generative AI space, catering to the increasing demands of AI workloads in modern data centers.

memory. In comparison, NVIDIA's H100 NVL dual-GPU card offers 188GB of HBM3 memory. Thanks to these features, AMD MI300X can efficiently run large language model training (up to 80 billion parameters) and inference for generative AI workloads.

The expanding footprint is clearly reflected in AMD's financial performance. In the first quarter of 2025, data center revenues surged 57.2% year over year to $3.674 billion, accounting for 49.4% of total revenues. The Zacks Consensus Estimate for second-quarter Data Center revenues is pegged at $3.31 billion, indicating an impressive year-over-year increase of 16.7%.

Building on this momentum, in June 2025, Meta Platforms announced the broad deployment of AMD Instinct MI300X for Llama 3 and Llama 4 inference. Meta Platforms also expressed strong interest in the MI350 Series and is collaborating with AMD on future AI roadmaps, including the MI400 platform.

Feedback

Advanced Micro Devices Faces Stiff Competition

AMD faces stiff competition in the data center AI chip market from industry giants like **Intel Corporation** INTC and **NVIDIA** NVDA.

Intel Corporation has launched AI chips for data centers and PCs. This is primarily aimed at gaining a firmer footing in the expansive AI sector, spanning cloud and enterprise servers, networks, volume clients, and ubiquitous edge environments, in tune with evolving market dynamics. Intel has unveiled the Intel Core Ultra, featuring a neural processing unit that enables power-efficient AI acceleration with 2.5 times better power efficiency than the previous generation.

NVIDIA is benefiting from the strong growth of artificial intelligence (AI), high-performance and accele

MY QUOTES

The data center end-market business is likely to benefit from the growing demand for generative AI and large language models utilizing GPUs based on NVIDIA's Hopper and Blackwell architectures. The strong demand for its chips from large cloud service and consumer Internet companies is anticipated to continue aiding the data center segment's top-line growth. In the first quarter of fiscal 2026, data center revenues jumped 73.3% year over year and 9.9% from the previous quarter to $39.1 billion.

AMD's Share Price Performance, Valuation and Estimates

Advanced Micro Device shares have gained 28.8% year to date (YTD), outperforming the broader Zacks Computer & Technology sector's return of 8.3% and the Zacks Computer - Integrated Systems industry's increase of 26.6%.

AMD Stock Performance

Only $1 to See All Zacks' Buys and Sells

We're not kidding.

Several years ago, we shocked our members by offering them 30-day access to all our picks for the total sum of only $1. No obligation to spend another cent. Thousands have taken advantage of this opportunity.

Thousands did not - they thought there must be a catch. Yes, we do have a reason. We want you to get acquainted with our portfolio services like *Surprise Trader, Stocks Under $10, Technology Innovators*, and more, that closed 256 positions with double- and triple-digit gains in 2024 alone.
