8388 Po-Kai Huang	225	1 9.4.2.218.2	76	42	T	N	76.42 9.4.2.218.2	Currently, the 32 bit BA Bitmap support capability bit is written as a capability bit for reception of 32 bit BA bitmap in Table 9-262z. However, it is generally agreed that 32 bit BA Bitmap is an option feature. Hence, 32 bit BA Bitmap should be an optional feature for transmission as well.	Two options. Option 1: Change description of Bit 21 to 32 bit BA Bitmap Support Rx. Add one capability bit in reserved field for 32 bit BA Bitmap Tx. Option 2: Change description of Bit 21 to 32 bit BA Bitmap Support Tx & Rx. Change the description in Table 9-262z correspondingly.	2017/1/9 9:42
8389 Po-Kai Huang	225	1 27.5.2.6	172	35	T	N	172.35 27.5.2.6	An HE AP may transmit a Basic Trigger frame or a BSRP Trigger frame that contains one or more RUs for random access. However, a STA only maintains one counter for OFDMA random access. Assume the same system behavior for two different types of solicitation is awkward. Specifically, a STA that intends to transmit data to AP may get its chance at the slot of BSR random access allocation and needs to backoff again.	Make clear separation between operation of regular random access allocations and BSR random access allocations by separating into two backoff counters for OFDMA random access based on trigger type.	2017/1/9 9:42
8390 Po-Kai Huang	225	1 3.2	29	4	E	N	29.04 3.2	Add definition for S-MPDU	Add definition for S-MPDU	2017/1/9 9:42

8391	Po-Kai Huang	225	1 27.4.4.3	161	8	T	N	161.08 27.4.4.3	In 27.4.4.3 DL MU PPDU soliciting an HE trigger-based PPDU response, it is not clear if the DL MU PPDU includes VHT MU PPDU.	Two suggested options to resolve the comment: If the answer is no, change the title to "HE DL MU PPDU soliciting an HE trigger-based PPDU response". Specify that trigger frame or UL MU response scheduling is not allowed in VHT MU PPDU. If the answer is yes, a sentence in the paragraph describes that "An Action frame in the DL MU PPDU is always responded with an HE trigger-based PPDU." This behavior contradicts with the description in Table 9-9--Ack Policy subfield in QoS Control field of QoS Data frames, where the content only allows DL HE MU PPDU to set MU Ack Policy. Change the following sentence "For a frame that is carried in a DL HE MU PPDU" in table 9-9 to "For a frame that is carried in a DL MU PPDU." Specify that trigger frame or UL MU response scheduling is allowed in VHT MU PPDU.		2017/1/9 9:42
8392	Po-Kai Huang	225	1 27.4.4	160	52	T	N	160.52 27.4.4	It will be worthwhile to clarify the definition of DL MU PPDU in this section. Specifically, does DL MU PPDU include VHT MU PPDU? It will also be worthwhile to clarify the definition of DL SU PPDU. Does DL SU PPDU mean any PPDU format from AP to one destination? Similarly it will be worthwhile to clarify the definition of SU PPDU. Is it PPDU with any format to a singl user?	Add the definition of DL MU PPDU, DL SU PPDU, and SU PPDU in Section 3.		2017/1/9 9:42
8393	Po-Kai Huang	225	1 27.10.4	193	58	T	N	193.58 27.10.4	Currently, it is required that Multi-STA Block Ack is used for response to multi-TID A-MPDU. However, if the receiver only receives one MPDU with EOF in the delimiter set to 1 due to error of receiving other MPDUs, and the A-MPDU is carried in VHT PPDU, then the receiver may treat the MPDU as VHT single MPDU and responds with Ack frame rather than Multi-STA Block Ack. Similarly, if the receiver only receives one MPDU carrying QoS Data with EOF in the delimiter set to 0 due to error of receiving other MPDUs, then the receiver may treat the MPDU as single TID and respond with Block Ack rather than Multi-STA Block Ack.	There are several options to resolve the ambiguity. Option 1: Have an indication to differentiate multi-TID A-MPDU from single TID A-MPDU or S-MPDU. The reserved bit in MPDU delimiter can be used for this purpose. Option 2: HE STA always responds Multi-STA Block Ack to A-MPDU sent from HE STA that supports Multi-STA Block Ack. Option 3: Relax the restriction that response to multi-TID A-MPDU shal be Multi-STA Block Ack and allow Ack and Block Ack. Add the condition that in multi-TID A-MPDU, there is only one MPDU that solicits Ack frame.		2017/1/9 9:42
8394	Po-Kai Huang	225	1 27.11.5	197	44	T	N	197.44 27.11.5	Based on the new response rule in 27.15.2, it is now possible that a TXOP responder transmits HE extended range PPDU. As a result, the setting rule of TXOP Duration field for the HE extended range PPDU response needs to be defined.	Add the setting rule when the TXOP responder transmits HE extended range PPDU. The rule can just aligns with the setting rule when TXOP responders transmits HE TB PPDU.		2017/1/9 9:42
8395	Po-Kai Huang	225	1 9.3.1.23.6	51	40	T	N	51.40 9.3.1.23.6	GCR MU-BAR has variable length for Trigger dependent common info field due to variable length of BAR information field. As a result, in the future if additional BAR variant is added, a STA that supports GCR MU-BAR may not be able to decode User Info field. Ideally, a STA that does not support the new BAR vairant will not be included in the User Info field. However, this introduces additional checking logic except User Info field to check if a STA is solicited by different variant of Trigger frame.	Suggest to add a length field in Trigger dependent Common Info field of MU-BAR to indicate the length of BAR control and BAR Info.		2017/1/9 9:42
8396	Po-Kai Huang	225	1 9.3.1.23.4	50	43	T	N	50.43 9.3.1.23.4	Similar to section 9.3.1.23.2, 9.3.1.23.3, 9.3.1.23.5, and 9.3.1.23.7, change the note related to Trigger Dependent Common Info field and Trigger Dependent User Info field to description.	As in comment		2017/1/9 9:42
8397	Po-Kai Huang	225	1 9.3.1.23.4	50	64	E	N	50.64 9.3.1.23.4	Similar to the description in 9.3.1.23, organize the description of RU allocation field at the end of the section with itemized list.	As in comment		2017/1/9 9:42

8398	Po-Kai Huang	225	1 9.4.1.62	57	46	T	N	57.46 9.4.1.62	The description of Sounding Dialog Token Number in Table 9-76a is for RU End Index.	Fix the description for Sounding Dialog Token Number.	2017/1/9 9:42
8399	Po-Kai Huang	225	1 9.4.2.218.2	70	42	T	N	70.42 9.4.2.218.2	Description for Maximum A-MPDU Length Exponent is empty. Understand that there are corresponding descriptions after the table, but it is weird that the table is empty.	Fill in the description.	2017/1/9 9:42
8400	Po-Kai Huang	225	1 9.4.2.219	91	39	T	N	91.39 9.4.2.219	There are two paragraphs for the description of BSS Color field.	Merge these two paragraphs into one paragraph for the descriptions of AP.	2017/1/9 9:42
8401	Po-Kai Huang	225	1 27.10.4	193	47	T	N	193.47 27.10.4	11ax introduces new EOF setting rule. However, the EOF setting rule in 10.13.7 and table 9-422 in 9.7.1 is not changed correspondingly.	Make sure that the description for EOF setting in 10.13.7 and Talbe 9-422 are consistent with the new EOF setting rule added in 27.10.4.	2017/1/9 9:42
8402	Po-Kai Huang	225	1 27.2.2	150	59	T	N	150.59 27.2.2	The fourth bullet for the setting of Intra-BSS NAV with the duration information is a conditional bullet that is only reuqired if the STA is a TXOP holder. The concept is there, but the description may need be revised for clear presentation.	Several option for better presentation. Option 1: Have two set of descriptions: one for the STA that is a TXOP holder. One for the STA that is not a TXOP holder. Option 2: Add note or description to clarify that the fourth bullet is a conditional bullet that is only required for checking when the STA is a TXOP holder.	2017/1/9 9:42
8403	Po-Kai Huang	225	1 27.2.2	150	58	T	N	150.58 27.2.2	The thrid bullet for the setting of Intra-BSS NAV with the duration information may need to be revised. Specficially, it is possible that a STA that is solicited by the Trigger frame does not respond to the Trigger frame. If the Trigger frame solicits a long transmission, then the STA may contend and transmit later and hurt the reception of UL MU transmissoin.	Revise the rule such that a HE STA always set NAV when receives a Trigger frame regardless of being solicited for response or not.	2017/1/9 9:42
8404	Po-Kai Huang	225	1 9.7.1	107	1	T	N	107.01 9.7.1	The MPDU Length field is used by HE PPDU as well. However, there is no corresponding description in equaltion 9-5.	Add the description for HE PPDU in equation 9-5.	2017/1/9 9:42
8405	Po-Kai Huang	225	1 9.7.3	107	30	E	N	107.30 9.7.3	It should be HE_EXT_SU rather than HE_EXT.	Fix the error.	2017/1/9 9:42
8406	Po-Kai Huang	225	1 9.7.3	107	35	T	N	107.35 9.7.3	Can Multi-TID be used in A-MPDU carried in non-HE PPDU such as VHT PPDU, HT PPDU, and non-HT PPDU? From the sentence, it may be implied that the restriction exists.	Directly specify if multi-TID A-MPDU can be carried in non-HE PPDU. From commenter's point of view, the answer is yes as long as the recipient supports multi-TID A-MPDU.	2017/1/9 9:42
8407	Po-Kai Huang	225	1 9.7.3	108	7	T	N	108.07 9.7.3	The underlined sentence does not exclude the cast that HE MU PPDU solicits one immediate response not carried in an HE trigger-based PPDU and solicits one immediate response carried in an HE trigger-based PPDU.	Add descriptions to exclude the case.	2017/1/9 9:42
8408	Po-Kai Huang	225	1 9.7.3	110	38	T	N	110.38 9.7.3	In Table 9-425, there is a description for Ack Policy equal to Ack requrest. However, in table 9-9, there is no description for Ack policy equal to "Ack request". Is Ack request a new policy or should it be revised as normal Ack? Same comment for the description in Note 1.	Clarify what is Ack policy equal to Ack request.	2017/1/9 9:42
8409	Po-Kai Huang	225	1 9.7.3	111	45	T	N	111.45 9.7.3	It should be "One Ack or Block Ack frame is ..." for the description of no HE BSS.	Revise the sentence as suggested by the comment.	2017/1/9 9:42
8410	Po-Kai Huang	225	1 10.3.2.8a.3	117	29	T	N	117.29 10.3.2.8a.3	The fourth bullet of the condition for responding to MU-RTS is covered by the second bullet.	Combine fourth bullet and second bullet.	2017/1/9 9:42
8411	Po-Kai Huang	225	1 10.3.2.8a.3	117	21	T	N	117.21 10.3.2.8a.3	The description of ED-based CCA and virtual CS in the second bullet of the condition for responding to MU-RTS seems to be redundant because the UL MU CS section has already included ED-based CCA and virtual CS.	Remove the description of ED-based CCA and virtual CS or turn the description of ED-based CCA and virtual CS to a note.	2017/1/9 9:42
8412	Po-Kai Huang	225	1 10.3.2.10.2	119	24	T	N	119.24 10.3.2.10.2	The description "defined by the UL trigger information" seems to be redundant. Further, there is really no specific definition for UL trigger information.	delete the description "defined by the UL trigger information". Similarly, Figure 10-12a should be reivsed.	2017/1/9 9:42
8413	Po-Kai Huang	225	1 10.3.2.10.3	120	2	T	N	120.02 10.3.2.10.3	For the format allowed for Multi-STA BA, can we just say Multi-STA BA transmission are allowed in any PPDU format except HE TB PPDU? It seems that this is the intention.	Revised as in comment.	2017/1/9 9:42
8414	Po-Kai Huang	225	1 10.3.2.10.3	120	5	T	N	120.05 10.3.2.10.3	The OFDMA part in OFDMA HE MU PPDU is redundant.	Remove OFDMA from OFDMA HE MU PPDU.	2017/1/9 9:42

8415 Po-Kai Huang	225	1 9.3.1.23	42	16	T	N	42.16 9.3.1.23	It is possible that AP may not have enough time to decode multiple responses, which can be up to 32-36 responses, to Trigger frame simultaneously and continue the following transmission in SIFS. AP can choose to separate the Trigger process to Multiple Trigger frame, but this will then increase the overhead.	Add a field called required MAC padding duration in Trigger Dependent Common Info every variant of Trigger frame except MU-RTS. A STA that receives the field must have MAC padding larger than or equal to the indicated required MAC padding duration. As a result, AP can have enough time. Add description that AP should make sure that STA has enough time to include the required response such as BSR.		2017/1/9 9:42
8416 Robert Stacey	225	1 9.4.2.218.3	83	40	T	Y	83.40 9.4.2.218.3	No "Doppler procedure" has been defined so it is not possible to determine how this bit should be set.	Return bit to the pool of reserved bits		2017/1/9 9:42
8417 Robert Stacey	225	1 28.2.2	223	51	T	Y	223.51 28.2.2	What is "the doppler effect" and how should it be considered? The spec does not define such an effect and there is no text defining a) how this a prameter should be set and b) what the PHY does with this parameter	Remove the DOPPLER parameter from Table 28-1		2017/1/9 9:42
8418 Robert Stacey	225	1 28.3.10.7.2	275	33	T	Y	275.33 28.3.10.7.2	What is "Doppler mode"? Such a mode is not defined and thus it is not possible to determine how this bit is set	Return bit to the pool of reserved bits		2017/1/9 9:42

8426 Robert Stacey	225	1 9.2.4.6.4.5	25	34	T	Y	25.34 9.2.4.6.4.5	The two methods for reporting queue size (Queue Size field in QoS Data and BSR A-Control) are not compatible with each other. The Queue Size in QoS Data is reported per TID while Queue Size in BSR A-Control is reported per AC. An AP collecting Queue Size per TID would not know how to partition the BSR information (since it is the sum of the queue size for two TIDs). An AP that collects queue size per AC may make inaccurate allocations to STAs that do not support multi-TID aggregation or if the AP itself cannot receive multi-TID A-MPDUs.	Change the BSR so that it either reports queue size per TID or simplify it so that it just indicates which Acs have traffic.		2017/1/9 9:42

8427 Robert Stacey	225	1 9.2.4.6.4.5	25	34	T	Y	25.34 9.2.4.6.4.5	The BSR is poorly designed. Its only purpose is to report queue state for traffic not in the current aggregate (since queue size in QoS Control can do it for traffic in the aggregate). Even so, it is not strictly necessary since that status could be collected through multi-TID aggregation or through a separate access. It is not compatible with queue size reported in QoS Control since it reports per AC and has a queue size range that different from queue size in QoS Control.	Redesign BSR so that it reports queue size in a manner compatible with queue size in QoS Control. Say 3 fields of 8-bits representing the queue sizes of TIDs in each of the ACs not represeted by the TID of the QoS Data frame carrying the BSR. Queue size reported in a manner compatible with queue size in QoS Control (units of 256 octets). The TIDs reported in sets: say {1, 0, 4, 6} and {2, 3, 5, 7}, so that if the QoS Data frame is for a TID in set 1 the queue size for other TIDs are in set 1.		2017/1/9 9:42
8428 Robert Stacey	225	1 28.3.16	344	33	T	N	344.33 28.3.16	Either the HE NDP PPDU is a distinct PPDU format or it isn't. If it is a distinct format it should be listed with the other formats in 28.3.4. If it is a special case of the HE SU PPDU then just describe it as such (in 28.3.4). During the comment period we had it then we removed it then we added it again but in a different place. Let's decide.	Remove clause 28.3.16. Add a sentence to 28.3.4 (PPDU formates): "The HE NDP PPDU is an HE SU PPDU with a zero length Data field and a 4 us Packet Extension field"		2017/1/9 9:42
8429 Robert Stacey	225	1 9.4.2.218.2	80	4	T	N	80.04 9.4.2.218.2	The BSRP A-MPDU Aggregation capability is unclear. What does it mean for a STA to accept a BSRP Trigger frame? If the software doesn't crash does that constitute acceptance? What exactly is the condition for setting the field? The STA must be able to "accept" the BSRP Trigger frame when it is aggregated with at least one control frame AND at least one Data frame and at least one Management frame? What if it "accepts" the BSRP Trigger frame but only in a S-MPDU. Or Only if aggregated with data (not control and nt management)?	Clarify the conditions for indicating support		2017/1/9 9:42
8430 Robert Stacey	225	1 9.4.2.218.2	80	17	E	N	80.17 9.4.2.218.2	(A-)MPDU: the bracketed (A-) is unnecessary. The A-Control field is present in an A-MPDU by virtue of being present in an MPDU. It doesn't appear in an A-MPDU withing being in an MPDU.	Remove "(A-)"		2017/1/9 9:42
8431 Robert Stacey	225	1 9.4.2.218.2	80	16	T	N	80.16 9.4.2.218.2	Why do we need to signal a capability for generating a BQR? If a STA is capable of generating a BQR it could just generate one. We don't have capability settings for all the things STAs are capable of generating. Why is this one special?	Remove reference to non-AP STA usage. Change to "Indicates that the AP is will use information in the BQR A-Control subfied when scheduling STAs for UL operation"		2017/1/9 9:42
8432 Robert Stacey	225	1 27.4	157	16	T	Y	157.16 27.4	The Block Acknowledgement subclause is poorly written. The overview section should provide an overview and define the relationship to HT-immediate block ack.	Introduce the block ack extensions in the overview (or intro) subclause. Give the new procedure a name (e.g., HE-immendiate block ack). Ennumerate the extnesions (e.g., An HE extension to the block ack feature, called HE-immeidate block ack, is defined in 27.4.2, 27.4.3 and 27.4.4. HE-immeidate block ack builds on the features defined for HT-immediate block ack, with the following extensiosn: 1) Support for a Multi-STA BlockAck frame, 2) Support for a Multi-STA BlockAckReq (MU-BAR), 3) Additional options for the block ack scoreboard size, ...". Move the requirements into the subsequent subclauses.		2017/1/9 9:42

8433	Robert Stacey	225	1 10.5	122	31	T	N	122.31 10.5	The term "static fragmention" is not descriptive of the characteristic being descibed. It is not the whole procedure that is different, it is just the requirement for each fragment having the same number of octets that changes.	Name the charactreristic not the procedure: uniformly fragmented MSDU or MMPDU and non-uniformly fragmented MSDU or MMPDU. Since we are now defining a term, remove all the "shalls". The shalls apply to the implementation so we make an additional shall statement against the STA once the term has been defined. Change to read: "With a uniformly fragmented MSDU or MMPDU, the length of each fragment consists of an equal number of octets for all fragments except the last, which may be smaller. The length of each fragment is an even number of octets, except the last fragment, which may be either an even or an odd numver of octets. The length of each fragment is never larger than dot11FragmentationThreshold unless security encapsulation is invoked for the MPDU. If security encapsulation is invoked for the MPDU, then the MPDU shall be expanded	2017/1/9 9:42
8434	Robert Stacey	225	1 27.3.1	152	41	T	N	152.41 27.3.1	"An HE STA supports the static fragmentation procedure...". The procedure that is supported by an HE STA is the fragmentation procedure, not the static fragmentation procedure. What is called "static fragmetnation" is just a small part of that procedure (i.e., the genreation of uniformly sized fragments).	Change to read "An HE STA supports the fragmentation procedure defined in 10.2.7, ,,,"	2017/1/9 9:42
8435	Robert Stacey	225	1 27.3.2	152	55	T	N	152.55 27.3.2	In 10.5 there is a statement referencing conditions defined in 27.3.2 that need to be met. The single paragraph in 27.3.2 is a mixture of conditions, a statement permitting fragmentation of A-MSDUs and a procedure for fragmenting where the length of each fragment is not uniform. Separate the conditions from the other statements.	Define a non-uniformly fragmentated MSDU, A-MSDU or MMPDU: "With a non-uniformly fragmented MSDU, A-MSDU or MMPDU, the length of each fragment is not necessarily the same. The length of the first fragment is greater than or equal to the minimum fragment size indicated in the Minimum Fragment Size subfield of the HE Capabilities Information field in the HE Capabilities element sent by the recipient STA. If the length of the MSDU, A-MSDU or MMPDU is less than the minimum fragment size, then the MSDU, A-MSDU or MMPDU is not fragmented." And then define the conditions under which it can be used: "An HE STA may non-uniformly fragment an MSDU, A-MSDU or MMPDU provided the following conditions are met: 1) The recipient STA has indicated support for level 1, level 2 or level 3 fragmentation in the HE Fragmentation Support	2017/1/9 9:42
8436	Robert Stacey	225	1 27.3	152	36	T	N	152.36 27.3	The new fragmentation procedure is poorly written and needs some structure.	Structure 27.3 as follows. An introductory subclause that defines how the existing procedure applies and what is new (non-uniformly fragmented MSDUs and MMPDUs, fragmetation of an A-MSDU, fragmentation under a block ack agreement). Then define the conditions under which the new procedures apply. Then define the new procedures.	2017/1/9 9:42

8437 Robert Stacey	225	1 27.3.3.1	153	16	T	N	153.16 27.3.3.1	Statement does not make sense. "transmitting an MPDU or A-MPDU": sending an A-MPDU that does not contain a MPDU is silly. A fragment is an MPDU by definition (see REVmc/D8.0 P1306L44) so an MPDU cannot contain a fragment. "Shall solicit an immediate response" is incomplete. What is the immediate response? My jokes solicit an immediate reponse, usually a groan. "For each of the fragments in the MPDU" is non-sensisical since a fragment is an MPDU and it is the MSDU, A-MSDU or MMPDU that is in multiple pieces. How does the STA do the soliciting? If I've fragmented an Action No Ack and what to send it? Is it no longer possible to send it or do I just need to use a different procedure?	Fix		2017/1/9 9:42
8438 Robert Stacey	225	1 27.3.3.1	153	22	T	N	153.22 27.3.3.1	"A STA shall not transmit a fragment containing all or part of an A-MSDU". By definition, a fragment contains a "portion of an MSDU, A-MSDU or MMPDU" (see P152L55). The constraint on A-MSDU size in Table 9-19 applies to the A-MSDU not the fragment. So the statement is unncessary (the fragment can never be bigger than the A-MSDU).	Delete paragraph "A STA shall not transmit a fragment..."		2017/1/9 9:42
8439 Robert Stacey	225	1 27.3.3.1	153	26	T	N	153.26 27.3.3.1	The NOTE is unrelated to any of the nearby text and simple makes a reference to another statement elsewhere	Delete NOTE		2017/1/9 9:42
8440 Robert Stacey	225	1 27.3.3.1	153	29	T	N	153.29 27.3.3.1	"receive explicit indications in response frames" is way too vague. Under level 1, fragments solicit an Ack frame and "explicit indications of none received" is not posible. Under level 2, fragments are sent in order and it is not possible to send more than one fragment of an MSDU, A-MSDU or MMPDU at a time. So the statement can be reformulated to apply to the first fragment since it can never happen that a later fragment is sent without an earlier fragment being ACK'ed. Also, under level 2 you can go further. not only can you retransmit the full MSDU, A-MSDU or MMPDU, you can refragment differently. Under level 3 it is possible for fragments to be delivered out of order. Given the big differences beween the fragmentation levels as it related to refragmentation it makes sense to have separate statements for each.	Remove the statement (and NOTE) from the General subclause and add a level-specific statement to the level 2 subclause and level 3 subclause. No statement is needed in the level 1 subclause since the condition doesn't apply. The satement for the level 2 subclause only needs to reference the first fragment: "If a BlockAck frame is received in response to an A-MPDU that carries the first fragment of a MSDU, A-MSDU or MMPDU and the BlockAck frame indicates that the fragment was not received, then the MSDU, A-MSDU or MMPDU may be refragmented for retransmission." No additional statement about retransmitting the same fragment is needed since the only options are refragment or not refragment and not refragment is retransmit the same. For level 3, a more complex set of rules are needed.	2017/1/9 9:42
8441 Robert Stacey	225	1 27.3.3.1	153	41	T	Y	153.41 27.3.3.1	The statement prevents a legacy device from sending a fragment since the term dynamic fragment is so broadly defined ("A dynamic fragment is an MPDU, the payload of which carries a portion of an MSDU, A-MSDU or MMPDU"), that it covers what we consider a "legacy" fragment, too. I beleive the original author has conflated the terms dynamic fragment (the MPDU) and dynamic fragmentation (the procedures). But then the statement is circular: you shall not send a fragment using the dynamic fragmentation procedures unless you are using the dynamic fragmentation procedures.	Delete the statement. Alternatively, more accurately define "dynamic fragment". I believe that it would be better to call the thing that gets sent a "non-uniformly fragment MSDU, A-MSDU or MMPDU" (see previous comment regarding statement on P152L55). Then you can make a statement like: A STA shall not send a non-uniformly fragmented MSDU, A-MSDU or MMPDU unless it is following the procudures defined in 27.3.3.2, 27.3.3.3 or 27.3.3.4."		2017/1/9 9:42

8442 Robert Stacey	225	1 27.3.3.2	153	47	T	N	153.47 27.3.3.2	"not sent under a block ack agreement" is not compatible with baseline fragmentation. Should be "sent as a non-A-MPDU frame". Even if a block ack agreement is in place, the originator can fragment and send as long as the fragment is sent in a non-A-MPDU frame.	The only difference between the level 1 fragmentation and the baseline fragmentation procedure is the requirement on equal lengh fragments. Thus this section should reference the baseline procedure with that one exception. Delete content of subclause and replace with "An originator STA may transmit a non-uniformly fragmented MSDU, A-MSDU or MMPDU following the procedure defined in 10.2.7, 10.5 and 10.6 if the Fragmentation Support subfield in the HE MAC Capabilities Information field of the HE Capabilities element is 1." A non-uniformly fragmented MSDU, A-MSDU or MMPDU" should be defined (see previous comment regarding P152L55).		2017/1/9 9:42
8443 Robert Stacey	225	1 27.3.3.2	153	60	T	N	153.60 27.3.3.2	The value of level 1 signaling in the block ack agreement is questionable. Level 1 is supported without a block ack agreement (provided the recipient has indicated level 1 support in its HE Capabilities element). Why should putting a block ack agreement in place disable it?	Remove level 1 negotiation from the block ack agreement.		2017/1/9 9:42
8444 Robert Stacey	225	1 27.3.3.2	154	1	T	N	154.01 27.3.3.2	This is a silly statement to make. Are there other ways to generate an S-MPDU?	Delete sentence		2017/1/9 9:42
8445 Robert Stacey	225	1 27.3.3.3	154	7	T	N	154.07 27.3.3.3	Level 2 fragmentation only makes sense if there is a block ack agreement in place.	Delete 1st paragraph of subclause.		2017/1/9 9:42
8446 Robert Stacey	225	1 27.3.3.3	154	26	T	N	154.26 27.3.3.3	This is a silly statement to make. Are there other ways to generate an S-MPDU?	Delete sentence. At best it should be a NOTE.		2017/1/9 9:42
8447 Robert Stacey	225	1 27.3.3.3	154	21	T	N	154.21 27.3.3.3	This long paragraph basically says you can send a fragment under level 2 fragmentation either as a non-A-MPDU frame or in an A-MPDU. Sending fragments as a non-A-MPDU frame is what level 1 fragmenation support provides. So level 2 fragementation is level 1 plus support for sending fragments in an A-MPDU. Describe it as such.	Change to read "With level 2 dynamic fragmentation, an HE STA may send a non-uniformally fragmented MSDU, A-MSDU or MMPDU to a STA that has the Fragmentation Support subfield of the HE MAC Capabilities field in the HE Capabilities element set to 2 or 3. The STA follows the procedure defined in 10.2.7, 10.5 and 10.6 for sending the fragment in a non-A-MPDU frame. In addition, the STA may send the fragment in a A-MPDU."		2017/1/9 9:42
8448 Robert Stacey	225	1 27.3.3.3	154	35	T	N	154.35 27.3.3.3	The rules for including fragments in an A-MPDU under level 2 fragemention are not defined. For example, there should be a rule preventing two fragments of the same MSDU being included. There should also be a rule that the next fragment can only be included once the previous fragment has been acknowledged.	Add the statement: "An originator STA shall not include more than one fragment of an MSDU, A-MSDU or MMPDU in an A-MPDU." Add the statement: "A fragment that is not the first fragment of an MSDU, A-MSDU or MMPDU shall only be sent if the previous fragment of the MSDU, A-MSDU or MMPDU has been acknowledged. NOTE--Fragments are sent in order of lowest fragment number to highest fragment number as defined in 10.5."		2017/1/9 9:42
8449 Robert Stacey	225	1 27.3.4.1	155	12	T	N	155.12 27.3.4.1	The fragmentation support nuances are not reflected in the MIB variable. The MIB variable is binary while the Fragment Support field has 4 values.	Delete the MIB variable or make it reflect the STA fragmentation capabilities.		2017/1/9 9:42
8450 Robert Stacey	225	1 27.3.4.1	155	12	T	N	155.12 27.3.4.1	Requiring consistent settings on the MIB variable and Fragmentation Support field is all good and well, but it is not sufficient. The STA has certain capabilities based on choices made by the implementer. A peer STA learns of these from the HE Capability element. A management station learns of these capabilities using the simple network management protocol ("reading the MIB"). So the setting of the HE Capabilities element and the setting of the "OptionImplemented" MIB objects must trace back to the implemented support.	Change the 1st paragraph to read: "An HE STA shall set the Fragmentation Support field in the HE MAC Capabilities Information field of the HE Capabilities element as follows: - Set to 1 if... - Set to 2 if ..., Set to 3 if ..., - Otherwise set to 0" Then add a subsequent paragraph: "An HE STA that sets Fragmentation Support field to 0 shall set the dot11HEDynamicFragmentationImplemented to false. Otherwise, the HE STA shall set the dot11HEDynamicFragmentaitonImplemented to true."		2017/1/9 9:42

8451	Robert Stacey	225	1 27.3.4.1	155	29	T	N	155.29 27.3.4.1	"of a number of outstanding MSDUs" is inconsistent with "The term outstanding refers to an MPDU that contains...". An MSDU is not an MPDU.	Fix	2017/1/9 9:42
8452	Robert Stacey	225	1 27.3.4.1	155	47	T	N	155.47 27.3.4.1	"all or part": by definition, a fragment contains part of an A-MSDU (see P152L55). Also, the requirement is not clear on whether the "of arbitrary length" applies to the fragment or the A-MSDU.	Change to read: "A STA that has dot11AMSDUFragmentationOptionImplemented true shall be capable of receiving a fragmented A-MSDU where the length of the A-MSDU is less than or equal to the maximum A-MSDU size as specified in Table 9-19 (Maximum data unit sizes (in octets) and durations (in microseconds))."	2017/1/9 9:42
8453	Robert Stacey	225	1 27.3.4.1	155	27	T	N	155.27 27.3.4.1	It is not clear how the Nmax requirement is applied. Are there two Nmax, one for MSDUs and one for MMPDUs? What about A-MSDUs? It seems that we really need a reserved buffer for MMPDUs otherwise outstanding MSDUs/A-MSDUs could block transmission of a critical MMPDU, or, at least, make delivery complicated by Nmax considerations (the STA could always send as a fragment burst). Also, there are really two requirements here: the implementation requirement and the cabability signaling requirement.	Break this into two separate requirements, an implementation requirement and a signaling requirement. Ensure that there is a always buffer space for a fragmented MMPDU. Change to read: "A recipient STA shall support the concurrent reassembly of Nmax outstanding fragmented MSDUs and A-MSDUs (if supported) from the same transmitting STA where Nmax is either in the set 1, 2, ..., 2^6 or is unlimited. A fragmented MSDU or A-MSDU is outstanding if delivery of the MSDU or A-MSDU has not yet been completed (i.e., the acknowledgment of the final fragment has not been received and the MSDU or A-MSDU has not been discarded due to retries, lifetime, or for some other reason). The recipient STA shall indicate Nmax in the Maximimum Number of Fragmented MSDUs subfield in the HE MAC Capabilities Information field in the HE Capabilities	2017/1/9 9:42
8454	Robert Stacey	225	1 27.3.4.2	155	56	T	N	155.56 27.3.4.2	The statement "MPDU or S-MPDU that carries one or more dynamic fragments" is non-sensical since a fragment is an MPDU per definition. We already have specific rules as to when an Ack frame is the appropriate response so this whole sentence is unnecessary.	Delete sentence.	2017/1/9 9:42
8455	Robert Stacey	225	1 27.3.4.2	155	58	T	N	155.58 27.3.4.2	There is no need to reference Ack frame and BlockAck frame response rules for fragments any more than there is a need to reference these rules for MPDUs that are not fragments. There are special rules for generating the block ack bitmap, but that belongs in the Block Acknowledgement subclause.	Delete sentence.	2017/1/9 9:42
8456	Robert Stacey	225	1 27.3.4.2	155	56	T	N	155.56 27.3.4.2	The statement "MPDU or A-MPDU that carries one or more dynamic fragments" is non-sensical since a fragment is an MPDU by definition. All the requirements in this subclause have to do with acknowledgement. The Ack frame rules for fragments in the first bullet are the same as the Ack frame rules for non-fragments and covered by the general rules for MPDU acknowledgement (nothing special happens if the MPDU is a fragment). There are special rules for handling the block ack bitmap related to fragmentation, but that belongs in the Block Acknowledgement subclause.	Delete the first paragraph.	2017/1/9 9:42
8457	Robert Stacey	225	1 27.3	152	36	E	N	152.36 27.3	To maintain consistency between the baseline procedures and the new Clause 27 procedures, reorganize subclause 27.3 (Fragmentation). The baseline refers to fragmentation for the "originator" procedure and defragmentation for the "recipient" procedure.	Change heading of 27.3 (Fragmentation) to "Fragmentation and defragmentation". Change the heading of subclause 27.3.3 (Procedure at the originator) to "Fragmentantation". Change the heading of subclause 27.3.4 (Procedure at the recipient) to "Defragmentation". Remove the heading 27.3.2 (Support and requirements for dynamic fragmentation) and combine content with 27.3.1 (General).	2017/1/9 9:42

8458	Robert Stacey	225	1 27.3.4.3	156	31	T	Y	156.31 27.3.4.3	Flushing the reassembly buffer of incomplete MSDUs, A-MSDUs and MMPDUs that will never be completed is more involved than simply comparing sequence numbers against BlockAckReq frame's starting sequence number. There are other ways in which the originator can indicate to the recipient that an MSDU will never complete. See the rules in 10.24.7.6.2 (Operation for each received Data frame) for flushing the reorder buffer on receipt of a QoS Data frame. Similar rules are needed for the reassmebly buffer.	Develop a comprehensize set of rules for flushing the reassembly buffer of incomplete MSDUs/A-MSDUs that will never be completed. For example, the originator can indicate that an MSDU with SN=x will never be completed (because the MSDU has been discarded) by sending a QoS Data frame with SN=x+WinSizeB.	2017/1/9 9:42
8459	Robert Stacey	225	1 27.4.1	157	21	T	N	157.21 27.4.1	"An HE STA can use ...": the conditions for Compressed BlockAck frame and Multi-STA BlockAck frame use are more elaborate than this. The statement carries no value.	Delete sentence.	2017/1/9 9:42
8460	Robert Stacey	225	1 27.4.1	157	22	T	N	157.22 27.4.1	"An HE STA shall support generation...if HT-immediate BA is supported...": An HE STA is an HT STA. HT-immediate block ack support is mandatory for an HT STA hence it is mandatory for an HE STA thus the "if HT-immediate..." condition is unecessary. Making the "generation" of a particular frame type mandatory is meanlingless. Frame types are "generated" to meet protocol requirements, for example, a Compressed BlockAck frame is sent in response to Compressed BlockAckReq frame so there is no need for a standalone statement on the generation of such frames. If a STA supports a protocol (such as HT-immediate block ack) it supports the generation of the frames required to implement that procotol. SImilarly, statements regarding the generation of Multi-STA BlockAck frame is unnecessary.	Delete 2nd and 3rd sentence of the first paragraph.	2017/1/9 9:42
8461	Robert Stacey	225	1 27.4.1	157	37	T	N	157.37 27.4.1	"An HE STA may send a Multi-STA BlockAck frame in response to an HE trigger-based PPDU." This statement is incomplete. It may do that but only if certain conditions are met and, in fact, it shall do that if those conditions are met. It cannot, for example, do that if the HE trigger-based PPDU carries frames a management frame of type Action No Ack.	Delete the first sentence: the conditions under which a Multi-STA BlockAck frame are transmitted need to be more explicitly stated.	2017/1/9 9:42
8462	Robert Stacey	225	1 27.4.1	157	37	T	N	157.37 27.4.1	"A Multi-STA BlockAck frame contains one or more...": the states are obvious from a glance at the frame format.	Delete the second sentence.	2017/1/9 9:42
8463	Robert Stacey	225	1 27.4.1	157	39	E	N	157.39 27.4.1	"... with different AID subfield values" is cumbersome.	Change the sentence to read: "An HE AP that sends a Multi-STA BlockAck frame where the STA Info fields address more than one STA shall set the RA field to the broadcast address."	2017/1/9 9:42
8464	Robert Stacey	225	1 27.4.1	157	41	E	N	157.41 27.4.1	"...or with the same values of the AID subfield in Per STA Info subfields...": poor grammar	Change the sentence to read: "An HE AP that transmits a Multi-STA BlockAck frame where the STA Info fields address a single STA shall set the RA field to either the address of that STA or the broadcast address."	2017/1/9 9:42
8465	Robert Stacey	225	1 27.4.1	157	43	T	N	157.43 27.4.1	The last sentence in this paragraph is already covered by a previous statement at P157L28.	Delete sentence.	2017/1/9 9:42
8466	Robert Stacey	225	1 27.4.1	157	48	T	N	157.48 27.4.1	What does it mean to support "Multi-STA BlockAck"? The term is not defined. "shall examine": this is not testable so the shall is not appropriate. There is no such thing as a "Multi-STA". There is no such thing as a BA agreement.	Delete the first sentence and change the second to read: "A STA that receives a Multi-STA BlockAck frame performs the following operations for each BA Information field in the Multi-STA BlockAck frame that is addressed to it:"	2017/1/9 9:42
8467	Robert Stacey	225	1 27.4.1	157	56	T	N	157.56 27.4.1	The introductory sentence says that "a STA performs the following", but this (second) bullet does not descibe an action.	The meaning of the fields in a frame are defined in the frame formats section. This is a behavioral clause and should define an action. Fix.	2017/1/9 9:42

8468	Robert Stacey	225	1 9.3.1.9.7	37	20	E	N	37.20 9.3.1.9.7	We have an MU-BAR and MU-RTS but we have a Multi-STA BlockAck. Let's be consistent: is it multi-user or multi-STA?	Change the name of the Multi-STA BlockAck frame to MU BlockAck frame.	2017/1/9 9:42
8469	Robert Stacey	225	1 27.4.1	157	61	T	N	157.61 27.4.1	The rules for responding to a BlockAckReq frame are defined in 10.24.7 (more accurately 10.24.7.5) but the rules for responding to an MU-BAR frame are not defined there. It seem that the sentence needs to be two sentences: how to respond to a BlockAckReq frame and another on how to respond to an MU-BAR frame. Also this sentence references itself: if the repsonse is defined in this subclause there should be no need to reference it. References statements should not contain shall statements; references are informative and help the reader find the normative text. A statement like "shall respond with a BlockAck frame as defined in" does not account for the full suite of options in 10.24.7 (10.24.7.5 only requires a reponse if Address 1 matches). The reference should be to 10.24.7.5 not 10.24.7 since it is only 10.24.7.5 that deals with responding to a BlockAckReq	Change to read "An HE STA responds to a BlockAckReq frame as defined in 10.24.7.5 (Generation and transmission of BlockAck frames by an HT STA or DMG STA)."	2017/1/9 9:42
8470	Robert Stacey	225	1 9.3.1.9.1	34	11	T	N	34.11 9.3.1.9.1	Since the Multi-TID, Compressed Bitmap and GCR Mode subfields no longer exist, changes are needed throughout to replace references to these subfields with references to the BA Type subfield.	Update 10.24.6 and any other occurances.	2017/1/9 9:42
8471	Robert Stacey	225	1 27.4.3	159	26	T	N	159.26 27.4.3	A change to the block ack setup procedure is needed to account for the potentially larger window size. A statement in REVmc/D8.0 P1384L45 limits the transmit window size to 64: "If the value in the Buffer Size field of the ADDBA Response frame is smaller than the value in the ADDBA Request frame, the originator shall change the size of its transmission window (WinSizeO) so that it is not greater than the value in the Buffer Size field of the ADDBA Response frame and is not greater than the value 64."	Change the statement in REVmc to read: "If the value in the Buffer Size field of the ADDBA Response frame is smaller than the value in the ADDBA Request frame, the originator shall change the size of its transmission window (WinSizeO) so that it is not greater than the value in the Buffer Size field of the ADDBA Response frame and is not greater than the value 64 if the sender of the ADDBA Response frame is a non-HE STA and not greater than 256 if the sender of the ADDBA Response frame is an HE STA."	2017/1/9 9:42
8472	Robert Stacey	225	1 9.3.1.9.7	37	31	E	N	37.31 9.3.1.9.7	The Per STA Info field is not really per STA since there could be multiple addressed to the same STA.	Change the field name to STA Info throughout.	2017/1/9 9:42
8473	Robert Stacey	225	1 9.3.1.9.7	37	37	E	N	37.37 9.3.1.9.7	"Per" in the Per AID TID Info field name is not meaningful.	Change the field name to AID/TID Info throughout. BTW, we have various conjuction styles in field names (e.g., underscore as in TID_INFO field, slash as in Duration/ID field and +HTC/Order field, lower case 'and' as in VHT-MCS and NSS Set field, uppercase 'And')	2017/1/9 9:42

Change to read: "The Ack Type field is not set to 1 when responding to an MU-BAR frame."	2017/1/9 9:42
8475	Robert Stacey	225	1 9.3.1.9.7	38	4	T	N	38.04 9.3.1.9.7	The TID value for a management frame acknowledgement is descriptive and shouldn't be a NOTE.	Change from a NOTE to a statement that reads: "	2017/1/9 9:42
8476	Robert Stacey	225	1 9.3.1.9.7	38	22	E	N	38.22 9.3.1.9.7	The Block Ack Starting Sequence Control and Block Ack Bitmap subfields are either both present or both absent. No need for separate rows in Table 9-24b. Also they are not optional fields as described in the column heading.	Simplify the table. Change the heading to the 3rd column to "Block Ack Starting Sequence Control and Block Ack Bitmap subfields". For each row simply indicate "Present", "Not Present" or "N/A".	2017/1/9 9:42
8477	Robert Stacey	225	1 9.3.1.9.7	38	31	T	N	38.31 9.3.1.9.7	"context" column: A-MPDUs don't solicit anything; the MPDUs in the A-MPDU do the soliciting. Also, there is no way for a BlockAckReq frame to solicit a Multi-STA response so this statement should be deleted.	Change to read: Sent in response to an A-MPDU that carries a QoS Null frame or one or more QoS Data frames of the same TID where the Ack Policy subfield is MU Ack."	2017/1/9 9:42

8478 Robert Stacey	225	1 9.3.1.8.2	33	61	T	N	33.61 9.3.1.8.2	Meaning needs to be assigned to the nonzero values of the Fragment Number subfield or the strikeout removed	Remove the strikeout	2017/1/9 9:42
8479 Robert Stacey	225	1 9.3.1.9.7	36	20	T	N	36.20 9.3.1.9.7	Only 4 values of the 16 available values of the Fragment Number subfield have any meaning, the other 12 values are reserved. The table can be simplified. Also, the meaning of Fragmentation Level 3 ON/OFF is not clear since it doesn't relate to any other text in this subclause.	The table is better presented in 3 columns (Fragment Number subfield, Block Ack Bitmap subfield length, Block Ack Bitmap subfield interpretation). The rows would be {0, 8 octets, <interpretation>}, {4, 32 octets, <interpretation>}, {1, 8 octets, <interpretation>}, {5, 32 octets, <interpretation>}, {Otherwise, -, Reserved} and <interpretation> is substituted by the text in paragraphs below. For example, the <interpretation> for Fragment Number = 0 is "Indicates the receive status of 64 MSDUs and A-MSDUs. Each bit that is 1 indicates successful reception of a single MSDU or A-MSDU or fragment of an MSDU or A-MSDU with the first bit corresponding to...".	2017/1/9 9:42
8480 Robert Stacey	225	1 9.3.1.9.7	36	61	T	N	36.61 9.3.1.9.7	With level 2 fragmentation, each bit does not necessarily acknowledge the successful reception of a single MSDU or A-MSDU. It could acknowledge a fragment thereof.	Change to read: "...acknowledges the successful reception of a single MSDU or A-MSDU or fragment thereof in the order of sequence number..."	2017/1/9 9:42
8481 Robert Stacey	225	1 27.4.2	158	37	T	N	158.37 27.4.2	"TID value of that MPDU": Not all MPDUs have a TID field. "that requires acknowledgement": needs to be more specific. "receiving a single MPDU": this appers to refer to S-MPDU (i.e., MPDU in an A-MPDU subframe wth EOF = 1). "A single MPDU" is grammetically equivalent to "an MPDU".	Fix	2017/1/9 9:42
8482 Robert Stacey	225	1 27.4.2	158	21	E	N	158.21 27.4.2	The subclause heading is unnecessary long.	Change heading to "STA Info field format selection in a Multi-STA BlockAck frame"	2017/1/9 9:42
8483 Robert Stacey	225	1 27.4.4.1	160	34	T	N	160.34 27.4.4.1	The EOF field is not what solicits an immediate response. It is also inaccurate (The EOF field is set in the padding delimiters at the end of an A-MPDU). EOF=1 with Lengh > 0 is the equivalent of not setting the Aggregation field in an HT PPDU.	Delete "and the EOF field setting"	2017/1/9 9:42
8484 Robert Stacey	225	1 27.4.4.1	160	31	T	N	160.31 27.4.4.1	The fact that a STA can send a PPDU and get a variety of responses dependent on the frame carried in the PPDU is a truism and does not need stating. The statement specifically related to QoS Data frames and QoS Null frames is incomplete. No response is also a possibilty.	Delete sentence.	2017/1/9 9:42
8485 Robert Stacey	225	1 9.3.1.23	41	34	E	N	41.34 9.3.1.23	The terminology for the various Trigger frame variants is inconsistent throught the draft.	Terminology similar to the BlockAck frame should be adopted. It is worth keeping "Trigger" in the name since they all serve that purpose: allocate resporses and trigger a synchronized response. We should use the name "Trigger frame" for the generic case (where the variant does not matter) and then the names "Basic Trigger frame", "Beamforming Report Trigger frame", "MU-BAR Trigger frame", "MU-RTS Trigger frame", "Buffer Status Report Trigger frame", "GCR MU-BAR Trigger frame", "Bandwidth Query Report Trigger frame". Note we can drop "Poll" from the name since "Trigger" is symantically equivalent.	2017/1/9 9:42
8486 Robert Stacey	225	1 10.28.3	136	44	T	N	136.44 10.28.3	Non-HE STAs don't send Multi-STA BlockAck frames so the edits here don't make sense.	Remove the Multi-STA Block Ack insertion.	2017/1/9 9:42

8487	Robert Stacey	225	1 27.4.4.2	160	53	T	N	160.53 27.4.4.2	This convention of prefixing MPDU with a (A-) adds ambiguity. Presumably the intent is to apply the requirement to both MPDUs and A-MPDUs. However, MPDUs and A-MPDUs are very different beasts. An A-MPDU is a framing structure that encapsulates MPDUs. The "at most one of the MPDUs" is a very different statement from "at most one of the A-MPDUs". Also, an A-MPDU does not have an Ack Policy subfield. Nor do most MPDUs for that matter.	Change the statement so that it refers to frames that have an Ack Policy subfield.	2017/1/9 9:42
8488	Robert Stacey	225	1 27.4.4.2	160	52	T	N	160.52 27.4.4.2	SU PPDU is not a defined	Create a definition in 3.2	2017/1/9 9:42
8489	Robert Stacey	225	1 27.4.4	160	27	T	N	160.27 27.4.4	We don't need shall rules to prevent implementors from doing stupid things at the initiator side (like a rule to not solicit an immediate response from more than one STA). What we need are rules at the responder side that prevent bad things happening.	Add a statement that clarifies when an HE trigger-based PPDU is used as a response to HE MU PPDU and when an SU PPDU is is used "An HE STA transmits an HE trigger-based PPDU in response to an HE MU PPDU (provided the conditions in xxx [CCA, NAV, etc.] are met) when the A-MPDU in the HE MU PPDU that is received by the STA includes a Trigger frame or a QoS Data frame or QoS Null frame with a UL MU Scheduling Response A-Control field. An HE STA transmits an SU PPDU in response to an HE MU PPDU if the A-MPDU in the HE MU PPDU that is received by the STA iincludes an MPDU that solicits an immediate response and the A-MPDU does not include any of the following: 1) a Trigger frame 2) a QoS Data frame or QoS Null frame with a DL MU Scheduling Response A-Control field 3) A QoS Data frame or QoS Null frame where the Ack Policy subfield in the	2017/1/9 9:42
8490	Robert Stacey	225	1 27.4.4.2	160	52	T	N	160.52 27.4.4.2	DL MU PPDU is not defined. It could be HE MU PPDU or VHT PPDU with Group ID between 1 and 62 or both.	Change all occurances of DL MU PPDU to HE MU PPDU.	2017/1/9 9:42
8491	Robert Stacey	225	1 27.4.4.2	160	57	T	N	160.57 27.4.4.2	If DL MU PPDU includes VHT PPDU then we break backward compatibility with this requirement ("... shall not include an Action frame...").	Change all occurances of DL MU PPDU to HE MU PPDU.	2017/1/9 9:42
8492	Robert Stacey	225	1 27.4.4.2	160	58	T	N	160.58 27.4.4.2	A DL MU PPDU (= HE MU PPDU?) does not solicit an immediate response; the frames it carries do the soliciting. The list is not all inclusive, other responses might be possible. Item 1: an S-MPDU does not necessarily have an Ack Policy field; only an S-MPDU that is a QoS Data or QoS Null frame has such a field. Item 2: An A-MPDU does not have an Ack Policy. Item 3: An A-MPDU does not have an Ack Policy. How does the recipient know the A-MPDU is a multi-TID A-MPDU?	"A STA that receives an HE MU PPDU with an A-MPDU that contains QoS Data or QoS Null frames addressed to it, responds as follows: 1) If there is only one QoS Data or QoS Null frame, it is an S-MPDU and the ack policy is Normal Ack, then the STA responds with an Ack frame carried in an SU PPDU. 2) If the QoS Data or QoS Null frames have ack policy Implicit BAR and all the QoS Data and QoS Null frames are associated with the same block ack agreement, then the STA responds with a Compressed BlockAck frame carried in an SU PPDU 3) If the QoS Data and QoS Null frames have ack policy Implicit BAR and are associated with two or more block ack agreements, then the STA responds with a Multi-STA BlockAck frame carried in an SU PPDU."	2017/1/9 9:42
8493	Robert Stacey	225	1 27.4.4.4	161	33	T	N	161.33 27.4.4.4	Poorly titled subclause. An HE trigger-based PPDU does not solicit anything. It is the AP that decides what follows the HE trigger-based PPDUs (there can be more than one). It even says so in the subclause: "If the AP intends..."	The text in 27.4.4.4 and 27.4.4.5 should be in the MU operation subclauses	2017/1/9 9:42
8494	Robert Stacey	225	1 8.3.5.2.2	15	34	T	N	15.34 8.3.5.2.2	There is no need for a new STA_INDEX parameter. USER_INDEX and STA_INDEX are semantically equivalent. Let's choose one and stick with it.	Remove STA_INDEX. Update the text for USER_INDEX to include HE MU PPDU. Use same name for PHY-DATA.indication.	2017/1/9 9:42

8495	Robert Stacey	225	1	162	56	T	N	162.56	DL OFDMA With MIMO PPDU is not defined. There is no such thing as a DL OFDMA With MIMO Support field. The capability that most closely resembles this is the DL MU-MIMO On Partial Bandwidth field.	Describe in terms of TXVECTOR parameters.	2017/1/9 9:42
8496	Robert Stacey	225	1 27.5.1.2	163	3	T	N	163.03 27.5.1.2	"The Type and Subtype subfields ... may be different... ": Meaningless statement.	Remove statement	2017/1/9 9:42
8497	Robert Stacey	225	1 27.5.1.2	163	8	T	N	163.08 27.5.1.2	"Two STA-ID fields in HE-SIG_B..." We hide the PHY details behind the PHY service interface so this statement should be made in terms of the TXVECTOR parameter STA_ID_LIST. Since STA_ID_LIST has a subclause of its own (27.11.1) might as well do it there.	Define in terms of TXVECTOR parameters: "An AID shall appear only once in the TXVECTOR parameter array STA_ID_LIST." A statement regarding the 2046 entry can be made in the PHY clause itself. The TXVECTOR just needs to identify the used resources. HE-SIG-B is then built (in the PHY) using this infomation and "2046" entries added as needed.	2017/1/9 9:42
8498	Robert Stacey	225	1 3.2	3	4	T	N	3.04 3.2	The term RU is not defined and is inconsistently used. In some places it refers to a frequency segment (e.g., a 26-tone RU) and in other places it refers to something that carries the PSDU intneded for a STA (e.g., P195L50: "...that RU is set to the AID of the STA receiving the PSDU..."). In the single stream case this may not matter, but in the SU-MIMO (multi-stream) case and especially in the MU-MIMO case it does matter.	Add a definition for resource unit (RU) to 3.2. "resource unit (RU): A set of 26, 52, 106, 242, 484, 996 or 2x996 subcarriers."	2017/1/9 9:42

8538	Rojan Chitrakar	225	1 8.3.5.12.2	16	20	T	N	16.20 8.3.5.12.2	The PHY-CCA.indication(BUSY, {primary}) primitive is issued by the PHY as long as a valid PPDU is detected at a sufficient signal strength over the primary 20 MHz channel. However, just based on this indication, it is not possible for the MAC to understand which of the 20 MHz channels other than the primary 20 MHz are actually busy. To facilitate better spectrum re-use during DL/UL OFDMA transmissions, it would be beneficial for the MAC to be aware of the busy/idle state of the rest of the 20 MHz channels even when the primary 20 MHz channel is busy.	In order to enable the MAC to understand which of the 20 MHz channels other than the primary 20 MHz are actually busy, add three more channel-list elements for HE STAs: primary20: In an HE STA, indicates that the primary 20 MHz channel is busy but the rest of the 20 MHz channels within the operating channel width are idle. primary40: In an HE STA, indicates that the primary 40 MHz channel is busy but the rest of the 20 MHz channels within the operating channel width are idle. primary80: In an HE STA, indicates that the primary 80 MHz channel is busy but the rest of the 20 MHz channels within the operating channel width are idle.	2017/1/9 9:42
8539	Rojan Chitrakar	225	1 9.3.1.23	45	36	T	N	45.36 9.3.1.23	STAs with limited/inaccurate transmission power adjustment capabilities may not be able to accurately match the "Target RSSI" level specified in the Trigger Frame. This may cause large differences in the received power among STAs, leading to severe Multi-User Interference (MUI). As an example, an STA located very close to the AP may cause high RSSI at the AP even at minimum transmission power. This issue would be even more serious in the case of random access since the AP cannot know which STAs will actually transmit.	In order to enable the AP to reduce the chances of Multi-User Interference (MUI), aside from AID = 0, add two more special AIDs to identify RUs for random access with some restrictions as below: AID = 2008: Only STAs whose estimated received signal power at the AP does not exceed the "Target RSSI" specified in the Trigger frame, when the STA transmits at the transmit power level calculated as per Eqn. 28-118, may transmit on the RU. AID = 2009: Only STAs that cause the estimated received signal power at the AP to exceed the "Target RSSI" specified in the Trigger frame, even when the STA transmits at minimum transmit power level calculated as per Eqn. 28-118, may transmit on the RU. The definition of AID = 0 remains the same: AID = 0 : Random access with no restriction.	2017/1/9 9:42
8540	Rojan Chitrakar	225	1 9.3.1.23	42	32	T	N	42.32 9.3.1.23	Even though the Basic Trigger variant Trigger frame allows STAs to aggregate management frames with Data frames in an HE trigger based PPDU, in certain situations, it is more efficient if the AP is able to restrict the frame type that is included in the HE trigger based PPDU. For e.g. during the BSS setup, the AP can expect many simultaneous exchanges of block ack setup frames. In such times, it would be more efficient for the AP to restrict the uplink frames to management frames (ADDBA request/ADDBA response etc.).	Add a new Trigger variant for management frame types (Management frame Trigger variant) to solicit specific management frames from STAs. An two octet "preferred response type" field in the Type dependent common info field can be used to specify the specific management frame. The same encoding for frame subtypes defined in Section 9. Frame formats, may be reused. For Action frames, the remaining bits may be used to specify the Action category (as defined in 9.4.111) as well as the Action field defined for each Action frame.	2017/1/9 9:42
8541	Rojan Chitrakar	225	1 9.4.2.139	68	30	T	N	68.30 9.4.2.139	Instead of defining new Action frames (L3 Frag BA Request/Response) for block ack setup for L3 fragmentation, it is more efficient to reuse the HE Fragmentation Operation subfield to indicate L3 fragmentation as well.	Use the value of 3 for the HE Fragmentation Operation subfield in the ADDBA request/response frames to negotiate Block Ack setup under fragmentation level 3.	2017/1/9 9:42
8542	Rojan Chitrakar	225	1 9.6.5.1	98	46	T	N	98.46 9.6.5.1	Instead of defining new Action frames (L3 Frag BA Request/Response) for block ack setup for L3 fragmentation, it is more efficient to reuse the HE Fragmentation Operation subfield to indicate L3 fragmentation as well.	Remove Block Ack Action field values 3, 4 and 5 and instead use the value of 3 for the HE Fragmentation Operation subfield in the ADDBA request/response frames to negotiate Block Ack setup under fragmentation level 3.	2017/1/9 9:42
8543	Rojan Chitrakar	225	1 11.2.2.17	143	49	T	N	143.49 11.2.2.17	Inclusion of BSS Color Change Announcement element should also be classified as a critical update.	Add "Inclusion of BSS Color Change Announcement element" to the list.	2017/1/9 9:42

8544	Rojan Chitrakar	225	1 27.3.3.4	154	39	T	N	154.39 27.3.3.4	Instead of defining new Action frames (L3 Frag BA Request/Response) for block ack setup for L3 fragmentation, it is more efficient to reuse the HE Fragmentation Operation subfield to indicate L3 fragmentation as well.	use the value of 3 for the HE Fragmentation Operation subfield in the ADDBA request frames to initiate Block Ack setup under fragmentation level 3.	2017/1/9 9:42
8545	Rojan Chitrakar	225	1 27.3.3.4	154	41	T	N	154.41 27.3.3.4	Instead of defining new Action frames (L3 Frag BA Request/Response) for block ack setup for L3 fragmentation, it is more efficient to reuse the HE Fragmentation Operation subfield to indicate L3 fragmentation as well.	use the value of 3 for the HE Fragmentation Operation subfield in the ADDBA response frames to accept Block Ack setup under fragmentation level 3.	2017/1/9 9:42
8546	Rojan Chitrakar	225	1 27.3.3.4	154	46	T	N	154.46 27.3.3.4	More detail is required for the block acknowledgment record used during L3 fragmentation. It is mentioned that the block acknowledgment record maintains "up to" 4 bits per MSDU. Does it mean that it is also possible to have fewer than 4 (e.g. only 2) bits per MSDU if the MSDU only contain 2 fragments? If this is the case, a separate table would be required to track the number of fragments present in each received MSDU. If this is the intended effect, please provide more detail on how the recipient maintains and updates the block acknowledgment record (and other tables if applicable) under L3 fragmentation.	Please clarify the meaning of "up to" 4 bits per MSDU. If the block acknowledgement record may maintain variable number of bits per MSDU, please provide more detail on how the recipient maintains and updates the block acknowledgment record (and other tables if applicable) under L3 fragmentation.	2017/1/9 9:42
8547	Rojan Chitrakar	225	1 27.3.4.1	155	39	T	N	155.39 27.3.4.1	Some sort of timeout timer would still be required for defragmentation of dynamic fragments, else the incompletely received MSDUs, A-MSDU or MMPDU may cause the recipient's buffer to be full.	Clarify why the receive timer rules do not apply to dynamic fragments. Else, provide alternate mechanism to flush the recipient's buffer.	2017/1/9 9:42
8548	Rojan Chitrakar	225	1 27.4.1	157	49	E	N	157.49 27.4.1	Incomplete name in the sentence "... each received Multi-STA sent by an STA ..."	change "Multi-STA" to "Multi-STA Block Ack frame"	2017/1/9 9:42
8549	Rojan Chitrakar	225	1 27.4.3	160	8	G	N	160.08 27.4.3	Either incomplete or unclear sentence: "The values in the recipient's record ..."	Re-write the sentence in an easier to understand manner.	2017/1/9 9:42
8550	Rojan Chitrakar	225	1 27.4.4.1	160	46	T	N	160.46 27.4.4.1	"soliciting" should be "solicited"	replace "soliciting" with "solicited"	2017/1/9 9:42
8551	Rojan Chitrakar	225	1 27.4.4.5	162	23	T	N	162.23 27.4.4.5	The sentence "... announce the support the reception of MU multi-STA BlockAck frame.", refers to non-existence capability "MU multi-STA BlockAck frame". The closest thing appears to be "Group Addressed Multi-STA Block-Ack In DL MU Support" but that bit refers to support for the reception of a group-addressed Multi-STA BlockAck frame sent in a "non-broadcast" RU instead of a broadcast RU as stated in this clause.	Replace "reception of MU multi-STA BlockAck frame" with the correct HE capability subfield.	2017/1/9 9:42
8552	Rojan Chitrakar	225	1 27.5.2.2.2	166	38	T	N	166.38 27.5.2.2.2	"User Info field" should be "A-control subfield"?	Replace "User Info field" with "A-control subfield"	2017/1/9 9:42
8553	Rojan Chitrakar	225	1 27.52.2.2	167	15	T	N	167.15 27.52.2.2	"AC Preference Level subfield" should be "Preferred AC subfield" and grammar is wrong	Replace the sentence with "The AP may assign any value defined in Table 9-25i (Preferred AC subfield encoding) in the Preferred AC subfield in the Trigger Dependent User Info field for an HE STA identified by the AID12 subfield of the User Info field of a Basic Trigger frame."	2017/1/9 9:42
8554	Rojan Chitrakar	225	1 27.5.2.3	167	64	T	N	167.64 27.5.2.3	"- Otherwise, a STA shall not send an HE trigger-based PPDU." The conditions listed missed the case of AID12 = 0 i.e. transmission of HE trigger-based PPDU during OFDMA based UL Random Access.	Add the condition for the case of AID12 = 0 i.e. transmission of HE trigger-based PPDU during OFDMA based UL Random Access.	2017/1/9 9:42

8555	Rojan Chitrakar	225	1 27.5.2.4	170	36	T	N	170.36 27.5.2.4	Based on the description of the subsequent paragraph, the ED based CCA considers the status of a wide band channel on a 20 MHz granularity, i.e. as long as the 20 MHz channels containing the allocated RUs are considered idle, even if the other 20 MHz channels are busy (including the primary 20 MHz), a STA is still allowed to transmit the HE trigger- based PPDU. However, the virtual CS i.e. NAV is considered over the whole wide band. Even a narrow band OBSS transmission on the primary 20 MHz channel will set the STA's Inter-BSS NAV thereby rendering all the remaining 20 MHz channels of the wide band unusable for UL MU even when the ED based CCA returns idle on those 20 MHz channels. As such, it will be beneficial to record, in addition to the duration of the Inter-BSS NAV, the busy/idle state of the 20 MHz channels other than the primary 20 MHz. If the 20 MHz channels containing the	When recording the inter-BSS NAV set by an inter-BSS PPDU, in addition to recording the NAV duration of the Inter-BSS PPDU, the busy/idle state of the 20 MHz channels other than the primary 20 MHz are also recorded. A STA may also keep this record in conjunction with the HE bandwidth query report operation. This allows the virtual CS to be considered on a 20 MHz granularity as well i.e. the virtual CS is considered busy on a 20 MHz channel only if the NAV counter is nonzero and the 20 MHz channel was recorded as busy when the NAV was recorded. If the 20 MHz channels containing the allocated RUs in a Trigger frame are considered idle by both the ED based CCA as well as the virtual CS, a STA is allowed to transmit the HE trigger- based PPDU on the allocated RU.		2017/1/9 9:42
8556	Rojan Chitrakar	225	1 27.5.2.6	172	23	E	N	172.23 27.5.2.6	The term "UL OFDMA-based random access" is very long. Define an acronym for "UL OFDMA-based random access" for easy referencing.	Following the 802.11 tradition of four letter acronyms for channel access schemes (e.g. EDCA, HCCA, MCCA etc.), would like to suggest UORA (Uplink OFDMA-based Random Access). Add a definition for UORA in Clause 3.2 and Clause 3.4 and replace all appropriate repetitive instances of "Uplink OFDMA-based Random Access" with UORA.		2017/1/9 9:42
8557	Rojan Chitrakar	225	1 27.5.2.6.1	172	33	T	N	172.33 27.5.2.6.1	STAs with limited/inaccurate transmission power adjustment capabilities may not be able to accurately match the "Target RSSI" level specified in the Trigger Frame. This may cause large differences in the received power among STAs, leading to severe Multi-User Interference (MUI). As an example, an STA located very close to the AP may cause high RSSI at the AP even at minimum transmission power. This issue would be even more serious in the case of random access since the AP cannot know which STAs will actually transmit.	In order to enable the AP to reduce the chances of Multi-User Interference (MUI), aside from AID = 0, add two more special AIDs to identify RUs for random access with some restrictions as below: AID = 2008: Only STAs whose estimated received signal power at the AP does not exceed the "Target RSSI" specified in the Trigger frame, when the STA transmits at the transmit power level calculated as per Eqn. 28-118, may transmit on the RU. AID = 2009: Only STAs that cause the estimated received signal power at the AP to exceed the "Target RSSI" specified in the Trigger frame, even when the STA transmits at minimum transmit power level calculated as per Eqn. 28-118, may transmit on the RU. The definition of AID = 0 remains the same: AID = 0 : Random access with no restriction.		2017/1/9 9:42
8558	Rojan Chitrakar	225	1 27.5.2.6.1	172	49	T	N	172.49 27.5.2.6.1	This note (If the STA does not receive the RAPS element, the STA does not transmit any HE trigger-based PPDU using random access RUs.) implies that an STA performing Active Scan may not use Random Access to transmit Probe Request frames to an AP from which it has not received Beacon/Probe Response frames. Since unassociated STAs were one of the target device categories given as example when the random access scheme was introduced, this limitation appears restrictive.	Define default values for OCWmin and OCWmax that may be used by unassociated STAs to transmit the probe request frames using random access RUs.		2017/1/9 9:42

8675	Sigurd Schelstraete	225	1 9.4.2.218.3	84	40	T	Y	84.40 9.4.2.218.3	There are 6 conditions for setting the MU Beamformer bit. Some of them are potentially contradictory. E.g: Set to 1 if SU Beamformer subfield is 1, Set to 0 if sent by non-AP STA. Also, two of the conditions are: Set to 0 if the SU Beamformer subfield is 0, Set to 1 if SU Beamformer subfield is set to 1. This would make the MU Beamformer bit identical to the SU Beamformer bit. Clearly some extra hierarchy or conditions are needed to specify the value of the MU Beamformer bit.	Correct Encoding of MU Beamformer bit.	2017/1/9 9:42

8676	Sigurd Schelstraete	225	1 9.4.2.218.3	84	49	T	Y	84.49 9.4.2.218.3	Beamformee STS Capability is indicated in the HE Capabilities element. We believe HE should support MU-MIMO and BF optimized for up to 8 antennas. This means not being restricted by limited feedback capability of certain non-AP STAs. Ideally, all non-AP STAs should support Beamformee STS Capability equal to 8. Given that the feedback requirements are relatively straightforward for 1 and 2-antennas receivers, we could consider making it mandatory for those STAs. These are also the devices that are prime candidates for MU-MIMO and BF.	Define a class of non-AP STAs for which Beamformee STS Capability (and NSTS Total Capability) equal to 8 is mandatory (for instance, as function of N_STS supported by STA)		2017/1/9 9:42
8677	Sigurd Schelstraete	225	1 9.4.2.218.3	86	6	T	Y	86.06 9.4.2.218.3	The name "HE ER SU Payload" is not very descriptive. Replace with a name that better covers the definition.	See comment		2017/1/9 9:42
8678	Sigurd Schelstraete	225	1 9.4.2.218.4	86	44	T	N	86.44 9.4.2.218.4	There is no reason to call the field "Highest NSS Supported M1". It's better and cleaner to call it "Highest NSS Supported" and clarify how this is encoded, as is done throughout the draft (see e.g. "NSTS Total For <= 80 MHz", "Number Of Sounding Dimensions For <= 80 MHz", ... All of those fields are encoded as the number of streams minus 1, but that is not reflected in the field name)	See comment		2017/1/9 9:42
8679	Sigurd Schelstraete	225	1 9.4.2.218.4	87	56	T	N	87.56 9.4.2.218.4	"If all of the bits of the Tx BW Bitmap subfield and all of the bits of the Rx BW Bitmap subfield are zero, then none of the subfields of the Tx Rx HE MCS Support field beyond Highest MCS Supported need to be present."This means that "Tx BW bitmap", "Rx BW bitmap", ... could be absent. That should be reflected in Figure 9-589cm.	Add "(if present)" for the fields that are not always included.		2017/1/9 9:42

Change "The PPE Thresholds Info field is (NSS M1 + 1) x Number of bits set to 1 in the RU Index Bitmask subfield x 6 bits in length." to "The PPE Thresholds Info field contains 6 x (NSS M1 + 1) bits for every bit in the RU Index Bitmask subfield that is different from zero."	See comment		2017/1/9 9:42
8689	Sigurd Schelstraete	225	1 9.7.1	107	1	T	N	107.01 9.7.1	Where is HE PPDU in (9-5)?	Change "VHT PPDU" to "VHT and HE PPDU"		2017/1/9 9:42
8690	Sigurd Schelstraete	225	1 17.2.2.1	145	24	T	Y	145.24 17.2.2.1	In Table 17-1, it says that a value of "false" for "TRIGGER_RESPONDING" means that "the MAC entity requests that the PHY entity does not have to do synchronization". In 17.2.2.6 it says that "false" means that "the MAC sublayer is requesting that the PHY entity does not do synchronization". In other words: in one case, the MAC does not require (but presumably permits) timing correction, in the other case, the MAC does not allow synchronization. It's not clear why the MAC would forbid synchronization, even if it doesn't explicitly request it.	Change definition of "TRIGGER_RESPONDING" such that it indicates that the MAC does not require synchronization, but does not forbid it either.		2017/1/9 9:42

8691	Sigurd Schelstraete	225	1 17.2.2.1	145	53	T	Y	145.53 17.2.2.1	"pre-compensate for carrier frequency offset (CFO) error and symbol clock error". Relative to what?	Indicate that correction is done relative to the reference provided by the trigger frame.	2017/1/9 9:42
8692	Sigurd Schelstraete	225	1 27.1	149	8	T	N	149.08 27.1	Shouldn't section called "Introduction" briefly summarize the purpose of the Clause? Now all it says is that "The use of HCCA and TSPEC are banned at HE STAs."	Provide brief summary of Clause 27 as part of 27.1.	2017/1/9 9:42
8693	Sigurd Schelstraete	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	One of the conditions for inter-BSS frame is: "An HE AP receives either a VHT MU PPDU or an HE MU PPDU". Does this imply that STAs can never use the MU format - even if they only transmit to one user.	Use of MU format by STAs should be clarified. Page 212, line 9 states that non-AP STAs may support "Transmission of an HE MU PPDU over partial PPDU bandwidth and full PPDU bandwidth". In that case, reception of an HE MU by the HE AP could be intra-BSS.	2017/1/9 9:42
8694	Sigurd Schelstraete	225	1 27.3.3.1	153	19	E	N	153.19 27.3.3.1	Typo: change ".." to "."	See comment	2017/1/9 9:42

8763	Sigurd Schelstraete	225	1 28.2.2	219	53	T	N	219.53 28.2.2	Replace "DCM is not applied to STBC" with "DCM is not applied in combination with STBC"	See comment	2017/1/9 9:42
8764	Sigurd Schelstraete	225	1 28.2.2	220	11	T	N	220.11 28.2.2	SIG_B_COMPRESSION_MODE is not an independent parameter. SIG-B compression is only used for full-BW MU-MIMO. Whether the PPDU is full BW MU-MIMO will follow from other fields in TXVECTOR.	Remove "SIG_B_COMPRESSION_MODE" from the Table	2017/1/9 9:42
8765	Sigurd Schelstraete	225	1 28.2.2	221	15	T	N	221.15 28.2.2	Replace "Right 106-tone RU" with "higher in frequency"	See comment	2017/1/9 9:42
8766	Sigurd Schelstraete	225	1 28.2.2	221	18	T	N	221.18 28.2.2	The term "channel bonding" has been replaced with "preamble puncturing"	Replace wording	2017/1/9 9:42

8767	Sigurd Schelstraete	225	1 28.2.2	221	18	T	N	221.18 28.2.2	The values for CH_BANDWIDTH for HE_MU format should be included in this table. Values in SIG-A should reference the values in this table, not the other way around.	Provided enumerated list with possible values.	2017/1/9 9:42
8768	Sigurd Schelstraete	225	1 28.2.2	221	24	T	N	221.24 28.2.2	What is the estimated channel width of an HE_TRIG PPDU in RXVECTOR? Isn't it already known at the AP? What would be the bandwidth if not all triggered STAs respond to the trigger? There could be many more possibilities than the ones listed.	Clarify	2017/1/9 9:42
8769	Sigurd Schelstraete	225	1 28.2.2	221	33	T	N	221.33 28.2.2	"The TXVECTOR parameter CH_BANDWIDTH does not represent the channel width of the transmitted PPDU.". It might.	Replace with "The TXVECTOR parameter CH_BANDWIDTH does not necessarily represent the channel width of the transmitted PPDU."	2017/1/9 9:42
8770	Sigurd Schelstraete	225	1 28.2.2	222	42	T	N	222.42 28.2.2	NUM_STS support in RXVECTOR is indicated as MU (column 5) for HE_MU. Does this mean that each receiver has to indicate the NUM_STS for all users in the MU PPDU? Why?	Clarify	2017/1/9 9:42
8771	Sigurd Schelstraete	225	1 28.2.2	222	46	T	N	222.46 28.2.2	"non MU-MIMO RU". Previously "SU RU" was used. Need a clear term for this type of RU.	Use unique terminology to refer to RU with only one user	2017/1/9 9:42
8772	Sigurd Schelstraete	225	1 28.2.2	222	49	T	N	222.49 28.2.2	"NUM_STS summed over all users per RU is not greater than 8." is a statement of fact. It should be a requirement.	Replace with "NUM_STS summed over all users per RU shall not be greater than 8."	2017/1/9 9:42
8773	Sigurd Schelstraete	225	1 28.2.2	222	51	T	N	222.51 28.2.2	NUM_STS support in TXVECTOR is indicated as MU (column 4) for HE_TRIG. Each Trigger-based frame has only one user.	Change "MU" to "Y"	2017/1/9 9:42
8774	Sigurd Schelstraete	225	1 28.2.2	223	25	T	N	223.25 28.2.2	Remove paragraph starting at line 25. This is too much detail and refers to B0-B7 that are not used in this section. Alse delete NOTE.	See comment	2017/1/9 9:42
8775	Sigurd Schelstraete	225	1 28.2.2	223	51	T	N	223.51 28.2.2	"Indicates whether the doppler effect should be considered for the PPDU." There is no indication anywhere in the document what this means. This requirement is not actionable.	Clarify or remove parameter.	2017/1/9 9:42
8776	Sigurd Schelstraete	225	1 28.2.2	224	20	T	N	224.20 28.2.2	RU_ALLOCATION is not explicitly indicated in the PPDU for HE_TRIG, so it can not be part of RXVECTOR.	Replace "MU" in column 5 with "N"	2017/1/9 9:42
8777	Sigurd Schelstraete	225	1 28.2.2	224	29	T	N	224.29 28.2.2	"a single user allocation in an RU". Previously terms "SU RU and "non MU-MIMO RU" were used.	Use unique terminology to refer to RU with only one user	2017/1/9 9:42
8778	Sigurd Schelstraete	225	1 28.2.2	224	38	T	N	224.38 28.2.2	The value of HE_LTF_MODE can not be chose independently from the GI_TYPE	Restrict the number of possible combinations of GI and LTF type. Either have a single parameter to list the combinations or add NOTE.	2017/1/9 9:42
8779	Sigurd Schelstraete	225	1 28.2.2	224	56	T	N	224.56 28.2.2	NUM_HE_LTF also needs to be be supported for format "HE_MU". The value is needed in HE-SIG-A for MU format.	Change "FORMAT is HE_TRIG" to "FORMAT is HE_TRIG or HE_MU"	2017/1/9 9:42
8780	Sigurd Schelstraete	225	1 28.2.2	225	52	T	N	225.52 28.2.2	Why is PREAMBLE_TYPE only specified for HE? Shouldn't TX/RXVECTOR also be updated for other types?	Clarify	2017/1/9 9:42
8781	Sigurd Schelstraete	225	1 28.2.2	226	4	T	N	226.04 28.2.2	The parameter "PE_DURATION" should be renamed "MAX_PE_DURATION", since it doesn't give the actual value of the PE field.	See Comment. Also updated\ decription.	2017/1/9 9:42
8782	Sigurd Schelstraete	225	1 28.2.2	226	13	T	N	226.13 28.2.2	BEAM_CHANGE is described as boolean value (true/false). In most other binary cases, 0/1 is used. Which is correct?	Use either boolean or 0/1 consistently.	2017/1/9 9:42
8783	Sigurd Schelstraete	225	1 28.2.2	227	4	T	N	227.04 28.2.2	Why does the MAC need to know the Scrambler Initialization value? RXVECTOR already contains CH_BANDWIDTH_IN_NON_HT and DYN_BANDWIDTH_IN_NON_HT for NON_HT format. For other formats, this value carries no information.	Remove "SCRAMBLER_INITIAL_STATE" from the Table	2017/1/9 9:42
8784	Sigurd Schelstraete	225	1 28.3.2.1	227	48	T	N	227.48 28.3.2.1	"The MU transmissions include DL MU transmissions and UL MU transmissions." What do we call an HE MU transmitted by an non-AP STA? This is an allowed option (see page 212, line 9), but it appears to be neither UL or DL MU.	Clarify	2017/1/9 9:42

8785	Sigurd Schelstraete	225	1 28.3.2.1	227	50	T	N	227.50 28.3.2.1	"simultaneously transmit frames". There is only one frame. Use term PSDU instead of frame.	See comment	2017/1/9 9:42
8786	Sigurd Schelstraete	225	1 28.3.2.1	227	54	T	N	227.54 28.3.2.1	"simultaneous frames from more than one non-AP STAs.". It is allowed to trigger a sinlge STA, so it would be more correct to say "one or more non-AP STAs"	See comment	2017/1/9 9:42
8787	Sigurd Schelstraete	225	1 28.3.2.1	227	55	T	N	227.55 28.3.2.1	"Non-AP STAs transmit their frames using HE trigger-based PPDU format and employ either UL OFDMA, UL MU-MIMO, or a mixture of both." The STAs don't employ OFDMA or MU-MIMO. They simply transmit in their given RU with the requested number of HE-LTFs and are pretty much ignorant to whether MU-MIMO is applied or not.	Delete "and employ either UL OFDMA, UL MU-MIMO, or a mixture of both."	2017/1/9 9:42
8788	Sigurd Schelstraete	225	1 28.3.2.1	227	59	T	N	227.59 28.3.2.1	Replace "On an RU" with "within an RU"	See comment	2017/1/9 9:42
8789	Sigurd Schelstraete	225	1 28.3.2.1	227	64	T	N	227.64 28.3.2.1	Who is "they"?	Improve wording	2017/1/9 9:42
8790	Sigurd Schelstraete	225	1 28.3.2.1	228	1	T	N	228.01 28.3.2.1	"SU transmission" in a given RU can only be done using HE MU format. The use of the term SU in this case is confusing. We need a better term to distinguish RUs with one user vs. RUs shared by multiple users.	See comment	2017/1/9 9:42
8791	Sigurd Schelstraete	225	1 28.3.3.1	228	12	T	N	228.12 28.3.3.1	Replace "several" with "one or more". MU format can be used for one user.	See Comment. Also updated\ decription.	2017/1/9 9:42
8792	Sigurd Schelstraete	225	1 28.3.3.1	228	12	T	N	228.12 28.3.3.1	Remove "in general"	See comment	2017/1/9 9:42
8793	Sigurd Schelstraete	225	1 28.3.3.1	228	13	T	N	228.13 28.3.3.1	"In HE, the time region covers the entire data portion of an HE PPDU". No mention has been made of "time regions" so far. The need for this is not clear.	Replace "In HE, the time region covers the entire data portion of an HE PPDU, and the frequency region includes a number of contiguous subcarriers with the exception of the RUs which straddle DC where nulls are placed in the middle of the band." with "In HE, subsets consists of contiguous subcarriers called resource units (RU) with the exception of the RUs which straddle DC where nulls are placed in the middle of the band."	2017/1/9 9:42
8794	Sigurd Schelstraete	225	1 28.3.3.1	228	17	T	N	228.17 28.3.3.1	Reference to Table 28-15 should probably be Figure 28-1	Correct reference	2017/1/9 9:42
8795	Sigurd Schelstraete	225	1 28.3.3.1	228	18	T	N	228.18 28.3.3.1	Sentence starting at "Similar to OFDM, ..." is essentially repetition.	Remove sentence	2017/1/9 9:42
8796	Sigurd Schelstraete	225	1 28.3.3.1	228	20	T	N	228.20 28.3.3.1	The term "subchannelization" is only used twice on this page and nowhere else in the document.	Delete this sentence and the use of "subchannelization"	2017/1/9 9:42
8797	Sigurd Schelstraete	225	1 28.3.3.1	228	50	T	N	228.50 28.3.3.1	Sentence starting at "Subchannelization defines subchannels, ..." is essentially repetition.	Remove sentence	2017/1/9 9:42
8798	Sigurd Schelstraete	225	1 28.3.3.5	237	26	T	N	237.26 28.3.3.5	Improve wording "some RUs in 20 MHz operating STAs are restricted to be used in 40, 80, 80+80 or 160 MHz OFDMA operation."	Change to e.g. "the use of some RUs in the presence of 20 MHz operating STAs is not allowed in 40, 80, 80+80 or 160 MHz OFDMA transmissions."	2017/1/9 9:42
8799	Sigurd Schelstraete	225	1 28.3.3.5	237	34	T	N	237.34 28.3.3.5	Delete "(2 26-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8800	Sigurd Schelstraete	225	1 28.3.3.5	237	36	T	N	237.36 28.3.3.5	Delete "(7 26-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8801	Sigurd Schelstraete	225	1 28.3.3.5	237	38	T	N	237.38 28.3.3.5	Delete "(14 26-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8802	Sigurd Schelstraete	225	1 28.3.3.5	237	42	T	N	237.42 28.3.3.5	Delete "(2 of 52-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8803	Sigurd Schelstraete	225	1 28.3.3.5	237	44	T	N	237.44 28.3.3.5	Delete "(4 of 52-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8804	Sigurd Schelstraete	225	1 28.3.3.5	237	49	T	N	237.49 28.3.3.5	Delete "(2 of 106-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8805	Sigurd Schelstraete	225	1 28.3.3.5	237	50	T	N	237.50 28.3.3.5	Delete "(4 of 106-tone RUs are restricted)". This adds no useful information.	See comment	2017/1/9 9:42
8806	Sigurd Schelstraete	225	1 28.3.3.5	237	57	T	N	237.57 28.3.3.5	"all 242-tone RUs of 20 MHz operating STAs". How can there be more than one 242-tone RU in 20 MHz? What does this requirement mean?	Clarify	2017/1/9 9:42
8807	Sigurd Schelstraete	225	1 28.3.3.5	237	57	T	N	237.57 28.3.3.5	"It is optional ...". Support for an option should be indicated in e.g. Capabilities. How is support for this option communicated?	Clarify	2017/1/9 9:42

8808	Sigurd Schelstraete	225	1 28.3.3.6	238	1	T	N	238.01 28.3.3.6	"20 MHz-only" instead of "20 MHz only"?	Use one term consistenly throughout the draft	2017/1/9 9:42
8809	Sigurd Schelstraete	225	1 28.3.3.6	238	1	T	N	238.01 28.3.3.6	It seems more logical to have current section 28.3.3.6 before 28.3.3.5	Swap sections	2017/1/9 9:42
8810	Sigurd Schelstraete	225	1 28.3.3.6	238	5	T	N	238.05 28.3.3.6	"A 20 MHz only HE STA operates in the primary 20 MHz channel as a mandatory mode." is not correct language for a standard.	Change to "A 20 MHz only HE STA shall only operate in the primary 20 MHz channel."	2017/1/9 9:42
8811	Sigurd Schelstraete	225	1 28.3.3.6	238	5	T	Y	238.05 28.3.3.6	"A 20 MHz only HE STA operates in the primary 20 MHz channel as a mandatory mode." Having 20 MHz-only systems operate in only the primary channel is suboptimal. There should be an option for 20-MHz only devices to operate in any 20 MHz channels.	See comment	2017/1/9 9:42
8812	Sigurd Schelstraete	225	1 28.3.3.6	238	9	T	N	238.09 28.3.3.6	"An HE AP in 5 GHz shall be 80 MHz capable". This is already covered in 28.1.1. No need to repeat.	Delete	2017/1/9 9:42
8813	Sigurd Schelstraete	225	1 28.3.3.6	238	13	T	N	238.13 28.3.3.6	Add references to Table 28-3 to 28-5 for clarity	See comment	2017/1/9 9:42
8814	Sigurd Schelstraete	225	1 28.3.3.7	238	19	T	N	238.19 28.3.3.7	The purpose of this section is not clear or informative.	Delete 28.3.3.7	2017/1/9 9:42
8815	Sigurd Schelstraete	225	1 28.3.3.8.1	238	27	T	N	238.27 28.3.3.8.1	Change title to "Supported RU sizes for DL MU-MIMO"	See comment	2017/1/9 9:42
8816	Sigurd Schelstraete	225	1 28.3.3.8.1	238	30	T	N	238.30 28.3.3.8.1	There should be a similar requirement for transmit side (MU-MIMO only on RU sizes >= 106 tones)	Add requirement	2017/1/9 9:42
8817	Sigurd Schelstraete	225	1 28.3.3.8.1	238	30	T	N	238.30 28.3.3.8.1	Add reference to HE Capabilities field "DL MUMIMO On Partial Bandwidth"	See comment	2017/1/9 9:42
8818	Sigurd Schelstraete	225	1 28.3.3.8.2	238	38	E	N	238.38 28.3.3.8.2	Change "to minimum of" to "to the minimum of"	See comment	2017/1/9 9:42
8819	Sigurd Schelstraete	225	1 28.3.3.8.3	238	55	T	N	238.55 28.3.3.8.3	Most of the text in 28.3.3.8.3 seems to belong in either HE-SIG-A or HE-SIG-B sections. Move the relevant text to the appropriate sections and describe resource allocation in more general terms for this section.	See comment	2017/1/9 9:42
8820	Sigurd Schelstraete	225	1 28.3.3.8.3	238	60	T	N	238.60 28.3.3.8.3	Use HE-SIG-B instead of SIGB	Replace throughout the text.	2017/1/9 9:42
8821	Sigurd Schelstraete	225	1 28.3.3.8.3	239	17	T	Y	239.17 28.3.3.8.3	Paragraph starting at line 17 describes receiver operation. Transmitter behavior should be described instead.	Describe contents of HE-SIG-B from transmitter point of view.	2017/1/9 9:42
8822	Sigurd Schelstraete	225	1 28.3.3.8.3	239	38	T	N	239.38 28.3.3.8.3	"If a STA finds that it is a member of the beamformee group in RU r, its corresponding NSTS,r,u interpreted from the HE-SIG-B user specific blocks shall not be zero for the STA in the PPDU." There is no way the receiver can control the value of the HE-SIG-B user specific blocks, so this requirement as formulated for the receiver does not make sense.	Change to e.g. "If a STA is included as a a member of the beamformee group in RU r, its corresponding NSTS,r,u as contained in the HE-SIG-B user specific blocks shall not be zero."	2017/1/9 9:42
8823	Sigurd Schelstraete	225	1 28.3.3.9.1	239	46	T	N	239.46 28.3.3.9.1	Do we really need a subsection to 28.3.3.9? 28.3.3.9.1 is the only subsection here and it's only one sentence long.	Merge 28.3.3.9 and 28.3.3.9.1	2017/1/9 9:42
8824	Sigurd Schelstraete	225	1 28.3.3.9.1	239	49	T	N	239.49 28.3.3.9.1	Change "more than one" to "one or more"	See comment	2017/1/9 9:42
8825	Sigurd Schelstraete	225	1 28.3.3.9.1	239	50	T	N	239.50 28.3.3.9.1	STA should be plural	Change "The non-AP STA uses" to "The non-AP STA(s) use"	2017/1/9 9:42
8826	Sigurd Schelstraete	225	1 28.3.3.9.1	239	52	T	N	239.52 28.3.3.9.1	Mention both MU-MIMO and OFDMA in the introductory section 28.3.3.9.1	See comment	2017/1/9 9:42
8827	Sigurd Schelstraete	225	1 28.3.3.10.2	240	1	T	N	240.01 28.3.3.10.2	Change title to "Supported RU sizes for UL MU-MIMO"	See comment	2017/1/9 9:42
8828	Sigurd Schelstraete	225	1 28.3.3.10.2	240	3	T	N	240.03 28.3.3.10.2	Add reference to HE Capabilities field "UL MUMIMO "	See comment	2017/1/9 9:42
8829	Sigurd Schelstraete	225	1 28.3.3.10.2	240	6	T	N	240.06 28.3.3.10.2	There should be a similar requirement for receiver side (MU-MIMO only on RU sizes >= 106 tones)	Add requirement	2017/1/9 9:42
8830	Sigurd Schelstraete	225	1 28.3.3.10.2	240	23	E	N	240.23 28.3.3.10.2	Change "to minimum of" to "to the minimum of"	See comment	2017/1/9 9:42
8831	Sigurd Schelstraete	225	1 28.3.3.10.2	240	29	T	N	240.29 28.3.3.10.2	Clarify "A total of up to 8". Each STA individually only has knowledge of its own streams. Isn't this more a requirement on HE-LTF?	Clarify	2017/1/9 9:42
8832	Sigurd Schelstraete	225	1 28.3.3.10.2	240	39	T	N	240.39 28.3.3.10.2	Change "indicates the transmitting STAs" to "indicates to the transmitting STAs"	See comment	2017/1/9 9:42
8833	Sigurd Schelstraete	225	1 28.3.3.10.2	240	55	T	N	240.55 28.3.3.10.2	"will not transmit" should be a requirement	Change to "shall not transmit"	2017/1/9 9:42
8834	Sigurd Schelstraete	225	1 28.3.4	241	14	T	N	241.14 28.3.4	Change "that is not a response of a Trigger frame" to "when the PPDU is not a response to a Trigger Frame"	See comment	2017/1/9 9:42

8835	Sigurd Schelstraete	225	1 28.3.4	241	28	T	N	241.28 28.3.4	"HE-SIG-A field is repeated". Strictly speaking it is not simply a repetition, since the interleaving is different.	Clarify	2017/1/9 9:42
8836	Sigurd Schelstraete	225	1 28.3.4	242	4	T	N	242.04 28.3.4	SIGNAL is all-caps for L-SIG and RL-SIG, but not for HE-SIG-A and HE-SIG-B.	Use "SIGNAL" or "Signal" consistently	2017/1/9 9:42
8837	Sigurd Schelstraete	225	1 28.3.4	242	27	T	N	242.27 28.3.4	Text mentions the field HE-SIG-A-R. This is not mentioned anywhere else. Should this be used in the definition of the preamble or should be remove it?	Clarify	2017/1/9 9:42
8838	Sigurd Schelstraete	225	1 28.3.5	243	16	T	N	243.16 28.3.5	Figure 28-9 shows L-SIG, RL-SIG, HE-SIG-A. Don't' bring L-STF or L-LTF into the description.	Remove line 16 (starting at "These transmit blocks") to line 22. Similarly for lines 53 to 59.	2017/1/9 9:42
8839	Sigurd Schelstraete	225	1 28.3.5	244	31	T	N	244.31 28.3.5	Don't use term "legacy preamble".	Use e.g. non-HE preamble fields	2017/1/9 9:42
8840	Sigurd Schelstraete	225	1 28.3.5	244	31	T	N	244.31 28.3.5	"on the 20 MHz channels where the STA's HE modulated fields are located" is not clear.	Change to "on the 20 MHz channels that overlap with the RU's that are used by the HE-modulated fields"	2017/1/9 9:42
8841	Sigurd Schelstraete	225	1 28.3.5	245	29	T	N	245.29 28.3.5	Change "number of spatial stream" to "number of spatial streams"	See comment	2017/1/9 9:42
8842	Sigurd Schelstraete	225	1 28.3.6.2	249	53	T	N	249.53 28.3.6.2	For HE_MU, L-STF should only be sent in the 20 MHz channels that overlap with active RU's, so the CH_BANDWIDTH alone does not determine L-STF sequence over the full frequency.	Add special requirements for HE_MU. Similar for L-LTF, L-SIG and RL_SIG.	2017/1/9 9:42
8843	Sigurd Schelstraete	225	1 28.3.6.4	250	42	T	N	250.42 28.3.6.4	Change "in subcarriers k" to "at subcarriers locations"	See comment	2017/1/9 9:42

Therefore, it is not precise to describe HE NDP PPDU in HE_SU,HE_MU,HE_EXT_SU or HE_TRIG format row.	First, separate the row into two rows, one is 'FORMAT is HE_SU', the other is 'FORMAT is HE_MU,HE_EXT_SU or HE_TRIG'. In 'FORMAT is HE_SU' row. Include the description of HE NDP PPDU. In 'FORMAT is HE_MU,HE_EXT_SU or HE_TRIG', change the minimum octet size from 0 to 1 describing the number of octets in the HE PSDU.	2017/1/9 9:42
9142	SUNGEUN LEE	225	1 28.2.2	223	28	E	Y	223.28 28.2.2	Improve the description on note for B1-B6. Integer can be in decimal, in octal, or in binary format, so 'B1-B6 is integer' description is not sufficient.	Update the note to express decimal value, e.g., Note. B1-B6 indicates a decimal integer of a binary number from B1 to B6, where B1 is MSB.	2017/1/9 9:42
9143	SUNGEUN LEE	225	1 28.2.2	223	20	T	Y	223.20 28.2.2	all 1s in TXOP denotes the no duration information, but it does not mean it is an invalid value.	Describe all 1 case (127) with better wording	2017/1/9 9:42
9144	SUNGEUN LEE	225	1 28.2.2	226	15	T	Y	226.15 28.2.2	HE-LTF1 is not clearly defined in the specification, so detailed description for the first symbol of HE-LTF is required to be added	Change HE-LTF1 into the first symbol of HE-LTF	2017/1/9 9:42

9224	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE beamformee should be included.	Add a definition of HE beamformee in clause 3.2.	2017/1/9 9:42
9225	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE beamformer should be included.	Add a definition of HE beamformer in clause 3.2.	2017/1/9 9:42
9226	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE-MCS should be included.	Add a definition of HE-MCS in clause 3.2.	2017/1/9 9:42
9227	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE MU PPDU should be included.	Add a definition of HE MU PPDU in clause 3.2.	2017/1/9 9:42
9228	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE PPDU should be included.	Add a definition of HE PPDU in clause 3.2.	2017/1/9 9:42
9229	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of HE SU PPDU should be included.	Add a definition of HE SU PPDU in clause 3.2.	2017/1/9 9:42
9230	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of DL-OFDMA should be included.	Add a definition of DL-OFDMA in clause 3.2.	2017/1/9 9:42
9231	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of UL-OFDMA should be included.	Add a definition of UL-OFDMA in clause 3.2.	2017/1/9 9:42
9232	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of SR should be included.	Add a definition of SR in clause 3.2.	2017/1/9 9:42
9233	Tomoko Adachi	225	1 3.2			T	Y	3.2	The definition of SRP-based SR should be included.	Add a definition of SRP-based SR in clause 3.2.	2017/1/9 9:42
9234	Tomoko Adachi	225	1 3.4			E	Y	3.4	The acronym definition of UL-MU-MIMO should be added.	Add an acronym definition of UL-MU-MIMO in clause 3.4.	2017/1/9 9:42
9235	Tomoko Adachi	225	1 3.4			E	Y	3.4	The acronym definition of DL-OFDMA should be added.	Add an acronym definition of DL-OFDMA in clause 3.4.	2017/1/9 9:42
9236	Tomoko Adachi	225	1 3.4			E	Y	3.4	The acronym definition of UL-OFDMA should be added.	Add an acronym definition of UL-OFDMA in clause 3.4.	2017/1/9 9:42
9237	Tomoko Adachi	225	1 3.4			E	Y	3.4	The acronym definition of SR should be added.	Add an acronym definition of SR in clause 3.4.	2017/1/9 9:42
9238	Tomoko Adachi	225	1 3.4			E	Y	3.4	The acronym definition of SRP should be added.	Add an acronym definition of SRP in clause 3.4.	2017/1/9 9:42
9239	Tomoko Adachi	225	1			E	Y		Both "DL MU-MIMO" and "DL-MU-MIMO" are used. Terminology should be unified. Referring to 802.11ac, "DL-MU-MIMO" seems to be the one to choose.	Search for "DL MU-MIMO" and replace it with "DL-MU-MIMO" throughout the draft.	2017/1/9 9:42
9240	Tomoko Adachi	225	1			E	Y		"UL MU-MIMO" is used but referring to 802.11ac using "DL-MU-MIMO", "UL-MU-MIMO" seems to be the one to use.	Search for "UL MU-MIMO" and replace it with "UL-MU-MIMO" throughout the draft.	2017/1/9 9:42
9241	Tomoko Adachi	225	1			E	Y		Both "DL OFDMA" and "DL-OFDMA" are used. Terminology should be unified. Rererring to 802.11ac using "DL-MU-MIMO", "DL-OFDMA" seems to be the one to choose.	Search for "DL OFDMA" and replace it with "DL-OFDMA" throughout the draft.	2017/1/9 9:42
9242	Tomoko Adachi	225	1			E	Y		Both "UL OFDMA" and "UL-OFDMA" are used. Terminology should be unified. Referring to 802.11ac using "DL-MU-MIMO", "UL-OFDMA" seems to be the one to choose.	Search for "UL OFDMA" and replace it with "UL-OFDMA" throughout the draft.	2017/1/9 9:42

9243	Tomoko Adachi	225	1 3.4	7	8	E	Y	7.08 3.4	As "DL-MU-MIMO" is used in the baseline, it seems that the acronym "DL MU" should be changed to "DL-MU".	Search for "DL MU" and replace it with "DL-MU" throughout the draft.	2017/1/9 9:42
9244	Tomoko Adachi	225	1 3.4	7	20	E	Y	7.20 3.4	As "DL-MU-MIMO" is used in the baseline, it seems that the acronym "UL MU" should be changed to "UL-MU".	Search for "UL MU" and replace it with "UL-MU" throughout the draft.	2017/1/9 9:42
9245	Tomoko Adachi	225	1			E	Y		"Trigger frame" is already used for other than triggering STAs to start UL-MU. See such as 2nd paragraph in 10.29.4, 4th paragraph in 11.2.3.5.1 of 802.11-2016. The name of the frame should be revisited, so that it can be deferentiated with the frames used for other purposes. Also, there are places using lower-letter "trigger" and it is better to capitalize the frame name throughout the draft.	Search for "trigger frame" and "Trigger frame" where it is used to trigger STAs to start UL-MU and replace it with "UL-MU Trigger frame" throughout the draft.	2017/1/9 9:42
9246	Tomoko Adachi	225	1 4.3.14a	9		T	Y	9.00 4.3.14a	Optional support for UL-MU-MIMO should be mentioned here.	Add such description in clause 4.3.14a.	2017/1/9 9:42
9247	Tomoko Adachi	225	1 4.3.14a	9		E	N	9.00 4.3.14a	All the items except the one in line 51 end without periods. Unify the expression.	Check the style guide and unify the expression of the items in clause 4.3.14a.	2017/1/9 9:42
9248	Tomoko Adachi	225	1 4.3.14a	9	54	T	Y	9.54 4.3.14a	Multi-STA BlockAck is said to be optional here. However from p.l. 157.25 in clause 27.4.1, as UL OFDMA is mandatory, it is mandatory for HE STAs.	Change the item "Optional support for Multi-STA BlockAck" in clause 4.3.14a to "Mandatory support for Multi-STA BlockAck".	2017/1/9 9:42
9249	Tomoko Adachi	225	1 4.3.14a	9	63	T	Y	9.63 4.3.14a	It says "Multi-STA BlockAck frames are used by the AP to acknowledge the transmissions from multiple non-AP STAs." But Multi-STA BlockAck can be also used by non-AP STAs. See 9.3.1.9.1 and 27.4.1 for example. I am not sure of the intention of this sentence, but assume it was written to describe the UL-MU sequence in accordance with the previous two sentences. And the AP can also acknowledge STAs with Compressed BlockAck frames using DL-MU transmission.	Change the sentence "Multi-STA BlockAck frames are used by the AP to acknowledge the transmissions from multiple non-AP STAs." to "Multi-STA BlockAck frames may be used by the AP to acknowledge the UL-MU transmissions. " Or delete this sentence.	2017/1/9 9:42
9250	Tomoko Adachi	225	1 4.3.14a	9	64	E	N	9.64 4.3.14a	The sentence "Scheduled Trigger frames are sent by the AP to allow for non-AP STA power save." should be reconsidered.	Change the sentence "Scheduled Trigger frames are sent by the AP to allow for non-AP STA power save." to "Scheduled Trigger frames are sent by the AP to allow non-AP STAs to be in power save."	2017/1/9 9:42
9251	Tomoko Adachi	225	1 9.2.4.6.4.2	23	59	E	N	23.59 9.2.4.6.4.2	The sentence "The UL PPDU Length subfield indicates the length of the HE trigger-based PPDU response and is set to the number of OFDM symbols the Data field of the HE trigger-based PPDU minus 1." should be reconsidered. A preposition needed between "the number of OFDM symbols" and "the Data field". Don't think "response" is needed after "trigger-based PPDU".	Change the sentence "The UL PPDU Length subfield indicates the length of the HE trigger-based PPDU response and is set to the number of OFDM symbols the Data field of the HE trigger-based PPDU minus 1." to "The UL PPDU Length subfield indicates the length of the HE trigger-based PPDU and is set to the number of OFDM symbols in the Data field of the HE trigger-based PPDU minus 1.	2017/1/9 9:42
9252	Tomoko Adachi	225	1 9.2.4.6.4.2	23	65	E	N	23.65 9.2.4.6.4.2	Don't think "reponse" is necessary after "trigger-based PPDU".	Delete "response" after "the HE trigger-based PPDU".	2017/1/9 9:42
9253	Tomoko Adachi	225	1 9.3.1.9.7	38	36	E	N	38.36 9.3.1.9.7	VHT Single MPDU is changed to S-MPDU from 802.11ah.	Change "Sent as a response to an MPDU or VHT Single MPDU that solicits an immediate acknowledgement" appearing in the right hand column of Table 9-24b to "Sent as a response to an MPDU or S-MPDU that solicits an immediate acknowledgement".	2017/1/9 9:42

9269	Tomoko Adachi	225	1 9.4.2.218.3	85	48	T	Y	85.48 9.4.2.218.3	B56 now indicates support of reception of SU-Type partial *and* full bandwidth feedback in the Tx Beamforming Feedback With Trigger Frame Capability subfield in Table 9-262aa. This means it is set to 1 only if both the partial and the full bandwidth feedback is supported. The indication for the partial and for the full bandwidth feedback should be divided.	Change the definition to read as follows: If the transmitting STA is an AP STA: Bxx: indicates support of reception of SU-Type full bandwidth feedback Bxx: indicates support of reception of SU-Type partial bandwidth feedback Bxx: indicates support of reception of MU-Type partial bandwidth feedback Bxx: indicates support of reception of CQI-Only partial and full bandwidth feedback If the transmitting STA is a non-AP STA: Bxx: indicates support of transmission of SU-Type full bandwidth feedback Bxx: indicates support of transmission of SU-Type partial bandwidth feedback Bxx: indicates support of transmission of MU-Type partial bandwidth feedback Bxx: indicates support of transmission of CQI-Only partial and full bandwidth feedback	2017/1/9 9:42
9270	Tomoko Adachi	225	1 9.4.2.220	93	18	E	N	93.18 9.4.2.220	Unify the terminology whether to include "UL" before "OFDMA-based random access". All the places other than here, in page 9 line 58, and in page 413 line 12 include "UL". And if "UL" is added, referring to 802.11ac, it should be "UL-OFDMA-based".	Search for "OFDMA-based random access" not having "UL" before it and where it is used as the name of the mechanism, replace it with "UL-OFDMA-based random access." Also search for "UL OFDMA-based random access" and replace it with "UL-OFDMA-based random access".	2017/1/9 9:42
9271	Tomoko Adachi	225	1 9.7.3	108	56	E	N	108.56 9.7.3	"Multi-STA BlockAck" is the correct terminology.	Change "Multi-STA BA" in the middle column in the row for Control Response in Table 9-424 to "Multi-STA BlockAck".	2017/1/9 9:42
9272	Tomoko Adachi	225	1 9.7.3	109	28	E	N	109.28 9.7.3	"Multi-STA BlockAck" is the correct terminology.	Change "Multi-STA BA" in the middle column in the row for Multi-STA BlockAck in Table 9-425 to "Multi-STA BlockAck".	2017/1/9 9:42
9273	Tomoko Adachi	225	1 10.3.2.4	114	49	T	Y	114.49 10.3.2.4	There is no need to differentiate between whether the STA is solicited for an immediate response or not. Even if the STA is solicited for an immediate response and updated its intra-BSS NAV, the STA can still respond to the Trigger frame because the condition of intra-BSS NAV won't matter. It will just make the condition complex with no meaning.	Delete the sentence "If the STA is an HE STA and the STA is solicited for an immediate response by the PPDU carrying the received frame, the STA shall not update its NAV."	2017/1/9 9:42
9274	Tomoko Adachi	225	1 10.3.2.8a			T	N	10.3.2.8a	The MU-RTS/CTS procedure is limited among HE APs and HE STAs. Isn't it better to move under such as 27.5?	Move clause 10.3.2.8a and its subclauses between 27.5.2 and 27.5.3. Describe somewhere appropriate in 10.3.2 that the MU-RTS/CTS procedure is described in 27.5.	2017/1/9 9:42
9275	Tomoko Adachi	225	1 10.3.2.8a.1	116	3	E	N	116.03 10.3.2.8a.1	The acknowledgement responses here are responses to the DL MU PPDU. And they are achieved by UL-MU. There is also an extra period at the end of the sentence.	Change "... to protect DL MU PPDU and acknowledgement responses.." to "... to protect DL-MU PPDU and its acknowledgement responses that are achieved by UL-MU."	2017/1/9 9:42
9276	Tomoko Adachi	225	1 10.3.2.8a.1	116	29	E	N	116.29 10.3.2.8a.1	Referring to the sentence starting from line 1, the Multi-STA BlockAdk frame here is also acknowledgement responses.	Change "... to protect the scheduled HE trigger-based PPDU and Multi-STA BlockAck frame." to "... to protect the scheduled HE trigger-based PPDU and its acknowledgement responses that are achieved by a Multi-STA BlockAck frame."	2017/1/9 9:42
9277	Tomoko Adachi	225	1 10.3.2.8a.1	116	37	E	Y	116.37 10.3.2.8a.1	An acronym "TB" is not defined.	Search for "TB" and replace it with "trigger-based" throughout the draft. Or, define the acronym in clause 3.4.	2017/1/9 9:42
9278	Tomoko Adachi	225	1 10.3.2.10.3	120	7	E	N	120.07 10.3.2.10.3	Space is missing between the sentences.	Add space before the sentence starting with "Specifically, when an AP transmits ...".	2017/1/9 9:42
9279	Tomoko Adachi	225	1 10.3.2.10.3	120	22	E	N	120.22 10.3.2.10.3	The explanation of Figure 10-12b starting from line 14 says the BlockAck frames are sent by DL OFDMA. So, like in Figure 10-12a, the BlockAck frames should be described that they are sent by OFDMA.	Add "OFDMA BA" above the "BA" frames in Figure 10-12b.	2017/1/9 9:42

9280 Tomoko Adachi	225	1 10.3.2.10.3	120	39	E	N	120.39 10.3.2.10.3	The explanation of Figure 10-12b starting from line 14 says the BlockAck frames are sent by DL OFDMA. The title of Figure 10-12b should align with it.	Change the title of Figure 10-12b to "An example of an UL MU transmission with an immediate DL OFDMA transmission containing individually addressed BlockAck frames acknowledging the frames received from the respective STAs".	2017/1/9 9:42
9281 Tomoko Adachi	225	1 10.3.2.10.3	121	43	E	N	121.43 10.3.2.10.3	Figure 10-12d has only 4 STAs but Figures 10-12a to 10-12c have n STAs. There is no reason the number of STAs should be limited to 4 for this case.	Change Figure 10-12d to show n STAs are involved in the sequence.	2017/1/9 9:42
9282 Tomoko Adachi	225	1 10.22.2.9	133	37	T	Y	133.37 10.22.2.9	In clause 27.2.2, it is said that an HE AP doesn't need to maintain two NAVs. How the truncation rule described in clause 10.22.2.9 is applied to such AP is not clear. Even if the behavior described in clause 27.2.1 is also applied to such AP, such AP doesn't need to remember whether the most recent NAV update was due to an intra-BSS frame or an inter-BSS frame.	Clarify in clause 27.2.1 that an HE AP maintaining only one NAV doesn't need to hold the cause information of the most recent NAV update and that an HE STA maintaining two NAVs doesn't need to to hold the cause information of the most recent NAV updated of the basic NAV. Add a sentence in clause 10.22.2.9 to refer to clause 27.2.1. Or change the title of subclause 27.2.2 to "Operation of two NAVs" and describe the truncation rule which is specific to HE STAs maintaining two NAVs there.	2017/1/9 9:42
9283 Tomoko Adachi	225	1 10.28.3	136	27	E	N	136.27 10.28.3	VHT Single MPDU is changed to S-MPDU from 802.11ah.	Change "..., as a VHT single MPDU, ..." to "..., as an S-MPDU, ..."	2017/1/9 9:42
9284 Tomoko Adachi	225	1 27.2.2	150	58	T	Y	150.58 27.2.2	There is no need to differentiate between whether the STA is solicited for an immediate response or not. Even if the STA is solicited for an immediate response and updated its intra-BSS NAV, the STA can still respond to the Trigger frame because the condition of intra-BSS NAV won't matter. It will just make the condition complex with no meaning.	Delete the item "The STA is not solicited an immediate response by the PPDU carrying the frame."	2017/1/9 9:42
9285 Tomoko Adachi	225	1 27.2.2	151	42	T	Y	151.42 27.2.2	NOTE 2 should be a baseline text, not a note.	Move the content of NOTE 2 to a baseline text and remove NOTE 2.	2017/1/9 9:42
9286 Tomoko Adachi	225	1 27.4.1	157	22	T	Y	157.22 27.4.1	UL OFDMA is mandatory at HE STAs. Therefore the support of Multi-STA BlockAck frame is mandatory at HE STAs. And the generation of Multi-STA BlockAck frames is under the operation of HT-immediate BA.	Change the sentences "An HE STA shall support generation of Compressed BlockAck frames if HT-immediate BA is supported in the role of recipient (see 10.24.7.1 (Introduction). An HE STA shall support generation of Multi-STA BlockAck frame if either UL MU operation (see 27.5.2 (UL MU operation)) or multi-TID A-MPDU operation (27.10.4 (A-MPDU with multiple TIDs)) is supported in the role of recipient." to "An HE STA shall support generation of Compressed BlockAck frames and Multi-STA BlockAck frames if HT-immediate BA is supported in the role of recipient (see 10.24.7.1 (Introduction)."	2017/1/9 9:42
9287 Tomoko Adachi	225	1 27.4.4.4	161	36	E	Y	161.36 27.4.4.4	A Trigger frame always solicit an immediate response. The part "that intents to solicit an immediate response" is redundant and confusing.	Change the sentence "A non-AP STA that sends an HE trigger-based PPDU as a response to a Basic variant Trigger frame that intends to solicit an immediate response shall set the Ack Policy to Normal Ack/Implicit BAR ..." to "A non-AP STA that sends an HE trigger-based PPDU as a response to a Basic variant Trigger frame shall set the Ack Policy to Normal Ack/Implicit BAR ...".	2017/1/9 9:42
9288 Tomoko Adachi	225	1 27.4.4.4	161	38	T	Y	161.38 27.4.4.4	The referred clause number is wrong.	Change "... 10.3.2.11.4 (MU acknowledgement procedure for an UL MU transmission) ..." to "... 10.3.2.10.3 (Acknowledgement procedure for an UL MU transmission) ...".	2017/1/9 9:42
9289 Tomoko Adachi	225	1 27.5.1.1	161	57	E	Y	161.57 27.5.1.1	There is no reason that "with" needs to start with an upper letter.	Change "A STA shall not transmit a DL OFDMA With MIMO PPDU that contains ..." to "A STA shall not transmit a DL OFDMA within MIMO PPDU that contains ...".	2017/1/9 9:42
9290 Tomoko Adachi	225	1 27.5.1.1	161	58	T	Y	161.58 27.5.1.1	There is no DL OFDMA With MIMO Support field defined. It should be DL MU-MIMO on Partial BW field.	Change "... with the DL OFDMA With MIMO Support field set to 1." to "... with the DL MU-MIMO Partial BW field set to 1."	2017/1/9 9:42

9291	Tomoko Adachi	225	1 27.5.2.2.1	164	57	E	N	164.57 27.5.2.2.1	"BlockAck" is the correct terminology.	Change "immediate Multi-STA BA frame" in line 57 to "immediate Multi-STA BlockAck frame".	2017/1/9 9:42
9292	Tomoko Adachi	225	1 27.5.2.2.2	166	11	E	Y	166.11 27.5.2.2.2	The rules described in this paragraph are especially for the trigger frames in the same MU PPDU. The intention will be more clear if "MU" is added between "same" and "PPDU".	Add "MU" between "same" and "PPDU" where they appear in the paragraph starting from line 11. (3 appearances.)	2017/1/9 9:42
9293	Tomoko Adachi	225	1 27.5.2.2.2	166	65	E	N	166.65 27.5.2.2.2	Space is missing between the sentences.	Add space before the sentence starting with "A value 0 indicates to the STA that ...".	2017/1/9 9:42
9294	Tomoko Adachi	225	1 27.5.2.2.2	167	1	T	Y	167.01 27.5.2.2.2	As in p.l. 48.60, the TID Aggregation Limit is to limit the maximum number of TIDs. The sentence here does not align with that definition.	Change the sentence "A value 0 indicates to the STA that it shall not solicit any immediate response for the MPDUs that the STA aggregates in the HE trigger-based PPDU." to "A value 0 indicates to the STA that it shall not transmit any QoS Data MPDUs in the HE trigger-based PPDU." Or change the definition of the TID Aggregation Limit to only apply to the number of TIDs transmitted in QoS Data frames with implicit BAR (i.e., don't care No Ack frames) and update the sentences in p.l. 48.60 and 167.01 to align with it.	2017/1/9 9:42
9295	Tomoko Adachi	225	1 27.5.2.2.2	167	1	E	N	167.01 27.5.2.2.2	Space is missing between the sentences.	Add space before the sentence starting with "A value greater than 0 indicates ...".	2017/1/9 9:42
9296	Tomoko Adachi	225	1 27.5.2.3	168	51	T	Y	168.51 27.5.2.3	There is no SS Allocation field in Common Info field. The Starting Spatial Stream subfield is a value based on Nss and the STARTING_STS_NUM is a value based on Nsts. So it is not proper to set exactly the same value of Starting Spatial Stream subfield to the STARTING_STS_NUM. Also "shall be set to" is repeated.	Change the item "The STARTING_STS_NUM parameter shall be set to shall be set to the value of the Starting Spatial Stream subfield of the SS Allocation field in the Common Info field of the eliciting Trigger frame" to "The STARTING_STS_NUM parameter shall be set to the starting STS number indicated by the Starting Spatial Stream subfield of the SS Allocation field of the User Info field and STBC field in the Common Info field of the Trigger frame".	2017/1/9 9:42
9297	Tomoko Adachi	225	1 27.5.2.4	170	37	T	Y	170.37 27.5.2.4	The contents of this paragraph is already mentioned in clause 27.2.2, from page 150 line 27. Also, as the CS after the Trigger frame doesn't case the intra-BSS NAV, emphasizing the general interpretation under two NAVs by setting this paragraph after the paragraph starting from line 26 is misleading.	Describe that the CS for UL-MU is done during SIFS after the reception of the Trigger frame and refer clause 27.2.2 for the virtual CS operation for HE STAs. Delete the paragraph starting from line 37 in page 170.	2017/1/9 9:42
9298	Tomoko Adachi	225	1 27.5.2.6.2	173	18	E	N	173.18 27.5.2.6.2	M-BA is not defined as an acronym.	Change "M-BA" to "Multi-STA BlockAck" in Figure 27-1. (2 appearances.)	2017/1/9 9:42
9299	Tomoko Adachi	225	1 27.5.3	175	12	E	N	175.12 27.5.3	"Multi-STA BlockAck" is the correct terminology.	Change "Multi-STA BA" to "Multi-STA BlockAck" in Figure 27-2.	2017/1/9 9:42
9300	Tomoko Adachi	225	1 27.6.2	176	25	T	Y	176.25 27.6.2	Make the description of AID11 subfield in the HE NDP Announcement frame more accurate.	Change the sentence "If the HE NDP Announcement frame includes more than one STA Info field, the RA field of the HE NDP Announcement frame shall be set to the broadcast address, otherwise it shall be set to the MAC address of the STA whose AID is included in the STA Info field." to "If the HE NDP Announcement frame includes more than one STA Info field, the RA field of the HE NDP Announcement frame shall be set to the broadcast address, otherwise it shall be set to the MAC address of the STA whose 11 least significant bits of the AID is included in the AID11 subfield of the STA Info field. If the intended STA is other than an AP, mesh STA, or STA that is a member of an IBSS, the AID11 subfield shall be set to a valid AID value not equal to 0 regardless of the RA field being set to a unicast address."	2017/1/9 9:42

9301 Tomoko Adachi	225	1 27.6.2	176	48	T	Y	176.48 27.6.2	There is no subfield named Rx HE-MCS Map. It should be the Rx MCS NSS Descriptors subfield.	Change "Rx HE-MCS Map subfield" to "Rx MCS NSS Descriptors subfield" in page 176 line 48, in page 203 line 14, in page 205 line 10, and in page 205 line 12.	2017/1/9 9:42
9302 Tomoko Adachi	225	1 27.6.2	176	48	T	Y	176.48 27.6.2	There is no field named supported HE-MCS and NSS set. It should be the Tx Rx HE MCS NSS Support field.	Change "supported HE-MCS and NSS set field" to "Tx Rx HE MCS NSS Support field" in page 176 line 48. Change "Supported HE-MCS and NSS set field" to "Tx Rx HE MCS NSS Support field" in page 179 line 34, in page 202 line 29, in page 202 line 30, in page 203, line 8, in page 203 line 35, in page 204 line 38, in page 205 line 10, in page 373 line 5, and in page 373 line 6.	2017/1/9 9:42
9303 Tomoko Adachi	225	1 9.4.2.218.4	86	34	E	Y	86.34 9.4.2.218.4	The HE Capabilities element is described that it includes the Tx Rx HE MCS NSS Support field in subclause 9.4.2.218.1, not Tx Rx HE MCS Support field.	Change the subclause title from "Tx Rx HE MCS Support field" to "Tx Rx HE MCS NSS Support field". Change "Tx Rx HE MCS Support field" to "Tx Rx HE MCS NSS Support field" in page 86 line 37. Change the caption of Figure 9-589cm from "Tx Rx HE MCS Support field format" to "Tx Rx HE MCS NSS Support field format". Change "Tx Rx HE MCS Support field" to "Tx Rx HE MCS NSS Support field" in page 87 line 58, in page 191 line 55, in page 191 line 59, in page 238 line 41, and in page 240 line 26.	2017/1/9 9:42
9304 Tomoko Adachi	225	1 27.6.2	176	56	T	Y	176.56 27.6.2	There is no subfield named Received Operating Mode Indication. This should be the HE variant HT Control field when Control ID subfield is 1.	Change "... that carried a Received Operating Mode Indication subfield ..." to "... that carried the HE variant HT Control field with Control ID subfield set to 1 ...".	2017/1/9 9:42
9305 Tomoko Adachi	225	1 27.6.2	176	62	T	Y	176.62 27.6.2	There is no field named Beamformee STS Capability. The target subfields should be the Beamformee STS For <= 80 MHz, Beamformee STS For > 80 MHz, NSTS Total For <= 80 MHz, and NSTS Total For > 80 MHz in the HE PHY Capabilities Information field.	Change "... through the Beamformee STS Capability field." to "... through the HE PHY Capabilities Information field." in page 176 line 62.	2017/1/9 9:42

Add in the description for Number Of Sounding Dimensions For <= 80 MHz subfield that it applies when the channel width is equal to or less than 80 MHz.	2017/1/9 9:42
9312 Tomoko Adachi	225	1 9.4.2.218.3	85	26	T	Y	85.26 9.4.2.218.3	From its name, Number Of Sounding Dimensions For > 80 MHz, this subfield should apply for more than 80 MHz channel width.	Add in the description for Number Of Sounding Dimensions For > 80 MHz subfield that it applies when the channel width is more than 80 MHz.	2017/1/9 9:42
9313 Tomoko Adachi	225	1 27.7.3.2	185	19	T	Y	185.19 27.7.3.2	AM is not defined as an acronym. It seems to be used for "active mode".	Change "AM" in page 185 line 19 to "active mode".	2017/1/9 9:42
9314 Tomoko Adachi	225	1 27.7.3.3	185	62	T	Y	185.62 27.7.3.3	The sentence starting from line 62 seems to be one of the early TXT SP termination events.	Move the sentence from line 62 to be the 3rd item in the previous paragraph.	2017/1/9 9:42

9315	Tomoko Adachi	225	1 27.9.2.2	191		T	Y	191.00 27.9.2.2	The TXPWR can be a short term value and can be any value during CS as nothing will be transmitted. So adjusting the OBSS_PD level by the TXPWR seems not to be the right direction. It seems better to unify the mechanism to adjust the TXPWRmax by the OBSS_PD level.	Unify the mechanism to adjust the TXPWRmax by the OBSS_PD level, not adjusting the OBSS_PD level by the TXPWR.	2017/1/9 9:42
9316	Tomoko Adachi	225	1 27.11.2	196	11	T	Y	196.11 27.11.2	It is unclear why the UPLINK_FLAG needs to be set to 0 for RTS/CTS frames sent with TXOP Duration set to all 1s. When the AP transmits an RTS frame with the UPLINK_FLAG set to 0 in an Extended Range SU PPDU, and the receiver STA transmits a CTS frame with the UPLINK_FLAG to 1 in an Extended Range SU PPDU, as all the HE STAs within the BSS receives that RTS frame from the AP, the 3rd party HE STA can set the NAV by the RTS frame. Therefore, even if the UPLINK_FLAG in the CTS frame is set to 1 and the 3rd party HE STAs go to PPDU Power Save, the 3rd party HE STAs will hold the NAV value. Next when the STA transmits an RTS frame with the UPLINK_FLAG set to 1 in an Extended Range SU PPDU, and the AP which is the receiver of the RTS frame transmits a CTS frame with the UPLINK_FLAG set to 0 in an	Delete "except when the HE PPDU is an HE extended range SU PPDU with the TXOP Duration field set to all 1s and contains an RTS or CTS frame in which case the STA may set the TXVECTOR parameter UPLINK_FLAG to 0" from the first item starting from line 11 in page 196.	2017/1/9 9:42
9317	Tomoko Adachi	225	1 27.15.4.1	203	18	E	Y	203.18 27.15.4.1	Wrong reference number.	Change 9.4.2.213.3 to 9.4.2.218.4 and show the subclause title in brackets.	2017/1/9 9:42
9318	Tomoko Adachi	225	1 28.3.3.8.2	238	37	E	Y	238.37 28.3.3.8.2	The sentence "An HE STA shall support reception of DL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) equal to minimum of 4 and the maximum number of space-time streams supported for reception of HE SU PPDUs." should be reconsidered to be more clear.	Change the sentence "An HE STA shall support reception of DL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) equal to minimum of 4 and the maximum number of space-time streams supported for reception of HE SU PPDUs." to "An HE STA shall support reception of DL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) which is the minimum of 4 and the maximum number of space-time streams supported for reception of HE SU PPDUs."	2017/1/9 9:42
9319	Tomoko Adachi	225	1 28.3.3.10.4	240	21	E	Y	240.21 28.3.3.10.4	The sentence "A STA capable of UL MU-MIMO transmission shall support UL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) equal to minimum of 4 and the maximum number of space-time streams supported for transmission of HE SU PPDUs." should be reconsidered to be more clear.	Change the sentence "A STA capable of UL MU-MIMO transmission shall support UL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) equal to minimum of 4 and the maximum number of space-time streams supported for transmission of HE SU PPDUs." to "A STA capable of UL MU-MIMO transmission shall support UL MU-MIMO transmissions on full bandwidth with maximum number of space-time streams (per user) which is the minimum of 4 and the maximum number of space-time streams supported for transmission of HE SU PPDUs."	2017/1/9 9:42
9320	Tomoko Adachi	225	1 28.3.3.8.2	238	35	T	Y	238.35 28.3.3.8.2	In the SFD, there was the following requirement: "For an 11ax AP, support for DL MU-MIMO transmission, where MU-MIMO is being done on the entire PPDU BW, shall be mandatory if the AP supports TxNss >= 4." This is mentioned in subclause 4.3.14a but should be also mentioned in subclause 28.3.3.8.2, as other similar requirements are mentioned here.	As in comment.	2017/1/9 9:42
9321	Tomoko Adachi	225	1 28.5	373	4	T	Y	373.04 28.5	There is no subfield named Tx or Rx Highest Supported Long GI Data Rate.	Update the subfield name "Tx or Rx Highest Supported Long GI Data Rate" which appears in line 4 and line 6 in page 373.	2017/1/9 9:42

9322 Tomoko Adachi	225	1 28.5	373	24	E	Y	373.24 28.5	It seems that NBPCS appearing in Tables 28-47 to 28-102 should be NBPSCS.	Change NBPCS to NBPSCS in Tables 28-47 to 28-102.	2017/1/9 9:42
9323 Tomoko Adachi	225	1 28.3.12	340	13	T	Y	340.13 28.3.12	T_{HE-SIG-A-R} is described as HE-SIG-A field duration in an HE extended range SU PPDU and its value is 16 ++s = 4 +- 4 ++s in Table 28-9. Also t_{HE-STF} for an HE extended range SU PPDU is defined as t_{HE-SIG-A}+T_{HE-SIG-A-R} on p.263. In these two places, T_{HE-SIG-A-R} includes both the original HE-SIG-A field duration and the repeated HE-SIG-A field duration. But for T_{HE-PREAMBLE} for an HE extended range SU PPDU in eq. (28-117), T_{HE-SIG-A-R} is interpreted to be only for the repeated part and added with T_{HE-SIG-A}. To be consistent with the usage in Table 28-9 and in p.263, T_{HE-SIG-A-R} should be the full HE-SIG-A field duration including the repeated part and "+T_{HE-SIG-A}" should be removed from the expression.	Change the expression for an HE extended range SU PPDU in line 13 to T_{HE-PREAMBLE} = T_{RL-SIG}+T_{HE-SIG-A-R}+T_{HE-STF-NT}+N_{HE-LTF}T_{HE-LTF, SYM}.	2017/1/9 9:42
9324 Tomoko Adachi	225	1 B.4.10	410	21	T	Y	410.21 B.4.10	B.4.10 is for functionality, so dividing into transmission and reception for Multi-STA BlockAck is not necessary here. (If such division is necessary, the place will be B.4.4.2. However, referring to other examples, it is not required up to that level.)	Delete the rows for OB4.5.1 and OB4.5.2. Add "CFHE:M" (or "CFHEW:M", see the other comment relating to B.4) in the Status column for OB4.5 and fill in its Support column.	2017/1/9 9:42
9325 Tomoko Adachi	225	1 27.5.2.6.2	173	46	E	Y	173.46 27.5.2.6.2	Period and space are missing between the sentences.	Change the part "... selects one of the RUs assigned to AID value 0If the selected RU is idle ..." to "... selects one of the RUs assigned to AID value 0. If the selected RU is idle ...".	2017/1/9 9:42
9326 Tomoko Adachi	225	1 27.5.2.6.2	173	51	T	Y	173.51 27.5.2.6.2	Those STAs that had their CS busy and not transmitted should reselect OCW to avoid collision with new STAs whose OBO counter decremented to zero in the next Trigger frame.	Change "... and it randomly selects any one of the RUs that are assigned to AID value 0 in the subsequent Trigger frame." to "... and it shall initialize its OBO counter to a random value in the range of 0 and OCWmin"	2017/1/9 9:42
9327 Tomoko Adachi	225	1 10.9	127	12	T	Y	127.12 10.9	The "<reference>" should be specified.	Change "<reference>" to "10.3.2.4".	2017/1/9 9:42
9328 Tomoko Adachi	225	1 27.4.4.5	162	14	E	Y	162.14 27.4.4.5	The "individually addressed Multi-STA BlockAck frame" is followed by "to each of the STAs" and "individually addressed" is redundant. Also, the other Multi-STA BlockAck frames appearing in the same item with the same usage doesn't have "individually addressed" and are just followed by "to each of the STAs".	Change "... with Ack frame or an individually addressed Multi-STA BlockAck frame to each of the STAs from which ..." to "... with an Ack frame or a Multi-STA BlockAck frame to each of the STAs from which ...".	2017/1/9 9:42
9329 Tomoko Adachi	225	1			E	Y		Does "Single MPDU" have a special meaning. Don't think so.	Search for "Single MPDU" and replace it with "single MPDU" throughout the draft.	2017/1/9 9:42
9330 Tomoko Adachi	225	1 27.4.4.5	162	24	T	Y	162.24 27.4.4.5	The support of reception of MU Multi-STA BlockAck frame should be specified by a subfield.	Change the part "... if the receivers of group-addressed Multi-STA BlockAck frame announce the support the reception of MU Multi-STA BlockAck frame." to "... if the receivers of group-addressed Multi-STA BlockAck frame announce the support the reception of MU Multi-STA BlockAck frame by the Group Addressed Multi-STA BlockAck In DL MU Support subfield in the HE MAC Capabilities Information field."	2017/1/9 9:42
9331 Tomoko Adachi	225	1			E	N		Not "a S-MPDU" but "an S-MPDU".	Search for "a S-MPDU" and replace it with "an S-MPDU".	2017/1/9 9:42

9332	Tomoko Adachi	225	1 27.5.2.6			T	Y	27.5.2.6	Currently, it is considered that both the associated STAs and unassociated STAs are allowed to join the UL OFDMA-based random access. However, the real state that the STA is in and the state that the AP thinks the STA is in according to the association may be different. This is because there is no complete mechanism for the AP to syncrhonize with the STA. Therefore, when the AP acknowledges to those STAs that the AP thinks they are still associated with the Multi-STA BlockAck, some of the STAs that already disassociated may not distinguish the AIDs that the AP used for those STAs. The opposite perception gap may also occur. And as the unassociated STAs don't have their AIDs assigned, the AP can't acknowledge those unassociated STAs with the regular Multi-STA BlockAck procedure.	If both the associated STAs and unassociated STAs are handled together in the UL OFDMA-based random access, the way to solve the problems described in the comment will be to have the STAs responding to the UL OFDMA-based random access to set their AIDs if they are associated and temporary AIDs if they are unassociated in the Duration/ID field of the MPDUs. The temporary AIDs will be selected randomly from the range other than the one for AIDs. The AP will use the AIDs and/or temporary AIDs set in the Duration/ID fields for the Multi-STA BlockAck to respond to those transmission sent through UL OFDMA-based random access. For the probability of temporary AIDs colliding, as the unassociated STAs will only transmit management request frames and have timeout to wait for management response frames, the unassociated STAs can solve by themselves.		2017/1/9 9:42
9333	Tomoko Adachi	225	1 9.3.1.23			T	N	9.3.1.23	Most of the User Info subfields in the Trigger frame can be the same for RUs for UL OFDMA-based random access. This means the Trigger frame can be shorter and more efficient.	Limit the RU size that can be used for UL OFDMA-based random access in each Trigger frame and reduce the redundancy.		2017/1/9 9:42
9334	Tomoko Adachi	225	1 11.1.3.10			T	Y	11.1.3.10	When the AP transmits beacons in an HE_EXT_SU PHY format, it uses the dual beacon mechanism. However, the dual beacon mechanism is deprecated in the baseline (see Table 9-168 and subclause 11.1.3.2 in 802.11-2016). There is no need to reintroduce this again. Just allowing the beacons to be transmitted in an HE_EXT_SU PHY format is enough.	Add in subclause 10.7.5.3 a condition to allow beacon frames and group addressed frames to be transmitted in an HE_EXT_SU PHY format if the BSSBasicRateSet, the Basic HT-MCS Set, and the basic VHT-MCS and NSS set are all empty and only the Basic HE MCS And NSS Set is not empty. Delete subclause 11.1.3.10, delete the definition of high efficient (HE) dual beacon from subclause 3.2, replace the Dual Beacon subfield in the HE Operation Parameters field to reserved and delete the description of the Dual Beacon subfield in subclause 9.4.2.219.		2017/1/9 9:42
9335	Tomoko Adachi	225	1 B.4.4.2	409	28	T	Y	409.28 B.4.4.2	The References column is not filled in for the Trigger frame. As most of the other examples have "9" here, just filling in "9" seems to be enough.	Add "9" to the References column for FT43.		2017/1/9 9:42
9336	Tomoko Adachi	225	1 B.4			T	Y	B.4	"CFHEW" is not defined but used in the Status columns. It should be "CFHE" in line 42 of page 407.	Change all those appearing as "CFHEW" to "CFHE". Or change the item name "CFHE" to "CFHEW" in line 42 of page 407 and replace all those written as "CFHE" in the Status columns to "CFHEW", if any.		2017/1/9 9:42
9337	Tomoko Adachi	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	The content of the paragraph starting from line 39 is repeated in the next paragraph. The next paragraph also the other cases and should be kept.	Delete the paragraph starting from line 39 of page 91.		2017/1/9 9:42
9338	Tomoko Adachi	225	1 9.4.2.219	93	11	T	Y	93.11 9.4.2.219	It is better to define a channel width indication exclusive for HE STAs. There is a case when the AP wants to limit the channel width of the legacy STAs narrower than the HE STAs. This is because the HE STAs can coexist with the OBSS STAs in the secondary channels better than the legacy STAs.	Add "The content of the VHT Operation Information field in the HE Operation element may be different from the content notified in the VHT Operation element. The HE STAs follow the information specified in the VHT Operation Information field of the HE Operation element." after the sentence starting fom line 11 in page 93.		2017/1/9 9:42

9339	Tomoko Adachi	225	1 27.5.2.4			T	Y	27.5.2.4	As aSIFSTime is defined in 10.3.7 as aSIFSTime = aRxPHYDelay + aMACProcessingDelay + aTxPHYDelay + aRxTxSwitchTime + aTxRampOnTime and it doesn't include aCCATime (8.3.5.12), in the original 802.11 SIFS, STAs that even have enough processing time for CCA don't have to sense the medium during SIFS from the definition point of view. But now the HE STAs are required to perform ED-based CCA if they didn't require MAC padding in a Trigger frame.	Add "HE STAs that did not require the MAC padding field in the Trigger frame shall secure a time to perform ED-based CCA during aSIFSTime. HE STAs that required the MAC padding field in the Trigger frame shall secure a time to perform ED-based CCA during MinTrigProcTime+aSIFSTime." after eq. (10-4) in subclause 10.3.7.	2017/1/9 9:42
9340	Tomoko Adachi	225	1 9.3.1.23	45	26	E	Y	45.26 9.3.1.23	The same field name "RU Allocation" appears in the User Info field of the Trigger frame and in the Common Block subfield of the HE-SIG-B field but they are completely different. They should have a different name to avoid confusion.	Change the RU Allocation subfield in the User Info field of the Trigger frame to something different, such as Allocated RU subfield throughout the draft.	2017/1/9 9:42
9341	Tomoko Adachi	225	1 10.9	127	47	T	Y	127.47 10.9	"At most one Control subfield with a given Control ID value shall be present in the A-Control field of QoS Data or Management frames carried in an (A-)MPDU." Does this mean that at most one Control subfield with a given Control ID value shall be present in the A-Control field and the A-Control field with no Control subfield is also allowed? Or does it mean that at most one Control subfield can be present in an (A-)MPDU? I think if a frame carried an A-Control field, a single Control subfield with a given Control ID value shall be contained in the A-Control field, and any of the frames that carried the A-Control field in an A-MPDU shall have the same Control subfield.	Reconsider the sentence to be more clear. Have the same content appear in all of the A-Control fields within the same A-MPDU.	2017/1/9 9:42

9345	Tomoko Adachi	225	1 10.9	127	27	E	Y	127.27 10.9	Wrong reference number.	Change "10.31.4" to "27.13" and update the title of the subclause in brackets.	2017/1/9 9:42
9346	Tomoko Adachi	225	1 10.22.2.8	133	18	T	Y	133.18 10.22.2.8	Link adaptation through the HE variant HT Control field is specified in 27.13 and it should be also included.	Add "and 27.13 (Link adaptation using the HE variant HT Control field)" at the end of item e).	2017/1/9 9:42
9347	Tomoko Adachi	225	1 9.3.1.23	47	44	T	Y	47.44 9.3.1.23	"The Padding field extends the frame length to give the recipient STAs more time to prepare a response." More time than SIFS.	Add "than SIFS" after "more time".	2017/1/9 9:42
9348	Tomoko Adachi	225	1 9.7.1	106	32	T	Y	106.32 9.7.1	The "EOF" subfield is no longer an end of frame indication. This is used by HE STAs to let the responder know in acknowledging the frame in Ack, not in BlockAck bitmap, through the Multi-STA BlockAck.	Update the description of "EOF" subfield in Table 9-422 to cover the usage described in subclause 27.10.4. An S-MPDU should be destinguished by EOF set to 1 and no subframes other than with MPDU Length field equal to 0 following. Change the subfield name from "EOF" to "EOF/Ack indication".	2017/1/9 9:42
9349	Tomoko Adachi	225	1 27.10.3	193	19	T	Y	193.19 27.10.3	"The STA shall not add an A-MPDU subframe with EOF equal to 0 after any A-MPDU subframe with EOF set to 1." This should not be correct. With the usage described in subclause 27.10.4, there can be A-MPDU subframes with EOF equal to 0 coming after an A-MPDU subframe with EOF set to 1.	Change the sentence to "The STA shall not add an A-MPDU subframe with EOF equal to 0 after any A-MPDU subframe with EOF set to 1 and with MPDU Length field equal to 0."	2017/1/9 9:42
9350	Tomoko Adachi	225	1 9.3.1.23.1	48	61	T	Y	48.61 9.3.1.23.1	Count Action Ack frame as one TID (TID=15) when considering the TID Aggregation Limit subfield.	Add "Action Ack frame is also treated to consume one TID (TID=15)." after the sentence starting from line 61 in page 48.	2017/1/9 9:42

9351	Tomoko Adachi	225	1 27.4			T	Y	27.4	How does the STA respond if the AP transmits in a DL-SU PPDU with a Trigger frame, an Action Ack frame, and a QoS Data frame in implicit BAR aggregated, but the STA only received the Action Ack frame? The correct answer will be to not respond for this case. But in the current rule, it is not restricted to aggregate a Trigger frame, so the STA cannot determine whether it can respond or not. The same question will arise when the AP transmits a DL-SU PPDU with a Trigger frame and an Action Ack frame aggregated (but with no QoS data frame) and the STA only received the Action Ack frame.	Specify that whenever an Action Ack frame is aggregated with other frames soliciting immediate response, a Trigger frame shall be aggregated, too. Or, restrict DL-SU PPDU to a single receiver not to include a Trigger frame.		2017/1/9 9:42

9456	Xiaofei Wang	225	1 27.5.2.2.2	165	56	T	Y	165.56 27.5.2.2.2	The Note is about how to set RA address in Trigger based PPDUs and it seems to be unrelated to the text above, which is on the setting of the trigger frame. It should be removed or moved to the related sections.	Remove the Note	2017/1/9 9:42
9457	Xiaofei Wang	225	1 27.5.1	162	44	T	Y	162.44 27.5.1	There are two occurrence of "STA" in this sentence, it is unclear to which "the STA" is referring. Please rephrase and clarify.	Change the sentence "An AP shall not transmit to a STA an HE MU PPDU with the HE-SIG-B allocating spatial streams to more than one recipient STA, unless the STA sets the Downlink MU-MIMO On Partial Bandwidth Rx subfield of the HE Capabilities element to 1." into "Unless a STA sets the Downlink MU-MIMO On Partial Bandwidth Rx subfield of the HE Capabilities element to 1, an AP shall not transmit to that STA an HE MU PPDU with the HE-SIG-B allocating spatial streams to more than one recipient STA."	2017/1/9 9:42
9458	Xiaofei Wang	225	1 27.16.2	206	24	T	Y	206.24 27.16.2	It may be possible that an OBSS using the same BSS Color may be only visible to STAs, but may or may not be visible to the AP. A mechanism is needed for a STA to report a visible OBSS with the same BSS Color to its AP. The AP may then make decisions whether to change the BSS Color.	Provide a mechanism for STAs to report to AP an OBSS that is visible to the STAs that uses the same BSS Color as the AP that the STAs are associated with.	2017/1/9 9:42
9459	Xiaofei Wang	225	1 27.9.2.1	190	19	T	Y	190.19 27.9.2.1	In the procedure stated for spatial reuse, a STA should not ignore any CTS frames, even if it is below OBSS_PD. The OBSS STA may be at the edge of its BSS, and any transmissions may easily destroy its receptions from its AP, being either HE MU PPDU or HE/legacy SU PPDU.	revise the spatial reuse procedure, to at least obey CTS, which may be a part of MU-RTS/CTS exchange or RTS/CTS exchange.	2017/1/9 9:42
9460	Xiaofei Wang	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	This sentence seems to be out of place; it may be a wrongly formatted title.	remove this sentence or provide the correct formatting.	2017/1/9 9:42
9461	Xiaofei Wang	225	1 27.9.2.1	190	36	T	Y	190.36 27.9.2.1	When should a STA issue a PHYCCARESET.request if the received PPDU is a legacy STA? The normative behavior seems to be lacking.	provide normative behavior on when the PHYCCARESET.request should be issued for legacy PPDUs.	2017/1/9 9:42

9462	Xiaofei Wang	225	1 28.3.10.7.2	274	10	T	Y	274.10 28.3.10.7.2	This note is another form of TBD and should not be in Draft 1.0. Either provide detailed procedures for SRP or remove entirely.	provide detailed procedure for SRP or remove entirely.	2017/1/9 9:42
9463	Xiayu Zheng	225	1 28.3.15.1	343	17	E	Y	343.17 28.3.15.1	In Equation (28-121), the sub-index for Q_k,N_user-1 should be corrected as Q_k,N_user,r -1	As in comment	2017/1/9 9:42
9464	Xiayu Zheng	225	1 28.3.15.2	343	59	E	Y	343.59 28.3.15.2	The index of the angle phi(k,v), should be corrected to phi(k,u) for the Beamformee u	As in comment	2017/1/9 9:42
9465	Xiayu Zheng	225	1 28.3.15.2	344	8	E	Y	344.08 28.3.15.2	The index of the angle phi(k,v), should be corrected to phi(k,u) for the Beamformee u	As in comment	2017/1/9 9:42
9466	xun yang	225	1 27.5.1.3	163	20	T	Y	163.20 27.5.1.3	"A non-AP STA with A-BQR Support subfield of its HE Capabilities element equal to 1 delivers bandwidth query reports (BQRs) to assist the AP in allocating DL MU and UL MU resources in an efficient way." But this sentence is under the subclause of "HE bandwidth query report operation for DL MU". Then it is confusing that BQR is only for DL MU or it can be used for both DL MU and UL MU.	Please clarify.	2017/1/9 9:42
9467	xun yang	225	1 27.5.1.3	163	20	T	Y	163.20 27.5.1.3	"A non-AP STA with A-BQR Support subfield of its HE Capabilities element equal to 1 delivers bandwidth query reports (BQRs) to assist the AP in allocating DL MU and UL MU resources in an efficient way." "Asist" here is not clear. How does BQR information "asist" AP allocate the MU resources?	Please clarify.	2017/1/9 9:42
9468	xun yang	225	1 27.5.1.3	163	35	T	Y	163.35 27.5.1.3	Can AP solicit BQR more than one time by sending BQRP variant trigger frame? Consider the case that the availabe channels at the triggered STAs are few or the primary 20MHz is not available at all the triggered STAs, is it allowed that AP sending trigger to other STAs to know channel availability of them?	Please clarify.	2017/1/9 9:42
9469	xun yang	225	1 28.3.10.1	267	41	T	Y	267.41 28.3.10.1	"The HE portion of HE format preamble consists of pre-HE modulated fields and HE modulated fields. The HE modulated fields consist of HE-STF, HE-LTF and Data fields." Does this mean the HE portion of HE format preamble includes data fields? How can the preamble includes data fields?	Please clarify.	2017/1/9 9:42
9470	xun yang	225	1 9.3.1.23	42	32	T	Y	42.32 9.3.1.23	There is no definition of each subfield of Trigger variant.	Please define each subfield of trigger variant to make them clear somewhere.	2017/1/9 9:42
9471	xun yang	225	1 10.3.2.10.2	119	23	T	Y	119.23 10.3.2.10.2	"A non-AP STA that is the recipient, within an HE MU PPDU, of a QoS Data frame or QoS Null frame that solicits an immediate response with Ack Policy equal to MU Ack in the QoS Control field, of an MU-BAR frame, or of an MMPDU that solicits an immediate response, shall send the immediate response according to the scheduling information defined by the UL trigger information that is carried either in the Trigger frame(s) or UL MU Response Scheduling A-Control field." Is the immediate response in OFDMA only?	Please clarify.	2017/1/9 9:42
9472	xun yang	225	1 10.28	136	18	T	Y	136.18 10.28	Is HE MU PPDU allowed to be transmit by AP in RDP initiated by non-AP STA? Is HE trigger-based PPDU allowed to be triggered by AP in RDP initiated by non-AP STA?	It is natural to follow 11ac to allow AP to transmit HE MU PPDU or trigger HE trigger-based PPDU in RDP initiated by non-AP STA.	2017/1/9 9:42
9473	xun yang	225	1 9.3.1.23	47	61	T	Y	47.61 9.3.1.23	What is the definition of "max TF MAC Padding Duration"? Where is this parameter from at the Tx side?	Please clarify.	2017/1/9 9:42
9474	xun yang	225	1 9.3.1.23	48	5	T	Y	48.05 9.3.1.23	In HE PPDU, Padding field of trigger frame is not necessary if there is PE at the end of HE PPDU or EOF paddings in AMPDU.	Please clarify that padding field is not necessary or how to pad is an implementation issue in HE PPDU.	2017/1/9 9:42

9475	xun yang	225	1 9.2.4.5.4	20	49	E	Y	20.49 9.2.4.5.4	The procedure should be defined in 10.3.2.10.2. The title of 10.3.2.10.2 should be "Acknowledgement procedure for DL MU PPDU in MU format"	Make the changes accordingly.		2017/1/9 9:42
9476	xun yang	225	1 9.3.1.3	33	1	T	Y	33.01 9.3.1.3	For simultaneous CTS (MU RTS/CTS procedure), the CTS transmitted by non-AP STA shall be the same. However, the values of several subfields in Frame Control of CTS are unclear, e.g., power management subfield is reserved, no text on how to set More Data field, etc.This does not matter when CTS is transmitted one by one; but different values will causes interference when these CTSs are transmited simultaneously.	Please ensure that all the CTS frame are the same when they are triggered by MU-RTS.		2017/1/9 9:42
9477	xun yang	225	1 27.5.2.7	174	21	T	Y	174.21 27.5.2.7	There is no definition of NDP feedback, e.g., no format of NDP feedback, no procedure of its transmission, no text on how it works, etc.	Please add text to make the concept clear.		2017/1/9 9:42
9478	xun yang	225	1 27.5.2.2.2	167	12	T	Y	167.12 27.5.2.2.2	"The AP may assign any value in the AC Preference Level subfield in the Trigger Dependent User Info field for an HE STA identified by the AID12 subfield of the User Info field of a Basic Trigger frame". Since trigger can be sent in any AC, it is possible that AP use any AC to contend the channel, and use trigger another AC in the UL transmissions. That is, the primary AC in AP's TXOP is not the AC of the TXOP. Not sure if there is any unfair issue.	It is safer to limit the preferred AC field in trigger to be the AC in which the trigger is sent to contend the channel.		2017/1/9 9:42
9479	xun yang	225	1 9.4.2.218.2	76	42	E	Y	76.42 9.4.2.218.2	B22 should be "MU Cascading Support"	As in the comment.		2017/1/9 9:42

9488	Yan Zhang	225	1 28.3.12	339	25	T	Y	339.25 28.3.12	In Table 28-39 Pre-FEC Padding Factor subfield encoding, bxx did not specify which bit is LSB and which bit is MSB. This may not be clear enough for all spec readers. Please specify it	Replace "b" with "B1B0".		2017/1/9 9:42
9489	Yan Zhang	225	1 28.3.10.10	302	5	T	Y	302.05 28.3.10.10	HELTF4x,TGI1,Data is missing from "The optional combinations of HE-LTF mode and GI duration"	Add a new bullet 4xLTF, TGI1,Data for HE SU PPDU or HE SU extended PPDU or HE MU PPDU		2017/1/9 9:42
9490	Yan Zhang	225	1 28.4.2	371	58	T	Y	371.58 28.4.2	"TPE is given by Equation (28-113)." quoted wrong equation. It should be Equation (28-117).	Replace (28-113) with (28-117)		2017/1/9 9:42

9491	Yanchun Li	225	1 27.2.3	152	10	T	Y	152.10 27.2.3	When AP has acknowledged STA's uplink buffer status report (BSR), AP will allocate trigger based transmission resource to this STA soon. Similar to the current case that STA slow down its EDCA contention after being provided trigger-based UL transmission opportunity, STA shall also slow down its EDCA contention and use MU EDCA Parameter Set after uplink BSR. Otherwise, there will be too many legacy SU transmissions. And the whole system performance just degrades to legacy SU system. It will be hard for AP to organize MU transmission. Actually, 11ax shall take advantage from MU transmission as much as possible.	Insert condition "that receives an immediate response from the AP for the transmitted BSR" to the paragraph. The paragraph is changed to: An UL MU capable non-AP HE STA that receives a Basic Trigger frame that contains a Per User Info field with the AID of the STA, and that receives an immediate response from the AP for the transmitted Trigger based PPDU, or that receives an immediate response from the AP for the transmitted BSR, shall update its CWmin[AC], CWmax[AC], AIFSN[AC] and HEMUEDCATimer[AC] state variables to the values contained in the most recently received MU EDCA Parameter Set element sent by the AP to which the STA is associated, for all the ACs from which QoS Data frames were transmitted in the HE trigger-based PPDU.	2017/1/9 9:42
9492	Yanchun Li	225	1 10.3.2.8	115	63	T	Y	115.63 10.3.2.8	Current MU-RTS/CTS uses a fundamental assumption that a STA only need to have available 20MHz channel set which is a subset of AP's available 20MHz channel set. It considers the case of AP initiated RTS. It lacks the consideration over the case that, STA may also initiate RTS which occupies a subset of AP's available 20MHz channels. Without considering this case, the adavantage of MU transmission can't be full utilized and the system proformance will be degraded. On receiving RTS from HE-STA, AP shall be able to reply with CTS to occupy AP's available 20MHz/40MHz/80MHz/160MHz. Then AP can to RDG to trigger MU transmission.	Insert "On receiving RTS from HE-STA, AP shall be able to reply with CTS to occupy AP's available 20MHz/40MHz/80MHz/160MHz. Then AP can to RDG to trigger MU transmission."	2017/1/9 9:42
9493	Yanchun Li	225	1 27.5.2.6.2	173	48	T	Y	173.48 27.5.2.6.2	"If the selected RU is considered busy as a result of either physical or virtual carrier sensing, then the HE STA shall not transmit its HE trigger-based PPDU in the randomly selected RU and it randomly selects any one of the RUs that are assigned to AID value 0 in the subsequent Trigger frame." It will cause both the STAs finishing backoff in next trigger and current trigger to contend for random access RUs in next trigger. The over-crowd attempts cause low channel access efficiency.	Change this sentense to: If the selected RU is considered busy as a result of either physical or virtual carrier sensing, then the HE STA shall transmit its HE trigger-based PPDU in the randomly selected idle RU or it backoffs again and randomly selects any one of the RUs that are assigned to AID value 0 in the subsequent Trigger frame.	2017/1/9 9:42
9494	Yanchun Li	225	1 9.3.1.23.5	51	26	T	Y	51.26 9.3.1.23.5	"the Trigger Dependent User Info field is not present" causes degraded trigger based UL random access performance. 11ax is designed to work under high dense environment with large number of STAs which have diverse application demands. When BSRP variant Trigger frame triggers random access BSRs, the BSR from the STA with high priority AC shall not contend with low priority AC BSR. Need to reuse the AC-aware design in Basic Trigger variant.	Trigger Dependent User Info field for BSRP variant reuses Figure 9-52g--Trigger Dependent User Info field for the Basic Trigger variant. B0-B4 bits are discarded and reserved.	2017/1/9 9:42
9495	Yanchun Li	225	1 9.2.4.6.4.3	24	58	T	Y	24.58 9.2.4.6.4.3	Current ROM shall be improved to settle the case with large number of STA in narrow band ROM mode. Current ROM requires all STAs to occupy primary 20MHz and causes low channel utility. Need to allocate some narrow band ROM STA to RU in non-primary portion.	The Channel Width field shall support indication of specific 20MHz channel which STA prefers in this ROM mode.	2017/1/9 9:42

Remove "shall" from clause 9 according 802.11 Editorial Style Guide.	As per comment.		2017/1/9 9:42
9631	Yongho Seok	225	1 9.3.1.23	46	23	T	Y	46.23 9.3.1.23	Add the following into the last row of Table 9-25f. 1000101 - 1111111 | Reserved | 59	As per comment.		2017/1/9 9:42

9632	Yongho Seok	225	1 9.3.1.23	47	3	T	Y	47.03 9.3.1.23	"A value of 1 indicates that the HE trigger-based PPDU response shall use DCM as defined in 28.3.11.15 (Dual carrier modulation)." Remove "shall" from clause 9 according 802.11 Editorial Style Guide.	As per comment.	2017/1/9 9:42
9633	Yongho Seok	225	1 9.3.1.23	47	20	T	Y	47.20 9.3.1.23	On Figure 9-52f, the encoding mechanism of the Starting Spatial Stream and the Number Of Spatial Streams is missing.	As per comment.	2017/1/9 9:42
9634	Yongho Seok	225	1 9.3.1.23	47	47	T	Y	47.47 9.3.1.23	"Padding field starts with special STAID[11:0] as 0xFFF and the rest bits of the Padding field are all set to one. 0xFFF is reserved as the special value to indicate the start of the MAC padding." Because the Padding field are all set to one, special STAID[11:0] as 0xFFF does not have any meaning. Remove an unnecessary wording and just say the following:"The Padding field are all set to one."	As per comment.	2017/1/9 9:42
9635	Yongho Seok	225	1 9.3.1.23	48	4	T	Y	48.04 9.3.1.23	What is a NDBPS,SHORT in Equation (9-ax2)?	Define NDBPS,SHORT.	2017/1/9 9:42
9636	Yongho Seok	225	1 27.2.2	150	30	T	Y	150.30 27.2.2	"...if one of the two NAV timers is nonzero, the virtual CS indication is that the medium is busy." Exceptaionally, when the TXOP responder transmits a response frame (for example, HE trigger-based PPDU transmission in a response of trigger frame, CTS frame transmission in a response of RTS frame), the virtual CS indication is that the medium is busy only if the basic NAV is busy, regardless of the intra-BSS NAV.	Change it as the following: "...if one of the two NAV timers is nonzero, the virtual CS indication is that the medium is busy except for a TXOP responder. In such case, the TXOP responder considers only the basic NAV for determining the virtual CS indication."	2017/1/9 9:42
9637	Yongho Seok	225	1 27.5.2.4	170	61	T	Y	170.61 27.5.2.4	"The AP shall set the CS Required subfield to 1 except when all solicited HE trigger-based PPDUs contain an Ack or BlockAck frame and the Length subfield in the Common Info field of the Trigger frame is less than or equal to 418." When AP transmits a Trigger frame with the CS Required subfield set to 0 and QoS DATA frame with the Ack Policy subfield set to MU ACK within a same PPDU, if a target STA receives only the Trigger frame, what is happened? Probably, the target STA can transmit a QoS Null frame without having any Ack or BlockAck frame in an HE trigger-based PPDU. So, current spec text is nonsense. Because AP transmitting a Trigger frame with the CS Required subfield set to 0 can't predicts that all solicited HE trigger-based PPDUs contain an Ack or BlockAck frame.	Change it as the following: "The AP shall set the CS Required subfield to 1 except when it solicits an Ack or BlockAck frame in all scheduled HE trigger-based PPDUs and the Length subfield in the Common Info field of the Trigger frame is less than or equal to 418."	2017/1/9 9:42
9638	Yongho Seok	225	1 9.3.1.23	47	62	T	Y	47.62 9.3.1.23	When HT/VHT PPDU containing a Trigger frame with a Padding field is transmitted by using a short GI, additional two OFDM symbols (3.6usx2=7.2us)do not meet the Trigger Frame MAC Padding Duration of 8us. Please either disallow to use a short GI or add the mPAD values for a short GI as the following: mPAD = 0, max TF MAC Padding Duration among receiving STAs = 0 uss mPAD = 3, max TF MAC Padding Duration among receiving STAs = 8 uss mPAD = 5, max TF MAC Padding Duration among receiving STAs = 16 uss	As per comment.	2017/1/9 9:42
9639	Yongho Seok	225	1 9.3.1.23	48	17	T	Y	48.17 9.3.1.23	"STBC is disallowed for Trigger Frame transmission." This normative sentence should be moved to clause 27.5.2.2.	As per comment.	2017/1/9 9:42

9640	Yongho Seok	225	1 9.3.1.23.1	48	40	T	Y	48.40 9.3.1.23.1	"The MPDU MU Spacing Factor subfield indicates the value by which the minimum MPDU start spacing defined in Table 8-159 is multiplied." Any normative behavior of the STA transmitting A-MPDU is not defined for this MPDU MU Spacing Factor subfield.	Add some normative behavior of the STA using the MPDU MU Spacing Factor subfield in 10.13.3 (Minimum MPDU Start Spacing field).	2017/1/9 9:42
9641	Yongho Seok	225	1 9.3.1.23.6	51	33	T	Y	51.33 9.3.1.23.6	"The Trigger Dependent Common Info field of the GCR MU-BAR variant Trigger frame is defined in Figure 9-52j (Trigger Dependent Common Info field for the GCR MU-BAR variant)." Each recipent GCR STAs can have different block bitmap that is started from different starting sequence. For the BAR Control Information and BAR Information, please change the Trigger Dependent Common Info field to the Trigger Dependent User Info field.	As per comment.	2017/1/9 9:42
9642	Yongho Seok	225	1 9.3.1.8.2	33	54	T	Y	33.54 9.3.1.8.2	The 802.11-2016 spec is clearly stating that the Fragment Number subfield is set to 0. Changing Figure 9-28 without revising this sentence is meaningless.	Remove the changes on Figure 9-28 or clarify how to set the Fragment Number if it can be set to a non-zero value.	2017/1/9 9:42
9643	Yongho Seok	225	1 9.3.1.23	41	47	E	Y	41.47 9.3.1.23	Remove a bracket shown on RA field from Figure 9-52c because RA field is always present in the Trigger frame.	As per comment.	2017/1/9 9:42
9644	Yongho Seok	225	1 9.3.1.23	45	43	T	Y	45.43 9.3.1.23	"The first bit, B12, indicates the allocated RU is located in the primary or non-primary 80 MHz (zero for primary and one for non-primary)." What do a primary and a non-primary 80 MHz indicates? Non-primary 80 MHz is not defined in Clause 3.	Change it as the following: "The first bit, B12, is set to 0 for indicating that the allocated RU is located in a primary 80 MHz channel or set to 1 for indicating that the allocated RU is located in a secondary 80 MHz channel."	2017/1/9 9:42
9645	Yongho Seok	225	1 9.3.1.23	46	27	T	Y	46.27 9.3.1.23	"B12 is set to 0 for a 20 MHz, 40 MHz and 80 MHz PPDU. For the 2x996-tone RU case, B12 is set to 1." An interpretation of B12 shown in above is different with the previous paragraph. Probably, it may be for a case when the triggered PPDU is a non-OFDMA PPDU. But, even though it is a non-OFDMA case, current B12 definition is useless. Because B19-B13 has a complete information for indicating a 20/40/80/160/80+80MHz non-OFDMA PPDU. Please explain how current B12 encoding is utilized by a non-AP STA. Otherwise, change it as the following: "When a non-OFDMA PPDU is triggered, B12 is reserved and set to 0."	As per comment.	2017/1/9 9:42
9646	Yongho Seok	225	1 9.3.1.23.4	50	57	T	Y	50.57 9.3.1.23.4	"B12 of the RU Allocation subfield is set to 0 for indication of primary 20 MHz/40 MHz/80 MHz. For 160 MHz/80+80 MHz indication, B12 of the RU Allocation subfield is set to 1." B12 is not utilized by a non-AP STA when determining the resonse channel of the CTS. Like to the MCS, Coding Type, DCM, SS Allocation and Target RSSI fields, change it as the following: "B12 of the RU Allocation subfield is reserved."	As per comment.	2017/1/9 9:42

9647	Yongho Seok	225	1 9.3.1.23.4	50	64	T	Y	50.64 9.3.1.23.4	"If the BW subfield indicates 20 MHz, then the 242-tone RU entry 0111101 for B19-B13 indicates primary 20 MHz channel. ... If the Bandwidth field indicates 80+80 MHz or 160 MHz, then the entry 1000100 for B19-B13 indicates primary and secondary 80 MHz." The RU Allocation subfield in the MU-RTS frame is independent of BW field. For simplifying it, change it as the following: "The 242-tone RU entry 0111101 for B19-B13 indicates the primary 20 MHz channel. The 484-tone RU entry 1000001 for B19-B13 indicates the primary 40 MHz channel. The 996-tone RU entry 1000011 for B19-B13 indicates the primary 80 MHz channel. The 2x996-tone RU entry 1000100 for B19-B13 indicates the primary 80 MHz channel and secondary 80 MHz channel."	As per comment.		2017/1/9 9:42
9648	Yongho Seok	225	1 9.3.1.23.7	52	5	T	Y	52.05 9.3.1.23.7	"The CS Required subfield is set to 1." For consistency with other Trigger frame description, please move this sentence to 27.5.2.4. For example, remove above sentence and change P170 L58 as the following "The CS Required subfield in the MU-RTS variant and the BQRP variant of the Trigger frame shall be set to 1."	As per comment.		2017/1/9 9:42
9649	Yongho Seok	225	1 9.3.3.11	55	17	T	Y	55.17 9.3.3.11	"The TWT element is optionally present when dot11TWTOptionActivated and dot11HEOptionImplemented is true; otherwise it is not present." From 27.7.3.1 (General), the broadcast TWT element is present if it is included in only a broadcast Probe Response frame. Because a broadcast Probe Response frame is allowed only when dot11FILSOmitReplicateProbe Responses is true, change it as the following: "The TWT element is optionally present within broadcast Probe Response frames when dot11TWTOptionActivated, dot11HEOptionImplemented and dot11FILSOmitReplicateProbe Responses are true and ; otherwise it is not present."	As per comment.		2017/1/9 9:42
9650	Yongho Seok	225	1 9.3.3.11	55	26	E	Y	55.26 9.3.3.11	Remove a hyphone from "pre-sent".	As per commment.		2017/1/9 9:42
9651	Yongho Seok	225	1 9.4.1.62	56	38	T	Y	56.38 9.4.1.62	When the Feedback Type is the CQI feedback, Nr Index shall be reserved. Please add this missing statement.	As per comment.		2017/1/9 9:42
9652	Yongho Seok	225	1 9.4.1.62	56	53	T	Y	56.53 9.4.1.62	When the Feedback Type is the CQI feedback, Grouping shall be reserved. Please add this missing statement.	As per comment.		2017/1/9 9:42
9653	Yongho Seok	225	1 9.4.1.62	57	4	T	Y	57.04 9.4.1.62	When the Feedback Type is the CQI feedback, Codebook Information shall be reserved. Please add this missing statement.	As per comment.		2017/1/9 9:42
9654	Yongho Seok	225	1 9.4.1.62	57	21	E	Y	57.21 9.4.1.62	Change "VHT Compressed Beamforming frame" to "HE Compressed Beamforming And CQI frame".	As per comment.		2017/1/9 9:42
9655	Yongho Seok	225	1 9.4.1.62	57	34	E	Y	57.34 9.4.1.62	Change "VHT Compressed Beamforming Report field and MU Exclusive Beamforming Report field" to "HE Compressed Beamforming Report field and HE MU Exclusive Beamforming Report field".	As per commnet.		2017/1/9 9:42

9656	Yongho Seok	225	1 9.4.1.62	57	46	T	Y	57.46 9.4.1.62	"The ending RU index indicates the last RU26 for which the HE beamformer is requesting feedback." Above explantion about the Sounding Dialog Token Number is not correct. Change it as the following: "The sounding dialog token from the VHT/HE NDP Announcement frame soliciting feedback"	As per comment.	2017/1/9 9:42
9657	Yongho Seok	225	1 9.4.1.62	57	52	T	Y	57.52 9.4.1.62	"In an HE Compressed Beamforming frame not carrying all or part of an HE Compressed Beamforming report, the Nc Index, Nr Index, Channel Width, Grouping, Codebook Information, Feedback Type and Sounding Dialog Token Number subfields are reserved, the First Feedback Segment subfield is set to 0 and the Remaining Feedback Segments subfield is set to 7." The HE Compressed Beamforming frame does not exist. It shall be changed to the HE Compressed Beamforming And CQI frame. And, when Feedback Type is CQI feedback, an HE Compressed Beamforming report is not present in the HE Compressed Beamforming And CQI frame. But, in such case, the Nc Index, the BW and the Feedback Type are needed in the HE MIMO Control field.	As per commnet.	2017/1/9 9:42
9658	Yongho Seok	225	1 28.3.13	340	32	T	Y	340.32 28.3.13	Please clarify how to set the "The L-STF, L-LTF, and L-SIG fields shall be transmitted in the same way as in the HE transmission when the TXVECTOR parameter BEAM_CHANGE is 0" Non-HT duplicate transmission shall be equal to the HE transmission when the TXVECTOR parameter BEAM_CHANGE is 1.	Change "BEAM_CHANGE is 0" to "BEAM_CHANGE is 1".	2017/1/9 9:42
9659	Yongho Seok	225	1 27.7.3.1	182	31	T	Y	182.31 27.7.3.1	"The TWT scheduling STA may also include the broadcast TWT element in broadcast Probe Response frames." The broadcast Probe Response frames are allowed only when the TWT scheduling STA has dot11FILSOmitReplicateProbeResponses set to true. Please insert this constraint.	As per comment.	2017/1/9 9:42
9660	Yongho Seok	225	1 9.4.2.6	67	57	T	Y	67.57 9.4.2.6	"When included in TIM frames and FILS discovery frames at the beginning of a broadcast TWT SP by an HE AP:" The TIM element is differently interpreted according to the reception timing of it. If an HE non-AP STA in a doze state wakes up after long time, it can loss any timing information related with TBTT from its associated AP. In such case, when the HE non-AP STA receives a FILS discovery frame transmitted at the beginning of a broadcast TWT SP, it can't determine a content of TIM between an original TIM element and opportunistic power save TIM element.	Instead of redefining a TIM element, make a new information element for an opportunistic power save operation.	2017/1/9 9:42
9661	Yongho Seok	225	1 9.4.2.27	68	19	T	Y	68.19 9.4.2.27	When dot11S1GOptionImplemented is true, the TWT Requester Support is signalled through the S1G Capabilities element. Change it as the following: "A STA sets the TWT Requester Support field to 1 when dot11TWTOptionActivated is true and dot11S1GOptionImplemented is false, and sets it to 0 otherwise. See 11.11.9.9 (TWT section)."	As per comment.	2017/1/9 9:42

9662 Yongho Seok	225	1 9.4.2.27	68	25	T	Y	68.25 9.4.2.27	When dot11S1GOptionImplemented is true, the TWT Responder Support is signalled through the S1G Capabilities element. Change it as the following: "A STA sets the TWT Responder Support field to 1 when dot11TWTOptionActivated is true and dot11S1GOptionImplemented is false, and sets it to 0 otherwise. See 11.11.9.9 (TWT section)."	As per commnet.		2017/1/9 9:42
9663 Yongho Seok	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	"The BSS Color field is an unsigned integer whose value is the BSS color of the BSS corresponding to the AP which transmitted this element, except that a value of 0 in this field indicates that there is no BSS color for this BSS." This paragraph has not been removed yet differently with the comment resolution document (11-16/0862r3) of CC23.	Remove the following paragraph: "The BSS Color field is an unsigned integer whose value is the BSS color of the BSS corresponding to the AP which transmitted this element, except that a value of 0 in this field indicates that there is no BSS color for this BSS."		2017/1/9 9:42
9664 Yongho Seok	225	1 9.4.2.219	91	60	T	Y	91.60 9.4.2.219	"The HE Duration Based RTS Threshold field enables an HE AP to manage RTS/CTS usage by HE non-AP STAs that are associated with it." Does the HE Duration Based RTS Threshold field manage the MU-RTS/CTS usage as well? Please clarify it.	As per commnet.		2017/1/9 9:42
9665 Yongho Seok	225	1 9.4.2.219	91	64	T	Y	91.64 9.4.2.219	"The value 0 indicates that RTS/CTS must be used for all frame exchanges." First comment is that any normative text is not allowed in Clause 9. Second comment is that all frame exchanges can not use RTS/CTS. The value 0 can be applied only for an HE STA.	As per comment.		2017/1/9 9:42

For a general purpose, please keep The TWT Responder Support field in the Extended Capabilities element.	As per comment.		2017/1/9 9:42
9668 Yongho Seok	225	1 9.4.2.218.2	79	4	T	Y	79.04 9.4.2.218.2	"Indicates whether the STA supports reception of a Multi-STA BlockAck frame that has a 32-bit BlockAck Bitmap intended to it." In additional to 32-bit Block Ack Bitmap, 128-bit Block Ack Bitmap and 256-bit Block Ack Bitmap also need a capability field.	As per comment.		2017/1/9 9:42
9669 Yongho Seok	225	1 9.4.2.218.2	79	42	T	Y	79.42 9.4.2.218.2	For the Maximum AMPDU Length Exponent field, explain the definition and encoding way.	As per comment.		2017/1/9 9:42
9670 Yongho Seok	225	1 9.4.2.218.2	79	26	T	Y	79.26 9.4.2.218.2	"Indicates support by a non-AP STA for the reception of a group-addressed Multi-STA BlockAck frame that is sent in a DL MU PPDU in a non-broadcast RU." A group-addressed Multi-STA BlockAck frame is not sent in a non-broadcast RU of an HE MU PPDU. Change it as the following: "Indicates support by a non-AP STA for the reception of a group-addressed Multi-STA BlockAck frame that is sent in a broadcast RU of a DL MU PPDU."	As per comment.		2017/1/9 9:42
9671 Yongho Seok	225	1 9.4.2.218.2	79	14	T	Y	79.14 9.4.2.218.2	The below subfield name is wrong. "Ack-enabled Multi-TID Aggregation Support" It shall be replaced with the following: "Ack Enabled Multi-TID A-MPDU Support"	As per comment.		2017/1/9 9:42

9672 Yongho Seok	225	1 9.4.2.218.2	79	14	T	Y	79.14 9.4.2.218.2	Regarding the "Ack Enabled Multi-TID A-MPDU Support" subfield, TGax draft 1.0 says the following: "An HE transmitter shall not aggregate MPDU that asks for Ack in a multiple-TID A-MPDU to the HE recipient unless the recipient sets Ack Enabled Multi-TID A-MPDU Support subfield to 1 in its announced HE Capabilities element." The definition of subfield should be changed as the following: "Indicates support by a STA to receive a multi-TID A-MPDU that can solicit Ack, as described in 27.10.4 (A-MPDU with multiple TIDs)."	As per comment.		2017/1/9 9:42
9673 Yongho Seok	225	1 9.4.2.219	92	27	T	Y	92.27 9.4.2.219	Any normative texts can not be placed on Clause 9. Please remove the following paragraph or move it to Clause 27. "If a HE non-AP STA receives from associated AP a BSS Color Disabled subfield value equal to 1 in the HE Operation element the HE non-AP STA should not exclusively use BSS Color parameter in making decision related to Intra-PPDU power save and for setting Intra BSS NAV. Instead, the non-AP STA should use the MAC header to make such decisions (see 27.11.4 (BSS_COLOR)). HE non-AP STA may (re)enable BSS Color related features once it receives from the associated AP a BSS Color Disabled subfield equal to 0 in an HE Operation element."	As per comment.		2017/1/9 9:42
9674 Yongho Seok	225	1 9.4.2.219	93	10	T	Y	93.10 9.4.2.219	The addition of the VHT Operation Information field to the HE Operation element does not remove dependency from the VHT Operation element. If it is needed, the Basic VHT-MCS And NSS Set field also be added to the HE Operation element. Second comment is that it shall be placed as an optional field. When an HE AP supports both VHT STAs and HE STAs, it have to include an VHT Operation element. In such case, the addition of the VHT Operation Information field to the HE Operation element is just overhead. Third comment is that on 2.4GHz 80MHz operation is not allowed. Then, why do you think that the VHT Operation Information should be added to the HE Operation element? Are you considering the HE BSS consisting of only HE STAs? Please clarify above comments.	As per commnet.		2017/1/9 9:42

Two mechanisms (first is MU-BAR and second is GCR MU-BAR) for soliciting an UL MU based GCR Block ACK are defined.Remove GCR MU-BAR procedure from 10.24.10.3 (also remove 9.3.1.23.6).	As per commnet.		2017/1/9 9:42
9696 Yongho Seok	225	1 11.1.3.10	141	32	T	Y	141.32 11.1.3.10	Remove 11.1.3.10 because there is no evidence of the coverage improvement through the Beacon frame transmitted in an HE extended range SU PPDU. Please provide a simulation result of the Beacon transmission in an HE extended range SU PPDU. If it is proven, the rate selection rule of the Beacon transmission in an HE extended range SU PPDU shall be added. Insert a new subclause in 10.7.5 (Rate selection for Data and Management frames) for a rate selection of an HE extended range Beacon frame.	As per comment.		2017/1/9 9:42
9697 Yongho Seok	225	1 11.2.2.17	143	49	T	Y	143.49 11.2.2.17	A critical update should include the following case: "Inclusion of BSS Color Change Announcement element"	As per commnet.		2017/1/9 9:42
9698 Yongho Seok	225	1 11.49.1	144	29	T	Y	144.29 11.49.1	Move subclause 11.49.1 into a new subclause of 27.16 (HE BSS operation).	As per comment.		2017/1/9 9:42
9699 Yongho Seok	225	1 27.2.2	150	24	T	Y	150.24 27.2.2	"An HE non-AP STA shall maintain two NAV timers." When an HE non-AP STA is not associated with an HE AP, it is not required to maintain two NAV timers. Because the HE trigger-based PPDU is not used. Change it as the following: "An HE non-AP STA associated with an HE AP STA shall maintain two NAV timers."	As per comment.		2017/1/9 9:42
9700 Yongho Seok	225	1 27.2.2	151	20	T	Y	151.20 27.2.2	"The PPDU that carried information of the RXVECTOR parameter is not an HE trigger-based PPDU triggered by the STA" A control response frame can be sent in an HE PPDU. For example, if a control frame is sent as a response to a soliciting HE extended range SU PPDU, the frame shall be carried in an HE extended range SU PPDU. Above rule for the NAV update does not cover this case. So, change it as the following: "The PPDU that carried information of the RXVECTOR parameter is not an HE extended range SU PPDU, HE SU PPDU, or HE trigger-based PPDU solicited by the STA"	As per commnet.		2017/1/9 9:42

9701	Yongho Seok	225	1 27.2.2	151	56	T	Y	151.56 27.2.2	"A STA that maintains two NAVs has the capability to maintain NAV set by intra-BSS PPDU and inter-BSS PPDU separately. Maintaining two NAV is beneficial in dense deployment scenarios where a STA requires protection from frames transmitted by STAs within its BSS, i.e., intra-BSS, and avoid interference from frames transmitted by STAs in neighboring BSS, i.e., inter-BSS. For example, in a TXOP initiated by the associated AP for UL MU transmission, the intra-BSS NAV of the STA can be set by the AP to prevent the STA from contending the channel, and the basic NAV will not be updated by the associated AP so that NAV set by inter-BSS PPDU can be considered in UL MU CS as described in 27.5.2.4 (UL MU CS mechanism)." The above paragraph is a general introduction of two NAVs.	As per comment.		2017/1/9 9:42
9702	Yongho Seok	225	1 27.2.3	152	8	T	Y	152.08 27.2.3	Move the above paragraph to The definition of an UL MU capable STA is as the following (see 27.5.2.1): "A non-AP STA with dot11ULMUMIMOOptionImplemented equal to true is referred to as an UL MU capable STA." So, an UL MU capable STA represents a non-AP STA supporting an UL MU-MIMO. See the title of 27.2.3: "Obtaining an EDCA TXOP for UL MU capable STAs" When a non-AP STA does not support an UL MU-MIMO, it is not an UL MU capable STA. So, an EDCA TXOP rule defined in 27.2.3 is not appilied to that STA. Probably, it is not an intention of the proposed EDCA TXOP rule. Replace "UL MU capable STA(s)" with "HE non-AP STA(s)" throughout the TGax draft 1.0	As per commnet.		2017/1/9 9:42
9703	Yongho Seok	225	1 27.16.2	206	58	T	Y	206.58 27.16.2	"A HE non-AP STA in an infrastructure BSS shall not transmit the BSS Color Change Announcement element." In an TDLS/DLS, mesh cases, an HE non-AP STA should be allowed to transmit the BSS Color Change Announcement element. See the issue happened in an TDLS/DLS case. An HE non-AP STA1 has 1st TDLS connection with an HE non-AP STA2. And, the BSS Color of 1st TDLS connection is set to 1. Then, the HE non-AP STA1 has 2nd TDLS connection with an HE non-AP STA3. If the HE non-AP STA3 is a TDLS initiator STA, the HE non-AP STA1 can not know the BSS color of 2nd TDLS connection before receiving the TDLS confirm frame from the HE non-AP STA3. When the BSS color of 2nd TDLS connection is set to 2, the HE non-AP STA1 shall consider two BSS colors (1 and 2) as an intra-BSS color. It is very complicated	As per comment.		2017/1/9 9:42
9704	Yongho Seok	225	1 27.5.1.1	162	45	T	Y	162.45 27.5.1.1	"An AP shall not transmit to a STA an HE MU PPDU with the HE-SIG-B allocating spatial streams to more than one recipient STA, unless the STA sets the Downlink MU-MIMO On Partial Bandwidth Rx subfield of the HE Capabilities element to 1." The Downlink MU-MIMO On Partial Bandwidth Rx subfield is not defined in the HE Capabilities element. Probably, DL MU-MIMO on Partial BW subfield should be used.	As per commnet.		2017/1/9 9:42

9705 Yongho Seok	225	1 27.5.1.1	162	44	T	Y	162.44 27.5.1.1	"An AP shall not transmit to a STA an HE MU PPDU with the HE-SIG-B allocating spatial streams to more than one recipient STA, unless the STA sets the Downlink MU-MIMO On Partial Bandwidth Rx subfield of the HE Capabilities element to 1." Even though a STA does not support a reception of the DL MU-MIMO on a partial bandwidth, it can receive the DL MU-MIMO PPDU having the HE-SIG-B that allocates multiple spatial streams from a full bandwidth. Change it as the following: "An AP shall not transmit to a STA an HE MU PPDU with the TXVECTOR parameter SIG_B_COMPRESSION_MODE set to 1 and the HE-SIG-B allocating spatial streams to more than one recipient STA, unless the STA sets the DL MU-MIMO On Partial Bandwidth subfield of the HE Capabilities element to 1."	As per comment.		2017/1/9 9:42
9706 Yongho Seok	225	1 27.5.1.1	162	57	T	Y	162.57 27.5.1.1	"A STA shall not transmit a DL OFDMA With MIMO PPDU that contains a unicast RA that corresponds to a STA from which it has not received an HE Capabilities element with the DL OFDMA With MIMO Support field set to 1." What does "DL OFDMA With MIMO Support" field mean? It is not defined in the HE Capabilities element. Delete the corresponding paragraph.	As per comment.		2017/1/9 9:42
9707 Yongho Seok	225	1 27.5.2.1	164	25	T	Y	164.25 27.5.2.1	"A STA that is a class A device shall set the Class A subfield in HE Capabilities elements that it transmits to 1. A STA that is a class B device shall set the Class A subfield in HE Capabilities elements that it transmits to 0." There is no Class A subfield in HE Capabilities element. Change it as the following: "A STA that is a class A device shall set the Device Class subfield in HE Capabilities elements that it transmits to 1. A STA that is a class B device shall set the Device Class subfield in HE Capabilities elements that it transmits to 0."	As per comment.		2017/1/9 9:42
9708 Yongho Seok	225	1 27.5.2.2.1	164	46	T	Y	164.46 27.5.2.2.1	"A value of 0 also indicates that non-associated STAs can transmit on the allocated resource using the random access procedure as described in 27.5.2.6 (UL OFDMA-based random access)." Allowing a non-associated STA to an UL OFDMA-based random access is not defined in TGax draft 1.0. Remove the corresponding paragraph.	As per comment.		2017/1/9 9:42
9709 Yongho Seok	225	1 27.5.2.2.2	165	53	T	Y	165.53 27.5.2.2.2	"...that have indicated reception support for this Trigger frame in the Multiple BSSID Control Support field of the HE Capabilities element it transmits..." The Multiple BSSID Control Support field is not defined. Replace "Multiple BSSID Control Support" with "Rx Control Frame To MultiBSS".	As per comment.		2017/1/9 9:42
9710 Yongho Seok	225	1 27.5.2.2.2	166	62	T	Y	166.62 27.5.2.2.2	The Multi-TID Support field is not defined in the HE MAC Capabilities Information field of the HE Capabilities element. 9711 Yongho Seok	225	1 27.5.2.3	167	58	T	Y	167.58 27.5.2.3	"If the STA is not associated with the AP, TBD." Remove TBD sentence. Otherwise, define any UL MU random access behavior for a non-associated STA.	As per comment.		2017/1/9 9:42

9712 Yongho Seok	225	1 27.5.2.4	170	31	T	Y	170.31 27.5.2.4	"The NAV was set by an intra-BSS frame" Because an HE non-AP STA always maintains two NAVs, the above sentence shall be re-writtend for two NAVs. Change it as the following: "The value of the basic NAV is 0."	As per comment.	2017/1/9 9:42
9713 Yongho Seok	225	1 27.5.2.3	169	61	T	Y	169.61 27.5.2.3	"If the Trigger Type field of a Trigger frame is not Basic Trigger, then the STA shall include in the response A-MPDU at least one MPDU of the required type. A Beamforming Report Poll Trigger frame solicits HE Compressed Beamforming Feedback frames (see 27.6 (HE sounding protocol), an MU BAR Trigger frame solicits BlockAck frames (see 27.4 (Block acknowledgement)), and a BSRP Trigger frame solicits QoS Null frames (see 27.5.2.5 (HE buffer status feedback operation for UL MU). The MPDUs included in the response shall not solicit a response." The HE Compressed Beamforming Feedback frame is a wrong frame name. And, the above paragraph is missing the Bandwidth Query Report Poll variant Trigger frame. Change it as the following: "...A Beamforming Report Poll Trigger frame solicits HE	As per comment.	2017/1/9 9:42
9714 Yongho Seok	225	1 27.5.2.6.3	174	10	T	Y	174.10 27.5.2.6.3	"If an HE trigger-based PPDU soliciting an immediate response that is sent by a STA in its randomly selected RU (see 27.5.2.6.2 (Random access procedure)) fails, then the STA may attempt to retransmit the HE trigger-based PPDU using random access." If the STA does not attempt to retransmit it after a failure of an HE trigger-based PPDU in a randomly selected RU, what is a value of OCW? Probably, in such case, the STA shall set its OCW to OCWmin. Please clarify it.	As per comment.	2017/1/9 9:42
9715 Yongho Seok	225	1 27.5.2.7	174	22	T	Y	174.22 27.5.2.7	The NDP feedback report procedure is a blank. Delete this feature or define it.	As per comment.	2017/1/9 9:42
9716 Yongho Seok	225	1 27.5.3	174	36	T	Y	174.36 27.5.3	What does "a cascading sequence of MU PPDUs in a TXOP" mean? In my understanding, a cascading sequence of MU PPDU is as the following: An HE MU PPDU transmitted by the AP a SIFS after an HE trigger-based PPDU has the following A-MPDU contents: – One or more Ack, BlockAck or Multi-STA BlockAck frames for the preceding HE trigger-based PPDU and, – Zero or more MPDUs and, – One or more Trigger frames or UL MU Response Scheduling A-Control fields Please clarify a cascading sequence of MU PPDUs in a TXOP.	As per comment.	2017/1/9 9:42
9717 Yongho Seok	225	1 27.5.3	175	57	T	Y	175.57 27.5.3	"The cascading sequence may have different UL transmitters within each HE trigger-based PPDU. The cascading sequence may have a different set of transmitters in HE trigger-based PPDUs as compared to the HE MU PPDU that immediately follows the HE trigger-based PPDUs within the same TXOP." Is this paragraph an unique feature of the cascading sequence? In my understanding, this paragraph is comonly applied to an UL MU sequence. If this paragraph is needed, please move it to 27.5.2.1 (General).	As per comment.	2017/1/9 9:42

9718	Yongho Seok	225	1 27.4.3	159	54	T	Y	159.54 27.4.3	"A recipient shall not include in a transmitted Multi-STA BlockAck frame a BlockAck Bitmap field of size 32 bits that is intended to a STA that has not declared support of its reception in the HE Capabilities element it transmits." For using the BlockAck Bitmap length of 128 or 256 bits, a STA needs to check the declared HE Capabilities element of its peer STA. Insert the missing constraint for the BlockAck Bitmap length of 128 or 256 bits.	As per comment.		2017/1/9 9:42
9719	Yongho Seok	225	1 27.4.4.3	161	14	T	Y	161.14 27.4.4.3	"An Action frame in the DL MU PPDU is always responded with an HE trigger-based PPDU." The MMPDU is missing. Change it as the following: "An Action frame or a MMPDU in the DL MU PPDU is always responded with an HE trigger-based PPDU."	As per comment.		2017/1/9 9:42
9720	Yongho Seok	225	1 27.6.3	179	3	T	Y	179.03 27.6.3	Rules for segmented feedback in HE sounding protocol sequences is not defined. Define the following sequnce: HE NDPA | HE NDP | HE Compressed Beamforming And CQI frame (segmented) | Beamforming Report Poll frame | HE Compressed Beamforming And CQI frame (segmented)	As per comment.		2017/1/9 9:42
9721	Yongho Seok	225	1 28.2.2	218	5	T	Y	218.05 28.2.2	Because HE STA can operate in 2.4GHz band, parameter NO_SIG_EXTN is present when FORMAT is HE_SU, HE_MU, HE_EXT_SU or HE_TRIG.	As per comment.		2017/1/9 9:42
9722	Yongho Seok	225	1 27.16	204	27	G	Y	204.27 27.16	I think that 27.16 (HE BSS operation) specifies an MLME for an HE STA. It means that Clause 27 has both a MAC sublayer functional description for an HE STA (from 27.1 to 27.5) and an MLME for an HE STA. But, on IEEE 802.11-2016, a MAC sublayer functional description and an MLME are described in seperate clauses. For consistency with IEEE 802.11-2016, it is appropriate to move all MLME texts of an HE STA (e.g., subclause 27.16) to clause 11.	As per comment.		2017/1/9 9:42
9723	Yongho Seok	225	1 27.8.2	189	8	T	Y	189.08 27.8.2	"After transmitting the acknowledgement frame immediate response immediate acknowledgement for the frame containing the OMI A-Control field..." It is a wrong sentence. Change it as the following: "After transmitting the immediate acknowledgement for the frame containing the OMI A-Control field..."	As per comment.		2017/1/9 9:42
9724	Yongho Seok	225	1 27.8.2	189	3	T	Y	189.03 27.8.2	"The OMI responder shall use the values indicated by the Rx Channel Width and Rx NSS subfields of the most recently received OMI A-Control field sent by the OMI initiator to send PPDUs to the OMI initiator in subsequent TXOP." Please specify how to use the values indicated by the Rx Channel Width and Rx NSS subfields of the most recently received OMI A-Control field.	Replace the corresponding paragraph with the following: "The OMI responder shall not transmit non-OFDMA PPDUs to the OMI initator in subsequent TXOP that uses a bandwidth that is greater than the channel width indicated by Rx Channel Width subfield in the most recently received OMI A-Control field from that OMI initator. The OMI responder shall not transmit OFDMA PPDUs to the OMI initator in subsequent TXOP that allocates an RU outside of the channel width indicated by Rx Channel Width subfield in the most recently received OMI A-Control field from that OMI initator. The OMI responder shall not transmit PPDUs to the OMI initator in subsequent TXOP that uses a greater number of spatial streams than indicated by Rx NSS subfield in the most recently received OMI A-Control field from that OMI initator."		2017/1/9 9:42

9725	Yongho Seok	225	1 27.8.3	189	29	T	Y	189.29 27.8.3	"NOTE--The Channel Width subfield indicates the maximum channel width that the STA will use in response to Trigger frames" It is a normative text. Please covert from NOTE to a next bullet of the "Tx NSS subfield" bullet.	As per comment.		2017/1/9 9:42
9726	Yongho Seok	225	1 27.8.3	189	55	T	Y	189.55 27.8.3	"Shall indicate a channel width in the RU Allocation subfield of the Per User Info field of a Trigger frame, containing the AID of the OMI initiator, that is less than or equal to the value specified in the Channel Width subfield of the OMI A-Control field received by the OMI initiator" A channel width in the RU Allocation subfield of the Per User Info field is ambiguous.	Replace the corresponding paragrph with the following: "Shall indicate the RU Allocation subfield of the Per User Info field of a Trigger frame, containing the AID of the OMI initiator, by which the occupied channel is subset of the channel supported in the Channel Width subfield of the OMI A-Control field received by the OMI initiator"		2017/1/9 9:42
9727	Yongho Seok	225	1 27.2.1	150	15	T	Y	150.15 27.2.1	"If the received frame satisfies both intra-BSS and inter-BSS conditions, the decision made by using the MAC address takes precedence over the decision made by using the RXVECTOR parameter BSS_COLOR." There exist several further cases that satisfie both intra-BSS and inter-BSS conditions. For example, an HE AP receives an HE MU PPDU having the same BSS_COLOR. Above cited spec text is covering only single specific case. For generalizing it, please change it as the following. "If the received frame satisfies both intra-BSS and inter-BSS conditions, the decision made by using the RXVECTOR parameter BSS_COLOR is overridden by the decision made by using the other parameter."	As per comment.		2017/1/9 9:42

9761 Yoshio Urabe	225	1 27.9.2.1	190	30	T	Y	190.30 27.9.2.1	Non-HT Public Action frame should be exempted from SR operation regardless with its RA because of the following reason. Even if an RA of a Public Action frame is an indivudual address other than the receiving STA, it may be intended to a STA in the BSS that the receiving STA belongs to.	Replace lines 30-33 with the following text: -- The PPDU is not a non-HT PPDU that carries a Public Action frame.		2017/1/9 9:42
9762 Yoshio Urabe	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	The text in P190L50-54 is redundant because this condition and operation is covered by P190L36-37 and P190L56-57.	Remove lines 50-54. Move the NOTE in lines 56-57 after the next paragraph, that is, the end of the subclause 27.9.2.1.		2017/1/9 9:42
9763 Yoshio Urabe	225	1 9.3.1.23	41	47	E	Y	41.47 9.3.1.23	In Figure 9-52c, parentheses in the RA field is not necessary.	Remove parentheses of (RA) in Figure 9-52c.		2017/1/9 9:42
9764 Yoshio Urabe	225	1 27.9.2.1	190	53	E	Y	190.53 27.9.2.1	SR delay' should be 'SR_Delay' for consistency with HE-SIG-A definition in 28.3.10.7.2.	In lines 53, 56 and 57, replace 'SR delay' with 'SR_Delay'.		2017/1/9 9:42

9765	Youhan Kim	225	1 28.3.3.5	237	30	T	Y	237.30 28.3.3.5	The most important restriction is that 20 MHz operation STAs shall not be assigned RUs 'outside' the Primary20 subchannel. This restriction is missing (P237L30). Also, P237L58 says there is no restriction on 242-tone RU, but that is not correct. Only the 242-tone RU corresponding to the Primary20 can be allocated to the 20 MHz operating STA.	Change P237L30 "An AP shall not assign the following RUs to 20 MHz operating STAs" to "An AP shall not allocate RUs which cannot be signalled as part of the HE-SIG-B RU Allocation subfield corresponding to the Primary 20 MHz subchannel to 20 MHz operating non-AP STAs in HE MU or HE trigger based PPDUs. In additional, an AP shall not allocate the following RUs to 20 MHz operation STAs in HE MU or HE trigger based PPDUs:" Also, delete "If supported, there is no restriction on 242-tone RUs." from P237L58.	2017/1/9 9:42
9766	Youhan Kim	225	1 28.3.3.5	237	32	T	Y	237.32 28.3.3.5	It is not clear to readers why "[Table 28-4 and Table 28-5]" are written on L32. It is probably there to specify what, say, "RU 5" is, but it is not clearly written. Next, DL/UL OFDMA is not a valid PPDU type. Also, phrases like "(2 26-tone RUs are restricted)" do not seem necessary in the standard (probably was needed during discussion phase).	Delete "[Table 28-4 (Subcarrier indices for RUs in a 40 MHz HE PPDU) and Table 28-5 (Subcarrier indices for RUs in an 80 MHz HE PPDU)]" on P237L32. On P237L34, change "RU 5 and 14 in 40 MHz DL/UL OFDMA (2 26-tone Rus are restricted)" to "RU #5 and #14 in 40 MHz HE MU or HE trigger based PPDUs". Similar changes throughout P237L35~L52.	2017/1/9 9:42
9767	Youhan Kim	225	1 28.3.3.6	238	9	T	Y	238.09 28.3.3.6	This section (20 MHz only HE STAs) does not seem to be the appropriate place to state the requirement that an HE AP in 5 GHz must support 80 MHz channel width.	Move the statement "An HE AP in 5 GHz shall be 80 MHz capable" to a more appropriate section.	2017/1/9 9:42
9768	Youhan Kim	225	1 28.3.3.6	238	9	T	Y	238.09 28.3.3.6	An 80 MHz HE AP must also interoperate with 160/80+80 MHz capable non-AP STAs. Also, what does "operate for ... 20 MHz only non-AP HE STAs" mean?	Either add statement that HE APs must interop w/ 160/80+80 MHz capable non-AP STAs as well, or simply delete the state that HE AP must operate w/ 80 MHz capable non-AP STAs. Also, clarify what "operate for ... 20 MHz only non-AP HE STAs" means.	2017/1/9 9:42
9769	Youhan Kim	225	1 28.3.10.7.2	274	33	T	Y	274.33 28.3.10.7.2	4xLTF+0.8 for HE_EXT_SU as well? THe capability bit is for HE_SU only, not for HE_MU or HE_EXT_SU But HE_SIG_A change is for HE_EXT_SU as well (also for HE_MU) The HE PHY Capabilities Information field (P86L24) defines 4x HE-LTF and 0.8 usec GI only for HE SU PPDUs, not HE extended range SU.	Change at P274L33 "a 4x HE-LTF and 0.8 us GI" to "if HE extended SU PPDU format, a 4x HE-LTF and 0.8 us GI"	2017/1/9 9:42
9770	Youhan Kim	225	1 28.3.10.7.2	277	20	T	Y	277.20 28.3.10.7.2	Number of MU-MIMO users cannot be 1 (value 0x0) in HE-SIG-A of HE_MU PPDU because the Spatial Config subfield in HE-SIG-B has Nuser >= 2.	Make the value 0x0 reserved for the Number of HE-SIG-B Symbolf Or MU-MIMO Users field of HE-SIG-A for HE_MU PPDU if the SIGB Compression field is 1.	2017/1/9 9:42
9771	Youhan Kim	225	1 28.3.16	344	56	T	Y	344.56 28.3.16	A beamformer may choose to apply certain spatial mapping matrix to the NDP PPDU where channel smoothing at the receiver side is not desired. Hence, if the Beamformed bit is set to 1 in an NDP PPDU, the receiver shall not perform channel smoothing in generating the sounding feedback.	Add to P344L56 "If the Beamformed bit in the HE-SIG-A of an HE NDP PPDU is set to 1, then the receiver of the HE NDP PPDU shall not perform channel smoothing when generating the compressed beamforming feedback report."	2017/1/9 9:42
9772	Youhan Kim	225	1 28.5	397	1	E	Y	397.01 28.5	Typo. 969-tone RU should be 996-tone RU.	Change "969-tone RU" to "996-tone RU" in the headings of Tables 28-88~94.	2017/1/9 9:42
9773	Youhan Kim	225	1 9.3.1.23	48	17	T	Y	48.17 9.3.1.23	HE trigger based PPDU needs to be sent exactly SIFS (or Signal Extension + SIFS) after the end of reception of the Trigger Frame. If HT/VHT PPDU w/ SGI was used to transmit the Trigger Frame, then the receiver is supposed to align to 4 usec boundary before counting down SIFS, which could introduce ambiguity in the HE trigger based PPDU transmission timing. Also, since DSSS/CCK PPDU formats do not have Signal Extension, HE trigger based PPDUs may need to be sent only 10 usec after the reception of Trigger Frame if the Trigger Frame was sent using DSSS/CCK format.	Add the following to P48L17. "SGI is disallwed for Trigger Frame transmission if the Trigger Frame is sent using the HT or VHT PPDU format. DSSS and CCK PPDU formats are disallwed for Trigger Frame transmission."	2017/1/9 9:42

9774	Youhan Kim	225	1 9.4.2.218.3	84	6	T	Y	84.06 9.4.2.218.3	Suggest to add separate DCM capability bits for larger RU sizes.	Add separate capability bits for DCM TX/RX for different RU sizes.	2017/1/9 9:42
9775	Youhan Kim	225	1 3.2	3	5	T	Y	3.05 3.2	"20 MHz only" STA is undefined, while it is being used multiple in the draft. Also, the terminology is inconsistent - "20 MHz only HE STA", "20 MHz only device", "20 MHz only non-AP HE STA", "20 MHz only non-AP STA", "20 MHz only HE device".	Come up with a single unified terminology for "20 MHz only" xyz. Then, add the definition to clause 3.2. Also, search the draft for "20 MHz only", and replace w/ the unified terminology where applicable.	2017/1/9 9:42
9776	Youhan Kim	225	1 9.3.1.23	44	56	T	Y	44.56 9.3.1.23	Description for the Packet Extension field is not clear. What is the first two bits? B34-35? What is the definition of the pre-FEC padding factor? Is it the same as Table 28-39?	Clarify the definition of the Packet Extension field.	2017/1/9 9:42
9777	Youhan Kim	225	1 28.1.1	209	42	T	Y	209.42 28.1.1	"Channel puncturing" should be "preamble puncturing"	Change "channel puncturing" to "preamble puncturing". Same on P353L55.	2017/1/9 9:42
9778	Youhan Kim	225	1 28.1.1	209	44	T	Y	209.44 28.1.1	"RU" is not defined.	Define the term "RU".	2017/1/9 9:42
9779	Youhan Kim	225	1 28.1.1	209	50	T	Y	209.50 28.1.1	"Symbol duration" has different meaning throughout the draft. P209L51-52 uses it to refer to duration excluding the GI duration. But Table 28-9 and P339L50 use it to refer to duration including the GI duration. 802.11-2016 also uses symbol duration to refer to duration including the GI. Note that Table 28-9 and 11ac uses the term "DFT period" to refer to the duration excluding GI.	Change "symbol durations (symobl duration not including the guard interval" to "DFT periods". Similar changes on P209L52, P302L8 and P302L9.	2017/1/9 9:42
9780	Youhan Kim	225	1 28.1.1	209	58	T	Y	209.58 28.1.1	QPSK DCM is missing. On the other hand, do we need to call out DCM in this list of 'modulations'? DCM does not use a 'separate' modulation/constellation, but simply maps bits to multiple subcarriers using the existing BPSK/QPSK/16-QAM modulations. For example, we don't call out BPSK STBC, QPSK STBC, etc in this list of modulation.	Either remove BPSK DCM and 16-QAM DCM from the list, or add QPSK DCM.	2017/1/9 9:42
9781	Youhan Kim	225	1 28.3.2.1	227	60	T	Y	227.60 28.3.2.1	An RU with a single HE-SIG-B user field ("SU" RU) may be destined to multiple 'users' when the RU is used for broadcast/multicast purposes. Hence, 'transmissions to one user' may be misleading.	Use a more appropriate terminology than 'one user' in "single stream transmissions to one user os spatial multiplexing to one user".	2017/1/9 9:42
9782	Youhan Kim	225	1 28.3.2.1	227	61	T	Y	227.61 28.3.2.1	What is a "full bandwidth" DL MU-MIMO?	Define the phrase "full bandwdith" MU-MIMO	2017/1/9 9:42

9798	Youhan Kim	225	1 28.3.3.5	237	19	E	Y	237.19 28.3.3.5	ROM is a part of OMI.	Change "to 20 MHz by ROM" to "to 20 MHz using OMI".	2017/1/9 9:42
9799	Youhan Kim	225	1 28.3.3.5	237	21	T	Y	237.21 28.3.3.5	"20 MHz operating non-AP STA" is not defined.	Define "20 MHz operating non-AP STA".	2017/1/9 9:42
9800	Youhan Kim	225	1 28.3.3.5	237	21	T	Y	237.21 28.3.3.5	It is not necessary to explain why we are restricting the RU locations for 20 MHz operating STAs participating in wider BW OFDMA packets in the standard. Besides the current explanation is probably not quite clear enough for first time readers anyway (e.g. why is there performance penalty?).	Delete "When a 20 MHz operating ... OFDMA operation." (L21~L28)	2017/1/9 9:42
9801	Young Hoon Kwon	225	1 9.2.4.6.4.1	22	60	T	Y	22.60 9.2.4.6.4.1	Control subfield with Control ID subfield equal to 0 implies UL MU response scheduling, where the length of the Control information subfield is 26 bits, which is the maximum available. Therefore, in case Control ID subfield equalt to 0, there can be one and only one Control subfield in the A-Control subfield. So, the sentence "Control subfield with Control ID subfield equal to 0, if present, is the first subfield of the sequence." is meaningless.	Delete the sentence "Control subfield with Control ID subfield equal to 0, if present, is the first subfield of the sequence.".	2017/1/9 9:42
9802	Young Hoon Kwon	225	1 9.2.4.6.4.2	24	21	E	Y	24.21 9.2.4.6.4.2	"RSSI" should be a subscipt.	Make "RSSI" in the word "TRSSI" be subscripts.	2017/1/9 9:42
9803	Young Hoon Kwon	225	1 9.2.4.6.4.3	24	58	T	Y	24.58 9.2.4.6.4.3	Operating channel width for transmission of Trigger based PPDU also needs to be indicated, and the Channel Width subfield can be used for this purpose too.	Modify the text to "The Channel Width subfield indicates the operating channel width supported by the STA in reception and transmission, and is ...".	2017/1/9 9:42

9804	Young Hoon Kwon	225	1 9.2.4.6.4.3	25	1	T	Y	25.01 9.2.4.6.4.3	Main purpose of including Tx NSS in OMI is to use less number of Tx RF chains for power savings. However, different from Rx NSS, the number of Tx RF chains is more closely related with the number of space-time streams (N_STS) compared to the number of spatial streams (N_SS). For example, even in case a STA indicates Tx NSS to be 1, an serving AP can still allocate the STA single spatial stream with STBC, which requires at least two transmit RF chains to be turned on. Because this is still possible, even if a STA supporting STBC indicates Tx NSS = 1 to the serving AP, the STA shall have at least two Tx RF chains on, which defeats the original purpose of having Tx NSS subfield in OMI. For this issue, a simple remedy is to change Tx NSS subfield to indicate the maximum number of space-time streams (N_STS) and modify the related operation accordingly.	As in the comment.			2017/1/9 9:42
9805	Young Hoon Kwon	225	1 9.2.4.6.4.4	25	30	T	Y	25.30 9.2.4.6.4.4	For link adaptation to work properly, NSS and HE-MCS is not enough. For example, for soliced case, MRQ, MSI, and MFSI also need to be included. To further cover unsolicited case, there needs even more subfields. So, at least MRQ, MSI, and MFSI needs to be included into the A-Control field.	Per comment			2017/1/9 9:42
9806	Young Hoon Kwon	225	1 9.2.4.6.4.5	26	2	T	Y	26.02 9.2.4.6.4.5	In case all ACs have traffic, it is possible to set ACI bitmap is set to 0000 (when there are traffic for all 8 TIDs.). This needs to be described in this line, too.	Per comment			2017/1/9 9:42
9807	Young Hoon Kwon	225	1 9.2.4.6.4.7	27	64	T	Y	27.64 9.2.4.6.4.7	Duplicated sentence.	Delete the sentence "Bandwidth Query Report used for bandwidth query report operation to assist DL HE MU transmission (see 25.5.1.3. (Bandwidth query report operation).".			2017/1/9 9:42
9808	Young Hoon Kwon	225	1 9.2.4.6.4.7	28	6	T	Y	28.06 9.2.4.6.4.7	In Table 9-18d, each bit is set to 1 when corresponding channel is available. However, there's no clear definition in which case the channel is available. For example, it is not clear which CCA rule is applied in determining the channel availability. (ED, SD, Mid-Pkt detection, OBSS-PD based SR, etc). Also, it is not clear the measurement period for the decision on this. (E.g., Use of ED results measured during SIFS before transmitting a PPDU that contains this A-Control field.)	Per comment, please clarify how to determine the channel availability.			2017/1/9 9:42
9809	Young Hoon Kwon	225	1 9.2.4.6.4.8	28	60	T	Y	28.60 9.2.4.6.4.8	This is not for a Trigger frame.	Modify the sentence to "The Control Information subfield for Reverse Direction Protocol (RDP) is shown in Figure 9-15i ...".			2017/1/9 9:42
9810	Young Hoon Kwon	225	1 9.2.4.6.4.8	29	12	T	Y	29.12 9.2.4.6.4.8	It is not clear how to decide the AC for response frame if the last Data frames are from multiple TIDs. Need to clarify how to decide the available ACs when the last data frame is multi-TID frame.	Per comment.			2017/1/9 9:42
9811	Young Hoon Kwon	225	1 92.4.6.4.8	29	15	T	Y	29.15 92.4.6.4.8	In legacy RDG case, as RDG/More PPDU subfield is included in every HT Control field, so it is needed to explicitly indicate RDG status. However, for 11ax device, RDP variant A-Control field does not need to exist in every A-Control field. Therefore, having RDP variant A-Control field itselt can implicitly indicate. For example, if RDP variant A-Control field is included in the A-Control field from an RD initiator can indicate that "An RDG is present." Otherwise, "No reverse grant.". In this sense, having additional bit for "RDG/More PPDU" is not helpful.	Per comment.			2017/1/9 9:42

9812	Young Hoon Kwon	225	1 9.2.4.6.4.8	29	8	T	Y	29.08 9.2.4.6.4.8	It is not clear why this field needs 6 reserved bits. This field only has 2 meaningful bits. And having 6 bits of reserved bits is somewhat overkill. Also, as is shown in other variant A-Control field, byte-matching is not needed.	Per comment.	2017/1/9 9:42
9813	Young Hoon Kwon	225	1 9.2.5.2	31	10	T	Y	31.10 9.2.5.2	Single protection settings for MU-RTS frame transmission can be used for two different cases: 1) DL MU transmission, and 2) UL MU transmission. Current text in subbullet 1a) only describes the case for UL MU transmission. Therefore, the description needs to include these two cases.	Modify the bullet 1a) to "In an MU-RTS frame, the Duration/ID field is set to the estimated time, in microseconds, required for the pending frame, plus one CTS frame, plus the time for the solicited HE triggerbased PPDU if required, plus the time for an acknowledgement if required, plus applicable IFSs.".	2017/1/9 9:42
9814	Young Hoon Kwon	225	1 9.3.1.9.7	37	23	T	Y	37.23 9.3.1.9.7	Not clear what "the format defined below" means here. It's better to have figure that describes the format for Multi-STA BlockAck, instead. Or, it can also refer to Figure 9-32.	Per comment.	2017/1/9 9:42
9815	Young Hoon Kwon	225	1 9.3.1.9.7	37	24	T	Y	37.24 9.3.1.9.7	Normative descript is not appropriate in clause 9.	Delete the sentence "Multi-STA BlockAck frames shall be supported if either UL MU or multi-TID A-MPDU operation is supported.", and describe the normative behavior in Clause 10 or Clause 27.	2017/1/9 9:42
9816	Young Hoon Kwon	225	1 9.3.1.9.7	38	1	T	Y	38.01 9.3.1.9.7	First, the first sentence should start with a "NOTE". And, the sentence is somewhat misleading as there's no acknowledgement contained in the Per AID TID Info subfield.	Modify the first sentence to "NOTE – The TID subfield contains the TID for which the acknowledgment or block acknowledgment contained in the Per STA Info subfield applies.".	2017/1/9 9:42
9817	Young Hoon Kwon	225	1 9.3.1.9.7	38	4	T	Y	38.04 9.3.1.9.7	Does the TID value set to 15 imply a management frame or an action frame? In this note, it is said to be a management frame, but in Table 9-24b and in sub-clause 27.4, it is said to be an action frame. Clarification is needed.	As in the comment.	2017/1/9 9:42
9818	Young Hoon Kwon	225	1 9.3.1.9.7	39	62	T	Y	39.62 9.3.1.9.7	In subclause 10.12, it says "An A-MSDU may be fragmented and each fragment transmitted within a single QoS Data frame, when the recipient has indicated support for reception of fragmented A-MSDUs.", which implies that A-MSDU can be fragmented. Therefore, text in 10.12 and text in line 62 contradict each other. Need clarification.	As in the comment.	2017/1/9 9:42
9819	Young Hoon Kwon	225	1 9.3.1.20	40	53	T	Y	40.53 9.3.1.20	How to encode RU Start/End index to 7 bit needs to be described. Please add the rule.	As in the comment.	2017/1/9 9:42
9820	Young Hoon Kwon	225	1 9.3.1.23	41	47	E	Y	41.47 9.3.1.23	In Figure 9-52c, there's no reason to use parenthesis for RA field.	In Figure 9-52c, remove the parenthesis for RA field	2017/1/9 9:42
9821	Young Hoon Kwon	225	1 9.3.1.23	41	65	T	Y	41.65 9.3.1.23	Clarification is need on how to set TA field in case multiple BSSID is supported. Especially for the case that the Trigger frame schedules STAs in different virtual APs under the same physical AP.	As in the comment.	2017/1/9 9:42
9822	Young Hoon Kwon	225	1 9.3.1.23	41	62	T	Y	41.62 9.3.1.23	How about MU-BAR frame with GCR bit in BAR Control field is set to 1? Need further clarification.	As in the comment.	2017/1/9 9:42
9823	Young Hoon Kwon	225	1 9.3.1.23	43	52	T	Y	43.52 9.3.1.23	Normative behavior such as "The AP shall set .." is not appropriate in clause 9. Move this part to sub-clause related with AP behavior for UL MU transmission.	As in the comment.	2017/1/9 9:42
9824	Young Hoon Kwon	225	1 9.3.1.23	44	26	T	Y	44.26 9.3.1.23	There's no "Number of HE-LTF Symbols" defined in Table 28-18. Need clarification	As in the comment.	2017/1/9 9:42
9825	Young Hoon Kwon	225	1 9.3.1.23	45	1	T	Y	45.01 9.3.1.23	It needs further clarification which SR subfield corresponds which 20MHz out of 40/80/160/80+80 channel bandwidth.	As in the comment.	2017/1/9 9:42
9826	Young Hoon Kwon	225	1 9.3.1.23	45	38	T	Y	45.38 9.3.1.23	It should be Padding subfield in the Trigger frame, and is different from MAC padding field.	Modify the sentence to "User Info fields with AID = 0 is allocated only after User Info fields with AID not equals to 0, if any, and before the Padding subfield of the Trigger frame, if present.".	2017/1/9 9:42

9827	Young Hoon Kwon	225	1 9.3.1.23	45	37	T	Y	45.37 9.3.1.23	Normative behavior such as "User Info fields with AID = 0 shall be..." is not appropriate in clause 9. Move this part to sub-clause related with AP behavior for UL MU transmission.	As in the comment.	2017/1/9 9:42
9828	Young Hoon Kwon	225	1 9.3.1.23	47	35	T	Y	47.35 9.3.1.23	"Values 0 to 90" has 91 elements. However, -100dBm to -20dBm with 1dB resolution only has 81 element. So, this mapping is not correct.	Modify the description to "Values 0 to 90 map to -100dBm to -10dBm".	2017/1/9 9:42
9829	Young Hoon Kwon	225	1 9.3.1.23	47	39	T	Y	47.39 9.3.1.23	It is not clear why we need Target RSSI subfield set to 127 if it implies maximum transmit power for the assigned MCS, because the AP sets the target RSSI value to reasonably high such that the STA needs to use its maximum power. Rather, it may be better to imply that no restriction on STA's transmit power.	Modify the description to "Indicates to the STAthat the target received signal power of the HE trigger-based PPDU response is not applied.".	2017/1/9 9:42
9830	Young Hoon Kwon	225	1 9.3.1.23	47	56	T	Y	47.56 9.3.1.23	In case a Trigger frame is carried within an A-MPDU, it is possibe that padding can be done by EOF padding instead of Padding subfield in the Trigger frame. Therefore, the required duration for Padding subfield does not need to follow the equation here as long as total padding (Padding subfield in the trigger frame, EOF paddings, packet extension, etc) satisfies the processint time requirements. In this sense, equations 9-ax1 and 9-1x2 is not needed.	Delete Eq. 9-ax1, 9-ax2.	2017/1/9 9:42
9831	Young Hoon Kwon	225	1 9.3.1.23.1	48	61	T	Y	48.61 9.3.1.23.1	How to encode the TID Aggregation Limit subfield is not defined. In HE Capabilities element, Multi-TID Aggregation Support subfield is set to the number of TIDs minum 1 of QoS Data frames that can be aggregated. If the same rule is applied, it is not clear the meaning of value 0 in the TID Aggregation Limit subfield. If the TID Aggregation Limit subfield is set to the number of TIDs of frames that can be aggregated, the text shown in P49L1 "The value in the TID Aggregation Limit subfield in Trigger frame is less than or equal to the value indicated in the Multi-TID Aggregation Support field in the HE Capabilities element" is not valid. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9832	Young Hoon Kwon	225	1 9.3.1.23.1	48	64	T	Y	48.64 9.3.1.23.1	Then, how to indicate the STA can aggregate frames from 7 different TIDs? Need further clarification.	As in the comment.	2017/1/9 9:42
9833	Young Hoon Kwon	225	1 9.3.1.23.3	50	16	T	Y	50.16 9.3.1.23.3	Table 9-24c is for Multi-STA BA variant and is not for Multi-TID BA variant. Instead, in the baseline RevMC spec., it says "The Fragment Number subfield of the Block Ack Starting Sequence Control subfield is set to 0.". Therefore, this sentence is not in line with baseline rule. It needs clarification.	As in the comment.	2017/1/9 9:42
9834	Young Hoon Kwon	225	1 9.3.1.23.4	50	43	T	Y	50.43 9.3.1.23.4	The sentence "The Trigger Dependent Common Info field is not present in the MU-RTS frame." should not be a note.	Delete "NOTE --" and adjust font size accordingly in line 43.	2017/1/9 9:42
9835	Young Hoon Kwon	225	1 9.3.1.23.4	50	57	T	Y	50.57 9.3.1.23.4	As it is already mentioned that The RU Allocation subfield in the User Info field addressed to the STA follows the same definition as described in 9.3.1.23, additional explanation is not necessary.	Delete the paragraph (line 57 - 61).	2017/1/9 9:42
9836	Young Hoon Kwon	225	1 9.3.1.23.4	51	15	T	Y	51.15 9.3.1.23.4	The sentence "The Trigger Dependent User Info field is not present in the MU-RTS frame." should not be a note.	Delete "NOTE --" and adjust font size accordingly in line 15.	2017/1/9 9:42
9837	Young Hoon Kwon	225	1 9.3.1.23.7	52	5	T	Y	52.05 9.3.1.23.7	Currently, an AP can set the CS Required subfield to 0 only if the Trigger frame solicits Ack/BA and the length is shorter than some threshold value. As the BQRP does not solicits Ack/BA frame, the CS Required subfield is supposed to be set to 1. Therefore, there's no need to mention this.	Delete the sentence "The CS Required subfield is set to 1.".	2017/1/9 9:42

9838	Young Hoon Kwon	225	1 9.4.1.62	56	45	T	Y	56.45 9.4.1.62	Current spec allows preamble puncturing for DL MU transmission. If an AP is using preamble puncturing for DL MU transmission, it is not clear how to indicate compressed beamforming measurement. Thus, further clarification is needed for BW indication for preamble puncturing.	As in the comment.	2017/1/9 9:42
9839	Young Hoon Kwon	225	1 9.4.1.62	56	47	T	Y	56.47 9.4.1.62	Wrong description. Description for RU End Index is used for describing Sounding Dialog Token Number. Correct it.	As in the comment.	2017/1/9 9:42
9840	Young Hoon Kwon	225	1 9.4.1.63	58	28	T	Y	58.28 9.4.1.63	Wrong equation referral. Correct it.	As in the comment.	2017/1/9 9:42
9841	Young Hoon Kwon	225	1 9.4.2.6	67	57	T	Y	67.57 9.4.2.6	TIM frames and FILS frames may have different meaning depending on the timing of the frame sent, and this make cause wrong interpretation from STAs. For example, if TIM frames or FILS discovery frames are received from an HE non-AP STA that don't support broadcast TWT, these STAs don't know if these frames are at the beginning of a broadcast TWT SP or not, and thus, cannot figure out correct status. It needs further clarification.	Modify the third bullet to "Bit number N in the traffic indication virtual bitmap that corresponds to a broadcast TWT scheduled HE non-AP STA with AID N is determined as follows:".	2017/1/9 9:42
9842	Young Hoon Kwon	225	1 9.4.2.6	68	2	T	Y	68.02 9.4.2.6	The first bullet is wrong. In case an AP schedules for DL transmission, but not intends to schedule UL MU transmission for a STA with bit number N, the AP shall set the bit number N to 1. But, based on current sentence, that bit is set to 0 in this case.	Modify the first bullet to "Bit number N in the traffic indication virtual bitmap is 0 if the AP does not intend to transmit to the STA and does not intend to trigger the STA for an UL MU transmission during the TWT SP and before the next TWT SP.".	2017/1/9 9:42
9843	Young Hoon Kwon	225	1 9.4.2.200	69	63	T	Y	69.63 9.4.2.200	It is not clear the meaning when the Wake TBTT Negotiation subfield is set to 0 or 1. Need further clarification.	As in the comment.	2017/1/9 9:42
9844	Young Hoon Kwon	225	1 9.4.2.200	73	30	E	Y	73.30 9.4.2.200	Typo: STAT -> STA	As in the comment.	2017/1/9 9:42
9845	Young Hoon Kwon	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	Paragraph in line 39 - 42 needs to be deleted.	Delete the paragraph in line 39 - 42.	2017/1/9 9:42
9846	Young Hoon Kwon	225	1 10.3.2.3.7	114	32	T	Y	114.32 10.3.2.3.7	As the granularity of TXOP_DURATION parameter is coarse and the TXOP_DURATION value shall be less than or equal to actual remaining Duration value, when TXOP_DURATION value expires there's chance that packet transmission under ongoing TXOP duration is still going on, especially for the case that the most recent NAV update is based on TXOP_DURATION with granularity of 128 us. In this case, not invoking EIFS may result in high chance of packet collision. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9847	Young Hoon Kwon	225	1 10.3.2.4	115	8	T	Y	115.08 10.3.2.4	It is not clear how to check if the received PPDU is not triggered by the STA. Need further clarification.	Modify the third bullet in P115L8 to "The RXVECTOR parameter FORMAT is not HE_TRIG or the RXVECTOR parameter BSS_COLOR is different from the BSS Color of the STA.".	2017/1/9 9:42
9848	Young Hoon Kwon	225	1 10.3.2.4a	115	46	T	Y	115.46 10.3.2.4a	Description in this new sub-clause is very vague, and it does not give clear recommended behavior to AP or non-AP STA. Need further clarification.	Describe specific operation for AP and non-AP STA. Or, delete the sub-clause 10.3.2.4a.	2017/1/9 9:42
9849	Young Hoon Kwon	225	1 10.3.2.8a.1	116	3	E	Y	116.03 10.3.2.8a.1	Typo: there are two periods at the end of the sentence.	Delete one period at the end of the sentence.	2017/1/9 9:42
9850	Young Hoon Kwon	225	1 10.3.2.8a.3	117	25	T	Y	117.25 10.3.2.8a.3	As shown in 9.3.1.23.4, the RU Allocation subfield for MU-RTS frame is set to indicate P20/P40/P80/P160/80+80. In other words, once the MU-RTS is received correctly, there's no way that the RU Allocation is set to other values. In this sense, it is meaningless to add the third bullet.	Delete the third bullet.	2017/1/9 9:42
9851	Young Hoon Kwon	225	1 10.3.2.8a.3	117	32	T	Y	117.32 10.3.2.8a.3	In 2.4GHz band, non-HT PPDU may indicate not only Clause 17 PPDU but also other PPDU formats (e.g., 802.11b). So, it's better to clearly mention that the non-HT PPDU here implies Clause 17 PPDU format.	As in the comment.	2017/1/9 9:42
9852	Young Hoon Kwon	225	1 10.3.2.10.1	118	55	E	Y	118.55 10.3.2.10.1	Need a space between transmission and that.	change "transmisstionthat" to "transmission that".	2017/1/9 9:42

9853	Young Hoon Kwon	225	1 10.3.2.10.1	119	9	T	Y	119.09 10.3.2.10.1	Response to an MU-BAR frame shall use a trigger-based PPDU format. Therefore, this is not the case for this sub-clause.	Delete "or MU-BAR frame with multi-TID BAR variant" from the sentence.	2017/1/9 9:42
9854	Young Hoon Kwon	225	1 10.3.2.10.3	121	55	T	Y	121.55 10.3.2.10.3	The case "to whom the STA sent the QoS Data frame(s) with Ack Policy subfield equal to Block Ack" is not for UL MU PPDU transmission. Therefore, it's better to exclude this explanation in this subclause, as this sub-clause describes acknowledgement procedure for UL MU PPDU.	Delete ", to whom the STA sent the QoS Data frame(s) with Ack Policy subfield equal to Block Ack or" from the paragraph.	2017/1/9 9:42
9855	Young Hoon Kwon	225	1 10.7.9	124	25	T	Y	124.25 10.7.9	In 11ac, these are not applicable because these frames don't exist in 5GHz band, but 11ax can be operated in both 2.4GHz and 5GHz. HE STA may also need to support DSSS/ERP format for response frame. So, modulation class for DSSS/ERP-OFDM needs to be defined similar to 11n.	Change "N/A" in "DSSS and HR/DSSS" and "ERP-OFDM" case to the same as conditions in Clause 19.	2017/1/9 9:42
9856	Young Hoon Kwon	225	1 10.9	127	22	T	Y	127.22 10.9	OMI indicates operating mode for both transmit and receive.	Modify the second bullet to "A value of 1 in the Control ID subfield when the transmitting STA changes the receive or transmit operating mode, as described in 27.8 (Operating mode indication).".	2017/1/9 9:42
9857	Young Hoon Kwon	225	1 10.22.2.2	129	23	T	Y	129.23 10.22.2.2	There's no case that an MPDU requires more than one immediate response. In case of MU transmission, more than one MPDUs are carried in a PPDU, but even in case each MPDU may solicit upto 1 immediate response. So, clarification is needed here.	As in the comment.	2017/1/9 9:42
9858	Young Hoon Kwon	225	1 10.22.2.2	130	1	T	Y	130.01 10.22.2.2	The first two paragraphs are acward and meaningless. For example, transmission of a frame using trigger based PPDU is not a case for events that a STA invokes backoff procedure. (For example it is not within the conditions a) - f) shown in 10.22.2.2 of the baseline spec.). Also, it is not a case for a slot boundary. (For example, it is not within the conditions a) - f) shown in 10.22.2.4 of the baseline spec.). Therefore, based on baseline procedure, there's nothing supposed to happen in terms of backoff counter even under current baseline spec. These two paragraphs only makes confusion without having any additional clarification.	Delete the first two paragraphs or make clarification.	2017/1/9 9:42
9859	Young Hoon Kwon	225	1 10.22.2.2	130	11	T	Y	130.11 10.22.2.2	This is not appropriate sub-clause for describing the retry counter issue.	Move the paragraph to appropriate part in sub-clause 10.22.2.11.	2017/1/9 9:42
9860	Young Hoon Kwon	225	1 10.22.2.6	131	34	T	Y	131.34 10.22.2.6	As described in P131L27, this mode applies only to an AP that supports MU transmission. However, sub-clause 27.10.4 is not related with MU transmission. In this sense, this is a wrong reference.	Change the reference to an appropriate sub-clause.	2017/1/9 9:42
9861	Young Hoon Kwon	225	1 10.22.2.8	132	64	T	Y	132.64 10.22.2.8	Multiple HE trigger-based PPDU can be sent as long as all the trigger-based PPDUs are sent as immediate response to same Trigger frame. Need further clarification	As in the comment.	2017/1/9 9:42
9862	Young Hoon Kwon	225	1 10.22.2.8	133	5	E	Y	133.05 10.22.2.8	Missing article.	Trigger frame -> A Trigger frame	2017/1/9 9:42
9863	Young Hoon Kwon	225	1 10.22.2.10	133	47	T	Y	133.47 10.22.2.10	In 10.22.2.10 of the baseline spec., rule fortermination of TXOP is defined for all PPDU format cases. Here, a TXOP holder should transmit a short control frame as the final transmission in a TXOP to prevent 3rd party STA from invoking EIFS. However, in HE PPDU case, as the TXOP_DURATION is indicated in the PHY header, there's no reason to have this rule unless TXOP_DURATION field is set to all 1s. Clarification is needed for TXOP termination rule for HE PPDU format.	As in the comment.	2017/1/9 9:42

9864	Young Hoon Kwon	225	1 10.24.10.3	134	24	T	Y	134.24 10.24.10.3	It is not clear if both MU-BAR and GCR MU-BAR are allowed to request BA for GCR frames. If MU-BAR can be used, why GCR MU-BAR is additionally defined? Need further clarification.	As in the comment.	2017/1/9 9:42
9865	Young Hoon Kwon	225	1 10.28.3	136	50	T	Y	136.50 10.28.3	Non-HE STA does not solicit Multi-STA BlockAck as it is newly defined in 11ax. Therefore, if this rule is applied only to non-HE STA, we don't need to mention Multi-STA BlockAck. Also, if we define a rule for non-HE RD initiator, we also need to define a rule for HE RD initiator.	As in the comment.	2017/1/9 9:42
9866	Young Hoon Kwon	225	1 10.28.4	137	11	T	Y	137.11 10.28.4	Description is needed in case the last frame received from the RD initiator is Multi-TID A-MPDU.	As in the comment.	2017/1/9 9:42
9867	Young Hoon Kwon	225	1 10.43.1	137	42	T	Y	137.42 10.43.1	Currently TWT setup frame is defined under S1G Action frame. However, as TWT is going to be used not only for S1G STA but also for HE STA, it's better to categorize TWT setup frame in other way.	As in the comment.	2017/1/9 9:42
9868	Young Hoon Kwon	225	1 11.1.3.10	141	38	T	Y	141.38 11.1.3.10	When Beacon frames are transmitted in two PHY formats, it says one of the format shall be non-HE format. However, as baseline spec. says the beacon frame to be carried in non-HE (duplicate) format, it shall be non-HT format instead of non-HE format.	As in the comment.	2017/1/9 9:42
9869	Young Hoon Kwon	225	1 11.2.2.6	142	36	T	Y	142.36 11.2.2.6	In baseline spec., there's no More Data Ack subfield in the QoS Info field of a frame when sent by an AP. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9870	Young Hoon Kwon	225	1 11.2.2.17	143	48	T	Y	143.48 11.2.2.17	One Broadcast TWT element can have multiple broadcast TWT schedules. Therefore, even in case there'sa Broadcast TWT element included in a Beacon frame, its scheduled access can be modified at any time. In this sense, any change/modification in Broadcast TWT element may be considered as a critical update.	Change the item n) to "Inclusion or modification of a Broadcast TWT element"	2017/1/9 9:42
9871	Young Hoon Kwon	225	1 11.2.2.17	143	49	T	Y	143.49 11.2.2.17	Similar to item l), modification of the HE Operation element needs to be considered as a critical update	At the end of the paragraph, add another bullet that says "Modification of the HE Operation element".	2017/1/9 9:42
9872	Young Hoon Kwon	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	A non-AP HE STA can transmit HE MU PPDU. Therefore, receiving an HE MU PPDU by an HE AP does not guarantee that the received frame is an inter-BSS frame. Moreover, if an HE AP receives an HE MU PPDU, it can check if the received frame is an inter/intra-BSS frame by RXVECTOR BSS_COLOR, which is already mentioned in the first bullet. Therefore, adding HE MU PPDU does not need to be added here.	Delete "or an HE MU PPDU" in the last bullet.	2017/1/9 9:42
9873	Young Hoon Kwon	225	1 27.2.1	150	16	T	Y	150.16 27.2.1	If a received frame is considered to be intra-BSS frame based on the RXVECTOR parameter PARTIAL_AID, it is possible that the STA can determine that the frame is an inter-BSS frame based on the MAC address. This case needs to be clarified, too.	Modify the sentence in P150L16 to "If the received frame satisfies both intra-BSS and inter-BSS conditions, the decision made by using the MAC address takes precedence over the decision made by using the RXVECTOR parameter BSS_COLOR or PARTIAL_AID.".	2017/1/9 9:42

9874	Young Hoon Kwon	225	1 27.2.2	151	20	T	Y	151.20 27.2.2	It is not limited to the case of receiving an HE trigger-based PPDU triggered by the STA. For example, if an AP transmits an HE extended-range SU PPDU and expecting a response frame in the HE extended-range SU PPDU, the AP shall not update intra-BSS NAV by the response frame (even if the AP fails to decode the payload). Therefore, if the STA is a TXOP holder and receives an intra-BSS frame without any valid payload, the STA shall update the intra-BSS NAV based on the RXVECTOR parameter TXOP_DURATION. Clarification is needed.	As in the comment.	2017/1/9 9:42
9875	Young Hoon Kwon	225	1 27.4.1	157	21	E	Y	157.21 27.4.1	There's open paranthesis.	Modify the sentence to "... (see 10.24.7.1 (Introduction))."	2017/1/9 9:42
9876	Young Hoon Kwon	225	1 27.4.1	157	29	T	Y	157.29 27.4.1	Clarification is needed in case the AP is a member of multi-BSSID set.	As in the comment.	2017/1/9 9:42
9877	Young Hoon Kwon	225	1 27.4.1	157	45	T	Y	157.45 27.4.1	The sentence "An HE non-AP STA shall transmit a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields and shall set the RA field to the address of the recipient STA that requested the Block Ack frame." is misleading because in P157L28 already mentioned that "An HE non-AP STA that sends a Multi-STA BlockAck frame shall set the AID subfield in the Per STA Info field of the Multi-STA BlockAck frame to 0 and the RA field to the BSSID when the intended receiver of the frame is the AP.". So, delete this sentence or clarification is needed.	As in the comment.	2017/1/9 9:42
9878	Young Hoon Kwon	225	1 27.4.1	157	48	T	Y	157.48 27.4.1	What does "each received Multi-STA" mean? Clarification is needed.	As in the comment.	2017/1/9 9:42
9879	Young Hoon Kwon	225	1 27.4.2	158	36	T	Y	158.36 27.4.2	As it is a single MPDU, it shall not be a plural.	Modify the sentence to "... and the TID field to the TID value of that MPDU to indicate ...".	2017/1/9 9:42
9880	Young Hoon Kwon	225	1 27.4.2	159	5	T	Y	159.05 27.4.2	Not sure what does "each received Multi-STA BlockAck frame" mean. For a soliciting PPDU, there's only one Multi-STA BlockAck frame available. However, the Multi-STA BlockAck frame may include multiple Per STA Info field. Clarification is needed.	As in the comment.	2017/1/9 9:42
9881	Young Hoon Kwon	225	1 27.4.2	159	8	T	Y	159.08 27.4.2	The last paragraph is identical to the description shown in sub-clause 27.4.1 (P157L49), and it does not give any additional information. Also, the second and third bullets of this paragraph is not organized properly. It's better to delete this paragraph.	Delete the last paragraph of the sub-clause 27.4.2.	2017/1/9 9:42
9882	Young Hoon Kwon	225	1 27.4.3	159	34	T	Y	159.34 27.4.3	The first two sub bullets are confusing. In case the negotiated buffer size is within [1, 64] which is also within [1, 256], the first sub bullet says it shall use bitmap size of 64, but the second sub bullet sais to use either 64 or 256. Clarification is needed. The same thing applies to the Multi-STA BlockAck frame case. Clarification is needed.	As in the comment.	2017/1/9 9:42
9883	Young Hoon Kwon	225	1 27.4.4.2	160	58	T	Y	160.58 27.4.4.2	It's better to further describe that this this rule is applied for the case that the AP solicts immediate response in SU format.	Modify the text to "A non-AP STA that receives a DL MU PPDU that solicits an immediate response in SU PPDU format shall follow the following acknowledgment procedure:".	2017/1/9 9:42
9884	Young Hoon Kwon	225	1 27.4.4.3	161	16	T	Y	161.16 27.4.4.3	It's better to further describe that this this rule is applied for the case that the AP solicts immediate response in HE trigger-based format.	Modify the text to "A non-AP STA that receives a DL MU PPDU that solicits an immediate response in an HE trigger-based PPDU format shall follow the following acknowledgment procedure:".	2017/1/9 9:42

9885	Young Hoon Kwon	225	1 27.4.4.3	161	20	T	Y	161.20 27.4.4.3	In case of a S-MPDU context, isn't it possible to have Trigger frame in the A-MPDU? Maybe not.	Modify the sentence of bullet 1) to "If the DL MU PPDU carries a S-MPDU intended to it that solicits an immediate response, and an UL MU Response Scheduling A-Control field is present, ...".	2017/1/9 9:42
9886	Young Hoon Kwon	225	1 27.4.4.3	161	22	T	Y	161.22 27.4.4.3	For bullets 2) and 3), it's better to mention a non-AP STA's behavior when the STA didn't receive Trigger frame correctly.	As in the comment.	2017/1/9 9:42
9887	Young Hoon Kwon	225	1 27.4.4.4	161	51	T	Y	161.51 27.4.4.4	In bullet 2), Multi-STA BlockAck frame has two different cases: TID set to 14 with Ack Type 1, and Ack Type 0. However, in bullet 3) it just says Multi-STA BlockAck without having any details. It would be better for bullet 2) and bullet 3) to have same level of description.	Modify the sentence of bullet 3) to "... then the HE AP shall send a Multi-STA BlockAck frame with the Ack Type field set to 1 and the TID field set to 14 or a Multi-STA BlockAck frame with the Ack Type field set to 0 carried in a DL SU PPDU format.".	2017/1/9 9:42
9888	Young Hoon Kwon	225	1 27.4.4.5	162	26	E	Y	162.26 27.4.4.5	Double periods.	Change ".." to ".".	2017/1/9 9:42
9889	Young Hoon Kwon	225	1 27.5.1.1	162	44	T	Y	162.44 27.5.1.1	What does "allocating spatial streams to more than one recipient STA" mean? Poor description, and needs rewriting.	As in the comment.	2017/1/9 9:42
9890	Young Hoon Kwon	225	1 27.5.1.1	162	53	T	Y	162.53 27.5.1.1	This sub-clause is for HE DL MU operation, however, the padding procedure shown in 27.10.3 is for HE UL MU operation. Therefore, the padding procedure mentioned here is irrelevent. Need further clarification.	As in the comment.	2017/1/9 9:42
9891	Young Hoon Kwon	225	1 27.5.1.1	162	57	T	Y	162.57 27.5.1.1	DL OFDMA With MIMO Support field is not defined in HE Capabilities element. Need definition for it.	As in the comment.	2017/1/9 9:42
9892	Young Hoon Kwon	225	1 27.5.1.3	163	29	T	Y	163.29 27.5.1.3	It is not clear how to obtain the channel availability information for each 20MHz, especially for unsolicited BQR case. For example, how to measure and when to measure the channel availability for each 20MHz is not clear. It needs further clarification.	As in the comment.	2017/1/9 9:42
9893	Young Hoon Kwon	225	1 27.5.1.3	163	43	T	Y	163.43 27.5.1.3	When a STA receives a BQRP variant Trigger frame which does not schedule an RU for the STA, it is not clear if the STA shall participate random access or not. Need further clarification.	As in the comment.	2017/1/9 9:42
9894	Young Hoon Kwon	225	1 27.5.2.1	164	24	T	Y	164.24 27.5.2.1	Class A/B is not limited to an UL OFDMA PPDU. It can be applied HE trigger-based PPDU including not only OFDMA but also MU-MIMO cases.	Modify the last paragraph of 27.5.2.1 to " A STA transmitting an UL trigger-based PPDU shall operate as either ...".	2017/1/9 9:42
9895	Young Hoon Kwon	225	1 27.5.2.2.1	164	46	E	Y	164.46 27.5.2.2.1	Double periods.	Change ".." to ".".	2017/1/9 9:42
9896	Young Hoon Kwon	225	1 27.5.2.2.1	165	27	T	Y	165.27 27.5.2.2.1	This sentence is somewhat misleading. An AP shall ensure that the duration from the end of the User Info field to the end of the PPDU shall be longer than the maximum MinTrigProcTime value. However, how to achieve this is an AP's implementation issue, such as using EOF padding, Trigger frame padding, or both, etc. Therefore, it is not appropriate to mention that the AP shall apply the Trigger Frame MAC Padding field with duration corresponding to the longest value among all STAs... Further clarification is needed.	As in the comment.	2017/1/9 9:42
9897	Young Hoon Kwon	225	1 27.5.2.2.1	165	31	T	Y	165.31 27.5.2.2.1	How to determine the padding size for RU that is used for random access? As RU for random access channel is supposed to be located at the end of the Trigger frame, and any STA can utilize the RU for random access, additional padding requirement for random access channel seems to be more critical. For this purpose, an AP may need to indicate duration of Trigger frame MAC Padding that it provides in case random access RU is allocated, or non-AP STA's behavior may need to be defined in case the padding duration is not enough for a STA to transmit using random access channel.	As in the comment.	2017/1/9 9:42

9898	Young Hoon Kwon	225	1 27.5.2.2.2	166	10	T	Y	166.10 27.5.2.2.2	How about Trigger Dependent Common Info subfield? For example, if an AP sends GCR MU-BAR Trigger frame and MU-BAR Trigger frame together, it is not sure how to set the Trigger Dependent Common Info subfield of MU-BAR frame.	Change the txt "except the Trigger Type subfield," to "except the Trigger Type subfield and Trigger Dependent Common Info subfield,".	2017/1/9 9:42
9899	Young Hoon Kwon	225	1 27.5.2.2.2	167	6	T	Y	167.06 27.5.2.2.2	This sentence is not in line with sentence shown in P49L1, which says "The value in the TID Aggregation Limit subfield in Trigger frame is less than or equal to the value indicated in the Multi-TID Aggregation Support field in the HE Capabilities element". In my opinion, the text shown in P167L6 makes more sense than the other one. Anyway, further clarification is needed.	As in the comment.	2017/1/9 9:42
9900	Young Hoon Kwon	225	1 27.5.2.2.2	167	15	T	Y	167.15 27.5.2.2.2	The sentence is not written correctly.	Change the sentence to "The AP may assign any value defined in Table 9-25i (Preferred AC subfield encoding) in the Preferred AC subfield for an HE STA that the AC Preference level subfield in the Trigger Dependent User Info field is set to 1 and is identified by the AID12 subfield of the User Info field of a Basic Trigger frame.".	2017/1/9 9:42
9901	Young Hoon Kwon	225	1 27.5.2.2.3	167	25	T	Y	167.25 27.5.2.2.3	First of all, wrong sub-clause number: it should be 10.22.2.7 instead of 9.22.2.7. Moreover, sub-clause 10.22.2.7 describes overall multiple frame transmission in an EDCA TXOP that includes successful transmission cases and also unsuccessful transmission cases that requires anoher backoff or PIFS recovery. Therefore, by just mention that the same procedure is applied does not give clear description. More specifically, when an AP receives an immediate response with at least on MPDU from at least one STA solicited by a Trigger frame, it should be considered as "completion of the immediately preceding frame exchange sequence" in the context shown in 10.22.2.7. So, further description is needed.	As in the comment.	2017/1/9 9:42
9902	Young Hoon Kwon	225	1 27.5.2.2.3	167	30	E	Y	167.30 27.5.2.2.3	Wrong sub-clause number	9.22.2.2 -> 10.22.2.2	2017/1/9 9:42
9903	Young Hoon Kwon	225	1 27.5.2.2.3	167	30	T	Y	167.30 27.5.2.2.3	This sentence is not true if the AP sends more than one Trigger frame in a PPDU. For example, if the AP sends two Trigger frames and received immediate trigger-based PPDU in response to only one Trigger frame, even if the AP does not receive an immediate response with at least one MPDU from at least one STA solicited by a Trigger frame, its transmission is not failure. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9904	Young Hoon Kwon	225	1 27.5.2.3	167	54	T	Y	167.54 27.5.2.3	Transmitting a trigger-based PPDU using random access resource is also available. Need further descriiption on this.	As in the comment.	2017/1/9 9:42
9905	Young Hoon Kwon	225	1 27.5.2.3	168	8	T	Y	168.08 27.5.2.3	27.2.2 does not describe rule on how to set TXOP_DURATION value.Need further clarification	As in the comment.	2017/1/9 9:42
9906	Young Hoon Kwon	225	1 27.5.2.3	168	46	E	Y	168.46 27.5.2.3	"shall be set to" is mentioned twice in a sentence	Delete one of "shall be set to" in the sentence	2017/1/9 9:42
9907	Young Hoon Kwon	225	1 27.5.2.3	168	51	E	Y	168.51 27.5.2.3	"shall be set to" is mentioned twice in a sentence	Delete one of "shall be set to" in the sentence	2017/1/9 9:42
9908	Young Hoon Kwon	225	1 27.5.2.3	169	23	T	Y	169.23 27.5.2.3	27.2.2 does not describe rule on how to set TXOP_DURATION value.Need further clarification	As in the comment.	2017/1/9 9:42
9909	Young Hoon Kwon	225	1 27.5.2.3	169	29	T	Y	169.29 27.5.2.3	It is not clear how to set TXVECTOR HE_SIGA_RESERVED as UL MU Response Scheduling A-Control subfield does not include this information. Needs clarification	As in the comment.	2017/1/9 9:42

9910	Young Hoon Kwon	225	1 27.5.2.3	169	18	T	Y	169.18 27.5.2.3	In case of SR_Disallowed setting, only SRP-based spatial reuse is disallowed, which implies that OBSS_PD based SR operation is still allowed. As NDP frame is used for channel measurement, not only SRP based spatial reuse but also OBSS_PD based spatial reuse shall be disallowed. In this sense, it's better to set to "SR_delayed" as no spatial reuse operation will be allowed during the PPDU duration.	Change the sentence to "SPATIAL_REUSE shall be set to the value indicating SR_Delayed".		2017/1/9 9:42
9911	Young Hoon Kwon	225	1 27.5.2.4	170	23	T	Y	170.23 27.5.2.4	In sub-clause 21.3.18.5.2, ED-based CCA channel status decision is made for channels of Primary 20MHz, Secondary 20MHz, Secondary 40MHz, and Secondary 80MHz only. However, for trigger-based PPDU transmission, the ED-based CCA channel status decision needs to be done only for those 20MHz channels thar RU is assigned for a STA. Therefore, we cannot just follow ED-based CCA rule defined in 21.3.18.5.2. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9912	Young Hoon Kwon	225	1 27.5.2.4	170	29	T	Y	170.29 27.5.2.4	It is misleading. For a STA that is solicited by a Trigger frame needs to consider NAV if CS_Required bit is set to 1 in the Trigger frame and will not consier NAV if CS_Required bit is set to 0. So, the first bullet should be th AP's behavior on when to set the CS_Required bit to 1.	Change the first bullet to "The CS Required subfield in the Trigger frame is set to 1."		2017/1/9 9:42
9913	Young Hoon Kwon	225	1 27.5.2.4	170	31	T	Y	170.31 27.5.2.4	This is wrong. The STA may ignore intra-NAV but still needs to repect basic NAV. Therefore, even though NAV was set by an intra-BSS frame (intra-NAV is set), if there's non-zero basic NAV, the STA shall consider NAV.	Change the second bullet to "The basic NAV has non-zero value.".		2017/1/9 9:42
9914	Young Hoon Kwon	225	1 27.5.2.4	170	37	T	Y	170.37 27.5.2.4	It needs further clarification that even though virtual CS is busy, the STA is allowed to transmit if basic NAV is zero.	As in the comment.		2017/1/9 9:42
9915	Young Hoon Kwon	225	1 27.5.2.5	171	19	T	Y	171.19 27.5.2.5	As reporting the buffer status for a given TID in the Queue Size subfield is a mandatory feature, bit 4 of QoS Control field shall be set to 1, which implies that bits 8-15 of the QoS Control field represents Queue Size.	At the end of the 2nd paragraph of 10.13.1, add the following text: "HE non-AP STA shall set the bit 4 to1 across all MPDUs that contain the Qos Control fields."		2017/1/9 9:42
9916	Young Hoon Kwon	225	1 27.5.2.5	171	57	T	Y	171.57 27.5.2.5	When a STA receives a BSRP variant Trigger frame which does not schedule an RU for the STA, it is not clear if the STA shall participate random access or not. Need further clarification.	As in the comment.		2017/1/9 9:42
9917	Young Hoon Kwon	225	1 27.5.2.5	172	6	T	Y	172.06 27.5.2.5	If the AP does not support the A-BSR Support subfield, it shall not send BSRP variant Trigger frame. Therefore, "when the AP indicated its support..." is meaningless.	Delete "when the AP has indicated its support in the A-BSR Support subfield of its HE Capabilities element" in the second sub-bullet.		2017/1/9 9:42
9918	Young Hoon Kwon	225	1 27.5.2.6.2	173	30	T	Y	173.30 27.5.2.6.2	What does "initial HE trigger-based PPDU transmission" mean? If this implies the first HE trigger-based PPDU transmission within a TXOP of the serving AP, it means that OCW is reset for every TXOP, which may not be the preferred operation. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9919	Young Hoon Kwon	225	1 27.5.2.6.2	173	36	T	Y	173.36 27.5.2.6.2	It is not clear if an HE STA is allowed to participate in random access procedure even in case the HE STA does not have anything to transmit. For example, if the HE STA keeps decreasing the OBO counter by participating random access procedure even in case the STA does not have anything to transmit, the STA may get advantage when the STA has something to transmit because the STA may use smaller OBO counter value. This is a cheating and shouldn't be allowed. Further clarification is needed.	As in the comment.		2017/1/9 9:42

9920	Young Hoon Kwon	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	APs and non-AP STAs behavior for NDP feedback report procedure shall be defined clearly.	As in the comment.	2017/1/9 9:42
9921	Young Hoon Kwon	225	1 27.5.3	174	37	T	Y	174.37 27.5.3	Definition of a cascading sequence of MU PPDUs in a TXOP is not clear. It says "allowing alternating HE MU PPDUs and HE trigger-based PPDUs starting with an HE MU PPDU in the same TXOP". If this defines the cascaded sequence, DL MU transmission that solicits immediate response is also a cascading sequence as it has the sequence of DL MU PPDU followed by UL trigger based PPDU. If this is the case, DL MU transmission that solicits immediate response is allowed only if MU Cascading Support field in the HE Capabilities element is set to 1, which does not make sense. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9922	Young Hoon Kwon	225	1 27.5.3	175	32	T	Y	175.32 27.5.3	In P174L37, it says "alternating HE MU PPDUs and HE trigger-based PPDUs starting with an HE MU PPDU in the same TXOP". It implies that cascading sequence starts from DL MU PPDU. However, in P175L33, it says "An HE MU PPDU transmitted by the AP a SIFS after an HE trigger-based PPDU has the following AMPDU contents", which implies that DL MU PPDU follows UL trigger-based PPDU. These two sentences are not clearly in line with each other. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9923	Young Hoon Kwon	225	1 27.6.2	176	17	T	Y	176.17 27.6.2	Does this mean that an HE STA is not allowed to initiate VHT sounding sequnce? Further clarification is needed.	Modify the text to "The HE beamformer shall initiate an HE sounding sequence by transmitting an HE NDP Announcement frame followed by an HE NDP after a SIFS.".	2017/1/9 9:42
9924	Young Hoon Kwon	225	1 27.6.2	176	30	T	Y	176.30 27.6.2	If the NDPA frame has only one STA Info field, Ng, codebook, and Nc subfield in NDPA frame shall be reserved.	Insert the following text at the end of 9,3,1,20: "If the HE NDP Announcement frame contains only one STA Info field, Feedback Type and Ng subfield and Nc subfield are reserved.".	2017/1/9 9:42
9925	Young Hoon Kwon	225	1 27.6.2	177	1	T	Y	177.01 27.6.2	There's no separate Ng field. And, current Feedback Type and Ng subfield includes available Ng values for MU type feedback to be 4 and 16 only. Therefore, this sentence does not have any meaning.	Delete the text "An HE beamformer that sets the Feedback Type subfield of the STA Info field to MU shall set the Ng field value in the STA Info field of the HE NDP Announcement frame to either 0 (for Ng = 4) or 1 (for Ng = 16).".	2017/1/9 9:42
9926	Young Hoon Kwon	225	1 27.6.2	177	26	T	Y	177.26 27.6.2	Channel width information in Operation Mode Notification frame also needs to be considered for both starting RU index and ending RU index, similar to second bullet in P176L50.	As in the comment.	2017/1/9 9:42
9927	Young Hoon Kwon	225	1 27.6.2	177	35	T	Y	177.35 27.6.2	There's no separate Ng field. Also, as shown in Table 9-25a, Feedback Type and Ng subfield and Codebook Size subfield are jointly encoded. Therefore, it's better to say that these two subfields are reserved in an HE NDPA frame has only one STA Info field.	As in the comment.	2017/1/9 9:42
9928	Young Hoon Kwon	225	1 27.6.2	178	12	T	Y	178.12 27.6.2	In Figure 27-4, the brace on the bottom (saying "0..N times") shall include SIFS in front of the Trigger.	Modify the figure as in the comment	2017/1/9 9:42
9929	Young Hoon Kwon	225	1 27.6.2	178	32	T	Y	178.32 27.6.2	Also, CQI-only feedback needs to be added.	As in the comment.	2017/1/9 9:42
9930	Young Hoon Kwon	225	1 27.6.4	179	37	T	Y	179.37 27.6.4	By definition there's no PSDU in an NDP frame. Therefore, there's no TA/RA/SA/DA for the NDP frame. I don't understand what does "destination" or "source" of an HE NDP imply in these two sentences. Considering spec. text shown in baseline spec., these two sentences do not have any information.	Delete the last two paragraphs in 27.6.4.	2017/1/9 9:42

9931	Young Hoon Kwon	225	1 27.7.2	180	18	T	Y	180.18 27.7.2	It is not clear what "shall negotiate individual TWT agreements" mean if TWT Required subfield is set to 1. Negotiation does not imply active individual TWT agreement. For example, during the negotiation, it is possible that responding STA may not Accept TWT. So, further clarification is needed on what each STA needs to do if TWT Required subfield is set to 1.	As in the comment.		2017/1/9 9:42
9932	Young Hoon Kwon	225	1 27.7.2	180	41	T	Y	180.41 27.7.2	Definition of trigger enabled TWT may need to be present before its description, or at least reference number for operation on trigger enabled TWT may need to be inserted here.	As in the comment.		2017/1/9 9:42
9933	Young Hoon Kwon	225	1 27.7.2	181	14	T	Y	181.14 27.7.2	What will be TWT requesting STA's behavior for trigger-enabled TWT SP which is an announced TWT SP? Transmission of PS-Poll or APSD trigger frame is considered as initiating transmission of frames, current texts may not be well in line with each other. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9934	Young Hoon Kwon	225	1 27.7.2	182	6	T	Y	182.06 27.7.2	Event shown in 1) only implies that the AP will not schedule any UL MU transmission during remaining TWT SP, and it does not give any information on DL transmission. Therefore, the event 1) does not prohibit an AP from sending DL transmission during the TWT SP. Then, it is not sure how can a STA go to doze state with event 1)? Further clarification is needed.	As in the comment.		2017/1/9 9:42
9935	Young Hoon Kwon	225	1 27.7.3.3	185	55	T	Y	185.55 27.7.3.3	Event shown in 1) only implies that the AP will not schedule any UL MU transmission during remaining TWT SP, and it does not give any information on DL transmission. Therefore, the event 1) does not prohibit an AP from sending DL transmission during the TWT SP. Then, it is not sure how can a STA go to doze state with event 1)? Further clarification is needed.	As in the comment.		2017/1/9 9:42
9936	Young Hoon Kwon	225	1 27.7.3.3	185	62	T	Y	185.62 27.7.3.3	The last sentence should be written as the third event for termination. Therefore, it should be enumerated as 3). Also, "TWT responding STA" need to be changed to "TWT scheduling STA".	As in the comment.		2017/1/9 9:42
9937	Young Hoon Kwon	225	1 27.8.2	189	8	E	Y	189.08 27.8.2	Wrong grammar.	Modify the sentence to "After transmitting an immediate acknowledgement for the frame containing the OMI A-Control field, ...".		2017/1/9 9:42
9938	Young Hoon Kwon	225	1 27.8.3	189	26	T	Y	189.26 27.8.3	Main purpose of including Tx NSS in OMI is to use less number of Tx RF chains for power savings. However, different from Rx NSS, the number of Tx RF chains is more closely related with the number of space-time streams (N_STS) compared to the number of spatial streams (N_SS). For example, even in case a STA indicates Tx NSS to be 1, an serving AP can still allocate the STA single spatial stream with STBC, which requires at least two transmit RF chains to be turned on. Because this is still possible, even if a STA supporting STBC indicates Tx NSS = 1 to the serving AP, the STA shall have at least two Tx RF chains on, which defeats the original purpose of having Tx NSS subfield in OMI. For this issue, a simple remedy is to change Tx NSS subfield to indicate the maximum number of space-time streams (N_STS) and modify the related operation accordingly.	As in the comment.		2017/1/9 9:42

9939	Young Hoon Kwon	225	1 27.8.3	189	54	T	Y	189.54 27.8.3	This bullet is misleading. For example, if an OMI initiator sets the Channel Width to 20MHz, and the serving AP allocates this STA for UL trigger-based PPDU transmission for RU size that is less than 20MHz but is in the secondary 20MHz channel (let us assume that the trigger frame is carried in non-HT duplicated frame and the STA received only the primary 20MHz channel), the STA may not be available to transmit the frame unless the STA switches its transmission center frequency during SIFS time, which is not a normal operation. So, further clarification is needed.	As in the comment.		2017/1/9 9:42
9940	Young Hoon Kwon	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	Is it a sub-cluase name? If this is an sub-clause name, make it as a sub-clause name. If not, delete this sentence.	As in the comment.		2017/1/9 9:42
9941	Young Hoon Kwon	225	1 27.9.2.1	190	53	T	Y	190.53 27.9.2.1	In case of SR delay, as the PHYCCARESET.request primitive is issued at the end of the PPDU, it is quite straight-forward that a STA may resume its backoff procedure after the end of the PPDU if CCA is idle. This is also described in the last paragraph in page 190 again. Therefore, this sentence does not give any further information and is just redundant. It's better to delete this sentence. Same thing goes to following "NOTE".	As in the comment.		2017/1/9 9:42
9942	Young Hoon Kwon	225	1 27.9.2.1	190	59	T	Y	190.59 27.9.2.1	To make the process clearer, it's better to mention one step further details. For example, when PHY sublayer receives a PHY-CCARESET.request frimitive and performs CCA, the PHY sublayer sends PHY-CCARESET.confirm primitive before sending PHY-CCA.indication primitive.	Modify the paragraphs to "If an HE STA's MAC sublayer issues a PHY-CCARESET.request primitive and not update its NAV timer as allowed above, the HE STA's PHY sublayer issues a PHY-CCARESET.confirm primitive and the HE STA may resume its backoff procedure when the medium condition is IDLE as defined in 10.22.2.2 (EDCA backoff procedure).".		2017/1/9 9:42
9943	Young Hoon Kwon	225	1 27.9.2.1	190	48	T	Y	190.48 27.9.2.1	3dB deboost needs to be considered not only for OBSS_PD based spatial reuse but also for SRP-based spatial reuse. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9944	Young Hoon Kwon	225	1 27.9.2.2	191	62	T	Y	191.62 27.9.2.2	There's no description on OBSS_PD_{min/max_default}. Please clarifiy these variables.	As in the comment.		2017/1/9 9:42
9945	Young Hoon Kwon	225	1 27.9.2.2	192	1	T	Y	192.01 27.9.2.2	the term "antenna connector" is used quite many times throughout the spec. without any confusion. Thus, this NOTE is meaningless.	Delete the sentence.		2017/1/9 9:42
9946	Young Hoon Kwon	225	1 27.9.2.2	192	11	T	Y	192.11 27.9.2.2	TXPWR_max is unconstraind if OBSS_PD_level is equal to or less than OMBSS_PD_min.	Change the condition for unconstrained case of equation 27-1 as "if OBSS_PD_{level} <= OBSS_PD_{min}".		2017/1/9 9:42
9947	Young Hoon Kwon	225	1 27.9.2.2	192	20	T	Y	192.20 27.9.2.2	If a STA regards an inter-BSS PPDU as not having been received at all using a specific transmission power and resumes backoff process, it is not clear if the STA is allowed to increase the transmission power. If the increase of the transmission power is allowed, the STA may use the lowest transmission power during the backoff process to have more chance of SR transmission and then increases the transmission power right before the backoff reaches zero. This may give unfair competition and shall not be allowed. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9948	Young Hoon Kwon	225	1 27.10.4	194	26	T	Y	194.26 27.10.4	Clarification is needed in case the soliciting Trigger frame is not the Basic Trigger variant.	As in the comment.		2017/1/9 9:42

9949	Young Hoon Kwon	225	1 27.10.4	195	6	T	Y	195.06 27.10.4	Not sure the difference between this paragraph and the previous paragraph. In other words, when "should" is used and when "may" is used for the same Trigger frame setting. Further clarification is needed, or delete this paragraph.	As in the comment.	2017/1/9 9:42
9950	Young Hoon Kwon	225	1 27.10.4	195	12	T	Y	195.12 27.10.4	This sentence is somewhat misleading. The aggregation rule depends on Preferred AC subfield and AC Preference Level subfield. But, this sentence just generalize the aggregation rule. Therefore, without further clarification, this sentence only makes the non-AP STA's behaviour vague and unclear. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9951	Young Hoon Kwon	225	1 27.10.4	195	15	T	Y	195.15 27.10.4	This sentence is duplicate with paragraph in P194L51.	Delete the sentence in P195L15.	2017/1/9 9:42
9952	Young Hoon Kwon	225	1 27.10.4	195	26	T	Y	195.26 27.10.4	This sentence is misleading. The behaviour mentioned is under the condition that AC Preference Level subfield is set to 1.	Modify the sentence to "An HE STA with dot11AMPDUwithMultipleTIDOptionImplemented set to false should select any one of the TID value within the AC value indicated in the Preferred AC subfield if AC Preference Level subfield is 1 in the Trigger Dependent User Info field of a Basic Trigger variant Trigger frame.".	2017/1/9 9:42
9953	Young Hoon Kwon	225	1 27.11.4	197	27	T	Y	197.27 27.11.4	Not clear what "The HE non-AP STA may use the BSS color" means. Does this imply that the HE non-AP STA may include the BSS color in its own HE PPDU transmission? Or, does this imply the STA may update intra-BSS NAV or go to power save mode when the STA receives a PPDU with the BSS color? More clarification is needed.	As in the comment.	2017/1/9 9:42
9954	Young Hoon Kwon	225	1 27.11.6	198	22	T	Y	198.22 27.11.6	There are 16 entries in SPATIAL_REUSE parameter. However, only 1 entry (SR_Delay or SR_Restricted) in this sub-clause. And, there's no description for other entries throughout this draft spec. It needs further clarification on when to use and how to use other entries.	As in the comment.	2017/1/9 9:42
9955	Young Hoon Kwon	225	1 27.13	199	60	T	Y	199.60 27.13	There's no description on how link adaptation using the HE variant HT Control field works. For example, it is not clear when to send the feedback, how to figure out the reference frame for the measurement, etc. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9956	Young Hoon Kwon	225	1 27.14.2	199	60	T	Y	199.60 27.14.2	Not sure how an HE AP indicate the start times for Trigger frames. Even within a Trigger-enabled TWT SP, the AP does not specifically indicate the start time of each Trigger frame, if I remember correctly. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9957	Young Hoon Kwon	225	1 27.14.2	200	32	T	Y	200.32 27.14.2	Even when Cascade Indication field is set to 0 and there's non-zero OBO counter, the STA cannot go to doze state because there's still a chance that the serving AP may send DL data to the STA. Further clarification is needed.	As in the comment.	2017/1/9 9:42
9958	Young Hoon Kwon	225	1 27.14.2	200	20	T	Y	200.20 27.14.2	When an HE STA receives a Probe Response frame with broadcast TWT element, the STA can participate in the random access based operation. Therefore, it'd be better if the description includes not only for associated STAs but also for unassociated STAs. Further clarification is needed.	As in the comment.	2017/1/9 9:42

9959	Young Hoon Kwon	225	1 27.14.3.1	201	1	T	Y	201.01 27.14.3.1	This can not be a "shall" sentence. For example, what if the buffered traffic is expired and dequeued before the start of the next TWT SP? For the non-AP STA, regardless the STA is served or not during one TWT SP, the STA will wake up and check the TIM element in the subsequent TWT SP. And, the STA will figure out if there's RU scheduled for the STA or not based on the TIM information. How to set or how to schedule each STA is totally the serving AP's implementation issue. If spec. strongly recommend the AP to serve this STA in the subsequent TWT SP, it can be at most "should" sentence.	As in the comment.		2017/1/9 9:42
9960	Young Hoon Kwon	225	1 27.14.3.2	201	7	T	Y	201.07 27.14.3.2	Actual transmission time of TIM frame can be different from target start time of a broadcast TWT SP due to lots of reasons. (One example is that wireless medium is busy at the start of the broadcast TWT SP.) Therefore, when a STA receives a TIM frame, there's no guarantee that it is sent at the beginning of a broadcast TWT SP. And, as the meaning of TIM element is different based on this, the protocol is not complete enough. Further clarification is needed.	As in the comment.		2017/1/9 9:42
9961	Young Hoon Kwon	225	1 27.15.2	201	28	T	Y	201.28 27.15.2	It is not clear in which case a non-AP STA can transmit HE MU PPDU. Need clarification	As in the comment.	2017/1/9 9:42
9962	Young Hoon Kwon	225	1 27.15.2	201	38	T	Y	201.38 27.15.2	There's no UL MU PPDU Support field defined in HE Capabilities element. Need further clarification.	As in the comment.	2017/1/9 9:42
9963	Young Hoon Kwon	225	1 27.15.2	201	57	T	Y	201.57 27.15.2	This behaviour is for responder. It is not clear how can a responder know if the most recent PPDU sent by the responding STA to the soliciting STA is successful or not. Needs further clarification.	As in the comment.	2017/1/9 9:42
9964	Young Hoon Kwon	225	1 27.15.2	202	1	T	Y	202.01 27.15.2	Based on this rule, once a responder uses ER SU PPDU format for control response frame, it shall use ER SU PPDU format forever, even if the channel condition becomes better or the responder approaches to the soliciting STA. (Even if the frame transmission fails, as ER SU PPDU format is the lowest MCS, there's no reason to switch back to non-HT frame format.) I think it's better to give a chance for the responder to switch back to non-HT PPDU format if channel conditions becomes better.	As in the comment.		2017/1/9 9:42
9965	Young Hoon Kwon	225	1 27.15.3	202	21	T	Y	202.21 27.15.3	Control response frame in response to an ER SU PPDU can be either ER SU PPDU or non-HT PPDU format based on 27.15.2. <MCS0, 1> is only applicable to ER SU PPDU. Further clarification is needed if the control response frame is using non-HT PPDU format.	As in the comment.	2017/1/9 9:42
9966	Young Hoon Kwon	225	1 27.15.3	202	53	T	Y	202.53 27.15.3	Based on this rule, once a responder uses DCM or 106-tone, it needs to use it forever even though channel conditions becomes better. I think it's better to give a chance for the responder to switch back to DCM-off or 242 tone format.	As in the comment.	2017/1/9 9:42
9967	Young Hoon Kwon	225	1 27.16.1	204	56	T	Y	204.56 27.16.1	How about 20MHz-only STA? Need further clarification.	As in the comment.	2017/1/9 9:42
9968	Young Hoon Kwon	225	1 28.2.2	214	37	T	Y	214.37 28.2.2	In 2.4GHz band, legacy format needs to include non-OFDM frame format. So, NON_HT format needs to include PPDU formats in Clause 15, 16, 17, and 18.	Modify the value description for NON_HT to: "NON_HT indicates Clause 15, Clause 16, Clause 17, or Clause 18 PPDU formats or non-HT duplicate PPDU format. In this case, the modulation is determined by the NON_HT_MODULATION parameter.".	2017/1/9 9:42

10005	Yuichi Morioka	225	1 27.2.2	150	24	T	Y	150.24 27.2.2	The specification shall allow for more than two NAVs to be managed,i.e. maintain a NAV per OBSS, in order to avoid inter-BSS collision when there are more than one OBSS.	Define an option where STA maintains NAVs per BSS/OBSS.	2017/1/9 9:42
10006	Yuichi Morioka	225	1 27.2.2	150	24	T	Y	150.24 27.2.2	In order to allow efficient spatial reuse, the specification should define a mechanism where the a STA may transmit at lowered power during NAV set by OBSS, based on the reception power of the inter-BSS PPDU.	Expand the current OBSS-PD mechanism so MAC level spatial reuse can be realized. The commenter is willing to provide details of the resolution.	2017/1/9 9:42
10007	Yuichi Morioka	225	1 27.2.1	150	61	T	Y	150.61 27.2.1	Any response frame (such as ACK/BA/CTS) sent by associated AP in legacy PPDU doesn't meet this condition, therefore third party STAs which can't receive the UL PPDU frame will not be able to update the intra NAV.	Define a way to convey BSS Color information for legacy PPDUs.	2017/1/9 9:42
10008	Yuichi Morioka	225	1 27.4.1	157	34	E	N	157.34 27.4.1	What is difference between "rate" and "MCS" ?	Remove the word "rate".	2017/1/9 9:42
10009	Yuichi Morioka	225	1 27.4.4.2	160	61	T	Y	160.61 27.4.4.2	Any response frame (such as ACK/BA/CTS) sent by associated AP in legacy PPDU doesn't meet this condition, therefore third party STAs which can't receive the UL PPDU frame will not be able to update the intra NAV.	Modify the condition in L1P150 as follows. - The frame is identified as inter-BSS or cannot be identified as intra-BSS or inter-BSS with the condition that received power is less than OBSS-PD according to the rule described in 27.2.1 (Intra-BSS and inter-BSS frame detection) Modify the condition in L53P149 as follows. - The frame is identified as intra-BSS or cannot be identified as intra-BSS or inter-BSS with the condition that received power is higher than OBSS-PD according to the rule described in 27.2.1 (Intra-BSS and inter-BSS frame detection)	2017/1/9 9:42
10010	Yuichi Morioka	225	1 27.5.2.2.1	164	46	T	Y	164.46 27.5.2.2.1	Non-associated STAs shouldn't be able to transmit at random access.	If Trigger Frame which STA receives doesn't have associated AP's TA, STA should disregard this frame.	2017/1/9 9:42
10011	Yuichi Morioka	225	1 27.5.2.4	167	51	T	Y	167.51 27.5.2.4	When STA sets the basic NAV and then receives Trigger Frame in CS required bit = 1, STA can't transmit MU PPDU. This may create inefficiency.	Add texts as follow. Upon reception of a Trigger Frame with CS Required bit = 1, if the reception power of the PPDU that set the basic NAV is lower than the OBSS-PD threshold, the STA may ignore the basic NAV and transmit an UL PPDU.	2017/1/9 9:42
10012	Yuichi Morioka	225	1 27.5.2.4	167	59	T	Y	167.59 27.5.2.4	Non associated STA should not be able to respond to the trigger frame.	Replace TBD as suggested.	2017/1/9 9:42

10013	Yuichi Morioka	225	1 27.5.2.4	170	24	T	Y	170.24 27.5.2.4	If a triggered STA observes medium busy using Energy Detection, the energy is from OBSS or other systems. The STA should be able to transmit the triggered PPDU if the required transmission power is low.	Define a rule that allows STAs to overide Energy Detection depending on the received energy level and required transmission power of the triggered PPDU, similar to that of OBSS-PD.	2017/1/9 9:42
10014	Yuichi Morioka	225	1 27.5.2.4	170	53	T	Y	170.53 27.5.2.4	HE AP may be able to more effectively allocate UL MU resource if it has knowledge of the interference level observed at the HE STA.	Add Interference Level measurement feedback operation like HE buffer status feedback operation.	2017/1/9 9:42
10015	Yuichi Morioka	225	1 27.5.2.5	172	1	T	Y	172.01 27.5.2.5	Even if STA has already reported buffer status, STA should retransmit same BSR because AP may have missed the previous BSR.	Delete the first condition.	2017/1/9 9:42
10016	Yuichi Morioka	225	1 27.5.2.6	172	28	T	Y	172.28 27.5.2.6	It should be beneficial if the AP can allocate part of the random access RUs for BSRP and partly for other UL small data.	Define a field within the trigger frame that indicates which RU set is intended for BSRP.	2017/1/9 9:42
10017	Yuichi Morioka	225	1 27.5.2.6.2	173	46	E	N	173.46 27.5.2.6.2	missing period (.).	As commented	2017/1/9 9:42
10018	Yuichi Morioka	225	1 27.9	190	1	T	Y	190.01 27.9	In dense environments, most preambles sent from OBSS STAs will not be decodable due to partially overlapping PPDUs. The spec should define a spatial reuse mechanism that is effective in dense environments.	Define an adjustable Energy Detection threshold proportional to the transmission power, similar to that of OBSS-PD.	2017/1/9 9:42
10019	Yuichi Morioka	225	1 27.9.1	190	12	E	N	190.12 27.9.1	"... to either an HE STA or a non HE STA." This is all STAs, so no meaning.	Remove the cited part of the sentence.	2017/1/9 9:42
10020	Yuichi Morioka	225	1 27.9.1	190	30	T	Y	190.30 27.9.1	"- A non-HT PPDU that carries an..." This implies that the non-HT PPDU need to be decoded up until the end of the PPDU to determine whether the PHYCCARESET.request can be issue. By that time the PPDU has already ended.	Replace bullet starting with "- The PPDU is not one of the following" with "The PPDU is not a non HT PPDU"	2017/1/9 9:42
10021	Yuichi Morioka	225	1 27.9.1	190	36	T	N	190.36 27.9.1	"The PHYCCARESET.request primitive shall be issued at the end of the PPDU..." This is normal behavior. If the PPDU also meets all the conditions mentioned in the list above (e.g. if the PPDU is a inter BSS PPDU) which rule take precedence?	Reformulate the bullets in lines 24-34 in page 190, so it includes the case of "SR_Delay".	2017/1/9 9:42
10022	Yuichi Morioka	225	1 27.9.1	190	39	T	Y	190.39 27.9.1	"If the PHYCCARESET.request primitive is issued before the end of the PPDU,..." All PPDUs sent using the SR rule should be limited to within the OBSS PPDU, as the excess portion of the SR PPDU will be prone to interference.	Remove line 41 of page 190 that says "if the PPDU is HE MU PPDU and the RXVECTOR parameter SPATIAL_REUSE indicates SR_Restricted."	2017/1/9 9:42
10023	Yuichi Morioka	225	1 27.9.1	190	39	T	Y	190.39 27.9.1	"If the PHYCCARESET.request primitive is issued before the end of the PPDU,..." If it is allowed for the TXOP to go beyond the inter-BSS PPDU, it would be beneficial to limit the length of the first PPDU such that the start of the second PPDU starts after the end of the inter-BSS PPDU. This way the preamble of the second PPDU can be detected from third party.	Add rule as commented so preamble detection is still useful.	2017/1/9 9:42
10024	Yuichi Morioka	225	1 27.9.2.1	190	43	T	Y	190.43 27.9.2.1	In order to allow efficient use of SR resource, STA should be allowed to subtract the time it took to determine that the received PPDU is an inter-BSS PPDU from its BO timer.	Add "If the PHYCCARESET.request primitive is issued before the end of the PPDU, the Back off counter of the STA may be decremented by the time it took from the beginning of the PPDU until the PHYCCARESET.request primitive was issued"	2017/1/9 9:42
10025	Yuichi Morioka	225	1 27.9.2.1	190	43	T	Y	190.43 27.9.2.1	The specification needs to define a way for a STA to detect other PPDUs after PHYCCARESET.request is issued before the end of the inter-BSS PPDU.	Define a threshold at which a STA's PHY will issue PHY-CCA.indication with a value equal to BUSY upon detection of energy above the threshold during the inter-BSS PPDU. The threshold shall be relative to the reception power of the inter-BSS PPDU.	2017/1/9 9:42
10026	Yuichi Morioka	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	SR backoff procedure should be defined.	Add texts as follow. Before SR transmission, STA should wait for random time as special backoff. This random time should be determined by received interference level.	2017/1/9 9:42

10027	Yuichi Morioka	225	1 27.9.2.1	190	53	T	Y	190.53 27.9.2.1	"The STA may resume its backoff procedure..." This seems to be normal procedure after PHYCCARESET.request primitive is issued	Remove sentence and NOTE.	2017/1/9 9:42
10028	Yuichi Morioka	225	1 27.9.2.2	191	3	T	Y	191.03 27.9.2.2	When a HE STA lowers the transmission power based on OBSS-PD, the transmission may not be heard by another STA in the BSS, i.e. could be hidden within the BSS. Transmission of RTS could solve this problem.	Define a mechanism where the AP can request for the transmission of RTS if the transmission power of the STA is below a determined threshold.	2017/1/9 9:42
10029	Yuichi Morioka	225	1 27.9.2.2	191	7	E	N	191.07 27.9.2.2	OBSSPD should be OBSS_PD	replace OBSSPD with OBSS_PD	2017/1/9 9:42
10030	Yuichi Morioka	225	1 27.9.2.2	191	52	E	N	191.52 27.9.2.2	TXPWR should be TX_PWR	replace TXPWR with TX_PWR	2017/1/9 9:42
10031	Yuichi Morioka	225	1 27.9.2.2	191	62	T	Y	191.62 27.9.2.2	How OBSS_PDmin_default is used is not defined.	Specify how this value is used.	2017/1/9 9:42
10032	Yuichi Morioka	225	1 27.9.2.2	191	62	T	Y	191.62 27.9.2.2	"OBSS_PDmin_default = -82 dBm and OBSS_PDmax_default = -62 dBm." Second entry in this equation does not make sense.	Rewrite the second entry of this equation.	2017/1/9 9:42
10033	Yuichi Morioka	225	1 27.9.2.2	192	16	T	Y	192.16 27.9.2.2	If STA sets a low TXPWRmax after calculating with Equation (27-1), transmitted frame may not be receive at the receiver. STA should have information about link budget such as pathloss so that STA can judge if transmitted frame will be received successfully or not.	In HE SU PPDU, Acceptable Receiver Interference level of SRP in HE-SIG-A will be set as fixed value (such as -50dBm). STA that received HE SU PPDU frame can calculate pathloss by subtracting Acceptable Receiver Interference level as fixed value from SRP.	2017/1/9 9:42
10034	Yuichi Morioka	225	1 27.9.2.2	192	21	T	Y	192.21 27.9.2.2	"The STA may increase the OBSS_PDlevel during the backoff procedure, its maximum transmit power being adjusted as defined above." Incomplete sentence.	Correct sentence.	2017/1/9 9:42

10234	Yusuke Asai	225	1 28.5	373	23	T	Y	373.23 28.5	It makes no sense to state "mandatory" or "optional" in the title of each MCS table. Mandatory/optional features are defined in normative text and summalized in PICS (Annex B). There are many tables that includ both mandatory and optional MCS indices. For example, in table 28-48 (HE-MCSs for mandatory 26-tone RU, NSS = 2), all of MCS indices are defined as optional for non-AP STAs.	Delete "mandatory" and "optional" in the caption of the table 28-47 to 28-102.	2017/1/9 9:42
10235	Yusuke Asai	225	1 B.4.3	407	42	T	Y	407.42 B.4.3	"CFHEW" is not defined but referred many times. The term of HEW is not used in other Clauses. Instead of "HEW", "HE" should be used.	Replace all of CFHEW* with CFHE* in Annex B. (* is a wildcard including null.)	2017/1/9 9:42
10236	Yusuke Asai	225	1 B.4.27	410	34	T	Y	410.34 B.4.27	"High Efficiency WLAN (HEW)" should be replaced with "High Efficiency (HE)". Also, HEW should replaced with HE in P410L36, P413L21	As in comment.	2017/1/9 9:42
10237	Yusuke Tanaka	225	1 3.2	4	31	E	N	4.31 3.2	"a HE" should be "an HE". Same comments on whole of this document.	As commented.	2017/1/9 9:42
10238	Yusuke Tanaka	225	1 9.3.1.23.6	51	30	T	Y	51.30 9.3.1.23.6	The operation and the frame for GCR with MU-BAR is defined in this spec, but a hole in a receiver's Block Ack bitmap problem (previously known since11aa) remains. It can be solved by GCR MU-BAR variant with a bitmap of sequence numbers corresponding to the GCR stream.	Add GCR sequence number bitmap in Trigger Dependent Common Info field for the GCR MU-BAR variant.	2017/1/9 9:42
10239	Yusuke Tanaka	225	1 10.3.2.8a.1	116	37	E	N	116.37 10.3.2.8a.1	"HE TB PPDU" is not defined.	Use "HE trigger-based PPDU" in this figure.	2017/1/9 9:42
10240	Yusuke Tanaka	225	1 10.22.2.2	130	2	E	N	130.02 10.22.2.2	"trigger based" should be "trigger-based" Same comments on P130L7, P130L12, P145L65, P225L4, P359L16, P369L6.	As commented.	2017/1/9 9:42
10241	Yusuke Tanaka	225	1 27.2.1	149	20	T	Y	149.20 27.2.1	It is described that inter-BSS or intra-BSS frame can be identified by its MAC address. From the aspect of early identification for SR, it is beneficial to clarify that the identification of inter-BSS frame is realized per MPDU in the A-MPDU.	Add the following condition for inter-BSS frame identification. "The MAC address of a MPDU with valid FCS in the received A-MPDU is not the MAC address of members of the BSS with which the STA is associated."	2017/1/9 9:42
10242	Yusuke Tanaka	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	It is obvious that if the received signal is not IEEE Std 802.11 transmission it is an inter-BSS frame.	Add the following condition for inter-BSS frame identification. "An HE STA receives signal which is not NON_HT, HT_MF, HT_GF, VHT or HE PPDU."	2017/1/9 9:42
10243	Yusuke Tanaka	225	1 27.2.1	150	15	T	Y	150.15 27.2.1	A precedence rule of PARTIAL_AID should be defined.	Add "or PARTIAL_AID" at the end of the sentence.	2017/1/9 9:42
10244	Yusuke Tanaka	225	1 27.2.1	150	19	T	Y	150.19 27.2.1	If the received frame does not satisfy any of the intra-BSS and inter-BSS conditions, the frame can be defined as inter-BSS frame to improve benefit of OBSS_PD based SR. Even in case if the intra-BSS frame is identified as inter-BSS frame by erroneous detection, received power level of intra-BSS frame is usually high so that OBSS_PD based SR mechanism does not allow to transmit overlapping the frame and prevent interfering.	Replace "then the frame cannot be determined as intra-BSS or inter-BSS frame." with "then the frame can be determined as inter-BSS frame."	2017/1/9 9:42
10245	Yusuke Tanaka	225	1 27.2.1	150	19	E	Y	150.19 27.2.1	This sentence does not provide any information about specification and what it mentions here is beyond the spec.	Delete this sentence.	2017/1/9 9:42

10246	Yusuke Tanaka	225	1 27.2.2	150	48	T	Y	150.48 27.2.2	Static NAV can provide MAC level power save without suffering with unpredictable NAV updating.	Add the following rule at L48. "An HE AP may indicate that the NAV set by the Duration field in the PPDU will not be updated." Add the following rule at L59 and P151L5 "If an HE non-AP STA receives a PPDU with indication that the NAV set by the Duration field in the PPDU will not be updated, the HE non-AP STA may enter the doze state until the end of the NAV."	2017/1/9 9:42
10247	Yusuke Tanaka	225	1 27.2.2	151	51	T	Y	151.51 27.2.2	The condition does not cover the case two NAVs are reset at the same time.	Add "or two NAVs are reset at the same time" after "other NAV timer is 0,"	2017/1/9 9:42
10248	Yusuke Tanaka	225	1 27.2.3	152	29	T	Y	152.29 27.2.3	The operation when the HEMUEDCATimer[AC] reaches zero should consider the retry counters (SSRC/SLRC). The retry counters should be reset to 0 at updating of EDCA parameters, otherwise the STA would give up retransmission after only one transmission with CWmin.	Add the following texts at the end. "When the STA update the CWmin[AC], CWmax[AC] and AIFSN[AC] either, The SSRC and the SLRC shall be reset to 0.	2017/1/9 9:42
10249	Yusuke Tanaka	225	1 27.2.3	152	29	T	Y	152.29 27.2.3	To ensure that the STA receives EDCA Parameter Set element, the trigger frame may contain EDCA Parameter Set element.	Add "in the Trigger frame" after "EDCA Parameter Set element". Define EDCA Parameter Set element in Common Infor field of Trigger frame format in P42L6	2017/1/9 9:42
10250	Yusuke Tanaka	225	1 27.2.3	152	56	T	Y	152.56 27.2.3	Two NAVs is defined in this spec but the current RA field of CF-END is broadcast and an HE STA can not decide which NAV should be reset when it receives CF-END.	Define a new CF-END frame whose RA is the address of the intended STA.	2017/1/9 9:42
10251	Yusuke Tanaka	225	1 27.4.1	157	21	E	N	157.21 27.4.1	The first sentence does not provide any information about specification and would mislead the readers to misunderstand that these two blockack frames are only permitted.	Delete the first sentence in this paragraph.	2017/1/9 9:42
10252	Yusuke Tanaka	225	1 27.4.1	157	61	E	N	157.61 27.4.1	"MU-BAR variant Trigger frame" is lengthy expression so just simplify "MU-BAR frame" as 10.24.10.3. Same expressions can be found in whole of the section 27.4.	As commented.	2017/1/9 9:42

"SRP is the sum of the value of TX PWRAP and the value of Acceptable Receiver Interference levelAP." Remove "dBm" from Table 28-19.	2017/1/9 9:42
10307	Yusuke Tanaka	225	1 28.3.17.6.2	348	1	T	Y	348.01 28.3.17.6.2	CCA-ED is given in Table D-2 as written in this section. In this Table 2-5, encoding=1 is assigned to CCA-EDBehavior saying that "CCA shall also detect a medium busy condition when CCAEnergyDetect detects a channel busy condition." Also in the following sentence in this section says; "The operating classes requiring the corresponding CCA-ED behavior class are given in E.1 (Country information and operating classes)." Please note that 11ax D1.0 doesn't include amendment to Annex-E in 11mc so I refer tables in 11mc. If you refer Table E-1 for US, only operating class=13, 14 & 15 requires "CCA-EDBehavior" and these operating channels are 3GHz band. In Table E-2 for EU and E-3 for Japan don't include "CCA-	Either Remove section 28.3.17.6.2 entirely, or Add specifications for 3GHz operation to clause 28.	2017/1/9 9:42

10308 Yusuke Tanaka	225	1 28.3.17.6.4	349	21	T	Y	349.21 28.3.17.6.4	OBSS_PD is only available if the PPDU can be identified as an inter-PPDU. On the other hand the secondary 20MHz channel sensing threshold during aCCAMidTime can be applied for any IEEE Std 802.11 transmission. What is the reason to use OBSS_PD level during aCCAMidTime for any PPDUs without identification of inter-BSS frames? Same comments on secondary 40 MHz channel and 80 MHz channel cases.	Add technical description to explain the reason to apply OBSS_PD to the secondary 20MHz channel sensing threshold during aCCAMidTime. If not, remove OBSS_PD.		2017/1/9 9:42
10309 Yusuke Tanaka	225	1 28.3.17.6.4	349	36	T	Y	349.36 28.3.17.6.4	The threshold value -72dBm during aCCAMidTime is applied for 40MHz band but the value of the OBSS_PD is defined for 20MHz band. Compensate the OBSS_PD by -3dB considering the bandwidth.	Replace "max(-72 dBm, OBSS_PD)" with "max(-72 dBm, OBSS_PD - 3dB)"		2017/1/9 9:42
10310 Yusuke Tanaka	225	1 28.3.17.6.4	349	51	T	Y	349.51 28.3.17.6.4	The threshold value -69dBm during aCCAMidTime is applied for 80MHz band but the value of the OBSS_PD is defined for 20MHz band. Compensate the OBSS_PD by -6dB considering the bandwidth.	Replace "max(-69 dBm, OBSS_PD)" with "max(-69 dBm, OBSS_PD - 6dB)"		2017/1/9 9:42
10311 Yusuke Tanaka	225	1 28.4.3	373	45	T	Y	373.45 28.4.3	aCCAMidTime =25usec, and it is the exactly same as 11ac. Due to longer OFDM symbol in 11ax, I don't think we can expect reliable mid packet detect within 25usec. In 11ac, 25usec can contain 6 OFDM symbols and 0.8u*6=4.8usec can be used for auto-correlation. To have a reliable detection similar to 11ac, we need time of max{(0.8u+12.8u)*6, (1.6u+12.8u)*2, (3.2u+12.8u)*1} = 81.6usec.	Replace 25usec with 81.6usec for aCCAMidTime. To make such change, current description for 28.3.17.6.4 would become invalid. Use two separate "aCCAMidTIme"s, i.e., one is for 11ax having longer OFDM symbol such as 81.6usec as mentioned above, And the other is conventional value of 25usec for 11a/g/n/ac.		2017/1/9 9:42
10312 Zhigang Rong	225	1 27.5.2.2.2	166	24	E	Y	166.24 27.5.2.2.2	"CP_LTF_TYPE" is not a valid TXVECTOR or RXVEXTOR parameter according to "Table 28-1–TXVECTOR and RXVECTOR parameters". "CP_LTF_TYPE" should be corrected to "GI_TYPE and HE_LTF_TYPE".	Change the sentence to the following: "GI and LTF Type is set to 3 if the carrying PPDU TXVECTOR parameters GI_TYPE and HE_LTF_TYPE indicate 4x LTF + 3.2 ++s GI or 2x LTF + 1.6 ++s GI; otherwise is set to 2"		2017/1/9 9:42
10313 Zhigang Rong	225	1 27.5.2.3	169	26	E	Y	169.26 27.5.2.3	"CP_LTF_TYPE" is not a valid TXVECTOR or RXVEXTOR parameter according to "Table 28-1–TXVECTOR and RXVECTOR parameters". "CP_LTF_TYPE parameter" should be corrected to "The GI_TYPE and HE_LTF_TYPE parameters".	Change the sentence to the following: "The GI_TYPE and HE_LTF_TYPE parameters shall be set to indicate 4x LTF + 3.2 ++s GI if the RXVECTOR parameters GI_TYPE and HE_LTF_TYPE indicate 4x LTF + 3.2 ++s GI or 2x LTF + 1.6 ++s GI ; otherwise shall be set to indicate 2x LTF + 1.6 ++s GI"		2017/1/9 9:42
10314 Zhiyong Huang	225	1 28.3.14.3	342	20	T	N	342.20 28.3.14.3	Need to specify either number of packet or time duration for device to meet transmit power accuracy requirement. In subclause 28.3.14.2 it discuss how the device should adjust power. However, it does not specify either number of PPDU or time duration for the device to finish adjust transmitting power. In table 28-40, it also does not specify this requirement. 1 PPDU or 100 PPDU to achieve requirement will impact system perfomance/capacity differently.	add specific number of PPDU for the device to reach transmit power accuracy. If it was implied to reach accuracy requirement within 1 PPDU, it is better to explicitly define it in the 28.3.14.3.		2017/1/9 9:42

10320	Zhou Lan	225	1 27.2.2	150	25	T	Y	150.25 27.2.2	"An HE non-AP STA shall maintain two NAV timers. An HE AP STA may maintain two NAV timers." clarify the different requirement between AP and Non-AP STA	per comment	2017/1/9 9:42
10321	Zhou Lan	225	1 27.2.2	150	31	T	Y	150.31 27.2.2	"if one of the two NAV timers is nonzero, the virtual CS indication is that the medium is busy." clarify if the intra NAV is zero and inter NAV is non zero, in such case, what is the idle status?	per comment	2017/1/9 9:42
10322	Zhou Lan	225	1 27.2.2	150	40	T	Y	150.40 27.2.2	"The duration information is indicated by a frame in a PSDU as follows" clarify the case when the duration field is in the SIG-A (not part of PSDU),how the NAV update is performed	per comment	2017/1/9 9:42
10323	Zhou Lan	225	1 27.2.2	150	52	T	Y	150.52 27.2.2	"A STA shall update the intra-BSS NAV with the duration information indicated by the received frame in a PSDU if and only if all the following conditions are met:". Clarify if the duration filed is in the SIGA (i.e not part of the PSDU), how the intra NAV will be updated.	per comment	2017/1/9 9:42
10324	Zhou Lan	225	1 27.2.2	150		E	Y	150.00 27.2.2	"A STA that maintains two NAVs has the capability to maintain NAV set by intra-BSS PPDU and inter-BSS PPDU separately. Maintaining two NAV is beneficial in dense deployment scenarios where a STA requires protection from frames transmitted by STAs within its BSS, i.e., intra-BSS, and avoid interference from frames transmitted by STAs in neighboring BSS, i.e., inter-BSS. For example, in a TXOP initiated by the associated AP for UL MU transmission, the intra-BSS NAV of the STA can be set by the AP to prevent the STA from contending the channel, and the basic NAV will not be updated by the associated AP so that NAV set by inter-BSS PPDU can be considered in UL MU CS as described in 27.5.2.4 (UL MU CS mechanism)." This paragraph is more like a general description of two NAV setting. It should be moved to	per comment	2017/1/9 9:42
10325	Zhou Lan	225	1 27.2.2	150		T	Y	150.00 27.2.2	"The STA is not solicited an immediate response by the PPDU carrying the frame.". This condition needs fix. If AP wants to schedule different group of STAs to participate UL MU operation in one TXOP, this condition will only allow the STAs that are scheduled in the first round to transmit later in the same TXOP	need a contribution to fix it	2017/1/9 9:42
10326	Zhou Lan	225	1 27.2.2	151		T	Y	151.00 27.2.2	"The STA is not solicited an immediate response by the PPDU carrying the frame.". This condition needs fix. If AP wants to schedule different group of STAs to participate UL MU operation in one TXOP, this condition will only allow the STAs that are scheduled in the first round to transmit later in the same TXOP	need a contribution to fix it	2017/1/9 9:42

10327	Zhou Lan	225	1 27.2.3	152		T	Y	152.00 27.2.3	Section 27.5.2.1 says "A non-AP STA with dot11ULMUMIMOOptionImplemented equal to true is referred to as an UL MU capable STA.", so an UL MU capable STA is a STA that is capable of supporting UL MU MIMO. However, here in this section, it refers to UL MU MIMO, UL OFDMA, UL OFDMA+MU MIMO. UL OFDMA is a mandatory feature which doesnt need capability indication. So the language should be fixed.	fix the language per comment		2017/1/9 9:42
10328	Zhou Lan	225	1 27.4.1	157		T	Y	157.00 27.4.1	"An HE STA can use Compressed BlockAck frame or Multi-STA BlockAck frame after setting up a block ack agreement." Please clarify if Block ACK aggrement is required in the following cases. 1) Multiple STAs send single management frame in a trigger based PPDU and expecting acknoledgement from AP. 2) OFDMA random access for association and authentication	per comment		2017/1/9 9:42
10329	Zhou Lan	225	1 27.4.1	157	24	T	Y	157.24 27.4.1	"Multi-STA BlockAck frame if either UL MU operation (see 27.5.2 (UL MU operation)) or multi-TID AMPDU operation (27.10.4 (A-MPDU with multiple TIDs)) is supported in the role of recipient.", UL OFDMA (one of the UL MU operation) is mandatory. So M-BA is mandatory. This setence can be deleted.	per comment		2017/1/9 9:42
10330	Zhou Lan	225	1 27.4.1	157	33	T	Y	157.33 27.4.1	Shall define a mandated response rule mechanism to simplify the response MCS selection implementation	per comment		2017/1/9 9:42
10331	Zhou Lan	225	1 27.4.1	157	36	T	Y	157.36 27.4.1	change "HE STA" to "HE AP" if this is the case to ack a trigger based PPDU	per comment		2017/1/9 9:42
10332	Zhou Lan	225	1 27.10.4	193	53	T	Y	193.53 27.10.4	"A multi-TID A-MPDU may contain multiple noncontiguous nonzero length MPDU delimiters with EOF subfield equal to 1, one for each TID that solicits Ack and/or multiple noncontiguous nonzero length MPDU delimiters with EOF subfield equal to 0, one for each TID that solicits BlockAck." is conflicting with the baseline that says"An A-MPDU subframe with EOF set to 0 shall not be added after any A-MPDu subframe with EOF set to 1 " clarify the benefit of allowing this flexibility in terms of supporting MPDU with different ACK policy, othwise remove this	per comment		2017/1/9 9:42
10333	Zhou Lan	225	1 27.4.1	157	48	T	Y	157.48 27.4.1	"An HE STA that supports Multi-STA BlockAck shall examine each received Multi-STA sent by an STA with which it has a BA agreement." A HE STA shall support receiption of a M-BA. So delete "that supports Multi-STA BlockAck"	per comment		2017/1/9 9:42

Abstract

This submission proposes finalization of bit field ordering of HE-SIG-A in HE SU PPDU, HE extended range SU PPDU, HE MU PPDU, and HE Trigger-based PPDU.
Revisions:
— Rev 0: Initial version of the document.

Interpretation of a Motion to Adopt

A motion to approve this submission means that the editing instructions and any changed or added material are actioned in the TGax Draft. This introduction is not part of the adopted material.

Editing instructions formatted like this are intended to be copied into the TGax Draft (i.e. they are instructions to the 802.11 editor on how to merge the text with the baseline documents).

TGax Editor: Editing instructions preceded by "TGax Editor" are instructions to the TGax editor to modify existing material in the TGax draft. As a result of adopting the changes, the TGax editor will execute the instructions rather than copy them to the TGax Draft.

Changes to D0.2

TGax Editor: Delete Table 26-19 (Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU)
Replace Table 26-20 (Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU) with the following table:

Table 26-20 – Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU

Two parts of HE-SIG-A	Bits	Field	# of bits	Description
HE-SIG-A1	B0	Format	1	Differentiate between an HE SU PPDU and HE trigger-based PPDU. Set to 0 for HE trigger-based PPDU Set to 1 for HE SU PPDU. This field is reserved and set to 1 for an HE Extended range SU PPDU.
	B1	Beam Change	1	Set to 1 to indicate that the pre-HE STF portion of the SU PPDU is spatially mapped differently from HE-LTF1. Set to 0 to indicate that the pre-HE STF portion of SU PPDU is spatially mapped the same way as HE-LTF1 on each tone.
	B2	UL/DL	1	Indicates whether the PPDU is sent UL or DL. Set to 0 for DL Set to 1 for UL. This field indicates DL for TDLS.
	B3:B6	MCS	4	For HE SU PPDU Set to n for MCSn, where n = 0, 1, 2, …., 11. Values 12 - 15 are reserved For HE Extended Range SU PPDU If bandwidth = 0 (242-tone RU) Set to n for MCSn, where n = 0, 1, 2. Values 3 – 15 are reserved. If bandwidth = 1 (right 106-tone RU in P20) Set to 0 for MCS 0. Values 1 – 15 are reserved.
	B7	DCM	1	Set to 1 to indicate that the payload of the SU PPDU is modulated with dual sub-carrier modulation for the MCS. Set to 0 indicates that the payload of the PPDU is not modulated with dual sub-carrier for the MCS. DCM is only applicable to MCS0, MCS1, MCS3, and MCS4. DCM is only applicable to 1 and 2 spatial streams. DCM is not applicable to STBC.
	B8:B13	BSS Color	6	The BSS Color field is an identifier of the BSS
	B14	Reserved	1	Reserved and set to 1
	B15:B18	Spatial Reuse	4	"SR_allowed" signaling indicates whether SR operation is allowed or not. • Set to 0 to indicate SR is disallowed • The conditions to disallow SR are TBD Other details are TBD

				Notes: this part needs further development.
	B19:B20	Bandwidth	2	For HE SU PPDU Set to 0 for 20 MHz Set to 1 for 40 MHz Set to 2 for 80 MHz Set to 3 for 160/80+80 MHz For HE Extended Range SU PPDU Set to 0 for 242-tone RU Set to 1 for right 106-tone RU within the primary 20 MHz
	B21:B22	LTF + CP	2	Indicates LTF size and guard interval duration Set to 0 for 1x HE-LTF + 0.8 us Set to 1 for 2x HE-LTF + 0.8 us Set to 2 for 2x HE-LTF + 1.6 us Set to 3 for 4x HE-LTF + 3.2 us
	B23:B25	Nsts	3	Indicates the number of spatial streams. For HE SU PPDU Set to n for n+1 space time stream, where n = 0, 1, 2,…..,7. For HE Extended Range PPDU Set to 0 for 1 space time stream. Value 1 is TBD Values 2 - 7 are reserved
HE-SIG-A2	B0:B6	TXOP Duration	7	Indicates the remaining time in the current TXOP. Details TBD.
	B7	Coding	1	Indicates whether BCC or LDPC is used. Set to 0 for BCC Set to 1 for LDPC (#11-16/0610-04)
	B8	LDPC Extra Symbol Segment	1	Indicates presence of extra OFDM symbol segment for LDPC Set to 0 for LDPC extra symbol segment is not present Set to 1 for LDPC extra symbol segment is present. NOTE- This field is reserved and set to 1 when Coding field is set to 0
	B9	STBC	1	Set to 1 if STBC is used Set to 0 otherwise
	B10	Tx BF	1	Set to 1 if a Beamforming steering matrix is applied to the waveform in an SU transmission Set to 0 otherwise
	B11:B12	A-factor	2	Indicates the “a-factor” as defined in Table 26-44 (a-facotr subfield encoding)
	B13	PE Disambiguity	1	Indicates PE Disambiguity as defined in 26.3.11 (Packet Extension)
	B14	Reserved	1	Reserved and set to 1
	B15	Doppler	1	Set to 0 if Doppler mode is not used Set to 1 if Doppler mode is used

	B16:B19	CRC	4	CRC of bits 0 - 41 in HE-SIG-A (see 22.3.9.7.3 (CRC computation)). The first bit to be transmitted is bit C7 as explained in 20.3.9.7.3 (CRC computation).
	B20:B25	Tail	6	Used to terminate the trellis of the convolution decoder. Set to 0.

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position.

TGax Editor: Delete Table 26-21 (Fields in the HE-SIG-A for an HE MU PPDU)
Replace Table 26-22 (Fields in the HE-SIG-A for an HE MU PPDU) with the following table:

Table 26-22 – Fields in the HE-SIG-A for an HE MU PPDU

Two parts of HE-SIG-A	Bits	Field	# of bits	Description
HE-SIG-A1	B0	UL/DL	1	Indicates whether the PPDU is sent UL or DL. Set to 0 for DL Set to 1 for UL. This field indicates DL for TDLS.
	B1:B3	SIGB MCS	3	Indicates MCS of HE-SIG-B Set to n for MCSn, where n = 0, 1, 2,….,5 Values 6 - 7 are reserved
	B4	SIGB DCM	1	Set to 1 indicates that the HE-SIG-B is modulated with dual sub-carrier modulation for the MCS. Set to 0 indicates that the HE-SIB-B is not modulated with dual sub-carrier modulation for the MCS. DCM is only applicable to MCS0, MCS1, MCS3, and MCS4.
	B5:B10	BSS Color	6	BSS Color field is an identifier of the BSS
	B11:B14	Spatial Reuse	4	"SR_allowed" signaling indicates whether SR operation is allowed or not. • Set to 0 to indicate SR is disallowed • The conditions to disallow SR are TBD Other details are TBD Notes: this part needs further development.
	B15:B17	Bandwidth	3	Set to 0 for 20 MHz Set to 1 for 40 MHz Set to 2 for 80 MHz Set to 3 for 160/80+80 MHz
	B18:B21	SIGB Number of Symbols/Number of MU-MIMO Users	4	When SIGB compression field=0, indicates the number of HE-SIG-B symbols. Set to n for n+1 HE-SIG-B symbol, where n = 0, 1, 2,…..15 When SIGB compression field=1, indicates the number of MU-MIMO users minus 1.
	B22	SIGB Compression	1	Set to 1 for full BW MU-MIMO. Set to 0 otherwise.
	B23:B24	LTF and CP	2	Set to 0 for Reserved Set to 1 for 2x HE-LTF + 0.8 us Set to 2 for 2x HE-LTF + 1.6 us Set to 3 for 4x HE-LTF + 3.2 us

	B25	Doppler	1	Set to 0 if Doppler mode is not used Set to 1 if Doppler mode is used
HE-SIG-A2	B0:B6	Txop Duration	7	Indicates the remaining time in the current TXOP. Details TBD.
	B7	Reserved	1	Reserved and set to 1
	B8:B10	Number of HE-LTF symbols	3	Indicates the number of HE-LTF symbols. Set to 0 for 1 HE-LTF symbol Set to 1 for 2 HE-LTF symbols Set to 2 for 4 HE-LTF symbols Set to 3 for 6 HE-LTF symbols Set to 4 for 8 HE-LTF symbols Values 5 to 7 are reserved
	B11	LDPC Extra Symbol Segment	1	Indicates presence of extra OFDM symbol segment for LDPC Set to 0 for LDPC extra symbol segment is not present Set to 1 for LDPC extra symbol segment is present.
	B12	STBC	1	In an HE MU PPDU where each RU includes no more than 1 user, set to 1 to indicate al RUs are STBC encoded in the payload. Set to 0 to indicate al RUs are not STBC encoded in the payload. STBC is not applied in MU-MIMO RUs. STBC doesn't apply to HE-SIG-B.
	B13:B14	A-factor	2	Indicates the "a-factor" as defined in Table 26-44 (a-facotr subfield encoding)
	B15	PE Disambiguity	1	Indicates PE Disambiguity as defined in 26.3.11 (Packet Extension)
	B16:B19	CRC	4	CRC of bits 0 - 41 in HE-SIG-A. See 22.3.9.7.3 (CRC computation)). The first bit to be transmitted is bit C7 as explained in 20.3.9.7.3 (CRC computation).
	B20:B25	Tail	6	Used to terminate the trellis of the convolution decoder. Set to 0.

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position.

TGax Editor: Replace Table 26-23 (Fields in the HE-SIG-A for an HE trigger-based PPDU) with the following table:

Two parts of HE-SIG-A	Bits	Field	# of bits	Description
HE-SIG-A1	B0	Format	1	Differentiate between an HE SU PPDU and an HE trigger-based PPDU. Set to 0 for HE trigger-based PPDU Set to 1 for HE SU PPDU
	B1:B6	BSS Color	6	BSS Color field is an identifier of the BSS
	B7:B22	Spatial Reuse	16	"SR_allowed" signaling indicates whether SR operation is allowed or not. • Set to 0 to indicate SR is disallowed • The conditions to disallow SR are TBD Multiple SR fields (≥2) are signalled, where each SR field corresponds to a different subband of the PPDU. Other details are TBD. Notes: this part needs further development.

	B23	Reserved	1	Reserved and set to value indicated in the Trigger frame
	B24:B25	Bandwidth	2	Set to 0 for 20 MHz Set to 1 for 40 MHz Set to 2 for 80 MHz Set to 3 for 160/80+80 MHz
HE-SIG-A2	B0:B6	Txop Duration	7	Indicates the remaining time in the current TXOP. Details TBD.
	B7:B15	Reserved	9	Reserved and set to value indicated in the Trigger frame
	B16:B19	CRC	4	CRC of bits 0 - 41 in HE-SIG-A. See 22.3.9.7.3 (CRC computation). The first bit to be transmitted is bit C7 as explained in 20.3.9.7.3 (CRC computation).
	B20:B25	Tail	6	Used to terminate the trellis of the convolution decoder. Set to 0.

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position.

IEEE 802.11 TGax
High Efficiency WLAN
PHY Ad Hoc

1044

Co-Chairs:
Bo Sun (ZTE)
Jianhan Liu (Mediatek)
Hongyuan Zhang (Marvell)

Agenda Items

- **Call meeting to order**
- **Patent policy, etc. (Call for Potentially Essential Patents)**
- **Review ad hoc rules**
- **Set and approve agenda**
- **Technical Presentations approved by 802.11ax for presentation this week, and related straw polls**
  - CRs will be prioritized.
- **Any other technical presentations**

1045

Meeting Protocol, Attendance, Voting & Document Status

- **Please announce your affiliation when you first address the group during a meeting slot**
- **Cell Phones to be silent or Off**
- **Register your attendance via https://imat.ieee.org while on meeting SSID (e.g. Verilan-secure)**
- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, Member's Area**
  - Contact Jon Rosdahl – jrosdahl@ieee.org

1046

Patent Policy and Other Guidelines

- Following 5 slides

1047

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is consistent with the ANSI patent policy and is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 12 and 12a on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

1048

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy. Participants:

- **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Personal awareness" means that the participant "is personally aware that the holder may have a potential Essential Patent Claim," even if the participant is not personally aware of the specific patents or patent claims**
- **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of such potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**

Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2

- Early identification of holders of potential Essential Patent Claims is strongly encouraged
- No duty to perform a patent search

1049

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/guides/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/guides/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/board/pat/pat-material.html

1050

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/board/pat/index.html

This slide set is available at http://standards.ieee.org/board/pat/pat-slideset.ppt

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

1051

Slide #3

Other Guidelines for IEEE WG Meetings

- All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

1052

Slide #4

Ad Hoc Groups Operation

- **Straw Polls are only allowed during Ad Hoc group meeting // no motions, anyone can vote**
- **A straw poll needs to achieves at least 75% to be converted to a motion at the TG level.**
- **Each Presentation is suggested to have 15 minutes including presenting and Q&A.**

1053

TGax PHY Adhoc Schedule in a Glance

	Monday	Tuesday		Wednesday		Thursday
AM1	**TGax**			**TGax**		
AM2		**PHY (Seaport DE)**	MAC			**TGax**
PM1				**PHY (Location TBD)**	MAC	**TGax**
PM2	**TGax**	SR	MU	**TGax**

PHY Submissions (1/3)

Notes:

- **Docs in green color have been presented.**
- **Docs in red color have been withdrawn.**
- **Docs in black color have NOT been presented.**

DCN	Title	Author	ad hoc
11-16/0915	Text for bit field finalization of HE-SIG-A	Lochan Verma	PHY
11-16/0920	PHY comment resolution for CID 1659,493,494	Xiaogang Chen	PHY
11-16/0922	PHY CR 1024 QAM	Sriram Venkateswaran	PHY
11-16/0923	PHY CR DCM Constellation Mapping	Sriram Venkateswaran	PHY
11-16/0928	CR on Section 26.3.9.8 - HE-SIG-B	Kaushik Josiam	PHY
11-16/0964	Considerations on MAC-PHY interactions during SR operations	Jing Ma	PHY

- 11-16/0923 will be updated and presented again in TG meeting
- 11-16/0928 presented but not completed due to limited time.

1057

Straw-poll 1 (#1, 11-16/0816r0)

- **Do you agree the resolution to the comments as below in 11-16/0816r0**
  - CID 2183

1058

- **SP: Passed without objection**

Straw-poll 2 (#1, 11-16/0872r1)

- **Do you agree the resolution to the comments as below in 11-16/0872r1**
  - CID 2007, 2005, 2123, 2747, 2746, 2244, 842, 846, 526, 910

1059

- **SP: Passed without objection**

Straw-poll 3 (#1, 11-16/0873r1)

- **Do you agree the resolution to the comments as below in 11-16/0873r1**
  - CID 302, 2040, 2032, 2549, 2133, 2548, 1009, 2132, 2680, 2039, 2038, 1001,479, 2150

1060

- **SP: Passed without objection**

- **Note, solutions to CID 2032, 2549, 2133, 2548, 1009 are replaced by solutions to same CIDs in 11-16/1021r2 in a following SP.**

Straw-poll 4 (#1, 11-16/0893r0)

Do you agree to make the following changes to the spec D0.2

Replace the following text in Subclause 26.3.5 P82 L65

The HE extended range SU PPDU is 20 MHz and can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>, <MCS 1, 1> and <MCS 2, 1>

by

The HE extended range SU PPDU only supports single 242-tone and 106-tone RU. The 242-tone RU can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>, <MCS 1, 1> and <MCS 2, 1>. The 106-tone RU can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>. The 106-tone RU location within the 20MHz tone plan is fixed as the right one.

1061

- **SP: Passed without objection**

Straw-poll 5 (#2, 11-16/0893r0)

- Do you agree to the spec text changes to D0.2 on Table 26-20 – Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU as shown in doc 11/16-0915r0?

  .

1062

- **SP: Passed without objection**
- **Conditional motion depending on the latest revision of 11-16/0915**

Straw-poll 6 (#1, 11-16/0900r1)

- **Do you agree the resolution to the comments as below in 11-16/0900r1**
  - CID 1052, 2519

1063

- **SP: Passed without objection**

Straw-poll 7 (#1, 11-16/0891r0)

- **Do you agree to adopt the spec text change as shown in doc 11/16-0892r0?**

  .

- **SP: Passed without objection**

Straw-poll 8 (#1, 11-16/0894r0)

- **Do you agree that for DL-MUMIMO over the full BW, or for a HE-MU PPDU format sent to a single user, the mapping from $N_{STS,total}$ to N_{HE-LTF} is as in Table 21-13 (Number of VHT-LTFs required for different numbers of space-time streams) in clause 21.3.8.3.5 (VHT-LTF definition), i.e. the same as in 11ac?**

1065

- **SP: Passed without objection**
- **No motion**

Straw-poll 9 (#2, 11-16/0894r0)

- **Do you agree that 1x HE-LTF is mandatory to transmit in UL-MUMIMO PPDUs over the full BW, for a STA that supports UL-MUMIMO?**

1066

- **SP: passed without objection**
- **No motion**

Straw-poll 10 (#3, 11-16/0894r0)

- **Do you agree with the followings?**
  - 1x HE-LTF is disallowed in any DL-MUMIMO PPDU over the full BW.

1067

- **SP: passed without objection**
- **No motion**

Straw-poll 11 (#4, 11-16/0894r0)

- **Do you agree to adopt the spec text changes as shown in doc 11/16-0895r0, which reflects Straw Polls 1~3?**

1068

- **SP: passed without objection**

Straw-poll 12 (#1, 11-16/0896r0)

- **Do you agree to adopt the spec text changes as shown in doc 11/16-0897r1?**

1069

- **SP: passed without objection**

Straw-poll 13 (#2, 11-16/0898r0)

- **Do you agree to adopt the spec text changes as shown in doc 11/16-0899r0?**

- **SP: passed without objection.**

Straw-poll 14 (#1, 11-16/0906r0)

- **Do you support to add following rules for 20MHz operating STAs?**
  - AP shall not assign following RUs to 20 MHz operating STAs
    - For 26-tone RUs, [1]
      - RU_{26} #5, 14 in 40 MHz DL/UL OFDMA PPDU
        - 2 RU_{26}s are restricted
      - RU_{26} # 5, 10, 14, 19, 24, 28, 33 in 80 MHz DL/UL OFDMA PPDU
        - 7 RU_{26}s are restricted
      - RU_{26} # 5, 10, 14, 19, 24, 28, 33 in lower 80 MHz and upper 80 MHz, in 80+80 or 160 MHz DL/UL OFDMA PPDU
        - 14 RU_{26}s are restricted
    - For 52-tone RUs, [1]
      - RU_{52} #5, 12 in 80 MHz DL/UL OFDMA PPDU
        - 2 RU_{52}s are restricted
      - RU_{52} #5, 12 in lower 80 MHz and upper 80 MHz, in 80+80 or 160 MHz DL/UL OFDMA PPDU
        - 4 RU_{52}s are restricted
    - For 106-tone RUs, [1]
      - RU_{106} #3, 6 in 80MHz DL/UL OFDMA PPDU
        - 2 RU_{106}s are restricted
      - RU_{106} #3, 6 in lower 80 MHz and upper 80 MHz, in 80+80 or 160 MHz DL/UL OFDMA PPDU
        - 4 RU_{106}s are restricted
  - Center RU26 in primary 20 channel shall not be assigned to any STAs where 20MHz operating STAs are recipients of 40/80/160/80+80 OFDMA
  - [1] Table 26-9 and 26-10 of 16/0024r1

- **SP: passed without objection**
- **No motion**

1071

Straw-poll 15 (#2, 11-16/0906r0)

- **Do you support to add following rules for 20MHz operating STAs?**
  - It is optional whether all RU_{242}s of 20 MHz operating STAs to be supported in 40/80/160/80+80 MHz DL-OFDMA
    - If supported, there is no restriction on RU_{242}s
  - RU_{242} shall not be allocated to 20MHz operating STAs in 40/80/160/80+80 for UL-OFDMA

Function	Format	Sub-format	20MHz operating Non-AP STA
In 2.4 GHz	40MHz DL-OFDMA	RU242 tone mapping	O
In 5 GHz	40 & 80 MHz DL-OFDMA	RU242 tone mapping	O
In 5 GHz	80+80 or 160 MHz DL-OFDMA	RU242 tone mapping	O

- **SP: passed without objection**
- **No motion**

1072

Straw-poll 16 (#1, 11-16/0908r1)

- **Do you agree the resolution to CID 854 as in doc 11/16-0908r1?**

1073

- **SP: passed without objection**

Straw-poll 17 (11-16/0910r0)

- **Do you support the proposed addition to the end of section 26.3.7.1 in 11ax spec D0.2?**
  - In a HE MU PPDU transmission, at least Nx4x26 tones (contiguous or non-contiguous), where N is the number of 20MHz channels' legacy preambles present, shall be occupied throughout the signaled BW

1074

- **SP: passed without objection**

Straw-poll 18 (#1, 11-16/1021r2)

- **Do you agree the resolution to the following comments in 11-16/1021r2 to replace the resolutions to these CIDs in 11-16/0873r1?**
  - CID 2032, 2549, 2133, 2548, 1009

1075

- **SP: passed without objection**

Straw-poll 19 (#1, 11-16/0914r1)

- **Do you agree to adopt the spec. text changes proposed in "11-16-0915-02-00ax"?**

1076

- **SP: passed without objection**

Straw-poll 20 (#1, 11-16/0920r3)

- **Do you agree to the resolutions to the following CIDs in 11-16/0920r3?**
  - CID 1659
  - CID 493
  - CID 494

- **SP: passed without objection**

1077

Straw-poll 21 (#1, 11-16/0922r2)

- **Do you agree to the resolutions to the following CIDs in 11-16/0922r2?**
  - CID 1782, 2082, 2083

1078

- **SP: passed without objection**

Straw-poll 22 (#1, 11-16/0937r7)

- **Do you agree the resolution to the comments as below in 11-16/0937r7**
  - CID 836 883 884 1930 2247 292 525 904 906 908 1984 1990 1995 1988 1994 1058 1992 1991 1985 1989 1684 523 1857 271 1412 1195 1996 2532 2120 2098 293 1987 1993 2748 2749

- **SP: passed without objection**

Straw-poll xx (#1, 11-16/0923r1)

- **Do you agree to the resolutions to the following CIDs in 11-16/0923r1?**
  - CID 482, 1867, 2084, 2085

1080

- **SP: Not run, go to TG meeting**

Proposed resolutions to comments on clause 26.3.9.8

Date: 2016-05-16

Author(s):

Name	Affiliation	Address	Phone	email
Kaushik Josiam	Samsung Research America			k.josiam@samsung.com

Abstract

This submission contains proposed comment resolutions to comments on TGax Draft D0.1.

The comments assigned to the author in Clause 26.3.9.8 are:
302, 304, 306, 310, 311, 477, 478, 479, 527, 1001, 1002, 1003, 1009, 1010, 1692, 2020, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2032, 2033, 2035, 2036, 2037, 2038, 2039, 2040, 2130, 2131, 2132, 2133, 2150, 2151, 2157, 2245, 2246, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2679, 2680, 2681, 2748, 2749.

The resolutions proposed in this document are marked with green.
306, 310, 311, 477, 1002, 1003, 1010, 1692, 2020, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2036, 2037, 2130, 2151, 2245, 2246, 2543, 2544, 2545, 2546, 2547, 2679, 2681

The changes marked in this document are based on **TGax Draft 0.2**.

Revision Notes

R0	Initial revision
R1	Changes to the resolution of some comments
R2	Fix comment reference errors and changes to the resolution of some comments.

Comments for Clause 26.3.9.8

CID 2020, 2022, 2543

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2020	111.31	26.3.9.8.1	The notion of "content channel" should be explained in this section, as it is used later on in the description of HE-SIG-B	See comment	Revised. The original spec text has been augmented, clarifying the definition of content channel by the text below. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2020
2022	111.52	26.3.9.8.1	Replace "multiple" with "one or more"	See comment	Accepted. The change has been made as per the comment **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2022
2543	111.31	26.3.8.9.1	HE-SIG-B may not contain Common Block field.	Add some where in this subclause that there is a mode in which the HE-SIG-B Commone Block field is not included.	Revised. Agree with the commenter. A sentence has been added to describe the absence of HE-SIG-B Common

					Block when compression bit is set – as shown in the text below. Further description of the user field arrangement was also missing. That has been added **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2543

Proposed Text Changes for CID 2020, 2022 and 2543

Instruction to Editor:
Please make the following changes in TGax D0.2 P114 L 6 under subclause 26.3.9.8. 1
The HE-SIG-B field is separately encoded on each 20 MHz band. The encoding structure in one such 20 MHz band is shown in Figure 26-19 (HE-SIG-B field encoding structure in each 20 MHz). It consists of a Common Block field followed by a User Specific field which together are referred to as the HE-SIG-B content channel.(#2020)

The Common Block field of a HE-SIG-B content channel (#2020) contains information regarding the resource unit allocation such as the RU arrangement in frequency domain, the RUs allocated for MU-MIMO and the number of users in MU-MIMO allocations. The Common Block field is described in detail in 26.3.9.8.4 (HE-SIG-B common content).

The User Specific field of a HE-SIG-B content channel consists of ~~multiple~~ one or more (#2022)User Block fields. Each User Block field ~~contains~~ is made up of two user fields that contain (#2020) information for two STAs to decode their payloads. The last User Block field may contain information for only one STA, if the number of user fields indicated by the RU allocation signaling in the common block is odd. See 26.3.9.8.5 (HE-SIG-B per-user content) for a description of the contents of the User Block field.

When SIGB Compression bit in HE-SIG-A of a HE-MU-PPDU is set to 1 indicating full bandwidth MU-MIMO transmission, the Common Block field is not transmitted and the content channel consists of only the User Specific field. (#2543)

Please add the following sentences to TGax D0.2 P121 L 36 under subclause 26.3.9.8.5

When SIGB Compression bit in HE-SIG-A of a HE-MU PPDU is set to 1 indicating full bandwidth MU-MIMO transmission, the number of STAs in the MU-MIMO group is indicated in the 'SIGB Number of Symbols/Number of MU-MIMO users field' in HE-SIG-A. For bandwidths larger than 20 MHz, the User block fields are split equitably between two HE-SIG-B content channels, i.e., for a k user MU-MIMO PPDU, 1, …., ceil(k/2) User block fields are carried in HE-SIG-B content channel 1 and ceil(k/2)+1,……,k User block fields in HE-SIG-B content channel 2. (#2543)

CID 306, 2026, 2547

306	113.38	26.3.9.8.2	If the padding bits are used to round the number of symbols to the	Clarify that the padding bits are added both to have an integer number	Revised

			"nearest" integer, then how would it be possible to align the number of symbols across both content channels?	of symbols as well as to ensure that both content channels have the same number of symbols. Addition descriptions on how this should be done also need to be added - by adding more padding bits to the content channel with the smaller number of users etc..	The revised text for the spec draft has been added that addresses the comments intent. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 306
2026	113.38	26.3.9.8.3	"bits are added to round up the number of symbols to the nearest integer"	The number of symbols in HE-SIG-B is communicated in HE-SIG-A	DUPLICATE of CID 306 in doc 16-928r0.
2547	113.56	26.3.9.8.3	HE-SIG-B on different 20 MHz bands must end at the same OFDM symbol.	clarify "... round up the number of symbols to the nearest integer." to indicate that HE-SIG-B padding should be done so that HE-SIG-B on different 20 MHz bands end at the OFDM symbol.	DUPLICATE of CID 306 in doc 16-928r0.

Proposed Text Changes for CID 306

Instruction to Editor:
Please make the following changes in TGax D0.2 P115 L 59 under subclause 26.3.9.8.3
In the User Specific field, in any 20 MHz band, the bits corresponding to two STAs (i.e. two User fields) are encoded together. Specifically, the STAs scheduled in the HE-MU-PPDU are split into groups of two. Each group of two User fields shall have CRC and tail bits added and then BCC encoded at rate R = ½ using the encoder described in 18.3.5.6. ~~If the number of users is even, padding bits are added to round up the number of symbols to the nearest integer.~~ If the number of users in a content channel is odd, the User Block field corresponding to the last user, who is not grouped, is encoded after adding tail and CRC bits. After encoding, padding bits are added to each content channel to round up the number of symbols the content channel occupies to the nearest integer value. Further padding is added to each content channel until the number of OFDM symbols in the content channel equals the Number of HE-SIG-B symbols signalled by a 4 bit field in HE-SIG-A for an HE MU PPDU. Thus, padding ensures that the content channels in different 20MHz bands end at the same OFDM symbol. (#306)~~and only then are any padding bits added~~. ~~The padding bits added ensure that both content channels have the same number of symbols.~~ The specific method of generating padding bits is TBD. When the code rate is not equal to ½, the convolutional encoder output bits for each field (including padding bits) are concatenated, then the concatenated bit streams are punctured continuously as described in 18.3.5.6 (Convolutional encoder).

CID 2024, 2544, 2545, 2130, 2023, 1692

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution

2024	112.27	26.3.9.8.2	Improve wording	"the 1st and 3rd 20 MHz bands from the top" is not very precise. Find better formulation.	Revised. The commenter is correct. However the proposed change is insufficient. An alternate text for Section 26.3.9.8.2 has been proposed. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2024
2544	112.04	26.3.9.8.2	242-tones RU can cross the physical 20 MHz boundary. So, the notion that the HE-SIG-B Common Block field is transmitted on the same 20 MHz band as the STA's data is not strictly correct.	Clarify the HE-SIG-B description to match the actual design of the standard.	Revised. The commenter is correct. However the proposed change is insufficient. An alternate text for Section 26.3.9.8.2 has been proposed **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2544
2545	112.26	26.3.9.8.2	What is the "1st" 20 MHz band? For example, in an 80 MHz BSS using channels 36/40/44/48 (5GHz) with channel 40 being the Primary20, what is the "1st" 20 MHz band? Is it channel 40? Channel 36? Also, in case of 80+80 MHz BSS where the Primary80 segment has higher carrier frequency than the Secondary80 segment, would the "1st" 20 MHz band start in the Primary80 segment, or the segment lower in frequency?	Clarify what a "1st" 20 MHz band is.	DUPLICATE of CID 2024 in doc 16-928r1.

2130	112.01	26.3.9.8.2	Unclear what subbands A,B,C,D are tied to. (ie, to i_BW in eqn 26-25)	clarify mapping A,B,C,D to subband indices	DUPLICATE of CID 2024 in doc 16-928r1.
2023	112.02	26.3.9.8.2	Is there a specific relationship between content channels and the primary channel when BW>20?	The order of the content channels matter for MU transmissions. Is it correct to assume that the first content channel is always in the primary channel?	Revised. The arrangement of the content channels is in the order of increasing sub-carrier index starting from the lowest – which carries content channel #1. The text to clarify this has been proposed **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2023
1692	86.09	26.3.9.8.3	It is not clear at which position, and in which SIG-B channel that it carries the per-user content of the center 26-tone RU of 80MHz tone plan	specify the per-user content is located in the last per-user block of channel 1 , if common info is not 11010yyy or 11011yyy	Revised, The comment is correct but the proposed change is not. An alternate text that shows a 1-bit signaling in the content channel corresponding to the center 26 tone RU – to indicate presence of user field is proposed. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 1692

Proposed Text Changes for CID 2024, 2544, 2023 and 1692

Instruction to Editor:
Replace the contents of sub-clause 26.3.9.8.2 Frequency domain mapping in TGax D0.2 beginning P114 until P 115 line 47 with the following:

26.3.9.8.2 Frequency domain mapping (#2024)

The 20 MHz PPDU contains one content channel in which the Common Block field and User Specific field are carried as shown in Figure 26-20(HE-SIG-B content channel for a 20 MHz PPDU). The Common Block field contains the RU allocation signaling for RUs that occur within the 242-subcarrier RU boundary.

Figure 26-20—HE-SIG-B content channel for a 20 MHz PPDU

The 40MHz PPDU contains two content channels, each occupying a 20MHz segment. Each content channel contains a Common Block field followed by User Specific field as shown in Figure 26-21 (HE-SIG-B content channel arrangement for a 40 MHz PPDU). The content channels are ordered in increasing order of the absolute frequency i.e., the first content channel carries Common Block field and User Specific field corresponding to RUs whose sub-carrier indices fall between [-244:-3] and the second content channel carries Common Block field and User Specific field corresponding to RUs whose sub-carrier indices fall between [3:244] .(#2544) In case a 484-subcarrier RU is signaled, both content channels will carry Common Block field and User Specific field corresponding to the 484-subcarrier RU.

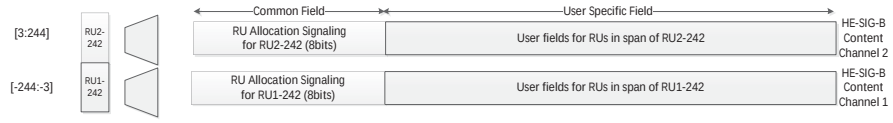

Figure 26-21—HE-SIG-B content channel arrangement for a 40 MHz PPDU

The 80MHz PPDU contains two content channels each of which are duplicated once as shown in Figure 26.22 (Default mapping of the two HE-SIG-B content channels and their duplication in an 80MHz PPDU). The arrangement of the content channels are in increasing order of the absolute frequency – where HE-SIG-B content channel #1 occupies the tones in the 20MHz segment with the lowest subcarrier indices followed by the HE-SIG-B content channel #2 in the adjacent 20MHz segment. This structure of the first content channel occupying the lower subcarrier index followed by the second content channel is repeated with content duplication in the remaining two 20MHz segments respectively. The first content channel appearing in the 20MHz segments carries a Common Block field and User Specific field corresponding to RUs whose subcarriers indices overlap those segments. (#2544) The Common Block field of content channel 1 contains the following: a RU allocation signaling field for RUs whose sub-carrier indices fall in the range [-500:-259], followed by a second RU allocation signaling field for RUs whose sub-carrier indices are between [17:258] and 1 bit to indicate presence of the user field corresponding to the center 26 sub-carrier RU that spans subcarriers [-16:-4, 4:16].(#1692) The second content channel carries a Common Block field and User Specific field corresponding to RUs whose subcarrier indices fall in those segments. The Common Block field of content channel 2 contains the following: a RU allocation signaling field for RUs whose sub-carrier indices fall in the range [-258:-17], followed by a second RU allocation signaling field for RUs whose sub-carrier indices are between [259:500] and 1 bit to indicate presence of the user field corresponding to center 26 sub-carrier RU that spans subcarriers [-16:-4, 4:16]. The same value for the bit signaling presence of center 26 sub-carrier RU is carried in both content channels. (#1692) The user fields in the User Specific field that follow the common field are arranged in the same order as the RU allocation signaling. When assigned, the user field corresponding to center 26 sub-carrier RU that spans subcarriers [-16:-4, 4:16] is carried as the last user field in HE-SIG-B content channel 1.(#1692) (#2023) When RUs greater than 242 subcarriers are signaled in the RU allocation signaling in a portion of the bandwidth, the signaling is carried in both content channels placed in the order of the absolute sub-carrier index.

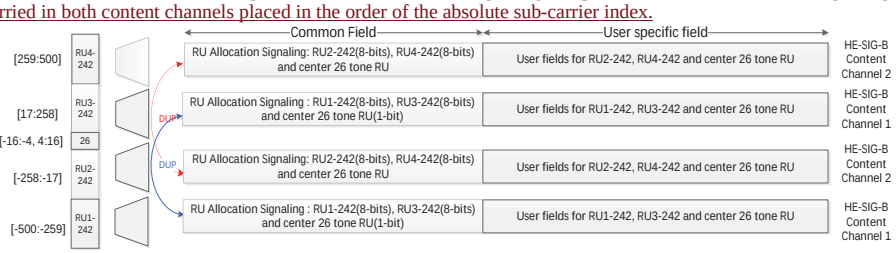

Figure 26-22—Default mapping of the two HE-SIG-B channels and their duplication in an 80 MHz PPDU

Field Code Changed

Field Code Changed

Field Code Changed

The 160MHz PPDU contains two content channels each of which are duplicated four times as shown in Figure 26-27 (Default mapping of the two HE-SIG-B channels and their duplication in a 160MHz PPDU). The arrangement of the content channels are in increasing order of the absolute frequency.(#2023) The first content channel occupies the tones in the 20MHz segment with the lowest subcarrier indices and the second content channel in the adjacent 20MHz segment. This pattern of arranging HE-SIG-B content channel 1 and HE-SIG-B content channel 2 is duplicated over the other segments. The HE-SIG-B content channel 1 and HE-SIG-B content channel 2 carries RU allocation signaling at 242 sub-carrier RU granularity that overlap with the 20MHz segments in which the content channels are carried (including duplication). The signaling for the presence of the user field corresponding to a center 26 tone RU in the 80MHz segment with the lower sub-carrier index is carried in HE-SIG-B content channel 1 as a 1-bit sub-field placed at the end of the Common field. Similarly, signalling for the center 26 tone RU in the 80MHz segment with the higher sub-carrier index is carried in HE-SIG-B content channel 2 as 1-bit sub-field placed at the end of the common field. When assigned, the user field corresponding to the center 26 tone RU in the 80MHz segments is carried as the last user field in their respective content channels. (#1692) When RUs greater than 242 subcarriers are signaled in the RU allocation signaling in a portion of the bandwidth, the signaling is carried in both content channels placed in the order of the absolute sub-carrier index.

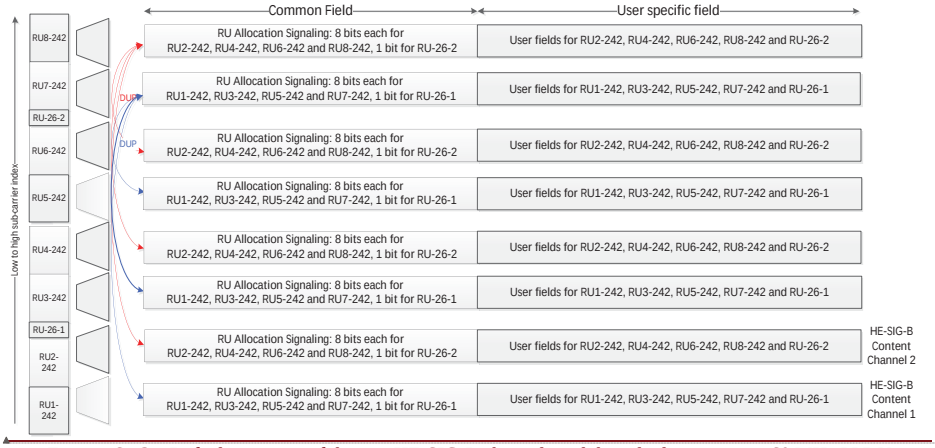

Figure 26-23—Default mapping of the two HE-SIG-B channels and their duplication in a 160 MHz PPDU

Field Code Changed

Instruction to Editor:
Insert the following in TGax D0.2 beginning P117 line 5 in Section 26.3.9.8.4.

Table 26-xx HE-SIG-B Common field in HE MU PPDU (#2024, #1692)

Field	# of bits	Description
RU Allocation	$N \times 8$	Indicates the RU arrangement in frequency domain. It also indicates number of user fields in each RU. For RUs of size greater than or equal to 106-tones that support MU-MIMO, it indicates the number of users multiplexed using MU-MIMO. $N = 1$ for 20 MHz and 40 MHz HE MU PPDU $N = 2$ for 80 MHz HE MU PPDU $N = 4$ for 160/80+80 MHz HE MU PPDU
Center 26-tone RU	1	This field is present only for full bandwidth 80 MHz and 160/80+80 MHz. For full bandwidth 80 MHz Set to 1 to indicate that Center 26-tone RU is allocated in the Common Block fields of both SIGB content channels with same value. Set to 0, otherwise. For full bandwidth 160/80+80 MHz Set to 1 to indicate that Center 26-tone RU is allocated for one individual 80 MHz in Common Block fields of both SIGB content channels. Set to 0, otherwise.

CRC	4	See CRC computation (26.3.9.7.3)
Tail	6	Used to terminate the trellis of the convolutional decoder. Set to 0.

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position.

CID 2546

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2546	113.23	26.3.9.8.2	Using "MHz" for RU size is not very accurate. For example, is a 26-tones RU 2 MHz RU? 2.5 MHz RU? 2.0312 MHz RU? Suggest to use # of tones when referring to RU size.	Change "RU size > 20 MHz" to "RU size greater than 242-tones".	Revised **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2546

Proposed Text Changes for CID 2546

Instruction to Editor:
Please make the following changes in TGax D0.2 P115 L 48 under subclause 26.3.9.8.3

For MU-MIMO allocation of RU size ~~> 20 MHz~~ greater than 242-sub-carriers (#2546), the User Block ~~sub~~fields are dynamically split between the two HE-SIG-B content channels (1/2) and the split is decided by the AP (on a per case basis).

CID 477 and 2679

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
477	113.56	26.3.9.8.3	Section 25.3.9.2.4 does not exist. The definition of the default mode in HE SIG-A is missing.	Clarify what the default mode in HE SIG-A means. Additionally, rename the "default mode" default is typically specificfied in case some signaling is missing. The name of the mode implies some signaling is not transmitted in some cases and transmitted in other cases.	Revised. The word default mode is confusing. The HE-SIG-A has been clarified as that in a HE-MU PPDU **Instruction to Editor:** TGax editor to make the changes shown

					in 11-16/928r1 under all headings that include CID 477
2679	113.56	26.3.9.8.3	There's no Section 25.3.9.2.4, and there's no definition on "default mode".	Add the definition of the "default mode".	DUPLICATE of CID 477 in doc 16-928r1.

Proposed Text Changes for CID 477

Instruction to Editor:

Please make the following changes in TGax D0.2 P116 L 18 under subclause 26.3.9.8.3

The number of ~~symbols in~~ HE-SIG-B symbols, denoted by $N_{SYM,HE\text{-}SIG\text{-}B}$, shall be ~~signaled~~signalled by a 4 bit field in HE-SIG-A of a HE MU PPDU (#477) ~~in the default mode~~ (see (#1304)26.3.9.7.2 (Content)(#2781)).

CID 2025

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2025	113.30	26.3.9.8.3	For CRC, add reference to 26.3.9.7.3	See comment	Revised. The comment should have been the proposed change **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2025

Proposed Text Changes for CID 2025

Instruction to Editor:

Please make the following changes in TGax D0.2 P116 L 18 under subclause 26.3.9.8.3

In each 20 MHz band, the bits in the Common Block field shall have CRC and tail bits added and then be BCC encoded at rate R = ½. The CRC bits are computed as described in 26.3.9.7.3.(#2025)

CID 2027

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2027	113.43	26.3.9.8.3	TBD	Define	Revised. The comment seeks to resolve the TBD in the sentence "The specific method of generating

					padding bits is TBD". The padding can either be defined as all zeros or left unspecified. Simulations [1] have verified that the PAPR with a long zero padding is within reasonable limits when used with the adopted phase rotation method for PAPR reduction in HE-SIG-B We can leave the padding sequence unspecified. The recommendation is to delete the sentence. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2027

Proposed Text Changes for CID 2027

Instruction to Editor:
Please delete the following changes in TGax D0.2 P116 L 2 under subclause 26.3.9.8.3
~~The specific method of generating padding bits is TBD.~~ (#2027)

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2028	113.43	26.3.9.8.3	Clarify puncturing requirement	The concatenation before the puncturing should also include the bits of the common field. Make this explicit and put the puncturing requirement in a separate paragraph, not as part of a paragraph on user-specific field.	Revised. Accepted in principle- an alternate text to clarify the intent of the **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2028
2029	113.34	26.3.9.8.3	Not clear what "continuously" means	delete "continuously"	Accepted **Instruction to Editor:** TGax editor to make the changes

					shown in 11-16/928r1 under all headings that include CID 2029

Proposed Text Changes for CID 2028, 2029

Instruction to Editor:
Please move the following sentence in TGax D0.2 P116 L 3 under subclause 26.3.9.8.3 to a new paragraph with the following change:

For both common and User Specific fields ,~~When~~ when the code rate is not equal to ½, the convolutional encoder output bits for each field (including padding bits) are concatenated, then the concatenated bit streams are punctured ~~continuously~~ (#2029) as described in 17.3.5.6 (Convolutional encoder)(#307)(#2028).

CID 310

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
310	118.36	26.3.8.9.5	"When MU-MIMO is used in RUs of size 20 MHz or greater" should be " greater than 242 subcarriers". If RU size is 20MHz, still only one HE SIGB content channel is needed. Also RU size shoul be in the unit of subcarriers	as in comment	Revised. The correct change as described in the comment is proposed as text **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 310

Proposed Text Changes for CID 310

Instruction to Editor:
Please make the following changes in TGax D0.2 P118 L 32 under subclause 26.3.9.8.5

When MU-MIMO is used in an RU of size ~~≤ 20 MHz~~ less than or equal to 242 sub-carriers (#310), the number of users (Nuser) in an MU-MIMO allocation is equal to the number of user-fields per RU signaled for the RU in the RU allocation subfield of an HE-SIG-B Common Block field. When MU-MIMO is used in RUs of size ~~20 MHz or greater~~ greater than 242 sub-carriers (#310), the number of users (Nuser) in an MU-MIMO allocation is computed as the sum of the number of user-fields per RU indicated for the RU by the 8-bit RU allocation subfield in each HE-SIG-B content channel. For a given value of Nuser, the four bits of the spatial configuration subfield are used as follows: A STA with a STA-ID that matches the 11-bit ID signaled in the user field for an MU-MIMO allocation derives the number of spatial streams allocated to it using the row corresponding to the signaled 4-bit spatial configuration subfield and the column corresponding to the position of the user-field in the user-specific field. The starting stream index for the STA is computed by summing the Nsts in the columns prior to the column indicated by the STA's user-field position. In the case of load balancing for RUs of size ~~> 20 MHz~~ greater than 242 sub-carrierswhere user fields corresponding to the same MU-MIMO allocations are split into two HE-SIG-B content channels, the user-field positions are logically continuous, with the first user-field corresponding to the same RU ~~,~~ in the second HE-SIG-B content channel updating its position (and therefore, column index) from that of the last user-field in the first HE-SIG-B content channel. (#310)

Formatted: Normal, Left

CID 311

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
311	118.00	26.3.8.9.5	The computation for the total number of spatial streams is missing from the description of how the spatial streams are indicated to each user	Mention that the total number of spatial streams is indicated by summing all the columns for the indicated row in the corresponding table.	Revised The total number of spatial streams (Total N_{STS}) is indicated in Table 26-21. The signalled *spatial configuration subfield corresponding to a signaled* N_{user} indicates the row and the user field position in the content channel specifies the number of spatial streams allocated to the user. The total number of spatial streams is just a table-look up given *Nuser*. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 311

Proposed Text Changes for CID 311

Instruction to Editor:
Please insert the following sentence in TGax D0.2 P118 L 45 under subclause 26.3.9.8.5

The total number of spatial streams (Total N_{STS}) is computed by summing all columns for the row signalled by the spatial configuration sub-field and is indicated in Table 26-21 (Spatial Configuration subfield encoding) under the column Total N_{STS} (#311).

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
1010	116.00	26.3.8.9.5	The text of the PHY motion 128 states, "Multiple RU allocation for one STA shall not be allowed in 11ax." This has to be incorporated in the spec text	Will bring a detailed text proposal for this comment	Revised. The proposed change is insufficient. To reflect the agreement accurately, text has been added to the spec as shown. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 1010
2151	116.00	26.3.8.9.5	Please confirm, maximum of one RU will be		DUPLICATE of CID 1010 in doc 16-928r1.

			expected to be decoded by a given STA		The normative behaviour is on the signalling – where the AP cannot allocate more than one RU to an addressed STA. That clarification is provided by the modification ot the text as suggested below.

Proposed Text Changes for CID 1010

Instruction to Editor:
Please make the following changes in TGax D0.2 P119 L 16 under subclause 26.3.9.8.5
Multiple RU allocations addressed to a single STA shall not be allowed in 802.11ax. Therefore, the signalling that enables STAs to decode its data is carried in only one user field (#1010).

CID 2037

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2037	117.51	26.3.9.8.5	Define values of fields	Also, lines 53, 56, 59, 61	Revised. The comment is correct. The proposed change is unclear. So, an alternate resolution is provided for both Table 26-19 and 26-20. **Instruction to Editor:** TGax editor to make the changes shown in 11-16/928r1 under all headings that include CID 2037

Proposed Text Changes for CID 2037

Instruction to Editor:
Please make the following changes to Table 26-19 and Table 26-20 under subclause 26.3.9.8.5 inTGax D0.2

Table 26-19—Fields of the HE-SIG-B user field for an(#916) non-MU-MIMO(#1101) allocation

Bit	Sub-Field	Number of bits	Description
B0:B10 ~~TBD~~	STA-ID	11	The STA identifier that addresses a STA – reference to MAC section(?). For RUs that carry a broadcast allocation:

			• For single BSS AP, the STAID for Broadcast will be 0; • For Multiple BSS AP, the STAID for Broadcast to a specific BSS will follow the group addressed AID assignment in the TIM according to the existing Multi-BSSID TIM operation; • For Multiple BSS AP, the STAID for Broadcast to all BSS of the AP will have a special STAID value reserved. • STAID value 2046 is used to indicate that the RU carries no data • When a STA transmits on the uplink using the HE_MU_PPDU format, the STA-ID field is populated by the AID of the transmitter assigned by the AP
B11:B13 ~~TBD~~	NSTS	3	Number of spatial streams Set to n for n+1 space time stream, where n = 0, 1, 2, …., 7
B14 ~~TBD~~	Tx Beamforming	1	Use of transmit beamforming Set to 1 if a Beamforming steering matrix is applied to the waveform in an SU transmission Set to 0 otherwise
B15:B18 ~~TBD~~	MCS	4	Modulation and Coding Scheme. Set to n for MCSn, where n = 0, 1 ,2 …., 11 Values 12 to 15 are reserved
B19 ~~TBD~~	DCM	1	Indication for use of dual carrier modulation. Set to 1 to indicate that the payload of the MU PPDU is modulated with dual sub-carrier modulation for the MCS Set to 0 indicates that the payload of the PPDU is not modulated with dual sub-carrier for the MCS.
B20 ~~TBD~~	Coding	1	Indicates whether BCC or LDPC is used. ~~Indication for use of LDPC~~ Set to 0 for BCC Set to 1 for LDPC

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position. (#1010)

Table 26-20—Fields of the HE-SIG-B user field for an(#2817) MU-MIMO allocation

Bit	Sub-Field	Number of bits	Description
B0:B10 ~~TBD~~	STA-ID	11	The STA identifier that addresses an STA – reference to MAC section(?)
~~TBD~~ B11:B14	Spatial Configuration	4	Indication for the number of spatial streams for a STA in an(#2817) MU-MIMO allocation. See Table 26-21 (Spatial Configuration subfield encoding).
~~TBD~~ B15:B18	MCS	4	Modulation and Coding Scheme. Set to n for MCSn, where n = 0, 1, 2,…..11 Values 12 to 15 are reserved
~~TBD~~ B19	DCM	1	Use of dual carrier modulation

Formatted: English (United States)

			Set to 1 to indicate that the payload of the MU PPDU is modulated with dual sub-carrier modulation for the MCS. Set to 0 indicates that the payload of the PPDU is not modulated with dual sub-carrier for the MCS.
~~TBD~~ B20	Coding	1	~~Use of LDPC~~ Indicates whether BCC or LDPC is used. Set to 0 for BCC Set to 1 for LDPC

NOTE- Integer fields are transmitted in unsigned binary format, LSB first, where the LSB is in the lowest numbered bit position.(#1010)

Formatted: English (United States)

CID 2245

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2245	112.24	26.3.9.8.2	HE-SIG-B definition is inelegant and prone to interoperability issues once systems are deployed.	Change SIG-B to be as efficient as possible: encode different users in each 20MHz segment. Or, change SIG-B to be more elegant and encode all users in each 20MHz segment	Rejected. Reason: The proposed change is insufficient in detail. Requires re-design of the HE-SIG-B content channel mapping – needs detailed proposal from the commenter

CID 2246

CID	Page. Line	Clause Number	Comment	Proposed Change	Proposed Resolution
2246	113.34	26.3.9.8.3	The time-domain encoding of user-specific-fields is inelegant and prone to interoperability issues	Remove the part about splitting users into two groups and remove the painful process of figuring out padding bits as a function of whether the number of users is even or odd. Encode user-specific-fields contained in a 20MHz segment together with one tail/CRC.	Rejected Reason: The proposed change is insufficient in detail. The comment requires us to revisit the current HE-SIG-B time-domain encoding and change it. While the rationale is to simplify, it will require us to make substantial

					changes to the exisiting design.

IEEE 802.11 Task Group ax
July 2016 San Diego Meeting
Manchester Grand Hyatt, San Diego, CA
July 24th – 29th, 2016

TGax Chair	**Osama Aboul-Magd (Huawei Technologies)**
Vice Chair	**Simone Merlin (Qualcomm)**
Vice Chair	**Ron Porat (Broadcom)**
TGax Secretary	**Yasuhiko Inoue (NTT)**
TGax Technical Editor	**Robert Stacy (Intel)**

Monday, July 25th, 2016, AM1 TGax Ad Hoc Session (8:00-10:00)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @8:05
   1.1. This is TGax ad hoc session since this session is placed before the WG opening plenary.

2. Announcement
   2.1. Agenda Doc.11-16/0779r0 on the server. Rev. 1 is the working document.
   2.2. Meeting Protocol: Chair asked to state name and affiliation when speaking for the first time.
   2.3. Attendance reminder.
      2.3.1. The attendance server: https://imat.ieee.org/

3. The chair reviewed the mandatory 5 slides of P&P.
   3.1. Instructions for the WG Chair.
   3.2. Participants, Patents, and Duty to Inform.
   3.3. Patent Related Links.
   3.4. Call for potentially essential patents.
      3.4.1. Chair asked if anyone is aware of potentially essential patents.
      3.4.2. No potentially essential patents reported.
   3.5. Other Guidelines for IEEE WG Meetings.

4. Agenda items for the week
   4.1. Approve TG and Telecons minutes since May meeting.
   4.2. Resolution of comments received on draft D0.1
   4.3. Ad Hoc group meetings
   4.4. Technical Presentations and related straw polls and/or motions
   4.5. Schedule Telecon times.

5. General Flow of the meeting
   5.1. Slides 13 and 14 of the 16/0779r1 contain general flow of the meeting.
   5.2. There are eight meeting slots planed for TGax.

	Monday	Tuesday		Wednesday	Thursday
AM1	TGax (full, ad hoc)			TGax (full)	
AM2		TGax (Ad Hoc)	TGax (Ad Hoc)		TGax (full)

PM1				TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (full)
PM2	TGax (full)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (full)		
PM3		TGax (Ad Hoc)	TGax (Ad Hoc)			

6. Agenda for Monday, July 25th, AM1 (8:00 – 10:00 AM).

6.1. Proposed Agenda for Monday AM1:

6.1.1. Call meeting to order
6.1.2. Patent policy, etc.
6.1.3. This is TGax full ad hoc meeting (No motions)
6.1.4. Call for submissions.
6.1.5. Set up agenda for the ad hoc meeting.
6.1.6. Presentations
6.1.7. Adjourn

6.2. Chair asked if there are any other items – No items proposed. Meeting will be conducted based on this order.

7. Call for submissions – we have 90 submissions

7.1. PHY – 26 submissions

7.1.1. 11-16-0816, "Comment Resolution for CID 2183," Daewon Lee (Newracom)
7.1.2. 11-16-0872, "CR HE-SIG-A Part II," Ross Jian Yu (Huawei Technologies)
7.1.3. 11-16-0873, "CR HE-SIG-A Part I," Ross Jian Yu (Huawei Technologies)
7.1.4. 11-16-0891, "LDPC for 1024QAM," Hongyuan Zhang (Marvell)
7.1.5. 11-16-0892, "Spec Text on LDPC for 1024QAM," Hongyuan Zhang (Marvell)
7.1.6. 11-16-0893, "11ax Extended Range PPDU," Bin Tian (Qualcomm)
7.1.7. 11-16-0894, "HE-LTF Capabilities," Hongyuan Zhang (Marvell)
7.1.8. 11-16-0895, "Spec Text for HE-LTF Capabilities," Hongyuan Zhang (Marvell)
7.1.9. 11-16-0896, "11ax Beamformee Capabilities," Hongyuan Zhang (Marvell)
7.1.10. 11-16-0897, "Spec Text for Beamformee Capabilities," Hongyuan Zhang (Marvell)
7.1.11. 11-16-0898, "BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
7.1.12. 11-16-0899, "Spec Text for BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
7.1.13. 11-16-0900, "PHY Comment Resolution for CID 1052 and 2519," Bin Tian (Qualcomm)
7.1.14. 11-16-0903, "Gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
7.1.15. 11-16-0904, "Proposed text for gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
7.1.16. 11-16-0906, "RU restriction on 20MHz operating STAs," Joonsuk Kim (Apple)
7.1.17. 11-16-0908, "CR - proposed text on RU restriction of 20MHz STAs," Joonsuk Kim (Apple)
7.1.18. 11-16-0910, "Minimum Occupied Bandwidth," Ron Porat (Broadcom)
7.1.19. 11-16-0914, "Bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
7.1.20. 11-16-0915, "Text for bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
7.1.21. 11-16-0920, "PHY comment resolution for CID 1659,493,494," Xiaogang Chen (Intel)
7.1.22. 11-16-0922, "PHY CR 1024 QAM," Sriram Venkateswaran (Broadcom)
7.1.23. 11-16-0923, "PHY CR DCM Constellation Mapping," Sriram Venkateswaran (Broadcom)
7.1.24. 11-16-0928, "CR on Section 26.3.9.8 - HE-SIG-B," Kaushik Josiam
7.1.25. 11-16-0937, "11ax Comment Resolutions for Clauses 26.3.2-26.3.9.3-26.3.9.4-26.3.9.5-26.3.10.2- 26.3.10.13," Rui Cao (Marvell)
7.1.26. 11-16-0964, "Considerations on MAC-PHY interactions during SR operations," Jing Ma (NICT)

7.2. MAC – 34 submissions

7.2.1. 11-16-0828, "HE Fragmentation - part 1," Alfred Asterjadhi (Qualcomm)

7.2.2. 11-16-0829, “Comment Resolution for Section 10.24.10 Block Ack/GCR block ack,” Reza Hedayat (Newracom)
7.2.3. 11-16-0844, “CC0-Intra_PPDU_PS,” Alfred Asterjadhi (Qualcomm)
7.2.4. 11-16-0856, “Issue of Buffer Status reporting,” Stephane Baron (Canon)
7.2.5. 11-16-0860, “comment resolution on A-MPDU format, » Yongho Seok (Newracom)
7.2.6. 11-16-0861, “comment resolution on mu acknowledgment procedure,” Yongho Seok (Newracom)
7.2.7. 11-16-0862, “comment resolution on subclause 25.11,” Yongho Seok (Newracom)
7.2.8. 11-16-0864, “d0.1 comment resolution on clause 6,” Yasuhiko Inoue (NTT)
7.2.9. 11-16-0867, “CIDs for CIDs: Section 9.3.1.9.3 Compressed BA format,” George Cherian (Qualcomm)
7.2.10. 11-16-0868, “CIDs for Section 9.3.1.9.7 Multi STA BAs, ” George Cherian (Qualcomm)
7.2.11. 11-16-0869, “Comment resolution section 9.3 TWT,” Zhou Lan (Broadcom)
7.2.12. 11-16-0871, “Trigger Frame Per User Info Order,” Zhou Lan (Broadcom)
7.2.13. 11-16-0877, “Comment resolution on CID 783 (TXOP Duration field format),” Jeongki Kim (LG Electronics)
7.2.14. 11-16-0878, “Comment resolution on CID 782 (Intra-PPDU PS),” Jeongki Kim (LG Electronics)
7.2.15. 11-16-0881, “Comment resolution on ROMI,” Jayh Park (LG Electronics)
7.2.16. 11-16-0882, “Comment resolution on TOMI,” Jayh Park (LG Electronics)
7.2.17. 11-16-0883, “Comment resolution for CID 152,” Jayh Park (LG Electronics)
7.2.18. 11-16-0884, “Spec. Text for HE Operation element and AID Assign Rule,” Jianhan Liu (MediaTek)
7.2.19. 11-16-0890, “Comment Resolution on NAV Setting of Single and Multiple Protection and Control Response,” Po-Kai Huang (Intel)
7.2.20. 11-16-0913, “SU Multi-TID Rules,” Jarkko Kneckt (Apple)
7.2.21. 11-16-0916, “TID value of ALL ACK signaling,” Woojin Ahn (Wilus Institute)
7.2.22. 11-16-0917, “Text for TID value of ALL ACK signaling,” Woojin Ahn (Wilus Institute)
7.2.23. 11-16-0918, “Discussions on Partial BSS Color,” Geonjung Ko (Wilus Institute)
7.2.24. 11-16-0924, “NAV resetting with RTS/MU-RTS,” Weimin Xing (ZTE)
7.2.25. 11-16-0925, "Spex text on NAV resetting with RTS/MU-RTS,” Weimin Xing (ZTE)
7.2.26. 11-16-0941, “CR HE Fragmentation - part 2,” Ming Gan (Huawei technologies)
7.2.27. 11-16-0942, “CR Service Field,” Ming Gan (Huawei Technologies)
7.2.28. 11-16-0951, “Setting for TXOP Duration Field,” Po-Kai Huang (Intel)
7.2.29. 11-16-0952, “Spec text trigger frame per user info order,” Zhou Lan (Broadcom)
7.2.30. 11-16-0953, “Comment Resolution and Spec Text for Setting for TXOP Duration field,” Po-Kai Huang (Intel)
7.2.31. 11-16-0960, “AP access procedure for UL MU operation,” Jinsoo Ahn (Yonsei Univ.)
7.2.32. 11-16-0961, “Consideration on Multi-STA BlockAck Optimization,” Hanseul Hong (Yonsei Univ.)
7.2.33. 11-16-0962, “EDCA rules follow up 1,” Jing Ma (NICT)
7.2.34. 11-16-0963, “EDCA rules follow up 2,” Jing Ma (NICT)
7.2.35. 11-16-0966, “CID 71 and CID 190 Resolutions,” Jarkko Kneckt (Apple)
7.2.36. 11-16-0998, “2 sets of EDCA parameters,” Laurent Cariou (Intel)

7.3. MU – 12 submissions
7.3.1. 11-16-0866, “Comment Resolution of Section 26.3.13 MU-MIMO,” Kome Oteri (InterDigital)
7.3.2. 11-16-0875, “CR for the section 10.3.2.8a CS Condition to Respond CTS,” Kiseon Ryu (LG Electronics)
7.3.3. 11-16-0876, “CR for the section 25.5.2.4 UL MU CS CCA and CS Required Bit,” Kiseon Ryu (LG Electronics)
7.3.4. 11-16-0880, “UL MU Transmission Rules - EDCA backoff,” Jayh Park (LG Electronics)
7.3.5. 11-16-0885, “Comment Resolution on UL MU CS NAV Consideration,” Po-Kai Huang (Intel)
7.3.6. 11-16-0886, “Comment Resolution for some UL MU CS TBD,” Po-Kai Huang (Intel)
7.3.7. 11-16-0887, “Spec Text for MU-RTS restriction on HE MU PPDU,” Po-Kai Huang (Intel)
7.3.8. 11-16-0926, “Soliciting UL_MU_ACK,” Raja Banerjea (Qualcomm)

7.3.9. 11-16-0929, “CR - UL MU Operation,” Simone Merlin (Qualcomm)
7.3.10. 11-16-0930, “CR - DL MU Operation,” Simone Merlin (Qualcomm)
7.3.11. 11-16-0938, “Comment Resolution for Sub-clause 25.10.4,” Chittabrata Ghosh (Intel)
7.3.12. 11-16-0958, “UL OFDMA for Unassociated STAs,” Leonardo Lanante (Kyushu Institute of Tech.)

7.4. SR – 10 submissions
7.4.1. 11-16-0879, “Comment resolution on SR for VHT PPDUs,” Jeongki Kim (LG Electronics)
7.4.2. 11-16-0889, “Comment Resolution for Spatial Reuse (Intra BSS detection),” Young Hoon Kwon (Newracom)
7.4.3. 11-16-0901, “Clarification of SR Fields in HE Trigger Based PPDU,” Daewon Lee (Newracom)
7.4.4. 11-16-0902, “Proposed Text Changes for SR Fields in HE Trigger-Based PPDU,” Daewon Lee (Newracom)
7.4.5. 11-16-0905, “SR Fields Clarification,” Ron Porat (Broadcom)
7.4.6. 11-16-0919, “Discussions on SR Fields in HE Trigger-based PPDU,” Geonjung Ko (Wilus Institute)
7.4.7. 11-16-0310, “DSC Proposal Text,” Graham Smith (SR Technologies)
7.4.8. 11-16-0945, “Clarifications for OBSS_PD-based SR parameters,” Laurent Cariou (Intel)
7.4.9. 11-16-0946, “Proposed text changes for OBSS_PD-based SR parameters,” Laurent Cariou (Intel)
7.4.10. 11-16-0957, “Comment Resolutions on OBSS_PD Conditions in 25.9.3,” James Wang (MediaTek)

7.5. TG – 8 submissions
7.5.1. 11-16-0835, “EIFS,” Alfred Asterjadhi (Qualcomm)
7.5.2. 11-15-1095, “OFDMA Performance in 11ax,” Suhwook Kim (LG Electronics)
7.5.3. 11-16-0870, “Conclusing MAC Trigger Padding,” Zhou Lan (Broadcom)
7.5.4. 11-16-0907, “20MHz HE devices,” Joonsuk Kim (Apple)
7.5.5. 11-16-0909, “CR – proposed text on 20 MHz devices,” Joonsuk Kim (Apple)
7.5.6. 11-16-0949, “MAC trigger frame padding follow up,” Zhou Lan (Broadcom)
7.5.7. 11-16-0965, “On High Efficiency WLAN (HEW) TG PAR Scope,” Osama Aboul-Magd (Huawei Technologies)

8. Ad Hoc meeting scheduling

8.1. Ad Hoc slot assignment
8.1.1.MAC … as many as possible, PHY … as many as possible, SR … 1, MU … 1.
8.2. Chair asked if there are any objections to approve the TGax schedule as follow.
8.2.1.There are no objections. The TGax schedule is approved.

	Monday	Tuesday		Wednesday		Thursday
AM1	TGax (full, ad hoc)			TGax (full)		
AM2		TGax (MAC)	TGax (PHY)			TGax (full)
PM1				TGax (PHY)	TGax (MAC)	TGax (full)
PM2	TGax (full)	TGax (SR)	TGax (MU)	TGax (full)		
PM3		TGax (MAC)	TGax (PHY)			

9. Presentations

9.1. Bo Sun (ZTE) presented "Proposed Resolutions to comments on 26.2.2" based on the submission 11-16-0813-03 (on behalf of Ke Yao).

9.1.1.Summary

9.1.1.1. Resolutions for the CIDs 1780, 370, 1923, 2517 and 1610 are proposed.

9.1.1.2. TBDs are removed.

9.1.1.3. Three parameters for the TXVECTOR and RXVECTOR are added.

9.1.2. Discussion

9.1.2.1. A member asked for offline discussion on additional parameters.

9.1.2.2. There are two other related submissions.

9.1.3. Next step

9.1.3.1. Bo Sun to work with the authors of related submissions.

9.2. Alfred Asterjadhi (Qualcomm) presented "EIFS," based on the submission 11-16-0835-00.

9.2.1.Summary

9.2.1.1. The title of the document is EIFS, however it is mostly related to

9.2.2. Discussion

9.2.2.1. No discussion.

9.3. Jeongki Kim (LG Electronics) presented "Comment Resolution on CID 783 (TXOP Duration Field)," based on the submission 11-16-0877-00.

9.3.1.Summary

9.3.1.1. Text for TXOP Duration field was proposed.

9.3.2.Discussion

9.3.2.1. No discussion.

9.3.2.2. Jeongki to work with Alfred.

9.4. Po-Kai Huang (Intel) presented "Setting for TXOP Duration Field," based on the submission 11-16-0951-00.

9.4.1.Summary

9.4.1.1. Size of TXOP Duration field in HE-SIG-A has been decided.

9.4.1.2. The setting rule of TXOP Duration field remains TBD and is discussed in this contribution.

9.4.1.3. Spec text contained in 16/953r0 which related to CID 2596 was also presented.

9.4.2.Discussion

9.4.2.1. A member has a suggestion on the proposed text.

9.4.2.2. A member commented that there will be more than one STA responding to a Trigger and all of them should have the same TXOP duration.

9.4.2.3. Another member asked for evaluation results such as channel access or throughput since preamble and MAC header have different length for TXOP.

9.4.2.4. A member pointed out that all 1s could be all 0s.

9.5. Bo Sun (ZTE) presented "Proposed Resolutions to comments on 26.2.2" based on the submission 11-16-0813-04.

9.5.1. Update: TXOP Duration is covered by Jeongki's submission 16/877r1.

10. AoB

10.1. Chair asked if we have any business that can be conducted

11. Adjournment

11.1. TGax ad hoc session adjourned @ 10:00 AM.

Monday, July 25th, 2016, PM2 TGax Full Session (16:00-18:00)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @16:00
   1.1. About 120 people are in the room.

2. Announcement
   2.1. Agenda Doc.11-16/0779r1 on the server. Rev. 2 is the working document.
   2.2. Meeting Protocol: Chair asked to state name and affiliation when speaking for the first time.
   2.3. Attendance reminder.
      2.3.1. The attendance server: https://imat.ieee.org/

3. The chair reviewed the mandatory 5 slides of P&P.
   3.1. Instructions for the WG Chair.
   3.2. Participants, Patents, and Duty to Inform.
   3.3. Patent Related Links.
   3.4. Call for potentially essential patents.
      3.4.1. Chair asked if anyone is aware of potentially essential patents.
      3.4.2. No potentially essential patents reported.
   3.5. Other Guidelines for IEEE WG Meetings.

4. Agenda Setting
   4.1. Proposed Agenda for this time slot:
      4.1.1. Call meeting to order
      4.1.2. Patent policy, etc.
      4.1.3. Call for submissions
      4.1.4. Set Ad Hoc Groups schedule and approve agenda
      4.1.5. Comment Resolution Tutorial – Adrian Stephens
      4.1.6. Summary from May 2016 meeting
      4.1.7. TG motions
         4.1.7.1. Approve TG meeting and Telecon minutes since May meeting.
         4.1.7.2. Approve resolutions of comments, if needed.
      4.1.8. Comment Resolution Status – Robert Stacey
      4.1.9. Timeline
      4.1.10. Presentations and Comment Resolution
         4.1.10.1. TXOP Duration Issues (Jeongki Kim and Bo Sun)
         4.1.10.2. 11-16/0965; On HEW TG PAR Scope
         4.1.10.3. 11-15/1095; OFDMA Performance in 11ax
         4.1.10.4. …
      4.1.11. Recess
   4.2. Chair asked if there is any addition, modification to the agenda?
      4.2.1. One additional submission reported.
      4.2.2. TGax Schedule
      4.2.3. Nothing reported. The agenda was approved.

5. Comment Resolution Tutorial by Adrian Stephens.
   5.1. Adrian Stephens, WG Chair, presented "**802.11 Comment Resolution – a Tutorial**," based on the document 11-13-0230r3.
      5.1.1. Summary
      5.1.2. Discussion
         5.1.2.1. Numbering of Motions – CR resolution motions should be numbered.
         5.1.2.2. Comment Resolution:

5.1.2.2.1. Structure: Comment/Discussion/Proposed Text/Some Analysis
5.1.2.2.2. For the sake of people to understand the process to come to conclusion, it is recommended.

6. Call for presentations

6.1. Done during the AM1 today.

7. Set Ad Hoc Groups schedule and approve agenda

7.1. Done during AM1.

7.2. TGax Schedule for the week:

	Monday	Tuesday		Wednesday		Thursday
AM1	TGax (full ad hoc)			TGax (full)		
AM2		TGax (PHY)	TGax (MAC)			TGax (full)
PM1				TGax (PHY)	TGax (MAC)	TGax (full)
PM2	TGax	TGax (SR)	TGax (MU)	TGax (full)		
PM3		TGax (PHY)	TGax (MAC)			

8. Summary from May 2016 Meeting

8.1. Received about 70 submissions. Majority of the submission were requesting changes to the TG Specification Framework document. Few submissions were addressing comment resolution mainly for the PHY clause.

8.2. Agreed to terminate the Specification Framework process. The frame of reference is Draft D0.1.

8.2.1. Future submissions shall bring text to continue developing the TG draft

8.3. Approved the resolutions of about 200 comments, most of them addressing the PHY clause

8.4. Revisited the timeline and accepted a new modified timeline – next slide.

8.5. The TG had a series of telecons where resolutions of about 227 comments were discussed.

8.6. Submissions Covered During Teleconferences

8.6.1. https://mentor.ieee.org/802.11/dcn/16/11-16-0725-03-00ax-comment-resolution-on-9-3-1-23.docx (6 CIDs)

8.6.2. https://mentor.ieee.org/802.11/dcn/16/11-16-0773-02-00ax-comment-resolution-section-25-6-he-sounding.docx (15 CIDs)

8.6.3. https://mentor.ieee.org/802.11/dcn/16/11-16-0774-01-00ax-comment-resolution-on-9-3-1-23-ruallocation.docx (14 CIDs)

8.6.4. https://mentor.ieee.org/802.11/dcn/16/11-16-0780-01-00ax-comment-resolution-on-9-3-1-23-phy-tbd.docx (31 CIDs)

8.6.5. https://mentor.ieee.org/802.11/dcn/16/11-16-0775-01-00ax-comment-resolution-on-section-26-3-12-4-phy-mu-mimo-power-pre-correction.docx (7 CIDs)

8.6.6. https://mentor.ieee.org/802.11/dcn/16/11-16-0766-00-00ax-he-variant-ht-control-ul-mu-response.docx (28 CIDs)

8.6.7. https://mentor.ieee.org/802.11/dcn/16/11-16-0798-00-00ax-he-variant-ht-control-general.docx (33 CIDs)

8.6.8. https://mentor.ieee.org/802.11/dcn/16/11-16-0815-02-00ax-comment-resolution-mu-rts-scrambler-seed.docx (5 CIDs)

8.6.9. https://mentor.ieee.org/802.11/dcn/16/11-16-0819-01-00ax-cids-for-section-9-3-1-9-blockack-frame-format.docx (9 CIDs)

8.6.10. https://mentor.ieee.org/802.11/dcn/16/11-16-0806-00-00ax-he-variant-ht-control-buffer-status-report.docx (24 CIDs)
8.6.11. https://mentor.ieee.org/802.11/dcn/16/11-16-0807-00-00ax-comment-resolution-on-mu-rts-cts-procedure.docx (27 CIDs)
8.6.11.1. Note: A new revision is expected to accommodate Mark's comments
8.6.12. https://mentor.ieee.org/802.11/dcn/16/11-16-0808-00-00ax-comment-resolution-on-trigger-frame-format-mu-rts-variant.docx (14 CIDs)
8.6.12.1. Note: A new revision is expected to accommodate Mark's comments
8.6.13. https://mentor.ieee.org/802.11/dcn/16/11-16-0813-00-00ax-cr-on-secition-26-2-2-txrxvector-parameters.doc (4 CIDs)
8.6.13.1. Note: We need to revisit this document again to try to cose a couple of TBDs
8.6.14. https://mentor.ieee.org/802.11/dcn/16/11-16-0836-00-00ax-comment-resolution-on-section-9-4-1-phy-mu-mimo-compressed-beamforming-report.docx (10 CIDs)
8.6.14.1. Note: Adds significant amount of text and introduces new frame.
8.7. Chair asked if there is any comment – No comment.

9. TG Motions

9.1. Motion: Approve TGax minutes of meetings and teleconferences from May 2016 interim meeting to today:

- **https://mentor.ieee.org/802.11/dcn/16/11-16-0686-00-00ax-tgax-may-2016-waikoloa-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-0768-05-00ax-tgax-teleconference-minutes-from-june-to-july-2016.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-0755-00-00ax-tgax-may-2016-waikoloa-phy-ad-hoc-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-0716-00-00ax-mu-ad-hoc-meeting-minutes-may-2016.docx**

9.1.1.https://mentor.ieee.org/802.11/dcn/16/11-16-0701-00-00ax-combined-spatial-reuse-mac-ad-hoc-group-meeting-minutes.docx

9.1.2. Moved: Bo Sun, Second: Robert Stacy
9.1.3. Discussion: No discussion.
9.1.4. Result: The motion was accepted with no objection.

---

10. Comment Resolution Status (Editor Report)

10.1. Robert Stacy presented "TGax Editor's Report," based on the submission 11-16-995r0
10.2. Discussion
10.2.1. C: There was a request to change MU database maintainer.
10.2.2. Q: What about the comments discussed during the teleconference?
10.2.3. A: Those resolutions are not motioned. They will be incorporated after motions.
10.2.4. Chair is wondering if September is the realistic time to produce draft 1.0.

11. From IEEE 802.11 Operation Manual

11.1. **https://mentor.ieee.org/802.11/dcn/14/11-14-0629-14-0000-802-11-operations-manual.docx**
11.2. Motions modifying drafts may be made at appropriate times during meetings. Complex technical changes to a draft shall be in a submission that has been accepted by document control according to document formats specified in section 3.7 of this document and

has been made available electronically for a period of not less than four active 802.11 WG session hours. The TG chair determines if a technical change is sufficiently complex to require a submission.

11.3. When a CRC is following the "Accelerated process" for completion of a WG letter ballot, and is not meeting during an 802.11 WG session, any submission containing changes to the draft shall be on the server and announced to the appropriate TG reflector no less than 72 hours before any motion is made related to that submission.

NOTE – when a CRC is meeting coincident with an 802.11 session, it is subject to the four hour rule described in the previous paragraph.

11.4. Comment:

11.4.1. This rule is applied once the draft gets 75% approval – it is not applied to TGax right now.

11.4.2. It is good to follow this practice even though the rule is not applied to us.

12. Timeline

12.1. Slide 27 of the agenda document

- **May 2014: start of the TG**
- **Nov. 2014: First draft of the TG SFD was approved**
- **Jan. 2016: proposed TG draft**
- **March 2016: Draft D0.1 was approved and CC started**
- **September 2016: Draft 1.0 and WG letter ballot**
- **March 2017: Draft 2.0 and recirculation**
- **July 2017: MDR (Mandatory Document Review)**
- **November 2017: Formation of SB pool**
- **March 2018: Sponsor Ballot**
- **December 2018: RevCom**

13. Presentations

13.1. Jeongki Kim (LG Electronics) presented "," based on the submission 11-16-0877-04.

13.1.1. Summary

13.1.1.1. The presenter had offline discussion with some members after AM1 and the document was revised.

13.1.1.1.1. Text for TXOP_DURATION was updated.

13.1.2. Discussion

13.1.2.1. A member asked for the revision number of the document. → Rev. 4.

13.1.2.2. Chair suggested to upload r5 modifying that part.

13.2. Bo Sun (ZTE) presented "" based on the submission 11-16-0813-04.

13.2.1. Summary

13.2.1.1. The document was updated based on the Jeongki's document 11-16-0877-04.

13.2.2. Discussion

13.2.2.1. Chair asked if there is any objection for the proposed resolution. There is no objection.

13.3. Osama Aboul-Magd (Huawei Technologies) presented "PAR" based on the submission 11-16-0965-00.

13.3.1. Summary

13.3.1.1. This submission attempts to start the discussion on how to verify the TG PAR scope.

13.3.1.2. No straightforward way to see 4 times improvement.

13.3.1.3. Options:

13.3.1.3.1. Do nothing → likely to cause problem.

13.3.1.3.2. To change the PAR → will be the last choice.
13.3.1.3.3. Run simulations based on the scenarios we agreed and show that we have a mode of operation to achieve our goal.
13.3.2. Discussion
13.3.2.1. If we do not have simulation, we can show some analysis result.
13.3.2.2. There are some submissions showing the simulation results.
13.3.2.3. Should we form a team to do this work?
13.3.2.3.1. A member mentioned that his team can do this work.
13.3.2.3.2. Another member mentioned document 15/333 contains some analysis.
13.3.2.4. Q: Will the simulation scenario document be updated? – Yes, if it is needed.

13.4. Suhwook Kim (LG Electronics) presented "OFDMA Performance in 11ax," based on the submission 11-15-1095-09.

13.4.1. Summary
13.4.1.1. TCP traffic is considered in this version.
13.4.1.2. TCP timeout has a significant impact on the system performance.
13.4.1.3.
13.4.2. Discussion
13.4.2.1. Q: Is the OFDMA based on the 802.11ax spec? → Yes.
13.4.2.1.1. Then, we do not have four times improvement.
13.4.2.2. C: Bluray needs 50 M bit/s throughput. → Chair suggested offline discussions.
13.4.3.

14. AoB

14.1. Ad Hoc schedule for tomorrow
14.1.1. AM2
14.1.1.1. PHY
14.1.1.2. MAC
14.1.2. PM2
14.1.2.1. MU.
14.1.2.2. SR.
14.1.3. PM3
14.1.3.1. PHY
14.1.3.2. MAC

15. TGax meeting recessed @ 18:01.

Tuesday, July 26th, 2016, AM2 TGax Ad Hoc Sessions (10:30-12:30)

- PHY Ad hoc – Seaport D & E.
  - Agenda: 11-16-1007
- MAC Ad hoc – Seaport G.
  - Agenda: 11-16-997

Tuesday, July 26th, 2016, PM2 TGax Ad Hoc Sessions (16:00-18:00)

- MU Ad hoc – Seaport D & E.
  - Agenda: 11-16-1012
- SR Ad hoc – Seaport G.
  - Agenda: 11-16-1016

Tuesday, July 26th 2016, PM3 TGax Ad Hoc Session (19:30-21:30)

- PHY Ad hoc – Seaport D & E.
  - Agenda: 11-16-1007
- MAC Ad hoc – Seaport G
  - Agenda: 11-16-997

Wednesday, July 27th 2016, AM1 TGax Full Sessions (8:00-10:00)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @8:02
   1.1. About 120 people are in the room.

2. Announcements/Reminder
   2.1. Chair asked participants to state name and affiliation when speaking for the first time during the session.
   2.2. Chair reminded that the meeting is conducted under IEEE 802 and 802.11 P&P.
   2.3. Chair reminded attendance.

3. Agenda Setting
   3.1. Proposed agenda for this session
      3.1.1. Call Meeting to order
      3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
      3.1.3. Progress from Ad Hocs
      3.1.4. Presentations
         3.1.4.1. 11-16/0907: 20 MHz HE Devices – Joonsuk kim
         3.1.4.2. 11-16/0909: Text for 20 MHz - Joonsuk Kim
         3.1.4.3. 11-16/0870 and 11-16/0949 – Zhou Lan
         3.1.4.4. 11-16/0971 – Graham Smith
         3.1.4.5. 11-16/0957 – James Wang
         3.1.4.6. 11-16/0947 – Laurent Cariou
      3.1.5. Recess
   3.2. Chair asked if there is any objection to proceed with this agenda. → No objection.
   3.3. The agenda for Wednesday AM1 was approved.

4. Progress from Ad Hoc groups
   4.1. PHY: 8 submissions remaining.
   4.2. MAC: heard half dozen presentations.
   4.3. MU: 6 submissions left – all of them are comment resolutions.
   4.4. SR: 6 presentations heard.

5. Presentations
   5.1. Joonsuk Kim (Apple) presented "20 MHz-only Device in 11ax," based on the submission 11-16-0907r2.
      5.1.1. Summary
         5.1.1.1. The 20 MHz only device is for low power, low complexity and better connectivity for wearable devices, home network connectivity, etc.
      5.1.2. Discussion
         5.1.2.1. Slide 12, Mandatory/Optional table: A member commented that we have not discussed M/O in TGax. → This table is just an example.
      5.1.3. Straw Polls

         5.1.3.1. Straw Poll #1: Do you support following Mandatory and Optional features on bandwidth?
            - In 2.4GHz,
               - 20MHz is mandatory for AP and non-AP

- 40MHz is optional for AP and non-AP [signaled in capability field]
- In 5GHz,
  - 20/40/80MHz is mandatory for AP
  - Non-AP can be either 20MHz-only, 80MHz, 160MHz or 80+80MHz capable [signaled in capability field]
    - 11ax spec document shall not allow STAs that are 40MHz capable but not 80MHz capable

5.1.3.1.1. Result: Y/N/A = 80/0/14

5.1.3.2. Straw Poll #2: Do you support 20MHz-only non-AP STAs operate in primary 20MHz channel as a mandatory mode?

5.1.3.2.1. Result: Y/N/A = 76/0/8.

5.1.3.3. Straw Poll #3: Do you support 20MHz-only non-AP STAs support tone mapping of tone-26 RU, tone-52 RU, tone-106 RU and tone-242 RU for

- 20, 40* MHz OFDMA in 2.4GHz and 5GHz band
- 80*, 80+80*, 160* MHz OFDMA in 5GHz band
-
- [Note*] Some of RUs are restricted for operation [1]

5.1.3.3.1. Result: 72/0/11.

5.1.4. Joonsuk presented "Spec text for 20 MHz-only devices in 11ax," based on 11-16-0909-01.

5.1.4.1. Discussion

5.1.4.1.1. A member suggested that text should refer to the all of relevant channel width such as 80 MHz, 160 MHz and 80+80 MHz.

5.1.4.1.2. Another member commented for clarification purpose that a 20 MHz only device does not support VHT operation.

5.1.4.2. Next step:

5.1.4.2.1. Joonsuk to upload updated version (r2) of this document incorporating the comments and suggestions. A motion to adopt 16/909r2 will be conducted during PM2 session.

5.2. Zhou Lan (Broadcom) presented "MAC trigger frame padding follow up," based on the submission 11-16-0949-01.

5.2.1. Summary

5.2.1.1. TBDs related to MAC trigger frame padding are resolved.

5.2.1.2. Related CIDs: 2890, 2896 and 1643.

5.2.1.3. Spec text (11-16-0870-00) also proposed.

5.2.2. Discussion

5.2.2.1. A member asked for the purpose of MAC padding. → For a Trigger frame, the receiver needs some time to process and prepare for the next action.

5.2.3. Straw Polls

5.2.3.1. Straw Poll #1: Do you support to direct TGax editor to adopt doc 11-16-0870r0 into TGax Draft per editing instruction in doc.11-16-0870r0 to conclude MAC trigger padding TBDs?

5.2.3.1.1. Result: No objection.

5.2.3.2. Straw Poll #2: Do you support to adopt the resolution text for comment CID 2890, 2896, 1634 as provided in 11-16-0870r0?

5.2.3.2.1. Result: No objection.

5.3. Graham Smith (SR Technologies) presented "Resolution on CID 69 and others," based on the submission 11-16-0971-02.

5.3.1. Summary

5.3.1.1. 16/971r2 contains the proposed text for 11ax Draft with respect to dynamic sensitivity control (DSC) so as to satisfy CID 69.

5.3.1.2. Other CIDs #9, 187, 188, 208, 209, 225, 257, 463, 464, 651, 703, 704, 953, 994, 1016, 2332, 2336, 2912, 2724, and 2742 are also resolved.

5.3.2. Discussion

5.3.2.1. A member commented on the relationship between the information in preamble and DSC.

5.3.2.2. Another member expressed concern that we already have two operations to change the sensitivity and detect the OBSS packet, therefore additional mode could increase the complexity. → The presenter responded that this proposal is much simpler.

5.3.2.3. There is an opinion that spatial reuse technique should only be applied to the OBSS cases, and this proposal is not aligned to that direction.

5.3.2.4. Some members are supportive for this proposal.

5.3.2.5. There was a comment that determination of threshold should clarified.

5.3.3. Straw Polls – Chair suggested to defer the straw poll.

5.4. James Wang (MediaTek) presented "Comment Resolution on OBSS_PD Conditions in 25.9.3," based on the submission 11-16-0957-01.

5.4.1. Summary

5.4.1.1. The resolution for CID #706 on Clause 25.9.3 is provided.

5.4.1.2. Spec text for this sub-clause is proposed.

5.4.2. Discussion

5.4.2.1. A member mentioned that there still are three TBDs in the text. → Those TBDs are resolved by CR for different CIDs.

5.4.2.2. A member has some comments on the text of P50, L1 and would like to work offline with James. The commenter also mentioned that the equation has to be updated.

5.4.2.3. Another member commented that we have not seen that this algorithm actually works and he is not convinced.

6. AOB

6.1. As a general policy, given a motion on an explicitly listed CID X that is resolved in an explicitly specified doc (say with revision R), if the proposed comment resolution within the doc for CID X refers to a revision earlier than R (e.g. R-1, due to an oversight by the comment resolver), the chair indicated he was OK if the database editors modified the comment resolution to refer to revision "R" in accordance with the intent of the motion.

6.2. No concerns were raised by the members.

7. Recess

7.1. TGax full session is in recess until PM2 today.

Wednesday, July 27th 2016, PM1 TGax Ad Hoc Sessions (13:30-15:30)

- PHY ad hoc → Seaport D & E.
  - Agenda: 11-16-1007

- MAC ad hoc → Seaport G
  - Agenda: 11-16-0997

Wednesday, July 27th 2016, PM2 TGax Full Sessions (16:00-18:00)

8. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @16:00

9. Announcements
   - 9.1. Chair asked participants to state name and affiliation when speaking for the first time during the session.
   - 9.2. Chair reminded that the meeting is conducted under IEEE 802 and 802.11 P&P.
   - 9.3. Chair reminded attendance.

10. Agenda Setting
    - 10.1. Proposed Agenda for this session:
      - 10.1.1. Meeting call to order
      - 10.1.2. Announcement
      - 10.1.3. Agenda setting
      - 10.1.4. Presentations
        - 10.1.4.1. 11-16/947: Laurent Cariou
        - 10.1.4.2. 11-16/957: James Wang (??)
      - 10.1.5. TG Motions
      - 10.1.6. Recess
    - 10.2. Chair asked for comments and/or suggestions for the comments. → Heard none.
    - 10.3. The agenda for Wednesday PM2 was approved.

11. Presentations
    - 11.1. Laurent Cariou (Intel) presented "Clarification for OBSS_PD-based SR parameters," based on the submission 11-16-0945-01.
      - 11.1.1. Summary
        - 11.1.1.1. Proposed to fill the TBDs in the spec by defining default parameters for OBSS_Pdmin/max and PWRref which the AP can adaptively change.
        - 11.1.1.2. Proposed to clarify that SR_disallow in HE-SIGA only disallow SRP-based SR
      - 11.1.2. Discussions
        - 11.1.2.1. C (Slide 15): Background of choosing these parameters are not clear enough. Do not understand why 3 spatial streams is the break point.
        - 11.1.2.2. A member commented that it is not clear how a device sets the power reference. → Default parameters in slide 15 are out-of-box conditions.
        - 11.1.2.3. Another member commented that it is not clear what we can get from SR. Simulation works are needed.
        - 11.1.2.4. There was a comment that what we need to specify is the rules for SR. In the original DSC, the TPC is not effective.

11.1.3. Laurent presented the spec text "Proposed Text Changes for OBSS_PD-based SR parameters," based on the submission 11-16-0947-04.

11.1.3.1. Discussions

11.1.3.1.1. A member commented on the SR disallow mode: There will be certain condition that a STA sets SR disallow flag. It is not clear what will be motivation for a STA to set this parameter.

11.1.3.1.2. Another member commented that the condition(s) to disallow SPR-based SR shall be provided.

11.1.3.1.3. A member pointed out that there are some TBDs.

12. TG Motions

12.1. SR Motion #9: Move to include the text in doc 11-16/0971r2 related to DSC in the next revision of the TG draft

12.1.1. Moved by Graham Smith, Seconded by Sean Coffey.

12.1.2. Discussions

12.1.2.1. A member commented that the document 16/971r2 contains fundamental flaw.

12.1.2.2. Another member mentioned that it is beneficial to include text in the draft.

12.1.2.3. There was an opinion that the proposed text is more appropriate to be considered in TGmc.

12.1.2.4. There was a comment that this proposal violates the PAR.

12.1.3. Result: After long discussions, motion was withdrawn.

12.2. SR Motion #10: Move to accept the proposed text changes in document "11-16/0947r4, for OBSS_PD-based SR parameters" and include the changes in the next revision of the TG draft

12.2.1. Moved by Laurent Cariou, Seconded by Ron Porat.

12.2.2. Discussions

12.2.2.1. Some members expressed objection to conduct this motion since not enough information is provided.

12.2.2.2. Chair determined this motion to be recorded vote.

12.2.3. Result: Y/N/A = 59/21/29, motion fails.

12.2.3.1. The vote record is provided in the Appendix A.

---

13. AoB

No time to conduct any other business.

14. Recess

14.1. TGax is in recess until the start of Thurday AM2 (10:30 AM).

Thursday, July 28th, 2016, AM2 TGax full Session (10:30-12:30)

1 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax, @10:32 AM

1.1 Agenda 16/0779r5 is on the server. Rev. 6 is the working document.

2 Announcement/Reminder

2.1 Chair reminded IEEE 802 and 802.11 IPR P&P.
2.2 Chair asked people to state name and affiliation when addressing for the first time in the session.
2.3 Chair reminded people to do attendance.

3 Agenda for this session

3.1 Thursday AM2 and PM1
- 3.1.1 Call Meeting to order
- 3.1.2 Announcement/Reminder
  - 3.1.2.1 IEEE 802 and 802.11 IPR Policy and procedure.
  - 3.1.2.2 Attendance
- 3.1.3 Agenda Setting
- 3.1.4 Presentations (if any)
- 3.1.5 TG Motions
- 3.1.6 Timeline update
- 3.1.7 Goals for September 2016
- 3.1.8 Conference Calls Schedule
- 3.1.9 AOB
- 3.1.10 Adjourn

3.2 Chair asked if there are any modifications to the agenda.
3.3 Agenda approved without objections.

4 Presentations – No presentation left.

5 Motions

5.1 SR Motion

5.1.1 SR Motion #11: Move to accept the proposed text changes in document 11-16/0902r3 and include the changes in the next revision of the TG draft.

5.1.1.1 Moved by Daewon Lee, Seconded by Ron Porat
5.1.1.2 Discussion – No discussion.
5.1.1.3 Result: Motion passes with no objection.

5.2 PHY Motions

5.2.1 PHY Motion #158: Move to include the spec text change as shown in doc 11/16-0892r0 to the next revision of the TG draft.

5.2.1.1 Moved by Hongyuan Zhang, Seconded by Bo Sun.
5.2.1.2 Discussion – No discussion.
5.2.1.3 Result: Motion passes with no objection

5.2.2 PHY Motion #159: Move to include the spec text changes as shown in doc 11/16-0895r0 in the next revision of the TG draft, which reflects Straw Polls 1~3 in doc 11-16/0894r0.
5.2.2.1 Moved by Hongyuan Zhang, Seconded by Bo Sun.
5.2.2.2 Discussion – No discussion.
5.2.2.3 Result: Motion passes with no objection.

5.2.3 PHY Motion #160: Move to include the spec text changes as shown in doc 11/16-0897r1 in the next revision of the TG draft.
5.2.3.1 Moved by Hongyuan Zhang, Seconded by Bo Sun.
5.2.3.2 Discussion – No discussion.
5.2.3.3 Result: Motion passes with no objection.

5.2.4 PHY Motion #161: Move to include the spec text changes as shown in doc 11/16-0899r0 (reflects the content of SP1 in doc 11-16/0898r0) to the next revision of the TG draft
5.2.4.1 Moved by Hongyuan Zhang, Seconded by Bo Sun.
5.2.4.2 Discussion – No discussion.
5.2.4.3 Result: Motion passes with no objection.

5.2.5 PHY Motion #162: Move to add the spec text changes to D0.2 on Table 26-20 – Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU as shown in doc 11/16-0915r0
5.2.5.1 Moved by Bin Tian.
5.2.5.2 Result: This motion was not conducted.

5.2.6 PHY Motion #163: Move to include the spec text change as shown in doc 11/16-0909r2 in the next revision of the TG draft.
5.2.6.1 Moved by Joonsuk Kim, Seconded by Bo Sun.
5.2.6.2 Discussion - No discussion.
5.2.6.3 Result: Motion passes with no objection.

5.2.7 PHY Motion #164: Move to include the spec text changes in doc 11-16/0915r2 in the next revision of the TG draft.
5.2.7.1 Moved by Brian Hart, Seconded by Bo Sun.
5.2.7.2 Discussion – No discussion.
5.2.7.3 Result: Motion accepted with no objection.

5.2.8 PHY Motion #165: Move to add to the next revision of the TG draft:
- **Add at the end of section 26.3.7.1 the following sentence:**
- **In a HE MU PPDU transmission, at least Nx4x26 tones (contiguous or non-contiguous), where N is the number of 20MHz channels' legacy preambles present, shall be occupied throughout the signaled BW**

5.2.8.1 Moved by Ron Porat, Seconded by Bo Sun.
5.2.8.2 Discussion – No discussion.
5.2.8.3 Result: Motion passes with no objection.

5.3 MU Motions
5.3.1 MU Motion #57: Move to add the following to the next revision of the TG draft:

- *Insert the following at the end of 10.22.2.2:*
  - When an HE STA successfully receives the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter countdown
- *Insert the following at the end of 10.22.2.2:*
  - When an HE STA does not receive the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter countdown
- *Insert the following at the end of 10.22.2.2:*
  - If an HE STA does not successfully receive the corresponding acknowledgement frame in response to the MPDU sent in an HE trigger based PPDU, the short retry counters and long retry counters for the associated EDCAF are not changed

5.3.1.1 Moved by Kiseon Ryu, Seconded by Simone Merlin.
5.3.1.2 Discussion – No discussion.
5.3.1.3 Result: Motion passes with no objection.

5.4 MAC Motions

5.4.1 MAC Motion #85: Move to add the following text to the TG draft:

- The Queue Size subfield is an 8-bit field that indicates the amount of buffered traffic, for a given TC or TS at the STA sending this frame.
- *An HE non-AP STA uses the Queue Size subfield to indicate the amount of buffered traffic intended for the STA identified by the receiver address of the frame containing the QoS Control field.*

5.4.1.1 Moved by Pascal Vigar, Seconded by Stephane Baron.
5.4.1.2 Discussion - No discussion.
5.4.1.3 Result: Motion passes with no objection.

5.4.2 MAC Motion #86: Move to add the following text to the TG draft:

- Add to clause #9.3.1.23
- "Per User Info fields with AID = 0 shall be allocated only after Per User Info fields with AID not equals to 0, if any, and before the MAC padding field, if present."

5.4.2.1 Moved by Zhou Lan, Seconded by Reza Hedayat.
5.4.2.2 Discussion – No discussion.
5.4.2.3 Result: Motion passes with no objection.

5.5 CR Motions

5.5.1 CR Motion #15: Move to approve resolutions of CIDs, 9, 228, 2219, 2422, 2691, 2900 in doc 11-16/0725r3.

5.5.1.1 Moved by Raja Banerjea, Simone Merlin.
5.5.1.2 Discussion – No discussion.
5.5.1.3 Result: Motion passes with no objection.

5.5.2 CR Motion #16: Move to approve resolutions to CIDs, 55, 1000, 1221, 1915, 2234, 802,1695, 1222, 182, 971,2713, 702, 1916, 2233, 223 in doc 11-16/0773r2.

5.5.2.1 Moved by Raja Banerjea, Robert Stacy.
5.5.2.2 Discussion – No discussion.
5.5.2.3 Result: Motion passes with no objection.

5.5.3 CR Motion #17: Move to accept resolutions to CIDs, 262,1083, 102, 612, 660, 830, 864, 1716, 2215, 2301, 2376, 372, 719, 864 in doc 11-16/0774r1.

5.5.3.1 Moved by Raja Banerjea, Simone Merlin.

5.5.3.2 Discussion – No discussion.

5.5.3.3 Result: Motion passes with no objection.

5.5.4 CR Motion #18: Move to approve resolutions to CIDs, 101,103, 104,374,375, 377, 558, 561, 661, 662, 664, 688, 1296, 1299, 1301, 1717, 1718, 1882, 2113, 2114, 2174, 2217, 2302, 2421, 227, 720, 663,1303,1305,1306 in doc 11-16/0780r1

5.5.4.1 Moved by Raja Banerjea, Simone Merlin.

5.5.4.2 Discussion – No discussion.

5.5.4.3 Result: Motion passes with no objection.

5.5.5 CR Motion #19: Move to approve resolutions to CIDs, 340, 341, 342, 343, 1023, 2734, and 2889 in doc 11-16/0775r2

5.5.5.1 Moved by Lochan Verma, Seconded by Sameer Vermani.

5.5.5.2 Discussion – No discussion.

5.5.5.3 Result: Motion passes with no objection.

5.5.6 CR Motion #20: Move to approve resolutions of CIDs, 855, 1064, 1, 784, 90, 94, 654, 453, 1181, 2249, 2297, 2208, 2406, 2576, 2901, 2902, 2903, 2405, 2904, 1254, 1255, 1256, 1202, 1714, 1761, 1762, 1881, 1418 in doc 11-16/766r1

5.5.6.1 Moved by Alfred Asterjadhi, Seconded by Young Hoon Kwon.

5.5.6.2 Discussion – No discussion.

5.5.6.3 Result: Motion passes with no objection.

5.5.7 CR Motion #21: Move to approve resolutions of CIDs, 1126, 1127, 1179, 58, 89, 361, 2248, 1877, 1878, 792, 686, 687, 793, 1133, 91, 92, 362, 363, 2296, 1712, 1713, 1250, 1253, 1711, 2204, 2205, 2206, 211, 364, 1231, 134, 1750, 1244 in doc 11-16/0798r0

5.5.7.1 Moved by Alfred Asterjadhi, Seconded by Simone Merlin.

5.5.7.2 Discussion – No discussion.

5.5.7.3 Result: Motion passes with no objection.

5.5.8 CR Motion #22: Move to approve resolutions to CIDs, 14, 127, 370, 371, 2602 in doc 11-16/0815r2

5.5.8.1 Moved by Young Hoon Kwon, Seconded by Yongho Seok.

5.5.8.2 Discussion – No discussion.

5.5.8.3 Result: Motion passes with no objection.

5.5.9 CR Motion #23: Move to approve resolutions to CIDs, 961, 1137, 804, 212, 2212, 2412, 2413, 1136, 1493 in doc 11-16/0819r1

5.5.9.1 Moved by Alfred Asterjadhi, Seconded Yasuhiko Inoue.

5.5.9.2 Discussion – No discussion.

5.5.9.3 Result: Motion passes with no objection.

5.5.10 CR Motion #24: Move to approve resolutions to CIDs, 824, 93, 1067, 2388, 45, 178, 254, 438, 680, 769, 770, 771, 817, 818, 1062, 1065, 1066, 1550, 2189, 2190, 2191, 2272, 2711, 147 in doc 11-16/0806r0

5.5.10.1 Moved by Alfred Asterjadhi, Seconded by Matt Fischer.

5.5.10.2 Discussion – No discussion.

5.5.10.3 Result: Motion passes with no objection.

5.5.11 CR Motion #25: Move to approve the resolutions to CIDs, 963, 128, 214, 2171, 2428, 692, 124, 2906, 2840, 2603, 2599, 1209, 2264, 15, 13, 126, 1071, 693, 1768, 401, 1727, 403, 1644, 2281, 2282, 2279, 160 in doc11-16/0807r2

5.5.11.1 Moved by Po-Kai Huang, Seconded by Yongho Seok.

5.5.11.2 Discussion – No discussion.

5.5.11.3 Result: Motion passes with no objection.

5.5.12 CR Motion #26: Move to accept the resolutions of CIDs, 1311, 2223, 110, 2587, 8, 2222, 1068, 1310, 1312, 2588, 2601, 2894, 1204, 2907 in doc 11-16/0808r2.

5.5.12.1 Moved by Po-Kai Huang, Seconded by Kiseon Ryu.

5.5.12.2 Discussion – No discussion.

5.5.12.3 Result: Motion passes with no objection.

5.5.13 CR Motion #27: Move to approve resolutions to CIDs, 2517, 1780, 1923, and 1610 in doc 11-16/0813r5.

5.5.13.1 Moved by Bo Sun, Seconded by Hongyuan Zhang.

5.5.13.2 Discussion – No discussion.

5.5.13.3 Result: Motion passes with no objection.

5.5.14 CR Motion #28: Move to approve resolutions to CIDs, 112, 380, 381, 456, 539, 689, 690, 1154, 1316, 1862 in doc 11-16/0836r1.

5.5.14.1 Moved by Lochan Verma, Seconded by Sriram Venkateswaran.

5.5.14.2 Discussion – No discussion.

5.5.14.3 Result: Motion passes with no objection.

5.5.15 CR Motion #29: Move to approve resolution to CID 2183 in document 11-16/0816r1.

5.5.15.1 Moved by Daewon Lee, Seconded by Young Hoon Kwon.

5.5.15.2 Discussion – No discussion.

5.5.15.3 Result: Motion passes with no objection.

5.5.16 CR Motion #30: Move to approve the resolutions to CIDs, 2007, 2005, 2123, 2747, 2746, 2244, 842, 846, 526, 910 in doc 11-16/0872r2.

5.5.16.1 Moved by Ross Jian Yu, Seconded by Bo Sun.

5.5.16.2 Discussion – No discussion.

5.5.16.3 Result: Motion passes with no objection.

5.5.17 CR Motion #31: Move to approve resolutions to CIDs, 302, 2040, 2132, 2680, 2039, 2038, 1001,479, 2150 in doc 11-16/0873r1.

5.5.17.1 Moved by Ross Jian Yu, Seconded by Bo Sun.

5.5.17.2 Discussion – No discussion.

5.5.17.3 Result: Motion passes with no objection.

5.5.18 CR Motion #32: Move to approve resolutions to CIDs, 2032, 2549, 2133, 2548, and 1009 in doc 11-16/1021r2
- 5.5.18.1 Moved by Ross Jian Yu, Seconded by Bo Sun.
- 5.5.18.2 Discussion – No discussion.
- 5.5.18.3 Result: Motion passes with no objection.

5.5.19 CR Motion #33: Move to approve the resolutions to CIDs, 1052, 2519 in doc 11-16/0900r1
- 5.5.19.1 Moved by Robert Stacy, Seconded by Sriram Venkateswaran.
- 5.5.19.2 Discussion – No discussion.
- 5.5.19.3 Result: Motion passes with no objection.

5.5.20 CR Motion #34: Move to approve the resolution to CID 854 in doc 11-16/0908r1.
- 5.5.20.1 Moved by Joonsuk Kim, Seconded by Yongho Seok.
- 5.5.20.2 Discussion – No discussion.
- 5.5.20.3 Result: Motion passes with no objection.

5.5.21 CR Motion #35: Move to approve the resolutions to CIDs, 1659, 493, 494 in doc 11-16/0920r3
- 5.5.21.1 Moved by Xiaogang Chen, Seconded by Bo Sun.
- 5.5.21.2 Discussion – No discussion.
- 5.5.21.3 Result: Motion passes with no objection.

5.5.22 CR Motion #36: Move to approve the resolutions to the CIDs, 1782, 2082, 2083 in doc 11-16/0922r2
- 5.5.22.1 Moved by Sriram Venkateswaran, Seconded by Bo Sun.
- 5.5.22.2 Discussion – No discussion.
- 5.5.22.3 Result: Motion passes with no objection.

5.5.23 CR Motion #37: Move to approve the resolutions to CIDs, 836 883 884 1930 2247 292 525 904 906 908 1984 1990 1995 1988 1994 1058 1992 1991 1985 1989 1684 523 1857 271 1412 1195 1996 2532 2120 2098 293 1987 1993 2748 2749 in doc 11-16/0937r7.
- 5.5.23.1 Moved by Rui Cao, Seconded by Bo Sun.
- 5.5.23.2 Discussion – No discussion.
- 5.5.23.3 Result: Motion passes with no objection.

5.5.24 CR Motion #38: Move to approve resolutions to CIDs, 482, 1867, 2084, 2085 in doc 11-16/0923r1.
- 5.5.24.1 Moved by Sriram Venkateswaran, Seconded by none.
- 5.5.24.2 Discussion - This motion needs presentation.
- 5.5.24.3 Result: This motion was skipped (not conducted).

5.5.25 CR Motion #39: Move to approve resolutions to CIDs, 22, 23, 24, 136, 414, 415, 587, 694, 21, 1213, 2615, 1442, 1443, 1756, 1769, 2231 in doc 11-16/0829r3.

5.5.25.1 Moved by Reza Hedayat, Seconded by Brian Hart.
5.5.25.2 Discussion – No discussion.
5.5.25.3 Result: Motion passes with no objection.

5.5.26 CR Motion #40: Move to approve resolutions to CIDs, 1275, 1270, 1269, 1139, 97, 2213, 1809, 1808, 1807, 1806 in doc 11-16/0867r2.
5.5.26.1 Moved by George Cherian, Seconded by Brian Hart.
5.5.26.2 Discussion – No discussion.
5.5.26.3 Result: Motion passes with no objection.

5.5.27 CR Motion #41: Move to approve resolutions to CIDs, 76, 194, 258, 259, 1598, 1773, 2849 in doc 11-16/0844r2.
5.5.27.1 Moved by Alfred Asterjadhi, Seconded by Brian Hart.
5.5.27.2 Discussion – No discussion.
5.5.27.3 Result: Motion passes with no objection.

5.5.28 CR Motion #42: Move to approve resolutions to CIDs, 1482, 1481, 1480, 1479, 1478, 1476, 1475, 1474, 1473, 30, 1225, 1486, 967, 750, 697, 696, 1793, 424, 167, 2629, 2628, 2627, 2626, 2269, 1484, 1485, 1794, 1662, 1487, 2197, 2464, 2465, 1470, 165, 1217 in doc 11-16/0828r0.
5.5.28.1 Moved by Alfred Asterjadhi, Seconded by Brian Hart.
5.5.28.2 Discussion – No discussion.
5.5.28.3 Result: Motion passes with no objection.

5.5.29 CR Motion #43: Move to approve resolutions to CIDs, 2484, 2483, 2482, 2481, 2430, 2429, 2489 in doc 11-16/0860r1.
5.5.29.1 Moved by Yongho Seok, Seconded by Brian Hart.
5.5.29.2 Discussion – No discussion.
5.5.29.3 Result: Motion passes with no objection.

5.5.30 CR Motion #44: Move to approve the resolutions to CIDs, 73, 210, 192, 642, 1593, 1919, 643, 1595, 2259, 2260 in doc 11-16/0862r3.
5.5.30.1 Moved by Yongho Seok, Seconded by Young Hoon Kwon.
5.5.30.2 Discussion – No discussion.
5.5.30.3 Result: Motion passes with no objection.

5.5.31 CR Motion #45: Move to approve resolutions to CIDs, 2608, 2607, 2606, 2488, 2487, 1399, 2841 in doc 11-16/0861r2.
5.5.31.1 Moved by Yongho Seok, Seconded by Brian Hart.
5.5.31.2 Discussion – No discussion.
5.5.31.3 Result: Motion passes with no objection.

5.5.32 CR Motion #46: Move to approve the resolution to CID 2596 in doc 11-16/0953r2 and includes the text changes in the TG draft.
5.5.32.1 Moved by Po-Kai Huang, Seconded by Young Hoon Kwon.
5.5.32.2 Discussion – No discussion.
5.5.32.3 Result: Motion passes with no objection.

5.5.33 CR Motion #47: Move to approve resolutions to CIDs, 705, 2437, 2436, 2439, 2440 in doc 11-16/0879r2.

5.5.33.1 Moved by Jeongki Kim, Seconded by Young Hoon Kwon.

5.5.33.2 Discussion – No discussion.

5.5.33.3 Result: Motion passes with no objection.

5.5.34 CR Motion #48: Move to approve resolutions to CIDs, 62, 640, 2434, 2438, 703, 2435, 66, 257, 447, 186, 2661, 2662, 776, 2660, 1577, 2332, 2718 in doc 11-16/0889r1.

5.5.34.1 Moved by Young Hoon Kwon, Seconded by Yongho Seok.

5.5.34.2 Discussion – No discussion.

5.5.34.3 Result: Motion passes with no objection.

5.5.35 CR Motion #49: Move to approve resolutions of CIDs, 1070, 2226, 693, 125, 2650, 2651 in doc 11-16/0875r2.

5.5.35.1 Moved by Kiseon Ryu, Seconded by Po-Kai Huang.

5.5.35.2 Discussion – No discussion.

5.5.35.3 Result: Motion passes with no objection.

5.5.36 CR Motion #50: Move to approve the resolutions of CIDs, 768, 829, 978, 1546, 1295, 2710, 2709, 2187, 2647, 2266 in doc 11-16/0876r2.

5.5.36.1 Moved by Kiseon Ryu, Seconded by Po-Kai Huang.

5.5.36.2 Discussion – No discussion.

5.5.36.3 Result: Motion passes with no objection.

5.5.37 CR Motion #51: Move to approve the resolutions of CIDs, 2890, 2896, 1634 in doc 11-16/0870r0.

5.5.37.1 Moved by Zhou Lan, Seconded by Young Hoon Kwon.

5.5.37.2 Discussion – No discussion.

5.5.37.3 Result: Motion passes with no objection.

5.5.38 CR Motion #52: Move to approve resolution to CID 783 in doc 11-16/0877r5.

5.5.38.1 Moved by Jeongki Kim, Seconded by Kiseon Ryu.

5.5.38.2 Discussion – No discussion.

5.5.38.3 Result: Motion passes with no objection.

5.5.39 CR Motion #53: Move to approve resolutions of CIDs, 162, 2444, 2443, 2623 in doc 11-16/0835r1.

5.5.39.1 Moved by Alfred Asterjadhi, Seconded by Po-Kai Huang..

5.5.39.2 Discussion – No discussion.

5.5.39.3 Result: Motion passes with no objection.

5.5.40 CR Motion #54: Move to approve resolutions to CIDs 507, 949, 1005, 1785, 1862 in doc 11-16/0866r4.

5.5.40.1 Moved by Kome Oteri, Seconded by Xiaofei Wang.

5.5.40.2 Discussion – No discussion.

5.5.40.3 Result: Motion passes with no objection.

5.5.41 CR Motion #55: Move to approve resolutions to CIDs, 482, 1867, 2084, 2085 in doc 11-16/0923r1.
5.5.41.1 Moved by Sriram Venkateswaran, Seconded by Ron Porat.
5.5.41.2 Discussion – No discussion.
5.5.41.3 Result: Motion passes with no objection.

---

6 AOB

6.1 A member informed the group that some of the motions was moved by an individual who had lost the voting right. Those motions will be taken care of during PM1 session.

7 Recess

7.1 TGax is in recess @ 12:28 PM until PM1 (13:30) today.

Thursday, July 28th, 2016, PM1 TGax full Session (13:30-15:30)

8 The meeting called to order by Osama Aboul-Magd (Huawei Technologies)

8.1 The agenda file: 11-16-0977-05.

9 Announcement

9.1 Chair reminded IEEE 802 and 802.11 IPR P&P.
9.2 Chair asked people to state name and affiliation when addressing for the first time in the session.
9.3 Chair reminded people to do attendance.

10 TG Motions (continued)

10.1 CR Motions (continued)

10.1.1 CR Motion #56: Move to approve resolutions of CIDs, 9, 228, 2219, 2422, 2691, 2900 in doc 11-16/0725r3.
10.1.1.1 Moved by Alfred Asterjadhi, Seconded by Simone Merlin.
10.1.1.2 Note - This motion originally was the CR Motion #15 which was moved be a member who had lost the voting right.
10.1.1.3 Discussion – No discussion.
10.1.1.4 Result: Motion passes with no objection.

10.1.2 CR Motion #57: Move to approve resolutions to CIDs, 55, 1000, 1221, 1915, 2234, 802,1695, 1222, 182, 971,2713, 702, 1916, 2233, 223 in doc 11-16/0773r2.
10.1.2.1 Moved by Alfred Asterjadhi, Seconded by Simone Merlin.
10.1.2.2 Note – This motion originally was the CR Motion #16 moved by an individual who had lost the voting right.
10.1.2.3 Discussion – No discussion.
10.1.2.4 Result: Motion passes with no objection.

10.1.3 CR Motion #58: Move to accept resolutions to CIDs, 262,1083, 102, 612, 660, 830, 864, 1716, 2215, 2301, 2376, 372, 719, 864 in doc 11-16/0774r1.

10.1.3.1 Moved by Alfred Asterjadhi, Seconded by Simone Merlin.
10.1.3.2 Note – This motion originally was the CR Motion #16 moved by an individual who had lost the voting right.
10.1.3.3 Discussion – No discussion.
10.1.3.4 Result: Motion passes with no objection.

10.1.4 CR Motion #59: Move to approve resolutions to CIDs, 101,103, 104,374,375, 377, 558, 561, 661, 662, 664, 688, 1296, 1299, 1301, 1717, 1718, 1882, 2113, 2114, 2174, 2217, 2302, 2421, 227, 720, 663,1303,1305,1306 in doc 11-16/0780r1.
10.1.4.1 Moved by Alfred Asterjadhi, Seconded by Simone Merlin.
10.1.4.2 Note – This motion originally was the CR Motion #16 moved by an individual who had lost the voting right.
10.1.4.3 Discussion – No discussion.
10.1.4.4 Result: Motion passes with no objection.

---

11 Presentations

11.1 George Cherian (Qualcomm) presented "CIDs for: Section 9.3.1.9.7 Multi STA BAs," based on the submission 11-16-0868-00.

11.1.1 Summary
11.1.1.1 This submission proposes resolutions for multiple comments related to TGax D0.1 with the following CIDs (31 CIDs)
11.1.1.1.1 80, 1284, 1182, 1143, 1286, 962, 1287, 831, 508, 367, 100, 99, 98, 999, 1812, 2580, 2458, 2414, 2389, 2232, 2185, 2170, 1285, 1813, 2582, 1811, 1810, 1715, 1291, 1288, 1814.
11.1.2 Discussion
11.1.2.1 CID #2389 will be resolved in another submission.
11.1.3 Motion

11.1.3.1 CR Motion #60: Move to accept resolutions to CIDs, 80, 1284, 1182, 1143, 1286, 962, 1287, 831, 508, 367, 100, 99, 98, 999, 1812, 2580, 2458, 2414, 2232, 2185, 2170, 1285, 1813, 2582, 1811, 1810, 1715, 1291, 1288, 1814 in doc 11-16/0868r1
11.1.3.1.1 Moved by George Cherian, Seconded by Simone Merlin.
11.1.3.1.2 Discussion – No discussion.
11.1.3.1.3 Result: Motion accepted with no objection.

11.2 Woojin Ahn (Wilus Institute) presented "TID value of ALL ACK signaling," based on the submission 11-16-0916-01.

11.2.1 Summary
11.2.1.1 The TID value for BA information in case of all ACK was discussed.
11.2.1.2 Without proper TID value setting rule, originator may not distinguish single MPDU ACK and all ACK upon reception of M-BA.
11.2.1.3 Proposed to Set TID value of All ACK to one of values between 1000-1110.
11.2.2 Discussion – No discussion.
11.2.3 Motion

11.2.3.1 MAC Motion #87: Move to include the spec text change as shown in doc 11/16-0917r1 in the TG draft

11.2.3.1.1 Moved by Woojin Ahn, Seconded by John Son.
11.2.3.1.2 Discussion
11.2.3.1.2.1 This motion will be confirmed if correct clause number is captured.
11.2.3.1.3 Result: Motion passes with no objection.

11.3 Kaushik Josiam (Samsung) presented "Proposed resolutions to comments on clause 26.3.9.8," based on the submission 11-16-0928-01.

11.3.1 Summary
11.3.1.1 The resolutions for the following CIDs are contained in this document.
11.3.1.1.1 CIDs #: 306, 310, 311, 477, 1002, 1003, 1010, 1692, 2020, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2036, 2037, 2130, 2151, 2245, 2246, 2543, 2544, 2545, 2546, 2547, 2679, 2681.
11.3.2 Discussion
11.3.2.1 There were comments on the resolutions for CIDs 1010 and 2151 whether these comments are relevant for DL MU only. The presenter will clarify those points.
11.3.3 Motion

11.3.3.1 CR Motion #61: Move to approve resolutions to CIDs, 306, 310, 311, 477, 1002, 1003, 1010, 1692, 2020, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2036, 2037, 2130, 2151, 2245, 2246, 2543, 2544, 2545, 2546, 2547, 2679, 2681 in doc 11-16/0928r2.
11.3.3.1.1 Moved by Kaushik Josiam, Seconded by Bo Sun
11.3.3.1.2 Discussion – No discussion.
11.3.3.1.3 Result: Motion was accepted with no objection.

11.4 Chittabrata Ghosh (Intel) presented "Resolution for CID 1589, 1590, 2668, and 2669 on Multi-TID Aggregation in Sub-clause 25.10.4," based on the submission 11-16-0938-00.

11.4.1 Summary
11.4.1.1 The resolutions for the following CIDs and relevant text are proposed.
11.4.1.1.1 CIDs #1589, 1590, 2668, and 2669.
11.4.2 Discussion
11.4.2.1 C: Relevant MIB (dot11AMPDUwithMultipleTIDOptionImplemented) needs to be specified in Annex C. → One of the next action items.
11.4.3 Motion

11.4.3.1 CR Motion #62: Move to approve resolutions to CIDs, 1589, 1590, 2668, and 2669 in doc 11-16/0938r0.
11.4.3.1.1 Moved by Chittabrata Ghosh, Seconded Yasuhiko Inoue.
11.4.3.1.2 Discussion – No discussion.
11.4.3.1.3 Result: Motion accepted with no objection.

---

12 Teleconference planning

12.1 Chair suggested weekly conference calls.
12.1.1 Thursday, August 4th, 2016, 20:00 - 22:00 (ET) – already approved.

12.1.2 Thursday, August 11th, 25th & September 8th, 2016, 10:00 - 12:00 (ET)
12.1.3 Thursday, August 18th & September 1st, 2016, 20:00 - 22:00 (ET)
12.2 Chair asked if there is any objection to this plan. → No objection.

13 Presentations

13.1 Jarkko Kneckt (Apple) presented "SU Multi-TID rules," based on the submission 11-16-0913-00.

13.1.1 Summary
13.1.1.1 This submission discusses how to use the multi-TID aggregation in SU TXOPs.
13.1.1.2 Also, the resolutions for CIDs #71 and 190 are provided.
13.1.2 Discussion
13.1.2.1 There was a discussion on TXOP Limit – Which AC should be assumed? → The answer was the primary AC.
13.1.3 Motion

13.1.3.1 CR Motion #63: Move to approve resolutions to CIDs, 71 and 190 in doc 11-16/966r0
13.1.3.1.1 Moved by Jarkko Kneckt, Seconded by Alfred Asterjadhi.
13.1.3.1.2 Discussion – No discussion.
13.1.3.1.3 Result: Motion accepted with no objection.

13.2 Jeongki Kim (LG Electronics) presented "Comment resolution on CID 782 (Intra-PPDU PS)," based on the submission 11-16-0878-01.

13.2.1 Summary
13.2.1.1 The resolution for the CID #782 and related text are proposed.
13.2.1.2 Conditions for identification of Intra-BSS PPDU for the VHT case and other cases were added.
13.2.2 Discussion
13.2.2.1 There was a request to double check the definition of Partial AID. The presenter agreed to do so.
13.2.3 Motion

13.2.3.1 CR Motion #64: Move to approve resolution to CID 782 in doc 11-16/0878r1.
13.2.3.1.1 Moved by Jeongki Kim, Seconded by Kiseon Ryu.
13.2.3.1.2 Discussion – No discussion.
13.2.3.1.3 Result: Motion was accepted with no objection.

---

14 AOB

14.1 No other business that fit with 2 or 3 minutes.

15 Adjournment

15.1 TGax adjourned for the week @ 15:28.

Appendix B

2023-01-18 TGay Awards Photographs

The TGay awards ceremony was held during the electronic July 2021 session and the accompanying presentation is here. The awards themselves were kept in storage and presented at the January 2023 session at the Hilton Balitmore Inner Harbor, Baltimore, MD, USA, the photos for which are below. Not all recipients were able to attend.

WG and TGay Officer Awards

Dorothy Stanley

WG Chair

Jon Rosdahl

WG Vice Chair

Robert Stacey

WG Vice Chair

Stephen McCann

WG Secretary

Edward Au

TGay Chair

Sang Kim

TGay Vice Chair

Jeorge Hurtarte

TGay Secretary

Robert Stacey accepting on behalf of Carlos Coredeiro

TGay Editor

SangHyun Chang

Former TGay Vice Chair

Yan Xin

Former TGay Vice Chair, major contributor to EDMG PHY and comment resolution

TGay Significant Contributor Awards

Claudio da Silva

For significant contribution to EDMG PHY, coexistance assurance document, and comment resolution

Alecsander Eitan

For signficant contribution to EDMG PHY and comment resolution

Lei Huang

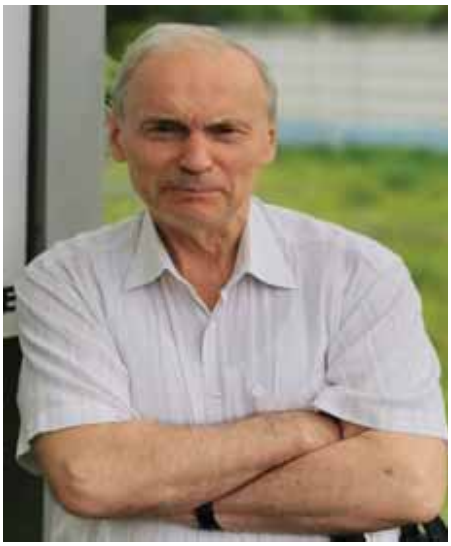
For signficant contribution to EDMG PHY and comment resolution

Assaf Kasher

For signficant contribution to EDMG MAC and comment resolution

Artyom Lomayev

For significant contribution to the EDMG channel modelling, EDMG PHY, and comment resolution



Alexander Maltsev

For significant contribution to the EDMG channel modelling and EDMG PHY

Payam Torab

For significant contribution to TDD millimeter wave distribution networks

Solomon Trainin

For significant contribution to the EDMG MAC and comment resolution

Hiroyuki Motozuka

For major contribution to EDMG PHY comment resolution

Kome Oteri

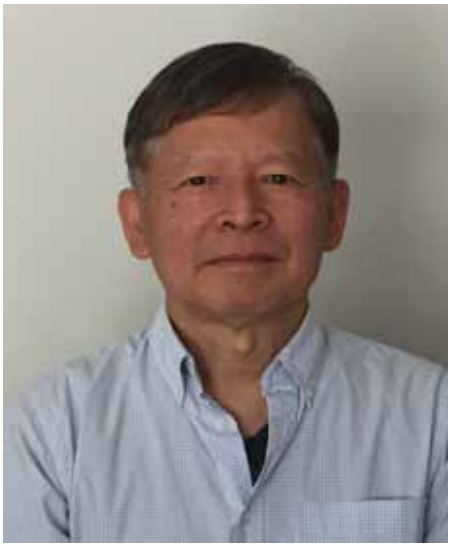
For major contribution to EDMG PHY and comment resolution

Ilya Bolotin

For major contribution to EDMG MAC and comment resolution

Cheng Chen

For major contribution to EDMG MAC, TDD millimeter wave distribution networks, and comment resolution



James Wang

For major contribution to EDMG MAC and comment resolution

Al Petrick

For major contribution to comment resolution. Award given at March 2023 session.

Rui Yang

For major contribution to comment resolution

Rob Sun

For major contribution to comment resolution

TGay PHY Contributor Awards

Nelson Costa

For contribution to comment resolution

Thomas Handte

For contribution to EDMG PHY and comment resoliution

Takenori Sakamoto

For contribution to EDMG PHY and comment resoliution

Sunwoong Yun

For contribution to EDMG PHY

TGay MAC Contributor Awards

Djordje Tujkovic

For contribution to TDD millimeter wave distribution networks

Mohamed AbouelSeoud

For contribution to EDMG MAC comment resoliution

Sauhee Bang

For contribution to EDMG MAC and comment resoliution

George Calcev

For contribution to EDMG MAC comment resoliution

Tony Xiao Han

For contribution to EDMG MAC

Chris Hansen

For contribution to EDMG MAC comment resoliution. Award given at March 2023 session.

Kyungtae Jo

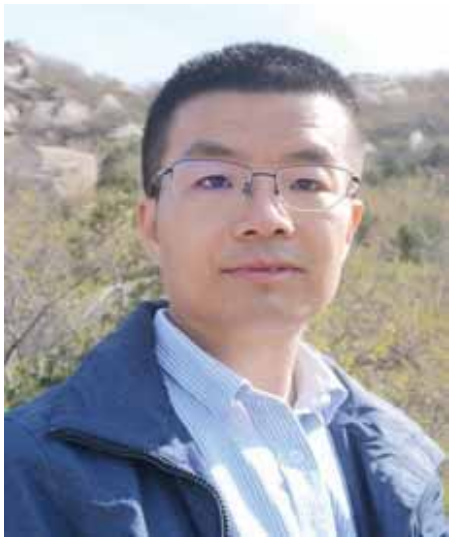
For contribution to EDMG MAC

Oren Kedem

For contribution to EDMG MAC and comment resoliution

Jinmin Kim

For contribution to EDMG MAC and comment resoliution



Dejian Li

For contribution to EDMG MAC comment resoliution

Sungjin Park

For contribution to EDMG MAC and comment resoliution

Kazuyuki Sakoda

For contribution to EDMG MAC comment resoliution

Li-Hsiang Sun

contribution to EDMG MAC comment resoliution

Acknowledgment

Working Group IEEE 802.11 gratefully acknowledges Matthew Fischer and Mark Hamilton for taking these photographs.

Specification Framework for TGax

Date: 2016-01-28

Author(s):

Name	Affiliation	Address	Phone	email
Robert Stacey	Intel	2111 NE 25th Ave, Hillsboro OR 97124, USA	+1-503-724-893	robert.stacey@intel.com

Abstract

This document provides the framework from which the draft TGax amendment will be developed. The document provides an outline of each the functional blocks that will be a part of the final amendment. The document is intended to reflect the working consensus of the group on the broad outline for the draft specification. As such it is expected to begin with minimal detail reflecting agreement on specific techniques and highlighting areas on which agreement is still required. It may also begin with an incomplete feature list with additional features added as they are justified. The document will evolve over time until it includes sufficient detail on all the functional blocks and their inter-dependencies so that work can begin on the draft amendment itself.

Revision history

Revision	Date	Changes
0	January 13, 2015	As approved by TG motion at the November 2014 meeting [1]
1	January 13, 2015	Added motioned text from PM1 session January 13, 2015
2	January 15, 2015	Added motioned text from January 14, 2014
3	March 27, 2015	Added motioned text from PM1 session March 12, 2015
4	March 27, 2015	Some corrections to the March PHY motion numbers and missing statement added.
5	May 14, 2015	Removed duplicate statement on OFDMA operation in bandwidths less than 20 MHz. Added text for motions passed during the May 2015 session.
6	July 9, 2015	Fixed typo in reference #14. Tomo Adachi notified the editor by email that MU Motion 5 was added in error since the motion failed. Text removed.
7	July 16, 2015	Added text for motions passed July 16, 2015
8	September 18, 2015	Nrow → Nrot (per email from Youhan Kim). Grouped statements in appropriate subsections. Added missing MAC Motion 23 from July (thanks again Tomo Adachi). Added text that passed motion on September 17, 2015 as found in 15/0987r6.
9	September 22, 2015	Updated based on comments from Hongyuan: missing 40 MHz for mandatory LDPC; RL-SIG in HE NDP PPDU format
10	November 24, 2015	Added PHY motions passed November 12, 2015. Automated heading numbering.
11	November 28, 2015	Added remaining motions from November meeting
12	December 1, 2015	Previous revision appears to be an incomplete, perhaps a interim saved version of the document rather than the completed version. Corrected with this release.
13	December 7, 2015	Added missing MAC Motion 29 from Spetember 2015 session. Fixed type on PHY Motion 80.
14	January 21, 2016	Added motioned text from January session.
15	January 28, 2016	Missed motion on slide 27 of 15/1516r3. Document referenced in motion is 16/0043r0.

HE High Efficiency
UL Uplink
DL Dowlink
OFDMA Orthogonal Frequency-Division Multiple Access

3 High Efficiency (HE) Physical Layer

3.1 General

Section 3 describes the functional blocks in the physical layer.

The HE extended Range SU PPDU is transmitted only on the primary 20 MHz.

[PHY Motion 116, January 2016, see [2]]

The HE Extended Range SU PPDU can only be transmitted with MCS0, MCS1, MCS2 and only with 1 spatial stream.
[PHY Motion 117, January 2016, see [2]]

There are two STA classes that support HE trigger-based PPDU with information exchanged as part of the device capability

- Class A: STAs that are high capability devices and
- Class B: STAs that are low capability devices

[PHY Motion 118, January 2016, see [3]]

STAs that participate in HE trigger-based PPDU shall support per chain max(P-32,-10dBm) as the min Tx power, with P the max power the STA can transmit at the antenna connector of that chain using MCS0 while meeting the TX EVM and spectral mask requirements. A STA transmitting at and above the min power shall support the EVM requirements for TBD MCS (but at least MCS7).
[PHY Motion 119, January 2016, see [3]]

STAs that participate in HE trigger-based PPDU shall support the following absolute Tx power requirements and the RSSI measurement accuracy requirements for the two device classes

Parameter	11ax Minimum Requirements		Comments
	Class A devices	Class B devices	
Absolute Transmit Power accuracy	+/-3dB	+/-9dB	Accuracy of achieving a specified transmit power level
RSSI Measurement Accuracy	+/- 2 dB	+/- 5 dB	Difference between the actual RSSI and the measured RSSI Requirements are valid from minimum RX to maximum RX input power

[PHY Motion 120, January 2016, see [3]]

STAs that participate in HE trigger-based PPDU shall pre-compensate for carrier frequency offset (CFO) error and timing drift. After compensation, the absolute value of residual CFO error with respect to the corresponding Trigger frame shall not exceed 350 Hz for data subcarriers when measured as the 10% point of CCDF of CFO errors in AWGN at a received power of -60 dBm in the primary 20MHz. The residual CFO error measurement shall be made on the HE trigger-based PPDU packet after HE-SIGA.
[PHY Motion 121, January 2016, see [3]]

STA that participate in HE Trigger based PPDU transmission shall have timing accuracy of +/-0.4μs relative to the Trigger frame. This requirement does not include round trip delay.
[PHY Motion 122, January 2016, see [3]]

The following TX LO leakage requirements are supported for all transmission modes in 11ax:

- The power measured at the location of the RF LO using resolution BW 78.125 kHz shall not exceed the maximum of –32 dB relative to the total transmit power and -20 dBm, or equivalently max(P-32,-20), where *P* is the transmit power per antenna in dBm. The transmit center frequency leakage is specified per antenna.

[PHY Motion 123, January 2016, see [3]]

Transmit center frequency and the symbol clock frequency for all transmit antennas and frequency segments shall be derived from the same reference oscillator.
[PHY Motion 124, January 2016, see [3]]

The non-contiguous channel bonding will be supported in 802.11ax by:

- Transmitting using OFDMA PPDU format by nulling the tones of one or more secondary channels in 80 MHz and 160 (80+80) MHz;
- Modes for non-contiguous channel bonding are TBD;
- Non-contiguous channels within primary or secondary 80 MHz only exists at AP side.

[PHY Motion 125, January 2016, see [4]]

3.2 HE preamble

3.2.1 General

An HE PPDU shall include the legacy preamble (L-STF, L-LTF and L-SIG), duplicated on each 20 MHz, for backward compatibility with legacy devices. [PHY Motion #3, January 2015, see [5]]

In an HE PPDU, both the first and second OFDM symbols immediately following the L-SIG shall use BPSK modulation.

NOTE–This is to spoof all legacy (11a/n/ac) devices to treat an HE PPDU as a non-HT PPDU.

[PHY Motion 15, July 16, 2015, see [6]]

MU-MIMO shall only be supported on allocations sizes ≥ 106 tones.

[PHY Motion 35, July 16, 2015, see [7]]

The number of spatially multiplexed users in a DL or UL MU-MIMO transmission is up to 8 (in a given RU).

[PHY Motion 92, November 2015, see [8]]

There are only three pre-HE-STF preamble formats defined:

- SU format (mandatory) / Trigger based UL
- MU format (mandatory)
- Extended range SU format (mandatory)

[PHY Motion 68, November 2015, see [9], modified with PHY Motion 115, Janaury 2016, see [2]]

Editorial note: Let's refer to the associated PPDU formats as the HE SU PPDU, HE Trigger-based UL PPDU, HE MU PPDU and HE Extended Range SU PPDU. When discussing features associated with all formats, we use the term HE PPDU.

The signaling of the three preamble formats is illustrated in Figure 1.

- LSIG length set as mod3=1 means SU format. Set as mod3=2 means either MU format or extended range SU format
- QBPSK on HE-SIGA2 means extended range SU format

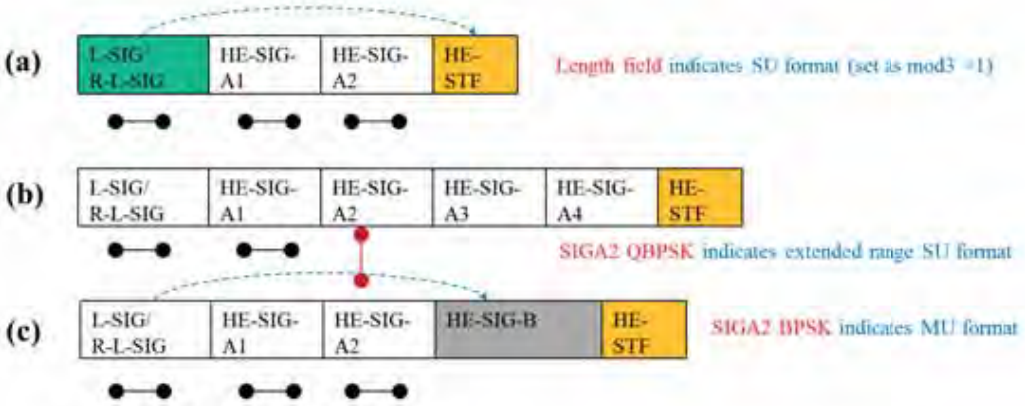

Figure 1 – Preamble format signaling

[PHY Motion 69, November 2015, see [9]]

The spec shall define an HE NDP PPDU for DL Sounding. The HE NDP PPDU format is based on the HE SU PPDU format and is shown in Figure 2. The presence and duration of packet extension at the end of HE NDP PPDU is TBD.

L-STF	L-LTF	L-SIG	RL-SIG	HE-SIG-A	HE-STF	HE-LTFs	Packet Extension

Figure 2 – HE NDP PPDU format

[PHY Motion 37, September 17, 2015, see [10], editorially changed TBD field to RL-SIG based on Motion 51]

If the Beam Change field in HE-SIG-A is 0 then the pre-HE-STF portion of the preamble shall be spatially mapped in the same way as HE-LTF1 on each tone.
[PHY Motion 84, November 2015, see [11]]

An HE PPDU has 4 extra subcarriers, two at each edge of each 20 MHz sub-channel for the L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields:

- The 4 subcarriers added to the L-SIG and RL-SIG fields are transmitted with known TBD BPSK constellations (±1).
- The number of data subcarriers in HE-SIG-A and HE-SIG-B fields is increased by 4 in each 20 MHz sub-channel.
- The L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields are always transmitted with same total power as L-LTF field (in cases when L-LTF is not being boosted).

[PHY Motion 72, November 2015, see [12]]

STBC is an optional feature in 11ax and it is ONLY defined for single spatial stream (Nss=1 and Nsts=2) In an HE MU PPDU, all RUs are either STBC or not STBC.
[PHY Motion 75, November 2015, see [13]]

3.2.2 L-STF and L-LTF

L-STF power is boosted by 3 dB in the extended range preamble.
[PHY Motion 66, November 2015, see [14]]

L-LTF power is boosted by 3 dB in the extended range preamble.
[PHY Motion 67, November 2015, see [14]]

3.2.3 L-SIG and repeated L-SIG

In L-SIG, the L_LENGTH field is set to a value not divisible by 3.
[PHY Motion 52, September 17, 2015, see [15], modified with first motion January 2016, see [16]]

The 11ax preamble shall have a 4 μs symbol repeating the L-SIG content right after the legacy section. This symbol shall be modulated by BPSK and rate ½ BCC.

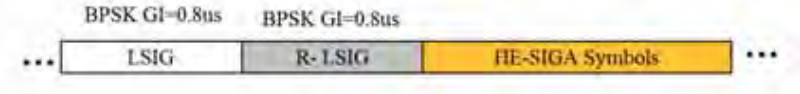

Figure 3 -- Repeated L-SIG

[PHY Motion 51, September 17, 2015, see [15]]

The content of 4 extra tones [-28,-27,27,28] of L-SIG and RL-SIG in 20 MHz HE PPDU is [-1,-1,-1,1].
[PHY Motion 114, January 2016, see [17]]

3.2.4 HE-SIG-A

HE-SIG-A (using a DFT period of 3.2 μs and subcarrier spacing of 312.5 kHz) is duplicated on each 20 MHz after the legacy preamble to indicate common control information.
[Motion #4, January 2015, see [5]]

HE-SIG-A is present in all 11ax packets and is two OFDM symbols long when it uses MCS0

- Information bits in HE-SIG-A are jointly encoded as in VHT-SIG-A (using 52 tones).
- SU packets and UL Trigger based packets do not contain HE-SIG-B symbols.

[PHY Motion 16, July 16, 2015, see [18], modified with first motion January 2016, see [16]]

~~HE-SIG-A shall include the following fields in an SU PPDU (the size of each field is TBD and other fields are TBD):~~

- ~~Format indication~~
- ~~TXOP duration~~
- ~~BW~~
- ~~Payload GI~~
- ~~PE~~
- ~~MCS~~
- ~~Coding~~
- ~~LTF Compression~~
- ~~NSTS~~
- ~~STBC~~
- ~~BF~~
- ~~CRC~~
- ~~Tail~~

[PHY Motion 43, September 17, 2015, see [19], removed with PHY Motion 96, November 2015]

~~HE-SIG-A shall include the following fields in an MU DL PPDU the size of each field is TBD and other fields are TBD):~~

- ~~Format indication~~
- ~~TXOP duration~~
- ~~Number of HE-SIG-B symbols~~
- ~~MCS of HE-SIG-B~~
- ~~CRC~~
- ~~Tail~~

[PHY Motion 44, September 17, 2015, see [19], removed with PHY Motion 97, November 2015]

The MCS of HE-SIG-B field indicates the following MCS values for HE-SIG-B:

- MCS0, MCS 1, MCS 2, MCS 3, MCS4, MCS5
- Other MCS is TBD

The MCS of HE-SIG-B field is 3 bits in length. If two MCS values for BW >= 40 MHz are to be signaled, additional TBD bits used.
[PHY Motion 88, November 2015, see [20]]

~~HE-SIG-A shall include the following fields in an MU-UL PPDU the size of each field is TBD and other fields are TBD):~~

- ~~Format indication~~
- ~~TXOP duration~~
- ~~CRC~~
- ~~Tail~~

[PHY Motion 45, September 17, 2015, see [19], removed with PHY Motion 98, November 2015]

~~The spec shall support adding a BSS Color field in the HE-SIG-A field. The BSS Color field is an identifier of the BSS (size TBD).~~
[PHY Motion 46, September 17, 2015, see [21], removed with PHY Motion 96, November 2015]

~~An UL/DL Flag field is present in the HE-SIG-A field of an HE SU PPDU. The UL/DL Flag field indicates whether the frame is UL or DL. The value of this field for TDLS is TBD.~~
[PHY Motion 48, September 17, 2015, see [21], removed with PHY Motion 96, November 2015]

~~HE-SIG-A includes a 1-bit DCM indication.~~
[PHY Motion 54, September 17, 2015, see [22], removed with PHY Motion 96, November 2015]

The format of the HE-SIG-A field for an HE SU PPDU is defined in Table 1.

Table 1 - HE-SIG-A field for an HE SU PPDU

Field	Length (bits)	Description	Encoding
DL/UL	1	Indicates whether the frame is UL or DL. The field is set to DL for TDLS. *NOTE: The TDLS peer can identify the TDLS frame by To DS and From DS fields in the MAC header of the MPDU.* [MAC Motion 57, November 2015, see [23]]	
Format	1	Differentiate between an SU PPDU and a Trigger-based UL PPDU. See [19].	
BSS Color	6	Base station identifier.	
Spatial Reuse	TBD	Exact bits TBD, e.g., indication of CCA Level, Interference Level accepted, TX Power	
TXOP Duration	TBD	Indicates the remaining time in the current TXOP. See [19].	

Bandwidth	2		
MCS	4		
CP+LTF Size	3		1x LTF + 0.8 μS 2x LTF + 0.8 μS 2x LTF + 1.6 μS 4x LTF + 3.2 μS
Coding	2		
Nsts	3		
STBC	1		
TxBF	1		
DCM	1	Dual carrier modulation indication	
Packet Extension	3	"a"-factor field of 2 bits and 1 disambiguation bit	
Beam Change	1	Indicate precoder change/no change between L-LTF and HE-LTF. See [11].	
CRC	4		
Tail	6		

[PHY Motion 96, November 2015, see [24]]

The format of the HE-SIG-A field for an HE MU PPDU is defined in Table 2.

Table 2 - HE-SIG-A field for an HE MU PPDU

Field	**Length (bits)**	**Description**	**Encoding**
DL/UL	1		
BSS Color	6	Base station identifier.	
Spatial Reuse	TBD		
TXOP Duration	TBD	Indicates the remaining time in the current TXOP. See [19].	
Bandwidth	≥ 2	May accommodate more than in SU case to take advantage of OFDMA	
SIGB MCS	3	See [20].	MCS0, MCS1, MCS2, MCS3, MCS4, MCS5 Other MCS TBD
SIGB DCM	1		
SIGB Number Of Symbols	4	Support about 16 users using MCS0 per BCC	
SIGB Compression Mode	≥ 1	Differentiates full bandwidth MU-MIMO from OFDMA MU PPDU. More compression modes TBD. See [25].	
Number of HE-LTF Symbols	3	Up to 8 LTF symbols possible	
CP+LTF Size	3		2x LTF + 0.8 μS 2x LTF + 1.6 μS 4x LTF + 3.2 μS
LPDC Extra Symbol	1		
Packet Extension	3		
CRC	4		
Tail	6		

[PHY Motion 97, November 2015, see [24]]

In an HE MU PPDU the HE-SIG-A field shall indicate the number of STAs when full bandwidth MU-MIMO compressed SIG-B mode is indicated. Details are TBD.
[PHY Motion 111, Janaury 2016, see [26]]

The format of the HE-SIG-A field for an HE Trigger-based UL PPDU is defined in Table 3.

Table 3 - HE-SIG-A fields for the HE Trigger-based UL PPDU

Field	Length (bits)	Description	Encoding
Format	1	Differentiate between an SU PPDU and a Trigger-based UL PPDU	
BSS Color	6	Base station identifier.	
Spatial Reuse	TBD		
TXOP Duration	TBD	Indicates the remaining time in the current TXOP. See [19].	
Bandwidth	TBD		
CRC	4		
Tail	6		

[PHY Motion 98, November 2015, see [24]]

HE-SIG-A includes a 1-bit Beam Change field. A value 1 indicates that spatial mapping is changed and a value 0 indictes that spatial mapping is unchanged.
[PHY Motion 83, November 2015, see [11]]

A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU. In case of full BW MU-MIMO, the following conditions hold:

- Only applicable for RU sizes 242, 484, 996, 2*996
- The RU information in HE-SIG-B common is not signaled
- For bandwidths > 20 MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels

[PHY Motion 87, November 2015, see [25]]

The HE-SIG-A field shall have a repetition mode for range extension. In the repetition mode, HE-SIG-A symbols are repeated once in time. The bit interleaver is bypassed in the repeated HE-SIG-A symbols.
[PHY Motion 55, September 17, 2015, see [27], modified with first motion January 2016, see [16]]

The CRC bits of HE-SIG-A and each coding group of HE-SIG-B are generated as 4 LSB of HT CRC generator output.
[PHY Motion 105, January 2016, see [28]]

3.2.5 HE-SIG-B

HE-SIG-B only has one CP size equal to 0.8 μS.
[PHY Motion 71, November 2015, see [9]]

Downlink HE MU PPDU shall include HE-SIG-B field, and the number of OFDM symbols of HE-SIG-B field is variable.
NOTE—The HE-SIG-B field includes information required to interpret HE MU PPDU, and detail is TBD.
[PHY Motion #8, March 2015, see [29]]

HE-SIG-B shall use a DFT period of 3.2 μs and subcarrier spacing of 312.5 kHz. [Motion #14, May 2015]

HE-SIG-B does not have any OFDM symbol duplicated in each 20 MHz of the PPDU bandwidth. [PHY Motion 18, July 16, 2015, see [18]]

HE-SIG-B is encoded on a per 20 MHz basis using BCC with common and user blocks separated in the bit domain. [PHY Motion 22, July 16, 2015, see [30]]

SIGB bits for each SIGB content channel are continuously encoded with 1 BCC encoder.
[PHY Motion 106, January 2016, see [31]]

For bandwidths ≥ 40 MHz, the number of 20 MHz subbands carrying different content is two and with structure as shown in Figure 4. Each square in the figure represents 20 MHz subband and 1/2 represents different signalling information. [PHY Motion 23, July 16, 2015, see [30]]

Figure 4 - 20 MHz subchannel content for HE-SIG-B for bandwidths ≥ 40 MHz

HE-SIG-B has a common field followed by a user specific field, where

- The common field includes the information for all of designated STAs to receive the PPDU in corresponding bandwidth
- The user specific field consists of multiple sub-fields that do not belong to the common field, where one or multiple of those sub-fields are for each designated receiving STA
- The boundary between the common and the user specific field is at the bit level and not the OFDM symbol level

[PHY Motion 19, July 16, 2015, see [32]]

The common field in HE-SIG-B contains Resource Unit (RU) allocation.
[PHY Motion 20, July 16, 2015, see [32]]

HE-SIG-B includes resource unit assignment and MCS per station for DL-OFDMA PPDU.
PHY Motion 21, July 16, 2015, see [33]]

The encoding structure of each BCC in HE-SIG-B is shown in Figure 5 and described below:

- Two users are grouped together and jointly encoded in each BCC block in the user specific section of HE-SIG-B
- The common block has a CRC separate from the CRC of the user specific blocks
- The last user information is immediately followed by a CRC and tail bits (regardless of whether the number of users is odd or even) and padding bits are only added after those tail bits

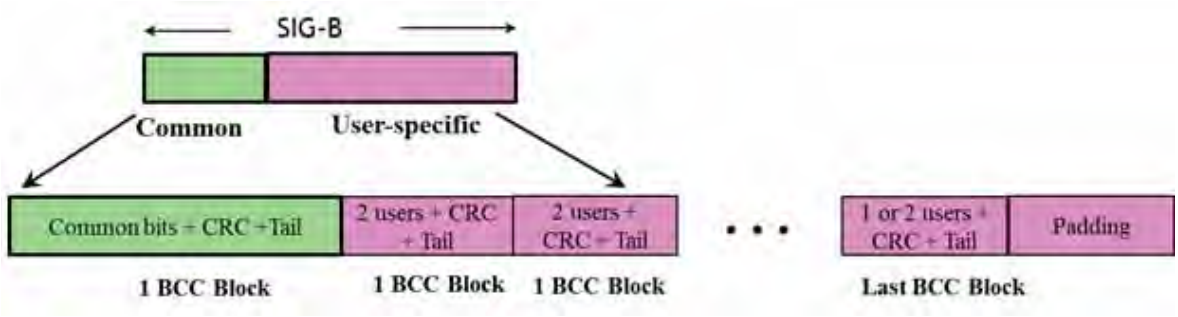

Figure 5 -- Encoding structure in HE-SIG-B

[PHY Motion 39, September 17, 2015, see [34], modified with PHY Motion 95, November 2015, see [35], modified with first motion January 2016, see [16]]

The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields:

- STAID
- For single-user allocations in an RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme), DCM (Dual Sub-Carrier Modulation) and Coding (Use of LDPC)
- For each user in a multi-user allocation in an RU: Spatial Configuraiton Fields, MCS, DCM and Coding.
- Other fields are TBD.

[PHY Motion 40, September 17, 2015, see [36], modified with PHY Motion 91, see [37]]

The STAID field in the user specific subfields of HE-SIGB is 11 bits in length.
[PHY Motion 90, November 2015, see [37]]

For MU-MIMO allocation of RU size > 20 MHz, the user-specific subfields is dynamically split between two HE-SIG-B content channels (1/2) and the split is decided by the AP (on a per case basis).
[PHY Motion 41, September 17, 2015, see [36]]

The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit, per 20 MHz PPDU BW for signaling

- The RU arrangement in frequency domain
- Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations.

The mapping of the 8 bits to the arrangement and the number of MU-MIMO allocations is defined in Table 4. Signaling for the center 26 unit in 80 MHz is TBD.

Table 4 - Arrangement and number of MU-MIMO allocations

8 bits indices	#1	#2	#3	#4	#5	#6	#7	#8	#9	Num of entries
000 0 0000	26	26	26	26	26	26	26	26	26	1
000 0 0001	26	26	26	26	26	26	26	52		1
000 0 0010	26	26	26	26	26	52		26	26	1

000 0 1101	52		52		26	26	26	52						1
000 0 1110	52		52		26	52		26	26					1
000 0 1111	52		52		26	52		52						1
000 1 xxxx	Definition TBD													16
00100 yyy	26	26	26	26	26	106								8
00101 yyy	26	26	52		26	106								8
00110 yyy	52		26	26	26	106								8
00111 yyy	52		52		26	106								8
01000 yyy	106				26	26	26	26	26					8
01001 yyy	106				26	26	26	52						8
01010 yyy	106				26	52		26	26					8
01011 yyy	106				26	52		52						8
011 xxxxx	Definition TBD													32
10 yyy yyy	106				26	106								64
11 0 00yyy	242													8
11 0 01yyy	484													8
11 0 10yyy	996													8
11 0 11yyy	2*996													8
11 1 xxxxx	Definition TBD													32

‘yyy’ = 000~111 indicates number of MU-MIMO STAs.
Definition for entries with ‘x’ bits is TBD.
[PHY Motion 64, September 17, 2015, see [36], modified with PHY Motion 89, November 2015, see [37]]

At least 1 state is reserved in the 8 bit RU allocation subfield of the HE-SIG-B common field for “no STA-specific information field assigned by the RU allocation subfield’. Details are TBD.
[PHY Motion 110, January 2016, see [38]]

The resource allocation signaling in the common control field and user specific subfields for an STA carried in the HE-SIG-B are transmitted in the same 20 MHz sub-channel as the data for 20 MHz and 40 MHz PPDU. For an 80 MHz PPDU, the default mapping per 20 MHz is as shown in Figure 6.

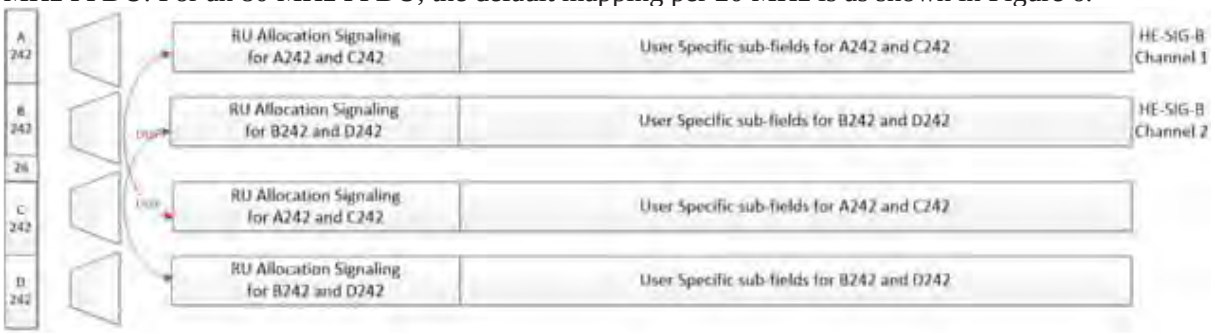

Figure 6 - Default mapping of the two HE-SIG-B channels for an 80 MHz HE PPDU

For a 160MHz PPDU, the default mapping per 20MHz is as shown in Figure 7.

Figure 7 - Default mapping of the two HE-SIG-B channels for a 160 MHz HE PPDU

[PHY Motion 86, November 2015, see [25]]

The length of the user specific subfield in HE-SIG-B for a single-user allocation is equal to the length of the user specific subfield of each user in a multi-user allocation.
[PHY Motion 65, September 17, 2015, see [36]]

The Nsts value for each user in a MU-MIMO RU is less than or equal to 4.
[PHY Motion 93, November 2015, see [8]]

A MU-MIMO user block includes a Spatial Config subfield of 4 bits indicating the number of spatial streams for each multiplexed STA. The subfield is constructed by using the entries corresponding to the value of Nuser of this RU in Table 5.

Table 5 - Spatial Config subfield encoding

Nuser	B0…B3	Nsts [1]	Nsts [2]	Nsts [3]	Nsts [4]	Nsts [5]	Nsts [6]	Nsts [7]	Nsts [8]	Number of Entries
2	0000~0011	1~4	1							10
	0100~0110	2~4	2							
	0111~1000	3~4	3							
	1001	4	4							
3	0000~0011	1~4	1	1						13
	0100~0110	2~4	2	1						
	0111~1000	3~4	3	1						
	1001~1011	2~4	2	2						
	1100	3	3	2

	0011	2	2	1	1	1	1			
7	0000~0001	1~2	1	1	1	1	1	1		2
8	0000	1	1	1	1	1	1	1	1	1

[PHY Motion 94, November 2015, see [8]]

The STAID field that identifies the RU allocation in HE-SIG-B for broadcast traffic in DL OFDMA PPDU shall be defined as following:

- For single BSS AP, the STAID for Broadcast will be 0;
- For Multiple BSS AP, the STAID for Broadcast to a specific BSS will follow the group addressed AID assignment in the TIM according to the existing Multi-BSSID TIM operation;
- For Multiple BSS AP, the STAID for Broadcast to all BSSs of the AP will have a special STAID value reserved.

[MAC Motion 56, November 2015, see [39]]

3.2.6 HE preamble following the HE signalling fields

3.2.6.1 General

Gamma (tone rotation as defined in Clause 22.3.7.5 of 11ac amendment) is not applied on HE-STF and beyond.

- TBD in case of a duplicated HE PPDU (if ever defined)

[PHY Motion 82, November 2015, see [40]]

In all transmission modes, HE-STF and HE-LTF only populate RUs that are populated in the data field.
[PHY Motion 81, November 2015, see [40]]

HE-LTF/HE-STF power is boosted 3dB for BPSK and QPSK including DCM in the HE Extended Range SU PPDU preamble.
[PHY Motion 131, January 2016, see [2]]

3.2.6.2 HE-STF

HE-STF of a non-trigger-based PPDU has a periodicity of 0.8 μs with 5 periods.

- A non-trigger-based PPDU is not sent in response to a trigger frame

[PHY Motion #11, May 2015, see [41]]

The HE-STF of a trigger-based PPDU has a periodicity of 1.6 μs with 5 periods.

- A trigger-based PPDU is an UL PPDU sent in response to a trigger frame

[PHY Motion #12, May 2015, see [41]]

The HE-STF tone positions are defined in Equation 1 where N_{STF_sample} = 16 for a non-trigger-based PPDU and N_{STF_sample} = 8 for a trigger-based PPDU

$$i_{STF} \bmod N_{STF_sample} = 0, \quad \lfloor N_{DC} / 2 \rfloor < |i_{STF}| \le N_{SR} \qquad (1)$$

i_{STF} : HE-STF tone index

N_{DC} : number of DC tones

N_{SR} : highest data subcarrier index

[PHY Motion #13, May 2015, see [41]]

The HE-STF sequences for 0.8 μs and 1.6 μs periodicity are as follows:

$$M = \{-1,-1,-1,+1,+1,+1,-1,+1,+1,+1,-1,+1,+1,-1,+1\}$$

20 MHz 1x HE-STF sequence:

$$HES_{-112,112}(-112{:}16{:}112) = M \cdot (1+j) \cdot sqrt\left(\frac{1}{2}\right)$$

$$HES_{-112,112}(0) = 0$$

40 MHz 1x HE-STF sequence:

$$HES_{-240,240}(-240{:}16{:}240) = \{M, 0, -M\} \cdot (1+j) \cdot sqrt(\frac{1}{2})$$

80 MHz 1x HE-STF sequence:

$$HES_{-496,496}(-496{:}16{:}496) = \{M, 1, -M, 0, -M, 1, -M\} \cdot (1+j) \cdot sqrt(\frac{1}{2})$$

20 MHz 2x HE-STF sequence:

$$HES_{-120,120}(-120{:}8{:}120) = \{M, 0, -M\} \cdot (1+j) \cdot sqrt(\frac{1}{2})$$

40 MHz 2x HE-STF sequence:

$$HES_{-248,248}(-248{:}8{:}248) = \{M, -1, -M, 0, M, -1, M\} \cdot (1+j) \cdot sqrt\left(\frac{1}{2}\right)$$

$$HES_{-248,248}(\pm 248) = 0$$

80 MHz 2x HE-STF sequence:

$$HES_{-504,504}(-504{:}8{:}504) = \{M, -1, M, -1, -M, -1, M, 0, -M, 1, M, 1, -M, 1, -M\} \cdot (1+j) \cdot sqrt(\frac{1}{2})$$

$$HES_{-504,504}(\pm 504) = 0$$

[PHY Motion 79, November 2015, see [42]]

3.2.6.3 HE-LTF

The HE-LTF shall adopt a structure of using P matrix in the data tones as in 11ac. In the data tones, every space-time stream is spread over all HE-LTF symbols by one row of the P matrix as defined in 11ac. Different space-time streams use different rows in P matrix. [PHY Motion #5, March 2015, see [43]]

The HE PPDU shall support the following LTF modes:

- HE-LTF symbol duration of 6.4 μs excluding GI
  - Equivalent to modulating every other tone in an OFDM symbol of 12.8 μs excluding GI, and then removing the second half of the OFDM symbol in time domain
- HE-LTF symbol duration of 12.8 μs excluding GI

[PHY Motion #6, March 2015, see [43]]

In an HE PPDU, the HE-LTF section shall start at the same point of time and end at the same point of time across all users. [PHY Motion #7, March 2015, see [43]]

In an OFDMA PPDU using N HE-LTF symbols, an RU with $N_{sts,total}$ shall use the first $N_{sts,total}$ rows of the $N \times N$ P matrix. [PHY Motion 29, July 16, 2015, see [44]]

Single stream pilot (like 11ac) in HE-LTF shall be used for SU, DL and UL OFDMA as well as in DL MU-MIMO transmissions. [PHY Motion 26, July 16, 2015, see [45]]

The HE-LTF sequences for UL MU-MIMO shall be generated as follows. For each stream, a common sequence shall be masked repeatedly in a piece-wise manner by a distinct row of an 8x8 orthogonal matrix. When the length of the LTF sequence is not divisible by 8, the last *M* elements of the LTF sequence (*M* being the remainder after the division of LTF length by 8) shall be masked by the first *M* elements of the orthogonal matrix row.
[PHY Motion 56, September 17, 2015, see [46]]

The orthogonal matrix used to mask the HE-LTF sequence for UL MU-MIMO is the 8x8 P-matrix used in 11ac.
[PHY Motion 57, September 17, 2015, see [46], modified with first motion January 2016, see [16]]

For UL MU MIMO transmissions, support of single stream pilots and masking the LTF sequence of each spatial stream by a distinct orthogonal code is mandatory at the transmitter side (non AP STA). When single stream pilot is used, no masking is applied to the HE LTF. The Trigger frame shall use 1 bit to indicate whether the UL MU MIMO transmission following it uses single stream pilots or a mask on each spatial stream of the LTF sequence by a distinct orthogonal code.
[PHY Motion 126, January 2016, see [47]]

The 4x HE−LTF sequence for 80 MHz is defined by the equation below:

$HE{-}LTF_{996}(-500{:}500) =$

{+1, +1, −1, +1, −1, +1, −1, −1, −1, +1, −1, −1, −1, +1, +1, −1, +1, +1, +1, +1, +1, −1,

[PHY Motion 109, January 2016, see [48]]

The only mandatory combinations of LTF size and CP size are:

- 2x LTF + 0.8 μS
- 2x LTF + 1.6 μS
- 4x LTF + 3.2 μS

with HE-LTF and payload using the same CP size. The LTF size and CP size are jointly signaled using 3 bits.

[PHY Motion 70, November 2015, see [9]]

A 1x LTF as an optional mode in 11ax for SU PPDUs (TBD for MU-MIMO). The 1x LTF + 0.8 μs GI is one optional combination as indicated by the "GI and LTF size" sub-field in HE-SIG-A.

[PHY Motion 85, November 2015, see [11]]

11ax allows 1xLTF as an optional mode in the following cases:

- SU, with GI = 0.8 μs only
- Full-BW UL-MUMIMO, with GI=1.6 μs only
- Full BW DL-MUMIMO with GI=0.8 μs is TBD

[PHY Motion 103, January 2016, see [49]]

When 1x/2x HE-LTF is transmitted, it is recommended that the spatial mapping matrix applied to HE-STF and beyond is chosen such that it preserves the smoothness of the physical channel, achieved by limiting the variation of each element's real and imaginary values in the spatial mapping matrix across successive tones.

[PHY Motion 104, January 2016, see [50]]

3.3 HE Data field

3.3.1 General

The Data field in UL MU transmissions shall immediately follow the HE-LTF section.
[PHY Motion 17, July 16, 2015, see [18]]

Data symbols in an HE PPDU shall use a DFT period of 12.8 μs and subcarrier spacing of 78.125 kHz.
[PHY Motion #1, January 2015, see [51]]

Data symbols in an HE PPDU shall support guard interval durations of 0.8 μs, 1.6 μs and 3.2 μs. [PHY Motion #2, January 2015, see [51]]

HE PPDUs shall have single stream pilots in the data section

- All streams use the same pilot sequence even in UL MU-MIMO

[PHY Motion 24, July 16, 2015, see [52]]

3.3.2 Tone plan

3.3.2.1 Resource unit, edge and DC tones

HE-PPDU for UL-OFDMA shall support UL data transmission below 20 MHz for an HE STA. [MU Motion #3, March 2015]

Define 20 MHz OFDMA building blocks as follows:

- 26-tone with 2 pilots, 52-tone with 4 pilot and 106-tone with 4 pilots and with 7 DC Nulls and (6,5) guard tones, and at locations shown in Figure 8
- An OFDMA PPDU can carry a mix of different tone unit sizes within each 242 tone unit boundary
- ~~The following is TBD: Exact location of extra leftover tones~~ *[Ed: deleted, see 3.3.2.2]*

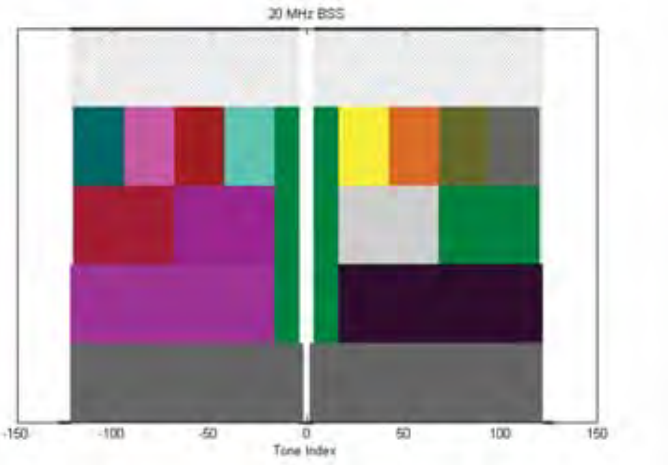

Figure 8 – 20 MHz tone plan

Define 40 MHz OFDMA building blocks as follows

- 26-tone with 2 pilots, 52-tone with 4 pilots, 106-tone with 4 pilots and 242-tone with 8 pilots and with 5 DC Nulls and (12,11) guard tones, and at locations shown in Figure 9
- ~~The following is TBD: exact location of extra leftover tones~~ *[Ed: deleted, see 3.3.2.2]*

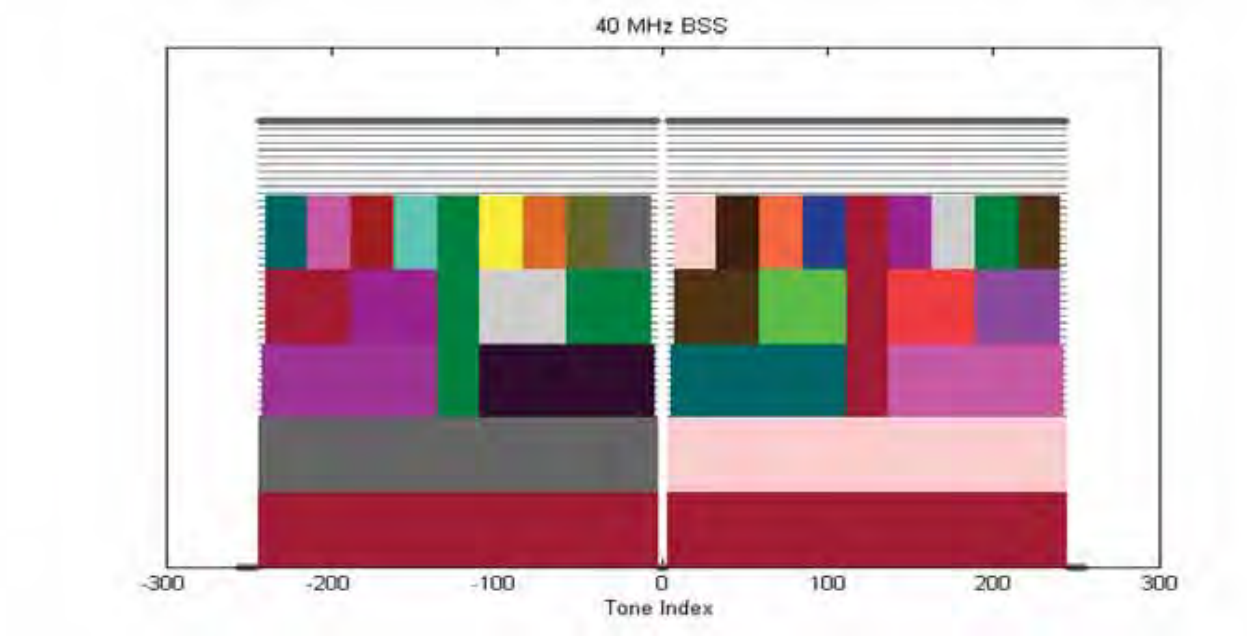

Figure 9 – 40 MHz tone plan

Define 80 MHz OFDMA building blocks as follows:

- 26-tone with 2 pilots, 52-tone with 4 pilots, 106-tone with 4 pilots, 242-tone with 8 pilots and 484-tone with 16 pilots and with 7 DC Nulls and (12,11) guard tones, and at locations shown in Figure 10
- ~~The following is TBD: exact location of extra leftover tones~~ *[Ed: deleted, see 3.3.2.2]*

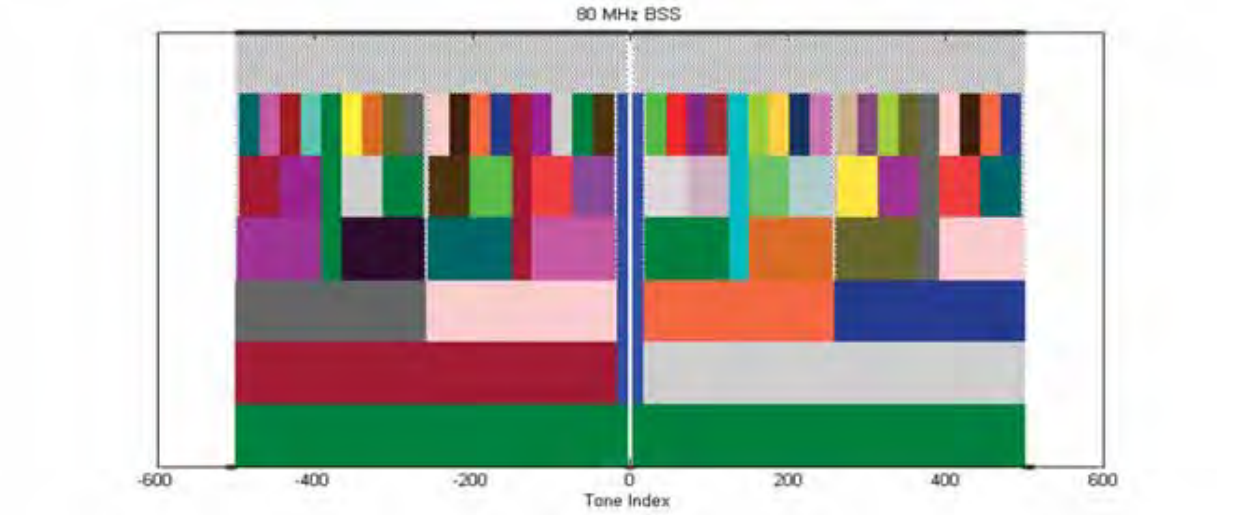

Figure 10 - 80 MHz tone plan

Define 160 MHz/80 MHz+80 MHz OFDMA building blocks as follows:

- 26-tone with 2 pilots
- 52-tone with 4 pilots
- 106-tone with 4 pilots
- 242-tone with 8 pilots
- 484-tone with 16 pilots
- 996-tone with 16 pilots (note that 996-tone is defined for 80 MHz HE-SA-PPDU or 80 MHz HE-SA-MU-PPDU)
- The following is TBD: exact location of extra leftover tones

[PHY Motion #10, May 2015, see [53]]

The 2x996-tone RU employs a segment parser (as in 11ac) between the two 996-tone frequency segments and the LDPC tone mapper in each 996-tone segment uses $D_{TM} = 20$.
[PHY Motion 74, November 2015, see [54]]

Multiple RU allocation for one STA shall not be allowed in 11ax.
[PHY Motion 128, January 2016, see [55]]

3.3.2.2 Left over tones

The left over tone locations for the 20 MHz, 40 MHz and 80 MHz tone plans are shown in Figure 11, Figure 12 and Figure 13 respectively.
NOTE—Left over tones have zero energy
[PHY Motion 25, July 16, 2015, see [45]]

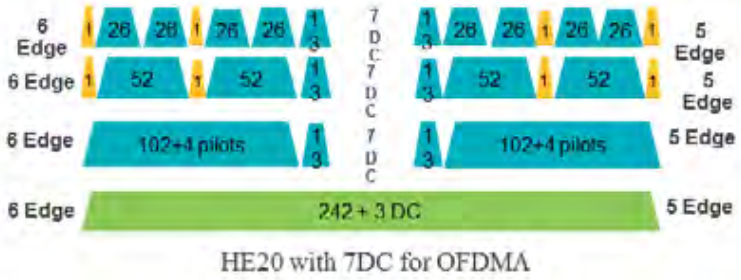

Figure 11 – Left over tone locations for 20 MHz

Figure 12 – Left over tone locations for 40 MHz

Figure 13 – Left over tone locations for 80 MHz

3.3.2.3 Pilot tones

All pilot tones in 4x data OFDMA symbol are at even indices. If pilots present in 4x HE-LTF, their tone indices shall be the same as those pilots in 4x data symbol. If pilots present in 2x HE-LTF, their tone indices shall be the same as the indices of those pilots in 4x data symbol divided by 2. [PHY Motion 27, July 16, 2015, see [45]]

The pilot tone locations for 20 MHz, 40 MHz and 80 MHz bandwidth are as shown in Figure 14, Figure 15 and Figure 16 respectively.
Note—80 MHz pilot positions are enumerated below for reference:

RU-26 pilots: ±10, ±24, ±38, ±50, ±64, ±78, ±92, ±104, ±118, ±130, ±144, ±158, ±172, ±184, ±198, ±212, ±226, ±238, ±252, ±266, ±280, ±292, ±306, ±320, ± 334, ±346, ±360, ±372, ±386, ±400, ±414, ±426, ±440, ±454, ±468, ±480, ± 494

RU-106/242/484 pilots: ±24, ±50, ±92, ±118, ±158, ±184, ±226, ±252, ±266, ±292, ±334, ±360, ±400, ±426, ±468, ±494

RU-996 pilots: ±24, ±92, ±158, ±226, ±266, ±334, ±400, ±468

The pilot locations for 160 MHz or 80+80 MHz use the same structure as 80 MHz for each half of the BW.

[PHY Motion 28, July 16, 2015, see [45]]

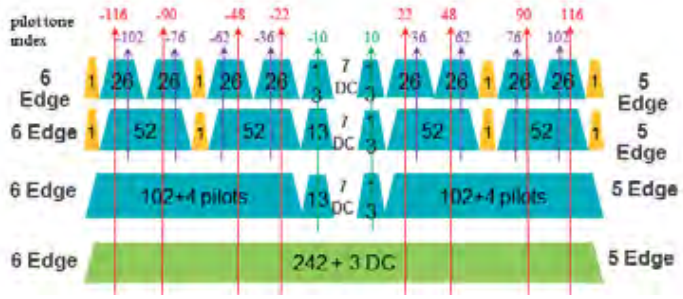

Figure 14 – Pilot tone locations for 20 MHz

Figure 15 – Pilot tone locations for 40 MHz

Figure 16 – Pilot tone locations for 80 MHz

3.3.3 Coding

LDPC is the only coding scheme in the HE PPDU Data field for allocation sizes of 484 tones, 996 tones and 996*2 tones.

[PHY Motion 30, July 16, 2015, see [56], modified with PHY Motion 36, September 17, 2015, see [57]]

Support of BCC code is limited to less than or equal to four spatial streams (per user in case of MU-MIMO), and is mandatory (for both TX and RX) for RU sizes less than or equal to 242 tones (20MHz).

Support of LDPC code for both TX and RX is mandatory for HE STAs declaring support for at least one of HE 40/80/160/80+80 SU PPDU bandwidths, or for HE STAs declaring support for more than 4 spatial streams. Otherwise, support of LDPC code for either TX or RX is optional.

[PHY Motion 31, July 16, 2015, see [56]]

The 11ax MCS table shall not have any MCS exclusion and, when LDPC is applied, N_{DBPS} is computed as follows

$N_{DBPS} = \lfloor N_{CBPS} R \rfloor$, where R is the coding rate

[PHY Motion 32, July 16, 2015, see [56]]

The BCC interleaver and LDPC tone mapper parameters are defined in Table 6.

Table 6 - BCC interleaver and LDPC tone mapper parameters

RU size (tones)	BCC		LDPC	LDPC (with DCM)
	N_{col}	N_{rot}	D_{TM}	D_{TM}
26	8	2	1	1
52	16	11	3	1
106	17	29	6	3
242	26	58	9	9
484	-	-	12	9
996	-	-	20	14

[PHY Motion 33, July 16, 2015, see [56], DCM column added with PHY Motion 130, January 2016, see [58]]

3.3.4 Modulation

1024-QAM is an optional feature for SU and MU using resource units equal to or larger than 242 tones in 11ax.

[PHY Motion 42, September 17, 2015 see [59]]

Move to add the following new MCS levels as an optional feature to the 11ax SFD:

- MCS10: 1024 QAM with 3/4 code rate
- MCS11: 1024 QAM with 5/6 code rate

[PHY Motion 112, Janaury 2016, see [60]]

TX EVM requirement of -35dB is used for MCS 10 and MCS 11.

[PHY Motion 113, January 2016, see [60]]

Dual sub-carrier modulation (DCM) is an optional modulation scheme for the HE-SIG-B and Data fields. DCM is only applied to BPSK, QPSK and 16-QAM modulations.

[PHY Motion 53, September 17, 2015, see [22]]

Move to add the following QPSK DCM modulation scheme to the IEEE802.11ax SFD

- The coded/interleaved bits are modulated as QPSK and mapped to the lower half frequency segment: $[d_1, d_2, \ldots d_{N_SD/2}]$;
- The modulated symbols of the lower half frequency segment are repeated and conjugated and then mapped to the upper half frequency segment: $[d_{N_SD/2+1}, d_{N_SD/2+2}, \ldots d_{N_SD}] = \text{conj}([d_1, d_2, \ldots d_{N_SD/2}])$

[PHY Motion 129, January 2016, see [58]]

3.3.5 Padding and packet extension

An 11ax SU PPDU should apply the MAC/PHY pre-FEC padding scheme as in 11ac, to pad toward the nearest of the four possible boundaries (*a-factor*) in the last Data OFDM symbol(s), and then use post-FEC padding bits to fill up the last OFDM symbol(s).

- Packet Extension (PE) field is defined at the end of HE PPDU
- PE should have the same average power as data field

[PHY Motion 58, September 17, 2015, see [61]]

11ax shall define the max packet extension modes of 8 μs and 16 μs, correspond to the short symbol segment padding boundaries (*a-factor*) according to the following PE duration (TPE) values:

- Max packet extension mode 8 μs: T_{PE} = [0 0 4 8] μs for a = 1~4 respectively;
- Max packet extension mode 16 μs: T_{PE} = [4 8 12 16] μs for a = 1~4 respectively.

HE Capability field shall define two constellation level thresholds (*threshold16* and *threshold8*) for a given {NSS, BW} combination, to determine if and when max packet extension modes 8 μs and 16 μs are applied, i.e.

- 3 bits are used to specify each threshold as the table below.
- If constellation ≥ *threshold16* apply max PE 16 μs mode, else if constellation ≥ *threshold8* apply max PE 8 μs mode, else no packet extension.
- If no PE is required for all constellations both *threshold8* and *threshold16* are set to 111
- If only max PE 8 μs mode is required, set *threshold16* to be 111, and *threshold8* to be the constellation at which max PE 8 μs mode starts
- If only max PE 16 μs mode is required, set *threshold16* to be the constellation at which max PE 16 μs mode starts, and *threshold8* to be 111
- Packet extension device capability thresholds are defined for all RU sizes greater than or equal to 242 tones. No thresholds defined for an RU size less than 242 tones

Table 7 - Threshold encoding in HE capability

Constellation	Threshold Encoding in HE Capability
BPSK	000
QPSK	001
16QAM	010
64QAM	011
256QAM	100
1024QAM (TBD)	101
None	111

[PHY Motion 59, September 17, 2015, see [61], modified with PHY Motion 127, January 2016, see [62]]

The number of uncoded bits for each of the first 3 short symbol segments (a=1~3) equals to the number of uncoded bits corresponding to $N_{SD.short}$ subcarriers as specified by the following table, and the number of uncoded bits for the last short symbol segment (a=4) equals to the number of bits of the whole OFDM symbol subtracting the total number of uncoded bits of the first three short symbol segments.

Table 8 - N_{SD}.short

RU Size	$N_{SD.short}$
26	6
52	12
106	24
242	60
484	120
996	240
996x2	492

[PHY Motion 60, September 17, 2015, see [61]]

HE-SIG-A field contains an a-factor field of 2 bits and a PE Disambiguity field of 1 bit that are set as described below.

In L-SIG, the L-LENGTH field is set by:

$$L_{LENGTH} = \left\lceil \frac{TXTIME - 20}{4} \right\rceil \times 3 - 3 - m, m = 1 \text{ or } 2$$

where

$TXTIME = T_{L_PREAMBLE} + T_{HE_PREAMBLE} + T_{HE_DATA} + T_{PE}$

$T_{HE_DATA} = T_{HE_SYM} \times N_{SYM} = (12.8 + T_{GI}) \times N_{SYM}$

T_{PE} is the PE duration

The ecoding of the a-factor field in HE-SIG-A is defined in Table 9.

Table 9 - A Factor field encoding

a-factor value	a-factor field encoding
1	01
2	10
3	11
4	00

The PE Disambiguity field in HE-SIG-A is set as follows:

- If $T_{PE} + 4 \times \left(\left\lceil\frac{TXTIME-20}{4}\right\rceil - \left(\frac{TXTIME-20}{4}\right)\right) \geq T_{SYM}$, where $T_{SYM} = 12.8 + T_{GI}$, then this field is set to 1; otherwise this field is set to 0.
- At the receiver, the following equations are used to compute N_{SYM} and T_{PE} respectively:

$$N_{SYM} = \left\lfloor \frac{\left(\frac{L_LENGTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE}\right)}{T_{SYM}} \right\rfloor - b_{PE_Disambiguity}$$

$$T_{PE} = \left\lfloor \frac{\left(\frac{L_LENGTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE}\right) - N_{SYM} \times T_{SYM}}{4} \right\rfloor \times 4$$

[PHY Motion 61, September 17, 2015, see [61], modified with PHY Motion 73, November 2015]

When the AP transmits a DL MU PPDU:

- All users use the same N_{SYM} and *a-factor* values according to the user with the longest span
- Based on the *a-factor* value and each user's PE capabilities, compute the PE duration for each user, $T_{PE,u}$, and the PE duration of the DL MU PPDU, $T_{PE} = \max_u(T_{PE,u})$
- In HE-SIG-A field, the a-factor field, the PE Disambiguity field and the LDPC Extra Symbol field are common to all users

[PHY Motion 62, September 17, 2015, see [61]]

For an UL MU PPDU transmission:

- The AP indicates its desired N_{SYM}, *a-factor*, LDPC extra symbol indication and PE duration values in the Trigger frame
- Possible PE values for UL MU are TBD
- Each user transmitting an UL MU PPDU shall encode and conduct PHY padding using the following parameters:
  - N_{SYM} as indicated in the Trigger frame
  - *a-factor* as indicated in the Trigger frame
  - LDPC Extra Symbol as indicated in the Trigger frame
  - Append PE specified in the Trigger frame

[PHY Motion 63, September 17, 2015, see [61]]

3.4 Transmit spectral mask

The spectral masks for non-OFDMA 20 MHz, 40 MHz, 80 MHz, 160 MHz and 80+80 MHz PPDUs are are defined below.

- The bandwidth of the applied spectrum mask for a (non-OFDMA) PPDU shall be determined by the bandwidth occupied by the pre HE-STF portion of the preamble in this PPDU, regardless of the BSS bandwidth
- The spectral mask requirements do not apply to LO leakage

The HE 20 MHz spectral mask is the 11ac 80 MHz mask downclocked by 4 (6/5 guard tones) as shown in Figure 17.

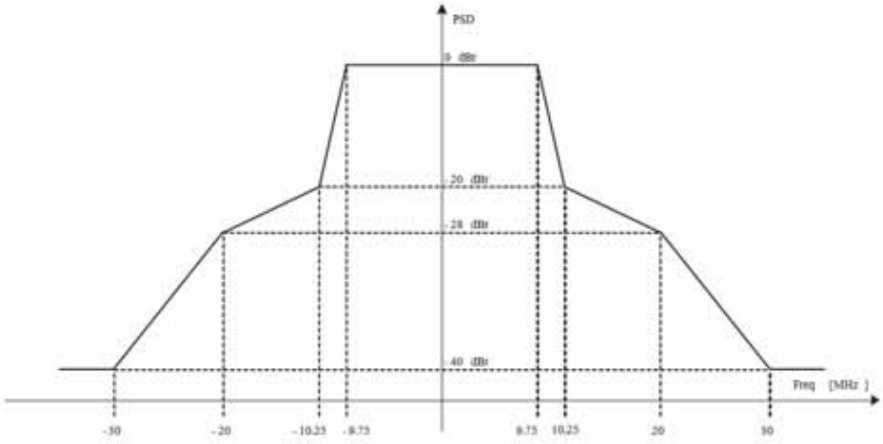

Figure 17 - Transmit spectral mask for an HE 20 MHz PPDU

The HE 40 MHz and 80 MHz spectral masks are the 11ac 80 MHz and 160 MHz masks downclocked by 2 (12/11 guard tones) as shown in Figure 18 and Figure 19.

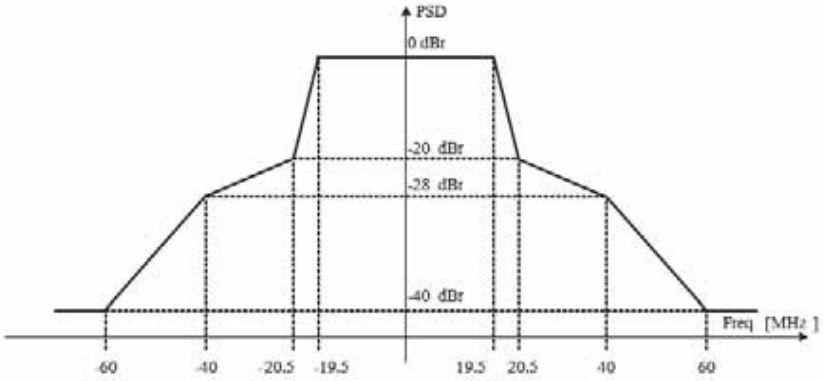

Figure 18 - Transmit spectral mask for HE 40 MHz PPDU

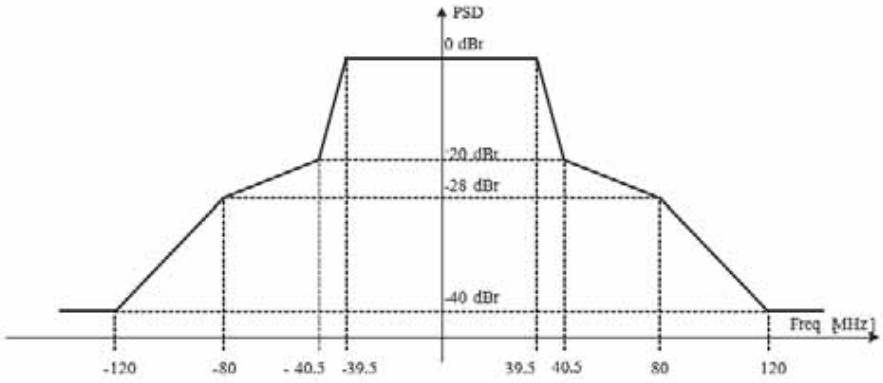

Figure 19 - Transmit spectral mask for HE 80 MHz PPDU

The HE 80+80 MHz and 160 MHz are similar to 11ac. The HE 160 MHz mask as shown in Figure 20 has the same skirt as that of 11ac 160 MHz and the 1st rolloff identical to HE 40/80 MHz. The 160 MHz tone

plan has the same number of guard tones (12/11) as HE 40/80 MHz. The HE 80+80 MHz mask is a combination of two 80 MHz interim spectral masks as shown in Figure 21.

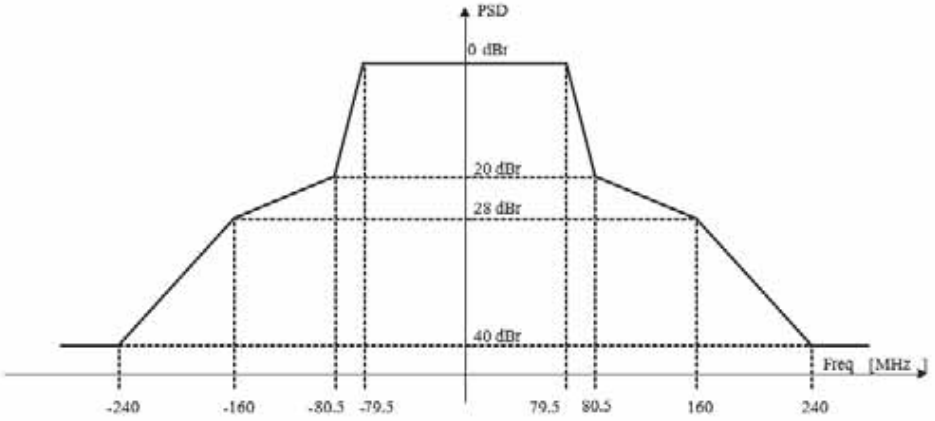

Figure 20 - Transmit spectral mask for HE 160 MHz PPDU

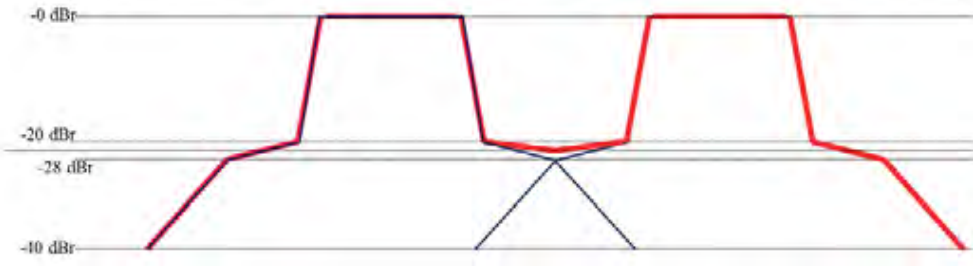

Figure 21 - Transmit spectral mask for HE 80+80 MHz PPDU

[PHY Motion 76, November 2015, see [63]]

4 Multi-user (MU) features

4.1 General

This section describes MU related features. MU features include UL and DL OFDMA and UL and DL MU-MIMO.

A TXOP can include both DL MU and UL MU transmissions.
[MAC Motion 14, July 16, 2015, see [64]]

The spec shall include the definition of a cascading TXOP structure, allowing alternating DL and UL MU PPDUs starting with a DL MU PPDU in the same TXOP

- The TXOP sequence has only one DL transmitter
- The TXOP sequence may have different UL transmitters within each UL MU PPDU
- The TXOP sequence may have a different set of transmitters in an UL MU PPDU as compared to the DL MU PPDU that follows the UL MU PPDU within the same TXOP

[MAC Motion 15, July 16, 2015, see [64]]

DL/UL OFDMA can multiplex different types of unicast frames in frequency domain. Types of frames can be data frame/control frame/management frame.
[MAC Motion 16, July 16, 2015, see [64]]

DL/UL MU-MIMO can multiplex different types of unicast frames in spatial domain. Types of frames can be data frame/control frame/management frame. Different types of frames are to/from different users.
[MAC Motion 17, July 16, 2015, see [64]]

The transmission for all the STAs in a DL MU (MIMO, OFDMA) PPDU shall end at the same time. The A-MPDU padding per each STA follows the 11ac procedure.
[MAC Motion 22, July 16, 2015, see [65]]

The transmission from all the STAs in an UL MU PPDU shall end at the time indicated in Trigger frame. The A-MPDU padding per each STA follows the 11ac procedure.
[MAC Motion 23, July 16, 2015, see [65]]

DL-OFDMA may reuse the same sharing mechanism of an EDCA TXOP as DL MU-MIMO.
[MAC Motion 36, September 17, 2015, see [66]]

The spec shall allow multiple TIDs in a single PSDU between AP and a STA for DL/UL OFDMA/MU-MIMO. Multiple TIDs aggregation rules are TBD if necessary.
[MU Motion 16, September 17, 2015, see [67]]

MPDUs with multiple TIDs that ask for Ack and/or BA acknowledgement and a management frame that asks for Ack acknowledgement may be aggregated in one A-MPDU of MU transmission.
[MAC Motion 66, January 2016, see [68]]

4.2 DL MU operation

The amendment shall include a mechanism to multiplex BA/ACK responses to DL MU transmission.
[MU Motion #4, March 2015, see [69]]

In each payload within a DL MU PPDU a Trigger frame may be present that carries the information that enables the recipient of the STA to send its ACK/BA response frame a TBD IFS after the DL MU PPDU.
[MU Motion 11, July 16, 2015, see [70]]

A unicast Trigger frame for a single user may be included in an A-MPDU for that user in the DL MU PPDU that precedes the UL MU transmission by TBD IFS. [MAC Motion 20, July 16, 2015, see [71]]

Broadcast trigger transmitted in a subchannel of DL OFDMA shall not include the resource allocation information of the STAs which are recipients of frames in the other subchannels of the DL OFDMA. The subchannel of the broadcast trigger frame is identified by TBD signaling. [MAC Motion 21, July 16, 2015, see [71]]

The spec shall allow that the schedule information for OFDMA acknowledgement from STAs is contained in the MAC header of DL MPDU.
[MU Motion 23, September 17, 2015, see [72]]

The contents of the scheduling information for an UL OFDMA ACK/BA includes UL PPDU Length (9 bits) and RU Allocation (TBD).
[MU Motion 24, September 24, 2015, see [72]]

In a HE MU PPDU, at most one A-MPDU is allowed to contain one or more MPDUs that solicit an immediate response, except when an immediate response is carried in HE TB UL PPDU. In such case, one or more A-MPDUs are allowed to contain one or more MPDUs that solicit an immediate response carried in an HE TB UL PPDU.
[MAC Motion 29, September 2015, see [73]]

Scheduling information for UL MU Acknowledgement from STA may be contained within the HE variant of the HT Control Field.

[MU Motion 29, November 2015, see [74]]

Within an A-MPDU the trigger information for a STA, if present, shall be signaled either in Trigger frame(s) or in the MAC header of MPDU(s) contained in the A-MPDU but not both.
[MU Motion 38, November 2015, see [75]]

Ack Policy field set to 01 (Trigger based UL MU Ack) has the following normative behavior for an HE STA:

- The addressed recipient that receives the trigger information, within a DL MU PPDU returns an immediate Ack/BlockAck response, either individually or as part of an A-MPDU after the PPDU carrying the frame, according to the trigger information carried in the same DL MU PPDU
- The addressed recipient that does receive no valid trigger information takes no action upon the receipt of the frame, except for recording the state (if necessary)

[MAC Motion 42, November 2015, see [76]]

Ack Policy field in a frame soliciting an immediate response is set to 00 (Normal Ack or Implicit Block Ack Request) if the immediate response is carried in SU PPDU, or it is set to 01 (Trigger based UL MU Ack) if the immediate response is carried in MU PPDU.
[MAC Motion 43, November 2015, see [77]]

When an AP initiates a DL MU transmission soliciting more than one immediate response frames, the DL MU transmission is successful if the AP receives the response frame correctly from at least one STA indicated by any trigger information in the DL MU transmission.
[MAC Motion 46, November 2015, see [78]]

The spec shall allow UL MU transmission of Multi-STA Block ACK frame in response to multi-TID A-MPDU of DL MU transmission. The value of the AID field in M-BA is TBD.
[MAC Motion 65, January 2016, see [68]]

4.3 UL MU operation

An UL MU PPDU (MU-MIMO or OFDMA) is sent as an immediate response (IFS TBD) to a Trigger frame (format TBD) sent by the AP. [MAC Motion #3, March 2015]

The inter frame space between a PPDU that contains a Trigger frame and its triggered HE trigger-based PPDU is SIFS.
[MU Motion 44, Janaury 2016, see [79]]

The spec shall define a MAC padding scheme (TBD) for trigger frame sent in Non-HT PPDUs
[MU Motion 45, Janaury 2016, see [79]]

The CP length for UL OFDMA/MU-MIMO transmissions shall be explicitly indicated by AP in the Trigger frame that allocates resources for the UL OFDMA/MU-MIMO transmission. The value of CP length for all users addressed by the Trigger frame shall be the same. [PHY Motion 34, July 16, 2015, see [80]]

A Trigger frame that addresses STAs in multiple BSSs corresponding to a multiple BSS set shall use a common address TBD in the A2 field.
[MAC Motion 55, November 2015, see [81]]

An UL OFDMA MPDU/A-MPDU is the acknowledgement of the trigger frame. When the AP receives MPDU correctly from at least one STA indicated by trigger frame, the frame exchange initiated by the trigger frame is successful. [MAC Motion 13, July 16, 2015, see [82]]

The amendment shall define a mechanism for multiplexing DL acknowledgments sent in response to UL MU transmissions. [MU Motion #1, January 2015, see [83]]

An AP shall not allocate UL subchannel in any 20 MHz channel that is not occupied by the immediately preceding DL PPDU that contains trigger information. In each 20 MHz channel occupied by the immediately preceding DL PPDU that contains trigger information, there is at least one allocated subchannel. [MAC Motion #10, May 2015, see [84], modified with MAC Motion 40, September 17, 2015, see [85]]

Non-AP STAs support using the QoS Control field in QoS Data and QoS Null frames to report per-TID Buffer Status information.
[MAC Motion 37, September 17, 2015, see [86]]

An AP can poll STAs for buffer status reports using the frame carrying the trigger info. The poll can request for specific buffer status information with TBD granularity.
[MAC Motion 38, September 17, 2015, see [86]]

A STA that is polled from a Trigger frame for UL MU transmission considers the NAV in determining whether to respond unless one of the following conditions is met

- The NAV was set by a frame originating from the AP sending the trigger frame
- The response contains ACK/BA and the duration of the UL MU transmission is below a TBD threshold
- The NAV was set by a frame originating from intra-BSS STAs
- Other condition TBD

[MU Motion 15, September 17, 2015, see [87], modified with MU Motion 28, November 2015, see [88]]

~~A STA shall consider CCA status to respond to a Trigger frame under a non-null TBD set of conditions.~~
[MU Motion 14, September 17, 2015, see [89], replaced with MU Motion 43, Janaury 2016]

Trigger frame carries an indication of whether or not the carrier sensing is required for the STA to transmit a UL MU PPDU in response to a Trigger frame. If a Trigger frame indicates that the carrier sensing is required, the STA shall consider the channel status of the physical channel sensing (meaning ED) and virtual carrier sense (NAV) before UL MU transmission in response to the Trigger Frame. Otherwise, the STA may transmit a UL MU PPDU without the carrier sensing. The AP shall require the carrier sensing except under TBD conditions.
[MU Motion 43, January 2016, see [90]]

When a STA is required to sense the medium before its UL MU transmission in response to a trigger frame, it senses the medium using ED after receiving the PPDU that contains the trigger frame (i.e. during the TBD IFS time).
[MU Motion 40, January 2016, see [91]]

When a STA needs to perform the energy-detect (ED) before its UL MU transmission in response to a trigger frame, it shall perform the energy-detect (ED) at least in the subchannel that contains the STA's UL allocation, where the sensed subchannel consists of either a single 20 MHz channel or multiple of 20 MHz channels.
[MU Motion 41, January 2016, see [91]]

When required to sense the medium before its UL MU transmission in response to a trigger frame, if a STA detects the 20MHz channels containing the allocated UL RU are not all idle, then the STA shall not transmit anything in the allocated UL RU.
[MU Motion 42, January 2016, see [92]]

The spec shall allow DL OFDMA transmission of Multi-STA Block ACK frame in response to UL MU PPDUs.
[MAC Motion 44, November 2015, see [93]]

When an AP selects rate, MCS, NSS of M-BA or OFDMA BA that acknowledges the UL OFDMA, the AP may ignore the MCS, NSS of UL OFDMA PPDU that elicits the DL acknowledgement.
The AP shall transmit the M-BA using one of rate, MCS, NSS that all of the acknowledgement receivers support.
[MAC Motion 45, November 2015, see [94]]

The recipient of a MU-BAR frame can transmit other data or management frame in addition to BA/ACK frame if it does not exceed the indicated UL MU duration.
[MAC Motion 58, January 2016, see [95]]

If the Trigger frame requests a specific frame type as response, the response to this Trigger frame shall contain at least the frame with the required type if the required type is available at the STA side; if the STA has no frame with the required type, the STA should transmit QoS Null frame to AP.
[MAC Motion 59, January 2016, see [96]]

4.4 MU RTS/CTS procedure

The spec shall define a frame that solicits simultaneous CTS responses from multiple STAs to protect DL MU transmission. [MU Motion 6, July 16, 2015, see [97]]

The scrambler seed of a simultaneous CTS is same as the scrambler seed of the frame that triggers the simultaneous CTS. The transmission rate of a simultaneous CTS shall use the primary rate based on the rate or MCS of the frame that triggers the simultaneous CTS. [MU Motion 7, July 16, 2015, see [97]]

MU-RTS/CTS frame exchange may be used for protection of MU transmissions during that TXOP.
[MU Motion 31, November 2015, see [98]]

The CTS sent in response to a frame that solicits simultaneous CTS shall be transmitted on one or more 20 MHz channels.
[MU Motion 33, November 2015, see [98]]

MU-RTS may request STAs to send non-HT CTS immediate response.
[MU Motion 34, November 2015, see [98]]

MU-RTS will carry signaling for each STA to indicate the 20 MHz channel(s) for transmitting CTS responses when CTS is sent in (duplicate) non-HT PPDU

- When a STA sends CTS in response to MU-RTS, the CTS response shall be transmitted in the 20 MHz channel(s) indicated in MU-RTS
    - provided other transmission conditions TBD are met (e.g. channel idleness)
- The indicated 20 MHz channel(s) can be either Primary20, Primary40, Primary80 or 160/80+80 MHz. Other indications are TBD.
- Exact Signaling TBD

[MU Motion 35, November 2015, see [98]]

4.5 UL OFDMA-based random access

The spec shall define a Trigger frame that allocates resources for random access. [MU Motion 8, July 16, 2015, see [99]]

An HE AP is allowed to broadcast a TBD parameter in the trigger frame to the STAs so that STAs can initiate the random access process after the trigger frames.
[MAC Motion 41, September 17, 2015, see [100]]

When an STA has a frame to send, it initializes its OBO (OFDMA Back-off) to a random value in the range 0 to CWO (OFDMA Contention window). For an STA with non-zero OBO value, it decrements its OBO by 1 in every RU assigned to AID value TBD within the TF-R. For a STA, its OBO decrements by a value, unless OBO=0, equal to the number of RUs assigned to AID value TBD in a TF-R. OBO for any STA can only be 0 once every TF-R. A STA with OBO decremented to 0 randomly selects any one of the assigned RUs for random access and transmits its frame.
[MU Motion 27, September 17, 2015, see [101]]

The spec shall indicate cascaded sequence of Trigger frames by using a bit in the Trigger frame.
[MU Motion 21, September 17, 2015, see [102], modified with MAC Motion 50, November 2015, see [103]]

The spec shall include a mechanism that allows the Beacon frame to indicate the target transmission time(s) of one or more Trigger frame(s) that allocate resources for random access.
[MU Motion 22, September 17, 2015, see [102]]

The AP may send trigger frame to elicit buffer status report (BSR) using random access.
[MU Motion 39, November 2015, see [104]]

4.6 Sounding protocol

The amendment shall include a CSI feedback mechanism which allows for a minimum feedback granularity of less than 20 MHz.
[MU Motion 9, July 16, 2015, see [105]]

The amendment shall define a mechanism to enable multiplexing of the Compressed Beamforming Action frame (CSI feedback) from multiple stations using UL MU (MIMO or OFDMA) mode.
[MU Motion 17, September 17, 2015, see [106]]

The amendment shall define a channel sounding sequence (Figure 22) initiated by an HE AP that includes a Trigger frame that is sent SIFS after the NDP frame in order to solicit UL MU mode of Compressed Beamforming Action frame from multiple HE STAs.
[MU Motion 18, Spetember 17, 2015, see [106], modified with MU Motion 37, November 2015, see [106]]

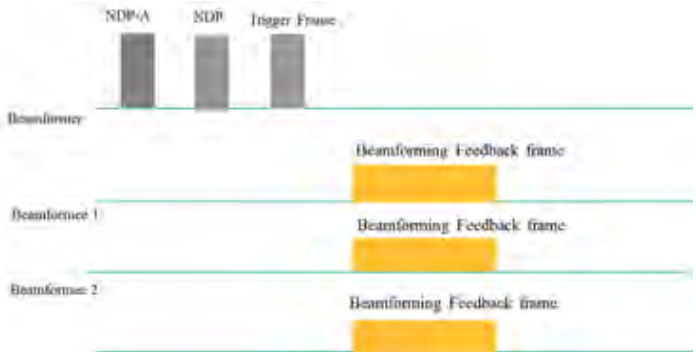

Figure 22 -- Illustration of DL Sounding Sequence

[MU Motion 20, September 17, 2015, see [107]]

The amendment shall define a mechanism to reduce the MIMO compressed beamforming feedback overhead.
[MU Motion 25, September 17, 2015, see [108]]

That mechanism shall use the compressed beamforming feedback as defined in section 8.4.1.48 in 802.11ac as a baseline.
[PHY Motion 100, November 2015]

4.7 GCR BA operation

The amendment shall include a mechanism to multiplex acknowledgment frames in response to Multicast receptions under GCR BA operation.
[MU Motion 12, September 17, 2015, see [109]]

5 Coexistence

This section describes the functional blocks that support coexistence.

5.1 Features for operation in dense environments

This section describes features that improve overlapping BSS (OBSS) operation in dense environments. This includes features such as deferral rules and CCA levels.

The STA determines whether the detected frame is an inter-BSS or an intra-BSS frame by using BSS color or MAC address in the MAC header. If the detected frame is an inter-BSS frame, under TBD condition, uses TBD OBSS PD level that is greater than the minimum receive sensitivity level
NOTE–Maybe extra rules need to be added to ensure that all 11ax STAs can make the decision in a consistent manner.
[MAC Motion 34, September 17, 2015, see [110]]

A STA should regard an Inter-BSS PPDU with a valid PHY header and that has a receive power/RSSI below the OBSS PD level used by the receiving STA and that meets additional TBD conditions, as not having been received at all (e.g., should not update its NAV), except that the medium condition shall indicate BUSY during the period of time that is taken by the receiving STA to validate that the PPDU is from an Inter-BSS, but not longer than the time indicated as the length of the PPDU payload. The OBSS PD level is greater than the minimum receive sensitivity level.
[SR Motion 1, September 17, 2015, see [111]]

The amendment shall include one or more mechanisms to improve spatial reuse by allowing adjustments to one or more of the CCA-ED, 802.11 Signal Detect CCA, OBSS_PD or TXPWR threshold values. The constraints on selecting threshold values are TBD.
[SR Motion 2, September 17, 2015, see [112]]

The specification to consider a procedure that may revise the NAV depending on TBD conditions at the recipient of the ongoing OBSS frame.
[SR Motion 3, September 17, 2015, see [113]]

An 11ax STA regards a valid OBSS PPDU as not having been received at all (e.g., should not update its NAV), except that the medium condition shall indicate BUSY during the period of time that is taken by the receiving STA to validate that the PPDU is from an Inter-BSS, but not longer than the time indicated as the length of the PPDU payload if the RXPWR of the received PPDU is below the OBSS_PD threshold and TBD conditions are met, noting that the OBSS_PD threshold is accompanied by a TXPWR

value and a reduction in the TXPWR may be accompanied by an TBD increase in the OBSS_PD threshold value.
[SR Motion 4, September 17, 2015, see [114]]

An HE STA should have a mechanism to remember and distinguish NAVs set by intra-BSS frame and OBSS frame. A CF-end frame that comes from intra-BSS should not reset NAV that was set by a frame from OBSS. To determine which BSS is the origin of a frame, the HE STA may use BSS color.
[SR Motion 5, November 2015, see [115]]

6 MAC

6.1 General

This section describes general MAC functional blocks.

The amendment shall define a mechanism to allow the AP to configure the use of RTS/CTS initiated by non-AP STA.
[MAC Motion #1, January 2015, see [116]]

In 2.4 GHz HE STAs should send beacon and probe (request & response) frames at rates ≥ 5.5 Mb/s.
[MAC Motion 24, 2015, see [117]]

HE STAs shall support the Multiple BSSID Set.
[MAC Motion 28, September 17, 2015, see [118]]

When a STA receives a CF-End from an OBSS STA, if the last NAV update was caused by an Intra-BSS frame, the STA should not reset its NAV.
[MAC Motion 33, September 17, 2015, see [119]]

A STA maintains two NAVs

- One is the NAV for Intra-BSS frame, and second one is the NAV for Inter-BSS frame or frame that cannot be determined to be Intra-BSS or Inter-BSS
- Note that maintaining two NAVs does not imply maintaining two NAV timers
- The detailed method of maintaining two NAVs (e.g., two NAV timers or one NAV timer with difference of two NAV values, etc.) is TBD
- Mandatory or Optional TBD

[MU Motion 36, November 2015, see [120]]

AP and STAs in one BSS of a Multiple BSSID set shall consider a frame from another BSS of the same Multiple BSSID set as an intra-BSS frame (Signaling for a Multiple BSSID set is TBD).
[MAC Motion 60, January 2016, see [121]]

A same BSS Color shall be used for the virtual APs which are defined by TBD Multiple BSSID element.
[MAC Motion 61, January 2016, see [122]]

6.2 Target Wake Time (TWT)

The spec shall include a mechanism that allows a target transmission time for a Trigger frame to be indicated. The mechanism is based on implicit TWT operation and additionally enables:

- Broadcast triggered TWT by including a TWT element in the Beacon
- Solicited triggered TWT by using implicit TWT negotiation procedure

[MAC Motion 25, July 16, 2015, see [123]]

When the broadcast triggered TWT is enabled, STA and AP may exchange TWT request/response to indicate the target Beacon frame to be monitored by the PS STA.
[MAC Motion 26, July 16, 2015, see [123]]

The TWT Flow Identifier field in the TWT IE included in the Beacon frame specifies the different types of flows allowed during the TWT SP.
[MAC Motion 48, November 2015, see [103]]

Multiple TWTs can be indicated in the TWT IE in the Beacon frame by allowing multiple TWT parameter sets in the same TWT IE.
[MAC Motion 49, November 2015, see [103]]

6.3 Power Save

An HE non-AP STA may enter the Doze state until the end of an HE DL MU PPDU if both the following conditions are true:

- The value of the PPDU's BSS Color field is equal to the BSS color of its BSS
- The value derived from any of the STA identifiers in the HE-SIG-B field does not match its own identifier or that of a broadcast/multicast identifier

An HE non-AP STA may enter the Doze state until the end of an HE UL MU PPDU if:

- The value of the PPDU's BSS Color field is equal to the BSS color of its BSS

[PHY Motion 47, September 17, 2015, see [21]]

An HE STA may enter the Doze state until the end of an HE SU PPDU if both the following conditions are true:

- The value of the PPDU's BSS Color field is equal to the BSS color of its BSS
- The value of the UL/DL Flag field indicates that the frame is UL

[PHY Motion 49, September 17, 2015, see [21]]

HE STA may use a notification of its operating mode changes for 802.11ax power saving mechanism.
[MAC Motion 30, September 17, 2015, see [124]]

The spec shall define a mechanism for a transmitting STA to indicate its RX operating mode, i.e. RX NSS, RX channel width, in a transmitted DATA type MAC header, so that the responding STA shall not transmit a subsequent PPDU using an NSS or channel width value not indicated as supported in the RX operating mode of the transmitting STA. The responding STA shall not adopt the new NSS and BW until a time TBD.
[MAC Motion 32, September 17, 2015, see [125]]

6.4 Fragmentation

The spec shall support fragmentation negotiation in A-MPDUs for HE STAs.
[MU Motion 19, September 17, 2015, see [126]]

The 11ax fragmentation negotiation shall allow the following fragmentation types (levels) to be indicated:

- Level 0: No support for fragments
- Level 1: Support for a fragment in a VHT single MPDU only
- Level 2: Support for up to one fragment per MSDU in an A-MPDU
- Level 3: Support for multiple fragments of an MSDU per A-MPDU

[MAC Motion 47, November 2015, see [127]]

Under 11ax fragmentation, the following acknowledgement rules apply:

– Fragmentation – Level I

- Recipient shall respond with an Ack to a fragment carried in a "VHT" single MPDU soliciting immediate response
- Fragmentation – Level II
  - Recipient shall respond with:
    - Ack frame to a fragment carried in a "VHT" single MPDU soliciting immediate response
    - C-BA frame to an A-MPDU soliciting immediate response
    - Each bit in BlockAck Bitmap indicates successful reception of the carried fragment or of the full MSDU
- Fragmentation – Level III
  - Recipient shall respond with:
    - Ack frame to a fragment carried in a "VHT" single MPDU soliciting immediate response
    - C-BA frame to an A-MPDU that does not carry fragments and soliciting immediate response
    - "Dedicated" C-BA frame to an A-MPDU carrying fragments and soliciting immediate response
      - Each bit in BlockAck Bitmap indicates successful reception of each of the carried fragments
      - The max number of fragments for which the BA frame signals the receive status is contained in a nonzero value of the FN subfield of the BA frame
  - Maximum number of fragments per MSDU in the eliciting A-MPDU transmitted by the originator shall be 4

[MAC Motion 63 and 64, January 2016, see [128]]

7 Frame formats

7.1 Fields

7.1.1 HT Control field

The spec shall define an HE variant (of the VHT variant) of the HT Control field that carries one or more control fields for HE control information

- B0 and B1 of the HT Control field in this case are set to 1
- The control fields can be called HE Control field

[MAC Motion 39, September 17, 2015, see [129]]

HE link adaptation shall define reference payload size for the reported MCS in MFB.
Reference payload size may be dependent on the frames involved in link adaptation or fixed in specification. Details are TBD.
[PHY Motion 77, November 2015, see [130]]

The HE link adaptation field, which is part of HE variant of HT control field, consists of MFB and TBD subfields. The MFB subfield includes NSS and MCS subfield.
[PHY Motion 78, November 2015, see [130]]

7.1.2 QoS Control field

Bits in QoS Control field		**Meaning**
Bit 5	**Bit 6**	

0	1	No explicit acknowledgment or PSMP Ack or Trigger based UL MU Ack. When bit 6 of the Frame Control field (see 8.2.4.1.3 (Type and Subtype fields)) is set to 1: … When bit 6 of the Frame Control field (see 8.2.4.1.3 (Type and Subtype fields)) is set to 0: The acknowledgment for a frame indicating PSMP Ack when it appears in a PSMP downlink transmission time (PSMP-DTT) is to be received in a later PSMP uplink transmission time (PSMP-UTT). … If the DL PPDU is HE MU PPDU, the addressed recipient returns an Ack/BA in MU format as an immediate response to a DL MU PPDU.

[MAC Motion 43, November 2015]

7.2 Frames

7.2.1 Trigger frame

The spec shall define a new control frame format that carries sufficient information to identify the STAs transmitting the UL MU PPDUs and allocating resources for the UL MU PPDUs. The format of the new frame is given in Figure 23. The presence of A1 is TBD. [MAC Motion 19, July 16, 2015, see [131]]

FC	Duration	(A1)	A2	Common Info	Per User Info 1		Per User Info N	FCS
2	2	TBD	6	TBD	TBD		TBD	4

Figure 23 - Trigger frame

Trigger frame is a new subtype of the control type as indicated in the FC B4 to B7 with the subtype not equal to 6.
[MAC Motion 53, November 2015, see [131]]

The Common Info field includes the following subfields:

- Length [12 bits]
  - Value of the L-SIG Length of the UL MU PPDU
  - A responding STA will copy this value in its L-SIG length field, hence the encoding shall be same as defined for the L-SIG Length of the UL MU PPDU
- Info bits content of the SIG-A of the response UL MU PPDU [# of bits TBD]
  - May Exclude the bits that may be implicitly already known by all responding STAs, if any TBD
- CP + HE LTF type [TBD # of bits]
- Allowed response type / trigger type [# of bits TBD]
  - Types TBD

[MAC Motion 51, November 2015, see [131]]

The Per User Info field includes the following subfields:

- MCS [4 bits]
- Coding type [# bits TBD]
- RU allocation information [# bits TBD]
- SS allocation [# bits TBD]
- DCM [1 bit]
- User identifier field [12 bits]

- AID for STAs associated with AP; TBD for unassociated STAs

[MAC Motion 52, November 2015, see [132]]

The spec shall define optional type-specific Common Info and optional type-specific Per User Info of Trigger frame. The locations of type-specific Common Info and type-specific Per User Info are TBD.
[MAC Motion 54, November 2015, see [133]]

The MU BAR frame is a variant of Trigger frame whose Trigger Type subfield is MU BAR that carries additional BAR Control subfield (TBD) and an additional BAR Information subfield (TBD) in Common Info and/or each Per-User info.
[MU Motion 30, November 2015, see [134]]

The MAC format of MU-RTS is a variant of trigger frame format.
[MU Motion 32, November 2015, see [98]]

7.2.2 Multi-STA BA frame

The spec shall define a multi-STA BA frame by using the Multi-TID BlockAck frame format with the following changes:

- Add an indication that the frame is a multi-STA BA (TBD)
- Each BA Information field can be addressed to different STAs
- B0-B10 of the Per TID Info field carry a (Partial) AID identifying the intended receiver of the BA Information field

[MAC Motion #1, March 2015, see [135]]

The spec shall define a signaling in the Multi-STA BA frame that can indicate an ACK, as follows:

- If B11 in the per-TID info field is set, then the BlockAck bitmap and the SC subfields in the BA Info field are not present and this BA Info field indicates an ACK of either single MPDU or all MPDUs carried in the eliciting PPDU that was transmitted by the STA whose AID is indicated in the per-TID info field. [Modifed with MAC Motion #8, May 2015, see [136]]

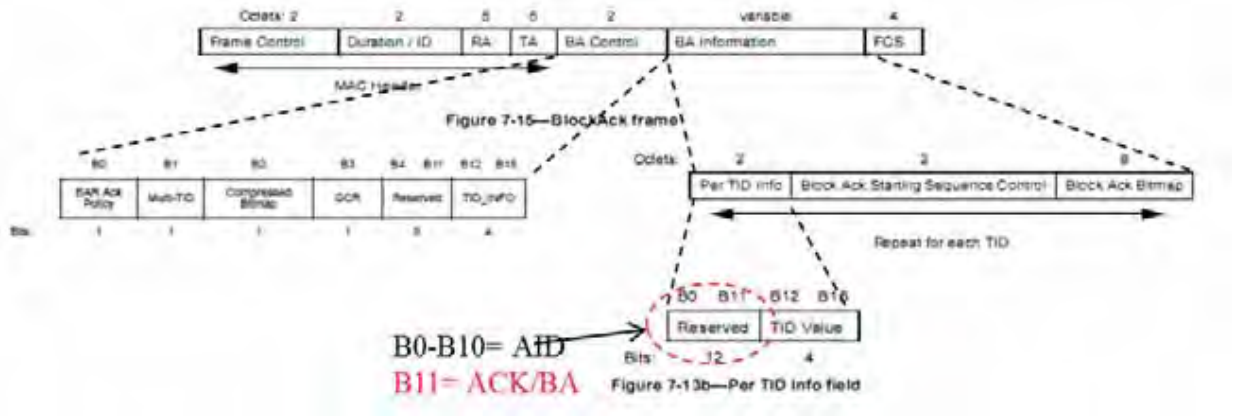

Figure 24 - Multi-STA BA frame

[MAC Motion #2, March 2015, see [135]]

7.2.3 MU-BAR frame

The spec shall define a MU-BAR frame to solicit BA/ACKs from multiple STAs in UL MU transmissions.
[MU Motion 13, September 17, 2015, see [137]]

7.3 Sounding feedback

802.11ax spec shall not support *Ng = 1* for sounding feedback.
NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.
[PHY Motion 38, September 17, 2015, see [138]]

802.11ax spec shall support *Ng* = 4 and 16 for sounding feedback with SU/MU-MIMO-OFDM(A).
NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.
[PHY Motion 101, January 2016, see [139]]

In the MU Exclusive Beamforming Report for the delta SNR, the locations of the feedback tones shall be identical to the tone locations of the compressed V matrices fed back.
[PHY Motion 102, January 2016, see [140]]

An HE AP indicates the necessary TBD parameters so that multiple HE STAs can construct the compressed beamforming feedback matrix immediately after receiving the HE NDP frame.
[MU Motion 46, Janaury 2016, see [106]]

Status of Project IEEE 802.11ax

High Efficiency WLAN (HEW)

Osama Aboul-Magd (Huawei Technologies), Chair
Simone Merlin (Qualcomm), Vice Chair
Ron Porat (Broadcom), Vice Chair
Yasuhiko Inoue (NTT), Secretary
Robert Stacy (Intel), Technical Editor

Background

In May 2013, the High Efficiency WLAN Study Group (HEW SG), a study group within IEEE 802.11 working group had started its activity to consider the improvement of spectrum efficiency to enhance the system throughput/area in high density scenarios of APs and/or STAs.

The study group was created based on the following straw poll and motion:
<Straw Poll>
Do you support starting a new study group called “high efficiency WLAN” to enhance 802.11 PHY and MAC in 2.4 and 5GHz with a focus on:

- Improving spectrum efficiency and area throughput
- Improving real world performance in indoor and outdoor deployments
  - in the presence of interfering sources, dense heterogeneous networks
  - in moderate to heavy user loaded APs

<Motion>
Request an approval by IEEE 802 LMSC to form an 802.11 Study Group to consider High-efficiency WLAN [as described in doc 11-13-0339r2] with the intent of creating a PAR and five criteria.

The HEW SG has successfully developed PAR and CSD documents and the project 802.11ax has started in May 2014.

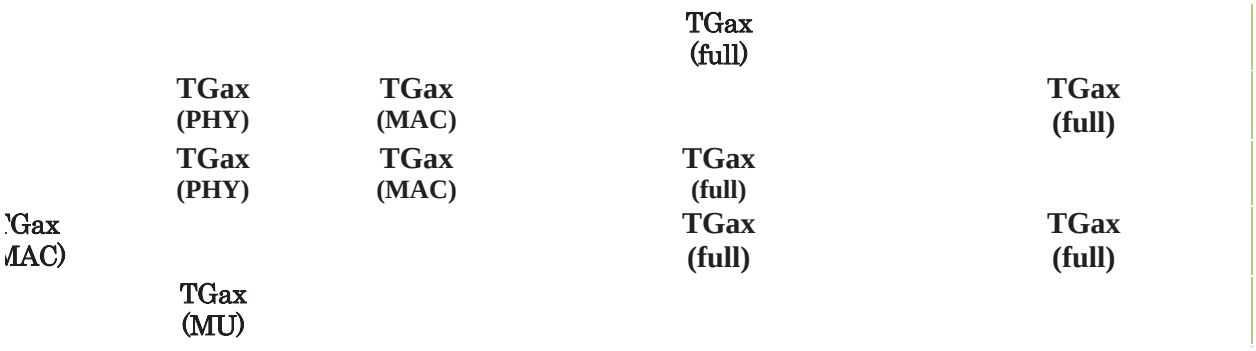
Task Group Documents – the latest revisions (as of November 25th, 2015)

- 11-14-0165-01 PAR and 11-14-0169-01 CSD
- 11-14-0938-04 TGax Selection Procedure
- 11-14-0980-16 TGax Simulation Scenarios
- 11-14-0571-12 TGax Evaluation Methodology
- 11-14-0882-04 TGax Channel Models
- 11-14-1009-02 TGax Functional Requirements
- 11-15-0132-15 TGax Specification Framework

January 2016 – Atlanta, GA

The TGax planned to have 10 sessions during the week.
Four out of eleven sessions were assigned to the ad hoc group sessions.

Tuesday	Wednesday	Thursday



Main documents

- TGax Agenda: 11-15-1516-03, TGax January 2016 Meeting Agenda
  - TGax PHY ad hoc agenda: 11-16-0108-02, TGax PHY Ad Hoc Jan 2016 Meeting Agenda
  - TGax MAC ad hoc agenda: 11-16-0109-02, TGax MAC Ad Hoc January 2016 Meeting Agenda
  - TGax Multi-User ad hoc agenda: 11-16-0147-01, TGax MU Ad-hoc January 2016 Agenda
- Closing report: 11-16-0187-00, TGax January 2016 Closing Report
- Draft TGax minutes: 11-16-0096-00, TGax January 2016 Atlanta Meeting Minutes
  - TGax PHY ad hoc meeting minutes: 11-16-0119-00, January 2016 Atlanta PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc meeting minutes: 11-16-0110-00, Jan 2016 Atlanta TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc meeting minutes: 11-16-0150-00, January 2016 Atlanta TGax MU Ad hoc Meeting minutes

Achievements

1. TG Documents

- **Passed a number of affecting all aspects of the TG Specification Framework:**
  - PHY – 30 motions passed.
  - MAC – 9 motions passed.
  - MU – 7 motions passed.
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-15-00ax-spec-framework.docx
- **Other TG documents**
  - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
  - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-12-00ax-evaluation-methodology.docx
  - Channel Model https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - Functional Requirements https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

2. Technical Presentations

48 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- Submissions – PHY (22 submissions)
  - 11-16/0030, "Maximum Tone Grouping Size for 802.11ax Feedback with MU-MIMO," Kome Oteri (InterDigital)
  - 11-16/0033, "1x HE-LTF for ULMUMIMO," Hongyuan Zhang (Marvell)
  - 11-16/0034, "Beamforming with HE-LTF Compression," Hongyuan Zhang (Marvell)
  - 11-16/0036, "CRC Generation for HE-SIG," Yakun Sun (Marvell)

- 11-16/0037, "Continuous Puncturing for HE-SIGB Encoding," Yakun Sun (Marvell)
- 11-16/0038, "Sequence for 1x LTF," Daewon Lee (Newracom)
- 11-16/0039, "RU Allocation in SIG-B," Daewon Lee (Newracom)
- 11-16/0040, "Issues with Compressed SIG-B Mode," Yujin Noh (Newracom)
- 11-16/0041, "Link Adaptation for HE WLAN," Yujin Noh (Newracom)
- 11-16/0044, "MCS Levels and TX EVM Requirement for 1024 QAM," Eunsung Park (LG Electronics)
- 11-16/0045, "Flexible Wider Bandwidth Transmission," John Son (WILUS)
- 11-16/0046, "Content for the extra tones in LSIG and RLSIG," Jiayin Zhang (Huawei)
- 11-16/0047, "Discussion on the HE Extended Range SU PPDU," Jiayin Zhang (Huawei)
- 11-16/0052, "Remaining HE-LTF Sequence Design," Le Liu (Huawei)
- 11-16/0053, "Requirements for UL MU Transmissions," Arjun Bharadwaj (Qualcomm)
- 11-16/0056, "On QPSK DCM Modulation and LDPC Tone Mapper for DCM," Jianhan Liu (MediaTek)
- 11-16/0071, "Packet Extension Follow Up," Ron Porat (Broadcom)
- 11-16/0079, "Allocation sizes for BCC in OFDMA," Ken Taniguchi (Toshiba)
- 11-16/0080, "1x/2x/4x OFDM Symbol in HE SU PPDU with BCC," Heejung Yu (Yeungnam Univ./NEWRACOM)
- 11-16/0088, "Ng for Compressed Beamforming feedback," Sriram Venkateswaran (Broadcom)
- 11-16/0089, "Single Stream Pilots in UL MU MIMO," Sriram Venkateswaran (Broadcom)
- 11-16/0104, "Rate Matching for HE-SIG-B," Daewon Lee (Newracom)

- Submissions – MAC (12 submissions)
  - 11-16/0015, "Explicit Block Ack Request in DL MU PPDU," Yongho Seok (Newracom)
  - 11-16/0017, "Beacon Collision Avoidance," Evgeny Khorov (IITP)
  - 11-16/0018, "TDMA for Eliminating Hidden Station Effect in Dense Networks," Evgeny Khorov (IITP)
  - 11-16/0028, "Follow Up for Multi-STA BA for SU Transmissions," Xiaofei Wang (InterDigital)
  - 11-16/0029, "TXOP Truncation Enhancement," Xiaofei Wang (InterDigital)
  - 11-16/0042, "BSS Color Settings for a Multiple BSSID Set," Geonjung Ko (WILUS)
  - 11-16/0050, "Fragmentation for MU frames-Follow up on acks," Alfred Asterjadhi (Qualcomm)
  - 11-16/0051, "Response Give Trigger Type," David Xun Yang (Huawei)
  - 11-16/0068, "BSS Color and Multiple BSSID," Liwen Chu (Marvell)
  - 11-16/0069, "Multi-TID A-MPDU in MU Transmission," Liwen Chu (Marvell)
  - 11-16/0087, "NAV cancellation issues on MU protection," Jinsoo Ahn (Yonsei Univ.)
  - 11-16/0102, "High Efficiency Medium Access via Rosters," Sean Coffey (RealTek)

- Submissions – Multi-User (9 submissions)
  - 11-16/0031, "Proposed UL MU CS Rules," Lei Wang (Marvell)
  - 11-16/0048, "Protection using MU RTS/CTS," Young Hoon Kwon (Newracom)
  - 11-16/0054, "UL MU CCA Response," Kaiying Lv (ZTE)
  - 11-16/0057, "Indication for UL MU Carrier Sensing," Kiseon Ryu (LG Electronics)
  - 11-16/0065, "Duration/ID field in UL-MU," Tomo Adachi (Toshiba)
  - 11-16/0066, "Views on UL-MU Features," Joonsuk Kim (Apple)
  - 11-16/0067, "MAC Padding in Trigger Frame," Liwen Chu (Marvell)
  - 11-16/0085, "Congestion control for UL MU random access," Woojin Ahn (Yonsei Univ.)
  - 11-16/0091, "Regarding HE NDPA frame for DL Sounding Sequence," Narendar Madhavan (Toshiba)

- Submissions – Spatial Reuse (1 submission)
  - 11-16/0060, "Recipient-aware Spatial Reuse," Reza Hedayat (Newracom)

- Submissions – TG (4 submissions)
  - ✧ 11-15/1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
  - ✧ 11-16/0024, "Proposed draft specification," Robert Stacy (Intel)
  - ✧ 11-16/0043, "Clarification of SFD Texts," John Son (WILUS)
  - ✧ 11-16/0059, "Non-contiguous Channel Bonding in 11ax," Yunbo Li (Huawei)

3. Draft Specification

- Document 11-16/0024r0 was submitted by the TG Editor and it includes a "draft" draft specification.
- The submission was reviewed by the TG Editor and is available on mentor to be reviewed by TG members.
- The submission is available at: https://mentor.ieee.org/802.11/dcn/16/11-16-0024-00-00ax-proposed-draft-specification.docx

4. Plan for Progressing TG Draft

- Approve the TG draft specification during the March 2016 meeting.
  - Draft 0.1
- Start a comment collection (CC) for 30 days on draft 0.1 – Ends some time in April.
- Comment resolution (May and July)
- Draft 1.0 in July 2016 and start WG LB.

Goals for March 2016

- Discuss Proposals affecting the TG Specification Framework document
- Approve D0.1 of the TG Draft
- Approve a 30-day Comment Collection Process.

Teleconferences

- Three teleconferences are planned before the March 2016 session.
  - ✧ Thursday, February 4th, 10:00 – 12:00 (ET)
  - ✧ Thursday, February 18th, 20:00 – 22:00 (ET)
  - ✧ Thursday, March 3rd, 10:00 – 12:00 (ET)

November 2015 – Dallas, TX

The TGax planed to have 10 sessions during the week.
One more session was added during the WG opening week plenary session due to the large number of submissions.
Five out of eleven sessions were assigned to the ad hoc group sessions.

6. Technical Presentations

83 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- Submissions – PHY
  - 11-15-1059, "SIG-B Encoding Structure Part II," Ron Porat (Broadcom)
  - 11-15-1289, "Non-Uniform Constellations for 1024-QAM," Thomas Handte (Sony)
  - 11-15-1303, "LTF Sequence Designs," Sungho Moon (Newracom)
  - 11-15-1304, "Supported Resource Allocations in SIG-B," Sungho Moon (Newracom)
  - 11-15-1305, "STBC and Padding Discussions" Hongyuan Zhang (Marvell)
  - 11-15-1309, "Extended Range Support for 11ax," Sameer Vermani (Qualcomm)
  - 11-15-1310, "11ax LDPC Tone Mapper for 160MHz," Bin Tian (Qualcomm)

- 11-15-1311, “11ax Spectral Mask,” Bin Tian (Qualcomm)
- 11-15-1315, “HE-SIG-B Mapping and Compression,” Kaushik Josiam (Samsung)
- 11-15-1320, “Maximum Tone Grouping Size for 802.11ax Feedback,” Kome Oteri (InterDigital)
- 11-15-1321, “Reducing Explicit MIMO Compressed Beamforming Feedback Overhead for 802.11a,” Kome Oteri (InterDigital)
- 11-15-1322, “Channel Estimation Enhancement and Transmission Efficiency Improvement Using Beam-Change Indication and 1x HE-LTF,” Jianhan Liu (MediaTek)
- 11-15-1323, “HE-STF Sequence,” Ensung Park (LG Electronics)

- 11-15-1374, "Consideration for protecting cascading MU DL/UL transmission with MU RTS/CTS," Jing Ma (NICT)

- Submissions – Spatial Reuse
  - 11-15-1259, "Use of TG ax Scenarios for Spatial Reuse," Graham Smith (SR Tecnologies)
  - 11-15-1284, "Simulation results for spatial reuse in 11ax," Jinmin Kim (LG Electronics)
  - 11-15-1313, "Considerations for Spatial Reuse," Reza Hedayat (Newracom)
  - 11-15-1316, "DSC calibration results with NS-3," M. Shahwaiz Afaqui (T.U. Catalonia)
  - 11-15-1336, "BSS Color Field Size Measurements," Chuck Lukaszewski (Aruba-HP)
  - 11-15-1337, "Secondary Channel CCA of HE STA," John Son (Willus Institute)
  - 11-15-1338, "Improving Spatial Reuse During OBSS UL MU Procedure," Geonjung Ko (Willus Institute)
  - 11-15-1348, "Multiple NAVs for Spatial Reuse," Sigurd Schelstraete (Quantenna)
  - 11-15-1427, "Drivers of the dynamic CCA adaptation," Eduard Garcia-Villegas (Technical Univ. of Catalonia)

- Submissions – TG
  - 11-15-1288, "An issue of wider bandwidth operation at real denser environment," Katsuo Yunoki (KDDI R&D Labs)
  - 11-15-1302, "System Level Simulator Evaluation with/without Capture Effect," Vida Ferdowsi (Newracom)
  - 11-15-1360, "Implications of wrap-around for TGax Scenario 3 and Scenario 4 – follow-up," Marcin Filo (Univ. of Surrey)
  - 11-15-1361, "Energy consumption with Scheduled PSP," Dmitry Akhmetov (Intel)
  - 11-15-1362, "On TGax Scenario 4 channel model – follow-up," Marcin Filo (Univ. of Surrey)
  - 11-15-1363, "Regulatory Landscape for Narrowband Transmissions in 11ax," Ilan Sutskover (Intel)
  - 11-15-1373, "Updated Box5 Calibration Results," Narendar Madhavan (Toshiba)
  - 11-15-1375, "11ax Support for IoT - Requirements and Technological Implications," Shimo Shilo (Huawei)

Goals for January 2016

- Continue to advance TG documents based on submissions.
  - Priority to the TG Specification Framework document.
- TG timeline indicates draft D0.1 will be available in January 2016.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the January 2016 session.
  - Thursday, December 10th, 10:00 – 12:00 (ET)

September 2015 – Bangkok, Thailand

Originally, TGax planned to have ten sessions during the week.
Two more sessions were added during the WG opening week plenary session due to the large number of submissions.
Six out of twelve sessions were assigned to the ad hoc sessions.

Achievements

7. TG Documents

- **Passed a number of affecting all aspects of the TG Specification Framework:**
  - PHY – 29 motions passed.
  - MAC – 12 motions passed.
  - MU – 15 motions passed.
  - SR – 4 motions passed.
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-09-00ax-spec-framework.docx
- **Approved new revisions of the TGax Simulation Scenario and Evaluation Methodology documents.**
  - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-14-00ax-simulation-scenarios.docx
  - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-10-00ax-evaluation-methodology.docx
- Other documents
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

8. Technical Presentations

83 technical submissions have been covered during the week.

A list of the submissions is available in the agenda document.

- PHY
  - 11-15-0579, “Preamble Design and Auto-detection,” Hongyuan Zhang (Marvell)
  - 11-15-0580, “11ax Coding Discussion,” Hongyuan Zhang (Marvell)
  - 11-15-0602, “HE-LTF squence for UL MU-MIMO,” Xiaogang Chen (Intel)
  - 11-15-0810, “HE PHY Padding and Packet Extension,” Hongyuan Zhang (Marvell)
  - 11-15-0823, “Preamble Design and Auto-Detection for 11ax,” Sungho Moon (Newracom)
  - 11-15-0826, ”HE-SIG-A Transmission for Range Extension,” Jiayin Zhang (Huawei)
  - 11-15-0853, “Extensible Preamble Format Design,” Leonardo Lanante (Kyutech)
  - 11-15-1031, “DL MU Signaling,” Katsuo Yunoki (KDDI)
  - 11-15-1051, “HE NDP frame for sounding,” Young Hoon Kwon (Newracom)
  - 11-15-1059, “SIG-B Encoding Structure Part II,” Ron Porat (Broadcom)
  - 11-15-1066, “HE-SIG-B Contents,” Kaushik Josiam (Samsung)
  - 11-15-1068, “Reliable Transmission Scheme for HE-SIG-B and Data,” Jianhan Liu (MediaTek)
  - 11-15-1070, “1024 QAM Proposal,” Eunsung Park (LG Electronics)
  - 11-15-1071, “Tone Grouping Factors and NDP format for 11ax,” Sameer Vermani (Qualcomm)
  - 11-15-1075, “Number of BSS Color bits,” Junichi Iwatani (NTT)
  - 11-15-1077, “HE-SIG-A Content,” Jiayin Zhang (Huawei)
  - 11-15-1088, “LTF Design for Uplink MU-MIMO,” Daewon Lee (Newracom)
  - 11-15-1089, “Considerations on PHY Padding and Packet Extension in 11ax,” Yujin Noh (Newracom)
  - 11-15-1091, “Considerations on Range Extension with SIG-A Repetition,” Yujin Noh (Newracom)
  - 11-15-1092, “Support of 1x/2x/4x OFDM Symbol in HE SU PPDU,” Heejung Yu (Yeungnam Univ.)
  - 11-15-1106, “SIG-B Structure,” Reza Hedayat (Newracom)
  - 11-15-1111, “SIG-B Resource Unit Allocation Coding,” Amin Jafarian (Newracom)
  - 11-15-1119, “Discussions on HE SIG-A Structure,” John Son (Wilus Institute)
  - 11-15-1122, “Identifiers in HE PPDUs for power saving,” Alfed Asterjadhi (Qualcomm)

- MAC
  - 11-15-1013, “802.11ae & 802.11ax,” Guido R. Hiertz (Ericsson)
  - 11-15-1014, “Multiple BSSID Element,” Guido R. Hiertz (Ericsson)
  - 11-15-1015, “Proxy ARB in 802.11ax,” Guido R. Hiertz (Ericsson)
  - 11-15-1033, “Data field in HE PPDU,” Yongho Seok (Newracom)
  - 11-15-1034, “Notification of Operating Mode Changes,” Yongho Seok (Newracom)
  - 11-15-1044, “Further Study of 11ax Multicast,” Kazuyuki Sakoda (Sony)
  - 11-15-1052, “Bandwidth for UL MU transmission,“ Young Hoon Kwon (Newracom)
  - 11-15-1060, “Receive Operating Mode Indication for Power Save,” Eric Wong (Apple)
  - 11-15-1063, “11ax Channel access procedure,” Chao-Chun Wang (MediaTek)
  - 11-15-1067, “MU TXOP truncation,” Jeongki Kim (LG Electronics)
  - 11-15-1096, “Recovery Procedures in Cascading Sequences,” John Son (Wilus Institute)
  - 11-15-1098, “ACK/BA frame for UL MU under cascading structure,” Narendar Madhavan (Toshiba)
  - 11-15-1114, “Airtime Analysis of EDCA,” Sean Coffey (RealTek)
  - 11-15-1115, “High Efficiency in Accessing the Medium,” Sean Coffey (RealTek)
  - 11-15-1116, “Trigger Frame Channel Access,” Jinsoo Ahn (Yonsei Univ.)
  - 11-15-1120, “Buffer Status Report,” Alfred Asterjadhi (Qualcomm)
  - 11-15-1121, “HE A-Control field,” Alfred Asterjadhi (Qualcomm)
  - 11-15-1137, “Triggered OFDMA Random Access Observations,” Russell Huang (MediaTek)

- Multi-User

- ✧ 11-15-1043, “Overall Protocol of UL MU BA for Multicast Transmission,” Kazuyuki Sakoda (Sony)
- ✧ 11-15-1047, “RU selection process upon TF-R reception,” Stephane Baron (Canon)
- ✧ 11-15-1053, “Multiuser Block ACK Request (MU-BAR),” Guoqing Li (Apple)
- ✧ 11-15-1057, “Multiple Resource Unit Allocation for TGax OFDMA,” Kome Oteri (InterDigital)
- ✧ 11-15-1062, “NAV Consideration for UL MU Response to Trigger frame,” Po-Kai Huang (Intel)
- ✧ 11-15-1065, “11ax uplink Multi-TID aggregation,” Chao-Chun Wang (MediaTek)
- ✧ 11-15-1086, “Consideration on multi-STA BA frame indication,” Jing Ma (NICT)
- ✧ 11-15-1097, “Reducing Channel Sounding Protocol Overhead for 11ax,” Narendar Madhavan (Toshiba)
- ✧ 11-15-1102, “Fragmentation with MU Operation,” Chittabrata Ghosh (Intel)
- ✧ 11-15-1103, “DL Sounding Sequence with UL MU Feedback,” Chittabrata Ghosh (Intel)

- Simulation and Calibration and others
  - ✧ 11-15/1039, “Spatial Reuse Measurements,” Chuck Lukaszewski (Aruba Networks, a HP company)
  - ✧ 11-15-1046, “MAC calibration results,” Stephane Baron (Canon)
  - ✧ 11-15-1048, “On TGax Scenario 4 channel model,” Marcin Filo (Univ. of Surrey)
  - ✧ 11-15-1049, “Implications of wrap-around for TGax Scenario 3 and Scenario 4,” Marcin Filo (Univ. of Surrey)
  - ✧ 11-15-1056, “Clarifying Link Level Simulator Assumptions,” Kome Oteri (InterDigital)
  - ✧ 11-15-1087, “MU BFee Interference channel feedback,” Sigurd Schelstraete (Quantenna)
  - ✧ 11-15-1095, “OFDMA performance in 11ax,” Suhwook Kim (LG Electronics)
  - ✧ 11-15-1099, “Power Save Simulation Results,” Hyeyoung Choi (LG Electronics)
  - ✧ 11-15-1100, “Discussion on Deep and Shallow Sleep States,” Chittabrata Ghosh (Intel)
  - ✧ 11-15-1113, “Box5 Calibration results,” Vida Ferdowsi (Newracom)
  - ✧ 11-15-1134, “11ax Support for IoT,” Shimi Shilo (Huawei)
  - ✧ 11-15-1135, “Results for SS6 calibration case for single BSS and OBSS,” Esa Tuomaala (Nokia)

Goals for November 2015

- Continue to advance TG documents based on submissions.
  - Priority to the TG Specification Framework document.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the November 2015 session.
  - ✧ Thursday, October 15th, 10:00 – 12:00 (ET)

July 2015 – Waikoloa, HI

Originally, TGax planned to have nine sessions during the week.
Two more sessions were added during the mid-week plenary session (marked red).
Four out of eleven sessions were ad hoc sessions.

Tuesday		Wednesday		Thursday
				TGax
TGax (PHY)	**TGax (MAC)**			**TGax**
TGax (Multi-User)	**TGax (Spatial Reuse)**	**TGax (PHY)**	**TGax (MAC)**	**TGax**
		TGax (PHY)	**TGax (Multi-User)**	**TGax**
	TGax			

Main documents

- TGax Agenda: 11-15-0735-05, TGax July 2015 Meeting Agenda
  - TGax PHY ad hoc agenda: 11-15-0898-03, TGax PHY Ad Hoc Jul 2015 Meeting Agenda
  - TGax MAC ad hoc agenda: 11-15-0888-02, TGax MAC ad hoc July 2015 Meeting Agenda
  - TGax Multi-User ad hoc agenda: 11-15-0899-02, TGax MU ad-hoc July 2015 Agenda
  - TGax Spatial Reuse ad hoc agenda: 11-15-0911-01, 802.11ax Spatial Reuse Ad Hoc Group
- Closing report: 11-15-0963-00, TGax July 2015 Closing Report
- Draft TGax minutes: 11-15-0884-00, TGax July 2015 Waikoloa Meeting Minutes
  - TGax PHY ad hoc meeting minutes: 11-15-0913-00, July 2015 Hawaii PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc meeting minutes: 11-15-0922-01, July 2015 Hawaii TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc meeting minutes: 11-15-0949-01, July 2015 Hawaii TGax MU Ad hoc Meeting minutes
  - TGax Spatial Reuse ad hoc meeting minutes: 11-15-0971-01, Minutes of the IEEE 802.11ax Spatial Reuse ad hoc group meeting

Achievements

9. TG Documents

- **Passed a number of PHY, MAC and MU motions affecting the TGax Specification Framework:**

- ✧ PHY Motions: SIG-A, SIG-B, Pilots, etc.
- ✧ MAC Motions: Trigger frame, etc.
- ✧ MU Motions: Trigger frame for random access, MU CTS, etc.

- **Latest revision of the Specification Framework is available at;**
  - ✧ https://mentor.ieee.org/802.11/dcn/15/11-15-0132-07-00ax-spec-framework.docx
- **Approved new revisions of the TGax Simulation Scenario and Evaluation Methodology documents.**
  - ✧ Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-14-00ax-simulation-scenarios.docx
  - ✧ Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-10-00ax-evaluation-methodology.docx
- Other documents
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

10. Technical Presentations

More than 70 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- PHY
  - ✧ 11-15-0579, "preamble design and autodetection," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0580, "11ax coding discussion," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0602, "HE-LTF sequence for UL MU-MIMO," Qinghua Li (Intel)
  - ✧ 11-15-0805, "SIG-B field for HEW PPDU," Young Hoon Kwon (Newracom)
  - ✧ 11-15-0810, "HE PHY Padding and Packet Extension," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0812, "Pilot Design for Data Section," Sameer Vermani (Qualcomm)
  - ✧ 11-15-0813, "CP Indication for UL MU Transmission," Zhigang Rong (Huawei)
  - ✧ 11-15-0816, "Interleaver and Tone Mapper for OFDMA," Yakun Sun (Marvell)
  - ✧ 11-15-0817, "P Matrix for HE-LTF," Yakun Sun (Marvell)
  - ✧ 11-15-0819, "11ax OFDMA Tone Plan Leftover Tones and Pilot Structure," Bin Tian (Qualcomm)
  - ✧ 11-15-0821, "HE SIG-B Structure," Joonsuk Kim (Apple)
  - ✧ 11-15-0822, "SIG-A Structure in 11ax Preamble," Jianhan Liu (MediaTek)
  - ✧ 11-15-0823, "Preamble Design and Auto-Detection for 11ax," Sungho Moon (Newracom)
  - ✧ 11-15-0824, "Pilot Design for 11ax Downlink Transmissions," Yujin Noh (Newracom)
  - ✧ 11-15-0826, "HE-SIG-A transmission for range extension," Jiayin Zhang (Huawei)

12. Technical Presentations

More than 50 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- PHY
  - 11-15/0550, "L-preamble issues for UL-OFDMA," Katsuo Yunoki (KDDI Labs)
  - 11-15/0553, "Enhancing Performance of Hybrid-ARQ with Linear Constellation Precoding," Muhammad Mehboob Fareed (King Abdullah Univ. of Science and Technology)
  - 11-15/0569, "Performance of 1x, 2x, and 4x HE-LTF," Kome Oteri (InterDigital)
  - 11-15/0572, "Inefficiency of 256-FFT per 20MHz," Heejung Yu (Yeungnam Univ./Newracom)
  - 11-15/0574, "SIG structure for UL PPDU," Young Hoon Kwon (Newracom)
  - 11-15/0575, "Preamble Structure in 802.11ax," Yujin Noh (Newracom)
  - 11-15/0577, "Pilot Design for 11ax," Daewon Lee (Newracom)
  - 11-15/0579, "Preamble design and auto-detection," Hongyuan Zhang (Marvell)
  - 11-15/0580, "11ax coding discussion," Hongyuan Zhang (Marvell)
  - 11-15/0584, "Considerations on LTF Sequence Design," Sungho Moon (Newracom)
  - 11-15/0600, "Non Uniform Constellations for 1024QAM," Daniel Schneider (Sony)
  - 11-15/0602, "HE-LTF sequence for UL MU-MIMO," Qinghua Li (Intel)
  - 11-15/0621, "Design Principles for HE Preamble," John Son (WILUS)
  - 11-15/0381, "HE-STF Proposal," Yakun Sun (Marvell)

- MAC
  - 11-15/0567, "Multi-STA BA for SU Transmissions," Xiaofei Wang (InterDigital)
  - 11-15/0604, "Random Access with Trigger Frames using OFDMA," Chittabrata Ghosh (Intel)
  - 11-15/0611, "Multi-STA Block ACK Protection," Jinsoo Ahn (Yonsei Univ.)
  - 11-15/0615, "UL OFDMA Bandwidth," Liwen Chu (Marvell)
  - 11-15/0617, "Duration and MAC Padding for UL MU PPDUs," Gang Ding (Qualcomm)
  - 11-15/0626, "Further consideration for Multi-STA Block ACK frame," Jeongki Kim (LG)

- Multi-User
  - 11-15/0378, "Channel Sensing in UL OFDMA," Reza Hedayat (Newracom)
  - 11-15/0568, "Frequency Selective Scheduling (FSS) for TGax OFDMA," Kome Oteri (InterDigital)
  - 11-15/0586, "Frequency Diversity Options in OFDMA," Reza Hedayat (Newracom)
  - 11-15/0587, "Uplink ACK and BA Multiplexing," Reza Hedayat (Newracom)
  - 11-15/0597, "Beamformed HE PPDU," Yongho Seok (Newracom)

- ✧ 11-15/0608, “Regarding trigger frame in UL MU,” Tomo Adachi (Toshiba)
- ✧ 11-15/0612, “Multi Channel availability for UL-OFDMA,” Woojin Ahn (Yonsei Univ.)

- Spatial Reuse
  - ✧ 11-15/0543, “Simulation Scenario changes for Frequency Re-use,” Graham Smith (SR Technologies)
  - ✧ 11-15/0544, “Proposed text additions to 14/980 for frequency re-use,” Graham Smith (SR Technologies)
  - ✧ 11-15/0548, “Enterprise Scenario and DSC,” Graham Smith (SR Technologies)
  - ✧ 11-15/0588, “CCA revisited II,” Amin Jafarian (Newracom)
  - ✧ 11-15/0595, “Discussion on The Receiver Behavior for CCAC/DSC with BSS Color,” Yasuhiko Inoue (NTT)

- Simulation and Calibration
  - ✧ 11-15/0551, “OBSS Preamble Detection,” Suhwook Kim (LG Electronics)
  - ✧ 11-15/0552, “IEEE 802.11 performance in dense, cellular-like, outdoor deployments,” Richard Edgar (Imagination Technologies)
  - ✧ 11-15/0330, “OFDMA Numerology and Structure,” Sharnaz Azizi (Intel)
  - ✧ 11-15/0583, “OBSS Preamble Error Probability,” Jiyong Pan (Huawei)
  - ✧ 11-15/0590, “Traffic Model Updates to Evaluation Methodology,” Phil Barber (Huawei)

  - ~~✧ 11-14/1392, “Simulation results for Box-5 calibration,” Suhwook Kin (LG Electronics)~~
  - ✧ 11-15/0674, “Joint submission for Box 5 Calibration,” Suhwook Kin (LG Electronics)
  - ✧ 11-15/0581, “LSP Correlation Clarification for Scenario 4,” Daewon Lee (Newracom)
  - ✧ 11-15/0582, “Clarifications to Box 2 MIMO simulation calibrations,” Daewon Lee (Newracom)
  - ✧ 11-15/0373, “Mixed traffic configurations on simulation scenarios,” Yingpei Lin (Huawei)
    - Not presented since the contents of this submission was merged into 11-15/0590.
  - ✧ 11-15/0610, “Simulation Results for Box 5 Calibration,” Vida Ferdowsi (Newracom)
  - ✧ 11-15/0613, “Box 5 Calibration Result,” Chinghwa Yu (MediaTek)
  - ✧ 11-15/0623, “TGax simulation scenario “Box 5” – calibration results,” Guido Hiertz (Ericsson)

  - ✧ 11-15/0316, “Power Save Calibrations,” Hyeyoung Choi (LG Electronics)
  - ✧ 11-15/0564, “802.11ax Calibration and Modeling Adjacent Channel Interference,” Naveen Kakani (CSR)
  - ✧ 11-15/0576, “Latency and Power Consumption in State Transitions,” Chittabrata Ghosh (Intel)
  - ✧ 11-15/0592, “More Power Save Calibration Results,” Eric Wong (Apple)
  - ✧ 11-15/0598, “U-APSD Enhancement for HE,” Jarkko Kneckt (Nokia)
  - ✧ 11-15/0603, “Calibration Results for PSP and U-APSD,” Chittabrata Ghosh (Intel)

Goals for July 2015

- Continue to advance TG documents based on submissions.
  - ➢ Expectation is more submissions affecting the TG specification framework document will be considered.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the July 2015 session.
  - ✧ Thursday, June 18th, 10:00 – 12:00 (ET)

March 2015 – Berlin, Germany

The original plan was to have nine sessions during the week, but one more session was added (Wednesday PM2).

Monday	Tuesday	Wednesday	Thursday
TGax (ad hoc)		**TGax (MU/Spatial Reuse)**	**TGax**
	TGax (PHY/MAC)		
TGax	**TGax**	**TGax**	**TGax**
		TGax	
	TGax		

Main documents

- Agenda: 11-15/0235r8, TGax March 2015 Meeting Agenda
- Closing report: 11-15/0465r0, TGax March 2015 Closing Report
- Minutes: 11-15/0309r1, TGax March 2015 Berlin Meeting Minutes

Achievements

13. Passed a number of motions affecting the TG specification framework:

- PHY motions related to LTF design and SIG-B.
- MAC motions related to Multi-User Block ACK and Multi-User Procedure
- MU motions related to ACK multiplexing
- Etc.

14. TG Documents.

- Approved new revisions of Simulation Scenarios and Evaluation Methodology TG documents.
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-0571-08-00ax-evaluation-methodology.docx
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-0980-09-00ax-simulation-scenarios.docx
- Other TG documents.
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - ✧ https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

15. Technical Presentations

Following technical submissions have been covered during the week.

- MAC
  - ✧ 11-15/0320, "GCR-BA with Measurement Report Performance in OBSS," Yuichi Morioka (SONY)
  - ✧ 11-15/0336, "MAC Overhead Analysis of MU Transmissions," Xiaofei WANG (InterDigital)
  - ✧ 11-15/0362, "Beacon Transmission Issues," Yonggang Fang (ZTE)
  - ✧ 11-15/0365, "UL MU Procedure," Kiseon Ryu (LG Electronics)
  - ✧ 11-15/0366, "Multi-STA BA," Simone Merlin (Qualcomm)
  - ✧ 11-15/0376, "UL-MU MAC Throughput Under Non-Full Buffer Traffic," Tatsumi Uwai (Radrix Co. Ltd)
- Spatial Reuse

- 11-15/0300, “Potential of Modified Signal Detection Thresholds,” Gustav Wikstrom (Ericsson AB)
- 11-15/0318, “CCA Regime Evaluation Revisited,” Amin Jafarian (Newracom Inc.)
- 11-15/0319, “Impact of TPC coupled to DSC for legacy unfairness issue,” Masahito Mori (Sony)
- 11-15/0338, “Discussions on the Definition of CCA Threshold,” Akira Kishida (NTT)
- 11-15/0367, “OBSS preamble detection,” Gwen Barriac (Qualcomm)
- 11-15/0371, “Proposal and simulatin based evaluation of DSC-AP Algorithm,” Eduard Garcia-Villegas (UPC)
- 11-15/0374, “Further Considerations on Legacy Fairness with Enhanced CCA,” John Son (WILUS Institute)

- PHY
  - 11-15/0305, “Effective Subcarrier Assignment for DL-OFDMA,” Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-15/0330, “OFDMA Numerology and Structure,” Shahrnaz Azizi (Intel Corporation)
  - 11-15/0344, “SIG field design principle for 11ax,” Young Hoon Kwon (Newracom)
  - 11-15/0349, “HE-LTF Proposal,” Hongyuan Zhang (Marvell)
  - 11-15/0358, “Numerology for 11ax,” Daewon Lee (Newracom)
  - 11-15/0360, “Preamble Auto-Detection for 802.11ax,” Sungho Moon (NEWRACOM)
  - 11-15/0364, “11ax Preamble design: training sequence,” Sigurd Schelstraete (Quantenna)
  - 11-15/0375, “Minimum Resource Granularity in OFDMA,” John Son (WILUS Institute)
  - 11-15/0378, “Channel Sensing in UL OFDMA,” Reza Hedayat (Newracom)
  - 11-15/0380, “Discussion on OFDMA scheduling for 802.11ax,” Le Liu (Huawei Technologies)
  - 11-15/0381, “HE-STF Proposal,” Yakun Sun (Marvell)
  - 11-15/0383, “Impact of number of sub-channels in OFDMA,” Leif Wilhelmsson (Ericsson)

- Multi-User
  - 11-15/0331, “Uplink Multi-User MIMO Protocol Design,” Yongho Seok (NEWRACOM)
  - 11-15/0333, “Throughput Comparison of Some Multi-user Schemes in 802.11ax,” Kome Oteri (InterDigital)
  - 11-15/0336, “MAC Overhead Analysis of MU Transmissions,” Xiaofei WANG (InterDigital)
  - 11-15/0353, “OFDMA Non-contiguous Channel Utilization,” Jinsoo Ahn (Yonsei univ.)
  - 11-15/0354, “Bandwidth granularity on UL-OFDMA data allocation,” Woojin Ahn (Yonsei Univ.)
  - 11-15/0363, “UL MU Synchronization Requirements,” Yonggang Fang (ZTE)
  - 11-15/0377, “Considerations on UL MU Resource Scheduling,” Leonardo Lanante (Kyutech)
  - 11-15/0379, “DL OFDMA Performance and ACK Aggregation,” Reza Hedayat (Newracom)
  - 11-15/0384, “Discussion on DL-OFDMA Sub-channel Indication Method,” Yu Cai (Lenovo)

- Simulation and Calibration
  - 11-14/1392, “Simulation results for Box-5 calibration,” Suhwook Kim (LG Electronics)
  - 11-14/1434, “SLS Box4 Calibration Results,” Russell Huang (MediaTek Inc.)
  - 11-15/0053, “Box5 Results of 11ac SS6,” Jiyong Pang ‘Huawei)
  - 11-15/0072, “U-APSD power saving calibration results,” Yanchun Li (Huawei)
  - 11-15/0125, “Box 1 and Box 2 Calibration Results,” Ron Porat (Broadcom)
  - 11-15/0304, “Evaluating Power Save Performance,” Joonsuk Kim (Apple)
  - 11-15/0306, “Power Save Mode Calibration Results,” Eric Wong (Apple)
  - 11-15/0307, “MAC calibration results for Test 4,” Ke Yao (ZTE Corp.)
  - 11-15/0308, “Simulation results for box 5,” Ke Yao (ZTE Corp.)
  - 11-15/0314, “Sleep States in IEEE 802.11ax Simulation Scenarios,” Chittabrata Ghosh (Intel)

- ✧ 11-15/0316, “Power Save Calibration,” Hyeyoung Choi (LG)
- ✧ 11-15/0326, “U-APSD Enhancements for HE,” Jarkko Kneckt (Nokia)
- ✧ 11-15/0327, “Microsleep for HE STA,” Jarkko Kneckt (Nokia)
- ✧ 11-15/0343, “In Situ Frame Size Measurements,” Chuck Lukaszewski (Aruba Networks)
- ✧ 11-15/0351, “Empirical Measurements of Channel Degradation Under Load,” Chuck Lukaszewski (Aruba Networks)
- ✧ 11-15/0357, “Scenario 1 CCA Simulation,” Knut Odman (Broadcom Corporation)
- ✧ 11-15/0359, “Clarification of MIMO Box2 calibration,” Jaehyun Ahn (Newracom)
- ✧ 11-15/0368, “Box 5 results for Single BSS Calibration Case,” Esa Tuomaala (Nokia)
- ✧ 11-15/0369, “MAC calibration test 4 simulation results,” Enrico-Henrik Rantala (Nokia)
- ✧ 11-15/0370, “MAC Calibration Results,” Guoqing Li (Apple)
- ✧ 11-15/0372, “Corrections on Reference Traffic Profile for Scenario 2 in Simulation Scenarios Document,” Yingpei Lin (Huawei)
- ✧ 11-15/0373, “Mixed traffic configurations on simulation scenarios,” Yingpei Lin (Huawei)
- ✧ 11-15/0382, “MAC calibration test 4 simulation results,” Yanchun Li (Huawei)
- ✧ 11-15/0441, “Proposed text to TGax Simulation Scenarios MAC test 4,” Enrico-Henrik Rantala (Nokia)

Goals for May 2015

- Continue to advance TG documents based on submissions.
  - ➢ Expectation is more submissions affecting the TG specification framework document will be considered.
- Technical Presentations.

Teleconferences

- Two teleconferences are planned before the May 2015 session.
  - ✧ Thursday, April 9th, 10:00 – 12:00 (ET)
  - ✧ Thursday, April 30th, 20:00 – 22:00 (ET)

January 2015 – Atlanta, GA

The original plan was to have nine sessions during the week, but one session was cancelled.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax**	**TGax**
AM2	**TGax**	**TGax**		
PM1	**TGax**	**TGax**	**TGax**	**TGax (canceled)**
PM2				
PM3	**TGax**			

Main documents

- Agenda: 11-14/1578r6, TGax January 2015 Meeting Agenda
- Closing report: 11-15/0186r0, TGax January 2015 Closing Report
- Draft minutes: 11-15/0090r0, TGax January 2015 Atlanta Meeting Minutes

Achievements

16. TG Structure

- Ad hoc chairs elected.

MAC	PHY	MU	Spatial Reuse
Eric Wong (Apple)	Bo Sun (ZTE)	Sigurd Schelstraete (Quantenna)	Laurent Cariou (Orange)
Reza Hedayat (NEWRACOM)	Jianhan Liu (MediaTak)	Kiseon Ryu (LG Electronics)	Guido Hiertz (Ericsson AB)
Brian Hart (Cisco)	Yakun Sun (Marvell)	Kaushik Josiam (Samsung)	Jae Seung Lee (ETRI)

17. TG Documents.

- Passed a number of motions affecting the TG specification Framework.
- Approved new revisions of Simulation Scenarios and Evaluation Methodology TG documents.
  - ✧ TGax Simulation Scenarios (11-14/0980r6)
  - ✧ TGax Evaluation Methodology (11-14/0571r7).

18. Technical Presentations

Following technical submissions have been covered during the week.

- DSA and CCA
  - ✧ 15/0025, "DSC and Roaming," Graham Smith (SR Technologies)
  - ✧ 15/0027, "Simulation Based Evaluation DSC in residential scenario," M. Shahwaiz Afaqui (UPC)
  - ✧ 15/0045, "Performance Analysis of BSS Color and DSC," Masahito Mori (Sony)
  - ✧ 15/0050, "Modeling components impacting throughput gain from CCAT adjustment," Yu Wang (Ericsson AB)
  - ✧ 15/0085, "Legacy Fairness Issues of Enhanced CCA," John Son (WILUS Institute)
  - ✧ 15/0105, "Dynamic CCA Management," Sean Coffey (RealTek)

- OFDMA
  - ✧ 15/0034, "DL-OFDMA Map Frame," Katsuo Yunoki (KDDI Labs)
  - ✧ 15/0066, "Downlink OFDMA Protocol Design," Yongho Seok (Newracom)
  - ✧ 15/0079, "OFDM Numerology for 11ax," Daewon Lee (Newracom)
  - ✧ 15/0091, "UL-OFDMA Procedure in IEEE 802.11ax," Woojin Ahn (Yonsei Univ.)
  - ✧ 15/0092, "DL-OFDMA Procedure in IEEE 802.11ax," Jinsoo Ahn (Yonsei Univ.)

- MU
  - ✧ 15/0010, "draft for integrated UL DL MU MIMO Frame Format," Tae-Yoon Kim (Korea Univ.) – Not presented
  - ✧ 15/0029, "Discussion on integrated UL/DL MU-MIMO," Tae-Yoon Kim (Korea Univ.) – Not presented
  - ✧ 15/0040, "Discussion on integrated UL-DL MU-MIMO-MAC," TaeYoon Kim (Korea Univ.)
  - ✧ 15/0064, "Consideration on UL-MU overheads," Tomoko Adachi (Toshiba)
  - ✧ 15/0086, "Uplink MU Transmission and Legacy Coexistence," Reza Hedayat (NEWRACOM)
  - ✧ 15/0089, "MAC Efficiency Gain of Uplink Multi-user Transmission," Leonardo Lanante Jr (Kyushu Inst. of Tech.)

- MAC
  - ✧ 15/0035, "Scalable Channel Utilization," Katsuo Yunoki (KDDI R&D Laboratories)
  - ✧ 15/0037, "Structural Format Change," Kyonggi University
  - ✧ 15/0046, "11aa GCR-BA Performance in OBSS," Yuichi Morioka (Sony)
  - ✧ 15/0059, "Uplink RTS/CTS Control," Sigurd Schelstraete (Quantenna)

- PHY
  - ✧ 15/0048, "Non-Uniform Constellations for Higher Order QAMs," Daniel Schneider (Sony)
  - ✧ 15/0068, "Support of outdoor environments," Young Hoon Kwon (NEWRACOM)

- ✧ 15/0079, “OFDM Numerology for 11ax,” Daewon Lee (NEWRACOM)
- ✧ 15/0081, “Considerations on 11ax Auto-detection Methods,” Jaeyoung Song (KAIST)
- ✧ 15/0082, “Considerations on 11ax OFDMA Frequency Granularity,” Young-bin Kim (KAIST)
- ✧ 15/0097, “Performance Analysis of Frequency Selective Scheduling,” Ningbo Zhang (BUPT)
- ✧ 15/0099, “Payload Symbol Size for 11ax,” Sriram Venkateswaran (Broadcom)
- ✧ 15/0101, “Preamble structure for 11ax system,” Jiayin Zhang (Huawei)

- Simulation Scenario and Evaluation Methodology
  - ✧ 14/1342, “MAC Calibration Results,” Igor Kim (ETRI)
  - ✧ 14/1343, “Multicast Scenarios for MAC Calibration,” Igor Kim (ETRI)
  - ✧ 14/1392, “Simulation Results for Box-5 Calibration,” Suhwook Kim (LGE)
  - ✧ 14/1523, “Offline Discussion Minutes of SLS Calibration,” Jiyong Pang (Huawei)
  - ✧ 14/1590, “Multi-wall penetration loss model for HEW system level simulation,” Kejun Zhao et al. (National Engineering Research Center for Broadband Networks & Applications)
  - ✧ 14/1597, “PHY abstraction and performance for outdoor channel models,” Kejun Zhao et al. (National Engineering Research Center for Broadband Networks & Applications)
  - ✧ 15/0022, “MAC Calibration Results,” Xiaofei Wang (InterDigital)
  - ✧ 15/0044, “Proposed Changes to Simulation Scenarios,” Masahito Mori (Sony)
  - ✧ 15/0051, “Box5 Calibration Results,” Jiyong Pang (Huawei)
  - ✧ 15/0052, “Box5 Results of One BSS Case,” Jiyong Pang (Huawei)
  - ✧ 15/0053, “Box5 Results of 11ac SS6,” Jiyong Pang (Huawei)
  - ✧ 15/0061, “FPS Network Traffic Model,” Allan Jones (Activision)
  - ✧ 15/0065, “11ax EMD Revision Straw Poll,” Jiyong Pang (Huawei)
  - ✧ 15/0071, “MAC calibration test 4 results,” Yanchun Li (Huawei)
  - ✧ 15/0072, “U-APSD power saving calibration results,” Yanchun Li (Huawei)
  - ✧ 15/0073, “Simulation Results of Box5,” Ke Yao (ZTE)
  - ✧ 15/0078, “Clarification on calibration test cases,” Guoqing Li (Apple)
  - ✧ 15/0080, “MAC Calibration Results,” Geonjung Ko (WILUS Institute)
  - ✧ 15/0093, “Text Update on PHY Abstraction and SP,” Yakun Sun (Marvell)
  - ✧ 15/0103, “Power Save Calibration,” Yarkko Kneckt (Nokia)
  - ✧ 15/0104, “SLS MAC Test 4 Results,” Chinghwa Yu (MediaTek)

- Others
  - ✧ 15/0043, “In-band Full Duplex Radios and System Performance,” Kapseok Chang (ETRI)
  - ✧ 15/0075, “Operating Rules for TGax Ad Hoc groups,” Osama Aboul-Magd (TGax chair)
  - ✧ 15/0076, “Field Sample OBSS and Client Data,” Carol Ansley (ARRIS Group)

Goals for March 2015

- Continue to advance TG documents.
  - ➢ Expectation is more submissions affecting the TG specification framework document will be considered.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the March 2015 session.
  - ✧ Thursday, February 26th, 10:00 – 12:00 (ET)

November 2014 – San Antonio, TX

The original plan was to have nine sessions during the week, but one session was cancelled.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax (ad hoc)**			**TGax**
AM2		**TGax**		
PM1		**TGax**	**TGax**	**TGax**
PM2	**TGax**	**TGax**		
PM3		**TGax (cancelled)**		

Main documents

- Agenda: 11-14/1319r7, TGax November 2014 Meeting Agenda
- Closing report: 11-14/1536r0, TGax November 2014 Closing Report
- Draft minutes: 11-14/1460r0, TGax November 2014 Meeting Minutes

Achievements

19. Discussions on the TG Structure

- The TG approved a motion to create four ad hoc groups.
  - ✧ PHY, MAC, Multiuser and Spatial Reuse
- The TG approved a motion to have 3 co-chairs for each of the ad hocs.
- Ad hoc chairs election is scheduled for January 2015 meeting on Tuesday.
- Ad hoc meetings will start on March 2015
- Robert Stacy (Intel) was appointed as the technical editor of the TGax.

20. TG Documents – The group approved updated documents.

- The group approved the first version of TGax Specification Framework document (11-14/1453r2).
- The group approved new revisions of the following documents.
  - ✧ TGax Simulation Scenarios (11-14/0980r5)
  - ✧ TGax Evaluation Methodology (11-14/0571r6).

21. Technical Presentations

About 35 technical submissions covered during the week.

- Evaluation Methodology
  - ✧ 11-14/1388, "Consideration on PER Prediction for PHY Abstraction," Bo Sun (ZTE Corp)
  - ✧ 11-14/1418, "Further Study of Time Varying Interference and PHY Abstraction," Yakun Sun (Marvell)
  - ✧ 11-14/1420, "The Impact of Preamble Error on MAC System Performance," Po-Kai Huang (Intel)
  - ✧ 11-14/1424, "Proposed Changes to Evaluation Methodology and Simulation Scenario," Yuichi Morioka (Sony)
  - ✧ 11-14/1440, "A Few Corrections to Video Traffic Model," Guoqing Li (Apple)

- Simulation Scenarios and Calibration
  - ✧ 11-14/1177, "Discussion about Box5 Calibration," Jiyong Pang (Huawei)
  - ✧ 11-14/1342, "MAC Calibration Results," Igor Kim (ETRI)
  - ✧ 11-14/1343, "Multicast Scenarios for MAC Calibration," Igor Kim (ETRI)
  - ✧ 11-14/1392, "Simulation results for Box 5 calibration," Suhwook Kim (LG Electronics)
  - ✧ 11-14/1402, "Box1 and Box3 calibration results," Masahito Mori (Sony)
  - ✧ 11-14/1419, "SLS Box5 Calibration Results and Discussions," Yakun Sun (Marvell)
  - ✧ 11-14/1434, "TGax SLS Box4 Calibration Results," Russell Huang (MediaTek Inc.)

- 11-14/1441, “Simulation Setting of Box5 Calibration,” Jiyong Pang (Huawei)
- 11-14/1444, “Energy Efficiency Evaluation and Simulation Model,” Chinghwa Yu (MediaTek)
- 11-14/1449, “MAC Calibration Results,” Newracom
- 11-14/1450,” Box 0 calibration results,” Hongsup Lee (Newracom)
- 11-14/1451, “Box 1 and Box 2 Calibration Results,” Jaehyun Ahn (Newracom)

- Technology/Others
  - 11-14/1228, “Issues on 256-FFT per 20MHz,” Heejung Yu (NEWRACOM/YU)
  - 11-14/1380, “Efficiency Measurement for RTS/CTS,” Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1381, “Novel RTS/CTS Procedure,” Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1382, “Responses to the comments on doc.1169,” Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1397, “Discussion on Frame Structure for Future WLAN Systems with OFDMA,” Myeong-Jin Kim (Korea University)
  - 11-14/1403, “Performance Analysis of BSS Color and DSC,” Masahito Mori (Sony)
  - 11-14/1404, “11aa GCR-BA Performance in OBSS,” Yuichi Morioka (Sony)
  - 11-14/1416, “Observed protocol violations caused by DSC with roaming STAs,” Chuck Lukaszewski (Aruba Networks)
  - 11-14/1417, “HEW PPDU Transmission Discussion,” Yongho Seok (NEWRACOM)
  - 11-14/1426, “DSC and legacy coexistence,” Gustav Wikstrom et al. (Ericsson)
  - 11-14/1427, “DSC Performance,” Gustav Wikstrom et al. (Ericsson)
  - 11-14/1428, “Clear Channel Assessment for OFDMA PHY,” K. C. Chen (NTU) and D. J. Deng (NCUE)
  - 11-14/1431, “Issues on UL-OFDMA Transmission,” Young Hoon Kwon (Newracom)
  - 11-14/1433, “Protocol and signaling framework for OFDMA,” Sigurd Schelstraete (Quantenna)
  - 11-14/1435, “Considerations on OBSS Spatial Re-Use,” Jianhan Liu (Mediatek Inc.)
  - 11-14/1436, “Overhead Analysis for Simultaneous Downlink Transmissions,” Pengfei Xia (interdigita)
  - 11-14/1437, “Efficient Wider Bandwidth Operation in IEEE 802.11ax,” Jinsoo Ahn (Yonsei Univ)
  - 11-14/1439, “Preamble Considerations in Large Channel Delay Spread Scenarios,” Daewon Lee (Newracom)
  - 11-14/1442, “Considerations on DL OFDMA control mechanism,” Woojin Ahn (Yonsei Univ.)
  - 11-14/1443, “Adapting CCA and Receiver Sensitivity,” Esa Tuomaala (Nokia)
  - 11-14/1446, “Analysis of frequency and power requirements for UL-OFDM,” Leif Wilhelmsson (Ericsson)
  - 11-12/1448, “Considerations for Adaptive CCA,” Reza Hedayat (Newracom)
  - 11-14/1452, “Frequency selective scheduling in OFDMA,” Leif Wilhelmsson (Ericsson)

- Specification Framework
  - 11-14/1429, “Proposed 802.11ax specification framework document,” Minho Cheong (Newracom)
  - 11-14/1432, “Proposed 802.11ax specification framework – background,” Minho Cheong (Newracom)
  - 11-14/1447, “Proposed Spec Framework Document for 11ax considering potential tech features,” John Son (WILUS Institute), Young Doo Kim (SK Telecom)
  - 11-14/1453, “Spec Framework Proposal,” Robert Stacey (Intel)

Goals for January 2015

- Elect ad hoc chairs – 3 co-chairs/ad hoc group as agreed.
- Continue to advance TG documents.

- Technical Presentations.

Teleconferences

- One teleconference is planned before the January 2015 session.
  - ✧ Thursday, December 4th, 10:00 – 12:00 (ET)
    - ➢ Chair had sent out call for submissions on the TGax reflector.

September 2014 – Athens, Greece

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**TGax**
AM2	**TGax**	**TGax**		
PM1		**TGax**	**TGax**	**TGax**
PM2	**TGax**	**TGax**		
PM3	**TGax**			

Main documents

- Agenda: 11-14/1033r5, TGax September 2014 Meeting Agenda
- Closing report: 11-14/1304r0, TGax September 2014 Closing Report
- Draft minutes: 11-14/1159r1, TGax September 2014 Meeting Minutes

Achievements

22. The group elected two vice chairs and discussed about the TG structure.

- Election of Vice Chairs took place during this meeting. The TG Vice Chairs are:
  - ✧ Simone Merlin (Qualcomm)
  - ✧ Ron Porat (Broadcom)
- The group started discussion on the Ad Hoc groups. Discussion will continue in future meetings.

23. The group approved minutes from the July 2014 San Diego meeting.

- 11-14/0864r0, July 2014 San Diego Meeting Minutes

24. TG Documents – The group approved updated documents.

- The TGax Simulation Scenarios (11-14/0980r4) and the TGax Evaluation Methodology (11-14/0571r5).
- The TGax Channel Model document (11-14-0882r4).
- The TGax Functional Requirements document (11-14-1009r2).

25. Technical Presentations

54 submissions were uploaded on the server and 52 of them were covered during the week.

- Functional Requirements
  - ✧ 11-14/0636, "Discussion on Functional Requirements," David Xun Yang (Huawei Technologies)
  - ✧ 11-14/0920, "Considerations of Functional Requirements Documents," David Xun Yang (Huawei Technologies)
  - ✧ 11-14/1009, "Proposed 802.11ax Functional Requirements," Lei Wang (Marvell)
  - ✧ 11-14/1164, "Meaningful 11ax Functional Requirements," Joe Kwak (InterDigital)
  - ✧ 11-14/1167, "TGax Functional Requirement Discussion," Yonggang Fang (ZTE)

- ✧ 11-14/1170, “Functional Requirements Discussions on Coex with Legacy STAs,” Masahito Mori (Sony)
- ✧ 11-14/1234, “Requirements Discussion,” Joseph Levy (InterDigital)

- Simulation Scenarios and Calibration
  - ✧ 11-14/0800, “Box 1 and Box 2 Calibration Results,” Nihae Jindal (Broadcom)
  - ✧ 11-14/1147, “MAC Simulator Calibration Results,” Shoko Shinohara, Akira Kishida (NTT)
  - ✧ 11-14/1175, “MAC Calibration results,” Suhwook Kim (LG Electronics)
  - ✧ 11-14/1177, “Discussion about Box5 Calibration,” Jiyong Pang (Huawei Technologies)
  - ✧ 11-14/1187, “The Effect of Preamble Error Model on MAC Simulator,” Po-Kai Huang (Intel)
  - ✧ 11-14/1191, “MAC calibration results,” Zhou Lan (Huawei Technologies)
  - ✧ 11-14/1192, “MAC calibration results comparison,” Zhou Lan (Huawei Technologies)
  - ✧ 11-14/1198, “Additional Test Cases for MAC calibration,” Gwen Barriac (Qualcomm)
  - ✧ 11-14/1217, “MAC Calibration Results for Test 1 and 2,” Esa Tuomaala (Nokia)
  - ✧ 11-14/1223, “Stadium Measurements,” Brian Hart (Cisco Systems)
  - ✧ 11-14/1226, “SLS Box 1&2 Calibration Results,” Russell Huang (MediaTek)
  - ✧ 11-14/1230, “MAC Calibration Result,” Chinghwa Yu (MediaTek)

- Evaluation Methodology
  - ✧ 11-14/1161, “Parameters for Power Save Mechanisms,” Eric Wong (Apple)
  - ✧ 11-14/1162, “Energy Efficiency Evaluation Methodology Follow Up,” Eric Wong (Apple)
  - ✧ 11-14/1174, “PHY Abstraction with Time Varying Interference,” Yakun Sun (Marvell)
  - ✧ 11-14/1176, “PHY abstraction tables for 11ax system level simulation,” Jiayin Zhang (Huawei Technologies)
  - ✧ 11-14/1221, “Traffic Generator for OBSS Calibration Case,” Chao-Chun Wang (MediaTek)

- Channel Model
  - ✧ 11-14/1214, “Impact of correlated shadowing in 802.11ax system evaluations,” Leif Wilhelmsson (Ericsson AB)
  - ✧ 11-14/1222, “Doppler Effect Evaluation for 11ax,” Jianhan Liu (MediaTek)

- Technology/Others
  - ✧ 11-14/1106, “WLAN Frame Collision Information,” Peng Shao (NEC Communication Systems)
  - ✧ 11-14/1148, “Consideration of asynchronous interference in OBSS environment,” Koichi Ishihara (NTT)
  - ✧ 11-14/1168, “802.11 TGax PHY Frame Structure Discussion for Enabling New Contention Mechanism,” Yonggang Fang (ZTE)
  - ✧ 11-14/1169, “DL-FDMA considerations,” Katsuo Yunoki (KDDI R&D Labs.)
  - ✧ 11-14/1171, “DSC Simulation Results for Scenario 3,” Masahiro Mori (Sony)
  - ✧ 11-14/1172, “Multicast Performance in OBSS,” Yuichi Morioka (Sony)
  - ✧ 11-14/1178, “Inter-BSS interference in WLANs,” Hyunduk Kang (ETRI)
  - ✧ 11-14/1179, “Considerations for Partial Band Interference between WLAN Systems,” Gwangzeen Ko (ETRI)
  - ✧ 11-14/1180, “Discussions on Interference between TD-LTE & WLAN around 2.4GHz Band,” Meng Yang (CATR)
  - ✧ 11-14/1181, “Measurements on A-MPDU performances under various channel conditions,” John Sun (WILUS Institute)
  - ✧ 11-14/1186, “Comparisons of Simultaneous Downlink Transmissions,” Pengfei Xia (InterDigital)
  - ✧ 11-14/1190, “Frame Exchange Control for Uplink Multi-user transmission,” Kaying Lv (ZTE)
  - ✧ 11-14/1199, “Effect of CCA in residential scenario part 2,” Gwen Barriac (Qualcomm)

- ✧ 11-14/1207, “OBSS reuse mechanism which preserves fairness,” Laurent Cariou (Orange)
- ✧ 11-14/1208, “MAC considerations on 802.11ax OFDMA,” Jinsoo Ahn (Yonsei Univ.)
- ✧ 11-14/1209, “Multiple RF operation for 802.11ax OFDMA,” Woojin Ahn (Yonsei Univ.)
- ✧ 11-14/1210, “HEW PPDU Format for Supporting MIMO-OFDMA,” Yongho Seok (NEWRACOM)
- ✧ 11-14/1211, “ACK Procedure for OFDMA,” Yongho Seok (NEWRACOM)
- ✧ 11-14/1216, “Consideration on Coexistence between LTE-U and 802.11 WLAN,” Jae Seung Lee (ETRI)
- ✧ 11-14/1224, “Link-Aware CCA,” Brian Hart (Cisco Systems)
- ✧ 11-14/1225, “Considerations on CCA for OBSS Opearation in 802.11ax,” Luo Jun (Huawei Technologies)
- ✧ 11-14/1227, “OFDMA Performance Analysis,” Tianyu Wu (MediaTek)
- ✧ 11-14/1128, “Issues on 256-FFT per 20MHz,” Heejung Yu (NEWRACOM)
- ✧ 11-14/1229, “Dynamic OFDM Symbol Duration,” Alan Jauh (MediaTek)
- ✧ 11-14/1232, “On MU Aggregation Mechanisms for 11ax,” Reza Hedyat (NEWRACOM)
- ✧ 11-14/1233, “Adaptive CCA for 11ax,” Reza Hedyat (NEWRACOM)

Goals for November 2014

- Continue to advance TG documents.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the November 2014 session.
  - ✧ Thursday, October 9th, 10:00 – 12:00 (ET)
    - ➢ Chair had sent out call for submissions on the TGax reflector.

July 2014 – San Diego, CA

TGax had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax**		**TGax**	**TGax**
AM2		**TGax**		
PM1			**TGax**	**TGax**
PM2	**TGax**	**TGax**	**TGax**	
PM3		**TGax**		

Main documents

- Agenda: 11-14/0748r6, TGax July 2014 Meeting Agenda
- Closing report: 11-14/0984r1, TGax July 2014 Closing Report
- Draft minutes: 11-14/0864r0, July 2014 Meeting Minutes

Achievements

26. The group discussed on the TG structure.

- The group will have two vice chairs to be election during the initial meeting slot of TGax in September 2014.
  - ✧ Chair has sent out the call for nominations to the reflector.
- The group will have some ad hoc groups in the future, however, the discussion on the ad hoc structure was deferred.

27. The group approved minutes from the May 2014 Waikoloa meeting and Teleconference on July 2nd, 2014.

- 11-14/0655r3, May 2014 Waikoloa Meeting Minutes
- 11-14/0788r2, Minutes from the teleconference on July 2nd, 2014

28. TG Documents – The group discussed and approved following documents as current TG documents.

- The group approved new version of the Simulation Scenarios (11-14/0980r1) and Evaluation Methodology (11-14/0571r3) documents.
- The group approved the initial version of the TGax Channel Model document (11-14-0882r3).
- The group adopted the initial version of the TGax Selection Procedure (11-14-0938r4).
- The group had discussion on the Functional Requirements document.

29. Technical Presentations

More than 40 submissions were covered during the week.

- Simulation Scenarios and Calibration
  - 11-14/0799, "Modifications to Simulation Scenarios and Calibration Process," Nihar Jindal (Broadcom)
  - 11-14/0800, "Box 1 and Box 2 Calibration Results," Nihar Jindal (Broadcom)
  - 11-14/0803, "Packet Length for Box 0 Calibration," Wookbong Lee (LG Electronics)
  - 11-14/0850, "Clarification for MAC Calibration," Gwen Barriac (Qualcomm)
  - 11-14/0851, "Proposed Rate Control for MAC Simulator," Gwen Barriac (Qualcomm)
  - 11-14/0859, "Proposing a Stadium Scenario," Hakan Persson (Ericsson)
  - 11-14/0860, "Text proposal of a Stadium scenario to ax," Hakan Persson (Ericsson)
  - 11-14/0869, "MAC calibration results," Zhou Lan (Huawei)
  - 11-14/0871, "Further Calibration Results towards Integrated System Level Simulation," Jiyong Pang (Huawei)
  - 11-14/0892, "MAC Calibration Text to Simulation Scenarios," Jarkko Kneckt (Nokia)
  - 11-14/0894, "Calibration of System Level Simulators," Sayantan Choudhury (Nokia)
  - 11-14/0895, "Calibration of MAC simulator with OBSS Network Scenario," Chao-CHun Wang (MediaTek)

- Evaluation Methodology
  - 11-14/0571, " Evaluation Methodologies," Ron Porat (Broadcom)
  - 11-14/0810, "RBIR-based PHY Abstraction with Channel Estimation Error," Yukun Sun (Marvell)
  - 11-14/0811, "Overview on RBIR-based PHY Abstraction," Yukun Sun (Marvell)
  - 11-14/0827, "Energy Efficiency Evaluation Methodology," Eric Wong (Apple)
  - 11-14/0865, "ACI and AACI for 802.11ax System Simulations," Yu Cai (Huawei)
  - 11-14/0866, "Traffic modeling and system capacity performance measure," Johan Soder (Ericsson)
  - 11-14/0873, "PHY Abstraction Table for 11ax System Level Simulations," Jiayin Zhang (Huawei).
  - 11-14/0874, "Unified Traffic Model on Enterprise Scenario," Phillip Barber (Huawei)
  - 11-14/0875 "VoIP Traffic Model Content for 11ax TG Simulation Scenarios & Evaluation Methodology," Phillip Barber (Huawei)

- Channel Models
  - 11-14/0882, "IEEE 802.11ax Channel Model Document," Jianhan Liu (Mediatek inc.)
  - 11-14/0904 "In-Cabin WiFi Channel Channel: Preliminary Ray Tracing Simulations," Fan Bai (General Motors)

- Functional Requirements
  - 11-14/0567, "Proposed 802.11ax Functional Requirements," Lei Wang (Marvell)
  - 11-14/0818, "Synchronization Requirements," Yonggang Fang (ZTE)

- 11-14/0821, “Coexistence Requirements of 802.11 WLAN and LTE in Unlicensed Spectrum,” Alireza Babaei (CableLabs).
- 11-14/0835, “Functional Requirements Discussion,” Joe Kwak (InterDigital)

- Technology/Others
  - 11-14/0779, “Dynamic Sensitivity Control Practical Usage,” Graham Smith (DSP Group)
  - 11-14/0801, “Envisioning 11ax PHY Structure - Part II,” Dongguk Lim(LG Electronics)
  - 11-14/0802, “Consideration on UL MU transmission,” Jinyoung Chun (LG Electronics)
  - 11-14/0804, “Envisioning 11ax PHY Structure – Part I,” Jinsoo Choi (LG Electronics)
  - 11-14/0832, “Performance Evaluation of OBSS Densification,” Po-Kai Huang (Intel)
  - 11-14/0833, “Residential Scenario Sensitivity and Transmit Power Control Simulation Results,” Ron Murias (InterDigital)
  - 11-14/0838, “Discussion on dual-link STR in IEEE 802.11ax,” Jinsoo Ahn (Yonsei Univ)
  - 11-14/0839, “Discussion on OFDMA in IEEE 802.11ax,” Jinsoo Ahn (Yonsei Univ)
  - 11-14/0846, “Changing CCA in the Residential Environment,” Gwen Barriac (Qualcomm)
  - 11-14/0847, “Further Considerations on Enhanced CCA for 11ax,” John Son (WILUS Institute)
  - 11-14/0854, “DSC and Legacy Coexistence,” Yuichi Morioka (SONY)
  - 11-15/0855, “Techniques for Short Downlink Frames,” Brian Hart (Cisco Systems)
  - 11-15/0856, “Evaluating Dynamic CCA/Receiver Sensitivity Algorithms,” Brian Hart (Cisco Systems)
  - 11-14/0858, “Analysis on Multiplexing Schemes exploiting frequency selectivity,” Kaushik Josiam (Samsung)
  - 11-14/0861, “Impact of CCA adaptation on spatial reuse in dense residential scenario,” Sayantan Choudhury (Nokia)
  - 11-14/0868, “UL & DL DSC and TPC MAC simulations,” Johan Soder (Ericsson)
  - 11-14/0872, “A Protocol Framework for Dynamic CCA,” Sean Coffey (Realtek)
  - 11-14/0880, “Increased Network Throughput with Channel Width Related CCA and Rules,” James Wang (Mediatek)
  - 11-14/0889, “Performance Gains from CCA Optimization,” Nihar Jindal (Broadcom)

30. Timeline: There are no changes in the timeline.

- TGax initial timeline approved during the May 2014 Waikoloa session.
  - May 2014 - TG kick off
  - Nov. 2014 - start working on the Specification Framework
  - Jul. 2016 - Draft 1.0 to be ready
  - Mar. 2017 - Draft 2.0 to be ready
  - 1H/2019 - publication of the IEEE 802.11ax amendment

Goals for September 2014

- TG vice-chairs election.
- Continue to advance TG documents.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the September 2014 session.
  - Thursday, August 14th, 10:00 – 12:00 (ET)
    - Chair had sent out call for submissions on the TGax reflector.

May 2014 – Waikoloa, Big Island, HI

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax**	**TGax**
AM2	**TGax**	**TGax**		
PM1				**TGax**
PM2	**TGax**	**TGax**		
PM3	**TGax**	**TGax**		

Main documents

- Agenda: 11-14/0478r5, TGax May 2014 Meeting Agenda
- Closing report: 11-14/0702r0, TGax May 2014 Closing Report
- Draft minutes: 11-14/0655r1, May 2014 Waikoloa Meeting Minutes

Achievements

31. The group elected the chairperson and the secretary.

- Chairperson: Osama Aboul-Magd (Huawei Technologies)
- Secretary: Yasuhiko Inoue (NTT)
- Other officer positions and TG structure will be discussed during the July 2014 meeting.

32. The group approved minutes from the March 2014 Beijing meeting and Teleconference on April 17th 2014.

- 11-14/0380r1, March 2014 Beijing Meeting Minutes
- 11-14/0530r0, Minutes from the teleconference on April 17th, 2014

33. TG Documents

- The group approved initial version of the Simulation Scenarios (11-14/0621r4) and Evaluation Methodology (11-14/0571r2) documents.
- The group started the discussion related to Functional Requirements document. Expectation is to approve the initial revision of the document in July.
- Discussion related to Channel Model document is expected to start in July.

34. Technical Presentations

40 submissions were covered during the week.

- 11-14/0527, "PHY Abstraction for TGax System Level Simulations", Pengfei Xia (InterDigital)
- 11-14/0546, "IEEE 802.11ax High Efficiency WLAN Packet measurements around Boulder Colorado", Jim Lansford (CSR)
- 11-14/0567, "Proposed 802.11ax Functional Requirements", Lei Wang (Marvell)
- 11-14/0571, "11ax Evaluation Methodologies", Ron Porat (Broadcom)
- 11-14/0577, "Path Loss Model for Scenario 1," Nihar Jindal (Broadcom)
- 11-14/0578, "Residential Scenario CCA/TPC Simulation Discussion," Frank La Sita (InterDigital)
- 11-14/0581, "Further Discussions on PHY Abstraction," Yakun Sun (Marvell)
- 11-14/0582, "Calibrating MAC Simulator Through Function Test," Jinjing Jiang (Marvell)
- 11-14/0583, "Further Discussions on Instantaneous SINR Calibration for System Simulation," Yakun Sun (Marvell)
- 11-14/0584, "System Level Simulations on Beamforming and Link Adaptation," Yan Zhang (Marvell)
- 11-14/0585, "PHY Abstractions for and IEEE 11ax PHY System Simulation and Integrated System Level Simulation," Jianhan Liu (MediaTek)
- 11-14/0586, "Automotive Considerations for the Simulation Scenarios," Igal Kotzer (General Motors)

- 11-14/0594, "Insert Virtual Desktop Infrastructure (VDI) Traffic Model Content for HEW Simulation Scenarios," Yingpei Lin (Huawei)
- 11-14/0595, "Edits on Some Traffic Content for HEW SG Simulation Scenarios," Yingpei Lin (Huawei)
- 11-14/0598, "Uplink multi-user MAC protocol for 11ax," Tran Thi Thao Nguyen (Kyushu Inst. of Tech.)
- 11-14/0600, "Proposed Calibration For MAC simulator," Gwen Barriac (Qualcomm)
- 11-14/0604, "Modeling and Evaluating Variable Bit rate Video Streaming for 802.11ax," Chao-Chun Wang (MediaTek)
- 11-14/612, "Calibration Procedures towards Integrated System Level Simulation," Jiayin Zhang (Huawei)
- 11-14/0613, "Discussions on adaptive frame length in MAC based on block ACK," Ningbo Zhang (BUPT)
- 11-14/0614, "Joint Coding and Modulation Diversity with LRA MMSE VP by QR precoding MIMO," Ningbo Zhang (BUPT)
- 11-14/0616, "CSMA/CA Enhancement Suggestion," Yonggang Fang (ZTE)
- 11-14/0617, "Discussion on timeline for 802.11ax," Laurent Cariou (Orange)
- 11-14/0620, "Link Adaptation for PHY SLS calibration," Jinyoung Chun (LG Electronics)
- 11-14/0621, "TGax Simulation Scenarios," Simone Merlin (Qualcomm)
- 11-14/0624, "Investigation on 1024 QAM feasibility in 11ax," Eunsung Park (LG Electronics)
- 11-14/0625, "Multi-channel operation in Simulation scenarios," Suhwook Kim (LG Electronics)
- 11-14/0626, "IEEE 802.11ax Functional Requirements," SangHyun Chang (Samsung)
- 11-14/0627, "Outdoor Channel Models for System Level Simulations," Kaushik Josiam (Samsung)
- 11-14/0628, "Measurements on CCA Thresholds in OBSS Environment," John Son (WILUS Institute), Young Doo Kim (SK Telecom)
- 11-14/0634, "Consideration on MAC system calibration," Zhou Lan (Huawei)
- 11-14/0635, "Dynamic Sensitivity Control Implementation," Graham Smith (DSP Group)
- 11-14/0636, "Consideration on functional requirements," Zhou Lan (Huawei)
- 11-14/0637, "Spatial Reuse and Coexistence with Legacy Devices," James Wang (MediaTek)
- 11-14/0647, "PHY abstraction method comparison," Tianyu Wu (MediaTek)
- 11-14/0648, "Performance Observation of a Dense Campus Network," Chinghwa Yu (MediaTek)
- 11-14/0649, "802.11ax Timeline Scenarios," Rolf de Vegt (Qualcomm)
- 11-14/0656, "How to Describe 802.11ax Functional Requirements," Minho Cheong
- 11-14/0660, "802.11ax Timeline," Minho Cheong (NEWRACOM)
- 11-14/0677, "Comparison of Calibration Methodology for MAC Simulation," Chinghwa Yu (MediaTek)
- 11-14/0682, "In Situ Spectrum Reuse Measurements in Indoor 20,000 Seat Arena," Chuck Lukaszewski (Aruba Networks)

35. Timeline

- The group approved initial timeline.
  - ✧ May 2014 - TG kick off
  - ✧ Nov. 2014 - start working on the Specification Framework
  - ✧ Jul. 2016 - Draft 1.0 to be ready
  - ✧ Mar. 2017 - Draft 2.0 to be ready
  - ✧ 1H/2019 - publication of the IEEE 802.11ax amendment

Goals for July 2014

- Continue to advance simulation scenarios (11-14/0621) and Evaluation Methodologies (11-14/0571) documents.
- Approve an initial Functional Requirements documents
- Approve an initial Channel Model document.

- Discuss and approve TG structure and process.
- Technical Presentations.

Teleconferences

- Three teleconferences are planned before the July 2014 session.
  - ✧ Wednesday, June 4th, 10:00 – 12:00 (ET)
  - ✧ Wednesday, June 18th, 20:00 – 22:00 (ET)
  - ✧ Wednesday, July 2nd, 10:00 – 12:00 (ET)

  Details of the meeting information will be announced on the reflector.

March 2014 – Beijing, China

HEW study group had seven sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**HEW**	**HEW**
AM2		**HEW**		
PM1				**HEW**
PM2	**HEW**	**HEW**		
PM3		**HEW**		

Main documents

- Agenda: 11-14/0219r4, HEW SG March 2014 Meeting Agenda
- Closing report: 11-14/0457r0, HEW SG March 2014 Closing Report
- Draft minutes: 11-14/0380r0, March 2014 Beijing Meeting Minutes

Achievements

36. The group approved minutes from the January 2014 Los Angeles meeting and teleconferences on February 6th 2014 and February 13th 2014.

- 11-14/0199r0, January 2014 Los Angeles Meeting Minutes
- 11-14/0229r2, Minutes from the teleconference on February 6th, 2014
- 11-14/0242r0, Minutes from the teleconference on February 13th, 2014

37. Addressed comments related to the PAR and CSD received from individuals and other IEEE 802 WGs. Resolutions of comments are contained in the following document:

- https://mentor.ieee.org/802.11/dcn/14/11-14-0424-00-0hew-hew-sg-par-and-csd-comments-and-resolutions.pptx

38. Updated the PAR and the CSD documents based on received comments:

- https://mentor.ieee.org/802.11/dcn/14/11-14-0165-01-0hew-802-11-hew-sg-proposed-par.docx
- https://mentor.ieee.org/802.11/dcn/14/11-14-0169-01-0hew-ieee-802-11-hew-sg-proposed-csd.docx

39. The group passed motions to approve revised PAR and CSD documents, and SG extension.

- Revised PAR (11-14/0165r1): Y/N/A = 94/0/1, Pass
- Revised CSD (11-14/0169r1): Y/N/A = 97/0/1, Pass
- SG extension: Y/N/A = 105/0/0, Pass
- **HEW SG has completed its work and the IEEE standard board approved 802.11ax project.**

40. **The group received more than 30 submissions in the categories of simulation scenarios, evaluation methodologies, channel models, functional requirements, technologies and selection procedure. Following submissions have been presented and discussed during the week.**
    - 11-13/1359r1, "HEW-Evaluation-Methodology" Ron Porat (Broadcom)
    - 11-14/0112r1, "Wi-Fi interference measurements in Korea - part II", Minho Cheong (NEWRACOM)
    - 11-14/0113r1, "Modeling of additional channel loss in dense WLAN environments", Minho Cheong (NEWRACOM)
    - 11-14/0294r2, "DSC Channel Selection and Legacy Sharing" Graham Smith (DSP Group)
    - 11-14/0301r0, "Multicast Considerations for HEW", Eisuke Sakai (Sony Corporation)
    - 11-14/0306r0, "Discussions on HEW Functional Requirements", Lei Wang (Marvell)
    - 11-14/0307r0, "PHY Calibration Results", Nihar Jindal (Broadcom)
    - 11-14/0328r2, "Dense Apartment Complex Throughput Calculations", Graham Smith (DSP Group)
    - 11-14/0329r0, "Channel Models for different links in Simulations", Kaushik Josiam (Samsung)
    - 11-14/0330r3, "HEW PHY Abstraction", Sameer Vermani (Qualcomm)
    - 11-14/0335r0, "Instantaneous SINR Calibration for System Simulation", Yakun Sun (Marvell)
    - 11-14/0336r0, "Calibration of Long-Term SINR for System Simulator" Yakun Sun (Marvell)
    - 11-14/0339r0, "A simplified STR Mechanism", Raja Banerjea (CSR)
    - 11-14/0340r0, "A simplified STR Mechanism – MAC", Raja Banerjea (CSR)
    - 11-14/0342r0, "Short Packet Optimizations", Naveen Kakani (CSR, Inc)
    - 11-14/0345r1, "Joint Coding and Modulation Diversity with RBD pre-coding for next generation WLAN", Zhanji Wu (BUPT)
    - 11-14/0350r0, "Suggestion on Evaluation Methodology", Jinyoung Chun (LG Electronics)
    - 11-14/0352r0, "Discussion on power save mode for real time traffic", Giwon Park (LG Electronics)
    - 11-14/0353r0, "Suggestion on PHY Abstraction for Evaluation Methodology", Dongguk Lim (LG Electronics)
    - 11-14/0355r0, "Simulation Scenario 1 Revised", Simone Merlin (Qualcomm)
    - 11-14/0356r0, "Calibration of System Level Simulators", Jarkko Kneckt (Nokia)
    - 11-14/0357r0, "Utilizing Unused Resources for Simultaneous Transmissions", Jarkko Kneckt (Nokia).
    - 11-14/0365r0, "Extended Intra-Vehicle Channel Model", Igal Kotzer (General Motors)
    - 11-14/0372r2, "System level simulations on increased spatial reuse", Liwen Chu (Marvell)
    - 11-14/0373r1, "Energy Efficiency in HEW", Pingping Xu, Wei Wang (Southeast University)
    - 11-14/0381r0, "Stadium scenario for HEW", Johan Soder, Filip Mestanov (Ericsson AB)
    - 11-14/0383r0, "Considerations on evaluation methodology for candidate HEW PHY&MAC techniques", Le Liu (Huawei)
    - 11-14/0385r0, "Simulation Methodology and Calibration", Gwen Barriac (Qualcomm)
    - 11-14/0386r0, "Discussions on MCS selection" , Tianyu Wu (MediaTek)
    - 11-14/0392r0, "Traffic Separation Scheme for Optimizing WLANs using PHY and MAC options", Takayuki Nishio (Kyoto University)
    - 11-14/0393r0, "Possible Indoor Channel Models for HEW System Simulations", Leif Wilhelmsson (Ericsson AB).
    - 11-14/0419r0, "802.11ax Spec Development Process Proposal", Rolf de Vegt (Qualcomm)

Goals for May 2014

- Meet as a new TG and will have officer elections.
- Continue the work on simulation scenarios, evaluation methodologies, channel models, and function requirements.

Teleconferences

- One teleconference planned before the May 2014 session.

- ✧ Thursday, April 17th, 10:00 – 12:00 (ET)
- ✧ Details to be announced.

January 2014 – Los Angeles, CA

HEW study group had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**HEW**
AM2	**HEW**	**HEW**		
PM1				**HEW**
PM2	**HEW**	**HEW**	**HEW**	
PM3	**HEW**	**HEW**		

Main documents

- Agenda: 11-13/1506r5, HEW SG January 2014 Meeting Agenda
- Closing report: 11-14/0187r0, HEW SG January 2014 Closing Report
- Draft minutes: 11-14/0199r0, January 2014 Los Angeles Meeting Minutes

Achievements

1. **The group approved minutes from the November 2013 Dallas meeting and teleconferences on December 4th 2013, December 18th 2013 and January 8th, 2014..**
   - 11-13/1465r1, November 2013 Dallas Meeting Minutes
   - 11-13/1495r0, Minutes from the teleconference on December 4th, 2013
   - 11-13/1532r1, Minutes from the teleconference on December 18th, 2013
   - 11-14/0024r1, Minutes from the teleconference on January 8th, 2014

2. **The group resolved open issues related to the PAR and CSD.**

3. **The group received 28 submissions that were categorized into (1) PAR and 5 Criteria related submissions, and (2) Best Effort submissions. Best Effort submissions basically related to simulation scenario and evaluation methodology.**
   - **PAR and 5 Criteria related submissions**
     - ✧ 11-13/1410r6, “802.11 HEW Draft PAR and 5C”, Osama Aboul-Magd and All
     - ✧ 11-13/1489r5, “Airport Capacity Analysis”, Graham Smith (DSP Group)
     - ✧ 11-14/0026r1, “thoughts on hew par”, Yong Liu (Apple)
     - ✧ 11-14/0045r2, “E-Education Analysis”, Graham Smith (DSP Group)
     - ✧ 11-14/0058r1, “Pico Cell Use Case Analysis “, Graham Smith (DSP Group)
     - ✧ 11-14/0061r0, “Some findings from real world measurement”, Katsuo Yunoki (KDDI Labs)
     - ✧ 11-14/0065r1, “Comments on Draft HEW PAR”, Bill Carney (SONY)
     - ✧ 11-14/0101r2, “Comments on 802.11 HEW Draft PAR & 5C”, Rakesh Taori (Samsung Electronics)
     - ✧ 11-14/0106r0, “Discussion on HEW PAR”, Kiseon Ryu (LG Electronics)
     - ✧ 11-14/0119r2, “Suggested PAR Changes”, James Yee (MediaTek)
     - ✧ 11-14/0163r1, “Raising the PAR”, Mat Fischer (Broadcom)

   - **Best Effort submissions**
     - ✧ 11-14/0043r2, “PHY abstraction in system level simulation for HEW study”, Fei Tong (Samsung)

- ✧ 11-14/0051r0, “Wireless Office with Interference”, David Xun Yang (Huawei)
- ✧ 11-14/0053r0, “Further Considerations on Calibration of System Level Simulation”, Jiayin Zhang (Huawei)
- ✧ 11-14/0056r1, “Traffic Model on Virtual Desktop Infrastructure”, Yingpei Lin (Huawei)
- ✧ 11-14/0059r1, “Integrated System Level Simulation”, Jun Luo (Huawei)
- ✧ 11-14/0063r0, “Design Challenges for 802.11 HEW Radios”, Yu Cai (Huawei)
- ✧ 11-14/0070r0, “Joint MAC/PHY Evaluation Methodology”, Kaushik Josiam (Samsung)
- ✧ 11-14/0082r0, “Improved Spatial Reuse Feasibility – Part I”, Ron Porat (Broadcom)
- ✧ 11-14/0083r0, “Improved Spatial Reuse Feasibility – Part II”, Ron Porat (Broadcom)
- ✧ 11-14/0086r2, “Outdoor AP Measurement in Tokyo”, Tsugu Aoki (Toshiba)
- ✧ 11-14/0088r0, “Intra-Vehicular Channel Model”, Igal Kotzer (General Motors)
- ✧ 11-14/0095r0, “OFDM-IDMA Uplink Communication”, Leonardo Lanante (Kyushu Inst. Of Tech)
- ✧ 11-14/0107r0, “HEW Evaluation Metrics”, Yonggang Fang (ZTETX)
- ✧ 11-14/0116r1, “Long-Term SINR Calibration for System Level Simulation”, Yakun Sun (Marvell)
- ✧ 11-14/0117r0, “PHY Abstraction for HEW System Level Simulation”, Yakun Sun (Marvell)
- ✧ 11-14/0118r0, “Consideration on System Level Simulation”, Jinsoo Chio (LG Electronics)

4. The group passed motions to approve PAR and CSD.

- PAR: 11-14/0165r0, IEEE 802.11 HEW SG Proposed PAR
- CSD: 11-14/0169r0, IEEE 802.11 HEW SG Proposed CSD

Goals for the March 2014 Meeting

- Resolve comments expected from EC members and other IEEE 802 WGs
- Continue with presentations relevant to the SG topics.
  - ✧ Simulation scenarios
  - ✧ Evaluation Methodologies
  - ✧ Channel Models
  - ✧ Technology
  - ✧ etc.

Teleconferences

The group agreed to have four teleconferences before the March 2014 meeting.

- Thursday, February 6th, 2014: 20:00 – 22:00 (ET)
- Thursday, February 13th, 2014: 10:00 – 12:00 (ET)
- Thursday, February 20th, 2014: 10:00 – 12:00 (ET)
- Thursday, February 27th, 2014: 20:00 – 22:00 (ET)

November 2013 – Dallas, TX

HEW study group had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**HEW**	**HEW**
AM2		**HEW**		
PM1		**HEW**	**HEW**	**HEW**
PM2	**HEW**	**HEW**	**HEW**	**HEW**

Main documents

- Agenda: 11-13/1263r5, HEW SG November 2013 Meeting Agenda

- Closing report: 11-13/1476r1, HEW SG November 2013 Closing Report
- Draft minutes: 11-13/1465r1, November 2013 Dallas Meeting Minutes

Achievements

1. **The group approved minutes from the September 2013 Nanjing meeting and teleconferences on October 3rd and October 30th, 2013.**
   - 11-13/1117r1, September 2013 Nanjing Meeting Minutes
   - 11-13/1275r1, Minutes from the teleconference on October 3rd , 2013
   - 11-13/1303r0, Minutes from the teleconference on October 30th, 2013

2. **The group received more than 40 submissions that were categorized into three categories, i.e., (1) Channel Mode/Simulation Scenarios and Evaluation Methodologies, (2) MAC/PHY technologies and (3) PAR proposals. Following submissions were presented during the week.**
   - **Channel Models, Simulation Scenarios and Evaluation Methodologies**
     - 11-13/1001r5, "HEW SG Simulation Scenarios", Simone Merlin (Qualcomm)
     - 11-13/1305r0, "Simplification on HEW traffic models", Bill Carney (Sony)
     - 11-13/1334r5, 11-13/1335r4, "Video Traffic Modeling", Guiqing Li (Intel)
     - 11-13/1359r0, "HEW Evaluation Methodology", Ron Porat (Broadcom)
     - 11-13/1370r0, "LTE OOB Interference to 2.4 GHz Band", Yonggang Fang (ZTE TX)
     - 11-13/1376r3, "Discussions on Penetration Loss", Jianhan Liu (MediaTek)
     - 11-13/1380r0, "Outdoor Channel Model Simulation Follow-up", Hongyuan Zhang (Marvell)
     - 11-13/1383r0, "System Level Simulation Parameters", Wookbong Lee (LG Electronics)
     -
     - 11-13/1387r1, "HEW channel modeling for system level simulation", Yan Zhang (Marvell)
     - 11-13/1390r0, "PHY Abstraction for HEW System Level Simulations", Yakun Sun (Marvell)
     - 11-13/1391r0, "About SINR conversion for PHY Abstraction", Yakun Sun (Marvell)
     - 11-13/1392r0, "Methodology of Calibrating System Level Simulation Results", Yakun Sun (Marvell)
     - 11-13/1401r0, "System Level Assessments for Outdoor HEW Deployments", Kaushik Josiam (Samsung)
     - 11-13/1406r0, "Traffic Modeling for HEW Simulations", Huai-Rong Shao (Samsung)
     - 11-13/1407r0, "Simulation based study of QoE", Chao-Chun Wang (MediaTek)
     - 11-13/1412r0, "How to use simulation scenarios in HEW", Minho Cheong (ETIR)
     - 11-13/1419r1, "Modifications to ITU Channel Model to Support 160MHz bandwidth of operation", Shahrnaz Azizi (Intel)
     - 11-13/1420r1, "HEW Considerations for the Vehicular Environment", Igal Kotzer (General Motors)
     - 11-13/1438r0, "Traffic Observation and Study on Virtual Desktop Infrastructure", Phillip Barber (Huawei Technologies)
     - 11-13/1456r1, "Considerations on WFA feedback", Simone Merlin (Qualcomm)

   - **MAC/PHY Technologies**
     - 11-13/1325r5, "IEEE 802.11ai overview", Hiroshi Mano (ATRD), chair of TGai
     - 11-13/1349r0, "Access Control Enhancement", Katsuo Yunoki (KDDI)
     - 11-13/1375r1, "Summary and Discussions of Proposals on Potential PHY Technologies in HEW", Jianhan Liu (MediaTek)
     - 11-13/1377r0, "DL efficiency enhancement in high density network", Kiseon Ryu (LG Electronics)
     - 11-13/1382r0, "Discussion on OFDMA in HEW", Jinsoo Choi (LG Electronics)
     - 11-13/1386r2, "Improving WLAN Efficiency and QoE – A Top Down Approach", Veli-Pekka Kentonen (7 Signals)

- 11-13/1388r0, “UL MU-MIMO transmission”, Jinyoung Chun (LG)
- 11-13/1395r2, “Simultaneous Transmission Technologies for HEW”, Koichi Ishihara (NTT)
- 11-13/1409r0, “Dual Wi-Fi: Dual Channel Wi-Fi for Congested WLANs with Asymmetric Traffic Loads”, Adriana Flores (Rice University)
- 11-13/1421r1, “STR Radios and STR Media Access”, Phillip Levis (Stanford University)
- 11-13/1440r0, “Argos | Practical Masive-MIMO”, Clayton Shepard (Rice University)

- **PAR proposals**
  - 11-13/1331r2, “Proposed direction and priorities for HEW”, Guido R. Hiertz (Ericsson)
  - 11-13/1333r0, “Power Efficiency PAR Requirements”, Chris Hansen (Covariant)
  - 11-13/1366r3, “Some propositions to progress towards the PAR definition”, Laurent Cariou (Orange)
  - 11-13/1361r0, “Discussion to derive HEW Functional Requirements”, Yasunao Misawa (KDDI)
  - 11-13/1389r1, “Discussion on HEW PAR”, HanGyu Cho (LG Electronics)
  - 11-13/1397r0, “Renewing 2.4 GHz”, Brian Hart (Cisco Systems)
  - 11-13/1398r0, “Requirements for HEW”, Akira Yamada (NTT DOCOMO)
  - 11-13/1404r0, “Some Thoughts on PAR”, and 11-13/1405r0, “HEW PAR”, Eldad Perahia (Intel)
  - 11-13/1450r0, “Summary of PAR Discussions”, Osama Aboul-Magd (HEW SG chair)
  - 11-13/1470r1 and 11-13/1471r1, “802.11 HEW proposed basis for PAR discussion”, Laurent Cariou (Orange)

3. **Discussed the WFA feedback on prioritization of the usage cases and approved a liaison letter back to WFA.**
   - Feedback from Wi-Fi Alliance:
     - 11-13/1443r0, Liaison from Wi-Fi Alliance - HEW Use Cases
   - Approved a liaison document to Wi-Fi Alliance:
     - 11-13/1446r0, IEEE 802.11 Liaison to WFA on Prioritization of High Efficiency WLAN (HEW) Usage Scenarios

4. **Started the discussion on the PAR.**
5. **The group passed a motion to extend the study group by 136/0/2.**

Goals for the January 2014

- Progress the work on the PAR and 5C.

Teleconferences

The group agreed to have three teleconferences before the January 2014 meeting.

- Wednesday, December 4th, 2013: 10:00 – 12:00 (ET)
- Wednesday, December 18th, 2013: 20:00 – 22:00 (ET)
- Wednesday, January 8th, 2014: 10:00 – 12:00 (ET)

September 2013 – Nanjing, China

HEW study group had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**HEW**

AM2		**HEW**		
PM1			**HEW**	**HEW**
PM2	**HEW**	**HEW**	**HEW**	
Evening	**HEW**	**HEW**		

Main documents

- Agenda: 11-13/0951r7
- Closing report: 11-13/1231r1
- Draft minutes: 11-13/1117r1

Achievements

1. **The group approved minutes from the Geneva meeting and teleconference on August 28th, 2013.**
   - 11-13/0861r1, Minutes from face-to-face meeting in Geneva, July 2013
   - 11-13/1003r0, Minutes from the teleconference on August 28th, 2013
2. **50 submissions in the following categories were received and presented during the week.**
   - **Channel Models (CM)**
     - 11-13/0996r2, "Outdoor Channel Model Candidates for HEW", Kaushik Josiam (Samsung)
     - 11-13/1113r0, "Channel Modeling for Dense Wi-Fi Environments", Minho Cheong (ETRI)
     - 11-13/1125r3, "HEW Outdoor Channel Model Discussions", Hongyuan Zhang (Marvell)
     - 11-13/1135r4, "Summary of HEW Channel Models", Jianhan Liu (MediaTek)
     - 11-13/1146r1, "Update on HEW Channel Model", Shahrnaz Azizi (Intel Corp)
   - **Simulation Scenarios/Simulation Methodologies (SS/SM)**
     - 11-13/1000r2, "Simulation Scenarios", Simone Merlin (Qualcomm)
     - 11-13/1001r2, "Simulation Scenarios Document Template", Simone Merlin (Qualcomm)
     - 11-13/1079r0, "Outdoor Stadium Simulation Details Discussion", Joseph Levy (InterDigital)
     - 11-13/1080r0, "Markov Modeling of the Channel for HEW System Level Simulations", Joseph Levy (InterDigital)
     - 11-13/1081r0, "HEW Simulation Methodology", Sayantan Choudhury (Nokia).
     - 11-13/1083r0, "HEW SG Unified Simulation Scenarios", David Xun Yang (Huawei)
     - 11-13/1114r1, "Simulation Scenario for unplanned Wi-Fi Network", Jae Seung Lee (ETRI)
     - 11-13/1123r1, "Capacity Simulation of High Density Indoor WLAN Systems", Filip Mestanov (Ericsson AB)
     - 11-13/1133r0, "Virtual Desktop Infrastructure (VDI)", Yingpei Lin (Huawei Technologies)
     - 11-13/1153r0, "Simulation Scenario Proposal", Laurent Cariou (Orange)
     - 11-13/1159r1, "Video Performance Requirements and Simulation Parameters", Guoqing Li (Intel)
     - 11-13/1162r1, "Video Application Categories and Characteristics", Guoqing Li (Intel)
     - 11-13/1176r0, "Some Simulation Scenarios for HEW", Reza Hedayat (Cisco)
   - **Evaluation Methodologies (EM)**
     - 11-13/1051r1, "Evaluation Methodology", Ron Porat (Broadcom)
     - 11-13-1054r1, "HEW Evaluation Metrics Suggestions", Yonggang Fang (ZTETX)
     - 11-13/1059r0, "PHY Abstraction for HEW Evaluation Methodology", Dongguk Lim (LG Electronics)
     - 11-13/1131r0, "PHY Abstraction for HEW System Level Simulation", Jiayin Zhang (Huawei Technologies)
     - 11-13/1137r2, "The Definition of Performance Metrics for HEW", Haui-Rong Shao (Samsung)
     - 11-13/1144r1, "Simplified Traffic Model Based on Aggregated Network Statistics", William Carney (Sony)
     - 11-13/1158r0, "Video Traffic and Applications for HEW", William Carney (Sony)
   - **Functional Requirements (FR)**
     - 11-13/1097r0, "Functional Requirements for HEW PAR", Minho Cheong (ETRI)

- 11-13/1116r0, “Discussion on HEW Functional Requirements”, Jinsoo Choi (LG Electronics)

- **MAC/PHY Technologies (TECH)**
  - 11-13/1046r2, “Discussion for Massive MIMO for HEW”, Zhigang Wen (BUPT)
  - 11-13/1056r1, “Enhancement on resource utilization in OBSS environment”, Giwon Park (LG Electronics)
  - 11-13/1058r0, “Efficient wider bandwidth operation”, Kiseon Ryu (LG Electronics)
  - 11-13/1061r0, “Multicast Transmission for HEW”, Jeongki Kim (LG electronics)
  - 11-13/1073r1, “Access Control Enhancement“, Katsuo Yunoki (KDDI Labs)
  - 11-13/1074r0, “Occupied air time calculation for doc.1073r0”, Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-13/1077r1, “EDCA Enhancements for HEW”, Hui Zhao (BUPT)
  - 11-13/1089r1, “D2D Technology for HEW”, Xiang Gao (BUPT)
  - 11-13/1090r2, “Non-linear pre-coding MIMO Scheme for next generation WLAN”, Xiang Gao (BUPT)
  - 11-13/1105r0, “Discussion on Access Mechanism for HEW”, Meng Yang (CATR)
  - 11-13/1122r1, “Considerations for In-Band Simultaneous Transmit and Receive (STR) feature in HEW”, Rakesh Taori (Samsung Electronics)
  - 11-13/1126r0, “Beamforming under OBSS Interference”, Hongyuan Zhang (Marvell)
  - 11-13/1168r0, “Requirements on WLAN Ad Push”, Hui Tian (BUPT)
  - 11-13/1169r0, “WLAN Cellular Offload in High Speed Moving Environment”, Hui Tian (BUPT)
  - 11-13/1154r0, “DL-MU-MIMO Transmission with Unequal Bandwidth”, Yongming Huang (Southeast University)
  - 11-13/1155r0, “Space Division Multiplex for OBSS Interference Suppression”, Yongming Huang (Southeast University)
  - 11-13/1156r0, “TXOP Redundancy NAV Clear”, Yongming Huang (Southeast University)
  - 11-13/1157r3, “Feasibility of Coordination Transmission for HEW”, Yunzhou Li (Tsunghua University)

- **General (GEN)**
  - 11-13/1057r0, “Legacy support on HEW frame structure”, Wookbong Lee (LG electronics)
  - 11-13/1100r0, “HEW SG Progress Review”, Osama Aboul-Magd (HEW SG)
  - 11-13/1115r0, “Possible vision of the HEW-driven Wi-Fi 2020”, Minho Cheong (ETRI)
  - 11-13/1163r0, “PAR and 5C: Comments based on 11n”, Sean Coffey (RealTek)
  - 11-13/1164r1, “Some PAR and 5C Requirements”, Paul Lambert (Marvell)

3. Straw Polls

Several straw polls were conducted to sense the group consensus on topics related to simulation scenarios, evaluation methodologies and channel models.

4. Timeline

The group reviewed the timeline. No changes.

5. Teleconferences

The HEW SG agreed to have three teleconferences before the November 2013 session.

- Wednesday, October 9th, 2013: 10:00 – 12:00 (ET)
- Wednesday, October 17th, 2013: 00:01 – 02:00 (ET)
- Wednesday, October 30th, 2013: 10:00 – 12:00 (ET)

Goals for the November 2013

- Hear presentations addressing SS/SM/EM/FR/CM/TECH
  - Attempt to consolidate documents related to the above areas of discussion.
  - Priority will be given to presentations with consolidated views
- Start discussion on PAR related issues

- Motion for SG extension
- WFA feedback on the usage cases

July 2013 – Geneva, Switzerland

HEW study group had nine sessions during the week.

Main documents

- Agenda: 11-13/0664r5
- Closing report: 11-13/0922r0
- Draft minutes: 11-13/0861r0

Achievements

1. **The group approved minutes from the face-to-face meeting in Waikoloa, HI and teleconferences held on June 5th and June 19th.**
   - 11-13/0560r2, May 2013 Waikoloa meeting minutes
   - 11-13/0663r1, Teleconference minutes 20130605
   - 11-13/0704r0, Teleconference minutes 20130619
2. **The group received over 35 submissions in areas of (1) Usage Models/Use Cases, (2) Functional Requirements, (3) Simulation Scenarios and Evaluation Methodology, (4) MAC/PHY techniques as listed below.**
   - **Usage Models/Use Cases**
     - 11-13/0657r3, "HEW SG usage models and requirements - Liaison with WFA" Laurent Cariou (Orange)
     - 11-13/0795r0, "HEW Usage Scenarios Categorization", Eldad Perahia (Intel)
     - 11-13/0802r1, "Proposed re-categorization of the HEW usage models", Yasuhiko Inoue (NTT)
     - 11-13/0761r0, "Interference Control Use Case for HEW", Fang Xie (CMCC)
     - 11-13/0836r0, "HEW Usage Models for Backhauls and Floor Automation", Minho Cheong (ETRI)
   - **Functional Requirements**
     - 11-13/0787r0, "Follow up requirements", Wu Tianyu (Huawei)
     - 11-13/0850r0, "Quantitative QoE Requirements for HEW", Huai-Rong Shao (Samsung)
     - 11-13/0798r1, "Functional Requirements in HEW", Jinsoo Choi (LG Electronics)
     - 11-13/0840r1, "HEW Functional Requirements Follow-up (Preliminary Version for Study Group discussions)", Minho Cheong (ETRI)
   - **Simulation Scenarios and Evaluation Methodology**
     - 11-13/0723r1, "HEW SG Evaluation Methodology Overview", Minyoung Park (Intel)
     - 11-13/0756r1, "HEW Channel Model", Vinko Erceg (Broadcom)
     - 11-13/0858r0, "Enhanced Channel Model for HEW", Shahrnaz Azizi (Intel)
     - 11-13/0728r1, "Network Optimization for Expected HEW Traffic Patterns", Bill Carney (Sony)
     - 11-13/0869r0, "Simulation scenarios and metrics for HEW", Thomas Derham (Orange)
     - 11-13/0872r1, "Clarifications on outdoor deployments", Laurent Cariou (Orange)
     - 11-13/0847r1, "Evaluation Criteria and Simulation Scenarios" Klaus Doppler (Nokia)
     - 11-13/0786r0, "Discussion on System Level Simulation Methodology" Wu Tianyu (Huawei)
     - 11-13/0757r1, "Evaluation Methodology and Simulation Scenarios" Nihar Jindal (Broadcom)
     - 11-13/0805r2, "On Definition of Dense Networks and Performance Metric", Jianhan Liu (MediaTek)
     - 11-13/0800r1, "HEW Study Group Documentation", Hemanth Sampath (Qualcomm)

- 11-13/0837r0, “Consideration for HEW Evaluation Methodology”, Minho Cheong (ETRI)

- **MAC/PHY techniques**
  - 11-13/0768r0, “TD-*u*CSMA”, Riccard Scopigno (ISMB)
  - 11-13/0843r0, “Further Evaluation on outdoor Wi-Fi”, Wookbong Lee (LG Electronics)
  - 11-13/0852r0, “Potential approach to improve WLAN BSS edge performance”, Juho Pirskanen (Renesas Mobile)
  - 11-13/0871r0, “Discussion on Potential Techniques for HEW”, Timo Koskela (Renesas Mobile)
  - 11-13/0877r0, “HEW Beamforming Enhancements”, James Wang (MediaTek)
  - 11-13/0764r1, “Full-duplex Technology for HEW”, Andre Bourdoux (IMEC)
  - 11-13/0765r2, “Full-duplex is an emerging radio paradigm that has the potential to improve the efficiency of future WLANs”, Hongliang Bian (China Telecom)
  - 11-13/0712r1, “A Brief Time of History”, Larry Taylor (DTC)
  - 11-13/0801r1, “Issues of Low Rate Transmissions”, Akira Kishida (NTT)
  - 11-13/0758r0, “Possible Approaches for HEW”, Katsuo Yunoki (KDDI Labs)
  - 11-13/0849r1, “New Techniques: Enabling Real World Improvement By Exposing Internal MAC state”, Brian Hart (Cisco)
  - 11-13/0854r1, “Consideration on Efficiency Enhancement”, SangHyun Chang (Samsung)
  - 11-13/0865r2, “Video Data Rate for HEW”, Huai-Rong Shao (Samsung)
  - 11-13/0878r0, “Efficiency enhancement for dense WLAN environment”, Jeongki Kim (LG Electronics)

3. **The group approved document 11-13/0657r6 as HEW SG initial draft of Usage Models and to send it to Wi-Fi Alliance asking for prioritization of the use cases and additional feedbacks.**

4. **The group also approved a liaison letter to the Wi-Fi Alliance contained in the document 11-13/902r1.**

5. **The group passed motion to extend the SG.**

6. **The group discusses the timeline.**
   - May 2013: Initial meeting
   - July 2013: Presentations, SG extension
   - September 2013: Presentations
   - November 2013: Presentations, Initial PAR & 5C, SG extension
   - January 2014: Presentations, Final version of PAR and 5C, WG approval
   - March 2014: Presentations, EC approval of PAR and 5C
   - May – June 2014: NesCom approval
   - July 2014: TG starts

7. **Teleconferences**

   The group agreed to have two teleconferences before the September 2013 meeting.
   - Wednesday, August 7th, 2013: 10:00 – 12:00 (ET)
   - Wednesday, August 28th, 2013: 20:00 – 22:00 (ET)

Next steps

During the September 2013 meeting, the HEW SG continues discussions on issues related to:
- Usage Models/Use Cases
- Functional Requirements
- Feasibility
- Scope and Process

May 2013 – Waikoloa, HI

Main documents

- Agenda: 11-13/0400r4
- Closing report: 11-13/0624r0
- Draft minutes: 11-13/0560r2

Achievements

1. The group decided leadership structure to have one chairperson and one secretary.

Ÿ Osama Aboul-Magd (Huawei Technologies) was elected as the chair of the HEW SG.

Ÿ Yasuhiko Inoue (NTT) was elected as the recording secretary of the HEW SG.

2. The group received 22 submissions as listed below.

Ÿ **Usage Models/Use Cases:**

- ✧ 11-13/0514r0, "HEW Usage Scenarios and Applications", Eldad Perahia (Intel)
- ✧ 11-13/0538r0, "Dense apartment building use case for HEW", Klaus Doppler (Nokia)
- ✧ 11-13/0554r0, "Use Cases", Minho Cheong (ETRI)
- ✧ 11-13/0567r0, "Proposed HEW Usage Models", Yasuhiko Inoue (NTT)
- ✧ 11-13/0527r2, "Usage Models for Next Generation", David Xun Yang (Huawei) and James Wang (MediaTek)
- ✧ 11-13/0534r1, "Direction and Use Cases for HEW", HanGyu Cho (LG Electronics)
- ✧ 11-13/0563r0, "D2D Technology for HEW", Zhanji Wu (BUPT) – not presented

Ÿ **Problem Statements:**

- ✧ 11-13/0505r0, "MAC Efficiency Analysis for HEW SG", Minyoung Park (Intel)
- ✧ 11-13/0545r1, "WLAN QoE, End User Perspective Opportunities to Improve", Veli-Pekka Ketonen (7 signals)
- ✧ 11-13/0523r2, "Understanding Current Situation of Public Wi-Fi Usage – Possible Requirements for HEW –", Katsuo Yunoki (KDDI Labs)
- ✧ 11-13/0539r0, "Efficient Frequency Spectrum Utilization", Yongho Seok (LG Electronics)
- ✧ 11-13/0544r3, "Discussions on 11ac PHY efficiency", Jianhan Liu (MediaTek)
- ✧ 11-13/0536r0, "HEW SG PHY Considerations For Outdoor Environment", Wookbong Lee (LG Electronics)
- ✧ 11-13/0576r3, "Performance Evaluation for 11ac", Wu Tianyu (Huawei Technologies)
- ✧ 11-13/0556r1, "Wi-Fi interference measurements in Korea – Part 1", Minho Cheong (ETRI)
- ✧ 11-13/0549r0, "A perspective on what any High Efficiency Wireless TG should and should not do", Brian Hart (Cisco Systems)

Ÿ **Requirements:**

- ✧ 11-13/0524r2, "HEW Finctional Requirements", Wu Tianyu (Huawei Technologies)
- ✧ 11-13/0555r2, "Considerations on Functional Requirements for HEW", Minho Cheoung (ETRI)

Ÿ **Scenarios and Metrics**

- ✧ 11-13/0503r0, "Discussion on Basic Technical Aspects for HEW", Juho Pirskanen (Renesas Mobile)
- ✧ 11-13/0542r0, "HEW Scenarios and Goals", Simone Merlin (Qualcomm)
- ✧ 11-13/0486r1, "HEW – Metrics, Targets and Simulation Scenarios", Ron Porat (Broadcom)
- ✧ 11-13/0520r1, "HEW scenarios and evaluation metrics", Thomas Derham (Orange)

Ÿ **Technical Feasibility**

- ✧ 11-13/0558r1, "Coexistence and Optimization of Wireless LAN: Time, Frequency, Space, Power, and Load", Jim Lansford (CSR)

3. **Liaison to the Wi-Fi Alliance**
   - Ÿ The group agreed to ask the Wi-Fi Alliance for input about priority of the use cases.
   - Ÿ Laurent Cariou (Orange) volunteers to develop the use case document.

4. **Project planning**
   - Ÿ The group discussed about the project plan based on the submission 11-13/0616r2 by Phil Barber (Huawei)
   - Ÿ Discussion to be continued in the July meeting.

5. **Teleconferences**
   - Ÿ The group agreed to have two teleconferences before the July 2013 Plenary to develop a use case document to be shared with the Wi-Fi Alliance.
     - ✧ June 5th: 10:00 – 12:00 (ET)
     - ✧ June 19th: 20:00 – 22:00 (ET)

Next Steps

- During July 2013 session, the HEW SG will continue discussions on:
  - ➢ Usage Cases
  - ➢ Functional Requirements
  - ➢ Feasibility
  - ➢ Scope and Process

IEEE 802.11 WG LETTER BALLOTS

Note - percentage results are rounded to the nearest integer

Note - Links to documents in the voting members' private area (such as drafts) will stop functioning once the project is complete, e.g., whe its output document has been published by the IEEE-SA.

COMPLETED BALLOTS, from LB101 onwards

Letter ballot results up to LB100 can be found here. Ballot results can also be found in this spreadsheet.

Status of Project IEEE 802.11ax

High Efficiency WLAN (HEW)

Osama Aboul-Magd (Huawei Technologies), Chair
Simone Merlin (Qualcomm), Vice Chair
Ron Porat (Broadcom), Vice Chair
Yasuhiko Inoue (NTT), Secretary
Robert Stacy (Intel), Technical Editor

Background

In May 2013, the High Efficiency WLAN Study Group (HEW SG), a study group within IEEE 802.11 working group had started its activity to consider the improvement of spectrum efficiency to enhance the system throughput/area in high density scenarios of APs and/or STAs.

The study group was created based on the following straw poll and motion:
<Straw Poll>
Do you support starting a new study group called “high efficiency WLAN” to enhance 802.11 PHY and MAC in 2.4 and 5GHz with a focus on:

- Improving spectrum efficiency and area throughput
- Improving real world performance in indoor and outdoor deployments
  - in the presence of interfering sources, dense heterogeneous networks
  - in moderate to heavy user loaded APs

<Motion>
Request an approval by IEEE 802 LMSC to form an 802.11 Study Group to consider High-efficiency WLAN [as described in doc 11-13-0339r2] with the intent of creating a PAR and five criteria.

The HEW SG has successfully developed PAR and CSD documents and the project 802.11ax has started in May 2014.

Task Group Documents – the latest revisions (as of March 30th, 2015)

- 11-14-0165-01 PAR and 11-14-0169-01 CSD
- 11-14-0938-04 TGax Selection Procedure
- 11-14-0980-16 TGax Simulation Scenarios
- 11-14-0571-12 TGax Evaluation Methodology
- 11-14-0882-04 TGax Channel Models
- 11-14-1009-02 TGax Functional Requirements
- 11-15-0132-17 TGax Specification Framework

September 2016 – Warsaw, Poland

The TGax had 11 sessions during the week.
Six out of eleven sessions were assigned to the ad hoc group sessions.

Main documents

- TGax Agenda: 11-16-1077-06, TGax September 2016 Meeting Agenda
  - TGax PHY ad hoc agenda and motions: 11-16-1246-06, TGax PHY Ad Hoc Sep 2016 Meeting Agenda
    - TGax PHY ad hoc meeting minutes: 11-16-1276-00, September 2016 Warsaw PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc agenda: 11-16-1247-02, TGax MAC Ad Hoc September 2016 Meeting Agenda
    - TGax MAC ad hoc meeting minutes: 11-16-1252-01, September 2016 Warsaw TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc agenda: 11-16-1244-01, TGax MU Ad-hoc Agenda September 2016
    - TGax Multi-User ad hoc meeting minutes: 11-16-1275-00, IEEE 802.11 TGax, MU Ad hoc September 2016 TGax Meeting Minutes
  - TGax Spatial Reuse ad hoc agenda: 11-16-1245-02, TGax Spatial Reuse Ad-hoc Agenda September 2016 Meeting
    - TGax Multi-User ad hoc meeting minutes: 11-16-1300-00, TGax Spatial Reuse ad hoc group meeting minutes
- Closing report: 11-16-1284-00, TGax September 2016 Closing Report
- Draft TGax minutes: 11-16-1231-00, IEEE 802.11 TGax September 2016 Warsaw Meeting Minutes

Achievements

1. Work Completed

- **TGax received about 90 submissions.**
  - Number of submissions: PHY/MAC/MU/SR/TG = 28/43/12/9/6.

  The TG completed the discussion of all the submissions.
  Exact count of resolved CIDs will be published by the Editor.
- **The TG editor is planning to have draft revision D0.5 ready based on resolved comments.**

2. Technical Presentations

90 technical submissions were received.
Here is the list of submissions:

- **Submissions – MAC (43 submissions)**
  - 11-16-0864, "Comment Resolutions on Clause 6 & 8 comments," Yasuhiko Inoue (NTT)
  - 11-16-0869, "Misc. TWT comment resolution," Zhou Lan (Broadcom)
  - 11-16-0881, "Comment resolution on ROMI," Jayh Park (LG Electronics)
  - 11-16-0882, "Comment resolution on TOMI," Alfred Asterjadhi (Qualcomm)
  - 11-16-0883, "Comment resolution for CID152," JayhPark (LG Electronics)
  - 11-16-0884, "Spec. Text for HE Operation element and AID Assign Rule," Jianhan Liu (MediaTek)
  - 11-16-0913, "SU Multi-TID Rules," Jarkko Kneckt (Apple)
  - 11-16-0917, "Text for TID value of ALL ACK signaling," Woojin Ahn (WILUS)

- ✧ 11-16-0918, “Discussions on Partial BSS Color,” Geonjung Ko (WILUS)
- ✧ 11-16-0924, “NAV resetting with RTS/MU-RTS,” Weiming Xing (ZTE)
- ✧ 11-16-0925, “Spec text on NAV resetting with RTS/MU-RTS,” Weiming Xing (ZTE)
- ✧ 11-16-0941, “CR HE Fragmentation - part 2,” Ming Gan (Huawei)
- ✧ 11-16-0942, “CR Service Field,” Ming Gan (Huawei)
- ✧ 11-16-0960, “AP access procedure for UL MU operation,” Jinsoo Ahn (Yonsei Univ.)
- ✧ 11-16-0961, “Consideration on Multi-STA BlockAck Optimization,” Hanseul Hong (Yonsei Univ.)
- ✧ 11-16-0962, “EDCA rules-follow up 1,” Jing Ma (NICT)
- ✧ 11-16-0963, “EDCA rules-follow up 2,” Jing Ma (NICT)
- ✧ 11-16-0998, “Rules for 2 EDCA parameters,” Laurent Cariou (Intel)
- ✧ 11-16-1110, “Comment Resolution on subclause 10.22.2 and 10.22.4,” Yongho Seok (Newracom)
- ✧ 11-16-1131, “Comment Resolution on MU Ack Policy,” Yongho Seok (Newracom)
- ✧ 11-16-1154, “MAC CR for CID 966,” Weiming Xing (ZTE)
- ✧ 11-16-1157, “Comment resolution on SU_MU ACK procedures,” Jeongki Kim (LG Electronics)
- ✧ 11-16-1173, “Comment Resolution on Two NAVs - Part II,” Po-Kai Huang (Intel)
- ✧ 11-16-1180, “Proposed text changes for MU EDCA parameters,” Laurent Cariou (Intel)
- ✧ 11-16-1181, “CW value after UL MU procedure,” Woojin Ahn (WILUS)
- ✧ 11-16-1182, “HE Sounding Feedback Segmentation,” Liwen Chu (Marvell)
- ✧ 11-16-1183, “MU RTS CTS data rate comment,” Liwen Chu (Marvell)
- ✧ 11-16-1184, “A-MPDU 25.10 25.10.2 comment resolution, ” Liwen Chu (Marvell)
- ✧ 11-16-1185, “A-MPDU 25.10.3 comment resolution,” Liwen Chu (Marvell)
- ✧ 11-16-1186, “A-MPDU Content Comment Resolution,” Liwen Chu (Marvell)
- ✧ 11-16-1188, “MAC Capabilities in HE Capabilities IE,” Alfred Asterjadhi (Qualcomm)
- ✧ 11-16-1189, “CC0-TWT operation,” Alfred Asterjadhi (Qualcomm)

Goals for November 2016

- **Continue with Comment Resolutions.**
- **Prepare draft D1.0 and start a WG LB**

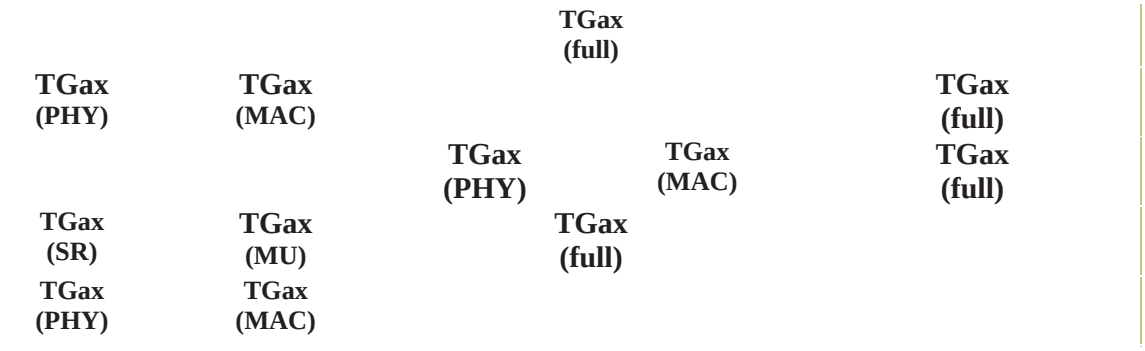
Teleconferences

- **Weekly teleconferences are planned after July 2016 session.**
  - ✧ **Thursday, September 29th, October 20th 10:00 – 12:00 (ET).**
  - ✧ **Thursday, October 13th: 20:00 – 22:00 (ET)**
  - ✧ **Thursday, October 27th and November 17th; 10:00 – 12:00 (ET)**

July 2016 – San Diego, CA

The TGax planned to have 10 sessions during the week.
Four out of ten sessions were assigned to the ad hoc group sessions.

Tuesday Wednesday Thursday



Main documents

- TGax Agenda: 11-16-0779-06, TGax July 2016 Meeting Agenda
  - TGax PHY ad hoc agenda and motions: 11-16-1007-03, TGax PHY Ad Hoc July 2016 Meeting Agenda
    - TGax PHY ad hoc meeting minutes: 11-16-1040-00, IEEE 802.11 TGax July 2016 San Diego PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc agenda: 11-16-0997-01, TGax MAC Ad Hoc July 2016 Meeting Agenda
    - TGax MAC ad hoc meeting minutes: 11-16-1000-02, IEEE 802.11 TGax, MAC Ad hoc July 2016 San Diego TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc agenda: 11-16-1012-00, TGax MU Ad-hoc Agenda July 2016 Agenda
    - TGax Multi-User ad hoc meeting minutes: 11-16-1027-00, IEEE 802.11 TGax, MU Ad hoc July 2016 TGax Meeting Minutes
  - TGax Spatial Reuse ad hoc agenda: 11-16-1016-01, TGax Spatial Reuse Ad-hoc Group Agenda
    - TGax Multi-User ad hoc meeting minutes: 11-16-1022-00, TGax Spatial Reuse ad hoc group meeting minutes

- Closing report: 11-16-1051-00, TGax July 2016 Closing Report
- Draft TGax minutes: 11-16-0967-00, IEEE 802.11 TGax July 2016 San Diego Meeting Minutes

Achievements

4. Work Completed

- **TGax received about 90 submissions.**
  - Number of submissions: PHY/MAC/MU/SR/TG = 26/34/12/10/8.

  Most of the submissions are proposed resolutions for the comments on the draft 0.1.
  A number of submissions were proposing new text to be added to the draft.
  - **A long list of submissions are yet to be considered.**
- **Approved the resolutions of about 230 comments discussed during telecons.**
- **Approved the resolutions of about 230 comments discussed during telecons.**
  - **Exact count of resolved CIDs will be published by the Editor.**
- **The TG editor is planning to have draft revision D0.3 ready based on resolved comments.**

5. Technical Presentations

90 technical submissions were received.
Here is the list of submissions:

- **Submissions – PHY (26 submissions)**
  - 11-16-0816, "Comment Resolution for CID 2183," Daewon Lee (Newracom)
  - 11-16-0872, "CR HE-SIG-A Part II," Ross Jian Yu (Huawei Technologies)
  - 11-16-0873, "CR HE-SIG-A Part I," Ross Jian Yu (Huawei Technologies)
  - 11-16-0891, "LDPC for 1024QAM," Hongyuan Zhang (Marvell)
  - 11-16-0892, "Spec Text on LDPC for 1024QAM," Hongyuan Zhang (Marvell)
  - 11-16-0893, "11ax Extended Range PPDU," Bin Tian (Qualcomm)

- 11-16-0894, "HE-LTF Capabilities," Hongyuan Zhang (Marvell)
- 11-16-0895, "Spec Text for HE-LTF Capabilities," Hongyuan Zhang (Marvell)
- 11-16-0896, "11ax Beamformee Capabilities," Hongyuan Zhang (Marvell)
- 11-16-0897, "Spec Text for Beamformee Capabilities," Hongyuan Zhang (Marvell)
- 11-16-0898, "BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
- 11-16-0899, "Spec Text for BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
- 11-16-0900, "PHY Comment Resolution for CID 1052 and 2519," Bin Tian (Qualcomm)
- 11-16-0903, "Gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
- 11-16-0904, "Proposed text for gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
- 11-16-0906, "RU restriction on 20MHz operating STAs," Joonsuk Kim (Apple)
- 11-16-0908, "CR - proposed text on RU restriction of 20MHz STAs," Joonsuk Kim (Apple)
- 11-16-0910, "Minimum Occupied Bandwidth," Ron Porat (Broadcom)
- 11-16-0914, "Bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
- 11-16-0915, "Text for bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
- 11-16-0920, "PHY comment resolution for CID 1659,493,494," Xiaogang Chen (Intel)
- 11-16-0922, "PHY CR 1024 QAM," Sriram Venkateswaran (Broadcom)
- 11-16-0923, "PHY CR DCM Constellation Mapping," Sriram Venkateswaran (Broadcom)
- 11-16-0928, "CR on Section 26.3.9.8 - HE-SIG-B," Kaushik Josiam
- 11-16-0937, "11ax Comment Resolutions for Clauses 26.3.2-26.3.9.3-26.3.9.4-26.3.9.5-26.3.10.2- 26.3.10.13," Rui Cao (Marvell)
- 11-16-0964, "Considerations on MAC-PHY interactions during SR operations," Jing Ma (NICT)

- **Submissions – MAC (34 submissions)**
  - 11-16-0828, "HE Fragmentation - part 1," Alfred Asterjadhi (Qualcomm)
  - 11-16-0829, "Comment Resolution for Section 10.24.10 Block Ack/GCR block ack," Reza Hedayat (Newracom)
  - 11-16-0844, "CC0-Intra_PPDU_PS," Alfred Asterjadhi (Qualcomm)
  - 11-16-0856, "Issue of Buffer Status reporting," Stephane Baron (Canon)
  - 11-16-0860, "comment resolution on A-MPDU format, » Yongho Seok (Newracom)
  - 11-16-0861, "comment resolution on mu acknowledgment procedure," Yongho Seok (Newracom)
  - 11-16-0862, "comment resolution on subclause 25.11," Yongho Seok (Newracom)
  - 11-16-0864, "d0.1 comment resolution on clause 6," Yasuhiko Inoue (NTT)
  - 11-16-0867, "CIDs for CIDs: Section 9.3.1.9.3 Compressed BA format," George Cherian (Qualcomm)
  - 11-16-0868, "CIDs for Section 9.3.1.9.7 Multi STA BAs, " George Cherian (Qualcomm)
  - 11-16-0869, "Comment resolution section 9.3 TWT," Zhou Lan (Broadcom)
  - 11-16-0871, "Trigger Frame Per User Info Order," Zhou Lan (Broadcom)
  - 11-16-0877, "Comment resolution on CID 783 (TXOP Duration field format)," Jeongki Kim (LG Electronics)
  - 11-16-0878, "Comment resolution on CID 782 (Intra-PPDU PS)," Jeongki Kim (LG Electronics)
  - 11-16-0881, "Comment resolution on ROMI," Jayh Park (LG Electronics)
  - 11-16-0882, "Comment resolution on TOMI," Jayh Park (LG Electronics)
  - 11-16-0883, "Comment resolution for CID 152," Jayh Park (LG Electronics)

6. Timeline

- **May 2014: start of the TG**
- **Nov. 2014: First draft of the TG SFD was approved**
- **Jan. 2016: proposed TG draft**
- **March 2016: Draft D0.1 was approved and CC started**
- **September 2016: Draft 1.0 and WG letter ballot**
- **March 2017: Draft 2.0 and recirculation**
- **July 2017: MDR (Mandatory Document Review)**
- **November 2017: Formation of SB pool**
- **March 2018: Sponsor Ballot**
- **December 2018: RevCom**

Goals for September 2016

- **Continue with Comment Resolutions.**

Teleconferences

- **Weekly teleconferences are planned after July 2016 session.**
  - ✧ **Thursday, August 4th; 20:00 – 22:00 (ET) →Approved during May 2016 meeting.**
  - ✧ **Thursday, August 11th, 25th, and September 8th: 10:00 – 12:00 (ET)**
  - ✧ **Thursday, August 18rd, September 1st, and 22nd; 20:00 – 22:00 (ET)**

May 2016 – Waikoloa, HI

The TGax planned to have 10 sessions during the week.
Six out of ten sessions were assigned to the ad hoc group sessions.

	Tuesday		Wednesday		Thursday
	TGax (PHY)	TGax (MAC/SR)			TGax (full)
			TGax (PHY)	TGax (MAC/SR)	
Gax C/SR)	TGax (PHY)	TGax (MU)	TGax (MAC)	TGax (MAC/SR)	TGax (full)
Gax MU)		TGax (full)			

Main documents

- TGax Agenda: 11-16-0512-04, TGax May 2016 Meeting Agenda
  - TGax PHY ad hoc agenda and motions: 11-16-0693-03, TGax PHY Ad Hoc May 2016 Meeting Agenda
    - TGax PHY ad hoc meeting minutes: 11-16-0755-00, TGax May 2016 Waikoloa PHY Ad Hoc Meeting Minutes
  - TGax MAC and SR ad hoc agenda: 11-16-0698-04, TGax MAC and Spatial Reuse Ad Hoc Agenda May 2016 Meeting
    - TGax MAC and Spatial Reuse ad hoc meeting minutes: 11-16-0701-00, Combined Spatial Reuse & MAC ad hoc group meeting minutes
  - TGax Multi-User ad hoc agenda: 11-16-0697-02, TGax MU Ad-hoc Agenda May 2016 Agenda
    - TGax Multi-User ad hoc meeting minutes: 11-16-0716-00, May 2016 Waikoloa TGax MU Ad hoc Meeting minutes
- Closing report: 11-16-0739-00, TGax May 2016 Closing Report
- Draft TGax minutes: 11-16-0686-00, TGax May 2016 Waikoloa Meeting Minutes

Achievements

7. Work Completed

- **TGax received about 70 submissions.**
  - Number of submissions: PHY/MAC/MUSR/TG = 33/18/9/3/6.

  Majority of the submission were requesting changes to the TG Specification Framework.
  Few submissions were addressing comment resolution mainly of the PHY clause.
- **Agreed to terminate the Specification Framework process. The frame of reference is Draft D0.1**
  - Future submissions shall bring text to continue developing the TG draft
  - The TG Technical Editor is planning to generate draft D0.2 based on outcome of this meeting
- **Approved the resolutions of about 200 comments, most of them addressing the PHY clause**
- **Revisited and accepted a new modified timeline.**

8. Technical Presentations

70 technical submissions have been covered during the week.
A list of the submissions is also available in the agenda document.

- Submissions – PHY (33 submissions)
  - 11-16/0608, "Beamforming Feedback Report Structure," Sameer Vermani (Qualcomm)
  - 11-16/0610, "CR HE-SIG-A Part I," Ross Jian Yu (Huawei Technologies)
  - 11-16/0611, "Remaining Issues in Trigger Frame Design," Sameer Vermani (Qualcomm)
  - 11-16/0613, "SIG-B Related Issues," Lochan Verma (Qualcomm)
  - 11-16/0614, "Comment Resolution on Clause 26.1.1 Part 1," Lochan Verma (Qualcomm)
  - 11-16/0615, "Comment Resolution on Clause 26.3.12 Part 1," Lochan Verma (Qualcomm)
  - 11-16/0617, "Remaining Topics in Power Control," Bin Tian (Qualcomm)
  - 11-16/0618, "11ax CSD Design," Bin Tian (Qualcomm)
  - 11-16/0619, "PAPR Reduction of HE-SIGB," Bin Tian (Qualcomm)
  - 11-16/0620, "DCM PHY Parameters," Hongyuan Zhang (Marvell)
  - 11-16/0621, "DCM Interleaver," Tianyu Wu (MediaTek)
  - 11-16/0622, "16 QAM Napping for DCM," Sudhir Srinivasa (Marvell)
  - 11-16/0623, "CR on Section 26.3.10.12," Bin Tian (Qualcomm)
  - 11-16/0625, "CR on Section 26.3.6," Bin Tian (Qualcomm)
  - 11-16/0626, "Feedback Element Compression for 802.11ax," Kome Oteri (InterDigital Communications)
  - 11-16/0633, "Left over Issues in RU Signaling for HE-SIGB," Yan Zhang (Marvell)
  - 11-16/0634, "11ax Comment Resolutions for Clauses 26.3.2," Yan Zhang (Marvell)

- ✧ 11-16/0635, "BW indication for Non-contiguous Channel Bonding," Yunbo Li (Huawei Technologies)
- ✧ 11-16/0636, "TXOP Duration field in HE-SIG-A," Jeongki Kim (LG Electronics)
- ✧ 11-16/0637, "Load balancing indication for MU-MIMO over 484-tone and larger RU in OFDMA," Ming Gan (Huawei Technologies)
- ✧ 11-16/0638, "Discussions for Non-contiguous Channel Bonding," John Son (Wilus)
- ✧ 11-16/0639, "Follow-up on HE-SIG-B user-specific field," Jinsoo Choi (LG Electronics)
- ✧ 11-16/0649, "Feedback Tone Map and Quantization," Sriram Venkateswaran (Broadcom)
- ✧ 11-16/0652, "Power scaling of 4 extra tones," Xiaogang Chen (Intel)
- ✧ 11-16/0653, "CR on section 26.3.3," Xiaogang Chen (Intel)
- ✧ 11-16/0654, "CP and LTF Options and Signaling," Ron Porat (Broadcom)
- ✧ 11-16/0655, "On MCS0 DCM Modulation and DCM Capability," Jianhan Liu (MediaTek)
- ✧ 11-16/0656, "1024QAM Modulation," Jianhan Liu (MediaTek)
- ✧ 11-16/0658, "CR on 26.3.7.1," Jinsoo Choi (LG Electronics)
- ✧ 11-16/0659, "CR on 26.3.9.9 and 26.3.5," Eunsung Park (LG Electronics)
- ✧ 11-16/0663, "CR on Secition 26.2.2," Ke Yao (ZTE)
- ✧ 11-16/0681, "Comment Resolution CID 215 2486," Daewon Lee (Newracom)
- ✧ 11-16/0682, "CR CID on PHY data field other," Daewon Lee (Newracom)

- Submissions – MAC (18 submissions)
  - ✧ 11-16/0583, "Backoff Procedure Handling Upon TF Reception," Yu Wang (Ericsson)
  - ✧ 11-16/0584, "Need of SDU Fragmentation to Reduce Padding Ratio in UL-OFDMA Transmission," Yu Wang (Ericsson)
  - ✧ 11-16/0588, "Channel State Estimation based Bidirectional Initialized Random Access," Bo Li (Northwestern Polytechnical Univ.)
  - ✧ 11-16/0590, "Multi-BSS Association for Edge Users' Throughput Improvements," Mao Yang (Northwestern Polytechnical Univ.)
  - ✧ 11-16/0616, "BlockAck generation and selection rules," Alfred Asterjadhi (Qualcomm)
  - ✧ 11-16/0627, "ROM Recovery Rules," Jayh Hyunhee Park (LG Electronics)
  - ✧ 11-16/0628, "Buffer Status Report in HE Control field," Jayh Hyunhee Park (LG Electronics)
  - ✧ 11-16/0640, "BSS Color Collision," Geonjung Ko (Wilus Institute)
  - ✧ 11-16/0641, "Regarding HE fragmentation," Woojin Ahn (Yonsei Univ.)
  - ✧ 11-16/0643, "HE Control Scheduling," Liwen Chu (Marvell)
  - ✧ 11-16/0644, "SS Allocation in Trigger," Liwen Chu (Marvell)
  - ✧ 11-16/0645, "MU Minimum MPDU Start Spacing," Liwen Chu (Marvell)
  - ✧ 11-16/0646, "HE Beamforming Feedback," Liwen Chu (Marvell)
  - ✧ 11-16/0657, "In-device Multi-radio Coexistence and UL MU operation," Robert Stacy (Intel)
  - ✧ 11-16/0673, "Multi-User EDCA," Jinsoo Ahn (Yonsei Univ.)
  - ✧ 11-16/0674, "EIFS excess problem of Acknowledgement for UL MU procedure," Hanseul Hon (Yonsei Univ.)
  - ✧ 11-16/0675, "comment resolution for CID2383," Yonggang Fang (ZTE)
  - ✧ 11-16/0684, "Channel Access Efficiency," Evgeny Khorov (IITP)

- Submissions – Multi-User (9 submissions)
  - ✧ 11-16/0582, "Random Access RU Allocation in the Trigger Frame," Evgeny Khorov (IITP)
  - ✧ 11-16/0591, "Issues related to OCW management," Patrice Nezou (Canon)
  - ✧ 11-16/0592, "Follow up on Issue related to unused UL OFDMA RUs," Stephane Baron (Canon)
  - ✧ 11-16/0648, "MU-RTS/CTS PHY Format," Po-Kai Huang (Intel)
  - ✧ 11-16/0661, "Adaptive Random Access UL OFDMA," Leonardo Lanante (Kyushu Institute of Technology)

- ✧ 11-16/0662, “Further consideration on channel access rule to facilitate MU transmission opportunity,” Jing Ma (NICT)
- ✧ 11-16/0664, “Consideration on backoff procedure for UL MU transmission,” Jing Ma (NICT)
- ✧ 11-16/0665, “Some Notes on Interference Alignment for Downlink Multi-User MIMO,” Dzevdan Kapetanovic (Ericsson)
- ✧ 11-16/0667, “Signaling of Multi-TID Aggregation Limit,” Chittabrata Ghosh (Intel)

- Submissions – Spatial Reuse (3 submission)
  - ✧ 11-16/0581, “Proposed changes to SR clause,” Soma Tayamon (Ericsson)
  - ✧ 11-16/0589, “Fractional-Backoff Procedure and Dynamic CCA,” Bo Li (Northwestern Polytechnical University)
  - ✧ 11-16/0647, “Consideration of Spatial Reuse for Trigger Frame,” Po-Kai Huang (Intel)

- Submissions – TG (6 submissions)
  - ✧ 11-16/0571, “QoS Handling of Trigger Frame,” Yu Wang (Ericsson)
  - ✧ 11-16/0597, “TG ax Indoor Enterprise Scenarios, Color, DSC and TPC,” Graham Smith (SR Technologies)
  - ✧ 11-16/0604, “Simulation-based evaluation of DSC in enterprise scenario,” Tanguy Ropitault (NIST)
  - ✧ 11-16/0609, “HE NDPA frame format,” Ross Jian Yu (Huawei)
  - ✧ 11-16/0612, “Mandatory/Optional Issues for 802.11ax,” Sameer Vermani (Qualcomm)
  - ✧ 11-16/0629, “Box 5 Calibration Results,” Marik Hsiao (MediaTek)

- ✧ Channel Model https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
- ✧ Functional Requirements https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

11. Technical Presentations

48 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- Submissions – PHY (12 submissions)
  - ✧ 11-15/1354, "SIGA fields and Bitwidths," Ron Porat (Broadcom)
  - ✧ 11-16/0203, "Signalling Support for Full Bandwidth MU-MIMO Compressed SIG-B Mode," Lei Huang (Panasonic)
  - ✧ 11-16/0319, "I-Q Decoupled OFDM: A Solution To I/Q Imbalance," Shouxing Simon Qu (Blackberry)
  - ✧ 11-16/0335, "HE-STF sequences for 160/80+80MHz," Eunsung Park (LG Electronics)
  - ✧ 11-16/0343, "Spectral Mask Discussion," Hongyuan Zhang (Marvell)
  - ✧ 11-16/0344, "PHY Padding Related Issues," Hongyuan Zhang (Marvell)
  - ✧ 11-16/0346, "11ax Pilot Sequence," Bin Tian (Qualcomm)
  - ✧ 11-16/0349, "HE-SIG-B Compression Mode," Kaushik Josiam (Samsung)
  - ✧ 11-16/0367, "Power Scaling of L-LTF and L-STF," Yakun Sun (Marvell)
  - ✧ 11-16/0389, "Sounding Design," Sriram Venkateswaran (Broadcom)
  - ✧ 11-16/0395, "Preamble transmission for Uplink OFDMA," Ming Gan (Huawei)
  - ✧ 11-16/0397, "HE-SIG-B Signaling Discussions," John Son (WILUS Institute)

- Submissions – MAC (18 submissions)
  - ✧ 11-16/0297, "Results for beacon collisions," Evgeny Khorov (IITP RAS)
  - ✧ 11-16/0345, "Simultaneous NAK for MU GCR-BA," Jinsoo Ahn (Yonsei Univ.)
  - ✧ 11-16/0347, "Fragmentation for MU frames-Follow up on parameters," Alfred Asterjadhi (Qualcomm)
  - ✧ 11-16/0352, "Considerations on MU initial link setup," Woojin Ahn (Yonsei Univ.)
  - ✧ 11-16/0353, "MU-RTS/CTS for TWT Protection," Hanseul Hong (Yonsei Univ.)
  - ✧ 11-16/0358, "Maximal A-MPDU Size," Liwen Chu (Marvell)
  - ✧ 11-16/0359, "Management ACK," Liwen Chu (Marvell)
  - ✧ 11-16/0361, "Ack Policy of UL MU frame," Jeongki Kim (LG Electronics)
  - ✧ 11-16/0362, "Multi-TID Aggregation Limit," Chittabrata Ghosh (Intel)
  - ✧ 11-16/0365, "Multi-STA BA Design," Xiaofei Wang (InterDigital)
  - ✧ 11-16/0368, "MAC padding options for legacy trigger frame," Zhou Lan (Broadcom)
  - ✧ 11-16/0369, "M-BA aggregated trigger frame," Zhou Lan (Broadcom)
  - ✧ 11-16/0377, "Sounding Sequences Clarifications," Simone Merlin (Qualcomm)
  - ✧ 11-16/0378, "Extended BA Bitmap," Simone Merlin (Qualcomm)
  - ✧ 11-16/0383, "RU Signaling in Trigger Frame," Yunbo Li (Huawei)
  - ✧ 11-16/0396, "Issues on BSS Color Bits Collision," Geonjung Ko (WILUS Institute)
  - ✧ 11-16/0399, "Considerations on Trigger Frame for Random Access Procedure," Evgeny Khorov (IITP RAS)
  - ✧ 11-16/0404, "BlockAck Bitmap," Dengyu Qiao (Huawei)

- Submissions – Multi-User (6 submissions)
  - ✧ 11-16/0331, "Power Control for Multi-User Transmission in 802.11ax," Kome Oteri (InterDigital)
  - ✧ 11-16/0333, "Issue related to unused UL OFDMA RUs," Stephane Baron (Canon)

- ✧ 11-16/0340, "Random Access UL MU Resource Allocation and Indication," Leonardo Lanante (Kyushu Institute of Technology)
- ✧ 11-16/0371, "Further consideration for MU-RTS/CTS," Jin Ma (NICT)
- ✧ 11-16/0379, "Trigger Frame Format," Simone Merlin (Qualcomm)
- ✧ 11-16/0413, "Power Control for UL MU," Arjun Bharadwaj (Qualcomm)

- Submissions – Spatial Reuse (7 submission)
  - ✧ 11-16/0212, "Enterprise Scenario DSC and Color," Graham Smith (SR Technplogies)
  - ✧ 11-16/0310, "DSC Proposed Text," Graham Smith (SR Technplogies)
  - ✧ 11-16/0350, "Enterprise Scenario TPC and DSC," Graham Smith (SR Technplogies)
  - ✧ 11-16/0360, "Simulation results of spatial reuse with various MCSs," Junichi Iwatani (NTT)
  - ✧ 11-16/0382, "Discussion on Spatial Reuse Operations in 11ax," Yunbo Li (Huawei)
  - ✧ 11-16/0403, "Spatial Re-Use with Adaptive CCA and TPC Simulation," Frank Hsu (MediaTek)
  - ✧ 11-16/0414, "Adjustment Rules for Adaptive CCA and TPC," James Wang (MediaTek)

- Submissions – TG (5 submissions)
  - ✧ 11-15/1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
  - ✧ 11-16/0066, "Views on UL MU Features," Joonsuk Kim (Apple)
  - ✧ 11-16/0355, "Snapshot of Residential Use 2016," Carol Ansley (ARRIS Group)
  - ✧ 11-16/0364, "AID Assign Rules Based on BSS Color and HE Operation Element," Jianhan Liu (MediaTek)
  - ✧ 11-16/0394, "Achieving High Efficiency in Medium Access via Roster Mode," Sean Coffey (RealTek)

12. Draft Specification

- The TGax approved version 0.1 of the draft specification.
- **TG Motion:**
- **Move to accept document 11-16/0024r1 as the TG draft specification D0.1, and start a 21 day comment collection period.**
  - ➢ The submission is available at: https://mentor.ieee.org/802.11/dcn/16/11-16-0024-01-00ax-proposed-draft-specification.docx
  - ➢ **Move: Robert Stacey, Second: Simone Merlin**
  - ➢ **Y/N/A: 75/0/5, motion passes.**

Goals for May 2016

- Comment Resolution.
- Technical presentations.
- Revisit the timeline based on the number of comments received.

Teleconferences

- Four teleconferences are planned before the March 2016 session.
  - ✧ Thursday, April 14th, 10:00 – 12:00 (ET)
  - ✧ Thursday, April 21st, 20:00 – 22:00 (ET)
  - ✧ Thursday, April 28th, 10:00 – 12:00 (ET)
  - ✧ Thursday, May 5th, 20:00 – 22:00 (ET)

January 2016 – Atlanta, GA

The TGax planned to have 10 sessions during the week.
Four out of ten sessions were assigned to the ad hoc group sessions.

	Tuesday		Wednesday	Thursday
			TGax (full)	
	TGax (PHY)	TGax (MAC)		TGax (full)
	TGax (PHY)	TGax (MAC)	TGax (full)	
TGax MAC)			TGax (full)	TGax (full)
	TGax (MU)			

Main documents

- TGax Agenda: 11-15-1516-03, TGax January 2016 Meeting Agenda
  - TGax PHY ad hoc agenda: 11-16-0108-02, TGax PHY Ad Hoc Jan 2016 Meeting Agenda
  - TGax MAC ad hoc agenda: 11-16-0109-02, TGax MAC Ad Hoc January 2016 Meeting Agenda
  - TGax Multi-User ad hoc agenda: 11-16-0147-01, TGax MU Ad-hoc January 2016 Agenda
- Closing report: 11-16-0187-00, TGax January 2016 Closing Report
- Draft TGax minutes: 11-16-0096-00, TGax January 2016 Atlanta Meeting Minutes
  - TGax PHY ad hoc meeting minutes: 11-16-0119-00, January 2016 Atlanta PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc meeting minutes: 11-16-0110-00, Jan 2016 Atlanta TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc meeting minutes: 11-16-0150-00, January 2016 Atlanta TGax MU Ad hoc Meeting minutes

Achievements

13. TG Documents

- **Passed a number of affecting all aspects of the TG Specification Framework:**
  - PHY – 30 motions passed.
  - MAC – 9 motions passed.
  - MU – 7 motions passed.
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-15-00ax-spec-framework.docx
- **Other TG documents**
  - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
  - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-12-00ax-evaluation-methodology.docx
  - Channel Model https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - Functional Requirements https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

14. Technical Presentations

48 technical submissions have been covered during the week.

A list of the submissions is available in the agenda document.

- Submissions – PHY (22 submissions)
  - 11-16/0030, "Maximum Tone Grouping Size for 802.11ax Feedback with MU-MIMO," Kome Oteri (InterDigital)
  - 11-16/0033, "1x HE-LTF for ULMUMIMO," Hongyuan Zhang (Marvell)
  - 11-16/0034, "Beamforming with HE-LTF Compression," Hongyuan Zhang (Marvell)
  - 11-16/0036, "CRC Generation for HE-SIG," Yakun Sun (Marvell)
  - 11-16/0037, "Continuous Puncturing for HE-SIGB Encoding," Yakun Sun (Marvell)
  - 11-16/0038, "Sequence for 1x LTF," Daewon Lee (Newracom)
  - 11-16/0039, "RU Allocation in SIG-B," Daewon Lee (Newracom)
  - 11-16/0040, "Issues with Compressed SIG-B Mode," Yujin Noh (Newracom)
  - 11-16/0041, "Link Adaptation for HE WLAN," Yujin Noh (Newracom)
  - 11-16/0044, "MCS Levels and TX EVM Requirement for 1024 QAM," Eunsung Park (LG Electronics)
  - 11-16/0045, "Flexible Wider Bandwidth Transmission," John Son (WILUS)
  - 11-16/0046, "Content for the extra tones in LSIG and RLSIG," Jiayin Zhang (Huawei)
  - 11-16/0047, "Discussion on the HE Extended Range SU PPDU," Jiayin Zhang (Huawei)
  - 11-16/0052, "Remaining HE-LTF Sequence Design," Le Liu (Huawei)
  - 11-16/0053, "Requirements for UL MU Transmissions," Arjun Bharadwaj (Qualcomm)
  - 11-16/0056, "On QPSK DCM Modulation and LDPC Tone Mapper for DCM," Jianhan Liu (MediaTek)
  - 11-16/0071, "Packet Extension Follow Up," Ron Porat (Broadcom)
  - 11-16/0079, "Allocation sizes for BCC in OFDMA," Ken Taniguchi (Toshiba)
  - 11-16/0080, "1x/2x/4x OFDM Symbol in HE SU PPDU with BCC," Heejung Yu (Yeungnam Univ./NEWRACOM)
  - 11-16/0088, "Ng for Compressed Beamforming feedback," Sriram Venkateswaran (Broadcom)
  - 11-16/0089, "Single Stream Pilots in UL MU MIMO," Sriram Venkateswaran (Broadcom)
  - 11-16/0104, "Rate Matching for HE-SIG-B," Daewon Lee (Newracom)

- Submissions – MAC (12 submissions)
  - 11-16/0015, "Explicit Block Ack Request in DL MU PPDU," Yongho Seok (Newracom)
  - 11-16/0017, "Beacon Collision Avoidance," Evgeny Khorov (IITP)
  - 11-16/0018, "TDMA for Eliminating Hidden Station Effect in Dense Networks," Evgeny Khorov (IITP)
  - 11-16/0028, "Follow Up for Multi-STA BA for SU Transmissions," Xiaofei Wang (InterDigital)
  - 11-16/0029, "TXOP Truncation Enhancement," Xiaofei Wang (InterDigital)
  - 11-16/0042, "BSS Color Settings for a Multiple BSSID Set," Geonjung Ko (WILUS)
  - 11-16/0050, "Fragmentation for MU frames-Follow up on acks," Alfred Asterjadhi (Qualcomm)
  - 11-16/0051, "Response Give Trigger Type," David Xun Yang (Huawei)
  - 11-16/0068, "BSS Color and Multiple BSSID," Liwen Chu (Marvell)
  - 11-16/0069, "Multi-TID A-MPDU in MU Transmission," Liwen Chu (Marvell)
  - 11-16/0087, "NAV cancellation issues on MU protection," Jinsoo Ahn (Yonsei Univ.)
  - 11-16/0102, "High Efficiency Medium Access via Rosters," Sean Coffey (RealTek)

- Submissions – Multi-User (9 submissions)
  - 11-16/0031, "Proposed UL MU CS Rules," Lei Wang (Marvell)
  - 11-16/0048, "Protection using MU RTS/CTS," Young Hoon Kwon (Newracom)
  - 11-16/0054, "UL MU CCA Response," Kaiying Lv (ZTE)
  - 11-16/0057, "Indication for UL MU Carrier Sensing," Kiseon Ryu (LG Electronics)
  - 11-16/0065, "Duration/ID field in UL-MU," Tomo Adachi (Toshiba)
  - 11-16/0066, "Views on UL-MU Features," Joonsuk Kim (Apple)

- ✧ 11-16/0067, "MAC Padding in Trigger Frame," Liwen Chu (Marvell)
- ✧ 11-16/0085, "Congestion control for UL MU random access," Woojin Ahn (Yonsei Univ.)
- ✧ 11-16/0091, "Regarding HE NDPA frame for DL Sounding Sequence," Narendar Madhavan (Toshiba)

- Submissions – Spatial Reuse (1 submission)
  - ✧ 11-16/0060, "Recipient-aware Spatial Reuse," Reza Hedayat (Newracom)

- Submissions – TG (4 submissions)
  - ✧ 11-15/1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
  - ✧ 11-16/0024, "Proposed draft specification," Robert Stacy (Intel)
  - ✧ 11-16/0043, "Clarification of SFD Texts," John Son (WILUS)
  - ✧ 11-16/0059, "Non-contiguous Channel Bonding in 11ax," Yunbo Li (Huawei)

15. Draft Specification

- Document 11-16/0024r0 was submitted by the TG Editor and it includes a "draft" draft specification.
- The submission was reviewed by the TG Editor and is available on mentor to be reviewed by TG members.
- The submission is available at: https://mentor.ieee.org/802.11/dcn/16/11-16-0024-00-00ax-proposed-draft-specification.docx

16. Plan for Progressing TG Draft

- Approve the TG draft specification during the March 2016 meeting.
- Draft 0.1
- Start a comment collection (CC) for 30 days on draft 0.1 – Ends some time in April.
- Comment resolution (May and July)
- Draft 1.0 in July 2016 and start WG LB.

Goals for March 2016

- Discuss Proposals affecting the TG Specification Framework document
- Approve D0.1 of the TG Draft
- Approve a 30-day Comment Collection Process.

Teleconferences

- Three teleconferences are planned before the March 2016 session.
  - ✧ Thursday, February 4th, 10:00 – 12:00 (ET)
  - ✧ Thursday, February 18th, 20:00 – 22:00 (ET)
  - ✧ Thursday, March 3rd, 10:00 – 12:00 (ET)

November 2015 – Dallas, TX

The TGax planed to have 10 sessions during the week.
One more session was added during the WG opening week plenary session due to the large number of submissions.
Five out of eleven sessions were assigned to the ad hoc group sessions.

Tuesday	Wednesday	Thursday

		TGax		TGax
TGax (PHY)	TGax (MAC)			TGax
TGax (MU)	TGax (SR)	TGax (PHY)	TGax (SR)	TGax

  - TGax Multi-User ad hoc agenda: 11-15-1418-02, TGax MU Ad-hoc November 2015 Agenda
  - TGax Spatial Reuse ad hoc agenda: 11-15-1403-06, 802.11ax Spatial Reuse Ad Hoc Group Agenda
- Closing report: 11-15-1457-00, TGax November 2015 Closing Report
- Draft TGax minutes: 11-15-1368-01, TGax November 2015 Dallas Meeting Minutes
  - TGax PHY ad hoc meeting minutes: 11-15-1442-00, November 2015 Dallas PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc meeting minutes: 11-15-1414-00, Nov 2015 Dallas TGax MAC Ad hoc Meeting Minutes
  - TGax Multi-User ad hoc meeting minutes: 11-15-1423-01, November 2015 Dallas TGax MU Ad hoc Meeting minutes
  - TGax Spatial Reuse ad hoc meeting minutes: 11-15-1421-01, Minutes of the IEEE 802.11ax Spatial Reuse ad hoc group meeting – Dallas, November 2015

Achievements

17. TG Documents

- **Passed a number of affecting all aspects of the TG Specification Framework:**
  - PHY – 33 motions passed.
  - MAC – 16 motions passed.
  - MU – 12 motions passed.
  - SR – 1 motion passed.
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-10-00ax-spec-framework.docx
- **Approved new revisions of the TGax Simulation Scenario and Evaluation Methodology documents.**
  - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
  - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-11-00ax-evaluation-methodology.docx
- Other documents
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

18. Technical Presentations

83 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- Submissions – PHY

- ✧ 11-15-1059, “SIG-B Encoding Structure Part II,” Ron Porat (Broadcom)
- ✧ 11-15-1289, “Non-Uniform Constellations for 1024-QAM,” Thomas Handte (Sony)
- ✧ 11-15-1303, “LTF Sequence Designs,” Sungho Moon (Newracom)
- ✧ 11-15-1304, “Supported Resource Allocations in SIG-B,” Sungho Moon (Newracom)
- ✧ 11-15-1305, “STBC and Padding Discussions” Hongyuan Zhang (Marvell)
- ✧ 11-15-1309, “Extended Range Support for 11ax,” Sameer Vermani (Qualcomm)
- ✧ 11-15-1310, “11ax LDPC Tone Mapper for 160MHz,” Bin Tian (Qualcomm)
- ✧ 11-15-1311, “11ax Spectral Mask,” Bin Tian (Qualcomm)
- ✧ 11-15-1315, “HE-SIG-B Mapping and Compression,” Kaushik Josiam (Samsung)
- ✧ 11-15-1320, “Maximum Tone Grouping Size for 802.11ax Feedback,” Kome Oteri (InterDigital)
- ✧ 11-15-1321, “Reducing Explicit MIMO Compressed Beamforming Feedback Overhead for 802.11a,” Kome Oteri (InterDigital)
- ✧ 11-15-1322, “Channel Estimation Enhancement and Transmission Efficiency Improvement Using Beam-Change Indication and 1x HE-LTF,” Jianhan Liu (MediaTek)
- ✧ 11-15-1323, “HE-STF Sequence,” Ensung Park (LG Electronics)
- ✧ 11-15-1324, “MCS for HE-SIG-B,” Dongguk Lim (LG Electronics)
- ✧ 11-15-1327, “Diversity Mode in OFDMA,” Yujin Noh (Newracom)
- ✧ 11-15-1329, “Link Adaptation for HE WLAN,” Yujin Noh (Newracom)
- ✧ 11-15-1331, “PHY Padding Capability Signaling,” Daewon Lee (Newracom)
- ✧ 11-15-1332, “Implicit Sounding for HE WLAN,” Daewon Lee (Newracom)
- ✧ 11-15-1334, “HE-LTF Sequence Design,” Le Liu (Huawei)
- ✧ 11-15-1335, “HE-SIG-B Contents,” Le Liu (Huawei)
- ✧ 11-15-1347, “Strategies to reduce MIMO feedback overhead,” Filippo Tosato (Toshiba)
- ✧ 11-15-1349, “Sounding for Uplink Transmission,” Sungho Moon (Newracom)
- ✧ 11-15-1350, “Spatial Configuration And Signaling for MU-MIMO,” Yakun Sun (Marvell)
- ✧ 11-15-1353, “Preamble Formats,” Ron Porat (Broadcom)
- ✧ 11-15-1354, “SIGA fields and Bitwidths,” Ron Porat (Broadcom)
- ✧ 11-15-1357, “Extra tones in the preamble,” Xiaogang Chen (Intel)
- ✧ 11-15-1372, “L-LENGTH Equation Updates,” Hongyuan Zhang (Marvell)

- Submissions – MAC
  - ✧ 11-15-1265, “RTSCTS for UL DL OFDMA Control,” Cheeha Kim (POSTECH)
  - ✧ 11-15-1278, “HE MU Acknowledgment Procedure,” Yongho Seok (Newracom)
  - ✧ 11-15-1300, “DL MU transmission sequence,” Yong Hoon Kwon (Newracom)
  - ✧ 11-15-1318, “Fragmentation for MU frames-Follow up,” Alfred Asterjadhi (Qualcomm)
  - ✧ 11-15-1319, “Scheduled Trigger frames-Follow up,” Alfred Asterjadhi (Qualcomm)
  - ✧ 11-15-1330, “A method of transmitting Multi-STA Block frame,” Jeongki Kim (LG Electronics)
  - ✧ 11-15-1341, “Reception Status of Frames Transmitted in Random Access RUs,” Tomoko Adachi (Toshiba)
  - ✧ 11-15-1344, “Trigger Frame Format,” Simone Merlin (Qualcomm)
  - ✧ 11-15-1345, “Trigger type specific information,” Kiseon Ryu (LG Electronics)
  - ✧ 11-15-1346, “Ack Policy for UL MU Ack transmission,” Kiseon Ryu (LG Electronics)
  - ✧ 11-15-1351, “Rate MCS Selection Rules for M-BA and DL OFDMA BA,” Liwen Chu (Marvell)
  - ✧ 11-15-1352, “broadcast STAID in HE SIG B,” Liwen Chu (Marvell)
  - ✧ 11-15-1355, “Considerations for TDLS transmission in 11ax,” Yingpei Lin (Huawei)
  - ✧ 11-15-1359, “System Performance Evaluation of 802.11ae,” Yu Wang (Ericsson)

- Submissions – Multi-User
  - ✧ 11-15-1280, “Traffic priority for random Multi User Uplink OFDMA,” Stephane Baron (Canon)
  - ✧ 11-15-1301, “NAV Rule for UL MU Response,” Yingpei Lin (Huawei)

- ✧ 11-15-1312, “MU BAR Frame Format,” Reza Hedayat (Newracom)
- ✧ 11-15-1314, “I/Q Imbalance Impact to TGax OFDMA Uplink Reception,” Rui Yang (InterDigital)
- ✧ 11-15-1325, “MU-RTS/CTS Follow Up,” Po-Kai Huang (Intel)
- ✧ 11-15-1326, “NAV Consideration for UL MU Response Follow Up,” Po-Kai Huang (Intel)
- ✧ 11-15-1328, “Scheduling information for UL OFDMA Acknowledgement,”Yujin Noh (Newracom)
- ✧ 11-15-1340, “NDP Announcement for HE Sequence,” Narendar Madhavan (Toshiba)
- ✧ 11-15-1364, “Signaling Trigger Information for STAs in 11ax,” Chittabrata Ghosh (Intel)
- ✧ 11-15-1369, “Random access based buffer status report,” Woojin Ahn (Yunsei Univ.)
- ✧ 11-15-1370, “UL OFDMA Random Access Control,” Jinsoo Ahn (Yonsei Univ.)
- ✧ 11-15-1374, “Consideration for protecting cascading MU DL/UL transmission with MU RTS/CTS,” Jing Ma (NICT)

- Submissions – Spatial Reuse
  - ✧ 11-15-1259, “Use of TG ax Scenarios for Spatial Reuse,” Graham Smith (SR Tecnologies)
  - ✧ 11-15-1284, “Simulation results for spatial reuse in 11ax,” Jinmin Kim (LG Electronics)
  - ✧ 11-15-1313, “Considerations for Spatial Reuse,” Reza Hedayat (Newracom)
  - ✧ 11-15-1316, “DSC calibration results with NS-3,” M. Shahwaiz Afaqui (T.U. Catalonia)
  - ✧ 11-15-1336, “BSS Color Field Size Measurements,” Chuck Lukaszewski (Aruba-HP)
  - ✧ 11-15-1337, “Secondary Channel CCA of HE STA,” John Son (Willus Institute)
  - ✧ 11-15-1338, “Improving Spatial Reuse During OBSS UL MU Procedure,” Geonjung Ko (Willus Institute)
  - ✧ 11-15-1348, “Multiple NAVs for Spatial Reuse,” Sigurd Schelstraete (Quantenna)
  - ✧ 11-15-1427, “Drivers of the dynamic CCA adaptation,” Eduard Garcia-Villegas (Technical Univ. of Catalonia)

- Submissions – TG
  - ✧ 11-15-1288, “An issue of wider bandwidth operation at real denser environment,” Katsuo Yunoki (KDDI R&D Labs)
  - ✧ 11-15-1302, “System Level Simulator Evaluation with/without Capture Effect,” Vida Ferdowsi (Newracom)
  - ✧ 11-15-1360, “Implications of wrap-around for TGax Scenario 3 and Scenario 4 – follow-up,” Marcin Filo (Univ. of Surrey)
  - ✧ 11-15-1361, “Energy consumption with Scheduled PSP,” Dmitry Akhmetov (Intel)
  - ✧ 11-15-1362, “On TGax Scenario 4 channel model – follow-up,” Marcin Filo (Univ. of Surrey)
  - ✧ 11-15-1363, “Regulatory Landscape for Narrowband Transmissions in 11ax,” Ilan Sutskover (Intel)
  - ✧ 11-15-1373, “Updated Box5 Calibration Results,” Narendar Madhavan (Toshiba)
  - ✧ 11-15-1375, “11ax Support for IoT - Requirements and Technological Implications,” Shimo Shilo (Huawei)

Goals for January 2016

- Continue to advance TG documents based on submissions.
  - ➢ Priority to the TG Specification Framework document.
- TG timeline indicates draft D0.1 will be available in January 2016.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the January 2016 session.
  - ✧ Thursday, December 10th, 10:00 – 12:00 (ET)

September 2015 – Bangkok, Thailand

Originally, TGax planned to have ten sessions during the week.
Two more sessions were added during the WG opening week plenary session due to the large number of submissions.
Six out of twelve sessions were assigned to the ad hoc sessions.

20. Technical Presentations

83 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- PHY
  - ✧ 11-15-0579, "Preamble Design and Auto-detection," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0580, "11ax Coding Discussion," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0602, "HE-LTF squence for UL MU-MIMO," Xiaogang Chen (Intel)
  - ✧ 11-15-0810, "HE PHY Padding and Packet Extension," Hongyuan Zhang (Marvell)
  - ✧ 11-15-0823, "Preamble Design and Auto-Detection for 11ax," Sungho Moon (Newracom)
  - ✧ 11-15-0826, "HE-SIG-A Transmission for Range Extension," Jiayin Zhang (Huawei)
  - ✧ 11-15-0853, "Extensible Preamble Format Design," Leonardo Lanante (Kyutech)
  - ✧ 11-15-1031, "DL MU Signaling," Katsuo Yunoki (KDDI)
  - ✧ 11-15-1051, "HE NDP frame for sounding," Young Hoon Kwon (Newracom)
  - ✧ 11-15-1059, "SIG-B Encoding Structure Part II," Ron Porat (Broadcom)
  - ✧ 11-15-1066, "HE-SIG-B Contents," Kaushik Josiam (Samsung)
  - ✧ 11-15-1068, "Reliable Transmission Scheme for HE-SIG-B and Data," Jianhan Liu (MediaTek)
  - ✧ 11-15-1070, "1024 QAM Proposal," Eunsung Park (LG Electronics)
  - ✧ 11-15-1071, "Tone Grouping Factors and NDP format for 11ax," Sameer Vermani (Qualcomm)
  - ✧ 11-15-1075, "Number of BSS Color bits," Junichi Iwatani (NTT)
  - ✧ 11-15-1077, "HE-SIG-A Content," Jiayin Zhang (Huawei)
  - ✧ 11-15-1088, "LTF Design for Uplink MU-MIMO," Daewon Lee (Newracom)
  - ✧ 11-15-1089, "Considerations on PHY Padding and Packet Extension in 11ax," Yujin Noh (Newracom)
  - ✧ 11-15-1091, "Considerations on Range Extension with SIG-A Repetition," Yujin Noh (Newracom)
  - ✧ 11-15-1092, "Support of 1x/2x/4x OFDM Symbol in HE SU PPDU," Heejung Yu (Yeungnam Univ.)
  - ✧ 11-15-1106, "SIG-B Structure," Reza Hedayat (Newracom)
  - ✧ 11-15-1111, "SIG-B Resource Unit Allocation Coding," Amin Jafarian (Newracom)
  - ✧ 11-15-1119, "Discussions on HE SIG-A Structure," John Son (Wilus Institute)
  - ✧ 11-15-1122, "Identifiers in HE PPDUs for power saving," Alfed Asterjadhi (Qualcomm)

- MAC
  - ✧ 11-15-1013, "802.11ae & 802.11ax," Guido R. Hiertz (Ericsson)
  - ✧ 11-15-1014, "Multiple BSSID Element," Guido R. Hiertz (Ericsson)
  - ✧ 11-15-1015, "Proxy ARB in 802.11ax," Guido R. Hiertz (Ericsson)
  - ✧ 11-15-1033, "Data field in HE PPDU," Yongho Seok (Newracom)
  - ✧ 11-15-1034, "Notification of Operating Mode Changes," Yongho Seok (Newracom)
  - ✧ 11-15-1044, "Further Study of 11ax Multicast," Kazuyuki Sakoda (Sony)
  - ✧ 11-15-1052, "Bandwidth for UL MU transmission," Young Hoon Kwon (Newracom)
  - ✧ 11-15-1060, "Receive Operating Mode Indication for Power Save," Eric Wong (Apple)
  - ✧ 11-15-1063, "11ax Channel access procedure," Chao-Chun Wang (MediaTek)
  - ✧ 11-15-1067, "MU TXOP truncation," Jeongki Kim (LG Electronics)
  - ✧ 11-15-1096, "Recovery Procedures in Cascading Sequences," John Son (Wilus Institute)
  - ✧ 11-15-1098, "ACK/BA frame for UL MU under cascading structure," Narendar Madhavan (Toshiba)
  - ✧ 11-15-1114, "Airtime Analysis of EDCA," Sean Coffey (RealTek)
  - ✧ 11-15-1115, "High Efficiency in Accessing the Medium," Sean Coffey (RealTek)

- 11-15-1116, “Trigger Frame Channel Access,” Jinsoo Ahn (Yonsei Univ.)
- 11-15-1120, “Buffer Status Report,” Alfred Asterjadhi (Qualcomm)
- 11-15-1121, “HE A-Control field,” Alfred Asterjadhi (Qualcomm)
- 11-15-1137, “Triggered OFDMA Random Access Observations,” Russell Huang (MediaTek)

- Multi-User
  - 11-15-1043, “Overall Protocol of UL MU BA for Multicast Transmission,” Kazuyuki Sakoda (Sony)
  - 11-15-1047, “RU selection process upon TF-R reception,” Stephane Baron (Canon)
  - 11-15-1053, “Multiuser Block ACK Request (MU-BAR),” Guoqing Li (Apple)
  - 11-15-1057, “Multiple Resource Unit Allocation for TGax OFDMA,” Kome Oteri (InterDigital)
  - 11-15-1062, “NAV Consideration for UL MU Response to Trigger frame,” Po-Kai Huang (Intel)
  - 11-15-1065, “11ax uplink Multi-TID aggregation,” Chao-Chun Wang (MediaTek)
  - 11-15-1086, “Consideration on multi-STA BA frame indication,” Jing Ma (NICT)
  - 11-15-1097, “Reducing Channel Sounding Protocol Overhead for 11ax,” Narendar Madhavan (Toshiba)
  - 11-15-1102, “Fragmentation with MU Operation,” Chittabrata Ghosh (Intel)
  - 11-15-1103, “DL Sounding Sequence with UL MU Feedback,” Chittabrata Ghosh (Intel)
  - 11-15-1105, “UL OFDMA-based Random Access Procedure,” Chittabrata Ghosh (Intel)
  - 11-15-1107, “Power Save with Random Access,” Chittarata Ghosh (Intel)
  - 11-15-1117, “Regarding UL MU protection,” Woojin Ahn (Yonei Univ.)
  - 11-15-1123, “Acknowledgement to DL MU,” Liwen Chu (Marvell)
  - 11-15-1129, “Feedback overhead in DL-MU-MIMO,” Filippo Tosato (Toshiba)

- Spatial Reuse
  - 11-15-1045, “Dynamic CCA control and TPC Simulation Results with SS1-SS3,” Takeshi Itagaki (Sony)
  - 11-15-1058, “CCA consideration for UL MU transmission,” Kiseon Ryu (LG Electronics)
  - 11-15-1069, “Adaptive CCA and TPC,” James Wang (MediaTek)
  - 11-15-1081, “Further consideration on receive behaviour based on the cascading structure and the BSS color scheme,” Jing Ma (NICT)
  - 11-15-1082, “Analysis of BSS and ESS Structure During Concurrent SR Transmissions,” Chuck Lukaszewski (Aruba/HP)
  - 11-15-1083, “Cost/Benefit Analysis of SR Techniques,” Chuck Lukaszewski (Aruba/HP)
  - 11-15-1101, “DSC/DCCA Calibration with TGax Agreed Scenarios,” Masahito Mori (Sony)
  - 11-15-1104, “TXOP Considerations for Spatial Reuse,” Reza Hedayat (Newracom)
  - 11-15-1109, “OBSS NAV and PD Threshold Rule for Spatial Reuse,” Rossi Jun Luo (Huawei)
  - 11-15-1110, “BSS TXOP,” Amin Jafarian (Newracom)
  - 11-15-1118, “Discussions on Spatial Reuse Enhancement,” Geonjung Ko (WILUS)
  - 11-15-1138, “To DSC or not to DSC,” Filip Mestanov (Ericsson)

- Simulation and Calibration and others
  - 11-15/1039, “Spatial Reuse Measurements,” Chuck Lukaszewski (Aruba Networks, a HP company)
  - 11-15-1046, “MAC calibration results,” Stephane Baron (Canon)
  - 11-15-1048, “On TGax Scenario 4 channel model,” Marcin Filo (Univ. of Surrey)
  - 11-15-1049, “Implications of wrap-around for TGax Scenario 3 and Scenario 4,” Marcin Filo (Univ. of Surrey)
  - 11-15-1056, “Clarifying Link Level Simulator Assumptions,” Kome Oteri (InterDigital)
  - 11-15-1087, “MU BFee Interference channel feedback,” Sigurd Schelstraete (Quantenna)
  - 11-15-1095, “OFDMA performance in 11ax,” Suhwook Kim (LG Electronics)

- ✧ 11-15-1099, "Power Save Simulation Results," Hyeyoung Choi (LG Electronics)
- ✧ 11-15-1100, "Discussion on Deep and Shallow Sleep States," Chittabrata Ghosh (Intel)
- ✧ 11-15-1113, "Box5 Calibration results," Vida Ferdowsi (Newracom)
- ✧ 11-15-1134, "11ax Support for IoT," Shimi Shilo (Huawei)
- ✧ 11-15-1135, "Results for SS6 calibration case for single BSS and OBSS," Esa Tuomaala (Nokia)

Goals for November 2015

- Continue to advance TG documents based on submissions.
  - ➢ Priority to the TG Specification Framework document.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the November 2015 session.
  - ✧ Thursday, October 15th, 10:00 – 12:00 (ET)

July 2015 – Waikoloa, HI

Originally, TGax planned to have nine sessions during the week.
Two more sessions were added during the mid-week plenary session (marked red).
Four out of eleven sessions were ad hoc sessions.

Tuesday		Wednesday		Thursday
				TGax
TGax (PHY)	**TGax (MAC)**			**TGax**
TGax (Multi-User)	**TGax (Spatial Reuse)**	**TGax (PHY)**	**TGax (MAC)**	**TGax**
		TGax (PHY)	**TGax (Multi-User)**	**TGax**
	TGax			

Main documents

- TGax Agenda: 11-15-0735-05, TGax July 2015 Meeting Agenda
  - ➢ TGax PHY ad hoc agenda: 11-15-0898-03, TGax PHY Ad Hoc Jul 2015 Meeting Agenda
  - ➢ TGax MAC ad hoc agenda: 11-15-0888-02, TGax MAC ad hoc July 2015 Meeting Agenda
  - ➢ TGax Multi-User ad hoc agenda: 11-15-0899-02, TGax MU ad-hoc July 2015 Agenda
  - ➢ TGax Spatial Reuse ad hoc agenda: 11-15-0911-01, 802.11ax Spatial Reuse Ad Hoc Group
- Closing report: 11-15-0963-00, TGax July 2015 Closing Report
- Draft TGax minutes: 11-15-0884-00, TGax July 2015 Waikoloa Meeting Minutes
  - ➢ TGax PHY ad hoc meeting minutes: 11-15-0913-00, July 2015 Hawaii PHY Ad Hoc Meeting Minutes
  - ➢ TGax MAC ad hoc meeting minutes: 11-15-0922-01, July 2015 Hawaii TGax MAC Ad hoc Meeting Minutes
  - ➢ TGax Multi-User ad hoc meeting minutes: 11-15-0949-01, July 2015 Hawaii TGax MU Ad hoc Meeting minutes

- TGax Spatial Reuse ad hoc meeting minutes: 11-15-0971-01, Minutes of the IEEE 802.11ax Spatial Reuse ad hoc group meeting

Achievements

21. TG Documents

- **Passed a number of PHY, MAC and MU motions affecting the TGax Specification Framework:**
  - PHY Motions: SIG-A, SIG-B, Pilots, etc.
  - MAC Motions: Trigger frame, etc.
  - MU Motions: Trigger frame for random access, MU CTS, etc.
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-07-00ax-spec-framework.docx
- **Approved new revisions of the TGax Simulation Scenario and Evaluation Methodology documents.**
  - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-14-00ax-simulation-scenarios.docx
  - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-10-00ax-evaluation-methodology.docx
- Other documents
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

22. Technical Presentations

More than 70 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- PHY
  - 11-15-0579, "preamble design and autodetection," Hongyuan Zhang (Marvell)
  - 11-15-0580, "11ax coding discussion," Hongyuan Zhang (Marvell)
  - 11-15-0602, "HE-LTF sequence for UL MU-MIMO," Qinghua Li (Intel)
  - 11-15-0805, "SIG-B field for HEW PPDU," Young Hoon Kwon (Newracom)
  - 11-15-0810, "HE PHY Padding and Packet Extension," Hongyuan Zhang (Marvell)
  - 11-15-0812, "Pilot Design for Data Section," Sameer Vermani (Qualcomm)
  - 11-15-0813, "CP Indication for UL MU Transmission," Zhigang Rong (Huawei)
  - 11-15-0816, "Interleaver and Tone Mapper for OFDMA," Yakun Sun (Marvell)
  - 11-15-0817, "P Matrix for HE-LTF," Yakun Sun (Marvell)
  - 11-15-0819, "11ax OFDMA Tone Plan Leftover Tones and Pilot Structure," Bin Tian (Qualcomm)
  - 11-15-0821, "HE SIG-B Structure," Joonsuk Kim (Apple)
  - 11-15-0822, "SIG-A Structure in 11ax Preamble," Jianhan Liu (MediaTek)
  - 11-15-0823, "Preamble Design and Auto-Detection for 11ax," Sungho Moon (Newracom)
  - 11-15-0824, "Pilot Design for 11ax Downlink Transmissions," Yujin Noh (Newracom)
  - 11-15-0826, "HE-SIG-A transmission for range extension," Jiayin Zhang (Huawei)
  - 11-15-0827, "Considerations on HE-SIG-A and B," Katsuo Yunoki (KDDI Labs)
  - 11-15-0832, "Performance evaluation of SU/MU MIMO in OFDMA," Jiayin Zhang (Huawei)
  - 11-15-0845, "LTF Design for Uplink MU-MIMO," Daewon Lee (Newracom)
  - 11-15-0853, "Extensible Preamble Format Design," Leonardo Lanante (Kyushu Institute of Technology)
  - 11-15-0865, "Discussion of ACI performance and ACI requirements for IEEE 802.11ax," Leif Wilhelmsson (Ericsson AB)
  - 11-15-0868, "Impact of Frequency Selective Scheduling Feedback for OFDMA," Hakan Persson (Ericsson)

- 11-15-0873, “SIG-B Encoding Structure,” Ron Porat (Broadcom)
- 11-15-0887, “Efficient padding for last OFDM symbol,” Heejung Yu (Newracom)

- MAC
  - 11-15-0615, “DL OFDMA Bandwidth,” Liwen Chu (Marvell)
  - 11-15-0803, “Frame Collision Information Management,” Peng Shao (NEC Communication Systems)
  - 11-15-0831, “Broadcast and Unicast (Trigger) in DL MU,” Liwen Chu (Marvell)
  - 11-15-0841, “Cascading Structure,” David Xun Yang (Huawei Technologies)
  - 11-15-0851, “HE Trigger Frame Format,” John Son (WILUS Institute)
  - 11-15-0856, “Compressed Uplink Trigger Frame,” Vida Ferdowsi (Newracom)
  - 11-15-0871, “Efficiency enhancement for 802.11ax,” Guido R. Hiertz (Ericsson)
  - 11-15-0872, “802.11ai and 802.11ax,” Guido R. Hiertz (Ericsson)
  - 11-15-0874, “Minimal data rates management frame transmissions in 2.4 GHz,” Guido R. Hiertz (Ericsson)
  - 11-15-0876, “Duration and MAC Padding for MU PPDU,” Simone Merlin (Qualcomm)
  - 11-15-0877, “Trigger Frame Format,” Simone Merlin (Qualcomm)
  - 11-15-0878, “Issues on Trigger Frame Retransmission,” Jinsoo Ahn (Yonsei Univ.)
  - 11-15-0880, “Scheduled Trigger frames,” Alfred Asterjadhi (Qualcomm)
  - 11-15-0914, “Enlarged minimal contention window size,” Guido R. Hiertz (Ericsson)

- Multi-User
  - 11-15-0800, “Multiplexing of Acknowledgements for Multicast Transmission,” Yusuke Tanaka (Sony)
  - 11-15-0806, “Protection for MU transmission,” Young Hoon Kwon (Newracom)
  - 11-15-0818, “Further Analysis of Feedback and Frequency Selective Scheduling (FSS) for TGax OFDMA,” Kome Oteri (InterDigital Communication)
  - 11-15-0829, “Uplink ACK and BA Multiplexing,” Reza Hedayat (Newracom)
  - 11-15-0843, “UL MU OFDMA analysis,” Yonggang Fang (ZTE)
  - 11-15-0852, “Transmission Interval of Trigger Frames,” Leonardo Lanante (Kyushu Institute of Technology)
  - 11-15-0854, “DL OFDMA Signalling,” Tomoko Adachi (Toshiba)
  - 11-15-0855, “How to collect STAs’ Tx demands for UL MU,” Tomoko Adachi (Toshiba)
  - 11-15-0858, “MU BFee Interference channel feedback,” Sigurd Schelstraete (Quantenna)
  - 11-15-0859, “A mechanism for incremental updates to MU precoding,” Sigurd Schelstraete (Quantenna)
  - 11-15-0867, “MU-RTS/CTS for DL MU,” Po-kai Huang (Intel)
  - 11-15-0875, “Random Access with Trigger Frames using OFDMA,” Chittabrata Ghosh (Intel)
  - 11-15-0881, “Regarding buffer status of UL-STAs in UL-OFDMA,” Woojin Ahn (Yonsei Univ.)

- Spatial Reuse
  - 11-15-0797, “NAV Operation for Spatial Reuse,” Yongho Seok (Newracom)
  - 11-15-0801, “DCCA/DSC Reference Simulation Results,” Masahito Mori (Sony)
  - 11-15-0804, “Outdoor Enterprise Scenario and DSC,” Graham Smith (SR Technologies)
  - 11-15-0807, “DSC Summary,” Graham Smith (SR Technologies)
  - 11-15-0811, “Topics for Consideration for Spatial Reuse,” Xiaofei Wang (InterDigital)
  - 11-15-0882, “DSC leveraging uplink RTS/CTS control,” M. Shahwaiz Afaqui (Technical University of Catalonia)
  - 11-15-0883, “Follow Up Discussion on The Receiver Behavior,” Yasuhiko Inoue (NTT)
  - 11-15-0886, “DSC Calibration Results,” Chinghwa Yu (MediaTek)

- Simulation and Calibration and others

- 11-15-0754, "WLAN Packet traffic and efficiency analysis," Jim Lansford (CSR)
- 11-15-0781, "Summary of Power Save Calibration Results," Eric Wong (Apple)
- 11-15-0787, "Power Save Calibration Results," Eric Wong (Apple)
- 11-15-0788, "Box 1 and Box 2 calibration results," Takeshi Itagaki (Sony)
- 11-15-0789, "Proposed Changes to Evaluation Methodologies," Allan Jones (Activision)
- 11-15-0802, "Box5 Calibration Results of SS6," Jiyong Pang (Huawei)
- 11-15-0814, "Simulation Results for Box5 Calibration," Ke Yao (ZTE)
- 11-15-0833, "Calibration results for PSP and UAPSD for 20, 40 and 80MHz bands," Dmitry Akhmetov (Intel)
- 11-15-0680, "Reference Box5 Calibration Assumptions and Parameters," Jiyong Pang (Huawei)
- 11-15-0849, "Simulation Results for Box5 Calibration," Rongzhen Yang (Intel)
- 11-15-0869, "OFDMA and VoIP Capacity," Hakan Persson (Ericsson)
- 11-15-0870, "802.11ax in 2.4 GHz," Guido R. Hiertz (Ericsson)
- 11-15-0885, "Box 5 Calibration Results," ChingHwa Yu (MediaTek)

Goals for September 2015

- Continue to advance TG documents based on submissions.
  - Priority to the TG Specification Framework document.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the September 2015 session.
  - Thursday, August 20th, 10:00 – 12:00 (ET)

May 2015 – Vancouver, BC, Canada

TGax had eight sessions during the week. Four out of eight sessions were ad hoc sessions.

	Tuesday		Wednesday		Thursday
					TGax
	TGax (Multi-User)	**TGax (Spatial Reuse)**			
TGax (MAC)	**TGax (PHY)**	**TGax (Spatial Reuse)**	**TGax (PHY)**	**TGax (Multi-User)**	**TGax**
			TGax		

Main documents

- TGax Agenda: 11-15-0500-08, TGax May 2015 Meeting Agenda
  - TGax PHY ad hoc agenda: 11-15-0640-04, TGax PHY Ad Hoc May 2015 Meeting Agenda
  - TGax MAC ad hoc agenda: 11-15-0599-02, TGax MAC ad hoc May 2015 Meeting Agenda
  - TGax Multi-User ad hoc agenda: 11-15-0645-01, TGax MU ad-hoc May 2015 Agenda
  - TGax Spatial Reuse ad hoc agenda: 11-15-0650-02, 802.11ax Spatial Reuse Ad Hoc Group
- Closing report: 11-15-00692-01, TGax May 2015 Closing Report
- Draft TGax minutes: 11-15-0622-00, TGax May 2015 Vancouver Meeting Minutes
  - TGax PHY ad hoc meeting minutes: 11-15-0651-02, May 2015 Vancouver PHY Ad Hoc Meeting Minutes

- TGax MAC ad hoc meeting minutes: 11-15-0637-00, May 2015 Vancouver TGax MAC Ad hoc Meeting Minutes
- TGax Multi-User ad hoc meeting minutes: 11-15-0679-00, May 2015 Vancouver Multi-User ad hoc Meeting minutes
- TGax Spatial Reuse ad hoc meeting minutes: 11-15-0662-01, May 2015 Vancouver Spatial Reuse ad hoc Meeting Minutes

Achievements

23. TG Documents

- **Passed a number of PHY and MAC motions affecting the TGax Specification Framework:**
  - PHY Motions: Tone Plans, STF design, SIG-B, etc.
  - MAC Motions: Enhancing multi-STA BA and aspects of the trigger frame
- **Latest revision of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-05-00ax-spec-framework.docx
- **Approved new revisions of the TGax Evaluation Methodology documents.**
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0571-09-00ax-evaluation-methodology.docx
- Other documents
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0980-12-00ax-simulation-scenarios.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

24. Technical Presentations

More than 50 technical submissions have been covered during the week.
A list of the submissions is available in the agenda document.

- PHY
  - 11-15/0550, "L-preamble issues for UL-OFDMA," Katsuo Yunoki (KDDI Labs)
  - 11-15/0553, "Enhancing Performance of Hybrid-ARQ with Linear Constellation Precoding," Muhammad Mehboob Fareed (King Abdullah Univ. of Science and Technology)
  - 11-15/0569, "Performance of 1x, 2x, and 4x HE-LTF," Kome Oteri (InterDigital)
  - 11-15/0572, "Inefficiency of 256-FFT per 20MHz," Heejung Yu (Yeungnam Univ./Newracom)
  - 11-15/0574, "SIG structure for UL PPDU," Young Hoon Kwon (Newracom)
  - 11-15/0575, "Preamble Structure in 802.11ax," Yujin Noh (Newracom)
  - 11-15/0577, "Pilot Design for 11ax," Daewon Lee (Newracom)
  - 11-15/0579, "Preamble design and auto-detection," Hongyuan Zhang (Marvell)
  - 11-15/0580, "11ax coding discussion," Hongyuan Zhang (Marvell)
  - 11-15/0584, "Considerations on LTF Sequence Design," Sungho Moon (Newracom)
  - 11-15/0600, "Non Uniform Constellations for 1024QAM," Daniel Schneider (Sony)
  - 11-15/0602, "HE-LTF sequence for UL MU-MIMO," Qinghua Li (Intel)
  - 11-15/0621, "Design Principles for HE Preamble," John Son (WILUS)
  - 11-15/0381, "HE-STF Proposal," Yakun Sun (Marvell)

- MAC
  - 11-15/0567, "Multi-STA BA for SU Transmissions," Xiaofei Wang (InterDigital)
  - 11-15/0604, "Random Access with Trigger Frames using OFDMA," Chittabrata Ghosh (Intel)
  - 11-15/0611, "Multi-STA Block ACK Protection," Jinsoo Ahn (Yonsei Univ.)
  - 11-15/0615, "UL OFDMA Bandwidth," Liwen Chu (Marvell)
  - 11-15/0617, "Duration and MAC Padding for UL MU PPDUs," Gang Ding (Qualcomm)
  - 11-15/0626, "Further consideration for Multi-STA Block ACK frame," Jeongki Kim (LG)

- Multi-User
  - 11-15/0378, “Channel Sensing in UL OFDMA,” Reza Hedayat (Newracom)
  - 11-15/0568, “Frequency Selective Scheduling (FSS) for TGax OFDMA,” Kome Oteri (InterDigital)
  - 11-15/0586, “Frequency Diversity Options in OFDMA,” Reza Hedayat (Newracom)
  - 11-15/0587, “Uplink ACK and BA Multiplexing,” Reza Hedayat (Newracom)
  - 11-15/0597, “Beamformed HE PPDU,” Yongho Seok (Newracom)
  - 11-15/0608, “Regarding trigger frame in UL MU,” Tomo Adachi (Toshiba)
  - 11-15/0612, “Multi Channel availability for UL-OFDMA,” Woojin Ahn (Yonsei Univ.)

- Spatial Reuse
  - 11-15/0543, “Simulation Scenario changes for Frequency Re-use,” Graham Smith (SR Technologies)
  - 11-15/0544, “Proposed text additions to 14/980 for frequency re-use,” Graham Smith (SR Technologies)
  - 11-15/0548, “Enterprise Scenario and DSC,” Graham Smith (SR Technologies)
  - 11-15/0588, “CCA revisited II,” Amin Jafarian (Newracom)
  - 11-15/0595, “Discussion on The Receiver Behavior for CCAC/DSC with BSS Color,” Yasuhiko Inoue (NTT)

- Simulation and Calibration
  - 11-15/0551, “OBSS Preamble Detection,” Suhwook Kim (LG Electronics)
  - 11-15/0552, “IEEE 802.11 performance in dense, cellular-like, outdoor deployments,” Richard Edgar (Imagination Technologies)
  - 11-15/0330, “OFDMA Numerology and Structure,” Sharnaz Azizi (Intel)
  - 11-15/0583, “OBSS Preamble Error Probability,” Jiyong Pan (Huawei)
  - 11-15/0590, “Traffic Model Updates to Evaluation Methodology,” Phil Barber (Huawei)

  - ~~11-14/1392, “Simulation results for Box-5 calibration,” Suhwook Kin (LG Electronics)~~
  - 11-15/0674, “Joint submission for Box 5 Calibration,” Suhwook Kin (LG Electronics)
  - 11-15/0581, “LSP Correlation Clarification for Scenario 4,” Daewon Lee (Newracom)
  - 11-15/0582, “Clarifications to Box 2 MIMO simulation calibrations,” Daewon Lee (Newracom)
  - 11-15/0373, “Mixed traffic configurations on simulation scenarios,” Yingpei Lin (Huawei)
    - Not presented since the contents of this submission was merged into 11-15/0590.
  - 11-15/0610, “Simulation Results for Box 5 Calibration,” Vida Ferdowsi (Newracom)
  - 11-15/0613, “Box 5 Calibration Result,” Chinghwa Yu (MediaTek)
  - 11-15/0623, “TGax simulation scenario “Box 5” – calibration results,” Guido Hiertz (Ericsson)

  - 11-15/0316, “Power Save Calibrations,” Hyeyoung Choi (LG Electronics)
  - 11-15/0564, “802.11ax Calibration and Modeling Adjacent Channel Interference,” Naveen Kakani (CSR)
  - 11-15/0576, “Latency and Power Consumption in State Transitions,” Chittabrata Ghosh (Intel)
  - 11-15/0592, “More Power Save Calibration Results,” Eric Wong (Apple)
  - 11-15/0598, “U-APSD Enhancement for HE,” Jarkko Kneckt (Nokia)
  - 11-15/0603, “Calibration Results for PSP and U-APSD,” Chittabrata Ghosh (Intel)

Goals for July 2015

- Continue to advance TG documents based on submissions.

- Expectation is more submissions affecting the TG specification framework document will be considered.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the July 2015 session.
  - Thursday, June 18th, 10:00 – 12:00 (ET)

March 2015 – Berlin, Germany

The original plan was to have nine sessions during the week, but one more session was added (Wednesday PM2).

Monday	Tuesday	Wednesday	Thursday
TGax (ad hoc)		**TGax (MU/Spatial Reuse)**	**TGax**
	TGax (PHY/MAC)		
TGax	**TGax**	**TGax**	**TGax**
		TGax	
	TGax		

Main documents

- Agenda: 11-15/0235r8, TGax March 2015 Meeting Agenda
- Closing report: 11-15/0465r0, TGax March 2015 Closing Report
- Minutes: 11-15/0309r1, TGax March 2015 Berlin Meeting Minutes

Achievements

25. Passed a number of motions affecting the TG specification framework:

- PHY motions related to LTF design and SIG-B.
- MAC motions related to Multi-User Block ACK and Multi-User Procedure
- MU motions related to ACK multiplexing
- Etc.

26. TG Documents.

- Approved new revisions of Simulation Scenarios and Evaluation Methodology TG documents.
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0571-08-00ax-evaluation-methodology.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0980-09-00ax-simulation-scenarios.docx
- Other TG documents.
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

27. Technical Presentations

Following technical submissions have been covered during the week.

- MAC
  - 11-15/0320, "GCR-BA with Measurement Report Performance in OBSS," Yuichi Morioka (SONY)

- ✧ 11-15/0336, “MAC Overhead Analysis of MU Transmissions,” Xiaofei WANG (InterDigital)
- ✧ 11-15/0362, “Beacon Transmission Issues,” Yonggang Fang (ZTE)
- ✧ 11-15/0365, “UL MU Procedure,” Kiseon Ryu (LG Electronics)
- ✧ 11-15/0366, “Multi-STA BA,” Simone Merlin (Qualcomm)
- ✧ 11-15/0376, “UL-MU MAC Throughput Under Non-Full Buffer Traffic,” Tatsumi Uwai (Radrix Co. Ltd)

- Spatial Reuse
  - ✧ 11-15/0300, “Potential of Modified Signal Detection Thresholds,” Gustav Wikstrom (Ericsson AB)
  - ✧ 11-15/0318, “CCA Regime Evaluation Revisited,” Amin Jafarian (Newracom Inc.)
  - ✧ 11-15/0319, “Impact of TPC coupled to DSC for legacy unfairness issue,” Masahito Mori (Sony)
  - ✧ 11-15/0338, “Discussions on the Definition of CCA Threshold,” Akira Kishida (NTT)
  - ✧ 11-15/0367, “OBSS preamble detection,” Gwen Barriac (Qualcomm)
  - ✧ 11-15/0371, “Proposal and simulatin based evaluation of DSC-AP Algorithm,” Eduard Garcia-Villegas (UPC)
  - ✧ 11-15/0374, “Further Considerations on Legacy Fairness with Enhanced CCA,” John Son (WILUS Institute)

- PHY
  - ✧ 11-15/0305, “Effective Subcarrier Assignment for DL-OFDMA,” Katsuo Yunoki (KDDI R&D Laboratories)
  - ✧ 11-15/0330, “OFDMA Numerology and Structure,” Shahrnaz Azizi (Intel Corporation)
  - ✧ 11-15/0344, “SIG field design principle for 11ax,” Young Hoon Kwon (Newracom)
  - ✧ 11-15/0349, “HE-LTF Proposal,” Hongyuan Zhang (Marvell)
  - ✧ 11-15/0358, “Numerology for 11ax,” Daewon Lee (Newracom)
  - ✧ 11-15/0360, “Preamble Auto-Detection for 802.11ax,” Sungho Moon (NEWRACOM)
  - ✧ 11-15/0364, “11ax Preamble design: training sequence,” Sigurd Schelstraete (Quantenna)
  - ✧ 11-15/0375, “Minimum Resource Granularity in OFDMA,” John Son (WILUS Institute)
  - ✧ 11-15/0378, “Channel Sensing in UL OFDMA,” Reza Hedayat (Newracom)
  - ✧ 11-15/0380, “Discussion on OFDMA scheduling for 802.11ax,” Le Liu (Huawei Technologies)
  - ✧ 11-15/0381, “HE-STF Proposal,” Yakun Sun (Marvell)
  - ✧ 11-15/0383, “Impact of number of sub-channels in OFDMA,” Leif Wilhelmsson (Ericsson)

- Multi-User
  - ✧ 11-15/0331, “Uplink Multi-User MIMO Protocol Design,” Yongho Seok (NEWRACOM)
  - ✧ 11-15/0333, “Throughput Comparison of Some Multi-user Schemes in 802.11ax,” Kome Oteri (InterDigital)
  - ✧ 11-15/0336, “MAC Overhead Analysis of MU Transmissions,” Xiaofei WANG (InterDigital)
  - ✧ 11-15/0353, “OFDMA Non-contiguous Channel Utilization,” Jinsoo Ahn (Yonsei univ.)
  - ✧ 11-15/0354, “Bandwidth granularity on UL-OFDMA data allocation,” Woojin Ahn (Yonsei Univ.)
  - ✧ 11-15/0363, “UL MU Synchronization Requirements,” Yonggang Fang (ZTE)
  - ✧ 11-15/0377, “Considerations on UL MU Resource Scheduling,” Leonardo Lanante (Kyutech)
  - ✧ 11-15/0379, “DL OFDMA Performance and ACK Aggregation,” Reza Hedayat (Newracom)
  - ✧ 11-15/0384, “Discussion on DL-OFDMA Sub-channel Indication Method,” Yu Cai (Lenovo)

- Simulation and Calibration
  - ✧ 11-14/1392, “Simulation results for Box-5 calibration,” Suhwook Kim (LG Electronics)
  - ✧ 11-14/1434, “SLS Box4 Calibration Results,” Russell Huang (MediaTek Inc.)

- ✧ 11-15/0053, “Box5 Results of 11ac SS6,” Jiyong Pang ‘Huawei)
- ✧ 11-15/0072, “U-APSD power saving calibration results,” Yanchun Li (Huawei)
- ✧ 11-15/0125, “Box 1 and Box 2 Calibration Results,” Ron Porat (Broadcom)
- ✧ 11-15/0304, “Evaluating Power Save Performance,” Joonsuk Kim (Apple)
- ✧ 11-15/0306, “Power Save Mode Calibration Results,” Eric Wong (Apple)
- ✧ 11-15/0307, “MAC calibration results for Test 4,” Ke Yao (ZTE Corp.)
- ✧ 11-15/0308, “Simulation results for box 5,” Ke Yao (ZTE Corp.)
- ✧ 11-15/0314, “Sleep States in IEEE 802.11ax Simulation Scenarios,” Chittabrata Ghosh (Intel)
- ✧ 11-15/0316, “Power Save Calibration,” Hyeyoung Choi (LG)
- ✧ 11-15/0326, “U-APSD Enhancements for HE,” Jarkko Kneckt (Nokia)
- ✧ 11-15/0327, “Microsleep for HE STA,” Jarkko Kneckt (Nokia)
- ✧ 11-15/0343, “In Situ Frame Size Measurements,” Chuck Lukaszewski (Aruba Networks)
- ✧ 11-15/0351, “Empirical Measurements of Channel Degradation Under Load,” Chuck Lukaszewski (Aruba Networks)
- ✧ 11-15/0357, “Scenario 1 CCA Simulation,” Knut Odman (Broadcom Corporation)
- ✧ 11-15/0359, “Clarification of MIMO Box2 calibration,” Jaehyun Ahn (Newracom)
- ✧ 11-15/0368, “Box 5 results for Single BSS Calibration Case,” Esa Tuomaala (Nokia)
- ✧ 11-15/0369, “MAC calibration test 4 simulation results,” Enrico-Henrik Rantala (Nokia)
- ✧ 11-15/0370, “MAC Calibration Results,” Guoqing Li (Apple)
- ✧ 11-15/0372, “Corrections on Reference Traffic Profile for Scenario 2 in Simulation Scenarios Document,” Yingpei Lin (Huawei)
- ✧ 11-15/0373, “Mixed traffic configurations on simulation scenarios,” Yingpei Lin (Huawei)
- ✧ 11-15/0382, “MAC calibration test 4 simulation results,” Yanchun Li (Huawei)
- ✧ 11-15/0441, “Proposed text to TGax Simulation Scenarios MAC test 4,” Enrico-Henrik Rantala (Nokia)

Goals for May 2015

- Continue to advance TG documents based on submissions.
  - ➢ Expectation is more submissions affecting the TG specification framework document will be considered.
- Technical Presentations.

Teleconferences

- Two teleconferences are planned before the May 2015 session.
  - ✧ Thursday, April 9th, 10:00 – 12:00 (ET)
  - ✧ Thursday, April 30th, 20:00 – 22:00 (ET)

January 2015 – Atlanta, GA

The original plan was to have nine sessions during the week, but one session was cancelled.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax**	**TGax**
AM2	**TGax**	**TGax**		
PM1	**TGax**	**TGax**	**TGax**	**TGax (canceled)**
PM2				
PM3	**TGax**			

Main documents

- Agenda: 11-14/1578r6, TGax January 2015 Meeting Agenda
- Closing report: 11-15/0186r0, TGax January 2015 Closing Report
- Draft minutes: 11-15/0090r0, TGax January 2015 Atlanta Meeting Minutes

Achievements

28. TG Structure

- Ad hoc chairs elected.

MAC	PHY	MU	Spatial Reuse
Eric Wong (Apple)	Bo Sun (ZTE)	Sigurd Schelstraete (Quantenna)	Laurent Cariou (Orange)
Reza Hedayat (NEWRACOM)	Jianhan Liu (MediaTak)	Kiseon Ryu (LG Electronics)	Guido Hiertz (Ericsson AB)
Brian Hart (Cisco)	Yakun Sun (Marvell)	Kaushik Josiam (Samsung)	Jae Seung Lee (ETRI)

29. TG Documents.

- Passed a number of motions affecting the TG specification Framework.
- Approved new revisions of Simulation Scenarios and Evaluation Methodology TG documents.
  - ✧ TGax Simulation Scenarios (11-14/0980r6)
  - ✧ TGax Evaluation Methodology (11-14/0571r7).

30. Technical Presentations

Following technical submissions have been covered during the week.

- DSA and CCA
  - ✧ 15/0025, "DSC and Roaming," Graham Smith (SR Technologies)
  - ✧ 15/0027, "Simulation Based Evaluation DSC in residential scenario," M. Shahwaiz Afaqui (UPC)
  - ✧ 15/0045, "Performance Analysis of BSS Color and DSC," Masahito Mori (Sony)
  - ✧ 15/0050, "Modeling components impacting throughput gain from CCAT adjustment," Yu Wang (Ericsson AB)
  - ✧ 15/0085, "Legacy Fairness Issues of Enhanced CCA," John Son (WILUS Institute)
  - ✧ 15/0105, "Dynamic CCA Management," Sean Coffey (RealTek)

- OFDMA
  - ✧ 15/0034, "DL-OFDMA Map Frame," Katsuo Yunoki (KDDI Labs)
  - ✧ 15/0066, "Downlink OFDMA Protocol Design," Yongho Seok (Newracom)
  - ✧ 15/0079, "OFDM Numerology for 11ax," Daewon Lee (Newracom)
  - ✧ 15/0091, "UL-OFDMA Procedure in IEEE 802.11ax," Woojin Ahn (Yonsei Univ.)
  - ✧ 15/0092, "DL-OFDMA Procedure in IEEE 802.11ax," Jinsoo Ahn (Yonsei Univ.)

- MU
  - ✧ 15/0010, "draft for integrated UL DL MU MIMO Frame Format," Tae-Yoon Kim (Korea Univ.) – Not presented
  - ✧ 15/0029, "Discussion on integrated UL/DL MU-MIMO," Tae-Yoon Kim (Korea Univ.) – Not presented
  - ✧ 15/0040, "Discussion on integrated UL-DL MU-MIMO-MAC," TaeYoon Kim (Korea Univ.)
  - ✧ 15/0064, "Consideration on UL-MU overheads," Tomoko Adachi (Toshiba)
  - ✧ 15/0086, "Uplink MU Transmission and Legacy Coexistence," Reza Hedayat (NEWRACOM)
  - ✧ 15/0089, "MAC Efficiency Gain of Uplink Multi-user Transmission," Leonardo Lanante Jr (Kyushu Inst. of Tech.)

- MAC
  - 15/0035, "Scalable Channel Utilization," Katsuo Yunoki (KDDI R&D Laboratories)
  - 15/0037, "Structural Format Change," Kyonggi University
  - 15/0046, "11aa GCR-BA Performance in OBSS," Yuichi Morioka (Sony)
  - 15/0059, "Uplink RTS/CTS Control," Sigurd Schelstraete (Quantenna)

- PHY
  - 15/0048, "Non-Uniform Constellations for Higher Order QAMs," Daniel Schneider (Sony)
  - 15/0068, "Support of outdoor environments," Young Hoon Kwon (NEWRACOM)
  - 15/0079, "OFDM Numerology for 11ax," Daewon Lee (NEWRACOM)
  - 15/0081, "Considerations on 11ax Auto-detection Methods," Jaeyoung Song (KAIST)
  - 15/0082, "Considerations on 11ax OFDMA Frequency Granularity," Young-bin Kim (KAIST)
  - 15/0097, "Performance Analysis of Frequency Selective Scheduling," Ningbo Zhang (BUPT)
  - 15/0099, "Payload Symbol Size for 11ax," Sriram Venkateswaran (Broadcom)
  - 15/0101, "Preamble structure for 11ax system," Jiayin Zhang (Huawei)

- Simulation Scenario and Evaluation Methodology
  - 14/1342, "MAC Calibration Results," Igor Kim (ETRI)
  - 14/1343, "Multicast Scenarios for MAC Calibration," Igor Kim (ETRI)
  - 14/1392, "Simulation Results for Box-5 Calibration," Suhwook Kim (LGE)
  - 14/1523, "Offline Discussion Minutes of SLS Calibration," Jiyong Pang (Huawei)
  - 14/1590, "Multi-wall penetration loss model for HEW system level simulation," Kejun Zhao et al. (National Engineering Research Center for Broadband Networks & Applications)
  - 14/1597, "PHY abstraction and performance for outdoor channel models," Kejun Zhao et al. (National Engineering Research Center for Broadband Networks & Applications)
  - 15/0022, "MAC Calibration Results," Xiaofei Wang (InterDigital)
  - 15/0044, "Proposed Changes to Simulation Scenarios," Masahito Mori (Sony)
  - 15/0051, "Box5 Calibration Results," Jiyong Pang (Huawei)
  - 15/0052, "Box5 Results of One BSS Case," Jiyong Pang (Huawei)
  - 15/0053, "Box5 Results of 11ac SS6," Jiyong Pang (Huawei)
  - 15/0061, "FPS Network Traffic Model," Allan Jones (Activision)
  - 15/0065, "11ax EMD Revision Straw Poll," Jiyong Pang (Huawei)
  - 15/0071, "MAC calibration test 4 results," Yanchun Li (Huawei)
  - 15/0072, "U-APSD power saving calibration results," Yanchun Li (Huawei)
  - 15/0073, "Simulation Results of Box5," Ke Yao (ZTE)
  - 15/0078, "Clarification on calibration test cases," Guoqing Li (Apple)
  - 15/0080, "MAC Calibration Results," Geonjung Ko (WILUS Institute)
  - 15/0093, "Text Update on PHY Abstraction and SP," Yakun Sun (Marvell)
  - 15/0103, "Power Save Calibration," Yarkko Kneckt (Nokia)
  - 15/0104, "SLS MAC Test 4 Results," Chinghwa Yu (MediaTek)

- Others
  - 15/0043, "In-band Full Duplex Radios and System Performance," Kapseok Chang (ETRI)
  - 15/0075, "Operating Rules for TGax Ad Hoc groups," Osama Aboul-Magd (TGax chair)
  - 15/0076, "Field Sample OBSS and Client Data," Carol Ansley (ARRIS Group)

Goals for March 2015

- Continue to advance TG documents.
  - Expectation is more submissions affecting the TG specification framework document will be considered.

- Technical Presentations.

Teleconferences

- One teleconference is planned before the March 2015 session.
  - ✧ Thursday, February 26th, 10:00 – 12:00 (ET)

November 2014 – San Antonio, TX

The original plan was to have nine sessions during the week, but one session was cancelled.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax (ad hoc)**			**TGax**
AM2		**TGax**		
PM1		**TGax**	**TGax**	**TGax**
PM2	**TGax**	**TGax**		
PM3		**TGax (cancelled)**		

Main documents

- Agenda: 11-14/1319r7, TGax November 2014 Meeting Agenda
- Closing report: 11-14/1536r0, TGax November 2014 Closing Report
- Draft minutes: 11-14/1460r0, TGax November 2014 Meeting Minutes

Achievements

31. Discussions on the TG Structure

- The TG approved a motion to create four ad hoc groups.
  - ✧ PHY, MAC, Multiuser and Spatial Reuse
- The TG approved a motion to have 3 co-chairs for each of the ad hocs.
- Ad hoc chairs election is scheduled for January 2015 meeting on Tuesday.
- Ad hoc meetings will start on March 2015
- Robert Stacy (Intel) was appointed as the technical editor of the TGax.

32. TG Documents – The group approved updated documents.

- The group approved the first version of TGax Specification Framework document (11-14/1453r2).
- The group approved new revisions of the following documents.
  - ✧ TGax Simulation Scenarios (11-14/0980r5)
  - ✧ TGax Evaluation Methodology (11-14/0571r6).

33. Technical Presentations

About 35 technical submissions covered during the week.

- Evaluation Methodology
  - ✧ 11-14/1388, “Consideration on PER Prediction for PHY Abstraction,” Bo Sun (ZTE Corp)
  - ✧ 11-14/1418, “Further Study of Time Varying Interference and PHY Abstraction,” Yakun Sun (Marvell)
  - ✧ 11-14/1420, “The Impact of Preamble Error on MAC System Performance,” Po-Kai Huang (Intel)

- 11-14/1424, "Proposed Changes to Evaluation Methodology and Simulation Scenario," Yuichi Morioka (Sony)
- 11-14/1440, "A Few Corrections to Video Traffic Model," Guoqing Li (Apple)

- Simulation Scenarios and Calibration
  - 11-14/1177, "Discussion about Box5 Calibration," Jiyong Pang (Huawei)
  - 11-14/1342, "MAC Calibration Results," Igor Kim (ETRI)
  - 11-14/1343, "Multicast Scenarios for MAC Calibration," Igor Kim (ETRI)
  - 11-14/1392, "Simulation results for Box 5 calibration," Suhwook Kim (LG Electronics)
  - 11-14/1402, "Box1 and Box3 calibration results," Masahito Mori (Sony)
  - 11-14/1419, "SLS Box5 Calibration Results and Discussions," Yakun Sun (Marvell)
  - 11-14/1434, "TGax SLS Box4 Calibration Results," Russell Huang (MediaTek Inc.)
  - 11-14/1441, "Simulation Setting of Box5 Calibration," Jiyong Pang (Huawei)
  - 11-14/1444, "Energy Efficiency Evaluation and Simulation Model," Chinghwa Yu (MediaTek)
  - 11-14/1449, "MAC Calibration Results," Newracom
  - 11-14/1450," Box 0 calibration results," Hongsup Lee (Newracom)
  - 11-14/1451, "Box 1 and Box 2 Calibration Results," Jaehyun Ahn (Newracom)

- Technology/Others
  - 11-14/1228, "Issues on 256-FFT per 20MHz," Heejung Yu (NEWRACOM/YU)
  - 11-14/1380, "Efficiency Measurement for RTS/CTS," Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1381, "Novel RTS/CTS Procedure," Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1382, "Responses to the comments on doc.1169," Katsuo Yunoki (KDDI R&D Laboratories)
  - 11-14/1397, "Discussion on Frame Structure for Future WLAN Systems with OFDMA," Myeong-Jin Kim (Korea University)
  - 11-14/1403, "Performance Analysis of BSS Color and DSC," Masahito Mori (Sony)
  - 11-14/1404, "11aa GCR-BA Performance in OBSS," Yuichi Morioka (Sony)
  - 11-14/1416, "Observed protocol violations caused by DSC with roaming STAs," Chuck Lukaszewski (Aruba Networks)
  - 11-14/1417, "HEW PPDU Transmission Discussion," Yongho Seok (NEWRACOM)
  - 11-14/1426, "DSC and legacy coexistence," Gustav Wikstrom et al. (Ericsson)
  - 11-14/1427, "DSC Performance," Gustav Wikstrom et al. (Ericsson)
  - 11-14/1428, "Clear Channel Assessment for OFDMA PHY," K. C. Chen (NTU) and D. J. Deng (NCUE)
  - 11-14/1431, "Issues on UL-OFDMA Transmission," Young Hoon Kwon (Newracom)
  - 11-14/1433, "Protocol and signaling framework for OFDMA," Sigurd Schelstraete (Quantenna)
  - 11-14/1435, "Considerations on OBSS Spatial Re-Use," Jianhan Liu (Mediatek Inc.)
  - 11-14/1436, "Overhead Analysis for Simultaneous Downlink Transmissions," Pengfei Xia (interdigita)
  - 11-14/1437, "Efficient Wider Bandwidth Operation in IEEE 802.11ax," Jinsoo Ahn (Yonsei Univ)
  - 11-14/1439, "Preamble Considerations in Large Channel Delay Spread Scenarios," Daewon Lee (Newracom)
  - 11-14/1442, "Considerations on DL OFDMA control mechanism," Woojin Ahn (Yonsei Univ.)
  - 11-14/1443, "Adapting CCA and Receiver Sensitivity," Esa Tuomaala (Nokia)
  - 11-14/1446, "Analysis of frequency and power requirements for UL-OFDM," Leif Wilhelmsson (Ericsson)
  - 11-12/1448, "Considerations for Adaptive CCA," Reza Hedayat (Newracom)
  - 11-14/1452, "Frequency selective scheduling in OFDMA," Leif Wilhelmsson (Ericsson)

- Specification Framework
  - 11-14/1429, "Proposed 802.11ax specification framework document," Minho Cheong (Newracom)
  - 11-14/1432, "Proposed 802.11ax specification framework – background," Minho Cheong (Newracom)
  - 11-14/1447, "Proposed Spec Framework Document for 11ax considering potential tech features," John Son (WILUS Institute), Young Doo Kim (SK Telecom)
  - 11-14/1453, "Spec Framework Proposal," Robert Stacey (Intel)

Goals for January 2015

- Elect ad hoc chairs – 3 co-chairs/ad hoc group as agreed.
- Continue to advance TG documents.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the January 2015 session.
  - Thursday, December 4th, 10:00 – 12:00 (ET)
    - Chair had sent out call for submissions on the TGax reflector.

September 2014 – Athens, Greece

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**TGax**
AM2	**TGax**	**TGax**		
PM1		**TGax**	**TGax**	**TGax**
PM2	**TGax**	**TGax**		
PM3	**TGax**			

Main documents

- Agenda: 11-14/1033r5, TGax September 2014 Meeting Agenda
- Closing report: 11-14/1304r0, TGax September 2014 Closing Report
- Draft minutes: 11-14/1159r1, TGax September 2014 Meeting Minutes

Achievements

34. The group elected two vice chairs and discussed about the TG structure.

- Election of Vice Chairs took place during this meeting. The TG Vice Chairs are:
  - Simone Merlin (Qualcomm)
  - Ron Porat (Broadcom)
- The group started discussion on the Ad Hoc groups. Discussion will continue in future meetings.

35. The group approved minutes from the July 2014 San Diego meeting.

- 11-14/0864r0, July 2014 San Diego Meeting Minutes

36. TG Documents – The group approved updated documents.

- The TGax Simulation Scenarios (11-14/0980r4) and the TGax Evaluation Methodology (11-14/0571r5).
- The TGax Channel Model document (11-14-0882r4).
- The TGax Functional Requirements document (11-14-1009r2).

37. Technical Presentations

54 submissions were uploaded on the server and 52 of them were covered during the week.

- Functional Requirements
  - ✧ 11-14/0636, "Discussion on Functional Requirements," David Xun Yang (Huawei Technologies)
  - ✧ 11-14/0920, "Considerations of Functional Requirements Documents," David Xun Yang (Huawei Technologies)
  - ✧ 11-14/1009, "Proposed 802.11ax Functional Requirements," Lei Wang (Marvell)
  - ✧ 11-14/1164, "Meaningful 11ax Functional Requirements," Joe Kwak (InterDigital)
  - ✧ 11-14/1167, "TGax Functional Requirement Discussion," Yonggang Fang (ZTE)
  - ✧ 11-14/1170, "Functional Requirements Discussions on Coex with Legacy STAs," Masahito Mori (Sony)
  - ✧ 11-14/1234, "Requirements Discussion," Joseph Levy (InterDigital)

- Simulation Scenarios and Calibration
  - ✧ 11-14/0800, "Box 1 and Box 2 Calibration Results," Nihae Jindal (Broadcom)
  - ✧ 11-14/1147, "MAC Simulator Calibration Results," Shoko Shinohara, Akira Kishida (NTT)
  - ✧ 11-14/1175, "MAC Calibration results," Suhwook Kim (LG Electronics)
  - ✧ 11-14/1177, "Discussion about Box5 Calibration," Jiyong Pang (Huawei Technologies)
  - ✧ 11-14/1187, "The Effect of Preamble Error Model on MAC Simulator," Po-Kai Huang (Intel)
  - ✧ 11-14/1191, "MAC calibration results," Zhou Lan (Huawei Technologies)
  - ✧ 11-14/1192, "MAC calibration results comparison," Zhou Lan (Huawei Technologies)
  - ✧ 11-14/1198, "Additional Test Cases for MAC calibration," Gwen Barriac (Qualcomm)
  - ✧ 11-14/1217, "MAC Calibration Results for Test 1 and 2," Esa Tuomaala (Nokia)
  - ✧ 11-14/1223, "Stadium Measurements," Brian Hart (Cisco Systems)
  - ✧ 11-14/1226, "SLS Box 1&2 Calibration Results," Russell Huang (MediaTek)
  - ✧ 11-14/1230, "MAC Calibration Result," Chinghwa Yu (MediaTek)

- Evaluation Methodology
  - ✧ 11-14/1161, "Parameters for Power Save Mechanisms," Eric Wong (Apple)
  - ✧ 11-14/1162, "Energy Efficiency Evaluation Methodology Follow Up," Eric Wong (Apple)
  - ✧ 11-14/1174, "PHY Abstraction with Time Varying Interference," Yakun Sun (Marvell)
  - ✧ 11-14/1176, "PHY abstraction tables for 11ax system level simulation," Jiayin Zhang (Huawei Technologies)
  - ✧ 11-14/1221, "Traffic Generator for OBSS Calibration Case," Chao-Chun Wang (MediaTek)

- Channel Model
  - ✧ 11-14/1214, "Impact of correlated shadowing in 802.11ax system evaluations," Leif Wilhelmsson (Ericsson AB)
  - ✧ 11-14/1222, "Doppler Effect Evaluation for 11ax," Jianhan Liu (MediaTek)

- Technology/Others
  - ✧ 11-14/1106, "WLAN Frame Collision Information," Peng Shao (NEC Communication Systems)
  - ✧ 11-14/1148, "Consideration of asynchronous interference in OBSS environment," Koichi Ishihara (NTT)
  - ✧ 11-14/1168, "802.11 TGax PHY Frame Structure Discussion for Enabling New Contention Mechanism," Yonggang Fang (ZTE)
  - ✧ 11-14/1169, "DL-FDMA considerations," Katsuo Yunoki (KDDI R&D Labs.)
  - ✧ 11-14/1171, "DSC Simulation Results for Scenario 3," Masahiro Mori (Sony)
  - ✧ 11-14/1172, "Multicast Performance in OBSS," Yuichi Morioka (Sony)
  - ✧ 11-14/1178, "Inter-BSS interference in WLANs," Hyunduk Kang (ETRI)

- 11-14/1179, "Considerations for Partial Band Interference between WLAN Systems," Gwangzeen Ko (ETRI)
- 11-14/1180, "Discussions on Interference between TD-LTE & WLAN around 2.4GHz Band," Meng Yang (CATR)
- 11-14/1181, "Measurements on A-MPDU performances under various channel conditions," John Sun (WILUS Institute)
- 11-14/1186, "Comparisons of Simultaneous Downlink Transmissions," Pengfei Xia (InterDigital)
- 11-14/1190, "Frame Exchange Control for Uplink Multi-user transmission," Kaying Lv (ZTE)
- 11-14/1199, "Effect of CCA in residential scenario part 2," Gwen Barriac (Qualcomm)
- 11-14/1207, "OBSS reuse mechanism which preserves fairness," Laurent Cariou (Orange)
- 11-14/1208, "MAC considerations on 802.11ax OFDMA," Jinsoo Ahn (Yonsei Univ.)
- 11-14/1209, "Multiple RF operation for 802.11ax OFDMA," Woojin Ahn (Yonsei Univ.)
- 11-14/1210, "HEW PPDU Format for Supporting MIMO-OFDMA," Yongho Seok (NEWRACOM)
- 11-14/1211, "ACK Procedure for OFDMA," Yongho Seok (NEWRACOM)
- 11-14/1216, "Consideration on Coexistence between LTE-U and 802.11 WLAN," Jae Seung Lee (ETRI)
- 11-14/1224, "Link-Aware CCA," Brian Hart (Cisco Systems)
- 11-14/1225, "Considerations on CCA for OBSS Opearation in 802.11ax," Luo Jun (Huawei Technologies)
- 11-14/1227, "OFDMA Performance Analysis," Tianyu Wu (MediaTek)
- 11-14/1128, "Issues on 256-FFT per 20MHz," Heejung Yu (NEWRACOM)
- 11-14/1229, "Dynamic OFDM Symbol Duration," Alan Jauh (MediaTek)
- 11-14/1232, "On MU Aggregation Mechanisms for 11ax," Reza Hedyat (NEWRACOM)
- 11-14/1233, "Adaptive CCA for 11ax," Reza Hedyat (NEWRACOM)

Goals for November 2014

- Continue to advance TG documents.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the November 2014 session.
  - Thursday, October 9th, 10:00 – 12:00 (ET)
    - Chair had sent out call for submissions on the TGax reflector.

July 2014 – San Diego, CA

TGax had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax**		**TGax**	**TGax**
AM2		**TGax**		
PM1			**TGax**	**TGax**
PM2	**TGax**	**TGax**	**TGax**	
PM3		**TGax**		

Main documents

- Agenda: 11-14/0748r6, TGax July 2014 Meeting Agenda

- Closing report: 11-14/0984r1, TGax July 2014 Closing Report
- Draft minutes: 11-14/0864r0, July 2014 Meeting Minutes

Achievements

38. The group discussed on the TG structure.

- The group will have two vice chairs to be election during the initial meeting slot of TGax in September 2014.
  - ✧ Chair has sent out the call for nominations to the reflector.
- The group will have some ad hoc groups in the future, however, the discussion on the ad hoc structure was deferred.

39. The group approved minutes from the May 2014 Waikoloa meeting and Teleconference on July 2nd, 2014.

- 11-14/0655r3, May 2014 Waikoloa Meeting Minutes
- 11-14/0788r2, Minutes from the teleconference on July 2nd, 2014

40. TG Documents – The group discussed and approved following documents as current TG documents.

- The group approved new version of the Simulation Scenarios (11-14/0980r1) and Evaluation Methodology (11-14/0571r3) documents.
- The group approved the initial version of the TGax Channel Model document (11-14-0882r3).
- The group adopted the initial version of the TGax Selection Procedure (11-14-0938r4).
- The group had discussion on the Functional Requirements document.

41. Technical Presentations

More than 40 submissions were covered during the week.

- Simulation Scenarios and Calibration
  - ✧ 11-14/0799, "Modifications to Simulation Scenarios and Calibration Process," Nihar Jindal (Broadcom)
  - ✧ 11-14/0800, "Box 1 and Box 2 Calibration Results," Nihar Jindal (Broadcom)
  - ✧ 11-14/0803, "Packet Length for Box 0 Calibration," Wookbong Lee (LG Electronics)
  - ✧ 11-14/0850, "Clarification for MAC Calibration," Gwen Barriac (Qualcomm)
  - ✧ 11-14/0851, "Proposed Rate Control for MAC Simulator," Gwen Barriac (Qualcomm)
  - ✧ 11-14/0859, "Proposing a Stadium Scenario," Hakan Persson (Ericsson)
  - ✧ 11-14/0860, "Text proposal of a Stadium scenario to ax," Hakan Persson (Ericsson)
  - ✧ 11-14/0869, "MAC calibration results," Zhou Lan (Huawei)
  - ✧ 11-14/0871, "Further Calibration Results towards Integrated System Level Simulation," Jiyong Pang (Huawei)
  - ✧ 11-14/0892, "MAC Calibration Text to Simulation Scenarios," Jarkko Kneckt (Nokia)
  - ✧ 11-14/0894, "Calibration of System Level Simulators," Sayantan Choudhury (Nokia)
  - ✧ 11-14/0895, "Calibration of MAC simulator with OBSS Network Scenario," Chao-CHun Wang (MediaTek)

- Evaluation Methodology
  - ✧ 11-14/0571, " Evaluation Methodologies," Ron Porat (Broadcom)
  - ✧ 11-14/0810, "RBIR-based PHY Abstraction with Channel Estimation Error," Yukun Sun (Marvell)
  - ✧ 11-14/0811, "Overview on RBIR-based PHY Abstraction," Yukun Sun (Marvell)
  - ✧ 11-14/0827, "Energy Efficiency Evaluation Methodology," Eric Wong (Apple)
  - ✧ 11-14/0865, "ACI and AACI for 802.11ax System Simulations," Yu Cai (Huawei)
  - ✧ 11-14/0866, "Traffic modeling and system capacity performance measure," Johan Soder (Ericsson)
  - ✧ 11-14/0873, "PHY Abstraction Table for 11ax System Level Simulations," Jiayin Zhang (Huawei).
  - ✧ 11-14/0874, "Unified Traffic Model on Enterprise Scenario," Phillip Barber (Huawei)

- 11-14/0875 "VoIP Traffic Model Content for 11ax TG Simulation Scenarios & Evaluation Methodology," Phillip Barber (Huawei)

- Channel Models
  - 11-14/0882, "IEEE 802.11ax Channel Model Document," Jianhan Liu (Mediatek inc.)
  - 11-14/0904 "In-Cabin WiFi Channel Channel: Preliminary Ray Tracing Simulations," Fan Bai (General Motors)

- Functional Requirements
  - 11-14/0567, "Proposed 802.11ax Functional Requirements," Lei Wang (Marvell)
  - 11-14/0818, "Synchronization Requirements," Yonggang Fang (ZTE)
  - 11-14/0821, "Coexistence Requirements of 802.11 WLAN and LTE in Unlicensed Spectrum," Alireza Babaei (CableLabs).
  - 11-14/0835, "Functional Requirements Discussion," Joe Kwak (InterDigital)

- Technology/Others
  - 11-14/0779, "Dynamic Sensitivity Control Practical Usage," Graham Smith (DSP Group)
  - 11-14/0801, "Envisioning 11ax PHY Structure - Part II," Dongguk Lim(LG Electronics)
  - 11-14/0802, "Consideration on UL MU transmission," Jinyoung Chun (LG Electronics)
  - 11-14/0804, "Envisioning 11ax PHY Structure – Part I," Jinsoo Choi (LG Electronics)
  - 11-14/0832, "Performance Evaluation of OBSS Densification," Po-Kai Huang (Intel)
  - 11-14/0833, "Residential Scenario Sensitivity and Transmit Power Control Simulation Results," Ron Murias (InterDigital)
  - 11-14/0838, "Discussion on dual-link STR in IEEE 802.11ax," Jinsoo Ahn (Yonsei Univ)
  - 11-14/0839, "Discussion on OFDMA in IEEE 802.11ax," Jinsoo Ahn (Yonsei Univ)
  - 11-14/0846, "Changing CCA in the Residential Environment," Gwen Barriac (Qualcomm)
  - 11-14/0847, "Further Considerations on Enhanced CCA for 11ax," John Son (WILUS Institute)
  - 11-14/0854, "DSC and Legacy Coexistence," Yuichi Morioka (SONY)
  - 11-15/0855, "Techniques for Short Downlink Frames," Brian Hart (Cisco Systems)
  - 11-15/0856, "Evaluating Dynamic CCA/Receiver Sensitivity Algorithms," Brian Hart (Cisco Systems)
  - 11-14/0858, "Analysis on Multiplexing Schemes exploiting frequency selectivity," Kaushik Josiam (Samsung)
  - 11-14/0861, "Impact of CCA adaptation on spatial reuse in dense residential scenario," Sayantan Choudhury (Nokia)
  - 11-14/0868, "UL & DL DSC and TPC MAC simulations," Johan Soder (Ericsson)
  - 11-14/0872, "A Protocol Framework for Dynamic CCA," Sean Coffey (Realtek)
  - 11-14/0880, "Increased Network Throughput with Channel Width Related CCA and Rules," James Wang (Mediatek)
  - 11-14/0889, "Performance Gains from CCA Optimization," Nihar Jindal (Broadcom)

42. Timeline: There are no changes in the timeline.

- TGax initial timeline approved during the May 2014 Waikoloa session.
  - May 2014 - TG kick off
  - Nov. 2014 - start working on the Specification Framework
  - Jul. 2016 - Draft 1.0 to be ready
  - Mar. 2017 - Draft 2.0 to be ready
  - 1H/2019 - publication of the IEEE 802.11ax amendment

Goals for September 2014

- TG vice-chairs election.
- Continue to advance TG documents.
- Technical Presentations.

Teleconferences

- One teleconference is planned before the September 2014 session.
  - ✧ Thursday, August 14th, 10:00 – 12:00 (ET)
    - ➢ Chair had sent out call for submissions on the TGax reflector.

May 2014 – Waikoloa, Big Island, HI

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax**	**TGax**
AM2	**TGax**	**TGax**		
PM1				**TGax**
PM2	**TGax**	**TGax**		
PM3	**TGax**	**TGax**		

Main documents

- Agenda: 11-14/0478r5, TGax May 2014 Meeting Agenda
- Closing report: 11-14/0702r0, TGax May 2014 Closing Report
- Draft minutes: 11-14/0655r1, May 2014 Waikoloa Meeting Minutes

Achievements

43. The group elected the chairperson and the secretary.

- Chairperson: Osama Aboul-Magd (Huawei Technologies)
- Secretary: Yasuhiko Inoue (NTT)
- Other officer positions and TG structure will be discussed during the July 2014 meeting.

44. The group approved minutes from the March 2014 Beijing meeting and Teleconference on April 17th 2014.

- 11-14/0380r1, March 2014 Beijing Meeting Minutes
- 11-14/0530r0, Minutes from the teleconference on April 17th, 2014

45. TG Documents

- The group approved initial version of the Simulation Scenarios (11-14/0621r4) and Evaluation Methodology (11-14/0571r2) documents.
- The group started the discussion related to Functional Requirements document. Expectation is to approve the initial revision of the document in July.
- Discussion related to Channel Model document is expected to start in July.

46. Technical Presentations

40 submissions were covered during the week.

- 11-14/0527, "PHY Abstraction for TGax System Level Simulations", Pengfei Xia (InterDigital)
- 11-14/0546, "IEEE 802.11ax High Efficiency WLAN Packet measurements around Boulder Colorado", Jim Lansford (CSR)
- 11-14/0567, "Proposed 802.11ax Functional Requirements", Lei Wang (Marvell)
- 11-14/0571, "11ax Evaluation Methodologies", Ron Porat (Broadcom)
- 11-14/0577, "Path Loss Model for Scenario 1," Nihar Jindal (Broadcom)
- 11-14/0578, "Residential Scenario CCA/TPC Simulation Discussion," Frank La Sita (InterDigital)
- 11-14/0581, "Further Discussions on PHY Abstraction," Yakun Sun (Marvell)

- 11-14/0582, "Calibrating MAC Simulator Through Function Test," Jinjing Jiang (Marvell)
- 11-14/0583, "Further Discussions on Instantaneous SINR Calibration for System Simulation," Yakun Sun (Marvell)
- 11-14/0584, "System Level Simulations on Beamforming and Link Adaptation," Yan Zhang (Marvell)
- 11-14/0585, "PHY Abstractions for and IEEE 11ax PHY System Simulation and Integrated System Level Simulation," Jianhan Liu (MediaTek)
- 11-14/0586, "Automotive Considerations for the Simulation Scenarios," Igal Kotzer (General Motors)
- 11-14/0594, "Insert Virtual Desktop Infrastructure (VDI) Traffic Model Content for HEW Simulation Scenarios," Yingpei Lin (Huawei)
- 11-14/0595, "Edits on Some Traffic Content for HEW SG Simulation Scenarios," Yingpei Lin (Huawei)
- 11-14/0598, "Uplink multi-user MAC protocol for 11ax," Tran Thi Thao Nguyen (Kyushu Inst. of Tech.)
- 11-14/0600, "Proposed Calibration For MAC simulator," Gwen Barriac (Qualcomm)
- 11-14/0604, "Modeling and Evaluating Variable Bit rate Video Streaming for 802.11ax," Chao-Chun Wang (MediaTek)
- 11-14/612, "Calibration Procedures towards Integrated System Level Simulation," Jiayin Zhang (Huawei)
- 11-14/0613, "Discussions on adaptive frame length in MAC based on block ACK," Ningbo Zhang (BUPT)
- 11-14/0614, "Joint Coding and Modulation Diversity with LRA MMSE VP by QR precoding MIMO," Ningbo Zhang (BUPT)
- 11-14/0616, "CSMA/CA Enhancement Suggestion," Yonggang Fang (ZTE)
- 11-14/0617, "Discussion on timeline for 802.11ax," Laurent Cariou (Orange)
- 11-14/0620, "Link Adaptation for PHY SLS calibration," Jinyoung Chun (LG Electronics)
- 11-14/0621, "TGax Simulation Scenarios," Simone Merlin (Qualcomm)
- 11-14/0624, "Investigation on 1024 QAM feasibility in 11ax," Eunsung Park (LG Electronics)
- 11-14/0625, "Multi-channel operation in Simulation scenarios," Suhwook Kim (LG Electronics)
- 11-14/0626, "IEEE 802.11ax Functional Requirements," SangHyun Chang (Samsung)
- 11-14/0627, "Outdoor Channel Models for System Level Simulations," Kaushik Josiam (Samsung)
- 11-14/0628, "Measurements on CCA Thresholds in OBSS Environment," John Son (WILUS Institute), Young Doo Kim (SK Telecom)
- 11-14/0634, "Consideration on MAC system calibration," Zhou Lan (Huawei)
- 11-14/0635, "Dynamic Sensitivity Control Implementation," Graham Smith (DSP Group)
- 11-14/0636, "Consideration on functional requirements," Zhou Lan (Huawei)
- 11-14/0637, "Spatial Reuse and Coexistence with Legacy Devices," James Wang (MediaTek)
- 11-14/0647, "PHY abstraction method comparison," Tianyu Wu (MediaTek)
- 11-14/0648, "Performance Observation of a Dense Campus Network," Chinghwa Yu (MediaTek)
- 11-14/0649, "802.11ax Timeline Scenarios," Rolf de Vegt (Qualcomm)
- 11-14/0656, "How to Describe 802.11ax Functional Requirements," Minho Cheong
- 11-14/0660, "802.11ax Timeline," Minho Cheong (NEWRACOM)
- 11-14/0677, "Comparison of Calibration Methodology for MAC Simulation," Chinghwa Yu (MediaTek)
- 11-14/0682, "In Situ Spectrum Reuse Measurements in Indoor 20,000 Seat Arena," Chuck Lukaszewski (Aruba Networks)

47. Timeline

- The group approved initial timeline.
  - ✧ May 2014 - TG kick off
  - ✧ Nov. 2014 - start working on the Specification Framework

- ✧ Jul. 2016 - Draft 1.0 to be ready
- ✧ Mar. 2017 - Draft 2.0 to be ready
- ✧ 1H/2019 - publication of the IEEE 802.11ax amendment

Goals for July 2014

- Continue to advance simulation scenarios (11-14/0621) and Evaluation Methodologies (11-14/0571) documents.
- Approve an initial Functional Requirements documents
- Approve an initial Channel Model document.
- Discuss and approve TG structure and process.
- Technical Presentations.

Teleconferences

- Three teleconferences are planned before the July 2014 session.
  - ✧ Wednesday, June 4th, 10:00 – 12:00 (ET)
  - ✧ Wednesday, June 18th, 20:00 – 22:00 (ET)
  - ✧ Wednesday, July 2nd, 10:00 – 12:00 (ET)

  Details of the meeting information will be announced on the reflector.

March 2014 – Beijing, China

HEW study group had seven sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**HEW**	**HEW**
AM2		**HEW**		
PM1				**HEW**
PM2	**HEW**	**HEW**		
PM3		**HEW**		

Main documents

- Agenda: 11-14/0219r4, HEW SG March 2014 Meeting Agenda
- Closing report: 11-14/0457r0, HEW SG March 2014 Closing Report
- Draft minutes: 11-14/0380r0, March 2014 Beijing Meeting Minutes

Achievements

48. The group approved minutes from the January 2014 Los Angeles meeting and teleconferences on February 6th 2014 and February 13th 2014.

- 11-14/0199r0, January 2014 Los Angeles Meeting Minutes
- 11-14/0229r2, Minutes from the teleconference on February 6th, 2014
- 11-14/0242r0, Minutes from the teleconference on February 13th, 2014

49. Addressed comments related to the PAR and CSD received from individuals and other IEEE 802 WGs. Resolutions of comments are contained in the following document:

- https://mentor.ieee.org/802.11/dcn/14/11-14-0424-00-0hew-hew-sg-par-and-csd-comments-and-resolutions.pptx

50. Updated the PAR and the CSD documents based on received comments:

- https://mentor.ieee.org/802.11/dcn/14/11-14-0165-01-0hew-802-11-hew-sg-proposed-par.docx
- https://mentor.ieee.org/802.11/dcn/14/11-14-0169-01-0hew-ieee-802-11-hew-sg-proposed-csd.docx

51. The group passed motions to approve revised PAR and CSD documents, and SG extension.

- Revised PAR (11-14/0165r1): Y/N/A = 94/0/1, Pass
- Revised CSD (11-14/0169r1): Y/N/A = 97/0/1, Pass
- SG extension: Y/N/A = 105/0/0, Pass
- **HEW SG has completed its work and the IEEE standard board approved 802.11ax project.**

52. The group received more than 30 submissions in the categories of simulation scenarios, evaluation methodologies, channel models, functional requirements, technologies and selection procedure. Following submissions have been presented and discussed during the week.

- 11-13/1359r1, "HEW-Evaluation-Methodology" Ron Porat (Broadcom)
- 11-14/0112r1, "Wi-Fi interference measurements in Korea - part II", Minho Cheong (NEWRACOM)
- 11-14/0113r1, "Modeling of additional channel loss in dense WLAN environments", Minho Cheong (NEWRACOM)
- 11-14/0294r2, "DSC Channel Selection and Legacy Sharing" Graham Smith (DSP Group)
- 11-14/0301r0, "Multicast Considerations for HEW", Eisuke Sakai (Sony Corporation)
- 11-14/0306r0, "Discussions on HEW Functional Requirements", Lei Wang (Marvell)
- 11-14/0307r0, "PHY Calibration Results", Nihar Jindal (Broadcom)
- 11-14/0328r2, "Dense Apartment Complex Throughput Calculations", Graham Smith (DSP Group)
- 11-14/0329r0, "Channel Models for different links in Simulations", Kaushik Josiam (Samsung)
- 11-14/0330r3, "HEW PHY Abstraction", Sameer Vermani (Qualcomm)
- 11-14/0335r0, "Instantaneous SINR Calibration for System Simulation", Yakun Sun (Marvell)
- 11-14/0336r0, "Calibration of Long-Term SINR for System Simulator" Yakun Sun (Marvell)
- 11-14/0339r0, "A simplified STR Mechanism", Raja Banerjea (CSR)
- 11-14/0340r0, "A simplified STR Mechanism – MAC", Raja Banerjea (CSR)
- 11-14/0342r0, "Short Packet Optimizations", Naveen Kakani (CSR, Inc)
- 11-14/0345r1, "Joint Coding and Modulation Diversity with RBD pre-coding for next generation WLAN", Zhanji Wu (BUPT)
- 11-14/0350r0, "Suggestion on Evaluation Methodology", Jinyoung Chun (LG Electronics)
- 11-14/0352r0, "Discussion on power save mode for real time traffic", Giwon Park (LG Electronics)
- 11-14/0353r0, "Suggestion on PHY Abstraction for Evaluation Methodology", Dongguk Lim (LG Electronics)
- 11-14/0355r0, "Simulation Scenario 1 Revised", Simone Merlin (Qualcomm)
- 11-14/0356r0, "Calibration of System Level Simulators", Jarkko Kneckt (Nokia)
- 11-14/0357r0, "Utilizing Unused Resources for Simultaneous Transmissions", Jarkko Kneckt (Nokia).
- 11-14/0365r0, "Extended Intra-Vehicle Channel Model", Igal Kotzer (General Motors)
- 11-14/0372r2, "System level simulations on increased spatial reuse", Liwen Chu (Marvell)
- 11-14/0373r1, "Energy Efficiency in HEW", Pingping Xu, Wei Wang (Southeast University)
- 11-14/0381r0, "Stadium scenario for HEW", Johan Soder, Filip Mestanov (Ericsson AB)
- 11-14/0383r0, "Considerations on evaluation methodology for candidate HEW PHY&MAC techniques", Le Liu (Huawei)
- 11-14/0385r0, "Simulation Methodology and Calibration", Gwen Barriac (Qualcomm)
- 11-14/0386r0, "Discussions on MCS selection" , Tianyu Wu (MediaTek)
- 11-14/0392r0, "Traffic Separation Scheme for Optimizing WLANs using PHY and MAC options", Takayuki Nishio (Kyoto University)
- 11-14/0393r0, "Possible Indoor Channel Models for HEW System Simulations", Leif Wilhelmsson (Ericsson AB).

- 11-14/0419r0, "802.11ax Spec Development Process Proposal", Rolf de Vegt (Qualcomm)

Goals for May 2014

- Meet as a new TG and will have officer elections.
- Continue the work on simulation scenarios, evaluation methodologies, channel models, and function requirements.

Teleconferences

- One teleconference planned before the May 2014 session.
  - ✧ Thursday, April 17th, 10:00 – 12:00 (ET)
  - ✧ Details to be announced.

January 2014 – Los Angeles, CA

HEW study group had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**HEW**
AM2	**HEW**	**HEW**		
PM1				**HEW**
PM2	**HEW**	**HEW**	**HEW**	
PM3	**HEW**	**HEW**		

Main documents

- Agenda: 11-13/1506r5, HEW SG January 2014 Meeting Agenda
- Closing report: 11-14/0187r0, HEW SG January 2014 Closing Report
- Draft minutes: 11-14/0199r0, January 2014 Los Angeles Meeting Minutes

Achievements

1. **The group approved minutes from the November 2013 Dallas meeting and teleconferences on December 4th 2013, December 18th 2013 and January 8th, 2014..**
   - 11-13/1465r1, November 2013 Dallas Meeting Minutes
   - 11-13/1495r0, Minutes from the teleconference on December 4th, 2013
   - 11-13/1532r1, Minutes from the teleconference on December 18th, 2013
   - 11-14/0024r1, Minutes from the teleconference on January 8th, 2014

2. **The group resolved open issues related to the PAR and CSD.**

3. **The group received 28 submissions that were categorized into (1) PAR and 5 Criteria related submissions, and (2) Best Effort submissions. Best Effort submissions basically related to simulation scenario and evaluation methodology.**
   - **PAR and 5 Criteria related submissions**
     - ✧ 11-13/1410r6, "802.11 HEW Draft PAR and 5C", Osama Aboul-Magd and All
     - ✧ 11-13/1489r5, "Airport Capacity Analysis", Graham Smith (DSP Group)
     - ✧ 11-14/0026r1, "thoughts on hew par", Yong Liu (Apple)
     - ✧ 11-14/0045r2, "E-Education Analysis", Graham Smith (DSP Group)
     - ✧ 11-14/0058r1, "Pico Cell Use Case Analysis ", Graham Smith (DSP Group)
     - ✧ 11-14/0061r0, "Some findings from real world measurement", Katsuo Yunoki (KDDI Labs)

- 11-14/0065r1, “Comments on Draft HEW PAR”, Bill Carney (SONY)
- 11-14/0101r2, “Comments on 802.11 HEW Draft PAR & 5C”, Rakesh Taori (Samsung Electronics)
- 11-14/0106r0, “Discussion on HEW PAR”, Kiseon Ryu (LG Electronics)
- 11-14/0119r2, “Suggested PAR Changes”, James Yee (MediaTek)
- 11-14/0163r1, “Raising the PAR”, Mat Fischer (Broadcom)

- **Best Effort submissions**
  - 11-14/0043r2, “PHY abstraction in system level simulation for HEW study”, Fei Tong (Samsung)
  - 11-14/0051r0, “Wireless Office with Interference”, David Xun Yang (Huawei)
  - 11-14/0053r0, “Further Considerations on Calibration of System Level Simulation”, Jiayin Zhang (Huawei)
  - 11-14/0056r1, “Traffic Model on Virtual Desktop Infrastructure”, Yingpei Lin (Huawei)
  - 11-14/0059r1, “Integrated System Level Simulation”, Jun Luo (Huawei)
  - 11-14/0063r0, “Design Challenges for 802.11 HEW Radios”, Yu Cai (Huawei)
  - 11-14/0070r0, “Joint MAC/PHY Evaluation Methodology”, Kaushik Josiam (Samsung)
  - 11-14/0082r0, “Improved Spatial Reuse Feasibility – Part I”, Ron Porat (Broadcom)
  - 11-14/0083r0, “Improved Spatial Reuse Feasibility – Part II”, Ron Porat (Broadcom)
  - 11-14/0086r2, “Outdoor AP Measurement in Tokyo”, Tsugu Aoki (Toshiba)
  - 11-14/0088r0, “Intra-Vehicular Channel Model”, Igal Kotzer (General Motors)
  - 11-14/0095r0, “OFDM-IDMA Uplink Communication”, Leonardo Lanante (Kyushu Inst. Of Tech)
  - 11-14/0107r0, “HEW Evaluation Metrics”, Yonggang Fang (ZTETX)
  - 11-14/0116r1, “Long-Term SINR Calibration for System Level Simulation”, Yakun Sun (Marvell)
  - 11-14/0117r0, “PHY Abstraction for HEW System Level Simulation”, Yakun Sun (Marvell)
  - 11-14/0118r0, “Consideration on System Level Simulation”, Jinsoo Chio (LG Electronics)

4. **The group passed motions to approve PAR and CSD.**
   - PAR: 11-14/0165r0, IEEE 802.11 HEW SG Proposed PAR
   - CSD: 11-14/0169r0, IEEE 802.11 HEW SG Proposed CSD

Goals for the March 2014 Meeting

- Resolve comments expected from EC members and other IEEE 802 WGs
- Continue with presentations relevant to the SG topics.
  - Simulation scenarios
  - Evaluation Methodologies
  - Channel Models
  - Technology
  - etc.

Teleconferences

The group agreed to have four teleconferences before the March 2014 meeting.

- Thursday, February 6th, 2014: 20:00 – 22:00 (ET)
- Thursday, February 13th, 2014: 10:00 – 12:00 (ET)
- Thursday, February 20th, 2014: 10:00 – 12:00 (ET)
- Thursday, February 27th, 2014: 20:00 – 22:00 (ET)

November 2013 – Dallas, TX

HEW study group had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**HEW**	**HEW**
AM2		**HEW**		
PM1		**HEW**	**HEW**	**HEW**
PM2	**HEW**	**HEW**	**HEW**	**HEW**

Main documents

- Agenda: 11-13/1263r5, HEW SG November 2013 Meeting Agenda
- Closing report: 11-13/1476r1, HEW SG November 2013 Closing Report
- Draft minutes: 11-13/1465r1, November 2013 Dallas Meeting Minutes

Achievements

1. **The group approved minutes from the September 2013 Nanjing meeting and teleconferences on October 3rd and October 30th, 2013.**
   - 11-13/1117r1, September 2013 Nanjing Meeting Minutes
   - 11-13/1275r1, Minutes from the teleconference on October 3rd , 2013
   - 11-13/1303r0, Minutes from the teleconference on October 30th, 2013

2. **The group received more than 40 submissions that were categorized into three categories, i.e., (1) Channel Mode/Simulation Scenarios and Evaluation Methodologies, (2) MAC/PHY technologies and (3) PAR proposals. Following submissions were presented during the week.**
   - **Channel Models, Simulation Scenarios and Evaluation Methodologies**
     - 11-13/1001r5, "HEW SG Simulation Scenarios", Simone Merlin (Qualcomm)
     - 11-13/1305r0, "Simplification on HEW traffic models", Bill Carney (Sony)
     - 11-13/1334r5, 11-13/1335r4, "Video Traffic Modeling", Guiqing Li (Intel)
     - 11-13/1359r0, "HEW Evaluation Methodology", Ron Porat (Broadcom)
     - 11-13/1370r0, "LTE OOB Interference to 2.4 GHz Band", Yonggang Fang (ZTE TX)
     - 11-13/1376r3, "Discussions on Penetration Loss", Jianhan Liu (MediaTek)
     - 11-13/1380r0, "Outdoor Channel Model Simulation Follow-up", Hongyuan Zhang (Marvell)
     - 11-13/1383r0, "System Level Simulation Parameters", Wookbong Lee (LG Electronics)
     -
     - 11-13/1387r1, "HEW channel modeling for system level simulation", Yan Zhang (Marvell)
     - 11-13/1390r0, "PHY Abstraction for HEW System Level Simulations", Yakun Sun (Marvell)
     - 11-13/1391r0, "About SINR conversion for PHY Abstraction", Yakun Sun (Marvell)
     - 11-13/1392r0, "Methodology of Calibrating System Level Simulation Results", Yakun Sun (Marvell)
     - 11-13/1401r0, "System Level Assessments for Outdoor HEW Deployments", Kaushik Josiam (Samsung)
     - 11-13/1406r0, "Traffic Modeling for HEW Simulations", Huai-Rong Shao (Samsung)
     - 11-13/1407r0, "Simulation based study of QoE", Chao-Chun Wang (MediaTek)
     - 11-13/1412r0, "How to use simulation scenarios in HEW", Minho Cheong (ETIR)
     - 11-13/1419r1, "Modifications to ITU Channel Model to Support 160MHz bandwidth of operation", Shahrnaz Azizi (Intel)
     - 11-13/1420r1, "HEW Considerations for the Vehicular Environment", Igal Kotzer (General Motors)
     - 11-13/1438r0, "Traffic Observation and Study on Virtual Desktop Infrastructure", Phillip Barber (Huawei Technologies)
     - 11-13/1456r1, "Considerations on WFA feedback", Simone Merlin (Qualcomm)

- **MAC/PHY Technologies**
  - 11-13/1325r5, "IEEE 802.11ai overview", Hiroshi Mano (ATRD), chair of TGai
  - 11-13/1349r0, "Access Control Enhancement", Katsuo Yunoki (KDDI)
  - 11-13/1375r1, "Summary and Discussions of Proposals on Potential PHY Technologies in HEW", Jianhan Liu (MediaTek)
  - 11-13/1377r0, "DL efficiency enhancement in high density network", Kiseon Ryu (LG Electronics)
  - 11-13/1382r0, "Discussion on OFDMA in HEW", Jinsoo Choi (LG Electronics)
  - 11-13/1386r2, "Improving WLAN Efficiency and QoE – A Top Down Approach", Veli-Pekka Kentonen (7 Signals)
  - 11-13/1388r0, "UL MU-MIMO transmission", Jinyoung Chun (LG)
  - 11-13/1395r2, "Simultaneous Transmission Technologies for HEW", Koichi Ishihara (NTT)
  - 11-13/1409r0, "Dual Wi-Fi: Dual Channel Wi-Fi for Congested WLANs with Asymmetric Traffic Loads", Adriana Flores (Rice University)
  - 11-13/1421r1, "STR Radios and STR Media Access", Phillip Levis (Stanford University)
  - 11-13/1440r0, "Argos | Practical Masive-MIMO", Clayton Shepard (Rice University)

- **PAR proposals**
  - 11-13/1331r2, "Proposed direction and priorities for HEW", Guido R. Hiertz (Ericsson)
  - 11-13/1333r0, "Power Efficiency PAR Requirements", Chris Hansen (Covariant)
  - 11-13/1366r3, "Some propositions to progress towards the PAR definition", Laurent Cariou (Orange)
  - 11-13/1361r0, "Discussion to derive HEW Functional Requirements", Yasunao Misawa (KDDI)
  - 11-13/1389r1, "Discussion on HEW PAR", HanGyu Cho (LG Electronics)
  - 11-13/1397r0, "Renewing 2.4 GHz", Brian Hart (Cisco Systems)
  - 11-13/1398r0, "Requirements for HEW", Akira Yamada (NTT DOCOMO)
  - 11-13/1404r0, "Some Thoughts on PAR", and 11-13/1405r0, "HEW PAR", Eldad Perahia (Intel)
  - 11-13/1450r0, "Summary of PAR Discussions", Osama Aboul-Magd (HEW SG chair)
  - 11-13/1470r1 and 11-13/1471r1, "802.11 HEW proposed basis for PAR discussion", Laurent Cariou (Orange)

3. **Discussed the WFA feedback on prioritization of the usage cases and approved a liaison letter back to WFA.**
   - Feedback from Wi-Fi Alliance:
     - 11-13/1443r0, Liaison from Wi-Fi Alliance - HEW Use Cases
   - Approved a liaison document to Wi-Fi Alliance:
     - 11-13/1446r0, IEEE 802.11 Liaison to WFA on Prioritization of High Efficiency WLAN (HEW) Usage Scenarios

4. **Started the discussion on the PAR.**
5. **The group passed a motion to extend the study group by 136/0/2.**

Goals for the January 2014

- Progress the work on the PAR and 5C.

Teleconferences

The group agreed to have three teleconferences before the January 2014 meeting.

- Wednesday, December 4th, 2013: 10:00 – 12:00 (ET)
- Wednesday, December 18th, 2013: 20:00 – 22:00 (ET)
- Wednesday, January 8th, 2014: 10:00 – 12:00 (ET)

September 2013 – Nanjing, China

HEW study group had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**HEW**
AM2		**HEW**		
PM1			**HEW**	**HEW**
PM2	**HEW**	**HEW**	**HEW**	
Evening	**HEW**	**HEW**		

Main documents

- Agenda: 11-13/0951r7
- Closing report: 11-13/1231r1
- Draft minutes: 11-13/1117r1

Achievements

1. **The group approved minutes from the Geneva meeting and teleconference on August 28th, 2013.**
   - 11-13/0861r1, Minutes from face-to-face meeting in Geneva, July 2013
   - 11-13/1003r0, Minutes from the teleconference on August 28th, 2013
2. **50 submissions in the following categories were received and presented during the week.**
   - **Channel Models (CM)**
     - 11-13/0996r2, "Outdoor Channel Model Candidates for HEW", Kaushik Josiam (Samsung)
     - 11-13/1113r0, "Channel Modeling for Dense Wi-Fi Environments", Minho Cheong (ETRI)
     - 11-13/1125r3, "HEW Outdoor Channel Model Discussions", Hongyuan Zhang (Marvell)
     - 11-13/1135r4, "Summary of HEW Channel Models", Jianhan Liu (MediaTek)
     - 11-13/1146r1, "Update on HEW Channel Model", Shahrnaz Azizi (Intel Corp)
   - **Simulation Scenarios/Simulation Methodologies (SS/SM)**
     - 11-13/1000r2, "Simulation Scenarios", Simone Merlin (Qualcomm)
     - 11-13/1001r2, "Simulation Scenarios Document Template", Simone Merlin (Qualcomm)
     - 11-13/1079r0, "Outdoor Stadium Simulation Details Discussion", Joseph Levy (InterDigital)
     - 11-13/1080r0, "Markov Modeling of the Channel for HEW System Level Simulations", Joseph Levy (InterDigital)
     - 11-13/1081r0, "HEW Simulation Methodology", Sayantan Choudhury (Nokia).
     - 11-13/1083r0, "HEW SG Unified Simulation Scenarios", David Xun Yang (Huawei)
     - 11-13/1114r1, "Simulation Scenario for unplanned Wi-Fi Network", Jae Seung Lee (ETRI)
     - 11-13/1123r1, "Capacity Simulation of High Density Indoor WLAN Systems", Filip Mestanov (Ericsson AB)
     - 11-13/1133r0, "Virtual Desktop Infrastructure (VDI)", Yingpei Lin (Huawei Technologies)
     - 11-13/1153r0, "Simulation Scenario Proposal", Laurent Cariou (Orange)
     - 11-13/1159r1, "Video Performance Requirements and Simulation Parameters", Guoqing Li (Intel)
     - 11-13/1162r1, "Video Application Categories and Characteristics", Guoqing Li (Intel)
     - 11-13/1176r0, "Some Simulation Scenarios for HEW", Reza Hedayat (Cisco)
   - **Evaluation Methodologies (EM)**
     - 11-13/1051r1, "Evaluation Methodology", Ron Porat (Broadcom)
     - 11-13-1054r1, "HEW Evaluation Metrics Suggestions", Yonggang Fang (ZTETX)

- ✧ 11-13/1059r0, “PHY Abstraction for HEW Evaluation Methodology”, Dongguk Lim (LG Electronics)
- ✧ 11-13/1131r0, “PHY Abstraction for HEW System Level Simulation”, Jiayin Zhang (Huawei Technologies)
- ✧ 11-13/1137r2, “The Definition of Performance Metrics for HEW”, Haui-Rong Shao (Samsung)
- ✧ 11-13/1144r1, “Simplified Traffic Model Based on Aggregated Network Statistics”, William Carney (Sony)
- ✧ 11-13/1158r0, “Video Traffic and Applications for HEW”, William Carney (Sony)

- **Functional Requirements (FR)**
  - ✧ 11-13/1097r0, “Functional Requirements for HEW PAR”, Minho Cheong (ETRI)
  - ✧ 11-13/1116r0, “Discussion on HEW Functional Requirements”, Jinsoo Choi (LG Electronics)

- **MAC/PHY Technologies (TECH)**
  - ✧ 11-13/1046r2, “Discussion for Massive MIMO for HEW”, Zhigang Wen (BUPT)
  - ✧ 11-13/1056r1, “Enhancement on resource utilization in OBSS environment”, Giwon Park (LG Electronics)
  - ✧ 11-13/1058r0, “Efficient wider bandwidth operation”, Kiseon Ryu (LG Electronics)
  - ✧ 11-13/1061r0, “Multicast Transmission for HEW”, Jeongki Kim (LG electronics)
  - ✧ 11-13/1073r1, “Access Control Enhancement“, Katsuo Yunoki (KDDI Labs)
  - ✧ 11-13/1074r0, “Occupied air time calculation for doc.1073r0”, Katsuo Yunoki (KDDI R&D Laboratories)
  - ✧ 11-13/1077r1, “EDCA Enhancements for HEW”, Hui Zhao (BUPT)
  - ✧ 11-13/1089r1, “D2D Technology for HEW”, Xiang Gao (BUPT)
  - ✧ 11-13/1090r2, “Non-linear pre-coding MIMO Scheme for next generation WLAN”, Xiang Gao (BUPT)
  - ✧ 11-13/1105r0, “Discussion on Access Mechanism for HEW”, Meng Yang (CATR)
  - ✧ 11-13/1122r1, “Considerations for In-Band Simultaneous Transmit and Receive (STR) feature in HEW”, Rakesh Taori (Samsung Electronics)
  - ✧ 11-13/1126r0, “Beamforming under OBSS Interference”, Hongyuan Zhang (Marvell)
  - ✧ 11-13/1168r0, “Requirements on WLAN Ad Push”, Hui Tian (BUPT)
  - ✧ 11-13/1169r0, “WLAN Cellular Offload in High Speed Moving Environment”, Hui Tian (BUPT)
  - ✧ 11-13/1154r0, “DL-MU-MIMO Transmission with Unequal Bandwidth”, Yongming Huang (Southeast University)
  - ✧ 11-13/1155r0, “Space Division Multiplex for OBSS Interference Suppression”, Yongming Huang (Southeast University)
  - ✧ 11-13/1156r0, “TXOP Redundancy NAV Clear”, Yongming Huang (Southeast University)
  - ✧ 11-13/1157r3, “Feasibility of Coordination Transmission for HEW”, Yunzhou Li (Tsunghua University)

- **General (GEN)**
  - ✧ 11-13/1057r0, “Legacy support on HEW frame structure”, Wookbong Lee (LG electronics)
  - ✧ 11-13/1100r0, “HEW SG Progress Review”, Osama Aboul-Magd (HEW SG)
  - ✧ 11-13/1115r0, “Possible vision of the HEW-driven Wi-Fi 2020”, Minho Cheong (ETRI)
  - ✧ 11-13/1163r0, “PAR and 5C: Comments based on 11n”, Sean Coffey (RealTek)
  - ✧ 11-13/1164r1, “Some PAR and 5C Requirements”, Paul Lambert (Marvell)

3. Straw Polls

Several straw polls were conducted to sense the group consensus on topics related to simulation scenarios, evaluation methodologies and channel models.

4. Timeline

The group reviewed the timeline. No changes.

5. Teleconferences

The HEW SG agreed to have three teleconferences before the November 2013 session.

- Wednesday, October 9th, 2013: 10:00 – 12:00 (ET)
- Wednesday, October 17th, 2013: 00:01 – 02:00 (ET)
- Wednesday, October 30th, 2013: 10:00 – 12:00 (ET)

Goals for the November 2013

- Hear presentations addressing SS/SM/EM/FR/CM/TECH
  - Attempt to consolidate documents related to the above areas of discussion.
  - Priority will be given to presentations with consolidated views
- Start discussion on PAR related issues
- Motion for SG extension
- WFA feedback on the usage cases

July 2013 – Geneva, Switzerland

HEW study group had nine sessions during the week.

Main documents

- Agenda: 11-13/0664r5
- Closing report: 11-13/0922r0
- Draft minutes: 11-13/0861r0

Achievements

1. **The group approved minutes from the face-to-face meeting in Waikoloa, HI and teleconferences held on June 5th and June 19th.**
   - 11-13/0560r2, May 2013 Waikoloa meeting minutes
   - 11-13/0663r1, Teleconference minutes 20130605
   - 11-13/0704r0, Teleconference minutes 20130619
2. **The group received over 35 submissions in areas of (1) Usage Models/Use Cases, (2) Functional Requirements, (3) Simulation Scenarios and Evaluation Methodology, (4) MAC/PHY techniques as listed below.**
   - **Usage Models/Use Cases**
     - 11-13/0657r3, "HEW SG usage models and requirements - Liaison with WFA" Laurent Cariou (Orange)
     - 11-13/0795r0, "HEW Usage Scenarios Categorization", Eldad Perahia (Intel)
     - 11-13/0802r1, "Proposed re-categorization of the HEW usage models", Yasuhiko Inoue (NTT)
     - 11-13/0761r0, "Interference Control Use Case for HEW", Fang Xie (CMCC)
     - 11-13/0836r0, "HEW Usage Models for Backhauls and Floor Automation", Minho Cheong (ETRI)
   - **Functional Requirements**
     - 11-13/0787r0, "Follow up requirements", Wu Tianyu (Huawei)
     - 11-13/0850r0, "Quantitative QoE Requirements for HEW", Huai-Rong Shao (Samsung)
     - 11-13/0798r1, "Functional Requirements in HEW", Jinsoo Choi (LG Electronics)
     - 11-13/0840r1, "HEW Functional Requirements Follow-up (Preliminary Version for Study Group discussions)", Minho Cheong (ETRI)
   - **Simulation Scenarios and Evaluation Methodology**
     - 11-13/0723r1, "HEW SG Evaluation Methodology Overview", Minyoung Park (Intel)

- 11-13/0756r1, “HEW Channel Model”, Vinko Erceg (Broadcom)
- 11-13/0858r0, “Enhanced Channel Model for HEW”, Shahrnaz Azizi (Intel)
- 11-13/0728r1, “Network Optimization for Expected HEW Traffic Patterns”, Bill Carney (Sony)
- 11-13/0869r0, “Simulation scenarios and metrics for HEW”, Thomas Derham (Orange)
- 11-13/0872r1, “Clarifications on outdoor deployments”, Laurent Cariou (Orange)
- 11-13/0847r1, “Evaluation Criteria and Simulation Scenarios” Klaus Doppler (Nokia)
- 11-13/0786r0, “Discussion on System Level Simulation Methodology” Wu Tianyu (Huawei)
- 11-13/0757r1, “Evaluation Methodology and Simulation Scenarios” Nihar Jindal (Broadcom)
- 11-13/0805r2, “On Definition of Dense Networks and Performance Metric”, Jianhan Liu (MediaTek)
- 11-13/0800r1, “HEW Study Group Documentation”, Hemanth Sampath (Qualcomm)
- 11-13/0837r0, “Consideration for HEW Evaluation Methodology”, Minho Cheong (ETRI)

- **MAC/PHY techniques**
  - 11-13/0768r0, “TD-*u*CSMA”, Riccard Scopigno (ISMB)

  - 11-13/0852r0, “Potential approach to improve WLAN BSS edge performance”, Juho Pirskanen (Renesas Mobile)
  - 11-13/0871r0, “Discussion on Potential Techniques for HEW”, Timo Koskela (Renesas Mobile)
  - 11-13/0877r0, “HEW Beamforming Enhancements”, James Wang (MediaTek)
  - 11-13/0764r1, “Full-duplex Technology for HEW”, Andre Bourdoux (IMEC)
  - 11-13/0765r2, “Full-duplex is an emerging radio paradigm that has the potential to improve the efficiency of future WLANs”, Hongliang Bian (China Telecom)
  - 11-13/0712r1, “A Brief Time of History”, Larry Taylor (DTC)
  - 11-13/0801r1, “Issues of Low Rate Transmissions”, Akira Kishida (NTT)
  - 11-13/0758r0, “Possible Approaches for HEW”, Katsuo Yunoki (KDDI Labs)
  - 11-13/0849r1, “New Techniques: Enabling Real World Improvement By Exposing Internal MAC state”, Brian Hart (Cisco)
  - 11-13/0854r1, “Consideration on Efficiency Enhancement”, SangHyun Chang (Samsung)
  - 11-13/0865r2, “Video Data Rate for HEW”, Huai-Rong Shao (Samsung)
  - 11-13/0878r0, “Efficiency enhancement for dense WLAN environment”, Jeongki Kim (LG Electronics)

3. **The group approved document 11-13/0657r6 as HEW SG initial draft of Usage Models and to send it to Wi-Fi Alliance asking for prioritization of the use cases and additional feedbacks.**

4. **The group also approved a liaison letter to the Wi-Fi Alliance contained in the document 11-13/902r1.**

5. **The group passed motion to extend the SG.**

6. **The group discusses the timeline.**
   - May 2013: Initial meeting
   - July 2013: Presentations, SG extension
   - September 2013: Presentations
   - November 2013: Presentations, Initial PAR & 5C, SG extension
   - January 2014: Presentations, Final version of PAR and 5C, WG approval
   - March 2014: Presentations, EC approval of PAR and 5C
   - May – June 2014: NesCom approval
   - July 2014: TG starts

7. **Teleconferences**

The group agreed to have two teleconferences before the September 2013 meeting.

- Wednesday, August 7th, 2013: 10:00 – 12:00 (ET)
- Wednesday, August 28th, 2013: 20:00 – 22:00 (ET)

Next steps

During the September 2013 meeting, the HEW SG continues discussions on issues related to:

- Usage Models/Use Cases
- Functional Requirements
- Feasibility
- Scope and Process

May 2013 – Waikoloa, HI

Main documents

- Agenda: 11-13/0400r4
- Closing report: 11-13/0624r0
- Draft minutes: 11-13/0560r2

Achievements

1. **The group decided leadership structure to have one chairperson and one secretary.**
   - Osama Aboul-Magd (Huawei Technologies) was elected as the chair of the HEW SG.
   - Yasuhiko Inoue (NTT) was elected as the recording secretary of the HEW SG.

2. **The group received 22 submissions as listed below.**
   - **Usage Models/Use Cases:**
     - 11-13/0514r0, “HEW Usage Scenarios and Applications”, Eldad Perahia (Intel)
     - 11-13/0538r0, “Dense apartment building use case for HEW”, Klaus Doppler (Nokia)
     - 11-13/0554r0, “Use Cases”, Minho Cheong (ETRI)
     - 11-13/0567r0, “Proposed HEW Usage Models”, Yasuhiko Inoue (NTT)
     - 11-13/0527r2, “Usage Models for Next Generation”, David Xun Yang (Huawei) and James Wang (MediaTek)
     - 11-13/0534r1, “Direction and Use Cases for HEW”, HanGyu Cho (LG Electronics)
     - 11-13/0563r0, “D2D Technology for HEW”, Zhanji Wu (BUPT) – not presented
   - **Problem Statements:**
     - 11-13/0505r0, “MAC Efficiency Analysis for HEW SG”, Minyoung Park (Intel)
     - 11-13/0545r1, “WLAN QoE, End User Perspective Opportunities to Improve”, Veli-Pekka Ketonen (7 signals)
     - 11-13/0523r2, “Understanding Current Situation of Public Wi-Fi Usage – Possible Requirements for HEW –“, Katsuo Yunoki (KDDI Labs)
     - 11-13/0539r0, “Efficient Frequency Spectrum Utilization”, Yongho Seok (LG Electronics)
     - 11-13/0544r3, “Discussions on 11ac PHY efficiency”, Jianhan Liu (MediaTek)
     - 11-13/0536r0, “HEW SG PHY Considerations For Outdoor Environment”, Wookbong Lee (LG Electronics)
     - 11-13/0576r3, “Performance Evaluation for 11ac”, Wu Tianyu (Huawei Technologies)
     - 11-13/0556r1, “Wi-Fi interference measurements in Korea – Part 1”, Minho Cheong (ETRI)
     - 11-13/0549r0, “A perspective on what any High Efficiency Wireless TG should and should not do”, Brian Hart (Cisco Systems)
   - **Requirements:**
     - 11-13/0524r2, “HEW Finctional Requirements”, Wu Tianyu (Huawei Technologies)

- ✧ 11-13/0555r2, “Considerations on Functional Requirements for HEW”, Minho Cheoung (ETRI)

Ÿ **Scenarios and Metrics**
- ✧ 11-13/0503r0, “Discussion on Basic Technical Aspects for HEW”, Juho Pirskanen (Renesas Mobile)
- ✧ 11-13/0542r0, “HEW Scenarios and Goals”, Simone Merlin (Qualcomm)
- ✧ 11-13/0486r1, “HEW – Metrics, Targets and Simulation Scenarios”, Ron Porat (Broadcom)
- ✧ 11-13/0520r1, “HEW scenarios and evaluation metrics”, Thomas Derham (Orange)

Ÿ **Technical Feasibility**
- ✧ 11-13/0558r1, “Coexistence and Optimization of Wireless LAN: Time, Frequency, Space, Power, and Load”, Jim Lansford (CSR)

3. Liaison to the Wi-Fi Alliance

Ÿ The group agreed to ask the Wi-Fi Alliance for input about priority of the use cases.

Ÿ Laurent Cariou (Orange) volunteers to develop the use case document.

4. Project planning

Ÿ The group discussed about the project plan based on the submission 11-13/0616r2 by Phil Barber (Huawei)

Ÿ Discussion to be continued in the July meeting.

5. Teleconferences

Ÿ The group agreed to have two teleconferences before the July 2013 Plenary to develop a use case document to be shared with the Wi-Fi Alliance.
- ✧ June 5th: 10:00 – 12:00 (ET)
- ✧ June 19th: 20:00 – 22:00 (ET)

Next Steps

- During July 2013 session, the HEW SG will continue discussions on:
  - ➢ Usage Cases
  - ➢ Functional Requirements
  - ➢ Feasibility
  - ➢ Scope and Process

IEEE 802.11 TGax: High Efficiency WLAN Task Group

San Diego, USA

July 24-29, 2016

Chair: Osama Aboul-Magd (Huawei Technologies)
Vice Chair: Simone Merlin (Qualcomm)
Vice Chair: Ron Porat (Broadcom)
Secretary: Yasuhiko Inoue (NTT)
Technical Editor: Robert Stacey (Intel)

1335

Meeting Protocol

- **Please announce your affiliation when you first address the group during a meeting slot**

1336

Attendance

- http://newton.meeting.verilan.com

1. Register
2. Indicate attendance

Attendance, Voting & Document Status

- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, member's area**
  - see Jon Rosdahl – jrosdahl@ieee.org
- **Cell Phones Silent or Off**

Patent Policy

- **Following 5 slides**

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which July be essential for the use of standards under development is strongly encouraged;
  - There July be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that July be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 14 and 15 on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

1340

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy.

- **Participants [Note: Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2]:**
  - **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**
- **Early identification of holders of potential Essential Patent Claims is strongly encouraged**
- **No duty to perform a patent search**

1341

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/develop/policies/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/develop/policies/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/about/sasb/patcom/materials.html

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/about/sasb/patcom/index.html

This slide set is available at https://development.standards.ieee.org/myproject/Public/mytools/mob/slideset.ppt

1342

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

1343

Slide #3

Other Guidelines for IEEE WG Meetings

- **All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.**
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches July be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

Slide #4

Agenda Items for the Week

- **Approve TG and Telecons minutes since May meeting.**
- **Resolution of comments received on draft D0.1**
- **Ad Hoc group meetings**
- **Technical Presentations and related straw polls and/or motions**
- **Schedule Telecon times.**

General Flow of the Meeting

- **Monday July25, 08:00 – 10:00**
  - Call Ad Hoc Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - AD hoc meeting Agenda setting
  - Approval of ad hoc meeting agenda
  - Call for submissions
  - Presentations
  - Adjourn
- **Monday July 25, 16:00 – 18:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Review from November 2014 meeting
  - Call for submissions
  - Agenda setting and approval
  - TG Motions
  - Presentations
  - Recess
- **Tuesday July 26, 10:30 – 12:30**
  - Ad Hoc Group Meetings
- **Tuesday July 26, 16:00 – 18:00**
  - Ad Hoc Group Meetings
- **Tuesday July 26, 19:30 – 21:30**
  - Ad Hoc Group Meetings
- **Wednesday July 27, 08:00 – 10:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Progress Review
  - Presentations
- **Wednesday July 27, 13:30 – 15:30**
  - Ad Hoc Group Meetings
- **Wednesday July 27, 16:00 – 18:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Recess
- **Thursday July 28, 10:30 – 12:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Recess
- **Thursday July 28, 13:30 – 15:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Goals for March 2016
  - Telecon Schedule
  - Adjourn

Summary from May 2016 Meeting

- **Received about 70 submissions. Majority of the submission were requesting changes to the TG Specification Framework document. Few submissions were addressing comment resolution mainly ofor the PHY clause.**
- **Agreed to terminate the Specification Framework process. The frame of reference is Draft D0.1.**
  - Future submissions shall bring text to continue developing the TG draft
- **Approved the resolutions of about 200 comments, most of them addressing the PHY clause**
- **Revisited the timeline and accepted a new modified timeline – next slide.**
- **The TG had a series of telecons where resolutions of about 227 comments were discussed.**

Submissions Covered During Telecons

Comment Resolution Status (Editor Report)

- **Robert Stacey (Technical Editor)**

From IEEE 802.11 Operation Manual

- https://mentor.ieee.org/802.11/dcn/14/11-14-0629-14-0000-802-11-operations-manual.docx

Motions modifying drafts may be made at appropriate times during meetings.
Complex technical changes to a draft shall be in a submission that has been accepted by document control according to document formats specified in section 3.7 of this document and has been made available electronically for a **period of not less than four active 802.11 WG session hours**. The TG chair determines if a technical change is sufficiently complex to require a submission.

When a CRC is following the "Accelerated process" for completion of a WG letter ballot, and is not meeting during an 802.11 WG session, any submission containing changes to the draft shall be on the server and announced to the appropriate TG reflector no less than 72 hours before any motion is made related to that submission.
NOTE – when a CRC is meeting coincident with an 802.11 session, it is subject to the four hour rule described in the previous paragraph.

Timeline

- May 2014: start of the TG
- Nov. 2014: First draft of the TG SFD was approved
- Jan. 2016: proposed TG draft
- March 2016: Draft D0.1 was approved and CC started
- September 2016: Draft 1.0 and WG letter ballot
- March 2017: Draft 2.0 and recirculation
- July 2017: MDR (Mandatory Document Review)
- November 2017: Formation of SB pool
- March 2018: Sponsor Ballot
- December 2018: RevCom

  - SR: Seaport G

1362

Agenda for Tuesday July 17, 19:30 – 21:30

- **Ad Hoc Group Meetings**
  - PHY: Seaport DE
  - MAC: Harbor EF

1363

Agenda for Wednesday July 27, 08:00 – 10:00

- **TG Meeting**
- **Call Meeting to order**
- **IEEE 802 and 802.11 IPR Policy and procedure.**
- **Progress from Ad Hocs**
- **Presentations**
  - 11-16/0907: 20 MHz HE Devices – Joonsuk kim
  - 11-16/0909: Text for 20 MHz - Joonsuk Kim
  - 11-16/0870 and 11-16/0949 – Zhou Lan
  - 11-16/0971 – Graham Smith
  - 11-16/0957 – James Wang
  - 11-16/0947 – Laurent Cariou
- **Recess**

1364

Agenda for Wednesday July 27, 13:30 – 15:30

- **Ad Hoc Group Meetings**
  - PHY: Seaport DE
  - MAC: Seaport G

Agenda for Wednesday July 27, 16:00 – 18:00

- **TG Meeting**
- **Call Meeting to order**
- **IEEE 802 and 802.11 IPR Policy and procedure.**
- **Presentations**
  - 11-16/0947 – Laurent Cariou
  - 11-16/0957 – James Wang (??)
- **TG Motions**
- **Recess**

1366

SR Motion #9

- **Move to include the text in doc 11-16/0971r2 related to DSC in the next revision of the TG draft**

- **Move: Graham Smith**
- **Second: Sean Coffey**

- **Motion withdrawn**

SR Motion #10

- **Move to accept the proposed text changes in document "11-16/0947r4, for OBSS_PD-based SR parameters" and include the changes in the next revision of the TG draft**

- **Move: Laurent Cariou**
- **Second: Ron Porat**
- **Y: 59, N:20, A: 29**
- **Motion fails**

Agenda for Thursday July 28, AM2 and PM1

- **TG Meeting**
- **Call Meeting to order**
- **IEEE 802 and 802.11 IPR Policy and procedure.**
- **TG Motions**
- **Presentations (if time allows)**
  - George
  - Wojin
  - Chitto
  - Jerrko
  - Kaushik
- **Telecon**
- **adjourn**

1369

SR Motion #11

- **Move to accept the proposed text changes in document 11-16/0902r3 and include the changes in the next revision of the TG draft**

- **Move: Daewon Lee**
- **Second: Ron Porat**
- **Accepted with no objection**

PHY Motion #158

- **Move to include the spec text change as shown in doc 11/16-0892r0 to the next revision of the TG draft**

- **Move: Hongyuan Zhang**
- **Second: Bo Sun**
- **Y/N/A**
- **Accepted with no objection**

PHY Motion #159

- **Move to include the spec text changes as shown in doc 11/16-0895r0 in the next revision of the TG draft, which reflects Straw Polls 1~3 in doc 11-16/0894r0**

- **Move: Hongyuan Zhang**
- **Second: Bo Sun**
- **Accepted with no objection**

PHY Motion #160

- **Move to include the spec text changes as shown in doc 11/16-0897r1 in the next revision of the TG draft.**

- **Move: Hongyuan Zhang**
- **Second: Bo Sun**
- **Accepted with no objection**

- **Y/N/A**

PHY Motion #161

- **Move to include the spec text changes as shown in doc 11/16-0899r0 (reflects the content of SP1 in doc 11-16/0898r0) to the next revision of the TG draft**

- **Move: Hongyuan Zhang**
- **Second: Bo Sun**
- **Y/N/A**
- **Accepted with no objection**

PHY Motion #162

- Move to add the spec text changes to D0.2 on Table 26-20 – Fields in the HE-SIG-A for an HE SU PPDU and HE Extended Range SU PPDU as shown in doc 11/16-0915r0

- Move: Bin Tian
- Second:
- Y/N/A

PHY Motion #163

- **Move to include the spec text change as shown in doc 11/16-0909r2 in the next revision of the TG draft.**

- **Move: Joonsuk Kim**
- **Second: Bo Sun**
- **Y/N/A**
- **Approved with no objection**

PHY Motion #164

- **Move to include the spec text changes in doc 11-16/0915r2 in the next revision of the TG draft.**

- **Move: Brian Hart**
- **Second: Bo Sun**
- **Accepted with no objection**

PHY Motion #165

- **Move to add to the next revision of the TG draft:**
  - Add at the end of section 26.3.7.1 the following sentence:

  - In a HE MU PPDU transmission, at least Nx4x26 tones (contiguous or non-contiguous), where N is the number of 20MHz channels' legacy preambles present, shall be occupied throughout the signaled BW
- **Move: Ron Porat**
- **Second: Bo Sun**
- **Y/N/A**
- **Accepted with no objection**

MU Motion #57

- **Move to add the following to the next revision of the TG draft:**
  - *Insert the following at the end of 10.22.2.2:*
  - When an HE STA successfully receives the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter countdown

  - *Insert the following at the end of 10.22.2.2:*
  - When an HE STA does not receive the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter countdown

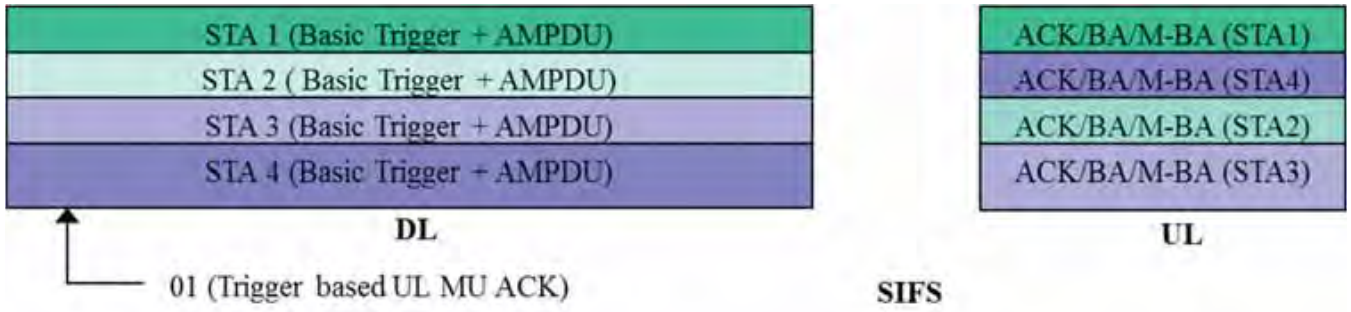
- *Insert the following at the end of 10.22.2.2:*
- If an HE STA does not successfully receive the corresponding acknowledgement frame in response to the MPDU sent in an HE trigger based PPDU, the short retry counters and long retry counters for the associated EDCAF are not changed

1380

- **Move: Kiseon Ryu**
- **Second: Simone Merlin**
- **Accepted with no objection**

MU Motion

- **Move to add the following text to the next revision of the TG draft**
- **Section 25.5.1**
  - It is mandatory at the non AP HE STA to support reception of Trigger in the DL MU PPDU aggregated with Data and respond with an ACK/BA/M-BA if the QoS ACK Policy in the DL A-MPDU is set to 01 (Trigger based UL MU ACK) and the STA has not set the UL MU Disable to 1.



- It is mandatory at the non AP HE STA to support reception of DL MU PPDU with QoS ACK Policy set to Block Ack or No ACK followed by a MU-BAR within SIFS followed by transmission of the ACK/BA/M-BA appropriately if the STA has not set the UL MU Disable to 1.

1382

- **Move: Simone Merlin**
- **Second: Alfred**
- **Ttable till PM1**

MAC Motion #85

- **Move to add the following text to the TG draft:**
  - The Queue Size subfield is an 8-bit field that indicates the amount of buffered traffic, for a given TC or TS at the STA sending this frame.
  - *An HE non-AP STA uses the Queue Size subfield to indicate the amount of buffered traffic intended for the STA identified by the receiver address of the frame containing the QoS Control field.*
- **Move: Pascal Viger Second:**
- **Y/N/A: Stephane Baron**
- **Accepted with no objection**

1383

MAC Motion #86

- **Move to add the following text to the TG draft:**
  - Add to clause #9.3.1.23
  - "Per User Info fields with AID = 0 shall be allocated only after Per User Info fields with AID not equals to 0, if any, and before the MAC padding field, if present."

  - Move: Zhou Lan
  - Second: Reza Hedayat
  - Accepted with no objection

MAC Motion #87

- **Move to include the spec text change as shown in doc 11/16-0917r1 in the TG draft**

- **Move: Woojin Ahn**
- **Second: John Son**

- **Accepted with no objection**

CR Motion #15

- Move to approve resolutions of CIDs, 9, 228
- 2219, 2422, 2691, 2900 in doc 11-16/0725r3.

- Move: Raja Banerjea
- Second: Simone Merlin
- Y/N/A
- Accepted with no objection

1386

CR Motion #16

- **Move to approve resolutions to CIDs, 55, 1000, 1221, 1915, 2234, 802,1695, 1222, 182, 971,2713, 702, 1916, 2233, 223 in doc 11-16/0773r2.**

1387

- **Move: Raja Banerjea**
- **Second: Robert Stacey**
- **Accepted with no objection**

CR Motion #17

- **Move to accept resolutions to CIDs, 262,1083, 102, 612, 660, 830, 864, 1716, 2215, 2301, 2376, 372, 719, 864 in doc 11-16/0774r1**

1388

- **Move: Raja Banerjea**
- **Second: Simone Merlin**
- **Y/N/A**
- **Accepted with no objection**

CR Motion # 18

- **Move to approve resolutions to CIDs, 101,103, 104,374,375, 377, 558, 561, 661, 662, 664, 688, 1296, 1299, 1301, 1717, 1718, 1882, 2113, 2114, 2174, 2217, 2302, 2421, 227, 720, 663,1303,1305,1306 in doc 11-16/0780r1**

- **Move: Raja Banerjea**
- **Second: Simone Merlin**
- **Accepted with no objection**
-

CR Motion #19

- **Move to approve resolutions to CIDs, 340, 341, 342, 343, 1023, 2734, and 2889 in doc 11-16/0775r2**

- **Move: Lochan Verma**
- **Second: Sameer Vermani**
- **Y/N/A**
- **Accepted with no objection**

CR Motion #20

- **Move to approve resolutions of CIDs, 855, 1064, 1, 784, 90, 94, 654, 453, 1181, 2249, 2297, 2208, 2406, 2576, 2901, 2902, 2903, 2405, 2904, 1254, 1255, 1256, 1202, 1714, 1761, 1762, 1881, 1418 in doc 11-16/766r1**

- **Move: Alfred Asterjadhi**
- Second: Young Hoon kwon
- Y/N/A
- Accepted with no objection

CR Motion #21

- **Move to approve resolutions of CIDs, 1126, 1127, 1179, 58, 89, 361, 2248, 1877, 1878, 792, 686, 687, 793, 1133, 91, 92, 362, 363, 2296, 1712, 1713, 1250, 1253, 1711, 2204, 2205, 2206, 211, 364, 1231, 134, 1750, 1244 in doc 11-16/0798r0**

- **Move: Alfred Asterjadhi**
- Second: Simone Merlin
- Y/N/A
- No objection

1392

CR Motion #22

- **Move to approve resolutions to CIDs, 14, 127, 370, 371, 2602 in doc 11-16/0815r2**

- **Move: Young Hoon Kwon**
- **Second: Yongho Seok**
- **Accepted with no objection**

CR Motion #23

- **Move to approve resolutions to CIDs, 961, 1137, 804, 212, 2212, 2412, 2413, 1136, 1493 in doc 11-16/0819r1**

- **Move: Alfred**
- **Second: Yasu**
- **Y/N/A**
- **Accepted with no objection**

CR Motion #24

- **Move to approve resolutions to CIDs, 824, 93, 1067, 2388, 45, 178, 254, 438, 680, 769, 770, 771, 817, 818, 1062, 1065, 1066, 1550, 2189, 2190, 2191, 2272, 2711, 147 in doc 11-16/0806r0**

- **Move: Alfred Asterjadhi**
- Second: Matt Fischer
- Y/N/A
- Accepted with no objection

CR Motion #25

- **Move to approve the resolutions to CIDs, 963, 128, 214, 2171, 2428, 692, 124, 2906, 2840, 2603, 2599, 1209, 2264, 15, 13, 126, 1071, 693, 1768, 401, 1727, 403, 1644, 2281, 2282, 2279, 160 in doc11-16/0807r2**

1396

- **Move: Po-Kai Huang**
- **Second: Yongho Seok**
- **Y/N/A**
- **Accepted with no objection**

CR Motion #26

- **Move to accept the resolutions of CIDs, 1311, 2223, 110, 2587, 8, 2222, 1068, 1310, 1312, 2588, 2601, 2894, 1204, 2907 in doc 11-16/0808r2**

1397

- **Move: Po-Kai Huang**
- **Second: Kiseon Ryu**
- **Y/N/A**
- **Accepted with no objection**

CR Motion #27

- **Move to approve resolutions to CIDs, 2517, 1780, 1923, and 1610 in doc 11-16/0813r5.**

- **Accepted with no objection**

CR Motion #40

- **Move to approve resolutions to CIDs, 1275, 1270, 1269, 1139, 97, 2213, 1809, 1808, 1807, 1806 in doc 11-16/0867r2**

1411

- **Move: George Cherian**
- **Second: Brian Hart**
- **Accepted with no objection**

CR Motion #41

- **Move to approve resolutions to CIDs, 76, 194, 258, 259, 1598, 1773, 2849 in doc 11-16/0844r2**

- **Move: Alfred Asterjadhi**
- Second: Brian Hart
- Y/N/A
- Accepted with no objection

1412

CR Motion #42

- **Move to approve resolutions to CIDs, 1482, 1481, 1480, 1479, 1478, 1476, 1475, 1474, 1473, 30, 1225, 1486, 967, 750, 697, 696, 1793, 424, 167, 2629, 2628, 2627, 2626, 2269, 1484, 1485, 1794, 1662, 1487, 2197, 2464, 2465, 1470, 165, 1217 in doc 11-16/0828r0**

1413

- **Move: Alfred Asterjadhi**
- Second: Brian Hart
- Y/N/A
- Accepted with no objection

CR Motion #43

- **Move to approve resolutions to CIDs, 2484, 2483, 2482, 2481, 2430, 2429, 2489 in doc 11-16/0860r1**

- **Move: Yongho Seok**
- **Second: Brian Hart**
- **Accepted with no objection**

CR Motion #44

- **Move to approve the resolutions to CIDs, 73, 210, 192, 642, 1593, 1919, 643, 1595, 2259, 2260 in doc 11-16/0862r3**

- **Move: Yongho Seok**
- **Second: Young Hoon Kwon**
- **Accepted with no objection**

CR Motion #45

- **Move to approve resolutions to CIDs, 2608, 2607, 2606, 2488, 2487, 1399, 2841 in doc 11-16/0861r2**

- **Move: Yongho Seok**
- **Second: Brian Hart**
- **Accepted with no objection**

1416

CR Motion #46

- **Move to approve the resolution to CID 2596 in doc 11-16/0953r2 and includes the text changes in the TG draft**

- **Move: Po-Kai Huang**
- **Second: Young Hoon Kown**
- **Accepted with no objection**

1417

CR Motion # 47

- **Move to approve resolutions to CIDs, 705, 2437, 2436, 2439, 2440 in doc 11-16/0879r2**

- **Move: Jeongki Kim**
- **Second: Young Hoon Kwon**
- **Accepted with no objection**

CR Motion #48

- **Move to approve resolutions to CIDs, 62, 640, 2434, 2438, 703, 2435, 66, 257, 447, 186, 2661, 2662, 776, 2660, 1577, 2332, 2718 in doc 11-16/0889r1**

1419

- **Move: Young Hoon Kwon**
- **Second: Yongho Seok**
- **Accepted with no objection**

CR Motion #49

- **Move to approve resolutions of CIDs, 1070, 2226, 693, 125, 2650, 2651 in doc 11-16/0875r2**

- **Move: Kiseon Ryu**
- **Second: Po-Kai Huang**
- **Y/N/A**
- **accepted with no objection**

CR Motion #50

- **Move to approve the resolutions of CIDs, 768, 829, 978, 1546, 1295, 2710, 2709, 2187, 2647, 2266 in doc 11-16/0876r2**

1421

- **Move: Kiseon Ryu**
- **Second: Po-Kai Huang**
- **Accepted with no objection**

CR Motion #51

- **Move to approve the resolutions of CIDs, 2890, 2896, 1634 in doc 11-16/0870r0**
- **Move: Zhou Lan**
- **Second: Young Hoon Kwon**
- **Accepted with no objection**

1422

CR Motion #52

- **Move to approve resolution to CID 783 in doc 11-16/0877 r5**
-
- **Move: Jeongki Kim**
- **Second: Kiseon Ryu**
- **Accpted with no objection**

CR Motion #53

- **Move to approve resolutions of CIDs, 162, 2444, 2443, 2623 in doc 11-16/0835r1**

- **Move: Alfred**
- **Second: Po-Kai Huang**
- **Accepted with no objection**

CR Motion #54

- **Move to approve resolutions to CIDs 507, 949, 1005, 1785, 1862 in doc 11-16/0866r4**

- **Move: Kome Oteri**
- **Second: Xiaofei**
- **Accepted with no objection**

CR Motion #55

- **Move to approve resolutions to CIDs, 482, 1867, 2084, 2085 in doc 11-16/0923r1**
-
- **Move:** Sriram Venkateswaran
- Second: Ron Porat

- Accepted with no objection

CR Motion #56

- **Move to approve resolutions of CIDs, 9, 228**
- **2219, 2422, 2691, 2900 in doc 11-16/0725r3.**

- **Move: Alfred**
- **Second: Simone Merlin**
- **Second: Y/N/A**
- **Accepted with no objection**

CR Motion #57

- **Move to approve resolutions to CIDs, 55, 1000, 1221, 1915, 2234, 802,1695, 1222, 182, 971,2713, 702, 1916, 2233, 223 in doc 11-16/0773r2.**

1428

- **Move: Alfred**
- **Second: Simone**
- **No objection**

CR Motion #58

- **Move to accept resolutions to CIDs, 262,1083, 102, 612, 660, 830, 864, 1716, 2215, 2301, 2376, 372, 719, 864 in doc 11-16/0774r1**

1429

- **Move: Alfred**
- **Second: Simone Merlin**
- **Y/N/A**

Accepted with no objection

CR Motion #59

- **Move to approve resolutions to CIDs, 101,103, 104,374,375, 377, 558, 561, 661, 662, 664, 688, 1296, 1299, 1301, 1717, 1718, 1882, 2113, 2114, 2174, 2217, 2302, 2421, 227, 720, 663,1303,1305,1306 in doc 11-16/0780r1**

- **Move: Alfred**
- **Second: Simone Merlin**

Accepted with no objection

CR Motion #60

- **Move to accept resolutions to CIDs, 80, 1284, 1182, 1143, 1286, 962, 1287, 831, 508, 367, 100, 99, 98, 999, 1812, 2580, 2458, 2414, 2232, 2185, 2170, 1285, 1813, 2582, 1811, 1810, 1715, 1291, 1288, 1814 in doc 11-16/0868r1**

1431

- **Move: George Cherian**
- **Second: Simone Merlin**
- **Y/N/A**
- **Accepted with no objection**

CR Motion #61

- **Move to approve resolutions to CIDs, 306, 310, 311, 477, 1002, 1003, 1010, 1692, 2020, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2036, 2037, 2130, 2151, 2245, 2246, 2543, 2544, 2545, 2546, 2547, 2679, 2681 in doc 11-16/0928r2**

- **Move: Kaushik Josiam**
- **Second: Bo Sun**
- **Accepted with no objection**

CR Motion #62

- **Move to approve resolutions to CIDs, 1589, 1590, 2668, and 2669 in doc 11-16/0938r0**

- **Move: Chitto Ghosh**
- **Second: Yasu**
- **Accepted with no objection**

CR Motion #63

- **Move to approve resolutions to CIDs, 71 and 190 in doc 11-16/966r0**

- **Move: Jarkko Kneckt**
- **Second: Alfred**
- **Accepted with no objection**

CR Motion #64

- **Move to approve resolution to CID 782 in doc 11-16/0878r1**

- **Move: Jeongki Kim**
- **Second: Kiseon Ryu**
- **Approved with no objection**

Conference call times

- **August 4 20:00 – 22:00 ET is already approved**

- **August 11, 25, Sept 8 10:00 – 12:00 ET**
- **August 18, Sept 1 20:00 – 22:00 ET**

TGax September 2016 Meeting Agenda

Date: 2016-08-05

Authors:

Name	Company	Address	Phone	email
Osama Aboul-Magd	Huawei Technologies	303 Terry Fox Drive Kanata, ONT, Canada K2K-3J1	613-287-1405	Osama.aboulmagd@Huawei.com

1438

IEEE 802.11 TGax: High Efficiency WLAN Task Group

1439

Warsaw, Poland

September 11-16, 2016

Chair: Osama Aboul-Magd (Huawei Technologies)
Vice Chair: Simone Merlin (Qualcomm)
Vice Chair: Ron Porat (Broadcom)
Secretary: Yasuhiko Inoue (NTT)
Technical Editor: Robert Stacey (Intel)

Meeting Protocol

- **Please announce your affiliation when you first address the group during a meeting slot**

1440

Attendance

- http://newton.meeting.verilan.com

1. Register
2. Indicate attendance

1441

Attendance, Voting & Document Status

- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, member's area**
  - see Jon Rosdahl – jrosdahl@ieee.org
- **Cell Phones Silent or Off**

1442

Patent Policy

- **Following 5 slides**

1443

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which September be essential for the use of standards under development is strongly encouraged;
  - There September be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that September be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 14 and 15 on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

1444

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy.

- **Participants [Note: Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2]:**
  - **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**
- **Early identification of holders of potential Essential Patent Claims is strongly encouraged**
- **No duty to perform a patent search**

1445

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/develop/policies/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/develop/policies/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/about/sasb/patcom/materials.html

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/about/sasb/patcom/index.html

This slide set is available at https://development.standards.ieee.org/myproject/Public/mytools/mob/slideset.ppt

1446

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

1447

Slide #3

Other Guidelines for IEEE WG Meetings

- **All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.**
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches September be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

1448

Slide #4

Agenda Items for the Week

- **Approve TG and Telecons minutes since May meeting.**
- **Resolution of comments received on draft D0.1**
- **Ad Hoc group meetings**
- **Technical Presentations and related straw polls and/or motions**
- **Schedule Telecon times.**

1449

General Flow of the Meeting

- **Monday September 12, 10:30 – 12:30**
  - Call Ad Hoc Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - AD hoc meeting Agenda setting
  - Approval of ad hoc meeting agenda
  - Call for submissions
  - Presentations
  - Recess
- **Monday September 12, 16:00 – 18:00**
  - Ad Hoc Group Meetings
- **Monday September 12, 19:30 – 21:30**
  - Ad Hoc Group Meetings
- **Tuesday September 13, 10:30 – 12:30**
  - Ad Hoc Group Meetings
- **Tuesday September 13, 16:00 – 18:00**
  - Ad Hoc Group Meetings
- **Wednesday September 14, 08:00 – 10:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Progress Review
  - Presentations
  - Recess
- **Wednesday September 14, 13:30 – 15:30**
  - Ad Hoc Group Meetings
- **Wednesday September 14, 16:00 – 18:00**
  - Ad Hoc Group Meetings
- **Thursday September 15, 10:30 – 12:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Recess
- **Thursday September 15, 13:30 – 15:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Recess
- **Thursday September 28, 16:00 – 18:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Goals for November 2016
  - Telecon Schedule
  - Adjourn

1450

TGax Schedule in a Glance

	Monday		Tuesday		Wednesday		Thursday
AM1					**TGax**		
AM2	**TGax**		MU	MAC			**TGax**
PM1					PHY	MAC	**TGax**
PM2	PHY	MAC	PHY	MAC	MU/PHY	MAC	**TGax**

*** Ad Hoc group is tbd**

Agenda for Monday September 12, 10:30 – 13:30

- **Call meeting to order**
- **Patent policy, etc.**
- **Call for submissions**
- **Set Ad Hoc Groups schedule and approve agenda**
- **Summary from July 2016 meeting**
- **TG motions**
  - Approve TG meeting and Telecon minutes since November meeting.
  - Approve resolutions of comments, if needed.
- **Comment Resolution Status – Robert Stacey**
- **Timeline**
- **Presentations and Comment Resolution**
- **Recess**

Summary from July 2016 Meeting

- **Approved the resolutions of about 230 comments discussed during telecons before July meeting.**
- **Approved resolutions of almost 350 CIDs during the July meeting**
- **Approved a number of submissions proposing new text to be added to the draft.**
- **Editor generated draft D0.3 and draft D0.4.**
- **Conducted weekly telecons since July F2F meeting.**
  - Covered 17 submissions
  - Discussed resolutions of almost 250 CIDs
  - Please refer to telecon minutes
    - https://mentor.ieee.org/802.11/dcn/16/11-16-1105-03-00ax-tgax-teleconference-minutes-from-august-to-september-2016.docx

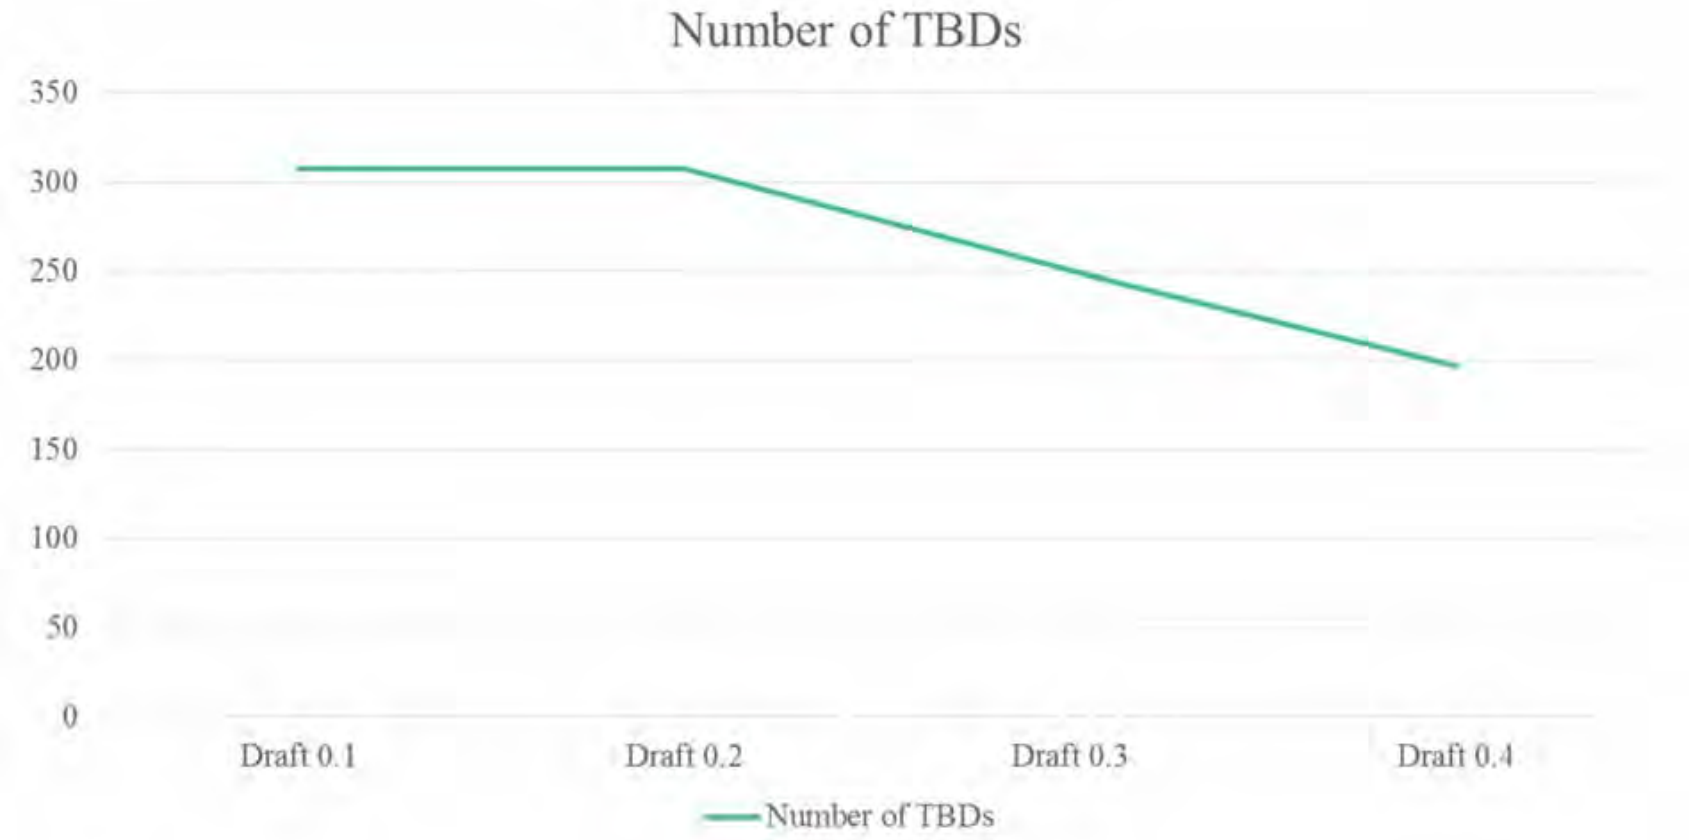
Number of TBDs



1468

Agenda for Monday September 12, 16:00 – 18:00

- **Ad Hoc Meetings**
  - PHY: Ballroom C&D
  - MAC : Baltic I

1469

Agenda for Monday September 12, 19:30 – 21:30

- **Ad Hoc Meetings**
  - PHY: Ballroom C&D
  - SR: Baltic I

1470

Agenda for Tuesday September 13, 10:30 – 12:30

- **Ad Hoc Group Meetings**
  - MU: Ballroom C&D
  - MAC: Baltic I

1471

Agenda for Tuesday September 13, 16:00 – 18:00

- **Ad Hoc Group Meetings**
  - PHY: Ballroom C&D
  - MAC: Baltic I

1472

Agenda for Wednesday September 14, 08:00 – 10:00

- **TG Meeting**
- **Call Meeting to order**
- **IEEE 802 and 802.11 IPR Policy and procedure.**
- **Progress from the ad hocs**
- **Presentations**
  - 11-16/1143, “11ax PAR Verification”
  - 11-16/1159, “Summary of Mandatory or Optional Features in 11ax”
  - 11-16/1223, “CR for Section 25.9.2 OBSS_PD Spatial reuse” - SP
  - 11-16/1219, “Consideration on CR for 2665 and 2715 – Jing Ma
  - 11-16/1225, “Heads We Win, Tails We Don't Lose: Proposals for Dynamic CCA” – move to Thursday AM2
- **Recess**

1473

11-16/1223 SP

- **Do you agree with the comment resolutions in document 1223r6 for CIDs 2386, 1232, 63, 463, 2663, 67, 641, 2913, 65, 462, 2742, 2743, 777, 255, 2665, 449, 68, 706, 1018, 2723, 1017, 1582, and 2667?**

- **Accepted with no objection**

1474

Agenda for Wednesday September 14, 13:30 – 15:30

- **Ad Hoc Group Meetings**
  - PHY: Ballroom C/D
  - MAC: Baltic I

1475

Agenda for Wednesday September 14, 16:00 – 18:00

- **Ad Hoc Group Meeting**
  - MU : Ballroom C/D
  - MAC: Baltic I

1476

Agenda for Thursday September 15, 08:00 – 10:00

- **Ad Hoc Meetings**
  - PHY: Ballroom C/D
  - MAC: Baltic I

1477

Agenda for Thursday September 15, AM2, PM1, and PM2

- **TG Meeting**
- **Call Meeting to order**
- **IEEE 802 and 802.11 IPR Policy and procedure.**
- **Presentations**
  - Continuation of PHY comments assignment
  - 11-16/1225, “Heads We Win, Tails We Don't Lose: Proposals for Dynamic CCA” – move to Thursday AM2
  - 11-16/1241 from the MAC ad hoc
- **TG Motions**
- **Timeline**
- **Goals for November 2016**
- **Telecon Schedule**
- **Adjourn**

1478

Motions

- **TG Motions start here**

1479

PHY Motion #166

Move to make the following changes to the spec.

Replace the following text in Subclause 26.3.5 P82 L65

The HE extended range SU PPDU is 20 MHz and can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>, <MCS 1, 1> and <MCS 2, 1>

by

The HE extended range SU PPDU only supports single 242-tone and 106-tone RU. The 242-tone RU can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>, <MCS 1, 1> and <MCS 2, 1>. The 106-tone RU can only be transmitted with the <HE-MCS, NSS> tuples <MCS 0, 1>. The 106-tone RU location within the 20MHz tone plan is fixed as the right one.

Move: Bin Tian Second: VK Jones

Accepted with no objection

PHY Motion #167

- **Move to accept the spec text changes as shown in doc 11/16-1134r1 and add to the next revision of the TG draft**

- **Move: Yan Zhang**
- **Second: Daewon Lee**
- **Accepted with no objection**

PHY Motion

- **Move to adopt the following SRP values for the corresponding entries in Spatial Reuse fields (in Spatial Reuse 1, Spatial Reuse 2, Spatial Reuse 3, and Spatial Reuse 4) for HE Trigger-based PPDU**

Spatial Reuse	SRP	Spatial Reuse	SRP
0001	-80 dBm	1000	-44 dBm
0010	-74 dBm	1001	-41 dBm
0011	-68 dBm	1010	-38dBm
0100	-62 dBm	1011	-35dBm
0101	-56 dBm	1100	-32 dBm
0110	-50 dBm	1101	-29 dBm
0111	-47 dBm	1110	-26 dBm

- SRP= $TX\ PWR_{AP}$ + Acceptable Receiver Interference $level_{AP}$
- Adjustment range for parameters (referenced to the antenna port)
  - TX_PWR_{AP}: -10 dBm to 26 dBm
  - Acceptable Receiver Interference $Level_{AP}$: -82dBm to -36 dBm
- If SRP is below <-80 dBm, set to Spatial Reuse to 0001, if SRP is above -26 dBm, set Spatial reuse to 1110
- Set Spatial Reuse to 0000 for SR disallowed flag, Value 1111 is reserved
- Same table is used for AP and STA.

Doc 11-16/1216r1

Move: James Wang Second:

Motion is not run since it is included in comment resolution doc 11-16/1148r6

PHY Motion # 168

- **Move to accept the proposed spec text in doc 11-16/1170r1 and include it in the next revision of the TG draft**

1483

- **Move: Sameer Vermani**
- **Second: Bin Tian**
- **Accepted with no objection**

PHY Motion #169

- **Move to accept the proposed spec text in doc 11-16/1171r0 and include it in the next revision of the TG draft**

- **Move: Sameer Vermani**
- **Second: Bin Tian**
- **Accepted with no objection**

PHY Motion #170

- **Move to add to 11ax spec draft D0.4 page 227 line 7 the following statement:**
  - A STA that applies beamforming (BF) in the UL should take the BF gain into account when calculating the transmit power needed to meet the target RSSI.

- **Move: Sriram**
- **Second: Zhou Lan**

- **Doc 11-16/1167r1**
- **Accepted with no objection**

PHY Motion

- **Move to add to the 11ax spec draft D0.4 on page 186 line 52 (after "It is mandatory to support transmission of 1x HE-LTF in an UL MU-MIMO PPDU over the full bandwidth, for a STA declaring support for UL MU-MIMO") the following sentence:**
  - When 1xLTF is used for full BW UL MU-MIMO, no pilots (in the LTF field) or frequency domain masking are applied.

1486

- **Move: Sriram Second:**
- **Doc: 11-16/1167r1**
- **Skipped because it is already in a CR document 11-16/1202r2**

PHY Motion #171

- **Move to add the proposed spec text changes in 11-16/1168r2 and include it in the next revision of the TG draft**

1487

- **Move: Sriram Venkateswaran**
- **Second: Bin Tian**
- **Accepted with no objection**

PHY Motion #172

- **Move to add the proposed spec text changes in 11-16/1179r4 and include in the next revision of the TG draft**

1488

- **Move: Daewon Lee**
- **Second: Sai**
- **Accepted with no objection**

PHY Motion #173

- **Move to add the proposed spec text changes in 11-16/1194r1 and include it in the next revision of the TG draft**

1489

- **Move: Daewon Lee**
- **Second: Young Hoon Kwon**
- **Accepted with no objection**

PHY Motion #174

- **Move to add the proposed spec text changes in 11-16/1242r1 and include it in the next revision of the TG draft**

- **Move: Yan Zhang**
- **Second: Daewon Lee**

- **Accepted with no objection**

SR Motion #12

- **Move to accept the modifications as proposed in submission 11-16/0947r12 and include it in the next TG draft**

1491

- **Move: Matthew Fischer**
- **Second: Alfred Asterjadhi**

- **Y:27 N: 10 A;21 Motion fails**

Motion to amend (SR #12 *)

- **Move to amend the motion (2016-09 SR #12) as follows:**
  - Alter to:
    - Move to accept the modifications as proposed in submission 11-16/0947r12, with the normative text

    "In the SR subfield of the HE-SIGA field:

    - One entry disallows SRP-based SR;
    - One entry disallows both SRP-based SR and OBSS_PD-based SR."

    added in Section 25.9.2,

    and include it in the next TG draft
- **Move: Sean Coffey**
- **Second: George Cherian**
- **Y 26 N 22 A 17**
- **Simple majority required. Motion passes**

1492

Motion (2016-09 SR #12A)

Move to accept the modifications as proposed in submission 11-16/0947r12, with the normative text

"In the SR subfield of the HE-SIGA field:

- One entry disallows SRP-based SR;
- One entry disallows both SRP-based SR and OBSS_PD-based SR."

added in Section 25.9.2,

and include it in the next TG draft

1493

Motion to amend (SR #12 **)

Amend to read as:

"Move to accept the modifications as proposed in submission 11-16/0947r12, with the normative text

"In the SR subfield of the HE-SIGA field:

- One entry disallows both SRP-based SR and OBSS_PD-based SR."

added in Section 25.9.2,

and include it in the next TG draft"

Move: Matthew Fischer

Second: Bin Tian

Y 39 N 14 A 9

Simple majority required. Motion passes

1494

Motion (2016-09 SR #12B)

"Move to accept the modifications as proposed in submission 11-16/0947r12, with the normative text

"In the SR subfield of the HE-SIGA field:

- One entry disallows both SRP-based SR and OBSS_PD-based SR."

added in Section 25.9.2,

and include it in the next TG draft"

Y 44 N 21 A 4

75% majority required. Motion fails

Motin To reconsider SR Motion #12

- **Move to reconsider SR Motion #12**

- **Move: Robert Stacey**
- **Second Po-Kai Huang**

- **Y: 34 No: 5 A: 25**
- **Motion Passes**
- **Back to the original SR #12 motion.**

1496

Move to amend ST Motion #12

- **Move to amend the motion**
- **Delete the exploratory text**

1497

MU motion #58

- **Move to add the following text after the end of the first paragraph of section 10.3.2.11.3 of the draft spec:**

Specifically, when an AP transmits an immediate acknowledgement in HE MU PPDU in response to (A-)MPDU sent in HE trigger-based PPDU, the AP should send it within the 20 MHz channel(s) where the pre-HE modulated fields of the HE trigger-based PPDU sent by the STA are located. The immediate acknowledgement is either Block Ack frame (or Ack frame) or Multi-STA Block Ack frame.

1498

Move: Ming Gan

Second: David Yang

Accepted with no objection

MU Motion #59

- **Move to add the following paragraph after the first paragraph of section 25.4.1**

A HE AP should only transmit group addressed M-BA in the DL MU PPDU to HE non AP STA *n* on the (broadcast RU) RU (26/52/106/242/484/996) that includes the RU used for receiving the immediate preceding HE Trigger Based PPDU from STA *n*. There shall be no more than one M-BA that is addressed to multiple recipients carried in a broadcast RU of the DL MU PPDU.

- **Move: Zhou Lan Second: Sriram**
- **Doc: 11-16/1163r0**
- **Approved with no objection**

MU Motion #60

- **Move to add the following text to the next revision of the TG draft**

- ***TGax editor: Add the Paragraph on page 40 line 62 as the following:***
  - An MU-RTS frame shall not be carried in an HE MU PPDU.

- **Move: Po-Kai Huang**
- **Second: Robert Stacey**
- **Accepted with no objection**
- **Doc 11-16/0887r1**

MAC Motion #88

- **Move to accept the proposed text in document 16/0884r5 and include it in the next revision of the TG draft.**

1501

- **Move: Tianyu Wu**
- **Second: David Yang**
- **Accepted with no objection**

MAC Motion #89

- **Move to accept the proposed text in document 16/0925r1 and include it in the next revision of the TG draft.**

1502

- **Move: Weimin Xing**
- **Second: Kaiying**
- **Accepted with no objection**

MAC Motion #90

- **Move to add the following sentence to the section 25.5.2.2.3 AP access procedures for UL MU operation on page 92 line 31, draft D0.4**
  - An AP may send the Trigger frame using any access category and follows the rules defined in 10.22.2 (HCF contention based channel access (EDCA)) for obtaining and sharing the TXOP

1503

- **Move: Jing Ma**
- **Second: Young Hoon Kwon**

Accepted with no objection

- **Doc:11-16/0962r5**

MAC Motion #91

- **Move to accept the spec changes proposed in document 16/1180r1 and include them in the next revision of the TG draft**

1504

- **Move: Po-Kai Huang**
- **Second: Young Hoon Kwon**

- **Accepted with no objection**

MAC Motion

- **Move to add the subfields below to the HE Capabilities IE and include it in the next revision of the TG draft**

	+HTC-HE Support	HE Link Adaptation	All Ack Support	32 bit BA Bitmap Support	MU Cascading Supported	Broadcast TWT Supported	Ack-enabled Multi-TID Aggregation Support	Group Addressed Multi-STA BlockAck In DL MU Support	OMI A-Control Support	OFDMA RA Support
Bits:	1	2	1	1	1	1	1	1	1	1

- **Move: Alfred Asterjadhi**
- **Second:**
- **Doc:11-16/1188r1**
- **Motion is not run. It is included in another CR document 11-16/1266r3**

MAC Motion

- **Do you support that:**
  - The reception of Action (ACK) frame aggregated with Data is optional.
  - The reception of acknowledgement frames (ACK, BA, M-BA) aggregated with Data is optional (indicated via MU Cascading Supported bit).
  - The reception of Basic variant Trigger frame aggregated with Data is mandatory.

- **What is the action?**

1506

MAC Motion

- **Move to accept the proposed text in document 16/0884r5 and add it to the next revision of the TG draft.**

1507

- **Move: Jianhan Liu**
- **Second:**
- **Motion is skipped. Duplication of MAC Motion #88**

MAC Motion #92

- **Move to instruct the TGax Editor to make the following changes:**
- ***TGax Editor: Change the paragraph below of 9.3.1.23.1 of D0.4 as follows:***
- **The TID Aggregation Limit subfield indicates the maximum number of TIDs ~~minus 1~~ that can be aggregated by a STA in a multi-TID A-MPDU carried in the responding HE trigger-based PPDU.**
- **NOTE– A value of 7 in the TID Aggregation Limit subfield indicates to the STA that it can aggregate QoS Data frames from any number of different TID values in the multi-TID A-MPDU.**
-
- ***TGax Editor: Change the paragraph below of 25.5.2.2.2 of D0.4 as follows:***
- **The AP shall set the value in the TID Aggregation Limit subfield in the Type dependent Per User Information field to 0 or 1 for an HE STA with STA that has indicated a zero value in the Multi-TID Aggregation Support field of the HE Capabilities element it transmits and is identified by the AID12 subfield of the User Info field of a Basic Trigger variant Trigger frame (see 9.3.1.23 (Trigger frame format)).(#2669) A value of zero indicates to the STA that it shall not solicit any immediate response for the MPDUs that the STA aggregates in the Trigger-based PPDU.**
- **Move: Alfred Asterjadhi Second: George Cherian**
- **Accepted with no objection**
- **Doc: 11-16/1195r1**

1508

MAC Motion

- **Move to accept the following NAV update rule:**
  - A STA shall update its NAV, irrespectively of whether it is the intended receiver of an MPDU contained in the received PPDU, except that it shall ignore the NAV if the PPDU solicits an immediate response from the STA

1509

- **Move: Alfred Asterjadhi**
- **Second:**
- **Skipped because it is included in CR document 11-16/1173r2**
- **Doc: 11-16/1195r1**

MAC Motion #93

- **Move to accept the proposed spec text change in document 16/1205r0 and include it in the next revision of the TG draft**

- **Move: Geonjung Ko**
- **Second: John Son**
- **Accepted with no objection**

CR Motion #65

- **Move to accept resolutions to CIDs; 1467, 635, 2648, 2708, 1544, 1545, 2649, 437, 1542, 990, 2256, 1543, 599 in doc 11-16/0885r3**

1511

- **Move: Po-Kai Huang**
- **Second: Alfred**
- **Accepted with no objection**

- **Accepted with no objection**

CR Motion #113

- **Do you agree to add to the 11ax specification D0.1 the comment resolutions in document 16/1189r2 for CIDs: 1214, 1779, 1658, 2899, 959, 416, 1735, 740, 1445, 1639, 137, 139, 2398, 2399, 1640, 1738, 2616, 1651, 1652, 1736, 1737, 742, 25, 138, 2617, 1653, 744, 957, 26, 141, 420, 142, 2618, 1741, 1874, 2400, 2845, 1649, 1650, 1740, 1739, 695, 1641, 976, 144, 1077, 145, 146, 452, 1642, 2619, 2621, 1643, 1647, 958, 745, 586, 143, 2622, 2820, 1656, 1654, 1657, 1646, 1318, 544, 155, 153, 151 in doc 11-16/1189r2.**

- **Move: Alfred Asterjadhi**
- **Second: Reza Hedayat**
- **Accepted with no objection**

1560

CR Motion #114

- **Move to accept resolutions for CIDs: 2313, 1410, 1454, 1728, 1897, 1411, 1729, 1898, 1899, 1730, 1731, 1403, 1427, 1409, 20, 1732, 1733, 17, 133 in doc 11-16/1210r1**

1561

- **Move: Junichi Iwatani**
- **Second: Yasu Inoue**
- **Accepted with no objection**

CR Motion #115

- **Move to accept resolutions for CIDs:122, 576, 972, 2598 in doc 11-16/1211r2**

- **Move: Huizhao Wang**
- **Second: Zhou Lan**
- **Accepted with no objection**

1562

CR Motion #116

- **Move to accept resolutions to CIDs; 1865 323 481 517 537 920 319 1059 2559 2551 2552 2553 2554 2555 2556 2557 2558 923 in doc 11-16/1202r5**

1563

- **Move: Ming Gan**
- **Second: Bo Sun**
- **Accepted with no objection**

CR Motion #117

- **Move to accept resolutions to CIDs; 841,1787,1945, 1946,1949,1950,1965,2365,2366,2524,2525,2526,2918 in doc 11-16/1227r2**

1564

- **Move: Po-Kai Huang**
- **Second: Chitto Ghosh**
- **Accepted with no objection**

CR Motion #118

- **Move to accept resolutions for CIDs: 805, 1354, 1356, 1357, 1358, 1360, 1359, 668, 1792, 2475, 2477, 2478, 2479, 2480, 1527, 2263, 120, 1366, 10, 1368, 1369, 1371, 1372, 1374, 1375, 394, 11,12, 669, 1378, 1376, 2455, 2592, 1381, 1384, 2456, 1377, 1635, 1804, 2309, 1367, 670, 2593, 2594, 2595, 1386 in doc 11-16/1186r1**

1565

- **Move: Liwen Chu**
- **Second: Lei Wang**

- **Accepted with no objection**

CR Motion #119

- “Moved to add to the 11ax draft comment resolutions in document 16/1266r3 for CIDs:

113	114	115	116	117	156	196	197

1566

- **Move: Brian Hart**
- **Second: Yasu Inoue**

- **Accepted with no objection**

CR Motion #120

- **Move to accept resolutions to CIDs; 567,665, 2220,2586 in doc 11-16/1241r1**

- **Move: George Cherian**
- **Second: Reza Hedayat**

- **Accepted with no objection**

CR Motion #121

- **The comment resolution to the following CIDs is "Revised" since they have been resolved in D0.4 or by approved resolutions to other CIDs?**
  - CID 2745, 1981, 1025, 502, 1666, 284, 1670, 1788, 1672, 1675, 2139, 1622, 1681, 295, 297, 2182, 309

1569

- **Move to accept the resolution of the above CIDs as "Revised"**
- **Move: Bo Sun Second: Bin Tian**
- **Accepted with no objection**

CR Motion #122

- **The comment resolution to CID 261 is “Rejected” with the reason “HE modulated field consists HE-STF, HE-LTF and HE-DATA only as defined in 26.3.2”**

- **Move to accept “Rejected” as the resolution to CID 261.**

- **Move Bo Sun Second: Bin Tian**
- **Accepted with no objection**

CR Motion #123

- **The comment resolution to CID 1458 is “Rejected” with the reason “The commenter failed to provide an applicable changes to the spec.”**

1571

- **Move to accept “Rejected” as the resolution to CID 1458**

- **Move: Bo Sun Second: Bin Tian**
- **Accepted with no objection**

CR Motion #124

- **Move to accept resolutions to CIDs, 1034, 1035, 1036, and 2138 in doc 11-16/1277r1**

- **Move: Yan Zhang**
- **Second: Bo Sun**
- **Accepted with no objectiom**

Abstract

TGax meeting minutes from the IEEE 802.11 November 2016 San Antonio meeting, November 7th – 11th, 2016.

Minutes/motions from the ad hoc groups are contained in the following documents:

- PHY Ad Hoc
  - Agenda: 11-16-1475, TGax PHY Ad Hoc Nov 2016 Meeting Agenda
  - Minutes: 11-16-1530, November 2016 San Antonio PHY Ad Hoc Meeting Minutes

- MAC Ad Hoc
  - Agenda: 11-16-1478, TGax MAC Ad Hoc November 2016 Meeting Agenda
  - Minutes: 11-16-1480, November 2016 San Antonio TGax MAC Ad hoc Meeting Minutes

- MU Ad Hoc
  - Agenda: 11-16-1487, TGax MU Ad-hoc Agenda November 2016
  - Minutes: 11-16-1520, IEEE 802.11 TGax, MU Ad hoc November 2016 Meeting Minutes

- SR Ad Hoc
  - Agenda: 11-16-1481, TGax Spatial Reuse Ad-hoc Agenda November 2016 Meeting
  - Minutes: 11-16-1569, TGax Spatial Reuse ad hoc group meeting minutes – San Antonio, November 2016

IEEE 802.11 Task Group AX (TGax)
November 2016 San Antonio Meeting
Grand Hyatt San Antonio, TX, U.S.A.
November 7th – 11th, 2016

TGax Chair	**Osama Aboul-Magd (Huawei Technologies)**
Vice Chair	**Simone Merlin (Qualcomm)**
Vice Chair	**Ron Porat (Broadcom)**
TGax Secretary	**Yasuhiko Inoue (NTT)**
TGax Technical Editor	**Robert Stacy (Intel)**

Monday, November 7th, 2016, AM1 TGax Ad Hoc Session (8:00 - 10:00 AM)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @08:03 AM
   1.1. Introduction of TGax chair, secretary, vice chair.

2. Announcement
- 2.1. Agenda Doc.11-16/1310r0 on the server. Rev. 1 is the working document.
- 2.2. Meeting Protocol:
  - 2.2.1. Chair asked to set the mobile devices mute.
  - 2.2.2. Chair asked to state name and affiliation when speaking for the first time.
- 2.3. Attendance reminder.
  - 2.3.1. The attendance server: https://imat.ieee.org/
- 2.4. Since this is an ad hoc meeting, no motion will be conducted.

3. Agenda Setting.
- 3.1. Proposed Agenda for Monday AM1:
  - 3.1.1. Call meeting to order
  - 3.1.2. Ad Hoc Meeting (no Motions)
  - 3.1.3. Patent policy, etc.
  - 3.1.4. Agenda Items for the week.
  - 3.1.5. Call for submissions.
  - 3.1.6. Set Ad hoc Group schedule and approve agenda.
  - 3.1.7. Comment Resolution Status – Robert Stacy (TGax editor).
  - 3.1.8. Timeline
  - 3.1.9. Presentations and Comment Resolution
    - 3.1.9.1. 11-16/1348 Coexistence assurance document
    - 3.1.9.2. 11-16/1363 11ax PAR Verification through OFDMA
    - 3.1.9.3. 11-16/1414 Verifying 11ax¡¯s PAR by UL MU-MIMO
    - 3.1.9.4. 11-16/1435 PAR Verification Simulation Followup
    - 3.1.9.5. More presentations if time allows
  - 3.1.10. Recess.
- 3.2. Chair asked if there are any other items – No items proposed. Meeting will be conducted based on this order.

4. The chair reviewed the mandatory 5 slides of P&P.
- 4.1. Instructions for the WG Chair.
- 4.2. Participants, Patents, and Duty to Inform.

4.3. Patent Related Links.
4.4. Call for potentially essential patents.
4.4.1. Chair asked if anyone is aware of potentially essential patents.
4.4.2. No potentially essential patents reported.
4.5. Other Guidelines for IEEE WG Meetings.

5. Agenda items for the week

- Approve TG and Teleconferences minutes since September meeting.
- Complete the resolution of comments received on draft D0.1
- Approve a motion to prepare draft D1.0 and start WG LB
- Ad Hoc group meetings
- Technical Presentations and related straw polls and/or motions
- Schedule Teleconference times.

6. General Flow of the meeting

6.1. Slides 13 and 14 of the 16/1310r1 contain general flow of the meeting.
6.2. There are eight meeting slots planed for TGax.

	Monday		Tuesday		Wednesday		Thursday	
AM1	TGax (full ad hoc)				TGax (full)		TGax (ad hoc)	TGax (ad hoc)
AM2			TGax (Ad Hoc)	TGax (Ad Hoc)				
PM1	TGax (full)				TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (full)	
PM2	TGax (ad hoc)	TGax (ad hoc)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (ad hoc)	TGax (ad hoc)	TGax (full)	
PM3	TGax (ad hoc)	TGax (ad hoc)						

7. Call for submissions – there are about 90 submissions

7.1. PHY – 29 submissions
7.1.1. 16/1295, “CC23 PHY CR Miscellaneous Part-1,” Yongho Seok (Newracom)
7.1.2. 16/1340, “CR HE-PHY Miscellaneous Part-3,” Lochan Verma (Qualcomm)
7.1.3. 16/1341, “CR HE-PHY-Introduction-Part-2,” Lochan Verma (Qualcomm)
7.1.4. 16/1356, “Spec text for HE NDP,” Yongho Seok (Newracom)
7.1.5. 16/1370, “Proposed Spec Text for CCA Section,” Laurent Cariou (Intel)
7.1.6. 16/1371, “CR HE-SIG-B part III,” Ross Jian Yu (Huawei)
7.1.7. 16/1372, “Some proposed changes to D0.5,” Ross Jian Yu (Huawei)
7.1.8. 16/1374, “Resolution on CID495 and Removal of Unnecessary PHY TBDs,” Yujin Noh (Newracom)
7.1.9. 16/1375, “Comment Resolution for CID2867 and Text Change Proposal of 26.3.10.8 HE-SIG-B,” Yujin Noh (Newracom)
7.1.10. 16/1377, “Comment resolution on Clauses 26.3.9 and 26.3.10,” Yusuke Asai (NTT)
7.1.11. 16/1387, “Comment resolution on CID2506 and proposed changes,” Jinsoo Chio (LG Electronics)
7.1.12. 16/1393, “EVM Definition for UL OFDMA,” Ron Porat (Broadcom)
7.1.13. 16/1398, “CR for CID 2077,” Sriram Venkateswaran (Broadcom)
7.1.14. 16/1399, “Changes to D0.5,” Sriram Venkateswaran (Broadcom)
7.1.15. 16/1402, “11ax Receiver Specification,” Bin Tian (Qualcomm)
7.1.16. 16/1406, “Spec Text for 11ax Receiver Requirements,” Bin Tian (Qualcomm)

7.1.17. 16/1407, “Changes to D0.5,” Xiaogang Chen (Intel)
7.1.18. 16/1408, “PHY CRs 26.3.3,26.3.18,26.3.19,” Xiaogang Chen (Intel)
7.1.19. 16/1410, “Clause 26 Fixes,” Hongyuan Zhang (Marvell)
7.1.20. 16/1411, “TXTIME and RXTIME Fixes,” Hongyuan Zhang (Marvell)
7.1.21. 16/1421, “Smoothness Recommendation for 4x HE-LTF,” Feng Jiang (Intel)
7.1.22. 16/1427, “Remove TBDs in PHY Transmit Spec.,” Yujin Noh (Newracom)
7.1.23. 16/1434,” Miscellaneous HE PHY corrections,” Lochan Verma (Qualcomm)
7.1.24. 16/1437, “Updated Text for DCM,” Jianhan Liu (MediaTek)
7.1.25. 16/1438, “0.8us GI with 4x HE LTF,” Jianhan Liu (MediaTek)
7.1.26. 16/1439, “Error correction to D0.5_on Beam-change text,” Jianhan Liu (MediaTek)
7.1.27. 16/1443, “Spec text: Smoothness Recommendation for HE-LTF,” Feng Jiang (Intel)
7.1.28. 16/1448, “Remaining CR on secition-26-2-2 TXRXVECTOR Parameters,” Ke Yao (ZTE)
7.1.29. 16/1449, “Proposed Text Changes to TXRXVECTOR in Clause 26.2.2,” Ke Yao (ZTE)

7.2. MAC – 36 submissions
7.2.1. 16/1238, “Setting Quiet time period – text,” Chao-Chun Wang (MediaTek)
7.2.2. 16/1352, “CC23 MAC CR Miscellaneous Part-1,” Yongho Seok (Newracom)
7.2.3. 16/1354, “CC23 CR Annex C,” Yongho Seok (Newracom)
7.2.4. 16/1355, “Spec text for 10.22.2.5 and 3.2,” Yongho Seok (Newracom)
7.2.5. 16/1358, “CC0-Remaining CIDs on BA,” Alfred Asterjadhi (Qualcomm)
7.2.6. 16/1359, “CC0-Some remaining CIDs related to TWT,” Alfred Asterjadhi (Qualcomm)
7.2.7. 16/1360, “CC0-HE variant HT control - Some Remaining CIDs,” Alfred Asterjadhi (Qualcomm)
7.2.8. 16/1362, “CC0-Complete RTS Enablement,” Alfred Asterjadhi (Qualcomm)
7.2.9. 16/1367, “NDP feedback report,” Laurent Cariou (Intel)
7.2.10. 16/1368, “Follow-up on MU EDCA parameters,” Laurent Cariou (Intel)
7.2.11. 16/1380, “Proposed text changes for TWT in congested environment,” Laurent Cariou (Intel)
7.2.12. 16/1381, “Proposed text changes for fragmentation operation,” Laurent Cariou (Intel)
7.2.13. 16/1404, “Early TWT SP Termination in TWT Operation,” Jayh Hyunhee Park (LG Electronics)
7.2.14. 16/1409, “A-MSDU Fragmentation,” Matthew Fischer (Broadcom)
7.2.15. 16/1413, “CID193 BSS Color Disabled Indication,” Abhishek Patil (Qualcomm)
7.2.16. 16/1415, “CID72 BSS Color change mechanism,” Abhishek Patil (Qualcomm)
7.2.17. 16/1416, “CC0-HE BSS operation11-16-xxxx-00-00ax-CC0-HE BSS operation,” Alfred Asterjadhi (Qualcomm)
7.2.18. 16/1417, “CC0-HE BSS operation,” Alfred Asterjadhi (Qualcomm)
7.2.19. 16/1418, “CC0-HE Multirate Support and 2G4 40MHz HE STA,” Alfred Asterjadhi (Qualcomm)
7.2.20. 16/1419, “MCS_NSS_BW_PPDU_Selection_for_11ax,” Alfred Asterjadhi (Qualcomm)
7.2.21. 16/1420, “TWT Information frames in 11ax,” Alfred Asterjadhi (Qualcomm)
7.2.22. 16/1423, “NAV Update Rule Considering UL MU Operation,” Geonjung Ko (WILUS)
7.2.23. 16/1424, “Issue on the CWmax value in MU EDCA,” Woojin Ahn (WILUS)
7.2.24. 16/1425, “Clarification on applying MU EDCA parameter set,” Woojin Ahn (WILUS)
7.2.25. 16/1431, “IEEE 802.11ax Annex G,” Osama Aboul-Magd (Huawei Technologies)
7.2.26. 16/1442, “Spec texts for section 25.4 BA,” Jeongki Kim (LG Electronics)
7.2.27. 16/1452, “Multiple BSSID and MU,” Liwen Chu (Marvell)
7.2.28. 16/1453, “A-MPDU content,” Liwen Chu (Marvell)
7.2.29. 16/1454, “Multiple BSSID and MU Discussion,” Liwen Chu (Marvell)
7.2.30. 16/1456, “A-MPDU content discussion,” Liwen Chu (Marvell)
7.2.31. 16/1458, “Comment Resolution for Sub-clause 25.13.2,” Chittabrata Ghosh (Intel)
7.2.32. 16/1459, “Considerations on Quiet Time Period,” Jinsoo Ahn (Yonsei Univ.)
7.2.33. 16/1461, “MU BAR comment resolutions,” Reza Hedayat (Newracom)
7.2.34. 16/1464, “RD Protocol,” Jarkko Kneckt (Apple)
7.2.35. 16/1468, “A-MPDU Content Capabilities,” Raja Banerjea (Qualcomm)
7.2.36. 16/1477, “CC23 Proposed Resolution (Update for) TWT Element,” Matthew Fischer (Broadcom)

7.3. SR – 9 submissions
- 7.3.1. 16/0947, “Proposed text changes for OBSS_PD-based SR parameters,” Matthew Fischer (Broadcom)
- 7.3.2. 16/1063, “Unified SR text DSC, ATPC, inter-BSS,” Graham Smith (SR Technologies)
- 7.3.3. 16/1064, “Unified SR approach DSC, ATPC and Inter-BSS,” Graham Smith (SR Technologies)
- 7.3.4. 16/1121, “Spec Texts: Spatial Reuse Indication for Trigger,” Po-Kai Huang (Intel)
- 7.3.5. 16/1337, “CR on SR CCA rules clause 25.9,” Bo Sum (ZTE)
- 7.3.6. 16/1403, “SR Backoff Procedure,” Jayh Hyunhee Park (LG Electronics)
- 7.3.7. 16/1430, “Comment Resolution for SR on BSS Color,” Junichi Iwatani (NTT)
- 7.3.8. 16/1440, “Proposed Resolutions to CID 2719,” Jing Ma (NICT)
- 7.3.9. 16/1450, “CR for CID 2492 section 25.9 spatial reuse operation,” Kaiying Lv (ZTE)

7.4. MU – 12 submissions
- 7.4.1. 16/1353, “CC23 MAC CR Miscellaneous Part-2,” Yongho Seok (Newracom)
- 7.4.2. 16/1357, “CC0 Remaining CIDs on sounding,” Alfred Asterjadhi (Qualcomm)
- 7.4.3. 16/1361, “CC0- Remaining CIDs on MU Operation,” Alfred Asterjadhi (Qualcomm)
- 7.4.4. 16/1382, “MAC support of preamble puncture,” Zhou Lan (Broadcom)
- 7.4.5. 16/1383, “Spec Text: MAC support of preamble puncture,” Zhou Lan (Broadcom)
- 7.4.6. 16/1389, “Comment Resolution for CID 807,” Po-Kai Huang (Intel)
- 7.4.7. 16/1390, “Spec Text: Revision for NAV Setting Rule under Immediate Response,” Po-Kai Huang (Intel)
- 7.4.8. 16/1391, “Comment Resolution Random Access miscellaneous,” Young Hoon Kwon (Newracom)
- 7.4.9. 16/1392, “Comment Resolution CID 2624 and 2738,” Young Hoon Kwon (Newracom)
- 7.4.10. 16/1426, “DL/UL indication in MU-RTS,” Woojin Ahn (WILUS)
- 7.4.11. 16/1441, “Consideration on Internal Contention Between Data and Trigger Frame,” Jing Ma (NICT)
- 7.4.12. 16/1457, “11ax D0.1 Comment Resolution for Clause 25.5.3,” David Xun Yang (Huawei)

7.5. TG – 4 submissions
- 7.5.1. 16/0995, “Editor's report,” Robert Stacy (Intel)
- 7.5.2. 16/1363, “11ax PAR Verification through OFDMA,” Suhwook Kim (LG Electronics)
- 7.5.3. 16/1414, “Verifying 11ax’s PAR by UL MU-MIMO,” Jason Yuchen Guo (Huawei)
- 7.5.4. 16/1435, “PAR Verification Simulation Followup, ” James Yee (MediaTek)

8. Ad Hoc meeting scheduling

8.1. Ad Hoc slot assignment
- 8.1.1. PHY … 5, MAC … 5, SR … 2, MU … 2.

	Monday		Tuesday		Wednesday		Thursday	
AM1	TGax (full ad hoc)				TGax (full)		TGax (PHY)	TGax (MAC)
AM2			TGax (PHY)	TGax (MAC)				
PM1	TGax (full)				TGax (PHY)	TGax (MAC)	TGax (full)	
PM2	TGax (PHY)	TGax (MAC)	TGax (SR)	TGax (MU)	TGax (PHY)	TGax (MAC)	TGax (full)	
PM3	TGax (SR)	TGax (MU)						

8.2. Chair asked if there are any objections to approve the TGax schedule as follow.
- 8.2.1. There are no objections. The TGax schedule is approved.

9. Presentations

9.1. Osama Aboul-Magd (Huawei Technologies), Chair of TGax, presented "Coexistence assurance document," based on the submission 11-16/1348r1, on behalf of Eldad Perahia (HP Enterprise).

9.1.1. Summary

9.1.1.1. Eldad Perahia (HP Enterprise) created the coexistence assurance document and the initial version was presented during the TGax teleconference.

9.1.1.2. The TGax chair presented the updated document.

9.1.2. Discussion

9.1.2.1. During the teleconference, some issues have been raised such as the definition of "legacy 802.11 system," and content of the section 5 New Features.

9.1.2.2. Osama asked for suggestions for the above issues.

9.1.3. Next Step

9.1.3.1. Osama will make some modification before the motion to approve the document as the official TGax CA document.

9.2. Suhwook Kim (LG Electronics) presented "11ax PAR Verification through OFDMA," based on the submission 11-16/1363r0.

9.2.1. Summary

9.2.1.1. It was verified that OFDMA can provide four times throughput enhancement in outdoor environment and DL/UL mixed traffic.

9.2.1.2. More gain in OFDMA can be obtained e.g., by adopting a better scheduler than a random scheduler.

9.2.2. Discussion

9.2.2.1. A member asked for the details of simulation conditions such as frame aggregation and MCS selection. Another member also asked for the simulation set up.

9.2.2.2. Chair asked for the importance of the simulation scenario that 37 STAs are on the same location. The answer is that it is to obtain the highest performance gain.

9.2.3. Next Step

9.2.3.1. The presenter plans to provide more simulation results.

9.3. Jason Yuchen Guo presented "Verifying 11ax's PAR by UL MU-MIMO," based on the submission 11-16/1414r2.

9.3.1. Summary

9.3.1.1. This presentation is to verify the four times throughput gain by UL MU-MIMO.

9.3.1.2. Higher throughput gain can be expected as the STA density goes higher.

9.3.1.3. Use of efficient scheduling algorithm also important for the higher throughput gain.

9.3.2. Discussion

9.3.2.1. There was a discussion on the fairness of the scheduling algorithm.

9.3.2.2. A member asked for the reason of fixed throughput performance in slide 4. → It is due to the assumed scheduling algorithm.

9.3.2.3. There was a discussion on the MCS selection/link adaptation.

9.3.2.4. There was a question on the use of buffer status report. → It is not considered in the simulations.

9.4. James Yee (MediaTek) presented "PAR Verification Simulation Follow-up ," based on the submission 11-16/1435r0.

9.4.1. Summary

9.4.1.1. In the residential scenario, increasing STA size improves DL gain and using higher UL MCS (5->8, 9) improves UL gain.

9.4.1.2. Indoor BSS scenario with more STAs and no frequency reuse does not show additional performance gain.

9.4.1.3. 4x gain with certain single BSS scenarios, but they are not the ‘dense’ STA and BSS scenarios we target in the EVM.

9.4.2. Discussion

9.4.2.1. A member commented on the throughput of MU with and without OBSS_PD that overhead introduced by the trigger frame is not so significant.

9.4.2.2. There was a discussion on the adjustment of OBSS_PD in a multiple BSS scenario.

9.4.2.3. A member asked if there are simulation results changing the packet size. The answer is yes. Additional gain can be expected in some cases.

9.4.2.4. There was a discussion on the impact of legacy STAs.

9.4.3. Straw poll

9.4.3.1. The straw poll was deferred until PM1 (due to lack of time).

10. Adjournment

10.1. TGax ad hoc session adjourned @ 10:00 AM.

Monday, November 7th, 2016, PM1 TGax Ad Hoc Session (13:30 - 15:30)

1. **The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @13:33 AM**
   1.1. Introduction of TGax chair, secretary, vice chair.

2. **Announcement**
   2.1. Agenda Doc.11-16/1310r1 on the server. Rev. 2 is the working document.
   2.2. Meeting Protocol: Chair asked to state name and affiliation when speaking for the first time.
   2.3. Attendance reminder.
      2.3.1. The attendance server: https://imat.ieee.org/

3. **Agenda for Monday, November 7th, PM1 (13:30 – 15:30).**
   3.1. Proposed Agenda for Monday PM1:
      3.1.1. Call meeting to order
      3.1.2. Patent policy, etc.
      3.1.3. Call for submissions.
      3.1.4. Set Ad hoc Group schedule and approve agenda.
      3.1.5. Summary from September 2016 meeting.
      3.1.6. TG motions
         3.1.6.1. Approve TG meeting and Telecon minutes since November meeting.
         3.1.6.2. Approve resolutions of comments, if needed
      3.1.7. Comment Resolution Status – Robert Stacy (TGax editor).
      3.1.8. Timeline
      3.1.9. Presentations and Comment Resolution
      3.1.10. Recess.
   3.2. Chair asked if there are any other items – No items proposed. Meeting will be conducted based on this order.

4. **The chair reviewed the mandatory 5 slides of P&P.**
   4.1. Instructions for the WG Chair.
   4.2. Participants, Patents, and Duty to Inform.
   4.3. Patent Related Links.
   4.4. Call for potentially essential patents.
      4.4.1. Chair asked if anyone is aware of potentially essential patents.
      4.4.2. No potentially essential patents reported.
   4.5. Other Guidelines for IEEE WG Meetings.

5. **Agenda items for the week**
   5.1. Approve TG and Telecons minutes since July meeting.
   5.2. Resolution of comments received on draft D0.1
   5.3. Ad Hoc group meetings
   5.4. Technical Presentations and related straw polls and/or motions
   5.5. Schedule Telecon times.

6. **Summary from the September 2016 Meeting – slide 23 of the agenda document.**
   - Continue with the resolution of comments received on CC-23
   - Good progress on the comment resolution
   - Adjusted the TG timeline with draft D1.0 available after November meeting.
   - Draft D0.5 was prepared by the TG Editor.

- Conducted "almost" weekly telecons since September F2F meeting.
  - **Covered 13 submissions**
  - **Discussed resolutions of almost 55 CIDs**
  - **Please refer to telecon minutes**
    - **https://mentor.ieee.org/802.11/dcn/16/11-16-1308-02-00ax-tgax-teleconference-minutes-from-september-to-october.docx**

7. TG Motions

7.1. Approve TGax minutes of meetings and teleconferences from September 2016 meeting to today:

- **https://mentor.ieee.org/802.11/dcn/16/11-16-1231-00-00ax-tgax-september-2016-warsaw-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-1308-02-00ax-tgax-teleconference-minutes-from-september-to-october.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-1300-00-00ax-september-2016-tgax-spatial-reuse-ad-hoc-group-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-1276-00-00ax-september-2016-warsaw-tgax-phy-ad-hoc-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-1252-01-00ax-september-2016-warsaw-tgax-mac-ad-hoc-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/16/11-16-1275-00-00ax-mu-ad-hoc-meeting-minutes-september-2016.docx**

7.2. Moved by Simone Merlin, Seconded by Robert Stacy
7.3. Result: Motion was accepted with no objection.

---

8. Editor's Report

8.1. Robert Stacy (Intel), TGax Editor, presented "," based on the submission 11-16-0995-02.
8.2. CR Status Summary
8.3. Discussion – No discussion.

9. Timeline

- **Current Timeline**
  - **May 2014: start of the TG**
  - **Nov. 2014: First draft of the TG SFD was approved**
  - **Jan. 2016: proposed TG draft**
  - **March 2016: Draft D0.1 was approved and CC started**
  - **November 2016: Draft 1.0 and WG letter ballot**
  - **May 2017: Draft 2.0 and recirculation**
  - **November 2017: MDR (Mandatory Document Review)**
  - **January 2018: Formation of SB pool**
  - **March 2018: Sponsor Ballot**
  - **December 2018: RevCom**

9.1. The good news is that the number of TBDs in the draft is reduced as shown in slide 27.

10. Presentation and Comment Resolution

10.1. PAR Verification Discussion

10.1.1. Discussion on continuing the work on PAR verification

10.1.1.1. 4 time improvement is already shown for outdoor scenarios in 11-16/1363

10.1.1.2. 4 times for indoor scenario is observed in 11-16/1414

10.1.2. Discussion

10.1.2.1. A member commented that it is hard to show x4 improvement for indoor cases. Outdoor scenario is more appropriate.

10.1.2.2. There was a comment that some simulation results are not based on realistic scenarios. More time is needed to evaluate realistic scenario.

10.1.2.3. There was a comment that indoor scenario is very important.

10.1.2.4. A member suggested mixed environment of HE and legacy STAs.

10.1.2.5. There was a comment that single BSS is not a dense environment.

10.1.3. Straw poll by James Yee (MediaTek) re: submission 11-16-1435-00.

10.1.3.1. Straw Poll: While we continue to look for additional gain under new modes - combination of 11ax features, do we:

Option 1

Continue to use current EVM scenarios.

Option 2

Modify scenarios in the EVM. E.g.

- Adding single BSS scenarios

- New OBSS scenarios

10.1.3.2. Discussion

10.1.3.2.1. Chair commented that we need more time if we choose option 2.

10.1.3.2.2. A member asked if EVM is the right reference to discuss the simulation scenario.

10.1.3.2.3. Chair asked if there is any objection to go with option 2. → No objection. The simulation scenario will be discussed in the TGax conferences.

10.2. James Wang (MediaTek) presented "Spatial Reuse Subfield Encoding Rule Clarification," based on the submission 11-16-1473-00.

10.2.1. Summary

10.2.1.1. This is the proposed changes to the Spatial Reuse subfield encoding rule based on TGax Draft 0.5

10.2.1.2. Transmit power of AP in table 26-19 Spatial Reuse subfield encoding is changed from "TX PWRAP: -10 dBm to 26 dBm" to "TX PWRAP: ≥-10 dBm."

10.2.2. Discussion

10.2.2.1. A member commented it could mean infinite transmit power is allowed. → The upper limit of the transmit power is obviously the regulatory limit.

10.2.3. Next Step

10.2.3.1. Chair asked if there is objection to this change. → No objection heard.

10.3. Sameer Vermani (Qualcomm) presented "Comment Resolutions of Miscellaneous HE PHY comments," based on the submission 11-16-1340-03.

10.3.1. Summary

10.3.1.1. A previous version of this document was presented by Lochan Verma during the TGax conference call on October 27th and got some minor comment.
10.3.1.2. This is the update considering those comments.
10.3.2. Discussion
10.3.2.1. A member suggested further change to the document. → Sameer agreed.
10.3.3. Next Step
10.3.3.1. Chair asked if there is any objection to accept the resolution. → No objection heard.

10.4. Sameer Vermani (Qualcomm) presented "Comment Resolutions on Clause 26.1.1 Part 2," based on the submission 11-16-1341-06.

10.4.1. Summary
10.4.1.1. Previous version of this document was presented by Lochan Verma during the TGax teleconference on October 27th.
10.4.1.2. Proposed changes to the text in 26.1.1 Introduction to the HE PHY.
10.4.2. Discussion
10.4.2.1. No discussion.
10.4.3. Next Step
10.4.3.1. Chair asked if there is any objection to the resolution. → No objection heard.

10.5. Sameer Vermani (Qualcomm) presented "Miscellaneous HE PHY Corrections," based on the submission 11-16-1434-01.

10.5.1. Summary
10.5.1.1. Various fixes relevant to the HE PHY propsoed.
10.5.2. Discussion
10.5.2.1. A member suggested minor correction to the document. Sameer agreed and updated the document.
10.5.3. Next Step
10.5.3.1. Chair asked if there is any objection to this resolution. → No objection heard.

10.6. Jarkko Kneckt (Apple) presented "Resolution to CIDs 52, 2459 and 2632," based on the submission 11-16-1464-00.

10.6.1. Summary
10.6.1.1. This document contains proposed resolutions for CIDs 52, 2459 and 2632 regarding the reverse direction protocol.
10.6.1.2. Text for the RD protocol signaling and the use of Multi-TID transmissions in RD protocol were proposed.
10.6.2. Discussion
10.6.2.1. A member commented that there is duplicate on the definition of the Multi-TID Aggregation. → Jarkko to update the document.
10.6.2.2. There was a discussion on the tradeoff between the AC constraint and QoS.
10.6.3. Next Step
10.6.3.1. Chair asked if there is any objection to incorporate these changes to the draft. → No objection heard.

10.7. Ross Jian Yu (Huawei Technologies) presented "Proposed resolutions to comments on clause 26.3.10.8 in D0.5," based on the submission 11-16-1371-00.

10.7.1. Summary
10.7.1.1. The document contains the proposed resolutions for CIDs 308, 1619 and 2847.
10.7.1.2. The document contains the proposed changes to the text in clause 26.3.10.8.4 as well which clarifies the mapping of user-fields to the RU allocation signaling for 80 and 160 MHz.
10.7.2. Discussion
10.7.2.1. No discussion.

10.7.3. Next Step
10.7.3.1. Chair asked if there is any objection to the proposed resolutions. → No objection.

10.8. Ross Jian Yu (Huawei Technologies) presented "Proposed change," based on the submission 11-16-1372-01.
10.8.1. Summary
10.8.1.1. This submission contains the proposed changes to clause 26.3.10.5 L-SIG and 26.3.10.8 HE-SIG-B.
10.8.2. Discussion
10.8.2.1. Chair confirmed that this is not comment resolution.
10.8.3. Next Step
10.8.3.1. Chair asked if there is any objection to accept the proposed changes in 16/1372r1. → No objection.

11. AoB
11.1. Chair asked if we have any business that can be conducted.
11.2. Room assignment for PM2 & PM3:
11.2.1. PM2: PHY – Texas D, MAC - Texas E.
11.2.2. PM3: MU – Texas D, SR – Texas E.

12. Adjournment
12.1. TGax recessed @ 15:29 PM.

Monday, November 7th, 2016, PM2 TGax ad hoc sessions (16:00-18:00)

Ad Hoc room assignment:
- PHY ad hoc: Texas D
- MAC ad hoc: Texas E

Monday, November 7th, 2016, PM3 TGax ad hoc sessions (19:30-21:30)

Ad Hoc room assignment:
- SR ad hoc: Texas D
- MU ad hoc: Texas E

Tuesday, November 8th, 2016, AM2 TGax ad hoc sessions (10:30-12:30)

Ad Hoc room assignment:

- PHY ad hoc: Texas D
- MAC ad hoc: Texas E

Tuesday, November 8th, 2016, PM2 TGax ad hoc sessions (16:00-18:00)

Ad Hoc room assignment:

- SR ad hoc: Texas D
- MU ad hoc: Texas E

Wednesday, November 9th 2016, AM1 TGax Full Sessions (8:00-10:00)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @8:04 AM.
   1.1. Introduction of the TG leadership.
   1.2. Agenda 11-16-1310-02 is on the server.

2. Announcements/Reminder
   2.1. Chair asked participants to state name and affiliation when speaking for the first time during the session.
   2.2. Chair reminded that the meeting is conducted under IEEE 802 and 802.11 P&P.
   2.3. Chair reminded attendance.

3. Agenda Setting
   3.1. Proposed agenda for this session
      3.1.1. Call Meeting to order
      3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
      3.1.3. Progress Review
      3.1.4. Presentations
         3.1.4.1. 11-16/1472 New Amendment Style – Robert Stacey
         3.1.4.2. 11-16/1431 IEEE 802.11ax Annex G - Osama
         3.1.4.3. Presentations from ad hocs
      3.1.5. Recess
   3.2. Chair asked if there is any objection to proceed with this agenda. → No objection.
   3.3. The agenda for Wednesday AM1 was approved.

4. Progress from Ad Hoc groups
   4.1. MU and SR ad hocs – completed.
   4.2. PHY: 7 – 8 presentations left.
   4.3. MAC: 16 presentations to go.

5. Presentations
   5.1. Robert Stacy (Intel) presented "New Amendment Style," based on the submission 11-16-1472r01.
      5.1.1. Summary
         5.1.1.1. The new amendment style is not a radical departure from how we amend the 802.11 specification.
         5.1.1.2. It concentrates MAC changes into one clause which helps with a number issues.
         5.1.1.3. The requirement inheritance is clear from the structure of the document.
      5.1.2.Discussion
         5.1.2.1. A member asked if there is a plan to apply this new style to the previous amendment. → Currently there is no plan to do so.
         5.1.2.2. Chair mentioned that the issue raised during the conference call was cross reference. Not sure what is the real issue.

   5.2. Osama Aboul-Magd (Huawei Technologies) presented "IEEE 802.11ax Annex G," based on the submission 11-16-1431r01.
      5.2.1. Summary
         5.2.1.1. This document contains resolutions for CIDs 1430, 1703 and 2503.

5.2.1.2. The initial text for the G.5 HE Sequences is proposed. The plan is to put one example here and add more, or reject current text and start from the scratch after the WG LB.

5.2.2. Discussion

5.2.2.1. A member commented that people should pay more attention to this clause since Annex. G is normative. The only trigger sequence looks quiet incomplete.

5.2.2.2. Another member suggested the trigger sequence to be the placeholder.

5.3. Jeongki Kim (LG Electronics) presented "Spec text for section 25.4 Block Acknowledgment," based on the submission 11-16-1442r00.

5.3.1. Summary

5.3.1.1. This is basically a clarification to the texts in subclause 25.4 Block Acknowledgment in D0.5.

5.3.1.2. In 9.3.1.9.7 Multi-STA BlockAck variant (D0.5), ACK of all MPDUs in an A-MPDU is indicated by Ack Type = 1 and TID subfield = 14 of Multi-STA Block ACK frame. The same concept should also be used in other subclauses (25.4 Block Acknowledgement).

5.3.2. Discussion

5.3.2.1. No discussion.

5.3.3.Next Step

5.3.3.1. Chair asked if there is any objection to accept this spec text. → No objection.

5.4. Abhishek Patil (Qualcomm) presented "Proposed Resolution for CID 193 (BSS Color Disable Indication)," based on the submission 11-16-1413r06.

5.4.1. Summary

5.4.1.1. The submission contains a resolution for CID 193.

5.4.1.2. The proposed resolution is to disable BSS Color when AP determines that there is a color collision.

5.4.2. Discussion

5.4.2.1. The document is not on the server. A member asked for more time to review.

5.5. Alfred Asterjadhi (Qualcomm) presented "HE BSS Operation," based on the submission 11-16-1417r00.

5.5.1. Summary

5.5.1.1. This document contains a resolution for the CID 154.

5.5.1.2. Proposed resolution includes expansion of the Basic HE MCS and NSS Set field from 2 to 3 bits to include the new MCSs added in 11ax (1024 QAM) and the addition of the VHT Operation Information field to the HE Operation element to remove dependency from the VHT Operation element.

5.5.2. Discussion

5.5.2.1. No discussion.

5.5.3.Next Step

5.5.3.1. Chair asked if there is any objection to accept this resolution and the changes to the draft. → No objection.

5.6. Alfred Asterjadhi (Qualcomm) presented "MCS, NSS, BW and PPDU selection for 11ax," based on the submission 11-16-1419r00.

5.6.1. Summary

5.6.1.1. This submission contains a proposed clarification on the selection rules for PPDU type, BW, and <MCS, NSS> for 11ax.

5.6.1.2. Proposed to finalize all the normative behavior for the selection of these parameters for control response frames.

5.6.1.3. Related submission (11-16-1418) which contains the spec text was presented as well.

5.6.2. Discussion

5.6.2.1. There was a discussion on the applicability of each rule.

5.6.3.Next Step

5.6.3.1. Chair asked if there is any objection to this resolution for CID #203. → No objection.

6. Preview of WG Motion
   6.1. Chair showed the motion text for WG Letter Ballot:
      6.1.1.Discussion
         6.1.1.1. A member mentioned that TGax, at this point, does not need detailed description as in the motion for WG recirculation ballot. Just need to say:
            6.1.1.1.1. Instruct the editor to prepare for TGax draft 1.0, and
            6.1.1.1.2. Approve a 30-day Working Group Letter Ballot.
      6.1.2. Chair will update the motion text as suggested.
   6.2. Chair showed the motion text for approval of coexistence assurance document.

7. AOB
   7.1. Only 5 minutes left.
   7.2. No other business to conduct.

8. Recess
   8.1. TGax full session is in recess @9:55 AM, until Thursday AM2.

Wednesday, November 9th 2016, PM1 TGax Ad Hoc Sessions (13:30-15:30)

- PHY ad hoc → Texas D.
- MAC ad hoc → Texas E

Wednesday, November 9th 2016, PM2 TGax ad hoc Sessions (16:00-18:00)

- PHY ad hoc → Texas D
- MAC ad hoc → Texas E

Thursday, November 10th, 2016, AM1 TGax full Session (8:00-10:00)

1 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax, @8:04 AM

1.1 Agenda 16/1310r3 is on the server. Rev. 4 is the working document.
1.2 Introduction of people at the front table.

2 Announcement/Reminder

2.1 Chair reminded IEEE 802 and 802.11 IPR P&P.
2.2 Chair asked people to state name and affiliation when addressing for the first time in the session.
2.3 Chair reminded people to do attendance.

3 Agenda for this session

3.1 Thursday AM1, PM1 and PM2
- 3.1.1 Call Meeting to order
- 3.1.2 Announcement/Reminder
  - 3.1.2.1 IEEE 802 and 802.11 IPR Policy and procedure.
  - 3.1.2.2 Attendance
- 3.1.3 Agenda Setting
- 3.1.4 Presentations
- 3.1.5 TG Motions
- 3.1.6 New Business:

3.2 Chair asked if there are any modifications to the agenda.
3.3 Agenda approved with no objection.

4 TG Motions

Chair asked the people to check the agenda file to make sure that the motion text is correct.

4.1 PHY Motion

4.1.1 PHY Motion #175: Move to accept the proposed changes to 11ax D0.5 spec text as in 11-16/1356r0.

4.1.1.1 Moved by Young Hoon Kwon, Seconded by Alfred Asterjadhi
4.1.1.2 Discussion – No discussion.
4.1.1.3 Result: The motion was accepted with no objection.

4.1.2 PHY Motion #176: Move to accept the proposed spec changes in doc 11-16/1387r3.

4.1.2.1 Moved by Jinsoo Choi, Seconded by Kiseon Ryu.
4.1.2.2 Discussion – No discussion.
4.1.2.3 Result: The motion was accepted with no objection

4.1.3 PHY Motion #177: Move to accept the proposed spec text changes in doc 11-16/1427r2.

4.1.3.1 Moved by Yujin Noh, Seconded by Young Hoon Kwon.
4.1.3.2 Discussion – No discussion.
4.1.3.3 Result: The motion was accepted with no objection.

4.1.4 PHY Motion #178: Do you agree the proposed spec text changes as in doc 11-16/1370r4.

4.1.4.1 Moved by Laurent Cariou, Seconded by Chittabrata Ghosh.
4.1.4.2 Discussion – No discussion.
4.1.4.3 Result: The motion was accepted with no objection.

4.1.5 PHY Motion #179: Move to accept the proposed spec text changes in doc 11-16/1399r2.

4.1.5.1 Moved by Sriram Venkateswaran, Seconded by Ron Porat.
4.1.5.2 Discussion – No discussion.
4.1.5.3 Result: The motion was accepted with no objection.

4.1.6 PHY Motion #180: Move to adopt the spec text in doc 11/16-1406r1 on 11ax Receiver Requirements.

4.1.6.1 Moved by Bin Tian, Seconded by Abhishek Patil.
4.1.6.2 Result: The motion was accepted with no objection.

4.1.7 PHY Motion #181: Move to adopt the changes to the 11ax spec text in doc 11/16-1407r4.

4.1.7.1 Moved by Xiaogang Chen, Seconded by Chittabrata Ghosh.
4.1.7.2 Discussion - No discussion.
4.1.7.3 Result: The motion was accepted with no objection.

4.1.8 PHY Motion #182: Move to adopt the spec text in doc 11/16-1443r0 into 11ax draft.

4.1.8.1 Moved by Feng Jiang, Seconded by Chittabrata Ghosh.
4.1.8.2 Discussion – No discussion.
4.1.8.3 Result: The motion was accepted with no objection.

4.1.9 PHY Motion #183: Move to adopt the spec text in doc 11/16-1410r2 into 11ax draft.

4.1.9.1 Moved by Hongyuan Zhang, Seconded by Saishankar Nandagopalan.
4.1.9.2 Discussion – No discussion.
4.1.9.3 Result: The motion was accepted with no objection.

4.1.10 PHY Motion #184: Move to adopt the spec text in doc 11/16-1411r1 into 11ax draft.

4.1.10.1 Moved by Hongyuan Zhang, Seconded by Saishankar Nandagopalan.

4.1.10.2 Discussion – No discussion.
4.1.10.3 Result: The motion was accepted with no objection.

4.1.11 PHY Motion #185: Move to adopt the spec text in doc 11/16-1437r0 into 11ax draft.

4.1.11.1 Moved by Tianyu Wu, Seconded by Hongyuan Zhang.
4.1.11.2 Discussion – No discussion.
4.1.11.3 Result: The motion was accepted with no objection.

4.1.12 PHY Motion #186: Move to adopt the spec text in doc 11/16-1438r4 into 11ax draft.

4.1.12.1 Moved by Tianyu Wu, Seconded by Hongyuan Zhang.
4.1.12.2 Discussion – No discussion.
4.1.12.3 Result: The motion was accepted with no objection.

4.1.13 PHY Motion #187: Move to adopt the spec text in doc 11/16-1439r1 into 11ax draft.

4.1.13.1 Moved by Tianyu Wu, Seconded by Hongyuan Zhang.
4.1.13.2 Discussion – No discussion.
4.1.13.3 Result: The motion was accepted with no objection.

4.1.14 PHY Motion #188: Move to adopt the spec text in doc 11/16-1449r3 into 11ax draft.

4.1.14.1 Moved by Bin Tian, Seconded by Alfred Asterjadhi.
4.1.14.2 Discussion – No discussion.
4.1.14.3 Result: The motion was accepted with no objection.

4.1.15 PHY Motion #189: Move to adopt the spec text in doc 11/16-1434r2 into 11ax draft.

4.1.15.1 Moved by Sameer Vermani, Seconded by Abhishek Patil.
4.1.15.2 Discussion – No discussion.
4.1.15.3 Result: The motion was accepted with no objection.

4.1.16 PHY Motion #190: Move to adopt the spec text in doc 11-16/1372r1 into 11ax draft.

4.1.16.1 Moved by Ross Jian Yu, Seconded by Ron Porat.
4.1.16.2 Discussion – No discussion.
4.1.16.3 Result: The motion was accepted with no objection.

4.2 MAC Motions

4.2.1 MAC Motion #94: Move to update the 11ax specification D0.5 according to the instructions in document 16/1355r0.

4.2.1.1 Moved by Young Hoon Kwon, Seconded by Eric Wong.
4.2.1.2 Discussion - No discussion.
4.2.1.3 Result: The motion was accepted with no objection.

4.2.2 MAC Motion #95: Move to update the 11ax specification D0.5 according to the instructions in document 16/1362r1.

4.2.2.1 Moved by Alfred Asterjadhi, Seconded by George Cherian.
4.2.2.2 Discussion – No discussion.
4.2.2.3 Result: The motion was accepted with no objection.

4.2.3 MAC Motion #96: Move to update the 11ax specification D0.5 according to the instructions in slide 16 of document 16/1367r0.
And append the following sentence at the end of slide 16
- This mechanism is optional for non-AP STA

4.2.3.1 Moved by Laurent Cariou, Seconded by Alfred Asterjadhi.
4.2.3.2 Discussion – No discussion.
4.2.3.3 Result: The motion was accepted with no objection.

4.2.4 MAC Motion #97: Move to update the 11ax specification D0.5 according to the instructions in document 16/1368r2.

4.2.4.1 Moved by Laurent Cariou, Seconded by Eric Wong.
4.2.4.2 Discussion – No discussion.
4.2.4.3 Result: The motion was accepted with no objection.

4.2.5 MAC Motion #98: Move to update the 11ax specification D0.5 according to the instructions in slide 16 of document 16/1404r1.

4.2.5.1 Moved by Kiseon Ryu, Seconded by Alfred Asterjadhi.
4.2.5.2 Discussion – No discussion.
4.2.5.3 Result: The motion was accepted with no objection.

4.2.6 MAC Motion #99: Move to update the 11ax specification D0.5 according to the instructions in document 16/1409r3.

4.2.6.1 Moved by Zhou Lan, Seconded by Eric Wong.
4.2.6.2 Discussion – No discussion.
4.2.6.3 Result: The motion was accepted with no objection.

4.2.7 MAC Motion #100: Move to update the 11ax specification D0.5 according to the instructions in slides 8, 9 and 10 in document 16/1420r0.

4.2.7.1 Moved by Alfred Asterjadhi, Seconded by Abhishek Patil.
4.2.7.2 Discussion – No discussion.
4.2.7.3 Result: The motion was accepted with no objection.

4.2.8 MAC Motion #101: Move to update the 11ax specification D0.5 according to the instructions in document 16/1380r3.

4.2.8.1 Moved by Laurent Cariou, Seconded by Abhishek Patil.
4.2.8.2 Discussion – No discussion.
4.2.8.3 Result: The motion was accepted with no objection.

4.2.9 MAC Motion #102: Move to update the 11ax specification D0.5 according to the instructions in slide 6 of document 16/1425r2.

4.2.9.1 Moved by Woojin Ahn, Seconded by John Son.
4.2.9.2 Discussion – No discussion.
4.2.9.3 Result: The motion was accepted with no objection.

4.2.10 MAC Motion #103: Move to update the 11ax specification D0.5 according to the instructions in document 16/1452r2.

4.2.10.1 Moved by Liwen Chu, Seconded by Abhishek Patil.
4.2.10.2 Discussion – No discussion.
4.2.10.3 Result: The motion was accepted with no objection.

4.2.11 MAC Motion #104: Move to update the 11ax specification D0.5 according to the instructions in document 16/1453r1.

4.2.11.1 Moved by Liwen Chu, Seconded by Eric Wong.
4.2.11.2 Discussion – No discussion.
4.2.11.3 Result: The motion was accepted with no objection.

4.2.12 MAC Motion #105: Move to update the 11ax specification D0.5 according to the instructions in document 16/1381r2.

4.2.12.1 Moved by Laurent Cariou, Seconded by Chittabrata Ghosh.
4.2.12.2 Discussion – No discussion.
4.2.12.3 Result: The motion was accepted with no objection.

4.2.13 MAC Motion #106: Move to instruct the TGax editor to remove the sentence below from IEEE802.11ax D0.5 in clause 9.3.1.23.
"The exact location of each 20 MHz for 80 MHz BW is TBD"

4.2.13.1 Moved by Alfred Asterjadhi, Seconded by Ron Porat.
4.2.13.2 Discussion – No discussion.
4.2.13.3 Result: The motion was accepted with no objection.

4.2.14 MAC Motion #107: Move to instruct the TGax Editor to make the following changes (related to HE Link adaptation A-Control format):

- Replace "TBD" with "16" in P17L21 of TGax D0.5
- Replace "TBD" with "Reserved" in P19L8 of TGax D0.5
- Replace "B6+X" with "B15" in P19L6 of TGax D0.5
- Replace "X" with "9" in P19L6 of TGax D0.5

4.2.14.1 Moved by Abhishek Patil, Seconded by Alfred Asterjadhi.

4.2.14.2 Discussion – No discussion.
4.2.14.3 Result: The motion was accepted with no objection.

4.2.15 MAC Motion #108: Move to instruct the TGax Editor to make the changes as shown in 16/1529r0.

4.2.15.1 Moved by Zhou Lan, Seconded by Eric Wong.
4.2.15.2 Discussion – No discussion.
4.2.15.3 Result: The motion was accepted with no objection.

4.2.16 MAC Motion #109: Move to instruct the TGax Editor to make the changes as shown in slide 6 of document 16/1424r2.

4.2.16.1 Moved by Woojin Ahn, Seconded by John Son.
4.2.16.2 Discussion – No discussion.
4.2.16.3 Result: The motion was accepted with no objection.

4.2.17 MAC Motion #110: Move to instruct the TGax Editor to make the changes as shown in 16/1442r0.

4.2.17.1 Moved by Jeongki Kim, Seconded by Kiseon Ryu.
4.2.17.2 Discussion – No discussion.
4.2.17.3 Result: The motion was accepted with no objection.

4.2.18 MAC Motion #111: Move to instruct the TGax Editor to make the changes as shown in 16/1238r4.

4.2.18.1 Moved by Chao-Chun Wang, Seconded by Dengyu Qiao.
4.2.18.2 Discussion – No discussion.
4.2.18.3 Result: The motion was accepted with no objection.

4.3 MU Motions

4.3.1 MU Motion #61: Move to update the 11ax draft specification D0.5 according to editor instruction in document 802.11-16/1383r2

- **A HE AP transmits a new trigger variant (Bandwidth Query Report Poll) to solicit bandwidth Query Report from one or multiple HE non AP STAs**
- **A HE non AP STA after receiving Bandwidth Query Report Poll from a HE AP responds with channel availability information in a new A-control field (Bandwidth Query Report)**
- **It is optional for a non AP STA to support the Bandwidth Query mechanism**

4.3.1.1 Moved by Zhou Lan, Seconded by Ron Porat.
4.3.1.2 Discussion – No discussion.
4.3.1.3 Result: The motion was accepted with no objection.

4.3.2 MU Motion #62: Move to accept the proposed changes to D0.5 in 802.11-16/1390r0.

4.3.2.1 Moved by Po-Kai Huang, Seconded by Kiseon Ryu.
4.3.2.2 Discussion – No discussion.

4.3.2.3 Result: The motion was accepted with no objection.

4.4 SR Motions

4.4.1 SR Motion #13: Move to incorporate 11-16/947r18 into the TGax draft.

4.4.1.1 Moved by Zhou Lan, Seconded by Ron Porat.
4.4.1.2 Discussion:

- A member commented that this motion should be withdrawn and whole SR related text should be reviewed.
- Another member agreed with the previous commenter and proposed a motion to table this motion.

4.4.1.3 Motion to table SR Motion #13: Move to table the SR Motion #13 till January 2017 F2F meeting.
4.4.1.3.1. Moved by Sean Coffey, Seconded by Graham Smith.
4.4.1.3.2. Result: Y/N/A = 16/42/43, motion to table the SR motion #13 fails.

- **Go back to the main motion.**
- **A member asked for a recorded vote.**

4.4.1.4 Result: Y/N/A = 45/19/51, motion fails (< 75%).

- **The vote record can be found in the Annex of this document.**

4.4.2 SR Motion #14: Move to incorporate 11-16/1121r2 into the TGax draft.

4.4.2.1 Moved by Po-Kai Huang, Seconded by Laurent Cariou.
4.4.2.2 Discussion – No discussion.
4.4.2.3 Result: The motion was accepted with no objection.

4.4.3 SR Motion #15: Move to add the following text in the 11ax spec draft (11-16/1403r1).

25.9.2.1 General

- **SR Backoff procedure for SR delayed case**

The STA may resume its backoff procedure after the end of the PPDU carrying the SR delay entry by following the procedure defined in 10.22.2 HCF contention based channel access (EDCA)

NOTE - The countdown of an existing backoff procedure is suspended until the end of the PPDU carrying the SR delay entry since the medium is busy during the duration of the PPDU carrying the SR delay entry..

4.4.3.1 Moved by Kiseon Ryu, Seconded by Po-Kai Huang.
4.4.3.2 Discussion – No discussion.
4.4.3.3 Result: The motion was accepted with no objection.

4.4.4 SR Motion #16: Move to accept the changes to the TG draft in doc 11-16/1473r0.

4.4.4.1 Moved by James Wang, Seconded by Bahar Sadeghi.
4.4.4.2 Discussion – No discussion.
4.4.4.3 Result: The motion was accepted with no objection.

Chair asked if there is any business that can be done in 6 minutes. → No response.

5 Recess

TGax Recess @9:54 until PM1 (13:30) this afternoon.

Thursday, November 10th, 2016, PM1 TGax full Session (13:30-15:30)

6 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax @ 13:35.

6.1 The agenda file: 11-16-1310-04.

7 Announcement

7.1 Chair reminded IEEE 802 and 802.11 IPR P&P.
7.2 Chair asked people to state name and affiliation when addressing for the first time in the session.
7.3 Chair reminded people to do attendance.

8 Agenda for this sessions – as approved during AM1 session.

8.1.1 Call Meeting to order
8.1.2 Announcement/Reminder
8.1.2.1 IEEE 802 and 802.11 IPR Policy and procedure.
8.1.2.2 Attendance
8.1.3 Agenda Setting
8.1.4 Presentations
8.1.5 TG Motions
8.1.6 New Business:
8.1.6.1 11-16-1238-04 Setting Quiet Time Period, by Chao-Chun Wang
8.1.7 WG LB, CA Doc Motions
8.1.8 11-16-1537-00, by Guido R. Hiertz.
8.1.9 Goals for January 2017
8.1.10 Teleconference schedule
8.1.11 AOB
8.1.12 Adjourn

9 TG Motions (continued from AM1)

9.1 CR Motions

9.1.1 CR Motion #125 (PHY): Move to accept resolutions to CIDs

- **CID 495 as in 11-16/1374r1**
- **CID 2867 in 11-16/1375r1**
- **CID 2043, 2044, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2058, 2059, 2062 in doc 11-16/1377r6**
- **CID 2431 in 11-16/1295r0**
- **CID 2077 in doc 11-16/1398r1**
- **CID 1031, 1827, 2472, 2753 in doc 11-16/1448r0**
- **CID 1116, 2350, 2460, 2461, 1038, 2147, 275 in doc 11-16/1408r0**
- **CID 1864 and 1849 in doc 11-16/1341r6**
- **CID 2506 in doc 11-16/1387r3**
- **CID 2147 in doc 11-16/1522r2**
- **1932, 2106, 2572, 2796 in doc 11-16/1340r4**
- **CID 308, 1619, 2874 in doc 11-16/1371r0**

9.1.1.1 Moved by Bin Tian, Seconded by Jianhan Liu.
9.1.1.2 Discussion – No discussion.
9.1.1.3 Result: The motion was accepted with no objection.

9.1.2 CR Motion #126 (PHY): Move to accept the following resolution to CID 85
- Resolution: Rejected
- Reason: The comment doesn't provide an applicable change suggestion to the spec draft

9.1.2.1 Moved by Jianhan Liu, Seconded by Hongyuan Zhang.
9.1.2.2 Discussion – No discussion.
9.1.2.3 Result: The motion was accepted with no objection.

9.1.3 CR Motion #127 (MAC): Move to accept resolutions to CIDs
- CIDs: 150, 1020, 2201 in doc 11-16/1354r0
- CIDs: 135, 658, 2389 in doc 11-16/1358r0
- CIDs: 385, 419, 458, 459, 514, 630, 741, 743, 2844, 2846 in doc 11-16/1359r0
- CIDs: 93, 824, 819, 989, 1067, 2388, 147, 161 in doc 11-16/1360r1
- CID 72 in doc 11-16/1415r2
- CID 193 in doc 11-16/1413r8
- CIDs: 195, 723, 779, 780, 1087, 1088, 2179, 2387, 2672, 2673, and 2674 in doc 11-16/1458r0
- CID 6 and 7 in doc 11-16/1461r1
- CIDs: 969, 1517, 1558, 1560, 1917, 2180 in doc 11-16/1357r0

9.1.3.1 Moved by Reza Hedayat, Seconded by George Cherian.
9.1.3.2 Discussion – No discussion.
9.1.3.3 Result: The motion was accepted with no objection.

9.1.4 CR Motion #128 (MAC): Move to accept resolutions to CIDs
- CID 682 in doc 11-16/1477r2
- CID 991 in doc 11-16/1503r2
- CID 1012 in doc 11-16/1350r0
- CID: 861, 1073, 16, 1398, 1212, 1211, 1176, 964, 823, 798, 797, 781, 733, 1400, 1072, 735 in doc 11-16/1332r3
- CID: 81, 82, 710, 1226, 1235, 1236, 1351, 1707, 1776 in doc 11-16/1336r1
- CID 2186 in doc 11-16/1342 (Editor)
- CID 154 in doc 11-16/1417r0
- CID 203 in doc 11-16/1418r0
- CID 1430, 1703, and 2503 in doc 11-16/1431r1
- CID 1700 and 2504 in doc 11-16/1335r3

9.1.4.1 Moved by Yonggang Fang, Seconded by Reza Hedayat.
9.1.4.2 Note: The motion is referring to the latest revision of 1342 which is r0.
9.1.4.3 Discussion – No discussion.
9.1.4.4 Result: The motion was accepted with no objection.

9.1.5 CR Motion #129 (MAC): Move to accept resolutions to CIDs
- CID 52, 2459, and 2632 in doc 11-16/1464r1
- CID 2113 in doc 11-16/1346r1

- CIDs: 1920, 2441, 2671, 2262, 2396, 2454, 2604, 2605, 1734, 118, 691, 822, 1353 in doc 11-16/1352r1

9.1.5.1 Moved by Reza Hedayat, Seconded by George Cherian.
9.1.5.2 Discussion – No discussion.
9.1.5.3 Result: The motion was accepted with no objection.

9.1.6 CR Motion #130 (MU): Move to accept resolutions to CIDs
- CIDs 2490 and 2505 as proposed in 11-16/1353r1
- CIDs 37, 38, 171, 759, 761, 763, 764, 815, 950, 1219, 1540, 2273, 2320, 2449, 2467, 2636, 2656 and 2910 as proposed in 11-16/1361r1
- CIDs 59, 2652 and 2653 as proposed in 802.11-16/1391r0
- CIDs 2624 and 2738 as proposed in 802.11-16/1392r0
- CID 807 as proposed in 802.11-16/1389r0
- CIDs 53, 54, 56, 57, 604, 1553, 1554, 1555, 1557 and 2655 as proposed in 802.11-16/1457r3
- CID: 729, 1069, 806, 2261, 2909, 1468, 1637, 998, 730, 245, 246, 247, 248, 399, 421, 1464, 588, 256, 812, 1661 in doc 11-16/1339r1

9.1.6.1 Moved by Kiseon Ryu, Seconded by Yonggang Fang.
9.1.6.2 Discussion – No discussion.
9.1.6.3 Result: The motion was accepted with no objection.

9.1.7 CR Motion #131 (SR): Move to accept resolutions to CIDs
- CIDs 187, 224, 803, 1233, 1578, 1579, 2284, 2433, 2666, 2912, 2915, 2916, 2917 in doc 11-16/1337r0.
- CIDs 448, 833, and 1232 in doc 11-16/1430r0
- CID 2492 as provided in submission 11-16/1450r0 and to modify the 802.11ax draft amendment as shown in the submission
- CID 2719 and to modify (adding text to the end of section 25.9.2.1 on page 153 line 15) the 802.11ax draft amendment as proposed in submission 11-16/1440r4

9.1.7.1 Moved by Sameer Alfred Asterjadhi, Seconded by Po-Kai Huang.
9.1.7.2 Discussion – No discussion.
9.1.7.3 Result: The motion was accepted with no objection.

9.1.8 CR Motion #132 (SR): Move to accept resolutions to CIDs
- CID 944, 64, and 2911 in doc 11-16/1476r6 with the exeption that 11-16/1476r6 replaces 11-16/: 461476r4 in the resolution

9.1.8.2 Moved by VK Jones, Seconded by Ron Porat.
9.1.8.3 Discussion
- A member asked to table this motion since there are so many additions to the current draft.
- The presenter replied that this document contains resolutions for the CIDs 944, 64 and 2911, and proposed text discussed in SR ad hoc in the simplest way.
- The previous commenter withdraws the motion to table, but recommends to vote No on this motion.
- This motion is determined to be a recorded vote.

9.1.8.4 Result: Y/N/A = 46/29/38, motion fails.
- The vote record is available in the Annex B of this document.

9.2 Motion to reconsider

9.2.1 Move to reconsider motion SR-13 on OBSS_PD SR.

9.2.1.1 Moved by Sriram Venkateswaran, Seconded Saishankar Nandagopalan.

9.2.1.1.1. Discussion

- **A member mentioned that this is out of order. The mover mentioned that he voted "No" for the SR motion #13, however it is worth to reconsider.**

9.2.1.2. Result: Motion to reconsider passed with no objection.

9.2.1.3. Go back to the main motion

9.2.1.4. Discussion – No discussion.

9.2.1.5. Result: Y/N/A = 46/18/38, motion fails (<75%)

- The vote record is available in the Annex C of this document.

9.3 WG Motions

9.3.1 WG LB Motion:

- **Instruct the editor to prepare TGax Draft D1.0**
- **Approve a 30 day Working Group Technical Letter Ballot asking the question "Should TGax Draft 1.0 be forwarded to Sponsor Ballot?"**

9.3.1.1 Moved by Robert Stacy, Seconded by Vinko Erceg.

9.3.1.2 Discussion – No discussion.

9.3.1.3 Result: Y/N/A = 89/0/6, motion passes.

9.3.2 Coexistence Assurance Document: Move to adopt 11-16/1348r2 as coexistence assurance document for 802.11ax amendment.

9.3.2.1 Moved by Robert Stacy, Seconded by Yasuhiko Inoue.

9.3.2.2 Discussion – No discussion.

9.3.2.3 Result: Y/N/A = 82/0/7, motion passes.

---

10 Presentation

10.1 Guido R. Hiertz (Ericsson) presented "TGax ad hoc meeting," based on the submission 11-16-1537-00.

10.1.1 Summary

10.1.1.1 Guido proposes an ad hoc meeting in Stockholm, Sweden, just before the IEEE 802 Wireless Session January 2017.

10.1.1.2 Ericsson will host the meeting

10.1.2 Discussion

10.1.2.1 The editor will create draft 1.0 in two or three week after the November session and a 30-day WG letter ballot starts after that. The ballot will be closed early January. We can assign comments during the teleconferences in January.

10.1.2.2 A member mentioned that it is difficult to prepare the resolution before the January 2017 meeting considering the sequence of events we will have.

10.1.3 Motion: Authorize TGax to hold an ad-hoc meeting on January 11-13/2017 in Stockholm, Sweden, for the purpose of comment resolution.

10.1.3.1 Moved by Guido R. Hiertz, Seconded by Hakan Persson

10.1.3.2 Discussion

11.1.3.2.1. A member mentioned that it is generally good to have an ad hoc meeting to accelerate the comment resolution process, however January is not the right timing.

11.1.3.2.2. There were similar comments.

10.1.3.3 Result: Y/N/A = 9/52/32, motion fails.

---

11 Teleconferences

11.1 Weekly conference calls are planned after September session.

- Thursday Dec. 1st, 8th and 15th, 2016 21:00 - 23:00 (ET) – For PAR Verification
- Thursday Jan. 5th, 2017 11:00 - 13:00 (ET)
- Thursday Jan. 12th, 2017 20:00 - 22:00 (ET)

12 AOB

12.1 No other business to conduct.

13 Adjournment

13.1 TGax adjourned for the week @ 15:35.

Thursday, November 10th, 2016, PM2 TGax full Session (16:00-18:00)

Upon completion of its business, TGax Thursday PM2 session was cancelled.

Annex A. Vote record of the SR Motion #13 - Thursday, November 10th, 2016, AM1 session.

Annex B. Vote record of the CR Motion #132 (SR) - Thursday, November 10th, 2016, PM1 session.

Annex C. Vote record of the SR Motion #13 (reconsider) - Thursday, November 10th, 2016, PM1 session.

The results are contained in separate tabs the excel file below..

Abstract

TGax meeting minutes from the IEEE 802.11 Vancouver session, March 13th – 17nd, 2017.

Minutes/motions from the ad hoc groups are contained in the following documents:

- PHY Ad Hoc
  - https://mentor.ieee.org/802.11/dcn/17/11-17-0494-00-00ax-march-2017-vancouver-phy-ad-hoc-meeting-minutes.docx
- MAC Ad Hoc
  - https://mentor.ieee.org/802.11/dcn/17/11-17-0155-01-00ax-11ax-mac-ad-hoc-minutes.docx
- MU Ad Hoc
  - https://mentor.ieee.org/802.11/dcn/17/11-17-0495-00-00ax-tgax-mu-ad-hoc-minutes-march-2017.docx
- SR Ad Hoc
  - https://mentor.ieee.org/802.11/dcn/17/11-17-0504-00-00ax-spatial-reuse-ad-hoc-group-march-2017-minutes.docx

IEEE 802.11 Task Group ax
March 2017 Vancouver Meeting
Hyatt Regency Vancouver, BC, Canada
March 13th – 17th, 2017

TGax Chair	**Osama Aboul-Magd (Huawei Technologies)**
Vice Chair	**Simone Merlin (Qualcomm)**
Vice Chair	**Ron Porat (Broadcom)**
TGax Secretary	**Yasuhiko Inoue (NTT)**
TGax Technical Editor	**Robert Stacy (Intel)**

Monday, March 13th, 2017, PM1 TGax Session (13:30-15:30)

1. The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chair of the TGax, @13:35
   1.1. Introduction of front table.

2. Announcement
   2.1. Agenda Doc.11-17/0199r1 on the server. Rev. 2 is the working document.
   2.2. Meeting Protocol: Chair asked to state name and affiliation when speaking for the first time.
   2.3. Attendance reminder.
      2.3.1. The attendance server: https://imat.ieee.org/

3. The chair reviewed the mandatory 6 slides of P&P.
   3.1. Instructions for the WG Chair.
   3.2. Participants, Patents, and Duty to Inform.
   3.3. Patent Related Links.
   3.4. Call for potentially essential patents.
      3.4.1. Chair asked if anyone is aware of potentially essential patents.
      3.4.2. No potentially essential patents reported.
   3.5. Other Guidelines for IEEE WG Meetings.
   3.6. Participation in IEEE 802 Meetings

4. Agenda items for the week
   4.1. Approve meeting and teleconferences minutes since January 2017
   4.2. Continue with comment resolution on draft D1.0
   4.3. Schedule TG ad hoc meeting (possibly in Korea)
   4.4. Schedule TG teleconferences.

5. General Flow of the meeting
   5.1. Slides 14 and 15 of the 17/0199r6 contain general flow of the meeting.

5.2. There are ten meeting slots planed for TGax.

	Monday		Tuesday		Wednesday		Thursday
AM1					TGax (full session)		
AM2			TGax (Ad Hoc)	TGax (Ad Hoc)			
PM1	TGax (full session)				TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (full session)
PM2	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (Ad Hoc)	TGax (full session)
PM3			SR ad Hoc				

6. Call for submissions – 62 submissions

6.1. PHY – 13 submissions

6.1.1. 11-17-0044, “NDP Short Feedback Design,” Ron Porat (Broadcom)
6.1.2. 11-17-0078, “RBW of 11ax,” Xiaogang Chen (Intel)
6.1.3. 11-17-0231, “CR_clause 28.3.5,” Xiaogang Chen (Intel)
6.1.4. 11-17-0234, “CR_clause 28.3.19_28.3.20,” Xiaogang Chen (Intel)
6.1.5. 11-17-0247, “CR HE PHY Introduction Part 4,” Lochan Verma (Qualcomm)
6.1.6. 11-17-0261, “CR HE PHY Transmit Requirements HE_TRIG_PPDU Part 1,” Lochan Verma (Qualcomm)
6.1.7. 11-17-0290, “CRs on TX specification,” Yujin Noh (Newracom)
6.1.8. 11-17-0345, “LB225 CR on TXOP_DURATION (28.2.2),” Jeongki Kim (LG Electronics)
6.1.9. 11-17-0398, “11ax Comment Resolutions for HE Preamble,” Yan Zhang (Marvell)
6.1.10. 11-17-0400, “CRs for 20MHz-only STA - Part 1,” Sungeun Lee (Cypress)
6.1.11. 11-17-0404, “CR on Pre-HE preamble transmission for trigger based PPDU,” Ross Jian Yu (Huawei)
6.1.12. 11-17-0414, “CR on clause 28-3-11 HE PHY data field,” Tianyu Wu (MediaTek)
6.1.13. 11-17-0436, “LB225 Comment Resolution of CID 7517,” Jianhan Liu (MediaTek)

6.2. MAC – 25 submissions

6.2.1. 11-17-0074, “Explanations for CR on 27.5.2.7,” Laurent Cariou (Intel)
6.2.2. 11-17-0088, “Discussion for CR on 10.22.2.8 TXOP limits,” Woojin Ahn (Wilus)
6.2.3. 11-17-0239, “LB225-MAC-CR-HT Control subclause 9.2.4.6.X and 10.1 - Block 2,” Alfred Asterjadhi (Qualcomm)
6.2.4. 11-17-0240, “LB225-MAC-CR-HT Control subclause 9.2.4.6.X and 10.1 - Block 3,” Alfred Asterjadhi (Qualcomm)
6.2.5. 11-17-0283, “lb225-mac-cr-9-3-1-23,” Raja Banerjea (Qualcomm)
6.2.6. 11-17-0285, “LB225-MAC-CR-HE MCS_NSS resolutions,” Alfred Asterjadhi (Qualcomm)
6.2.7. 11-17-0308, “CR for section 9.4.2 BSS load PPT,” Frank Hsu (MediaTek)
6.2.8. 11-17-0319, ” CRs for Section 27.4,” George Cherian (Qualcomm)
6.2.9. 11-17-0341, “LB225 11ax D1.0 Comment Resolution 10.13,” Liwen Chu (Marvell)
6.2.10. 11-17-0344, “LB225 CR on EIFS and TXOP_DURATION (10.3.2.3.7 and 27.11.5),” Jeongki Kim (LG Electronics)
6.2.11. 11-17-0346, “LB225 CR on TXOP Truncation (10.22.2.9),” Jeongki Kim (LG Electronics)
6.2.12. 11-17-0347, “LB225 CR on Intra-PPDU PS (27.14.1),” Jeongki Kim (LG Electronics)
6.2.13. 11-17-0353, “LB225-CRs-on-OFDMA-based-random-access-Response,” Suhwook Kim (LG Electronics)
6.2.14. 11-17-0359, “mac-cr-CS Required-9-3-1-23,” Raja Banerjea (Qualcomm)
6.2.15. 11-17-0360, “LB225 CR for CID5917 and CID8165,” Ming Gan (Huawei)

6.2.16. 11-17-0361, “BSS Load Information in 802.11ax,” Ming Gan (Huawei)
6.2.17. 11-17-0362, “LB225 CR for Subclause 9.4.2.218.2,” Ming Gan (Huawei)
6.2.18. 11-17-0384, “LB225, Comment resolution for 10.24.10,” Reza Hedayat (Newracom)
6.2.19. 11-17-0389, “CIDs-for-27-2-1-part1,” Kaiying Lv (ZTE)
6.2.20. 11-17-0395, “LB225-CR-on-Pre-association,” Ming Gan (Huawei)
6.2.21. 11-17-0396, “Association Exchange using Contention based UL OFDMA,” Ming Gan (Huawei)
6.2.22. 11-17-0421, “cr-for-11.49-HE BSS operation,” Chao-Chun Wang (MediaTek)
6.2.23. 11-17-0443, “LB225-CRs-on-OFDMA-based-random-access-Figure,” Suhwook Kim (LG Electronics)
6.2.24. 11-17-0445, “CR on Per-TID All Ack in Multi-STA BlockAck Frame,” Geonjung Ko (Wilus)
6.2.25. 11-17-0448, “Proposed resolution for comments related to CIDs in 27.5.2,” Jing Ma (NICT)

6.3. MU – 9 submissions
6.3.1. 11-17-0271, “CR for 17.2.2.1 and 17.3.9.10,” Po-kai Huang (Intel)
6.3.2. 11-17-0282, “11-17-xxxx-0x-00ax-lb225-mac-cr-number-of-ss-9-3-1-23,” Raja Banerjea (Qualcomm)
6.3.3. 11-17-0302, “D1.0 MAC Resolution CR for 27.5.2.4,” Po-Kai Huang (Intel)
6.3.4. 11-17-0325, “CR for 27.14.3 OPS,” Laurent Cariou (Intel)
6.3.5. 11-17-0335, “CR for CID 8142 - Random Access acronym,” Rojan Chitrakar (Panasonic)
6.3.6. 11-17-0338, “CR for 27.5.2.4 - Physical CS CIDs,” Rojan Chitrakar (Panasonic)
6.3.7. 11-17-0349, “LB225 CR for 25.5.2.4 Setting of CS Required Bit,” Kiseon Ryu (LG Electronics)
6.3.8. 11-17-0403, “CR-Subclause-27-5-3-MU-Cascading,” David Xun Yang (Huawei)
6.3.9. 11-17-0442, “LB225, CR CIDs 3215, 3216,” Reza Hedayat (Newracom)

6.4. SR – 10 submissions
6.4.1. 11-16-1063, “Unified SR text DSC, ATPC, inter-BSS,” Graham Smith (SR Technologies)
6.4.2. 11-16-1476, “CR-for section-25-9-spatial-reuse-operation-for-HE-PPDU,” Matthew Fischer (Broadcom)
6.4.3. 11-17-0075, “SRP-based SR Summary and Update,” Matthew Fischer (Broadcom)
6.4.4. 11-17-0163, “DSC as OBSS_PD,” Graham Smith (SR Technologies)
6.4.5. 11-17-0267, “CR for 25.9.2.2 OBSS_PD Spatial reuse,” Laurent Cariou (Intel)
6.4.6. 11-17-0383, “Spatial Reuse Group Challenges,” Reza Hedayat (Newracom)
6.4.7. 11-17-0452, “LB225, CR for CID3222,” Reza Hedayat (Newracom)
6.4.8. 11-17-0455, “Some clarifications on current SR spec text,” Laurent Cariou (Intel)
6.4.9. 11-17-0458, “OBSS_PD: Threshold problems,” Sean Coffey (RealTek)
6.4.10. 11-17-0459, “,” Kaiying Lv (ZTE)

6.5. TG – 5 submissions
6.5.1. 11-17-0112, “Link Transmit Power,” Matthew Fischer (Broadcom)
6.5.2. 11-17-0328, “Link Adaptation Feedback for Combating Interference,” Feng Jiang ()
6.5.3. 11-17-0334, “Proposed Text for Simulation Scenarios,” Frank Hsu (MediaTek)
6.5.4. 11-17-0369, “Some CIDs related to 20MHz operation,” Guoqing Li (Apple)
6.5.5. 11-17-0370, “Some CIDs related to 20MHz operation -- text,” Guoqing Li (Apple)

6.6. Ad Hoc meeting scheduling
6.6.1. Ad Hoc slot assignment
6.6.1.1. MAC … 5, PHY … 3.5, SR … 1, MU … 1.5.
6.6.2. Chair asked if there are any objections to approve the TGax schedule as follow.
6.6.2.1. There are no objections. The TGax schedule is approved.

	Monday		Tuesday		Wednesday		Thursday
AM1					TGax (full session)		
AM2			TGax (PHY)	TGax (MAC)			TGax (full session)
PM1	TGax (full session)				TGax (MAC)	TGax (MU)	
PM2	TGax (PHY)	TGax (MAC)	TGax (PHY)	TGax (MAC)	TGax (MAC)	TGax (PHY/MU)	TGax (full session)
PM3			TGax (SR)				

7. Agenda for Monday, March 14th, PM1 (13:30 – 15:30).

7.1. Proposed Agenda for Monday PM1:

7.1.1. Call meeting to order
7.1.2. Patent policy, etc.
7.1.3. Call for submissions
7.1.4. Set Ad Hoc Groups schedule and approve agenda
7.1.5. Summary from January 2017 meeting
7.1.6. TG motions
7.1.6.1. Approve TG meeting and Telecon minutes since November meeting.
7.1.6.2. Approve resolutions of comments, if needed.
7.1.7. Editor Report – Robert Stacey
7.1.8. Timeline
7.1.9. On Comment Resolution
7.1.10. Next ad Hoc Meeting (May)
7.1.11. Presentations and Comment Resolution
7.1.12. Recess

7.2. Chair asked if there are any other items – No items proposed. Meeting will be conducted based on this order.

8. Summary from January 2017 Meeting

8.1. Continued with the resolution of comments received on draft D1.0
8.2. Discussed issues related to spatial Reuse.
8.3. Held a weekly teleconferences to advance comment resolution
8.4. Held a TG 3-day ad hoc meeting in San Diego

9. TG Motions

9.1. Motion: Approve TGax minutes of meetings and teleconferences from January 2017 interim meeting to today:

- **https://mentor.ieee.org/802.11/dcn/17/11-17-0126-00-00ax-tgax-january-2017-atlanta-meeting-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/17/11-17-0224-03-00ax-tgax-teleconference-minutes-from-jan-to-mar-2017.docx**
- **https://mentor.ieee.org/802.11/dcn/17/11-17-0155-00-00ax-11ax-mac-ad-hoc-minutes.docx**
- **https://mentor.ieee.org/802.11/dcn/17/11-17-0358-00-00ax-tgax-march-2017-ad-hoc-meeting-minutes-non-phy-ad-hoc.docx**

- https://mentor.ieee.org/802.11/dcn/17/11-17-0456-00-00ax-mar-2017-tgax-sd-phy-ad-hoc-premeeting-minutes.docx

9.1.1. Discussion:

9.1.1.1. A member requested to check the CIDs discussed during the TGax ad hoc meeting.

9.1.2. Result: The motion was postponed until Wednesday AM1.

---

10. Editor's Report

10.1. Draft 1.1 is on the members' only area of the 802.11 web site.

11. Timeline

11.1. Slide 24 of the agenda document contains the current timeline.

11.1.1. May 2014: start of the TG
11.1.2. Nov. 2014: First draft of the TG SFD was approved
11.1.3. Jan. 2016: proposed TG draft
11.1.4. March 2016: Draft D0.1 was approved and CC started
11.1.5. November 2016: Draft 1.0 and WG letter ballot
11.1.6. May 2017: Draft 2.0 and recirculation
11.1.7. November 2017: MDR (Mandatory Document Review)
11.1.8. January 2018: Formation of SB pool
11.1.9. March 2018: Sponsor Ballot
11.1.10. December 2018: RevCom

11.2. Draft 2.0 is very unlikely to be available in May 2017.

11.2.1. Chair asked for comments and suggestions.

11.2.2. Timeline will be discussed during the TGax full session on Thursday session.

12. On Comment Resolutions

12.1. Number of comments were rejected with no proper reasons

12.2. Some of the reasons cited, "it is in the SFD", "the group adopted it"

12.3. Please refer to the comment resolution tutorial;
https://mentor.ieee.org/802.11/dcn/16/11-16-0230-03-000m-sb1-stephens-resolutions-part-1.doc

13. Presentations

13.1. Guoqing Li (Apple) presented "CIDs Related to 20MHz-only STAs operating on non-primary 20 MHz channels," based on the submission 11-17-0369-03.

13.1.1. Summary

13.1.1.1. The 802.11ax draft is introducing 20 MHz-only STAs which operate at 20MHz BW only, however, it is not clear on whether and how these STAs can operate on non-primary 20MHz channel, see text below.

13.1.1.2. What's defined in 11ax draft 1.0 is ready to enable the non-primary channel operation mode which enables intelligent load balancing and interference management, maximizes BSS BW utilization and reduces STA power consumption.

13.1.2. Discussion

13.1.2.1. A member mentioned that he/she likes this idea. However, he/she is concerned about the consistency with the protection mechanism, i.e. MU-RTS/CTS procedure.

13.1.2.2. Another member is concerned about the range disadvantage that a 20 MHz-only STA may have, and also the additional complexity since such a device is very likely to be a low cost device.

13.1.2.3. There is a comment that efficiency can be achieved by putting 20 MHz-only STA on the primary channel while placing other HE STAs secondary channels.

13.1.2.4. There is a comment that this proposal introduces an OBSS coexistence issue. The commenter would like to see all the mechanism for this procedure and results of evaluation.

13.1.2.5. A member mentioned that he/she generally agrees with the idea of giving a kind of flexibility. He/she would like to understand relationship between MU-RTS/CTS procedure and power efficiency.

13.1.3. Next Step

13.1.3.1. It is good to give people to review the document 17/370r2 that contains the text of this proposal.

14. AoB

14.1. PM2 session on Monday March 13th is ad hoc sessions

14.1.1. Ad Hoc #1 – PHY – Regency C.

14.1.2. Ad Hoc #2 – MAC – Regency D.

15. TGax meeting recessed @ 15:30.

The next TGax full session is AM1 on Wednesday, March 15th.

Monday, March 13th, 2017, PM2 TGax Ad Hoc Sessions (16:00-18:00)

- Ad Hoc #1: PHY – Regency C
  - Agenda: 11-17-0464
- Ad hoc #2: MAC – Regency D
  - Agenda: 11-17-0453

Tuesday, March 14th, 2017, AM2 TGax Ad Hoc Sessions (10:30-12:30)

- Ad hoc #1: PHY – Regency C
  - Agenda: 11-17-0464

- Ad hoc #2: MAC – Regency D
  - Agenda: 11-17-0453

Tuesday, March 14th, 2017, PM2 TGax Ad Hoc Sessions (16:00-18:00)

- Ad hoc #1: PHY – Regency C.
  - Agenda: 11-17-0464

- Ad hoc #2: MAC – Regency D
  - Agenda: 11-17-0453

Tuesday, March 14th 2016, PM3 TGax ad hoc Session (19:30-21:30)

- Ad hoc #1: SR – Regency C.
  - Agenda: 11-17-0482

Wednesday, March 15th 2017, AM1 TGax full Sessions (13:30-15:30)

1 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax, @8:00 AM

1.1 Agenda 17/0199r3 is on the server.
1.2 Rev. 4 is the working document.

2 Agenda Setting

2.1 Proposed agenda for this session
- 2.1.1 Call Meeting to order
- 2.1.2 IEEE 802 and 802.11 IPR Policy and procedure.
- 2.1.3 Approval of TG Minutes
- 2.1.4 May ad hoc Meeting and motion
- 2.1.5 Timeline
- 2.1.6 Progress Review from ad hocs
- 2.1.7 Presentations
  - 2.1.7.1 SP remaining from yesterday
  - 2.1.7.2 11-17/0075 and 11-16/1476
  - 2.1.7.3 11-17/0383 and 11-17/0452
  - 2.1.7.4 11-17/0459
  - 2.1.7.5 11-17/0267 – SP
- 2.1.8 Recess

2.2 Chair asked if there any comments or suggestions on the proposed agenda. No response.
- 2.2.1 The agenda for Wednesday AM1 is approved.

3 Reminder

3.1 Chair reminded that we are still operating under IEEE 802 and 802.11 Policies and Procedures.
3.2 Chair asked to state name and affiliation when addressing for the first time in the session.
3.3 Chair asked to put cellphone mute.

4 Approval of TG minutes (January 2017 meeting and teleconferences)

4.1 Motion: Approve TGax minutes of meetings and teleconferences from January 2017 plenary meeting to today:
- **4.1.1 https://mentor.ieee.org/802.11/dcn/17/11-17-0126-00-00ax-tgax-january-2017-atlanta-meeting-minutes.docx**
- **4.1.2 https://mentor.ieee.org/802.11/dcn/17/11-17-0224-03-00ax-tgax-teleconference-minutes-from-jan-to-mar-2017.docx**
- **4.1.3 https://mentor.ieee.org/802.11/dcn/17/11-17-0155-00-00ax-11ax-mac-ad-hoc-minutes.docx**
- **4.1.4 https://mentor.ieee.org/802.11/dcn/17/11-17-0358-02-00ax-tgax-march-2017-ad-hoc-meeting-minutes-non-phy-ad-hoc.docx**
- **4.1.5 https://mentor.ieee.org/802.11/dcn/17/11-17-0456-00-00ax-mar-2017-tgax-sd-phy-ad-hoc-premeeting-minutes.docx**

4.2 Moved by Bo Sun, Seconded by Bin Tian.
4.3 Discussion: No discussion.
4.4 Result: Motion was approved with no objection.

---

5 Ad Hoc Meeting in May 2017

5.1 Jinsoo Ahn (LG Electronics) volunteers to host the TGax ad hoc meeting in May 2017 before the week of the IEEE 802 Wireless Interim session.

5.2 Discussion

5.2.1 Some members prefer to have the ad hoc meeting on Saturday and Sunday.

5.2.2 PHY ad hoc does not need ad hoc meeting.

5.3 Motion

5.3.1 Authorize TGax to hold an ad-hoc meeting on May 3-5 in Seoul, Korea, for the purpose of working on comment resolution excluding PHY CIDs.

5.3.2 Moved by Robert Stacey, Seconded by Qinghua Li

5.3.3 Discussion: No discussion.

5.3.4 Result: Y/N/A = 55/0/2, motion passes.

---

6 Timeline discussion

6.1 Chair showed the proposed modification to the timeline contained in the agenda file and requested for comments and suggestions.

6.1.1 There will be a motion to approve the modified timeline on Thursday.

7 Progress from ad hoc groups

7.1 Report from the ad hoc groups:

7.1.1 PHY (Bo): 4 presentations left. Need one more session.

7.1.2 MU (Sigurd): 8 submissions left. Need one more session. It can be a joint session with PHY ad hoc.

7.1.3 SR (Guido): 5 left. Want Thursday AM1 session.

7.1.4 MAC (Eric): 14 left. Need more sessions.

7.2 Chair will request additional meeting slot during the WG mid-week plenary session.

7.3 Chair also asked the members to review the motion text contained in the agenda file.

8 Presentations

8.1 Matt. Fischer (Broadcom) presented "SRP-Based SR Operation," based on the submission 11-17-0075-07.

8.1.1 Summary

8.1.1.1 This is an update of a presentation that was given in January 2017 session.

8.1.2 Discussion

8.1.2.1 Q: A member asked about the retransmission procedure when the acknowledgment is not returned. → It is not likely that the retransmission occurs within the same SRP PPDU. We may need to think about the use of Delayed Block ACK procedure.

8.1.2.2 C: Some members disagree with the concept of SRP. Although some cases are explained in the document, there seems to be many hidden assumptions. More details of this procedure have to be discussed.

8.1.2.3 C: A member commented that AP will have an advantage for SR transmissions.

8.1.2.4 Q: A member asked if we have a mechanism to completely ON/OFF this procedure. → SR_Disallow bit.

8.1.2.5 C: Another member pointed out that there are some issues such as number of STAs participating SR transmissions, collision probability in a dense wireless LAN environment, UL/DL balancing.

8.1.3 Straw Polls

8.1.3.1 Straw Poll #1: Do you support the use of SRP in the DSRP_PPDU case, i.e. Trigger followed by UL Trigger-based PPDU?

8.1.3.1.1 Y/N/A = 31/12/35

8.1.3.2 Straw Poll #2: Do you support the use of SRP in the TSRP_PPDU case, i.e. HE Trigger-based PPDU preceded by IDLE or by PPDU with color match of Trigger-based PPDU?

8.1.3.2.1 Y/N/A = 24/26/29

8.1.3.3 Straw Poll #3: Do you support the use of SRP in the ULSRP_PPDU case 1, i.e. HE UL SU PPDU or HE UL MU PPDU preceded by IDLE?

8.1.3.3.1 Y/N/A = 13/25/31

8.2 Reza Hedayat (Newracom) presented "LB225, CR for CID3222," based on the submission 11-17-0452-02.

8.2.1 Summary

8.2.1.1 As a resolution for CID #3222, OBSS_PD Rule is modified.

8.2.1.2 The proposal is to use a more relaxed OBSS-PD for response frames to protect intended recipients of data frames from potential interference/collision.

8.2.1.3 Proposed text is contained in slide 10 of 11-17-0452-02.

8.2.2 Discussion

8.2.2.1 A member commented that we should have protection for response frame.

8.2.3 Straw Poll

8.2.3.1 Do you accept the Revised resolution for CID 3222 with the proposed text in slide 10 of 17-0452r1?

8.2.3.1.1 Accepted with no objection.

---

9 AoB

9.1 Guoqing Li (Apple) has straw polls from submission 11-17-0369

9.1.1 Straw Polls:

9.1.1.1 Straw Poll #1: Do you agree to accept the text described in 0370r2 for comment resolution for CID 8810 and 8811?

9.1.1.1.1 Discussion:

9.1.1.1.1.1 A member commented that this adds lots of complexity.

9.1.1.1.2 Result: Y/N/A = 39/26/17, straw poll will not be converted to a motion.

9.1.1.2 Straw Poll #2: Do you agree to allow 20 MHz-only STAs to operate on any 20 MHz channel within the BSS bandwidth as an optional mode?

9.1.1.2.1 Discussion:

9.1.1.2.2 Result: This straw poll was not conducted.

---

10 Recess

10.1 There will be TGax ad hoc meetings this afternoon.

10.2 Chair will send out an email.

Wednesday, March 15th 2017, PM1 TGax Ad Hoc Sessions (13:30-15:30)

- Ad Hoc #1: MAC – Regency C
  - Agenda: 11-17-0453
- Ad Hoc #2: MU – Regency D
  - Agenda: 11-17-0485

Wednesday, March 15th 2017, PM2 TGax Ad Hoc Sessions (16:00-18:00)

- Ad Hoc #1: MU/PHY – Regency C
  - Agenda: 11-17-0485/11-17-0464
- Ad Hoc #2: MAC – Regency D
  - Agenda: 11-17-0453

Thursday, March 16th, 2017, PM1 TGax full Session (13:30-15:30)

1 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax, @13:30.

1.1 Agenda 17/0199r5 is on the server. Rev. 6 is the working document.

2 Agenda for this session

2.1 Thursday PM1 and PM2
- 2.1.1 Call Meeting to order
- 2.1.2 Agenda Setting
- 2.1.3 Announcement/Reminder
  - 2.1.3.1 IEEE 802 and 802.11 IPR Policy and procedure.
  - 2.1.3.2 Attendance
- 2.1.4 TG Motions
- 2.1.5 Timeline update
- 2.1.6 Goals for May 2016
- 2.1.7 Teleconferences
- 2.1.8 Presentations
  - 2.1.8.1 11-17/0328
  - 2.1.8.2 11-17/0112
- 2.1.9 Adjourn

2.2 Chair asked if there are any modifications to the agenda.

2.3 Agenda approved without objections.

3 Announcement/Reminder

3.1 Chair reminded IEEE 802 and 802.11 IPR P&P.

3.2 Chair asked people to state name and affiliation when addressing for the first time in the session.

3.3 Chair reminded people to do attendance.

4 Motions – TG documents

4.1 CR Motions

4.1.1 CR Motion #152 (MAC): Move to accept resolutions to CIDs; 5164, 6974, 6975,6978, 6979, 6980, 6981, 7532, 7533, 8293, 8486, 9865, and 9866 in doc 11-17/0191r5

4.1.1.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.1.2 Discussion: No discussion.
4.1.1.3 Result: Motion was accepted with no objection.

4.1.2 CR Motion #153 (MAC): Move to accept resolutions to CIDs; 3193, 3194, 4747, 4748, 5032, 5172, 5684, 5854, 5906, 5908, 6159, 6160, 7138, 7178, 7185, 7186, 7795, 8212, 8213, 8214, 8264, 8295, 8296, 8297, 9403, 9491, 9521, 9586, 9702, 10248, 10249, 10327, 3244, 3389, 3499, 3830, 3919, 4270, 4454, 4483, 4742, 4744, 5843, 5911, 5912, 6462, 6463, 6464, 7562, 8201, 8262, 8263, 8265, 8290, 8291, 8519, 4745, 7660 in doc 11-17/0204r5.

4.1.2.1 Moved by Laurent Cariou, Seconded by Yasu Inoue.
4.1.2.2 Discussion: No discussion.
4.1.2.3 Result: Motion was accepted with no objection.

4.1.3 CR Motion #154 (MAC): Move to accept resolutions to CIDs; 6935, 3102, 7707, 8494, 4715, 6936, 4716, 6937, 5432, 4717 in doc 11-17/0223r2.

4.1.3.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.3.2 Discussion: No discussion.
4.1.3.3 Result: Motion was accepted with no objection.

4.1.4 CR Motion #155 (MAC): Move to accept resolutions to CIDs; 5931, 7528, 9748 in doc 11-17/0227r0.

4.1.4.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.4.2 Discussion: No discussion.
4.1.4.3 Result: Motion was accepted with no objection.

4.1.5 CR Motion #156 (MAC): Move to accept resolutions to CIDs; 4266, 4479, 5211, 10290 in doc 11-17/0248r3.

4.1.5.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.5.2 Discussion: No discussion.
4.1.5.3 Result: Motion was accepted with no objection.

4.1.6 CR Motion #157 (MAC): Move to accept resolutions to CIDs; 9756, 7788 in doc 11-17/0255r0.

4.1.6.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.6.2 Discussion: A member asked for a count.
4.1.6.3 Result: Y/N/A = 28/3/9, motion passes.

4.1.7 CR Motion #158 (MAC): Move to accept resolutions to CIDs; 3166, 6086, 6328, 7267, 7272, 7275, 7753, 8396, 9834, 9836, 5682, 7271, 3019, 6329, 9835, 9646, 9647, 8252, 7273, 7274, 7490, 8117, 10342 in doc 11-17/0207r6.

4.1.7.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.7.2 Discussion: No discussion.
4.1.7.3 Result: Motion was accepted with no objection.

4.1.8 CR Motion #159 (MAC): Move to accept resolutions to CIDs; 9612, 4832 in doc 11-17/0208r2.

4.1.8.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.8.2 Discussion:
4.1.8.2.1 A member asked for deferral of CID #9612.
4.1.8.2.2 Another member objects to it.
4.1.8.3 Result: Y/N/A = 28/3/9, motion passes.

4.1.9 CR Motion #160 (MAC): Move to accept resolutions to CIDs; 7667, 9693, 6529 in doc 11-17/0209r2.

4.1.9.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.

4.1.9.2 Discussion: No discussion.
4.1.9.3 Result: Motion was accepted with no objection.

4.1.10 CR Motion #161 (MU): Move to accept resolutions to CIDs; 7840, 7959, 8502, 9771, 8715, 10071 in doc 11-17/0309r1.

4.1.10.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.10.2 Discussion: No discussion.
4.1.10.3 Result: Motion was accepted with no objection.

4.1.11 CR Motion #162 (MAC): Move to accept resolutions to CIDs; 7668, 7669, 7906, 9694, 4833, 5775, 9600, 5969, 9861, 5968, 7670, 7881, 9346, 3188 in doc 11-17/0210r2.

4.1.11.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.11.2 Discussion: No discussion.
4.1.11.3 Result: Motion was accepted with no objection.

4.1.12 CR Motion #163 (MAC): Move to accept resolutions to CIDs; 6935, 3102, 7707, 8494, 4715, 6936, 4716, 6937, 5432, 4717 in doc. 11-17/0223r2.

4.1.12.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.12.2 Discussion: This is a duplicate of a previous motion (CR Motion #154).

4.1.13 CR Motion #164 (MAC): Move to accept resolutions to CIDs; 4754, 6094, 7564, 8404, 8689, 9677, 6480, 7565, 5848, 6481, 8406, 6484, 9611 in doc 11-17/0226r3.

4.1.13.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.13.2 Discussion: No discussion.
4.1.13.3 Result: Motion was accepted with no objection.

4.1.14 CR Motion #165 (MAC): Move to accept resolutions to CIDs; 8394, 5215, 7142, 10292 in doc 11-17/0263r3.

4.1.14.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.14.2 Discussion: No discussion.
4.1.14.3 Result: Motion was accepted with no objection.

4.1.15 CR Motion #166 (MAC): Move to accept resolutions to CIDs; 5075, 5076, 5561, 9481, 5562, 5563, 9274, 7140, 9423, 5044, 9425, 8095, 8096, 5045, 9427, 7975, 5932, 7976, 9424, 9426, 9557, 9681, 9850, 5933, 8411, 9515, 7569, 8410, 5795, 7137, 5761, 9682, 8256, 8257, 9428, 4835, 5934, 9851, 7663 in doc 11-17/0264r3.

4.1.15.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.15.2 Discussion: No discussion.
4.1.15.3 Result: Motion was accepted with no objection.

4.1.16 CR Motion #167 (MAC): Move to accept resolutions to CIDs; 10250, 10320, 10321, 10322, 10323, 10247, 10005, 10006, 10246, 9584, 9386, 9285, 8592, 8354, 8211, 7233, 6068, 6056, 5930, 5559, 5468, 5466, 5463, 5358, 5169, 3057, 8268, 8269, 7844, 9442 in doc 11-17/0324r1.

4.1.16.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.16.2 Discussion: No discussion.
4.1.16.3 Result: Motion was accepted with no objection.

4.1.17 CR Motion #168 (MAC): Move to accept resolutions to CIDs; 3006, 3010, 3112, 3162, 5047, 5058, 5067, 5926, 6075, 6076, 6272, 6273, 7134, 7311, 7312, 7314, 7475, 7733, 7734, 7735, 7736, 7737, 7934, 8113, 8186, 8187, 8474, 8475, 8477, 8478, 9362, 9363, 9364, 9625, 9626, 9642, 9814, 9815, 9816, 9817, 9818 in doc 11-17/306r4.

4.1.17.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.17.2 Discussion: No discussion.
4.1.17.3 Result: Motion was accepted with no objection.

4.1.18 CR Motion #169 (MAC): Move to accept resolutions to CIDs; 3060, 3063, 3064, 3065, 3201, 3202, 3203, 3204, 3205, 3206, 3213, 5174, 5178, 5650, 5651, 5652, 5653, 5654, 5655, 5668, 5685, 5803, 5804, 5805, 5806, 6060, 6135, 6608, 6611, 6621, 6623, 6637, 6639, 6640, 6641, 7082, 7393, 7534, 7653, 7654, 7655, 7656, 7802, 7967, 8122, 8391, 8392, 8459, 8490, 8491, 9214, 9286, 9718, 9736, 9737, 9882, 10009, 10329, 10330, 10333, 8395 in doc 11-17/0319r1.

4.1.18.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.18.2 Discussion: No discussion.
4.1.18.3 Result: Motion was accepted with no objection.

4.1.19 CR Motion #170 (MAC): Move to accept resolutions to CIDs; 3019, 9648, 9837, 10162 in doc 11-17/0359r2.

4.1.19.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.19.2 Discussion: No discussion.
4.1.19.3 Result: Motion was accepted with no objection.

4.1.20 CR Motion #171 (MAC): Move to accept resolutions to CIDs; 3018, 8190, 3167, 3216, 5130, 8166, 8335, 8336, 8380, 8415, 8539, 8540, 9494, 9645, 6082, 7484, 9831 in doc 11-17/0283r3.

4.1.20.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.20.2 Discussion: No discussion.
4.1.20.3 Result: Motion was accepted with no objection.

4.1.21 CR Motion #172 (MAC): Move to accept resolutions to CIDs; 6484, 9611 in document 17/0226r3.

1.1.1.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
1.1.1.2 Discussion: No discussion.
1.1.1.3 Result: Motion was accepted with no objection.

4.1.22 CR Motion #173 (MAC): Move to accept resolutions to CIDs; 9428 in document 17/0264r3.

4.1.22.1 Moved by Po-Kai Huang.

4.1.22.2 Discussion: This CID is included in a previous motion (CR Motion #166).

4.1.23 CR Motion #174 (MAC): Move to accept resolutions to CIDs; 3060, 3061, 9444, 5175, 3062, 3071, 5708, 5709, 5710, 9709, 5711, 7177, 3072, 4817, 3136, 9821, 3075, 7552, 7972, 8533, 5455, 7163, 7164, 9378, 7165, 7841, 7169, 9379, 7146, 8280, 8292 in document 17/0230r1.

4.1.23.1 Moved by Abhishek Patil, Seconded by Yasu Inoue.

4.1.23.2 Discussion: No discussion.

4.1.23.3 Result: Motion was accepted with no objection.

4.1.24 CR Motion #175 (MU): Move to accept resolutions to CIDs; 7968, 8271, 4809, 4810, 4811, 5702, 5183, 5184, 9451, 5185, 5703, 7574, 9894, 4812, 5186, 5704, 9452, 8272, 9707, 5706, 5187, 6168, 5983, 8273, 8338, 9588, 6166, 10167, 4815, 4816, 7644, 7812, 9896, 6065, 7175, 9759, 9456, 9589, 7176, 10260, 9898, 8552, 3228, 9710, 4818, 8151, 8701, 8702, 4821, 9529, 4820, 8703, 4822, 4823, 4824, 4825, 6685, 7649, 5717, 3232, 7816, 5988, 9713, 4828, 6196, 3325*, 6695, 8705, 6696, 7817, 6697, 9917, 5997, 5998, 6701 in document 17/0250r2.

4.1.24.1 Moved by Abhishek Patil, Seconded by Yasu Inoue.

4.1.24.2 Discussion: No discussion.

4.1.24.3 Result: Motion was accepted with no objection.

4.1.25 CR Motion #176 (MAC): Move to accept resolutions to CIDs; 6787, 7131, 10300, 10301, 4910, 4911, 6789, 8356, 4909, 9703, 4908 in document 17/138r1.

4.1.25.1 Moved by Abhishek Patil, Seconded by Yasu Inoue.

4.1.25.2 Discussion: No discussion.

4.1.25.3 Result: Motion was accepted with no objection.

4.1.26 CR Motion #177 (MAC): Move to agree to the resolution of CID 5189 in document 17/0359r2.

4.1.26.1 Moved by George Cherian, Seconded by Yasu Inoue.

4.1.26.2 Discussion: No discussion.

4.1.26.3 Result: Motion was accepted with no objection.

4.1.27 CR Motion #178 (MAC): Move to accept the resolutions to CIDs 3015, 3016, 3165, 7487, 8660, 8661, 9262, 9263, 9633 from document 17/0282r4.

4.1.27.1 Moved by George Cherian, Seconded by Yasu Inoue.

4.1.27.2 Discussion: No discussion.

4.1.27.3 Result: Motion was accepted with no objection.

4.1.28 CR Motion #179 (MAC): Move to accept the resolutions to CIDs 4564, 4571, 4614, 7369, 8083, 8511, 8512, 9666, 9667 in document 11-17/0235r0.

4.1.28.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.28.2 Discussion: No discussion.
4.1.28.3 Result: Motion was accepted with no objection.

4.1.29 CR Motion #180 (MAC): Move to accept the resolutions to CIDs 3132, 3175, 4720, 6919, 7228, 8308 in document 11-17/0236r2.

4.1.29.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.29.2 Discussion: No discussion.
4.1.29.3 Result: Motion was accepted with no objection.

4.1.30 CR Motion #181 (MAC): Move to accept the resolutions to CIDs 4789, 4808, 5217, 5218, 5219, 5220, 5221, 5511, 5518, 7034, 7035, 7154, 7581, 7582, 8525, 8526, 8616, 8617, 8729, 8730, 9732, 9961, 9962, 9963, 9964 in document 11-17/0237r3.

4.1.30.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.30.2 Discussion: No discussion.
4.1.30.3 Result: Motion was accepted with no objection.

4.1.31 CR Motion #182 (MAC): Move to accept the resolutions to CIDs 3084, 3085, 3086, 5387, 7166, 6786, 6779, 6777, 6781, 3088, 9458, 10299, 3087, 5476 in document 11-17/0134r10.

4.1.31.1 Moved by Abhishek Patil, Seconded by Yasu Inoue.
4.1.31.2 Discussion: No discussion.
4.1.31.3 Result: Motion was accepted with no objection.

4.1.32 CR Motion #183 (MAC): Move to accept the resolution to CID 5050 in document 11-17/0363r5.

4.1.32.1 Moved by Matt Fischer, Seconded by Yasu Inoue.
4.1.32.2 Discussion: No discussion.
4.1.32.3 Result: Motion was accepted with no objection.

4.1.33 CR Motion #184 (MAC): Move to accept the resolutions to CIDs 7809, 3074, 5999, 9121, 9122, 9123, 5018, 5019, 5020, 5021, 5022, 5023, 5066, 5714, 5986, 6167, 7648, 8156, 8279, 8554, 9100, 9591, 9904, 9975, 9708, 10168, 5364, 7814, 3097, 3229, 3230, 3301, 4819, 5035, 5094, 5190, 5370, 5713, 6195, 6677, 6999, 7097, 7845, 8276, 8299, 9528, 9711, 10169, 10010, 5810, 10012, 5365, 9916, 9258, 7745, 9827, 9630, 7329, 9997, 9998, 9826, 7041, 7141, 9897 in document 11-17/0229r2.

4.1.33.1 Moved by Abhishek Patil, Seconded by Yasu Inoue.
4.1.33.2 Discussion: No discussion.
4.1.33.3 Result: Motion was accepted with no objection.

4.1.34 CR Motion #185 (MAC): Move to accept the resolutions to CIDs 5222, 5223, 5224, 5225, 5226, 7584, 7585, 7586, 9751, 9965, 9966, 3256, 3354, 3461, 3775, 3858, 4301, 4925, 5227, 5228, 7587, 7588, 7589, 7590, 7591, 7592 in doc 11-17/0237r3.

4.1.34.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.34.2 Discussion: No discussion.
4.1.34.3 Result: Motion was accepted with no objection.

4.1.35 CR Motion #186 (MAC): Move to accept the resolutions to CIDs; 3004, 4725, 5436, 7715, 8175 (5 CIDs),
3378, 3483, 3812, 3896, 4358, 4425, 4727, 5025, 5438, 7471, 7713, 7714, 8176, 8643, 8644, 9801, 9984 (17 CIDs),
3153, 3381, 3487, 3817, 3902, 4365, 4433, 4734, 5051, 5122, 5123, 5439, 8177, 8645, 8646, 10334, 10335, 10336, 10337 (19 CIDs)
in document 11-17/0238r2.

4.1.35.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.35.2 Discussion: No discussion.
4.1.35.3 Result: Motion was accepted with no objection.

4.1.36 CR Motion #187 (MAC): Move to accept the resolutions to CIDs;
- 4732, 4733, 5052, 5053, 5124, 5125, 5440, 7379, 7716, 7717, 8178, 8248, 9804,
- 5335, 5441, 7888,
- 5054, 5055, 5056, 5126, 5442, 7302, 7303, 7305, 7719, 7865, 7867, 8133, 8179, 8180, 8181, 8249, 9620, 9621, 9806
in document 11-17/0239r2.

4.1.36.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.36.2 Discussion: No discussion.
4.1.36.3 Result: Motion was accepted with no objection.

4.1.37 CR Motion #188 (MAC): Move to accept the resolutions to CIDs; 3155, 3382, 3489, 3819, 3905, 4368, 4436, 5443, 7887, 8162, 8647,
3005, 3147, 3157, 3158, 3159, 4738, 5013, 5014, 5127, 5444, 6191, 7015, 7016, 7017, 7018, 7019, 7380, 7472, 7570, 7720, 8182, 8183, 8184, 8250, 8334, 8374, 9397, 9807, 9808, 10339
in document 11-17/0240r2.

4.1.37.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.37.2 Discussion: No discussion.
4.1.37.3 Result: Motion was accepted with no objection.

4.1.38 CR Motion #189 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0243r2.
CIDs: 3795, 4854, 4855, 4856, 4902, 4930, 4931, 5232, 5234, 5242, 5746, 5747, 5750, 5754, 5755, 5791, 10355, 10356

4.1.38.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.38.2 Discussion: No discussion.
4.1.38.3 Result: Motion was accepted with no objection.

4.1.39 CR Motion #190 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0245r2.
CIDs: 4903, 4934, 4935, 5236, 5237, 5238, 5239, 5240, 5745, 6110, 6818, 6819, 7218, 8331, 8332, 8357, 8361

4.1.39.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.39.2 Discussion: No discussion.
4.1.39.3 Result: Motion was accepted with no objection.

4.1.40 CR Motion #191 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0242r5.
CIDs: 3554, 5157, 5786, 5789, 6429, 7558, 8258, 9083, 9114, 8676, 8381, 6074

4.1.40.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.40.2 Discussion: No discussion.
4.1.40.3 Result: Motion was accepted with no objection.

4.1.41 CR Motion #192 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0244r2.
CIDs: 5147, 5148, 5149, 5150, 5151, 5152, 5153, 5154, 5841, 5842, 7557, 7559, 7573, 8346, 8347

4.1.41.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.41.2 Discussion: No discussion.
4.1.41.3 Result: Motion was accepted with no objection.

4.1.42 CR Motion #193 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0246r1.
CIDs: 8623, 8624, 8635, 8637, 8638, 8639, 8640, 8733, 8734, 8736, 8738, 8740, 8741, 8742, 8743, 10404, 10355

4.1.42.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.42.2 Discussion: No discussion.
4.1.42.3 Result: Motion was accepted with no objection.

4.1.43 CR Motion #194 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0247r2.
CIDs: 7036, 7217, 7218, 7428, 7429, 7824, 8359, 8626, 8627, 8629, 8630, 8631, 8632, 8633, 8634, 8732, 8735, 8737, 8739, 9113, 9134, 9777, 7778, 9779, 9780, 10081 10082, 10196

4.1.43.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.43.2 Discussion: No discussion.
4.1.43.3 Result: Motion was accepted with no objection.

4.1.44 CR Motion #195 (MU): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0303r2.
CIDs: 6341, 6339, 7355, 7354, 7349, 3425, 3539, 3440, 3439, 3436, 3434, 3431, 3430, 3428, 3427, 9265 9266, 9840, 7756, 8665, 8666, 8667, 8669, 8670

4.1.44.1 Moved by Lochan Verma, Seconded by Ron Porat.
4.1.44.2 Discussion: No discussion.
4.1.44.3 Result: Motion was accepted with no objection.

4.1.45 CR Motion #196 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0330r2.
CIDs: 3293, 3343, 3579, 3660, 4009, 4096, 5112, 5113, 5114, 5115, 5306, 5539, 6921, 7694, 7695, 8306, 8307, 8498, 9217, 9220, 9222, 9227, 9228, 9229, 9230, 9231, 9498, and 9499

4.1.45.1 Moved by Jianhan Liu, Seconded by Ron Porat.
4.1.45.2 Discussion: No discussion.
4.1.45.3 Result: Motion was accepted with no objection.

4.1.46 CR Motion #197 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0333r2.
CIDs: 9025 and 9658.

4.1.46.1 Moved by Jianhan Liu, Seconded by Ron Porat.
4.1.46.2 Discussion: No discussion.
4.1.46.3 Result: Motion was accepted with no objection.

4.1.47 CR Motion #198 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0332r2.
CIDs: 4995, 7234, 8894 and 8895.

4.1.47.1 Moved by Jianhan Liu, Seconded by Ron Porat.
4.1.47.2 Discussion: No discussion.
4.1.47.3 Result: Motion was accepted with no objection.

4.1.48 CR Motion #199 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0299r2.
CIDs: 4918, 5264, 6117, 8935, 8936, 10062.

4.1.48.1 Moved by Dongguk Lim, Seconded by Ron Porat.
4.1.48.2 Discussion: No discussion.
4.1.48.3 Result: Motion was accepted with no objection.

4.1.49 CR Motion #200 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0300r2.
CIDs: 5104, 8891, 8892, 8893, 9469.

4.1.57.3 Result: Motion was accepted with no objection.

4.1.58 CR Motion #209 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0231r2.
CIDs: 4000, 4236, 4897, 5254, 8161, 8838, 8841, 10202, and 10203.

4.1.58.1 Moved by Po-Kai Huang, Seconded by Ron Porat.
4.1.58.2 Discussion: No discussion.
4.1.58.3 Result: Motion was accepted with no objection.

4.1.59 CR Motion #210 (PHY): Move to accept the resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0232r2.
CIDs: 5101, 5102, 5103, 5297, 5298, 5299, 7513, 8848, 8849, 8850, 8851, 8852, 8853, 8854, 8855, 8856, 8857, 8858, 8985, 9158, 9159, 9160, 9166, 9167, and 10114.

4.1.59.1 Moved by Xiaogang Chen, Seconded by Ron Porat.
4.1.59.2 Discussion: No discussion.
4.1.59.3 Result: Motion was accepted with no objection.

4.1.60 CR Motion #211 (MAC): Move to accept the resolutions to the CIDs as in 11-17/0283r6.
CIDs: 8114, 3018, 8190, and 9494.

4.1.60.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.60.2 Discussion: No discussion.
4.1.60.3 Result: Motion was accepted with no objection.

4.1.61 CR Motion #212 (SR): Move to accept "Revised" as the resolution for CID 3222 with the proposed text in slide 10 of 11-17/0452r2.

4.1.61.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.61.2 Discussion: No discussion.
4.1.61.3 Result: Motion was accepted with no objection.

4.1.62 CR Motion #213 (MAC): Move to accept resolutions to CIDs; 5054, 5055, 5056, 5126, 5442, 7302, 7303, 7305, 7719, 7865, 7867, 8133, 8179, 8180, 8181, 8249, 9620, 9621, 9806 in doc 11-17/0239r2.

4.1.62.1 Moved by Alfred Asterjadhi, Seconded by .
4.1.62.2 Discussion: This is a duplicate of the previous motion.

4.1.63 CR Motion #214 (MAC): Move to accept resolutions to CIDs; 3384, 3491, 3822, 3907, 4371, 4439, 4740, 5445, 7020, 7473, 8185, 8375, 9809, 9810, 9811, 6965 in doc 11-17/0240r2.

4.1.63.1 Moved by Alfred Asterjadhi, Seconded by Yasu Inoue.
4.1.63.2 Discussion: No discussion.
4.1.63.3 Result: Motion was accepted with no objection.

4.1.64 CR Motion #215 (MAC): Move to accept resolutions to CIDs; 6537, 9282 (2 CIDs) in doc 11-17/0346r1.

4.1.64.1 Moved by Jeongki Kim, Seconded by Yasu Inoue.
4.1.64.2 Discussion: No discussion.
4.1.64.3 Result: Motion was accepted with no objection.

4.1.65 CR Motion #216 (MAC): Move to accept resolutions to CIDs; 3089, 6057, 7527, 9599, 9385 in doc 11-17/0344r1.

4.1.65.1 Moved by Jeongki Kim, Seconded by Yasu Inoue.
4.1.65.2 Discussion: No discussion.
4.1.65.3 Result: Motion was accepted with no objection.

4.1.66 CR Motion #217 (MAC): Move to accept resolutions to CIDs; 3091, 5216, 5506, 5938, 6055, 6782, 6783, 6784, 6785, 7602, 8241, 8242, 9602 in doc 11-17/0347r2.

4.1.66.1 Moved by Jeongki Kim, Seconded by Yasu Inoue.
4.1.66.2 Discussion: No discussion.
4.1.66.3 Result: Motion was accepted with no objection.

4.1.67 CR Motion #218 (MAC): Move to accept resolutions to CIDs; 3051, 3052, 3053, 3207, 3208, 3209, 3210, 3211, 3212, 7786, 7787, 9695, 9864 in doc 11-17/0384r2.

4.1.67.1 Moved by Reza Hedayat, Seconded by Yasu Inoue.
4.1.67.2 Discussion: No discussion.
4.1.67.3 Result: Motion was accepted with no objection.

4.1.68 CR Motion #219 (MAC): Move to accept resolutions to CIDs; 3018, 8190, 9494 in doc 11-17/283r5.

4.1.68.1 Moved by Raja Banerjea.
4.1.68.2 Discussion: This is duplicate of the previous motion.

4.1.69 CR Motion #220 (MU): Move to accept resolutions to CIDs; 5397, 5712 in doc 11-17/0448r4.

4.1.69.1 Moved by Jing Ma, Seconded by Yasu Inoue.
4.1.69.2 Discussion: No discussion.
4.1.69.3 Result: Motion was accepted with no objection.

4.1.70 CR Motion #221 (MAC): Move to accept resolutions to CIDs; 5403, 6184, 7044 in doc 11-17/0306r4.

4.1.70.1 Moved by George Cherian, Seconded by Yasu Inoue.
4.1.70.2 Discussion: No discussion.
4.1.70.3 Result: Motion was accepted with no objection.

4.1.71 CR Motion #222 (MU): Move to accept resolutions to CIDs; 7103, 7106, 7412, 8152, 8221, 9103, 9533 in doc 11-17/0443r2.

4.1.71.1 Moved by Suhwook Kim, Seconded by Yasu Inoue.
4.1.71.2 Discussion: No discussion.
4.1.71.3 Result: Motion was accepted with no objection.

4.1.72 CR Motion #223 (MAC): Move to accept resolutions to CIDs; 4782, 5975, 5976, 7161, 7789, 8267, 9698, 7661, 6567 in doc 11-17/0421r1.

4.1.72.1 Moved by Chao-Chun Wang, Seconded by Yasu Inoue.
4.1.72.2 Discussion: No discussion.
4.1.72.3 Result: Motion was accepted with no objection.

4.1.73 CR Motion #224 (MAC): Move to accept resolutions to CIDs; 6189, 7040, 9412 in doc 11-17/0088r2.

4.1.73.1 Moved by Woojin Ahn, Seconded by Yasu Inoue.
4.1.73.2 Discussion: A member expressed a concern on this motion and asked for deferral of this motion.
4.1.73.3 Result: Motion was deferred.

4.1.74 CR Motion #225 (MU): Move to accept resolution to CID 8142 in doc 11-17/0335r0.

4.1.74.1 Moved by Rojan Chitrakar, Seconded by Yasu Inoue.
4.1.74.2 Discussion: No discussion.
4.1.74.3 Result: Motion was accepted with no objection.

4.1.75 CR Motion #226 (PHY): Move to accept resolutions to CIDs; 6569, 7790, 7791, 8690, 8691, 10192, 9683 (MAC) in doc 11-17/0271r4.

4.1.75.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.75.2 Discussion: No discussion.
4.1.75.3 Result: Motion was accepted with no objection.

4.1.76 CR Motion #227 (MU): Move to accept resolutions to CIDs; 3142, 5992, 4830, 7650, 8061, 9712, 9912, 9913, 9914, 10271, 10272, 9297, 10011, 4831, 7575, 10014, 3012 (MAC) in doc 11-17/0302r2.

4.1.76.1 Moved by Po-Kai Huang, Seconded by Yasu Inoue.
4.1.76.2 Discussion: No discussion.
4.1.76.3 Result: Motion was accepted with no objection.

4.1.77 CR Motion #228 (MU): Move to accept resolutions to CIDs; 3235, 4829, 9339, 9911, 10013, 10172, 10270 in doc 11-17/0338r1.

4.1.77.1 Moved by Rojan Chitrakar, Seconded by Yasu Inoue.
4.1.77.2 Discussion: No discussion.
4.1.77.3 Result: Motion was accepted with no objection.

4.1.78 CR Motion #229 (MU): Move to accept resolutions to CIDs; 3231, 6690, 6691, 6692, 9637 in doc 11-17/0349r1.

4.1.78.1 Moved by Kiseon Ryu, Seconded by Yasu Inoue.
4.1.78.2 Discussion: No discussion.
4.1.78.3 Result: Motion was accepted with no objection.

4.1.79 CR Motion #230 (MU): Move to accept resolutions to CIDs; 4806, 4807, 5725, 5726, 5727, 6009, 6145, 6146, 6147, 6148, 6155, 6721, 6722, 8560, 9535, 9716, 9717, 9921, 9922 in doc 11-17/0403r1.

4.1.79.1 Moved by David Xun Yang, Seconded by Yasu Inoue.
4.1.79.2 Discussion: No discussion.
4.1.79.3 Result: Motion was accepted with no objection.

4.1.80 CR Motion #231 (PHY): Move to accept resolution to CID 7517 in doc 11-17/0436r0.

4.1.80.1 Moved by Bo Sun, Seconded by Ron Porat.
4.1.80.2 Discussion: No discussion.
4.1.80.3 Result: Motion was accepted with no objection.

5 Recess @ 15:28 until 16:00.

Thursday, March 16th, 2017, PM2 TGax full Session (16:00-18:00)

6 The meeting called to order by Osama Aboul-Magd (Huawei Technologies), the chairperson of the TGax, @16:00.

6.1 Agenda 17/0199r5 is on the server. Rev. 6 is the working document.

7 Agenda for today has been approved during the PM1 session.

8 Announcement/Reminder

8.1 Chair reminded IEEE 802 and 802.11 IPR P&P.
8.2 Chair asked people to state name and affiliation when addressing for the first time in the session.
8.3 Chair reminded people to do attendance.

9 Continue with Motions – TG documents

9.1 CR Motions

9.1.1 CR Motion #232 (PHY): Move to accept resolutions to CIDs; 9549, 10204 in doc 11-17/0231r2.

9.1.1.1 Moved by Robert Stacy, Seconded by Ron Porat.
9.1.1.2 Discussion: No discussion.
9.1.1.3 Result: Motion was accepted with no objection.

9.1.2 CR Motion #233 (PHY): Move to accept resolution to CID 7547 in doc 11-17/0471r1.

9.1.2.1 Moved by Xiaogang Chen, Seconded by Ron Porat.
9.1.2.2 Discussion: A member asked for deferral. Another member objected.
9.1.2.3 Result: Y/N/A = 28/5/12, motion passes.

9.1.3 CR Motion #234 (PHY): Move to accept resolutions to CIDs; 5381, 5383, 5783, 6880, 6881, 6883, 6884, 6886, 6887, 6889, 6890, 6891, 9041, 9042, 9043, 9044, 9045, 9046, 9047, 9049, 9051, 9089, 9609, 9610, 9733, 10134, 10135, 10228, 10231, 10232 in doc 11-17/0234r3.

9.1.3.1 Moved by Robert Stacy, Seconded by Ron Porat.
9.1.3.2 Discussion: No discussion.
9.1.3.3 Result: Motion was accepted with no objection.

9.1.4 CR Motion #235 (PHY): Move to accept resolution to CID 8136 in doc 11-17/0247r3.

9.1.4.1 Moved by Lochan Verma, Seconded by Ron Porat.
9.1.4.2 Discussion: No discussion.
9.1.4.3 Result: Motion was accepted with no objection.

9.1.5 CR Motion #236 (PHY): Move to accept resolution to CID 8839 in doc 11-17/0261r2.

9.1.5.1 Moved by Lochan Verma, Seconded by Ron Porat.
9.1.5.2 Discussion: No discussion.
9.1.5.3 Result: Motion was accepted with no objection.

9.1.6 CR Motion #237 (PHY): Move to accept resolutions to CIDs; 8897, 8898, 9064, 4870, 4907, 5256, 5265, 9487, 10405, 8899, 5105, 8900, 5257, 8901, 10403, 8902, 10401, 10402, 5258, 4898, 4915, 8927, 8928, 8933, 8934, 10214, 5106, 8929, 8930, 8931, 5263, 6116, 8932, 10215, 8944, 8945, 8946, 8947, 5270, 8169, 8948, 8949 in doc 11-17/0398r1.

9.1.6.1 Moved by Hongyuan Zhang, Seconded by Bin Tian.
9.1.6.2 Discussion: No discussion.
9.1.6.3 Result: Motion was accepted with no objection.

9.1.7 CR Motion #238 (PHY): Move to accept resolutions to CIDs; 8809, 9154, 8360, 8813, 9795, 8614, 7506, 9796, 7508, 8615, 9799, 9800, 8798, 9766, 8799, 8800, 8801, 8802, 8803, 8804, 8805, 5250, 8807, 10089, 9797, 9798, 4973, 10090, 9151, 10091, 10092, 9152, 6826, 6827, 8812, 9767, 9768, 6828, 6829, 6830 in doc 11-17/0400r3.

9.1.7.1 Moved by Sungeun Lee, Seconded by Ron Porat.
9.1.7.2 Discussion: No discussion.
9.1.7.3 Result: Motion was accepted with no objection.

9.1.8 CR Motion #239 (PHY): Move to accept resolutions to CIDs; 8774, 9142, 9143 in doc 11-17/0345r2.

9.1.8.1 Moved by Suhwook Kim, Seconded by Ron Porat.
9.1.8.2 Discussion: No discussion.
9.1.8.3 Result: Motion was accepted with no objection.

9.1.9 CR Motion #240 (PHY): Move to accept resolutions to CIDs; 10360, 8840 in doc 11-17/0404r1.

9.1.9.1 Moved by Ross Jian Yu, Seconded by Ron Porat.
9.1.9.2 Discussion: No discussion.
9.1.9.3 Result: Motion was accepted with no objection.

9.1.10 CR Motion #241 (PHY): Move to accept resolutions to CIDs; 8863, 4983, 8864, 8865, 8866, 8867, 8868, 8869, 8870, 8871, 8872, 8874, 9550, 10036, 4985, 4989, 8875, 8877, 8878, 8879, 10037, 10209, 4986, 4987, 7500, 7501,9321, 10234, 7244, 7245, 7246, 7502 in doc 11-17/0316r4.

9.1.10.1 Moved by Bin Tian, Seconded by Ron Porat.
9.1.10.2 Discussion: No discussion.
9.1.10.3 Result: Motion was accepted with no objection.

9.1.11 CR Motion #242 (PHY): Move to accept resolution to CID 3441 in doc 11-17/0465r5.

9.1.11.1 Moved by Bin Tian, Seconded by Ron Porat.
9.1.11.2 Discussion: No discussion.
9.1.11.3 Result: Motion was accepted with no objection.

9.1.12 CR Motion #243 (PHY): Move to accept resolutions to CIDs; 4347, 4883, 5304, 5379, 9074, 9014, 9073, 9011, 9010, 9009, 9008, 9007, 9006, 8991, 10224, 10055, 9754 in doc 11-17/0414r1.

9.1.12.1 Moved by Bo Sun, Seconded by Ron Porat.
9.1.12.2 Discussion: No discussion.
9.1.12.3 Result: Motion was accepted with no objection.

9.1.13 CR Motion #244 (SR): Move to accept resolutions to CIDs; 3198, 3199, 3200, 5204, 5205, 5207, 5208, 5484, 5489, 5494, 5496, 5497, 5499, 5500, 5502, 5503, 5690, 5691, 5870, 7122, 7123, 7129, 7406, 7612, 8073, 8104, 8232, 8239, 9315,9540, 9944, 9946, 9947, 10031, 10032, 7125, 3197, 5689, 9541, 3196, 6025, 7823, 8233 in doc 11-17/0267r5.

9.1.13.1 Moved by Laurent Cariou, Seconded by Alfred Asterjadhi.
9.1.13.2 Discussion: A member asked for a deferral of this motion since the power restriction is not clear.
Another member objects.
9.1.13.3 Result: Y/N/A = 23/9/24, motion failed.

9.1.14 CR Motion #245: Move to accept resolutions to CIDs; 3056, 3189, 3190, 5167, 5168, 5394, 5454, 5456, 5686, 5779, 5799, 6058, 6051,6152,6176, 6574,6575,6576,6579,6580,6581,6582,6583,7022,7071,7232,7659,8358,8693,9380,9585,9727,~~9739~~, 9747,9872,10007,10171,10241,10242,10243,10244,~~10319~~ in doc 11-17/389r3.

9.1.14.1 Moved by Kaiying Lv.
9.1.14.2 Discussion: Kaiying asked for deferral of this motion.
9.1.14.3 Result: This motion was deferred.

9.1.15 CR Motion #246: Move to accept resolutions to CIDs; 5402, 6183, 5403, 6184, 7044 in doc 11-17/0445r1.

9.1.15.1 Moved by Geonjung Ko.
9.1.15.2 Discussion: Those CIDs are covered by another motion.
9.1.15.3 Result: This motion was not conducted.

9.1.16 CR Motion #247: Move to accept resolutions to CIDs; 3241, 3350, 3454, 3762, 3848, 4284, 4753, 5404, 5571, 6967, 6968, 6969, 6970, 6971, 6972, 6973 in doc 11-17/0341r2.

9.1.16.1 Moved by Hongyuan Zhang, Seconded by Yasu Inoue.
9.1.16.2 Discussion: No discussion.
9.1.16.3 Result: Motion was accepted with no objection.

9.1.17 CR Motion #248: Move to accept resolutions to CIDs; 5036, 7254, 7546, 8140, 8520, 8157, 9332, 9119, 9120 in doc 11-17/0395r8.

9.1.17.1 Moved by Ming Gan, Seconded by Chittabrata Ghosh.
9.1.17.2 Discussion: No discussion.
9.1.17.3 Result: Motion was accepted with no objection.

9.1.18 CR Motion #249 (SR): Move to accept resolutions to CIDs;
6178, 5043, 5873, 5940, 7117, 7174, 5385, 9508, 10040, 10039, 10080, 8094
5941, 7611, 5485, 5504, 8069, 8234, 7908, 8118
6760, 6020, 7116, 3195, 5482, 5680, 10194, 9760, 8068, 8231, 9730

8087, 8091, 8092,

6115, 6127, 6143, 6142, 6842, 5872, 5871, 6845, 5942, 6843, 6844, 3600, 4997, 5259, 5260, 5261, 9462, 9180, 9181, 9183, 9208, 9209, 9210, 10043, 10041, 10415, 10414, 10413, 10412, 10409, 10407, 10406, 10306, 10305, 8568, 8920, 8907, 8908, 8914, 8909

by adopting the proposed resolutions in 11-16-1476r21.

9.1.18.1 Moved by Matthew Fischer, Seconded by Sean Coffey.
9.1.18.2 A member requested vote count.
9.1.18.3 Result: Y/N/A = 31/4/21, motion passes.

9.1.19 CR Motion #250: Move to accept resolution to CID; 6768 by adopting the proposed resolutions in 11-17-0500r0.

9.1.19.1 Moved by Sean Coffey, Seconded by George Cherian.
9.1.19.2 A member requested vote count.
9.1.19.3 Result: Y/N/A = 33/4/17, motion passes.

9.2 TG Motions
9.2.1 A member mentioned 17/292r2 (Re: CR Motion #210) is a wrong document.
9.2.2 WG vice chair suggested motion to reconsider CR Motion #210.

9.2.3 Motion to reconsider CR Motion #210
9.2.3.1 Moved by Jon Rosdahl, Seconded by Al Petrick.
9.2.3.2 Result: Motion to reconsider CR Motion #210 passes with no objection.
9.2.3.3 Back to the CR Motion #210.

9.2.4 CR Motion #210: Move to accept resolutions to the following CIDs and the corresponding spec text modification as in 11-17/0232r3.

9.2.4.1 Moved by Jon Rosdahl, Seconded by Al Petrick.
9.2.4.2 Discussion:

9.2.4.3 Motion to table this motion
9.2.4.3.1 Moved by Jon Rosdahl, Seconded by Al Petrick.
9.2.4.3.2 Discussion:
9.2.4.3.2.1 Q: Table to when? → Conference call.
9.2.4.3.3 Result: Motion to table passes with no objection.

---

10 Timeline update

10.1 Proposed modification to the current timeline.

10.1.1 May 2014: start of the TG

10.1.2 Nov. 2014: First draft of the TG SFD was approved

10.1.3 Jan. 2016: proposed TG draft

10.1.4 March 2016: Draft D0.1 was approved and CC started

10.1.5 November 2016: Draft 1.0 and WG letter ballot

10.1.6 September 2017: Draft 2.0 and recirculation

10.1.7 May 2018: MDR (Mandatory Document Review)

10.1.8 May 2018: Formation of SB pool

10.1.9 November 2018: Sponsor Ballot

10.1.10 July 2019: RevCom

11 Goals for the May 2017

11.1 Continue with the comment resolution and development of the TG draft.

12 Ad Hoc Meeting

12.1 After some discussions, PHY ad hoc decided to have a 1-day ad hoc meeting on Friday.

12.2 Motion: Authorize TGax to hold an ad-hoc meeting on May 3-5 in Seoul, Korea, for the purpose of working on comment resolution.

12.2.1 Moved by Hongyuan Zhang, Seconded by Bo Sun.

12.2.2 Result: Y/N/A = 20/2/9, motion passes.

---

13 Conference Calls

13.1 Already approved.

13.1.1 Thursday, March 30th, 2017: 10:00-12:00 (ET)

13.1.2 Thursday, March 23rd, April 6th, 2017: 20:00-22:00 (ET)

13.2 New calls:

13.2.1 Thursday, April 13th, 27th, May 25th, 2017: 10:00 – 12:00 (ET)

13.2.2 Thursday, April 20th, May 18th, 2017: 20:00 – 22:00 (ET)

13.3 Chair asked if there is any objection to this plan. → No objection.

13.4 The above plan will be approved during the WG closing plenary tomorrow.

14 Motion from the floor

14.1 A member proposed a motion to adjourn.

14.2 Move to adjourn TGax Meeting for the week.

14.2.1 Moved by Bin Tian, Seconded by David Xun Yang.

14.2.2 Result: Y/N/A = 47/3/1, motion passes.

15 Adjournment

15.1 TGax adjourned for the week @ 16:42.

[STDS-802-11-TGAX] Draft 1.0

- *To*: STDS-802-11-TGAX@xxxxxxxxxxxxxxxx
- *Subject*: [STDS-802-11-TGAX] Draft 1.0
- *From*: Osama AboulMagd <Osama.AboulMagd@xxxxxxxxxx>
- *Date*: Thu, 1 Dec 2016 18:41:48 +0000

Hello All,

Draft D1.0 is available in the member area. The WG Chair will announce the start of the 30-day WG letter ballot shortly.

Regards;

Osama.

[STDS-802-11] IEEE 802.11 Mandatory Technical Letter Ballot 225 for P802.11ax Draft 1.0 Starts Today

- *To*: STDS-802-11@xxxxxxxxxxxxxxxxx
- *Subject*: [STDS-802-11] IEEE 802.11 Mandatory Technical Letter Ballot 225 for P802.11ax Draft 1.0 Starts Today
- *From*: Adrian Stephens <adrian.p.stephens@xxxxxxxx>
- *Date*: Thu, 1 Dec 2016 19:16:52 +0000

--- This message came from the IEEE 802.11 Working Group Reflector ---

IEEE 802.11(TM) Letter Ballot 225

To: IEEE 802.11 Voters,

With this email, the 802.11 Working Group is officially beginning WG Technical Letter Ballot 225 (LB225), which is a Letter Ballot on the question "Should P802.11ax D1.0 be forwarded to Sponsor Ballot?".

This Letter Ballot opens Thu Dec 01, 2016 at 23:59 Eastern Time USA (11:59PM) and will close 30 days later on Sat Dec 31, 2016 at 23:59 Eastern Time USA (11:59pm). All necessary documents are available in the instructions that can be found on the IEEE 802.11 web site at
http://www.ieee802.org/11/LetterBallots/LB225ax/LB225_instructions.html.

Important:
o This is a 30-day Technical letter ballot and the ballot group (i.e., those that may vote) for this ballot is all IEEE 802.11 voter members as of the start of this letter ballot. o All current voter members of 802.11 are required to vote on this ballot series. o If you cast a "Do not approve" vote on this ballot, it must be accompanied by comments for your vote to be valid. o You must follow these instructions to vote. Do not send an email to vote. Voting by any method other than the web-based process described here will invalidate your vote. o Failure to follow these instructions will result in your vote being discarded as an invalid vote. o Not voting on a letter ballot series or sending an invalid vote can affect your voting privileges. o The draft is password protected in accordance with IEEE 802 Policies and Procedures. To obtain the draft, use the username and the password supplied to active members for the 802.11 WG private area.

(The attached file contains a reminder set for 4 days before the close of the ballot. You may find it helpful to import this into or open this with your calendar client in order to get an automated reminder.)

Thank you for participating in Letter Ballot 225.

Adrian Stephens, IEEE 802.11   Working Group Chair
E-mail: Adrian.P.Stephens@xxxxxxxx

Osama Aboul-Magd, IEEE 802.11 TGax Chair

IEEE 802.11™ TGax Technical Letter Ballot 225 Instructions

Motion: " Should P802.11ax D1.0 be forwarded to Sponsor Ballot? "

(Type of Motion: Technical)

Cast your vote here

This Letter Ballot opens on: Thu Dec 01, 2016 at 23:59 Eastern Time USA and closes 38 days later on Sun Jan 08, 2017 at 23:59 Eastern Time USA. (Add reminder to calendar).

Show detailed instructions Show detailed description of how to provide comments

The draft and the supporting documentation:

Document	Hyperlink
Draft	Draft P802.11ax_D1.0.pdf
Redlined Doc	n/a
Resolution Doc	n/a
Comment Template	.xls format or .csv format NOTE - you must be already signed into Mentor for these links to work.
Ballot Group	LB225 Voters
CA Document	11-16-1348-02-00ax-coexistence-assurance.docx
CSD Document	11-14-0169-01-0hew-ieee-802-11-hew-sg-proposed-csd.docx

Notes

- This is a 38-day Technical letter ballot and the ballot group (i.e., those that may vote) for this ballot is all IEEE 802.11 voters as of the start of this letter ballot.
  All current voter members of 802.11 are required to vote on this letter ballot series, even if they are subject to TGax "special measures".
- If you cast a "Do not approve" vote on this ballot, it must be accompanied by "must be satisfied = yes" comments for your vote to be valid.
- You must follow these instructions to vote. Do not send an email to vote. Voting by any method other than the web-based process described here will invalidate your vote. Failure to follow these instructions will result in your vote being discarded as an invalid vote. Not voting on letter ballots or sending an invalid vote can affect your voting privileges.
- The draft is password protected in accordance with IEEE 802 Policies and Procedures. To obtain the draft, use the username and the password supplied to active members for the 802.11 WG private area.
- You need an IEEE-SA web account to vote. Instructions for getting an account, changing the registered email address and affiliation are here. If you get a new IEEE-SA web account, you will need to record an interest in C/LM/WG802.11, and let the WG chair know your new SA pin before you can vote using this account.

IEEE 802.11 FUTURE SESSION PLANS

IEEE 802.11 WLAN WORKING GROUP SESSIONS

All interested parties are welcome to attend our open Public meetings of the IEEE 802.11 Working Group, you do not have to be an IEEE member to attend. There is a registration fee, to defray the cost of the session. At Plenary sessions these are administered by the IEEE 802 LMSC organization. Interim sessions are administered by the IEEE 802.11/15 Working Groups. This is in-addition to your individual hotel accommodation, and travel expenses. Click here to view an Example Plenary and Interim Session Agenda, or review the latest Combined Tentative Agenda for the next IEEE 802.11 WG Session below.

For Year 2016		Session	Type
January 17-22	Hyatt Regency Atlanta, Atlanta, GA, USA Session Information Registration Hotel Room Reservation	155	Interim*

Registration Fees & Deadlines

Early: Before 6:00 PM Pacific Time, Friday, December 4, 2015
* $US 375.00 for attendees staying at the Hyatt Regency Atlanta
* $US 575.00 for all others (including local attendees not staying at the group hotel)

Standard: After Early Registration and before 6:00 PM Pacific Time, Friday January 8, 2016
* $US 575.00 for attendees staying at the Hyatt Regency Atlanta
* $US 775.00 for all others (including local attendees not staying at the group hotel)

Late/On-site: After 6:00 PM Pacific Time Friday January 8, 2016
* $US 775.00 for attendees staying at the Hyatt Regency Atlanta
* $US 975.00 for all others (including local attendees not staying at the group hotel)

NOTES

China Interm - denotes an interim meeting of the IEEE 802.11 Working Group held in China, at which the only task group meeting is TGaj (China Millimetre Wave).

* *Denotes* - The IEEE 802.11 Working Group for Wireless Area Networks (WLANs) session is co-located with the IEEE 802.15 Working Group for Wireless Personal Area Networks (WPANs), IEEE 802.18 Technical Advisory Group for Radio Regulatory (R-REG), IEEE 802.19 Technical Advisory Group for Wireless Coexistence (COEX), IEEE 802.20 Working Group for Mobile Broadband Wireless Access (MBWA), IEEE 802.21 Working Group for Media Independent Handover Interoperability (MIHI), and IEEE 802.22 Working Group for Wireless Regional Area Networks (WRAN) sessions. A joint opening session with the five Working Groups and both the Technical Advisory Groups is normally carried out, at all Interim sessions.

GENERAL SESSION INFORMATION

- New attendees should check the agenda file for any new members orientation session. This session typically takes place on Sunday afternoon or Monday morning, and is intended to bring new attendees rapidly up to speed with how to operate effectively within the group.
- The Online Tentative Session Agenda displayed is always subject to change, after review at the start of the Full Working Group session for each meeting, and may be revised during the week to incorporate any necessary work.
- All Working Group sessions start promptly on time, as detailed in the session agenda.
- Attendees should bring a Laptop computer (or other small form factor computing device) equipped with 802.11 connectivity for use at the meetings. This is needed to access meeting documents and draft standards and to record meeting attendance.
- The Working Group operates under a hierarchy of IEEE, IEEE-SA, IEEE LMSC and 802.11 policies and procedures as described in http://www.ieee802.org/11/Rules/rules.shtml. You are deemed to be aware of and compliant to these rules by your participation in an 802.11 meeting.

SUMMARY REPORTS & MINUTES OF 802.11 WG SESSIONS

IEEE 802.11 WLAN WORKING GROUP SESSIONS

As our sessions are open to the public, all interested parties are welcome to attend IEEE P802.11 Working Group sessions, for which there is a registration fee, to defray the cost of the session. At Plenary sessions this is administered by the IEEE P802 LMSC organization. Whereas, the Interim sessions are normally managed by our sponsoring host. This is in-addition to your individual hotel accommodation, and travel expenses. Click here to view Example Plenary and Interim Session Agenda.

Session	Date	Month	File URL or Doc# Report	Minutes	Location	Place	Type
For Year 2025							
210	8th - 14th	March	Report		Hilton Atlanta	Atlanta GA USA	Plenary

1679

Background (1)

- **It is well accepted that being able to get a very short simultaneous feedback from a high number of STAs (all STAs) improve the 11ax system and power efficiencies [1], [3]**
  - Many feedbacks require 1 bit: PS-Poll (power efficiency), Channel Availability (collisions avoidance)
  - Other feedbacks could be 2 bit. For example: “How many buffered Bytes for transmission: 0, 1 to 1000, 1000 to 5000, > 5000 ?”
  - A short simultaneous resource request feedback (1 or several bits) capable of supporting a high number of STAs is needed for an efficient UL MU simultaneous scheduling in addition to the existing (or enhanced) piggybacked buffer information
  - Less overhead for resource request feedback than polling method
  - Low and stable latency for resource request feedback, compared to possibly high and unpredictable latency with CSMA-CA in dense environments

1680

Background (2)

- In Nov. 2016, added subclause 25.5.2.7 to the spec:

25.5.2.7 NDP feedback report procedure

The NDP feedback report is a mechanism for an HE AP to collect short feedbacks from a very high number of HE STAs, in an efficient manner. The feedbacks (e.g. resource requests) are sent without data payloads in response to a Trigger frame. The feedbacks are not for channel sounding. This mechanism is optional for non-AP STA.

1681

- But details of the NDP feedback mechanism are TBD

- Contribution 44r1 proposes a signaling technique for the NDP feedback mechanism that can handle a high number of STAs and is power and air time efficient
- This contribution proposes to define a new trigger type for NDP feedback report and the procedure for an HE non-AP STA to know, based on the trigger frame, if it can respond and what parameters to use to respond

Trigger frame proposal

- We propose to define a new trigger type for NDP feedback report
  - This is the cleanest solution, as specific common info field parameters are needed for this mechanism and as this mechanism should be generic and work for multiple types of feedbacks

1682

- We propose that this trigger type contains all the information so that:
  - STAs can know if they are scheduled
  - STAs can know on which allocation they can transmit their response, that allocation being unique
  - STAs can know what is the type of feedback that is requested and how many bits for the feedback

Proposed design for the trigger frame

- Use information in common info field and trigger dependent common info field.

1683

	Feedback type	Feedback size	Scheduling Type	GroupID	Starting STA	Probe request option	Target RSSI	Number of users per set of tones	Duplicate	Ressource request buffer threshold
Bits:	4	8		6	11	1	7	2	1	4

Trigger dependent common info field

Feedback types

- We propose to define types of feedback, and a field to identify the type
  - We define the resource request type
  - We can then easily define others

- For each feedback type, we can define and limit the modes of operation:
  - number of bits of feedback
    - For instance, if feedback type is resource request, it has to be a 1-bit feedback and the mapping is the following
    - For a 1-bit feedback, PHY design allows to have 3 states
      - a state with no-response
      - A state with a bit received with a value of 0
        - Defines a resource request for a small payload
      - A state with a bit received with a value of 1
        - Defines a resource request for a larger payload
  - Mode for selecting the scheduled users
    - Range of AIDs
    - GroupID

b0 Value	Description
0	Resource request with buffered bytes for transmission between 1 and "resource_request_buffer_threshold"
1	Resource request with buffered bytes for transmission above "resource_request_buffer_threshold"

Feedback types

- With this solution, it is also possible to define multiple feedbacks
  - Some feedback type indexes are associated with a single pre-defined feedback
  - Some feedback type indexes can be associated with multiple pre-defined feedbacks
- For each index, there is a clear spec sub-section that describes how the bits are assigned to each feedback (including the number of bits) and how to encode them

1685

Scheduling the STAs with range of AID

- *If Scheduling type field is set to zero, the STAs are scheduled with a range of AIDs*
- The trigger frame identifies the group of STAs that can respond:
- This is done by defining a range of consecutive AIDs, by using:
  - Starting STA field in the trigger frame
  - And the parameters to know how many AIDs are scheduled (NAIDs)
- The STAs whose AID is between Starting STA and Starting STA + NAIDs are scheduled
  - The index of the STA AID compared to Starting STA is used to know the allocation
- This allows:
  - Unique allocation per AID
  - No need for assigning the allocation in a static manner with any other frame exchanges
  - Starting STA field allows to define different groups of STAs and target the AID range that associated STAs are using

1686

Scheduling the STAs with groupID

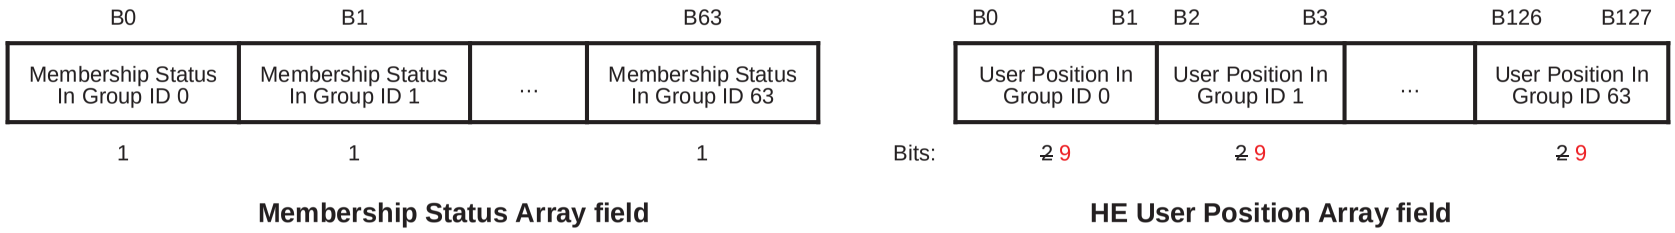
- *If Scheduling type field is set to 1, the STAs are scheduled with groupID*
- The trigger frame identifies the group of STAs that can respond:
  - The groupID field is set to a predefined group ID
  - The Starting STA field indicates at which index in the group the range of STAs are scheduled
  - STAs that belong to the group and whose index is between Starting STA and Starting STA + NAIDs are scheduled
  - The index of the STA in the groupID compared to Starting STA is used to know the allocation

1687

GroupID management

- We propose to enable group management as in 11ac
  - Frame unicasted to a STA to indicate to which group it is a member and the position of that STA in these groups.
  - 9 bits to indicate groups positions (instead of 2 with 11ac)

- For this, we propose to define a new HE Group ID Management frame (HE action frame)
  - It replicates 11ax groupID management
  - It includes Membership status array field already defined in 9.4.1.54
  - It includes a new HE user Position Array field (see below with the changes compared to User Position Array field used in 11ac)



1688

Deriving parameters for transmission of the response (allocation)

- The response follows the UL MU operation
- The parameters of the trigger-based PPDU are derived from the trigger frame, and each AID has a unique combination of:
  - 242 RU allocation
  - Tone sets allocations within each RU
  - NUM_STS

1689

- These are calculated based on:
  - AID range option: index “AID-AID start” and parameters from trigger frame: feedback size, BW, number of users per set of tones
  - Group ID: index “STA position in the group – Index start” and parameters from trigger frame: feedback size, BW, number of users per set of tones

Deriving parameters for transmission of the response (allocation)

- STAs are assigned in order depending on their AID or GroupID index, starting from Starting STA:
  - Assign all frequency allocations on the whole bandwidth using SS1 first
    - 18 first STAs for a 20MHz BW
    - 36 first STAs for a 40MHz BW (if duplicate =0)
  - Then assign the following STAs using incremented SSs.
    - Next 18 STAs are assigned the same allocations but with SS2

- For BW > 20MHz:
  - If duplicate field is equal to 0, allocations in frequency are done in order on the whole bandwidth
    - 18 first STAs in the first 20MHz, 18 following STAs in the second 20MHz…
  - If duplicate field is equal to 1, the same set of users are assigned the same allocation in each 20MHz

Example of user mapping

		Pm-c1	Pm-c2
242 RU1	TS0	0	36
	TS1	1	37
	...	...	...
	TS18	17	53
242 RU2	TS0	18	54
	TS1	19	55
	...	...	...
	TS18	35	71

40MHz – 2 P-matrix codes

		Pm-c1	Pm-c2
RU1	TS0	0	72
	TS1	1	73
	...	...	...
	TS18	17	89
RU2	TS0	18	90
	TS1	19	91
	...	...	...
	TS18	35	107
RU3	TS0	36	108
	TS1	37	109
	...	...	...
	TS18	53	125
RU4	TS0	54	126
	TS1	55	127
	...	...	...
	TS18	71	143

80MHz – 2 P-matrix codes

1691

Power control

- TargetRSSI is included in the trigger dependent common info field
- This enables power control with the same target for all STAs

1692

Specific mode for request for probe response

- *groupID* field set to the value of a groupID
- Associated STAs belonging to the signaled group ID shall respond as explained in previous slides.
- If the field “probe request option” is set to 1, it indicates that the last available allocation is assigned for non-associated STAs to **send single bit indicating probe request**.
  - This may be useful in HD/VHD deployments, such as stadiums or malls.
- The AP shall make sure that there is one allocation at the end of the bitmap not assigned to the STAs belonging to the groupID
- Non-zero value of the allocation assigned for probe requests in the received NDP feedback indicates that at least one STA requested a Probe Response frame.
- A single Probe Response shall be transmitted by the AP with the Addr1 set to Broadcast Address allowing all the non-associated STAs that transmitted the single-bit probe request to receive the probe response, preventing multiple APs from transmitting a probe-response.

1693

Summary

- We propose to progress on the definition of the NDP feedback report procedure
  - New trigger type
  - Parameters to identify the scheduled STAs
  - Parameters for scheduled STAs to derive the parameters for the response
  - Resource request type

1694

Straw Poll 2bis

- Which option do you prefer?
  - STAs scheduled by a NDP feedback report trigger frame variant with a feedback type set to “resource request” are identified by:
    - Option 1: a single mode: a range of AIDs
    - Option 2: 2 modes: a mode with a range of AIDs and a mode with groupID

1695

Straw Poll 2

- Do you agree to define a new NDP feedback report trigger frame variant

1696

Strawpoll #3

- Do you agree to define that the STAs scheduled by a NDP feedback report trigger frame variant with a feedback type set to “resource request” are identified by
  - Option 1: one range of AIDs
  - Option 2: one or multiple ranges of AIDs

  Note: A range of AIDs is defined to be between AID start and AID start + NAIDs - 1. The trigger frame includes the AID start parameter and the needed parameters to calculate NAIDs

1697

1698

Straw Poll #3

- Do you agree that the RU allocation, RU tone set allocation and starting_STS_num for the NDP feedback response from an HE non-AP STA are calculated based on common parameters in the new NDP feedback report trigger frame variant. A “duplicate” field is defined in the new NDP feedback report trigger frame variant to indicate that STAs allocation are calculated on with a 20MHz bandwidth and are duplicated on the other 20MHz channels

1699

Straw Poll #4

- Do you agree that, for resource request feedback type:
  - The feedback size is set to “1 bit” only
  - The NDP feedback report trigger frame variant has a field called “resource request buffer threshold”
  - Scheduled STAs send a 0 for the NDP feedback report to indicate a resource request with buffer size below the “resource request buffer threshold”
  - Scheduled STAs send a 1 for the NDP feedback report to indicate a resource request with buffer size above the “resource request buffer threshold”

1700

Straw Poll #5

- Do you agree with the mode defined in slide 20 to allocate one allocation to all unassociated STAs to make a request for a transmission by the AP of a probe response.

1701

1702

Straw Poll #4bis

- Which option do you prefer:
- The “resource request buffer threshold” allows to make 2 levels of resource requests, one for a payload smaller than the threshold, one for a payload higher than the threshold
  - Option 1: The “resource request buffer threshold” is indicated in the eliciting NDP feedback report poll trigger frame
  - Option 2: The “resource request buffer threshold” is indicated in an IE sent by the AP

1703

Annex – PHY design currently proposed

How to define the NDP feedback mechanism?

- UL MU transmission in response to a trigger frame
- Use frequency dimension for many small orthogonal allocations
- To avoid collisions, assign orthogonal allocations to users
- No data payload (NDP), STAs transmit energy on one orthogonal allocation for feedback
  - with spreading gain in time domain for PHY robustness
- For minimal changes to the current PHY, we propose
  - to use UL MU NDP simultaneous transmissions in response to a trigger frame
  - and to define orthogonal allocations (resource block RBs) to multiplex different STAs' feedbacks
  - These orthogonal allocations (RBs) are defined by using different frequency tone sets

1705

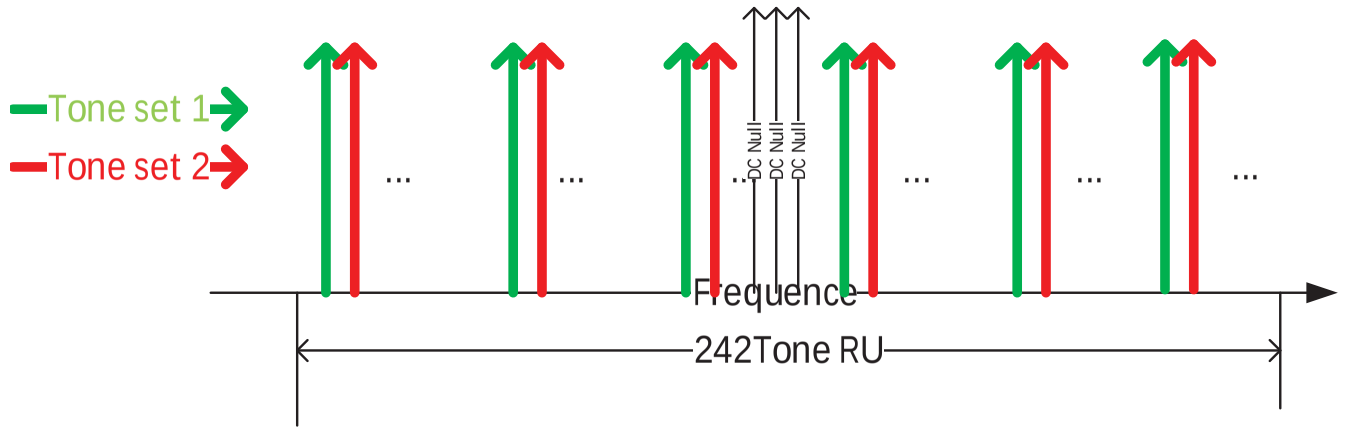
Overview of proposed signaling for Short Feedback

- For each 20MHz, the 242 tones RU are divided into 18 tones sets. Each tone set is made of 12 tones that are equally distributed over the RU (2 tones adjacent to each other)
- 1 allocation is made of 1 tone sets and a SS
  - 1 or multiple allocations can be uniquely assigned to one STA
  - 1 bit can be transmitted using 1 allocation (1 tone sets, made of 2 subsets of 6 tones)
    - 1 is sent by modulating to first tone subset and not the second one
    - 0 is sent by modumation the second subtone set and not the first one

- Channel estimation is not needed for detection
- AP and STAs must have a prior agreement on allocation assignement

1706

Proposed distribution of tones over 242 tones



1707

IEEE P802.11 - WORKING GROUP MEMBERSHIP LISTS

This page shows information for IEEE P802.11 Voter, Potential Voter, Aspirant, Ex Officio members, and Ex Voters as of 2016-11-11.

Note that this information is updated only after each 802.11 face-to-face session or working group letter ballot series.

The fields in the membership list have the following meaning

Column	Description
Status	The Status column has the following meaning: • Voter - the member can vote • Potential voter - the member will have a voting token at the next face-to-face meeting and will become a voter after that meeting • Aspirant - the member has recorded attendance at one qualifying meeting • Ex Officio - the member is a voter by virtue of their membership of the IEEE 802 executive committee (EC) • Ex Voter - the member was previously a voter member of 802.11. If you wish to be recognized as an Ex Voter, and are not recorded below, please furnish evidence of former voter status to the WG officers. Members of all these status are entitled to join 802.11 email reflectors and submit documents to the 802.11 document server.
Expires	This column shows the meeting number (which is necessarily a Plenary meeting) and approximate starting date of the meeting after which a voting member's voting status expires, if member does not attend any qualifying meetings between now and the end of that meeting. For "potential voter" members, this shows the meeting after which their status reverts to "aspirant". For "aspirant" members, this shows the meeting after which they lose "aspirant" status (and disappear from this listing). An asterisk after a meeting number (e.g., "142* (2013-11-07)") indicates that a voting member needs to attend one additional meeting before the cited meeting, or they will lose their voting membership at the cited meeting, regardless of whether they attend it or not. This occurs when the last two meetings attended by the member were a plenary and the interim following it. NOTE--the "Expires" entry for some voting members is blank. This signifies that the chair has granted them voting membership without an attendance requirement.
Expired	The Expired column indicates the date when the member became an Ex Voter, if that is known.
Last Invalid Ballot	This column indicates the ballot number any last invalid or missed ballot (see http://www.ieee802.org/11/LetterBallots.shtml for the list of working group ballots). It is present only for Voter members. An invalid ballot is a failure to return a vote in a Working Group letter ballot series (i.e., the initial ballot and all recirculations for a particular project), or returning an invalid vote (voting "no" with

	no "must be satisfied" comments, or voting abstain for a reason other than "lack of expertise"). Invalid ballots are counted over up to the last three letter ballot series since the member gained Voter status. Transition arrangements: For ballots starting before August 2016, a voter's response to a letter ballot series is determined by their response to the initial ballot. After then, a voter's resonse will be determined when the letter ballot series is known to have terminated (i.e., when the project is approved by the EC, or meets the terms of conditional approval by the EC, to proceed to sponsor ballot). Voters who failed to meet the updated OM were granted a waiver of the most recent ballot they missed so that the change in the application of the rules resulted in no loss of voting membership. According to the 802.11 operations manual, a Voter must return a valid vote in 2 of the last 3 letter ballot series to maintain their status. This means the voter can miss or return an invalid vote at most 1 such ballot series. A Voter that has missed a ballot series and fails to return a valid vote by the end of the next letter ballot series loses their Voter status and becomes an Ex Voter.

Please verify your affiliation.

There is a specific requirement in the IEEE-SA policies and procedures that attendees at its meetings disclose their affiliation. Attendees failing properly to do so risk losing the privileges of membership (i.e., voting rights).

For information from the IEEE-SA on affiliations please click here**.**

Affiliation is not shown for Ex-Voters. For other membership statuses, if there is no affiliation beside your name or if the affiliation is incorrect please follow these instructions.

If you have any related questions, please contact Adrian P Stephens at adrian.p.stephens@ieee.org.

Member Status	Count
Aspirant	115
ExOfficio	12
Ex Voter	785
Potential Voter	32
Voter	359

How do I specify my affiliation?

Affiliation is recorded in the IEEE myProject system at the Sponsor level, the Working Group level, and the Project level.

The affiliation shown above is updated from the IEEE-SA registration data after each session you attend.

To enter affiliation initially:

- Log onto myProject
- Click on Manage Activity Profile
- Expand the list to the Sponsor, Working Group, or Project
- Check the box to enroll in that specific group
- Follow the instructions to add your affiliation

To modify your affiliation in a committee that you already enrolled in:

- Log onto myProject
- Click on My Info on the top right hand corner
- Click on Affiliation Information

If you change your affiliation using the myProject system please also send an email to the Working Group Chair (Adrian P Stephens at adrian.p.stephens@ieee.org.).

(Any changes may also often require the changing of emails in the 802.11 email reflectors, which can be done by the Working Group 2nd Vice Chair (Dorothy Stanley) at the same time.)

How do I specify my employer?

There is no specific requirement in the IEEE-SA policies and procedures to disclose your employer.

Employer is asked for once in myProject.

To view or update your employer :

- Log onto myProject
- Click on My Info on the top right hand corner
- Here you can modify your employer

IEEE P802.11 - WORKING GROUP MEMBERSHIP LISTS

This page shows information for IEEE P802.11 Voter, Potential Voter, Aspirant, Ex Officio members, and Ex Voters as of 2017-05-12.

Note that this information is updated only after each 802.11 face-to-face session or working group letter ballot series.

The fields in the membership list have the following meaning

Column	Description
Status	The Status column has the following meaning: • Voter - the member can vote • Potential voter - the member will have a voting token at the next face-to-face meeting and will become a voter after that meeting • Aspirant - the member has recorded attendance at one qualifying meeting • Ex Officio - the member is a voter by virtue of their membership of the IEEE 802 executive committee (EC) • Ex Voter - the member was previously a voter member of 802.11. If you wish to be recognized as an Ex Voter, and are not recorded below, please furnish evidence of former voter status to the WG officers. Members of all these status are entitled to join 802.11 email reflectors and submit documents to the 802.11 document server.
Expires	This column shows the meeting number (which is necessarily a Plenary meeting) and approximate starting date of the meeting after which a voting member's voting status expires, if member does not attend any qualifying meetings between now and the end of that meeting. For "potential voter" members, this shows the meeting after which their status reverts to "aspirant". For "aspirant" members, this shows the meeting after which they lose "aspirant" status (and disappear from this listing). An asterisk after a meeting number (e.g., "142* (2013-11-07)") indicates that a voting member needs to attend one additional meeting before the cited meeting, or they will lose their voting membership at the cited meeting, regardless of whether they attend it or not. This occurs when the last two meetings attended by the member were a plenary and the interim following it. NOTE--the "Expires" entry for some voting members is blank. This signifies that the chair has granted them voting membership without an attendance requirement.
Expired	The Expired column indicates the date when the member became an Ex Voter, if that is known.
Last Invalid Ballot	This column indicates the ballot number any last invalid or missed ballot (see http://www.ieee802.org/11/LetterBallots.shtml for the list of working group ballots). It is present only for Voter members. An invalid ballot is a failure to return a vote in a Working Group letter ballot series (i.e., the initial ballot and all recirculations for a particular project), or returning an invalid vote (voting "no" with

	no "must be satisfied" comments, or voting abstain for a reason other than "lack of expertise"). Invalid ballots are counted over up to the last three letter ballot series since the member gained Voter status. Transition arrangements: For ballots starting before August 2016, a voter's response to a letter ballot series is determined by their response to the initial ballot. After then, a voter's resonse will be determined when the letter ballot series is known to have terminated (i.e., when the project is approved by the EC, or meets the terms of conditional approval by the EC, to proceed to sponsor ballot). Voters who failed to meet the updated OM were granted a waiver of the most recent ballot they missed so that the change in the application of the rules resulted in no loss of voting membership. According to the 802.11 operations manual, a Voter must return a valid vote in 2 of the last 3 letter ballot series to maintain their status. This means the voter can miss or return an invalid vote at most 1 such ballot series. A Voter that has missed a ballot series and fails to return a valid vote by the end of the next letter ballot series loses their Voter status and becomes an Ex Voter.

Please verify your affiliation.

There is a specific requirement in the IEEE-SA policies and procedures that attendees at its meetings disclose their affiliation. Attendees failing properly to do so risk losing the privileges of membership (i.e., voting rights).

For information from the IEEE-SA on affiliations please click here**.**

Affiliation is not shown for Ex-Voters. For other membership statuses, if there is no affiliation beside your name or if the affiliation is incorrect please follow these instructions.

If you have any related questions, please contact Adrian P Stephens at adrian.p.stephens@ieee.org.

How do I specify my affiliation?

Affiliation is recorded in the IEEE myProject system at the Sponsor level, the Working Group level, and the Project level.

The affiliation shown above is updated from the IEEE-SA registration data after each session you attend.

To enter affiliation initially:

- Log onto myProject
- Click on Manage Activity Profile
- Expand the list to the Sponsor, Working Group, or Project
- Check the box to enroll in that specific group
- Follow the instructions to add your affiliation

To modify your affiliation in a committee that you already enrolled in:

- Log onto myProject
- Click on My Info on the top right hand corner
- Click on Affiliation Information

If you change your affiliation using the myProject system please also send an email to the Working Group Chair (Adrian P Stephens at adrian.p.stephens@ieee.org.).

(Any changes may also often require the changing of emails in the 802.11 email reflectors, which can be done by the Working Group 2nd Vice Chair (Dorothy Stanley) at the same time.)

How do I specify my employer?

There is no specific requirement in the IEEE-SA policies and procedures to disclose your employer.

Employer is asked for once in myProject.

To view or update your employer :

- Log onto myProject
- Click on My Info on the top right hand corner
- Here you can modify your employer

11ax D1.0 CID of BSS Load

CID	Commenter	P.L	Clause	Comment	Proposed Change
5917	James Yee	67.01	9.4.2.139	With the introduction of new features such as OFDMA and UL MU MIMO, the existing BSS load elements (9.4.2.160 & 9.4.2.28), which address STA numbers, primary/secondary channel busy condition and DL MU-MIMO underutilization (11ac) are not sufficient for addressing the BSS load status in a 11ax BSS. A further enhanced BSS Load element needs to be defined.	Add a new information element to define 11ax BSS Load. The new IE shall address utilization status of OFDMA as well as UL/DL MU MIMO, as well as provisions to allow future extensions.
8165	Ming Gan	67.01	9.4.2.	BSS load element provides the channel utilization such that the unassociated STA can choose the proper AP┤+ε and extended BSS load element further provides the the spatial stream underutilization given the busy channel such that unassociated STA with MU-MIMO capability can choose the proper AP. Now 11ax introduce a OFDMA, there is the probability of frequence underutilization given the busy channel.	Define a HE BSS load element considering frequency utilization such to help unassociated STA to choose a best AP

1875

Summary

- **802.11 defines two BSS load information elements[1] containing**
  - information of current STA population and traffic level in the BSS (BSS load element)
  - information of MIMO spatial stream underutilization and bandwidth utilization (Extended BSS load element)
- **11ax introduces MU of OFDMA and UL MIMO, but current BSS load IEs cannot reflect true loading of 11ax HE BSSs**
- **In this presentation, we propose defining a new information element for conveying HE BSS load information**

1876

11ax MU BSS Load Element

- **Propose to add a new IE containing three categories of information**
  1. 11ax MU capable STA count and active STA counts
  2. MU TXOP time percentage over an observation period
  3. Load Report: Underutilization rate of MU TXOP to reflect potential capacity of an 11ax BSS

1877

11ax MU BSS Load Element Contents(1/4)

1. STA count

- **Total number of MU capable STAs**
  - MU includes MU MIMO and OFDMA
  - Let STAs know how many MU competitors are within the BSS
- **Active STA counts**
  - Some associated STA may not be active for a long time
  - AP can monitor STA's activities during an observation period
    - Prefer to define observation period in units of beacon intervals
  - An active STA: if the AP receives any MPDU from that STA during the observation period. Two active STA counts are defined.
    - Active STA count
    - Active MU capable STA count

1878

11ax MU BSS Load Element Contents(2/4)

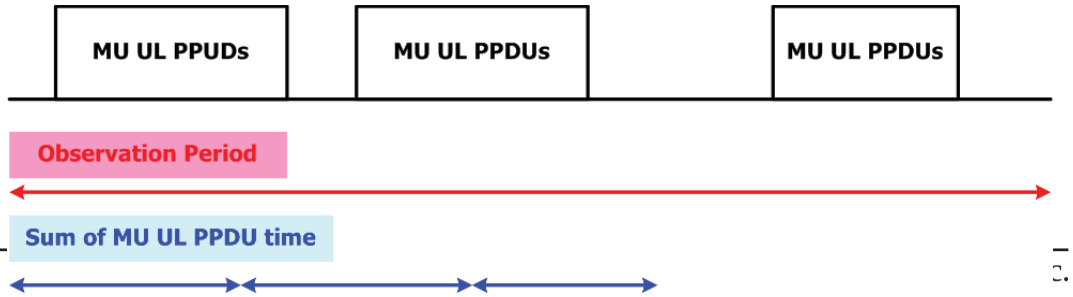
- **Usage Example:**
  - Example: HE BSS1 has 100 active STAs with 5 active MU capable STAs, and HE BSS2 has 100 active STAs with 95 active MU capable STAs. An unassociated HE STA may choose HE BSS2 for more transmit and receive opportunities

1879

11ax MU BSS Load Element Contents(3/4)

2. Time percentage of MU/SU TXOPs

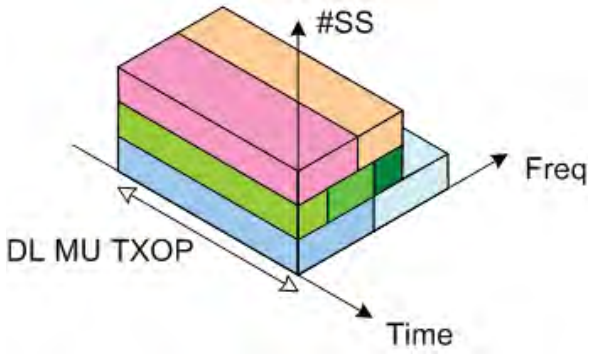
- MU: Report UL and DL separately
- SU: Report DL
- Let STAs know the traffic trend of TXOPs during the observation period. STA may have specific UL/DL requirements
  - `dot11ChannelUtilizationBeaconIntervals` serves as the observation period (50 beacon intervals default)
- Usage Example:
  - High percentage UL TXOP means heavily MU UL loaded BSS
- Illustration



11ax MU BSS Load Element Contents(4/4)

3. Load report of MU TXOPs

- Underutilization percentage over space & frequency
  - Information of available BW and SS
    - Interfered and used RUs shall not be included
  - Separate DL & UL reports
- Report BW
  - Reports of per 20 MHz BW
- Underutilization percentage formula (MU DL example)



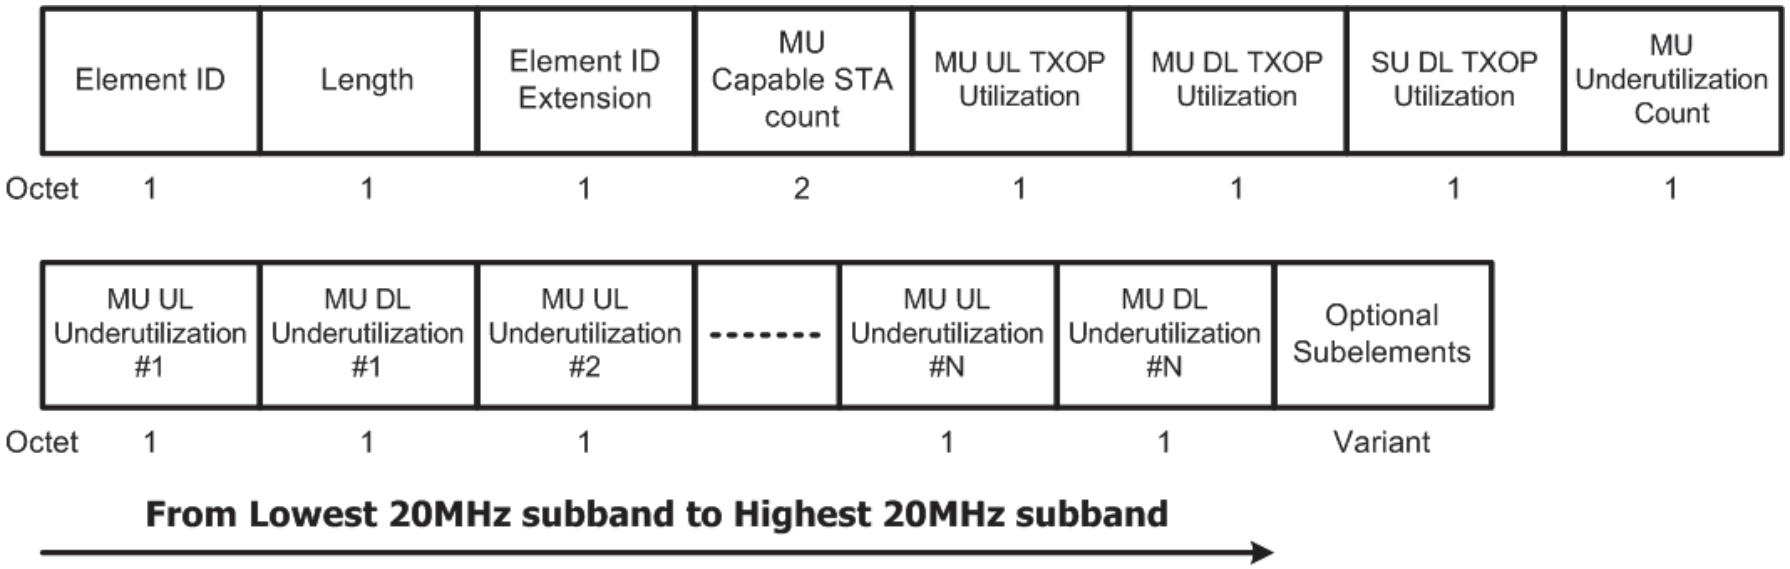
$$\frac{N_{\max_SS} \times RU_{\max} \times \sum_j T_{Busy(MUDL),j} - \sum_j \left[T_{Busy(MUDL),j} \left(\sum_i N_{SS,i,j} \times RU_{Busy,i,j} \right) \right]}{N_{\max_SS} \times RU_{\max} \times \sum_j T_{Busy(MUDL),j}}$$

N_{max_SS}: Max supported spatial stream
RU_{Busy}: Occupied RU weight(Used or interfered)
RU_{max}: RU weight of the available BW
$T_{Busy(MUDL)}$: Time of busy period for MU DL (MU DL TXOP)

1881

11ax MU BSS Load Information Element (1/2)

- **Define a new BSS Load information element for 11ax**
- **For UL/DL underutilization**
  - Variable length dependent on the channel bandwidth
- **Optional subelements carry active STA counts and legacy BSS load IEs (defined in next page)**



11ax MU BSS Load Information Element (2/2)

- **Subelements**
  - Optional active STA counts
  - Able to carry legacy BSS load elements
    - BSS load (9.4.2.28)
    - Extended BSS load (9.4.2.160)

Subelement ID	Name	Extensible
0	Reserved	
1	Active STA count	Yes
2	Active MU capable STA count	Yes
3	BSS load	
4	Extended BSS load	
5-255	Reserved	

- **Active STA count subelements**

	Subelement ID	Length	Active STA count	Observation period in units of beacon intervals
Octets:	1	1	2	1

	Subelement ID	Length	Active MU Capable STA count	Observation period in units of beacon intervals
Octets:	1	1	2	1

1883

Straw poll 1

- **Do you support to add a BSS load information element containing information defined on page 3~7?**
  - Y
  - N
  - A

1884

Straw poll 2

- **Do you support to define the 11ax MU BSS load information element as the formant on page 8~9?**
  - Y
  - N
  - A

1893

Statement of Problem

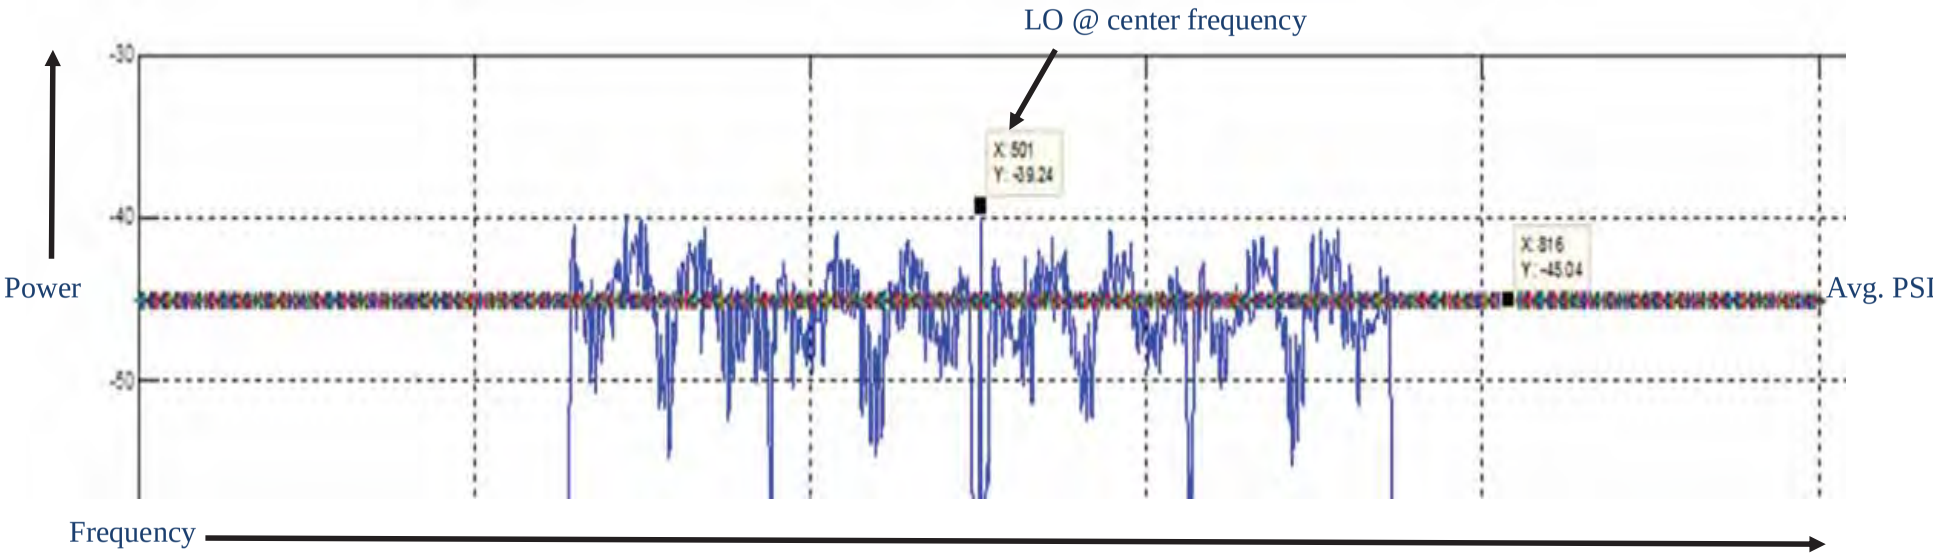
- **Draft 1.0 defines that masks of HE PPDUs are measured with RBW=25kHz and VBW=7.5kHz**
  - A change over former 802.11 that used RBW=100kHz and VBW=30kHz
- **With RBW of 25kHz, each spectrum point for 160MHz transmission is approximately 10LOG(160/0.025)=38dB below the total power. 6dB lower than 11ac.**
  - For in-band spurs, there is more chance that 0dBr at peak spectrum will be touching the CW "spur" instead of the data subcarriers.
  - For out-band spurs, there is more chance the spur break the mask.
- **Smaller RBW requires larger number of points at the SA, resulting in significantly more variance in the frequency domain & higher test time**
- **We have identified that some major SA manufacturers (like Keysight) support RF filtering with a limited RBW granularity only, where RBW=25kHz is not one of the available options**

1894

Spur Resilience (in-band)

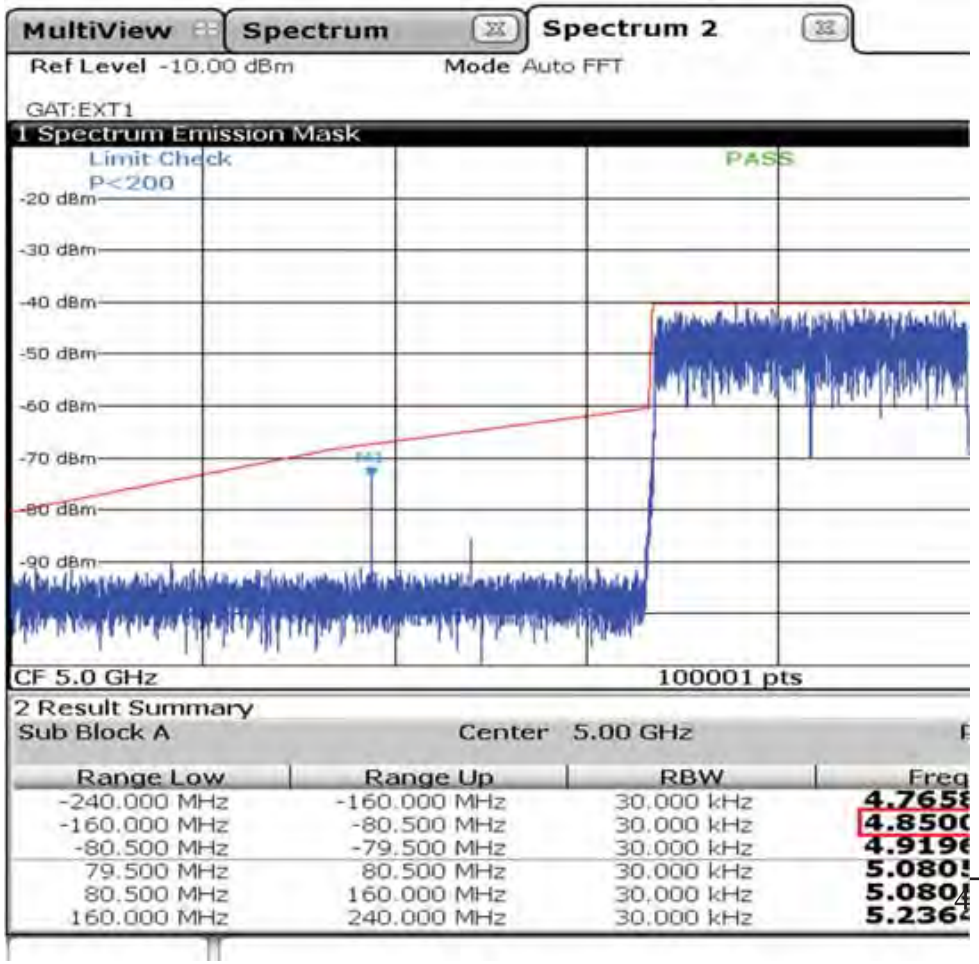
- CW-like signals' power does not vary with RBW, as their bandwidth is infinitely small. But the mask peak spectrum reduces in power with reduction to RBW.
- As a result, resilience to CW-like spurs has degraded by 6dB upon the change from RBW=100kHz to RBW=25kHz

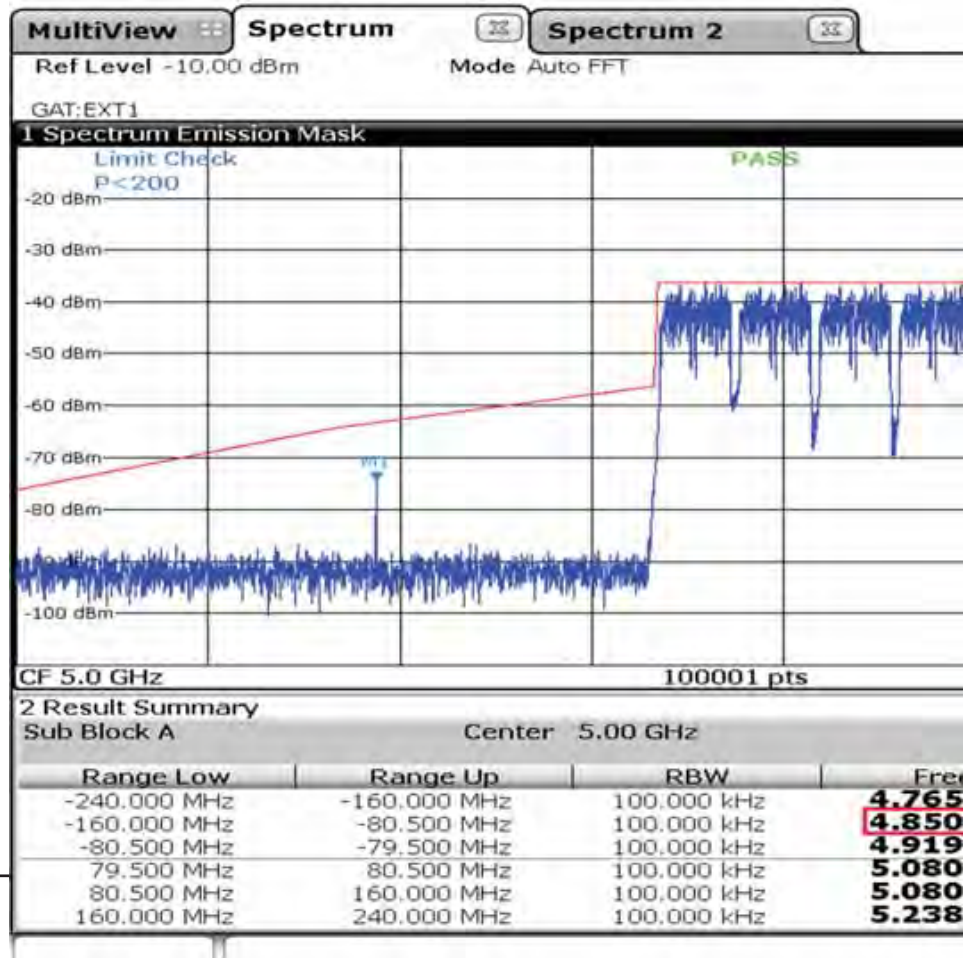
1895



Spur Resilience (out-band)

- Mask drop more due to accumulated power drop from 100kHz to 30kHz;
- Less margin for 30kHz RBW to the mask if out of band spur presents.





Number of Points in the Spectrum Analyzer

- **To ensure proper coverage of the tested span, the number of points measured must cover the spectrum properly. With reduction of RBW by 4X (compared to 11ac and earlier WiFi), 4X points are required to ensure same coverage.**
- **For 160MHz PPDU, span greater than 480MHz is required. With RBW=25kHz, according to R&S guideline (see below), one expects at least 2*480000/25=38400 points.**
- **Number of points has a significant impact on both test time and "deviations" in the spectrum (see next slides). The number of points is an implementation issue and is not defined by the standard.**

1897

Figure 10 - Menu to define the frequency step size

As a rule of thumb, you should keep the frequency step size to around half of the measurement bandwidth. This way there is no possibility of both missing information or an error in the magnitude response. The displayed measurement bandwidths of the network analyzer define the 3 dB bandwidths of the measurement filter, so up to 3 dB error could be expected when the frequency step size comes close to the measurement bandwidth.

With a maximum number of 60,001 data points and a measurement bandwidth of 5 MHz, the maximum frequency span that can be measured is:

2.5 MHz * 60,000 = 150 GHz

https://cdn.rohde-schwarz.com/pws/dl_downloads/dl_application/application_notes/1ez62/1EZ62_0e.pdf

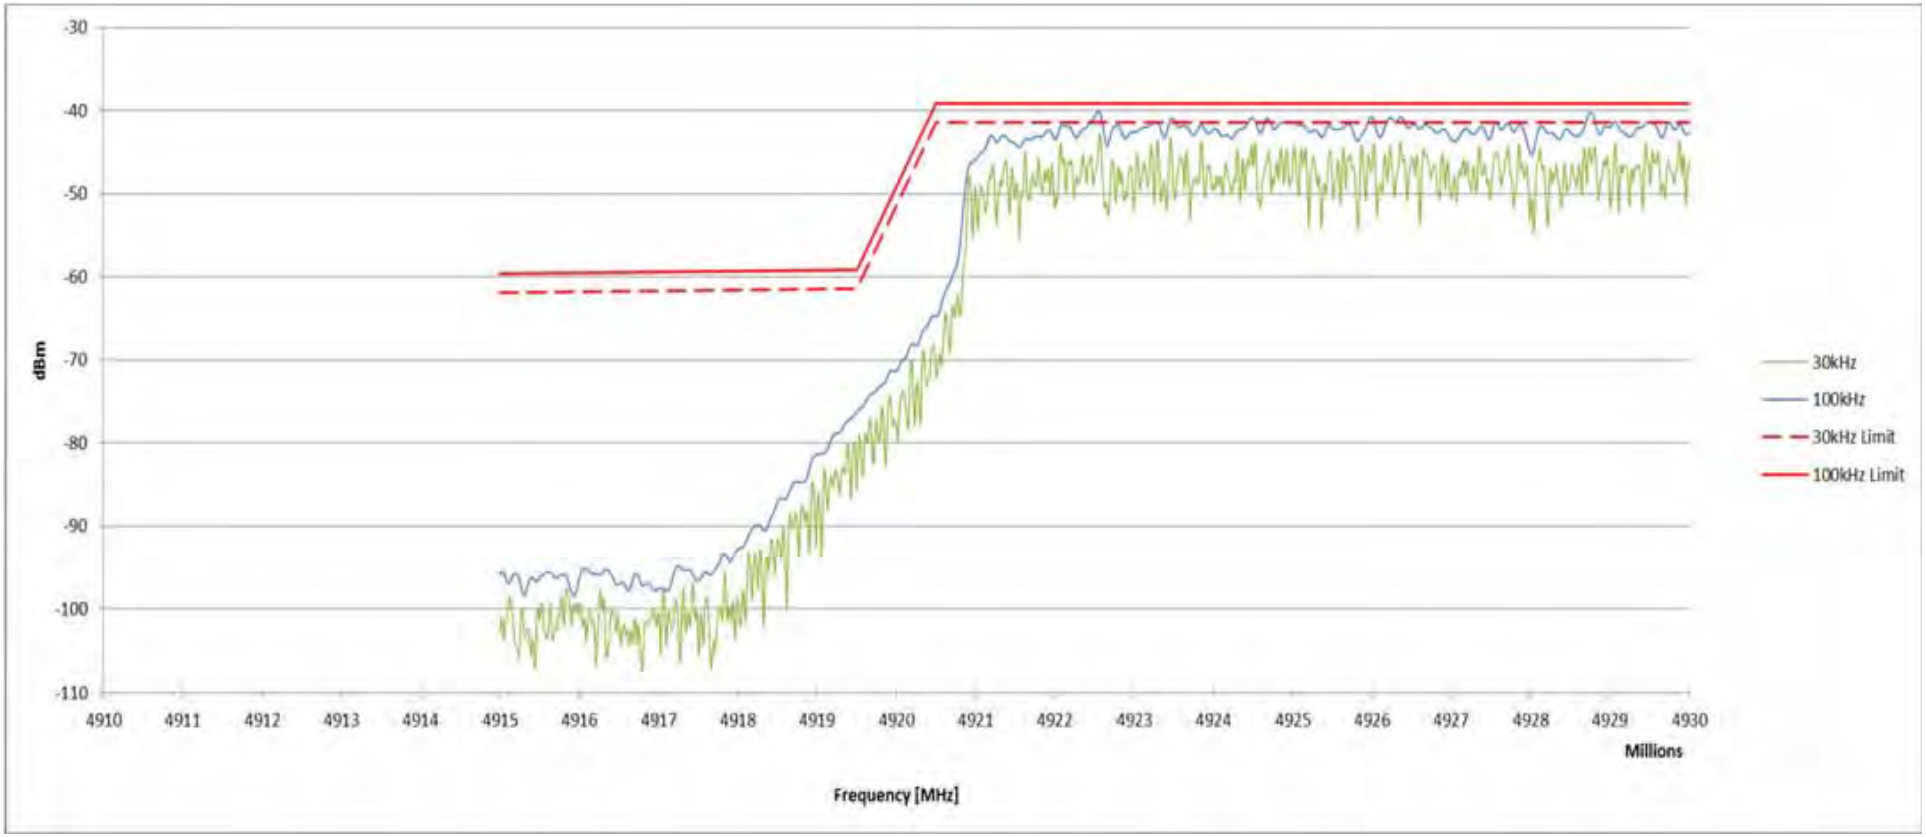
Impacts on the 11ax mask (1/3)

- 11ac transmissions with RBW=24kHz, 100kHz, 400kHz
- Shaping with 4X RBW is only slightly worse (~1 subcarrier spacing) than with 1X RBW.

1898

Impacts on the 11ax mask (2/3)

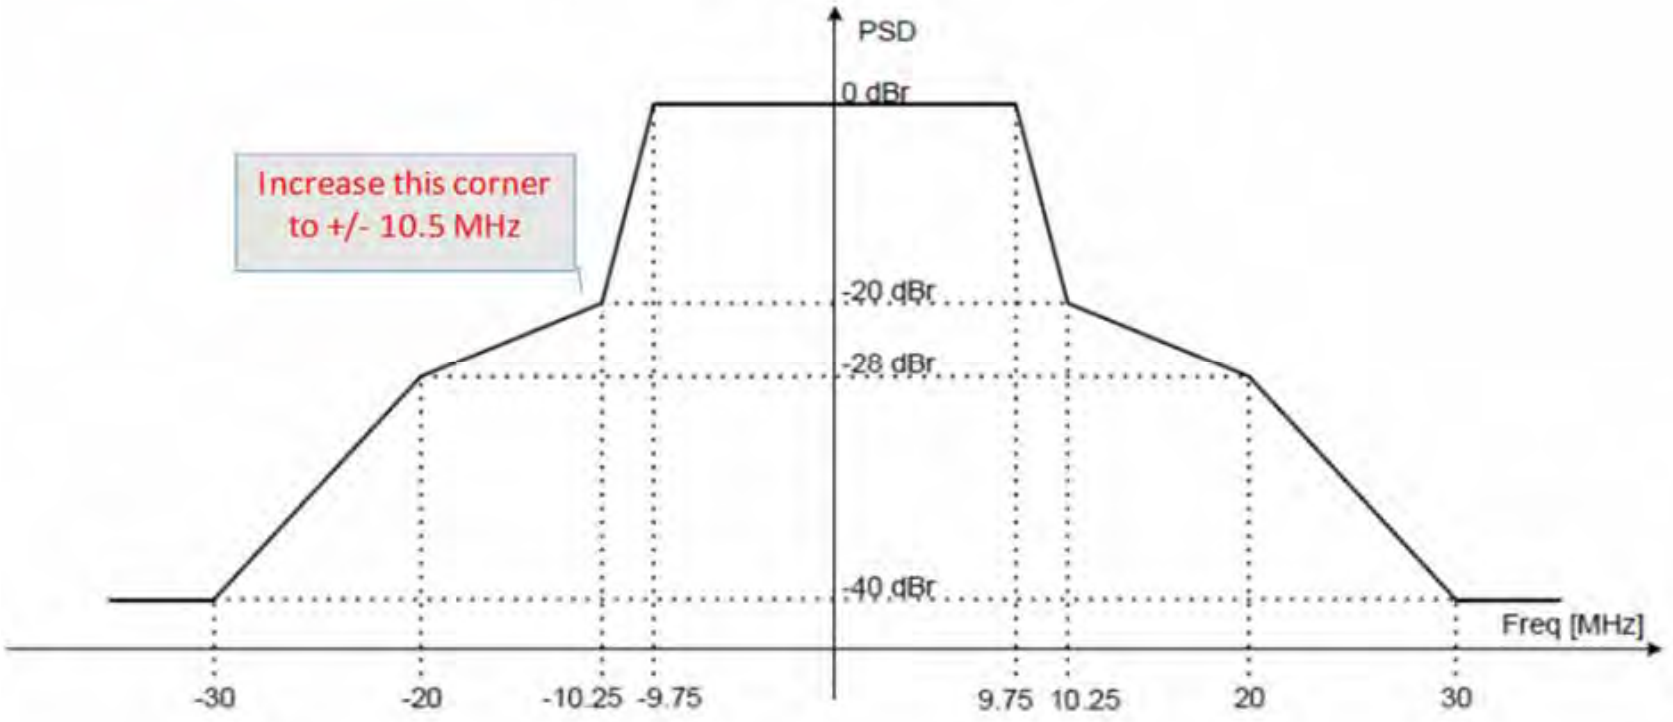
- **Cross check from Rohde-schwarz**



1899

Impacts on the 11ax mask (3/3)

- RBW 100kHz extends the shoulder part of the measured signal;
- If CFO presents in testing, it might be safer to stretch out 20MHz mask a little as shown bellow (to be updated)



1900

Proposed changes: Revised for CID 7547 per editing instructions in 11-17/0078r1

- ***To the TGax Editor: modify P.L. 353.53 as following***
  - Measurements shall be made using a ~~25~~ 100 kHz resolution bandwidth and a 7.5 kHz video bandwidth.
- ***In addition, replace Figure 28-37 with the bellow figure.***

Status of Project IEEE 802.11ax

High Efficiency (HE) Wireless LAN Task Group

Task Group Leadership

Chair	**Osama Aboul-Magd (Huawei Technologies)**
1st Vice Chair	**Ron Porat (Broadcom Ltd.)**
2nd Vice Chair	**Alfred Asterjadhi (Qualcomm)**
Secretary	**Yasuhiko Inoue (NTT)**
Technical Editor	**Robert Stacey (Intel)**

Background

In May 2013, the High Efficiency WLAN Study Group (HEW SG), a study group within IEEE 802.11 working group had started its activity to consider the improvement of spectrum efficiency to enhance the system throughput/area in high density scenarios of APs and/or STAs.

The study group was created based on the following straw poll and motion:

< Straw Poll >
Do you support starting a new study group called "high efficiency WLAN" to enhance 802.11 PHY and MAC in 2.4 and 5GHz with a focus on:

- Improving spectrum efficiency and area throughput
- Improving real world performance in indoor and outdoor deployments
  - in the presence of interfering sources, dense heterogeneous networks
  - in moderate to heavy user loaded APs

< Motion >
Request an approval by IEEE 802 LMSC to form an 802.11 Study Group to consider High-efficiency WLAN [as described in doc 11-13-0339r2] with the intent of creating a PAR and five criteria.

The HEW SG has successfully developed PAR and CSD documents and the project 802.11ax has started in May 2014.

Task Group Documents

The lastest version of the task group offical documents can be found here.

November 2020 — Online Meeting

The IEEE 802 Plenary Session November 2020 was held online.
The P802.11ax D8.0 was in the process of the second IEEE-SA recirculation ballot from November 3rd to 12th, 2020.
TGax had two online meetings during the November 2020 plenary.

Main documents

The TGax meeting agenda, draft meeting minutes and closing report can be found here.

- 11-20-1552-21, TGax CRC Teleconference Agendas: October - November - December 2020
- 11-20-1785-01, (draft) TGax November 2020 Meeting Minutes
- 11-20-1822-00, TGax November 2020 Closing Report

Accomplishments

- The TG was scheduled for two time slots - Tuesday @ 16:00 ET and Thursday @ 19:00 ET
- The TG reviewed and approved the report to the EC requesting conditional approval to forward to RevCom.
  The TG approved r3 of the report. R4 is on the server updating the number of unsatisfied comments.
  The report is available at:
  - https://mentor.ieee.org/802.11/dcn/20/11-20-1771-04-00ax-p802-11ax-report-to-ec-on-conditional-approval-to-forward-draft-to-revcom.pptx

- The TG reaffirmed the TG CSD.
  - https://mentor.ieee.org/802.11/dcn/14/11-14-0169-03-0hew-ieee-802-11-hew-sg-proposed-csd.docx
- **The TG is on time to submit the draft (8.0) for the January 2021 RevCom meeting.**

[Back to Page Top]

October 2020 — Status Update

- The first IEEE-SA recirculation ballot on the P802.11ax D7.0 completed successfully with 88% approval ratio. 132 comments were received.
- TGax continued two or three teleconferences to resolve the comments for D7.0.
- During TGax CRC teleconference on October 30th, TGax completed comment resolution for D7.0 and passed the motion
  - to instruct the TGax technical editor to create the IEEE 802.11ax draft 8.0 incorporating the resolutions, and
  - to approve a 10-day IEEE-SA Recirculation Ballot asking the question " Should P802.11ax Draft 8.0 be forwarded to RevCom?"

[Back to Page Top]

September 2020 — Online Meeting

The IEEE 802 Wireless Interim Session September 2020 was held online.
The P802.11ax D7.0 was in the process of the first IEEE-SA recirculation ballot
and the TGax had one online meeting during the week.

Main documents

The TGax meeting agenda and meeting minutes can be found here.

- 11-20-1169-18, TGax CRC Teleconference Agendas: August - September 2020
- 11-20-1522-00, TGax September 2020 Meeting Minutes

Accomplishments

- Approved TGax CRC teleconference minutes from July to August, 2020
- Reaffirmed Ron Porat (Broadcom) and Alfred Asterjadhi (Qualcomm) as the fist and the second vice-chairs, respectively.
- Reaffirmed Yasuhiko Inoue (NTT) as the TGax secretary.
- Reviewed the IEEE-SA Comment Resolution Guideline.

Timeline

- RevCom meeting scheduled at January 26, 2021.
  - Deadline for submission is December 11, 2020.
- 802 WG virtual meeting is scheduled during the period October 30 to November 13, 2020.
  - The CRC needs the 802.11 WG and 802 WG approvals to proceed to RevCom in January.
- The CRC seems to have about 40 days to complete resolutions of all comments received on draft 7.0.

[Back to Page Top]

- TGax had one session continued two teleconferences to resolve the comments for D6.0.
- During TGax CRC teleconference on August 27th, TGax completed comment resolution for D6.0 and passed the motion
  - to instruct the TGax technical editor to create the IEEE 802.11ax draft 7.0 incorporating the resolutions, and

    - to approve a 15-day IEEE-SA Recirculation Ballot asking the question " Should P802.11ax Draft 7.0 be forwarded to RevCom?"
- The 15-day IEEE-SA Recirculation Ballot on the IEEE 802.11ax D7.0 has opened on **September 3rd** and will close on **September 17th, 2020, 23:59 (ET)**.

[Back to Page Top]

August 2020 — Status Update

- TGax continued two teleconferences to resolve the comments for D6.0.
- During TGax CRC teleconference on August 27th, TGax completed comment resolution for D6.0 and passed the motion
    - to instruct the TGax technical editor to create the IEEE 802.11ax draft 7.0 incorporating the resolutions, and
    - to approve a 15-day IEEE-SA Recirculation Ballot asking the question " Should P802.11ax Draft 7.0 be forwarded to RevCom?"
- The 15-day IEEE-SA Recirculation Ballot on the IEEE 802.11ax D7.0 has opened on **September 3rd** and will close on **September 17th, 2020, 23:59 (ET)**.

[Back to Page Top]

July 2020 — Online Meeting

The IEEE 802 Plenary July 2020 Session was held online.
TGax had one meeting during the plenary session and another one after closing plenary.

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
    - 11-20-0538-45, TGax CRC Teleconference march-July 2020 Teleconference Agendas
    - 11-20-1103-00, (Draft) TGax July 2020 Meeting Minutes

[Back to Page Top]

May 2020

The IEEE 802 Wireless Interim Session May 2020 was also cancelled due to COVID-19.
In the meantime, TGax continued to accelerate comment resolution process by two teleconferences every week.

[Back to Page Top]

March 2020

The IEEE 802 Plenary Session March 2020 was cancelled due to COVID-19.
In the meantime, TGax accelerated comment resolution process by having two teleconferences per week.

[Back to Page Top]

January 2020 — Irvine, CA

The TGax had only one meeting during the week since the initial IEEE-SA ballot on the IEEE 802.11ax D6.0 is going on.

	Monday	Tuesday	Wednesday	Thursday
AM1				
AM2	**TGax** **(full session)**			
PM1				
PM2				
PM3				

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-19-2118-02, TGax January 2020 Meeting Agenda
  - 11-20-0190-00, TGax January 2020 Closing Report
  - 11-20-0148-00, (Draft) TGax January 2020 Irvine Meeting Minutes

Achievements

1. **Work Completed**
   - The TG was scheduled for one time slot on Monday AM-2
     - Approved November F2F meeting minute and December 13 teleconference minutes.
     - Decided on a TG teleconference schedule.
     - Decided no to have an ad hoc (CRC) meeting in March.
     - Reviewed the rules to be followed during the CRC operation.
   - Draft 6.0 is in SA ballot. The ballot closes on January 24th.
     - Please vote and submit your comments by the deadline.

2. Submissions
   - TGax received no submission to discuss during January 2020 session.

3. Timeline
   - No changes to current timeline.

Goals for the March 2020 session

- comments received on draft D6.0.

Teleconferences

Following TGax teleconferences were authorized during the January 2020 session.

Thursday	January 30th, 2020	10:00 - 12:00 (ET)
Thursday	February 13th & 27th , 2020	10:00 - 12:00 (ET)
Thursday	February 6th, 20th & March 5th, 2020	20:00 - 22:00 (ET)

[Back to Page Top]

November 2019 — Waikoloa, HI

TGax had eight meeting slots during the week.
All sessions are full TG session.

	Monday	Tuesday	Wednesday	Thursday
AM1		**TGax** (full session)	**TGax** (full session)	
AM2		**TGax** (full session)		**TGax** (full session)
PM1			**TGax** (full session)	
PM2	**TGax** (full session)	**TGax** (full session)		**TGax** (full session)
PM3

  - 11-19-2012-00, (Draft) TGax November 2019 Waikoloa Meeting Minutes

---

Achievements

1. **Work Completed**
   - The group completed the resolution of all comments received on draft 5.0.
   - Motion passed in the TG to instruct the Editor to prepare draft 6.0 and start a 15-day recirculation ballot.
   - A new revision of the TG Coexistence Assurance document is available.
     - TGax Coexistence Assurance Document
   - The EC Report on conditional approval to go to SA ballot is available at 11-19/2063.

2. **Technical Submissions**
   TGax received following submissions.
   - 11-19-1684, "CR on dot11HECCAIndicatinMode," Robert Stacey (Intel)
   - 11-19-1796, "Comments on TGax CA doc r6," Eldad Perahia (HPE-Aruba)
   - 11-19-1810, "11ax D5.0 Comment Resolution for NAV related comments," Po-Kai Huang (Intel)
   - 11-19-1814, "11ax D5.0 MAC Comment Resolution for SM Power Save," Po-Kai Huang (Intel)
   - 11-19-1816, "11ax D5.0 MAC Comment Resolution for Duration-based RTS/CTS," Po-Kai Huang (Intel)
   - 11-19-1819, "Resolution to comment to subclause 9.3.1.7.1" Tomoko Adachi (Toshiba)
   - 11-19-1831, "Comment resolutions for miscellaneous comments," Alfred Asterjadhi (Qualcomm)
   - 11-19-1832, "Comment resolutions for subclause 26.8," Alfred Asterjadhi (Qualcomm)/Robert Stacey (Intel)
   - 11-19-1833, "Comment resolution for subclause 26.15," Alfred Asterjadhi (Qualcomm)
   - 11-19-1834, "Comment resolution for subclause 26.17," Alfred Asterjadhi (Qualcomm)
   - 11-19-1835, "Comment resolutions for TWT IE," Alfred Asterjadhi (Qualcomm)
   - 11-19-1871, "Resolution to HESIGB and Related Comments," Brian Hart (Cisco Systems)
   - 11-19-1896, "Comment Resolutions for 11ax D5.0 HE PHY Service Interface Section," Bo Sun (ZTE)
   - 11-19-1905, "Resolution for CIDs related to Multiple BSSID," Abhishek Patil (Qualcomm)
   - 11-19-1906, "Resolution for CIDs related to BSS Color," Abhishek Patil (Qualcomm)
   - 11-19-1922, "Some 802.11ax comment resolutions," Jarkko Kneckt (Apple)
   - 11-19-1936, "Ack related comments," George Cherian (Qualcomm)
   - 11-19-1941, "CIDs on Clause 27.3.10.7 for D5.1," Jianhan Liu (MediaTek)
   - 11-19-1947, "MAC CR on Fragmentation," Ming Gan (Huawei Technologies)

- 11-19-1948, "MAC CR on CID 22386 and 22387," Ming Gan (Huawei Technologies)
- 11-19-1949, "CR for CID 22030, 22031, 22032, 22447," Xiaogang Chen (Intel)
- 11-19-1956, "CR for BSS Color Related CIDs," Xiaofei Wang (InterDigital Communications)
- 11-19-1957, "LB244 CR MAC Miscellaneous," Yongho Seok (MediaTek)
- 11-19-1977, "CR for BSS Color Related CIDs Part 2," Xiaofei Wang (InterDigital Commincations)
- 11-19-1983, "Remaining PHY Math comment resolutions," Yang Zhang (Marvell Semiconductor)
- 11-19-1986, "Sounding CRs 11ax D5.0," Menzo Wentink (Qualcomm)
- 11-19-1995, "CR for MU EDCA parameters," Laurent Carioou (Intel)

- 11-19-2048, "Proposed resolution for CIDs Related to Quiet Time Period," Kaiying Lu (MediaTek)
- 11-19-2053, "Proposed resolution for CIDs Related to Quiet Time Period," Kaiying Lu (MediaTek)
- 11-19-2057, "CID 22413, 22414," Youhan Kim (Qualcomm)
- 11-19-2068, "11ax D5.0 comment resolution of various subclauses," Liwen Chu (Marvell)
- 11-19-2075, "Proposed resolution for CID 22058," Kaiying Lu (MediaTek)
- 11-19-2077, "CID 22417," Youhan Kim (Qualcomm)
- 11-19-2083, "CR for RNR," Laurent Cariou (Intel)

3. **Timeline**
   No discussion on the timeline during the week.
   However, TGax timeline was updated as shown here.

Goals for the January 2020 session

- Start working on comments received on draft D6.0.

Teleconferences

No TGax teleconferences were authorized during the November 2019 session. A teleconference may be scheduled with a 10-day notice.

[Back to Page Top]

September 2019 — Hanoi, Vietnam

TGax had nine meeting slots during the week.

	Monday	Tuesday		Wednesday	Thursday
AM1				**TGax** (full session)	**TGax** (full session)
AM2	**TGax** (full session)	**TGax** (MAC ad hoc)	**TGax** (MU ad hoc)		
PM1				**TGax** (full session)	**TGax** (full session)

	Monday	Tuesday	Wednesday	Thursday
PM2	**TGax** (MAC ad hoc) **TGax** (PHY ad hoc)	**TGax** (MAC ad hoc) **TGax** (PHY ad hoc)		
PM3	**TGax** (full session)			

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-19-1409-06, TGax September 2019 Meeting Agenda
  - 11-19-1708-00, TGax September 2019 Closing Report
  - 11-19-1630-00, TGax September 2019 Hanoi Meeting Minutes
- TGax PHY ad hoc
  - 11-19-1634-01, TGax September 2019 Meeting - PHY Ad hoc Agenda
- TGax MAC ad hoc
  - 11-19-1409-06, TGax September 2019 Meeting Agenda (Agenda for the MAC ad hoc is contained in the TGax agenda)
- TGax MU ad hoc
  - 11-19-1649-02, September 2019 TGax MU Ad hoc Meeting Agenda

Achievements

1. **Work Completed**
   - The group completed the resolution of all comments received on draft 4.0.
   - Motion passed in the TG to instruct the Editor to prepare draft 5.0 and start a 15-day recirculation ballot.
   - Motion passed to approve the new revision of the TG Coexistence Assurance document.
     - TGax Coexistence Assurance Document
   - Motion passed to approve the TG MDR

2. **Technical Submissions**
   TGax received following submissions.
   - PHY submissions
     - 11-19-0422, "CR for CID 21501, 21502, 21436," Xiaogang Chen (Intel)
     - 11-19-1377, "11ax D4.2 Comment Resolution for PHY Introduction," Sameer Vermani (Qualcomm)
     - 11-19-1386, "Resolution to PHY-related CID 21366," Brian Harts (Cisco Systems)
     - 11-19-1515, "Remaining PHY Math comment resolutions," Yan Zhang (Marvell)
     - 11-19-1530, "LB238 CID 20742, 20751," Youhan Kim (Qualcomm)
     - 11-19-1531, "LB238 CID 20785, 20934," Youhan Kim (Qualcomm)
     - 11-19-1560, "D4.0 CR PHY Misc," Tianyu Wu (Samsung)
     - 11-19-1581, "HE-SIG-A fields proposed text changes," Yan Zhang (Marvell)
   - MAC submissions
     - 11-19-0463, "Comment resolutions for Miscellaneous 11ax CID," David Kloper (Cisco Systems)
     - 11-19-0552, "CID 20073," Abhishek Patil (Qualcomm)
     - 11-19-0594, "Comment resolutions for transmit power control - part 2," Alfred Asterjadhi (Qualcomm)
     - 11-19-0619, "Proposed Resolutions to selected comments on D4.0," Mark Rison (Samsung)
     - 11-19-0770, "LB238 CR PPDU format, BW, MCS, NSS and DCM slection," Yongho Seok (MediaTek)
     - 11-19-0966, "Comment resolutions for miscellaneous TWT - part 2," Alfred Asterjadhi (Qualcomm)
     - 11-19-0968, "Proposed changes for some bug fixes and clarifications," Alfred Asterjadhi (Qualcomm)
     - 11-19-1064, "CR Disallowed Subchannels," Matthew Fischer (Broadcom)
     - 11-19-1137, "11ax sounding comments D4.0," Menzo Wentink (Qualcomm)
     - 11-19-1150, "Resolution for CIDs related to Co-located BSSID," Abhishek Patil (Qualcomm)
     - 11-19-1155, "LB-238 Miscellaneous Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
     - 11-19-1167, "11ax D4.2 MAC Comment Resolution for SM Power Save Part II," Po-Kai Huang (Intel)

        - 11-19-1209, "11ax D4.0 CR for TXOP Duration-based RTS Threshold," Huizhao Wang (Quantenna Communications)
        - 11-19-1219, "Comment resolution for one CID," Alfred Asterjadhi (Qualcomm)
        - 11-19-1275, "Proposed Resolution to TGax D4.0 CR 20268," Srinivas Kandala (Samsung)
        - 11-19-1388, "Comment resolutions for non-AP STA scanning - part 2," Alfred Asterjadhi (Qualcomm)
        - 11-19-1390, "Comment resolutions for additional rules for preassociation," Alfred Asterjadhi (Qualcomm)
        - 11-19-1496, "Comment resolutions for 2 CIDs," Alfred Asterjadhi (Qualcomm)
        - 11-19-1520, "Resolution for CIDs related to Multiple BSSID - Part 3," Abhishek Patil (Qualcomm)
        - 11-19-1590, "CBF contents padding to 8bits," Huizhao Wang (Quantenna Communications)
        - 11-19-1610, "Comment resolutions for Reason Code CIDs," Pooya Monajemi (Cisco Systems)
        - 11-19-1618, "CR for CIDs 20475, 20788 and 21618," Jarkko Kneckt (Apple)
        - 11-19-1629, "11ax D4.0 MAC miscellaneous CIDs," Liwen Chu (Marvell)
        - 11-19-1631, "Proposed resolution for CIDs Related to Quiet Time Period," Kaiying Lu (MediaTek)
        - 11-19-1635, "Comment resolution on CID 20566," Edward Au (Huawei Technologies)
        - 11-19-1655, "11ax Comment Resolution Misc.," Zhou Lan (Broadcom)
        - 11-19-1658, "LB238 CR MAC Miscellaneous Part 2," Yongho Seok (MediaTek)
        - 11-19-1661, "Comment resolution on CIDs 20644 and 20645," Edward Au (Huawei Technologies)
        - 11-19-1662, "Resolutions to comments 20111 and 21011 of LB 238," Srinivas Kandala (Samsung)
        - 11-19-1667, "Resolutions for some comments on 11ax/D4.0 (LB238)," Mark Rison (Samsung)
        - 11-19-1668, "EOF handling in ack-enabled A-MPDU," Jarkko Kneckt (Apple)
        - 11-19-1673, "Proposed Resolution to TGax D4.0 CR20268," Srinivas Kandala (Samsung)
        - 11-19-1676, "MAC CR Fragment Flush," Ming Gan (Huawei Technologies)
        - 11-19-1682, "Comment resolutions for UORA," Chittabrata Ghosh (Intel)
        - 11-19-1684, "CR on dot11HECCAIndicationMode," Robert Stacey (Intel)
        - 11-19-1690, "Comment Resolution on MU Operation Part 2," Lochan Verma (Qualcomm)
    - MU submissions
        - 11-19-0765, "CR MU EDCA Timer," Zhou Lan (Broadcom)
        - 11-19-0908, "MU EDCA parameter update frame," Matthew Fischer (Broadcom)
        - 11-19-0917, "UORA Misc," Matthew Fischer (Broadcom)
        - 11-19-1186, "Comment Resolution on MU Operation," Lochan Veram (Qualcomm)
        - 11-19-1609, "MAC CR MU cascading," Ming Gan (Huawei Technologies)
        - 11-19-1627, "Last CIDs and fixes," Laurent Cariou (Intel)
    - SR submissions
        - 11-19-0613, "SRP Comments," Matthew Fischer (Broadcom)
    - Other submissions
        - 11-16-1348, "TGax Coexistence Assurance Document," Eldad Perahia (HPE/Aruba)
        - 11-19-0292, "Comments on TGax D4.0," Robert Stacey (Intel)
        - 11-19-1236, "Comment resolution on MIBs for LB238," Edward Au (Huawei Technologies)
        - 11-19-1243, "Comment Resolution on PICS for LB238," Edward Au (Huawei Technologies)

3. **Timeline**
   No discussion on the timeline during the week.
   However, TGax timeline was updated as shown here.

Goals for the November 2019 session

- Start working on comments received on draft D5.0.

Teleconferences

No TGax teleconferences were authorized during the September 2019 session. However, one teleconference was announced by a 10-day notice.

Tuesday	October 29th, 2019	13:00 - 15:00 (ET)

[Back to Page Top]

July 2019 — Vienna, Austria

TGax had ten meeting slots during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax ad hoc** (full session)			
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full session)
PM1	**TGax** (full session)	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax full** (PHY topic)	
PM2		**TGax ad hoc** (full session)	**TGax full** (MAC topic)	**TGax** (full session)
PM3	**TGax** (MAC ad hoc) **TGax** (MU ad hoc)			

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-19-0983-06, TGax July 2019 Meeting Agenda
  - 11-19-1347-00, TGax July 2019 Closing Report
  - 11-19-1264-00, TGax July 2019 Vienna Meeting Minutes
- TGax PHY ad hoc
  - 11-19-1274-03, TGax July 2019 Meeting Agenda - PHY Adhoc
  - 11-19-xxxx-yy, (Draft) TGax PHY Ad Hoc July 2019 Meeting Minutes (not available)
- TGax MAC ad hoc
  - 11-19-1279-02, TGax MAC Adhoc July 2019 Meeting Agenda
  - 11-19-1294-00, (Draft) July 15 PM3 TGax MAC Ad hoc meeting minutes
  - 11-19-1312-00, (Draft) July 16 TGax MAC Ad hoc meeting minutes

  - 11-19-1292-01, July 2019 TGax MU Ad hoc Meeting Agenda
  - 11-19-xxxx-yy, (Draft) TGax MU ad hoc July 2019 meeting minutes (not available)

Achievements

1. **Work Completed**
   - More time is needed to complete the resolution of all comments submitted during LB 238 on draft D4.0.
     - Almost 260 technical comments are remaining.

2. **Technical Submissions**

   TGax received following submissions.
   - PHY submissions
     - 11-19-0422, "CR for CID 21497, 21501, 21502," Xiaogang Chen (Intel)
     - 11-19-0793, "Remaining PHY Math comment resolutions," Yan Zhang (Marvell)
     - 11-19-0826, "CR on DCM and STBC Combinations," Youhan Kim (Qualcomm)
     - 11-19-0827, "CR on Punctured Non-HT Duplicate PPDU," Youhan Kim (Qualcomm)
     - 11-19-0830, "CR on Clause 17," Youhan Kim (Qualcomm)

- 11-19-0831, "D4.0 Comment Resolution - Part 2," Youhan Kim (Qualcomm)
- 11-19-0836, "D4.0 Comment Resolution - Part 3," Youhan Kim (Qualcomm)
- 11-19-0837, "CR on HE Capabilities," Youhan Kim (Qualcomm)
- 11-19-0858, "PHY CR in Clause 10," Youhan Kim (Qualcomm)
- 11-19-0866, "CR for Misc.," Xiangang Chen (Intel)
- 11-19-0971, "CR on CID 20760 and 20793," Ross Jian Yu (Huawei Technologies)
- 11-19-0972, "Remaining CR on SIG-B Part I," Ross Jian Yu (Huawei Technologies)
- 11-19-0973, "Resolution to CID20718," Yujin Noh (Newracom)
- 11-19-1013, "Spec Text Changes on MCS Table," Ross Jian Yu (Huawei Technologies)
- 11-19-1125, "Remaining CR on SIG-B Part II," Dandan Liang (Huawei Technologies)
- 11-19-1127, "Comment Resolution on CIDs on Clause 27.3.10.7," Jianhan Liu (MediaTek)
- 11-19-1150, "Proposed resolutions to comments on clause 26.3.10.15 (Packet Extension)," Ross Jian Yu (Huawei Technologies)
- 11-19-1185, "CR on PHY SIGB," Ming Gan (Huawei Technologies)
- 11-19-1225, "D4.0 Comment Resolution - Part 3," Youhan Kim (Qualcomm)
- 11-19-1226, "D4.0 Comment Resolution - Part 4," Youhan Kim (Qualcomm)
- 11-19-1271, "PHY Miscellaneous Comment Resolution," Sameer Vermani (Qualcomm)

- MAC submissions
  - 11-19-0339, "11ax D4.0 MAC Comment Resolution for Co-hosted BSSID," Po-Kai Huang (Intel)
  - 11-19-0414, "CR for NFRP," Laurent Cariou (Intel)
  - 11-19-0417, "CR for 6 GHz out of band," Laurent Cariou (Intel)
  - 11-19-0488, "CR for Reduced Neighbor Report," Jarkko Kneckt (Apple)
  - 11-19-0494, "Resolution for CID 20346 related to BSS Color," Kaiying Lu (ZTE)
  - 11-19-0594, "Comment resolutions for transmit power control - part 2," Alfred Asterjadhi (Qualcomm)
  - 11-19-0604, "11ax D4.1 MAC Comment Resolution for NAV part I," Po-Kai Huang (Intel)
  - 11-19-0696, "OMI Comment Resolutions," Jarkko Kineckt (Apple)
  - 11-19-0734, "11ax D4.0 Comment Resolution 9.7.3," Liwen Chu (Marvell)
  - 11-19-0735, "11ax D4.0 Comment Resolution 10.24," Liwen Chu (Marvell)

        - 11-19-0912, "Editorial changes to approved resolutions," Robert Stacey (Intel)
        - 11-19-1017, "D4.0 CR for 6GHz channelization," Ruchen Duan (Samsung)
        - 11-19-1122, "11ax D4.2 Padding for Random Access," Po-Kai Huang (Intel)
        - 11-19-1123, "Editorial Comments on TGax/D4.0," Po-Kai Huang/Robert Stacey (Intel)
        - 11-19-1183, "Comment Resolution on Trigger Frame Format," Lochan Verma (Qualcomm)
        - 11-19-1199, "Updated Channelization for 6 GHz," Imran Latif (Quantenna Communications)
3. **Timeline**

    No discussion on the timeline during the week.

    Here is the current timeline.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**

September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**
Janury 2019	**Draft 4.0 and Recirculation Ballot — Passes (92.2%)**
May 2019	**Mandatory Draft Review**
June 2019	**Formation of Sponsor Ballot pool**
August 2019	**Initial Sponsor Ballot**
January 2020	**Final 802.11 Approval**
March 2020	**Conditional EC Approval**
June 2020	**RevCom submittal and publication**

Goals for the September 2019 session

- Complete the comment resolution on draft D4.0.
- Instruct the TG Editor to prepare draft D5.0 and start a new WG Recirculation ballot.
- Approve the new revision of the TG Coexistence Assurance document.

Teleconferences

Following TGax teleconferences were authorized during the July 2019 session.

Thursday	August 1st, 2019	10:30 - 13:30 (ET)
Thursday	August 8th, 2019	19:00 - 22:30 (ET)
Thursday	August 15th, 2019	10:30 - 13:30 (ET)
Thursday	August 22nd, 2019	19:00 - 22:30 (ET)
Thursday	August 29th, 2019	10:30 - 13:30 (ET)
Thursday	September 5th, 2019	19:00 - 22:30 (ET)

[Back to Page Top]

May 2019 — Atlanta, GA

TGax had eight meeting slots during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**TGax** **(full session)**
AM2	**TGax** **(full session)**	**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**		
PM1	**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	**TGax** **(full session)**	**TGax** **(full session)**
PM2			**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	
PM3				

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-19-0615-06, TGax May 2019 Meeting Agenda
  - 11-19-0925-00, TGax May 2019 Closing Report
  - 11-19-0872-00, TGax May 2019 Atlanta Meeting Minutes
- TGax PHY ad hoc
  - 11-19-0880-01, TGax Mar 2019 Meeting Agenda - PHY Adhoc
  - 11-19-0xxx-00, Draft TGax PHY Ad Hoc May 2019 Meeting Minutes (not available)
- TGax MAC ad hoc
  - 11-19-0881-03, TGax MAC Adhoc May 2019 Meeting Agenda
  - 11-19-0918-00, TGax MAC Ad-hoc meeting minutes May 2019

Achievements

1. **Work Completed**
   - The TG completed the resolution of about 430 comments.
   - The TG passed a motion to have an ad-hoc meeting in Rennes, France hosted by Cannon during the period July 10-12.
   - Discussed the TG timeline and made few adjustments.

2. **Technical Submissions**
   TGax received following submissions.
   - PHY submissions
     - 11-18-1774, "Resolution to CID 16624 (HESIGB)," Brian Hart (Cisco Systems)
     - 11-19-0378, "D4.0 CID20395 Unused Tone EVM," Youhan Kim (Qualcomm)
     - 11-19-0379, "D4.0 Comment Resolution - Part 1," Youhan Kim (Qualcomm)
     - 11-19-0385, "Resolution for CIDs in 27.1.1," Sameer Vermani (Qualcomm)
     - 11-19-0386, "CR Disallowed Subchannels," Ron Porat (Broadcom)
     - 11-19-0407, "Comment Resolutions PHY xVECTORs," Bo Sun (ZTE)
     - 11-19-0422, "CR for CID 21497, 21501, 21502," Xiaogang Chen (Intel)
     - 11-19-0553, "Comment Resolutions on Clause 27.3.15.2 (Beamforming feedback matrix V)," Kome Oteri (InterDigital)
     - 11-19-0793, "Remaining PHY Math comment resolutions," Yan Zhang (Marvell)
     - 11-19-0826, "CR on DCM and STBC Combinations," Youhan Kim (Qualcomm)
     - 11-19-0827, "CR on Punctured Non-HT Duplicate PPDU," Youhan Kim (Qualcomm)
     - 11-19-0830, "CR on Clause 17," Youhan Kim (Qualcomm)
     - 11-19-0831, "D4.0 Comment Resolution - Part 2," Youhan Kim (Qualcomm)
     - 11-19-0836, "D4.0 Comment Resolution - Part 3," Youhan Kim (Qualcomm)
     - 11-19-0837, "CR on HE Capabilities," Youhan Kim (Qualcomm)
     - 11-19-0858, "PHY CR in Clause 10," Youhan Kim (Qualcomm)
     - 11-19-0866, "CR for Misc.," Xiangang Chaen (Intel)
   - MAC submissions
     - 11-18-0218, "Fragment Flush BlockAckReq," Matthew Fischer (Broadcom)
     - 11-18-1822, "Temporarily Limited Connection," Matthew Fischer (Broadcom)
     - 11-19-0288, "CR for HE Beacon," Po-Kai Huang (Intel)
     - 11-19-0292, "Comments on TGax D4.0," Po-Kai Huang (Intel)
     - 11-19-0301, "Comment resolutions for HE beacon in 6 Ghz band," Alfred Asterjadhi (Qualcomm)
     - 11-19-0302, "Comment resolutions for HE BSS operation," Alfred Asterjadhi (Qualcomm)
     - 11-19-0303, "Comment Resolution for QoS Control," Alfred Asterjadhi (Qualcomm)
     - 11-19-0304, "Comment resolutions for HE BSS operation in 6 GHz," Alfred Asterjadhi (Qualcomm)
     - 11-19-0305, "Comment resolutions for transmit power control," Alfred Asterjadhi (Qualcomm)
     - 11-19-0309, "Comment resolutions for Frame Control," Alfred Asterjadhi (Qualcomm)
     - 11-19-0315, "Comment resolutions for TWT power save," Alfred Asterjadhi (Qualcomm)

- 11-19-0316, "Comment resolutions for BSR operation," Alfred Asterjadhi (Qualcomm)
- 11-19-0325, "11ax D4.0 MAC Comment Resolution for SM Power Save," Po-Kai Huang (Intel)
- 11-19-0339, "11ax D4.0 MAC Comment Resolution for Co-hosted BSSID," Po-Kai Huang (Intel)
- 11-19-0394, "Resolution for CIDs in 9.3.1.22," Abhishek Patil (Qualcomm)
- 11-19-0395, "Resolution for CIDs related to BSS Color - Part 1," Abhishek Patil (Qualcomm)
- 11-19-0413, "CR for MU EDCA," Laurent Cariou (Intel)
- 11-19-0414, "CR for NFRP," Laurent Cariou (Intel)
- 11-19-0415, "CR for OPS," Laurent Cariou (Intel)
- 11-19-0417, "CR for 6 GHz out of band," Laurent Cariou (Intel)
- 11-19-0427, "Comment resolution on CID 20175," Zhou Lan (Broadcom)
- 11-19-0436, "Resolution for CIDs in clause 11.1.4," Abhishek Patil (Qualcomm)
- 11-19-0447, "Resolutions to CID 20256, 20257," Jarkko Kneckt (Apple)
- 11-19-0479, "Resolution for CID 20012," Abhishek Patil (Qualcomm)
- 11-19-0488, "CR for Reduced Neighbor Report," Jarkko Kneckt (Apple)
- 11-19-0492, "11ax D4.0 MAC Comment Resolution for MU-RTS/CTS," Po-Kai Huang (Intel)
- 11-19-0494, "Resolution for CID 20346 related to BSS Color," Kaiying Lu (ZTE)
- 11-19-0505, "Resolution for CIDs related to BSS Color - Part 2," Abhishek Patil (Qualcomm)
- 11-19-0506, "Resolution for CIDs related to Multiple BSSID," Abhishek Patil (Qualcomm)
- 11-19-0508, "Resolution for CIDs related to UORA," Abhishek Patil (Qualcomm)
- 11-19-0510, "Resolution for CIDs related to MU Operation," Abhishek Patil (Qualcomm)
- 11-19-0548, "Resolution for CIDs related to TF format (9.3.1.22) - Part 2," Abhishek Patil (Qualcomm)
- 11-19-0561, "Comment resolutions for miscellaneous TWT," Alfred Asterjadhi (Qualcomm)
- 11-19-0593, "Comment resolutions for Frame Control," Alfred Asterjadhi (Qualcomm)
- 11-19-0594, "Comment resolutions for transmit power control - part 2," Alfred Asterjadhi (Qualcomm)
- 11-19-0604, "11ax D4.1 MAC Comment Resolution for NAV part I," Po-Kai Huang (Intel)
- 11-19-0605, "11ax D4.0 MAC Comment Resolution for MU-RTS part II," Po-Kai Huang (Intel)
- 11-19-0652, "Comment resolutions for TWT Information frames," Alfred Asterjadhi (Qualcomm)
- 11-19-0696, "OMI Comment Resolutions," Jarkko Kineckt (Apple)
- 11-19-0703, "11ax D4.0 comment and resolution for Trigger frame MAC padding," Tianyu Wu (Apple)
- 11-19-0724, "Comment resolutions for broadcast TWT," Alfred Asterjadhi (Qualcomm)
- 11-19-0725, "Comment resolutions for Individual TWT," Alfred Asterjadhi (Qualcomm)
- 11-19-0734, "11ax D4.0 Comment Resolution 9.7.3," Liwen Chu (Marvell)
- 11-19-0735, "11ax D4.0 Comment Resolution 10.24," Liwen Chu (Marvell)
- 11-19-0737, "11ax D4.0 comment-resolution 9.2.4.6, 9.4.2.242.2," Liwen Chu (Marvell)
- 11-19-0745, "MAC CR for subclause 9.4.2," Ming Gan (Huawei)
- 11-19-0748, "11ax D4.0 Comment Resolution 26.2.8," Liwen Chu (Marvell)
- 11-19-0750, "11ax D4.0 comment-resolution 26.5.3.4," Liwen Chu (Marvell)
- 11-19-0751, "Figure 26-3a," Abhishek Patil (Qualcomm)
- 11-19-0753, "11ax D4.1 MAC Multiple BSSID Minor Bug Fix," Po-Kai Huang (Intel)
- 11-19-0756, "Ack related CRs on Section 26.4," George Cherian (Qualcomm)
- 11-19-0765, "CR MU EDCA Timer," Zhou Lan (Broadcom)
- 11-19-0769, "CR for NFRP," Laurent Cariou (Intel)
- 11-19-0770, "LB238 CR PPDU format, BW, MCS, NSS, and DCM selection," Yongho Seok (MediaTek)
- 11-19-0785, "MAC CR Comment Resolution," Ming Gan (Huawei)
- 11-19-0795, "Visio file for (updated) Figure 26-5," Abhishek Patil (Qualcomm)
- 11-19-0816, "Resolutions to comments to subclause 9.3.1.8," Tomoko Adachi (Toshiba)
- 11-19-0835, "Comment resolution for subclause 26.2.2," Kaiying Lu (ZTE)

◦ SR submissions

- 11-19-0416, "CR for Spatial reuse," Laurent Cariou (Intel)
- 11-19-0613, "SRP Comments," Matthew Fischer (Broadcom)

3. **Timeline**

A little adjustments to the current timeline are made.

Current Timeline

May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**
Janury 2019	**Draft 4.0 and Recirculation Ballot — Passes (92.2%)**
May 2019	**Mandatory Draft Review**
June 2019	**Formation of Sponsor Ballot pool**
August 2019	**Initial Sponsor Ballot**
January 2020	**Final 802.11 Approval**
March 2020	**Conditional EC Approval**
June 2020	**RevCom submittal and publication**

Goals for the July 2019 session

- Complete the comment resolution on draft D4.0.
- Instruct the TG Editor to prepare draft D5.0 and start a new WG Recirculation ballot.

Teleconferences

Following TGax teleconferences were authorized during the March 2019 session.

Thursday	May 23rd, 2019 (approved during the March 2019 meeting)	10:00 - 12:00 (ET)
Thursday	May 30th, 2019	20:00 - 22:00 (ET)
Thursday	June 13th, 2019	10:00 - 12:00 (ET)
Thursday	June 20st, 2019	20:00 - 22:00 (ET)
Thursday	June 27th, 2019	10:00 - 12:00 (ET)

[Back to Page Top]

March 2019 — Vancouver, BC, Canada

TGax had seven meeting slots during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1				**TGax** **(full session)**
AM2		**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**		
PM1	**TGax** **(full session)**		**TGax** **(full session)**	**TGax** **(full session)**

	Monday	Tuesday		Wednesday		Thursday
PM2		**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)	**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)	
PM3						

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

  - 11-19-0238-05, TGax March 2019 Meeting Agenda
  - 11-19-0521-00, TGax March 2019 Closing Report
  - 11-19-0428-00, TGax March 2019 Vancouver Meeting Minutes
- TGax PHY ad hoc
  - 11-19-0457-02, TGax Mar 2019 Meeting Agenda - PHY Adhoc
  - 11-19-0462-00, TGax March 2019 Vancouver PHY Ad Hoc Meeting Minutes
- TGax MAC ad hoc
  - 11-19-0453-02, TGax MAC Adhoc March 2019 Meeting Agenda
  - 11-19-0501-00, TGax MAC Ad-hoc meeting minutes March 2019

Achievements

1. **Work Completed**
   - The TG completed the resolution of about 200 comments.
   - Completed the assignment of almost all the CIDs.
   - The TG passed a motion to have an adhoc meeting in San Diego during the period May 8-10.

2. **Technical Submissions**
   TGax received following submissions.
   - PHY submissions
     - 11-18-1774, "Resolution to HESIGB-related CIDs," Brian Hart (Cisco Systems)
     - 11-19-0378, "D4.0 CID20395 - Unused Tone EVM," Youhan Kim (Qualcomm)
     - 11-19-0379, "D4.0 PHY Comment Resolution - Part 1," Youhan Kim (Qualcomm)
     - 11-19-0385, "Resolution for CIDs in 27.1.1," Sameer Vermani (Qualcomm)

January 2019 — St. Louis, MO

TGax planed ten sessions during the week.
During WG mid-week plenary session, one more session was added on Thursday PM2.

	Monday	Tuesday	Wednesday	Thursday
AM1		**TGax** **(full session)**	**TGax** **(full session)**	**TGax** **(full session)**

	Monday	Tuesday	Wednesday	Thursday
AM2	**TGax** (full session)	**TGax** (full session)		
PM1	**TGax** (full session)		**TGax** (full session)	**TGax** (full session)
PM2		**TGax** (full session)		**TGax** (full session)
PM3	**TGax** (full session)	**TGax** (full session)		

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-18-2114-10, TGax January 2019 Meeting Agenda
  - 11-19-0208-00, TGax January 2019 Closing Report
  - 11-19-0126-00, Draft TGax January 2019 St. Louis Meeting Minutes

Achievements

1. **Work Completed**
   - The TG completed the resolution of all comments submitted on draft D3.0.
   - The TG passed a motion to allow the Editor to prepare draft D4.0 and start a 15 day WG Ballot.
   - The TG approved a new revision of the Coexistence Assurance document.
   - TGax Timeline was adjusted.

2. **Technical Submissions**
   TGax received following submissions during the TGax sessions.
   - 11-18-0218, "Fragment Flushing BlockAckReq," Matthrew Fischer (Broadcom Ltd.)
   - 11-18-1211, "Comment resolutions for 27.16.1 related to 6 Ghz band," Alfred Asterjadhi (Qualcomm)
   - 11-18-1227, "CR for 6GHz - Discovery," Laurent Cariou (Intel)
   - 11-18-1471, "Comment resolutions for 27.16.1 related to 6 GHz band," Alfred Asterjadhi (Qualcomm)
   - 11-18-1472, "Comment resolutions for 27.7.4," Alfred Asrterjadhi (Qualcomm)
   - 11-18-1489, "Operation at 6GHz Band," Liwen Chu (Marvell Semiconductor)
   - 11-18-1506, "LB233 CR ER Beacon," Yongho Seok (MediaTek)
   - 11-18-1697, "MAC CR 27.7.3," Alfred Asterjadhi (Qualcomm)
   - 11-18-1779, "LB233 CR Transmit Power Control," Yongho Seok (MediaTek)
   - 11-18-1807, "Resolutions for Miscellaneous CIDs," Yasuhiko Inoue (NTT)

- 11-19-0194, "Clarification of HE TB PPDU timing requirements," Mark Rison (Samsung)

3. **Timeline update**
   Current timeline has been updated as follow.

Current Timeline (Updated)	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**
Janury 2019	**Draft 4.0 and Recirculation Ballot**
February 2019	**Formation of Sponsor Ballot pool**
March 2019	**Mandatory Draft Review**
July 2019	**Initial Sponsor Ballot**
January 2020	**Final 802.11 Approval**
March 2020	**Conditional EC Approval**
June 2020	**RevCom submittal and publication**

Goals for the March 2019 session

- Start comment resolution on draft D4.0.

Teleconferences

TGax teleconferences will be scheduled with a 10-day notice.

[Back to Page Top]

November 2018 — Bangkok, Thailand

TGax planed ten sessions during the week.
During WG mid-week plenary session, one more session was added in Thursday PM2.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax** (full ad hoc session)	**TGax** (MAC ad hoc)	**TGax** (full session)	**TGax** (full session)
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full session)
PM1			**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	
PM2	**TGax** (full)	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full session)
PM3		**TGax** (MAC ad hoc)		

Submissions for MU and SR ad hoc groups were considered in the MAC ad hoc group.

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-18-1517-08, TGax November 2018 Meeting Agenda
  - 11-18-2061-00, TGax November 2018 Closing Report
  - 11-18-1933-00, TGax November 2018 Bangkok Meeting Minutes

  - PHY ad hoc
    - 11-18-1997-02, TGax Nov 2018 Meeting Agenda - PHY Adhoc
    - 11-18-2024-00, IEEE 802.11 TGax November 2018 Bangkok PHY Ad Hoc Meeting Minutes
  - MAC ad hoc
    - 11-18-2006-02, TGax November 2018 MAC ad hoc Meeting Agenda
    - 11-18-2008-00, Minutes of TGax MAC ad hoc meeting November 2018 in Bangkok

---

Achievements

1. **Work Completed**
   - The TG approved resolutions to 500+ technical comments
   - The TG needs more time to complete resolutions of the rest of the comments ~ 250 to 300 CIDs are left
   - The TG plans to complete the comment resolution in January 2019

2. **Technical Submissions**
   TGax received following submissions during the TGax sessions.
   - PHY Submissions
     - 11-18-1492, "Remaining PHY Math comment resolutions," Yan Zhang (Marvell Semiconductor)
     - 11-18-1534, "CR for PPDU formats," Tianyu Wu (Samsung)
     - 11-18-1734, "PHY subcarriers and RU part 2," Yujin Noh (Newracom)

- 11-18-1735, "CR on PHY Intro," Yujin Noh (Newracom)
- 11-18-1759, "Comment Resolutions for xVECTORs," Bo Sun (ZTE)
- 11-18-1764, "CR on HE-SIG-A and HE-SIG-B - Part 6," Ross Jian Yu (Huawei Technologies)
- 11-18-1774, "Resolution to CID 16624 (HE-SIG-B)," Brian Hart (Cisco Systems)
- 11-18-1790, "CR on PHY Miscellaneous," Yujin Noh (Newracom)
- 11-18-1832, "D3.0 Comment Resolution on CID for 28.4.3," Jianhan Liu (MediaTek)
- 11-18-1841, "Comment Resolution on PHY Introduction," Bin Tian (Qualcomm)
- 11-18-1842, "Comment Resolution on PHY Miscellaneous," Bin Tian (Qualcomm)
- 11-18-1848, "CID 17100," Youhan Kim (Qualcomm)
- 11-18-1849, "D3.0 Comment Resolution Part 3," Youhan Kim (Qualcomm)
- 11-18-1850, "D3.0 Comment Resolution Part 4," Youhan Kim (Qualcomm)
- 11-18-1891, "Discussions on Trigger Frame MAC Padding," Hongyuan Zhang (Marvell Semiconductor)
- 11-18-1906, "Comment Resolution on Trigger Frame MAC Padding," Hongyuan Zhang (Marvell Semiconductor)
- 11-18-1907, "Comment Resolution of MU-CTS Scrambling," Hongyuan Zhang (Marvell Semiconductor)
- 11-18-1980, "D3.0 CR for PHY Misc," Tianyu Wu (Samsung)
- 11-18-2007, "Changes to D3.0," Xiaogang Chen (Intel)
- 11-18-2017, "PHY Remaining CSD," Bin Tian (Qualcomm)
- 11-18-2019, "Resolution for SIG_B_Compression_Mode definition in TxVector," Jerome Vanthournout (CEVA-DSP)
- 11-18-2023, "Comment Resolution on CID 16768," Jianhan Liu (MediaTek)

- MAC Submissions
  - 11-18-0218, "Fragment Flushing BlockAckReq," Matthew Fischer (Broadcom Ltd.)
  - 11-18-1432, "Doze Transition Signaling," Matthew Fischer (Broadcom Ltd.)
  - 11-18-1454, "Figure 27-12," Abhishek Patil (Qualcomm)
  - 11-18-1471, "Comment resolutions for 27.16.1 related to 6 Ghz band," Alfred Asterjadhi (Qualcomm)
  - 11-18-1472, "Comment resolutions for 27.7.4," Alfred Asterjadhi (Qualcomm)
  - 11-18-1473, "Comment resolutions for miscellaneous CIDs - Part 1," Alfred Asterjadhi (Qualcomm)
  - 11-18-1474, "Comment resolutions for 27.7.2," Alfred Asterjadhi (Qualcomm)
  - 11-18-1487, "11ax D3.0 Comment Resolution 27.5.3.2.3," Liwen Chu (Marvell Semiconductor)
  - 11-18-1498, "CR for 27.5.6," Laurent Cariou (Intel)
  - 11-18-1505, "LB233 CR MAC TXVECTOR," Yongho Seok (MediaTek)
  - 11-18-1506, "LB233 CR ER Beacon," Yongho Seok (MediaTek)
  - 11-18-1507, "11ax D3.0 MAC Comment Resolution for Co-located BSS," Po-Kai Huang (Intel)
  - 11-18-1508, "11ax D3.0 MAC Comment Resolution for Multiple BSSID," Po-Kai Huang (Intel)
  - 11-18-1519, "11ax D3.0 MAC Comment Resolution for Control response," Robert Stacey (Intel)
  - 11-18-1696, "Comment resolutions for 9.6.25," Alfred Asterjadhi (Qualcomm)
  - 11-18-1697, "Comment resolutions for 27.7.3," Alfred Asterjadhi (Qualcomm)
  - 11-18-1698, "Comment resolutions for miscellaneous CIDs part 2," Alfred Asterjadhi (Qualcomm)
  - 11-18-1699, "Comment resolutions for subclause 9.2.4," Alfred Asterjadhi (Qualcomm)
  - 11-18-1703, "Resolution to CID 17150," Tomoko Adachi (Toshiba)
  - 11-18-1733, "CID 16364 on Packet Extension," Yujin Noh (Newracom)
  - 11-18-1775, "Comment resolutions for miscellaneous - Part 3," Alfred Asterjadhi (Qualcomm)
  - 11-18-1777, "Ack-related CIDs remaining," George Cherian (Qualcomm)
  - 11-18-1778, "LB233 CR subclause 27.15.2 and 27.15.3," Yongho Seok (MediaTek)
  - 11-18-1779, "LB233 CR Transmit Power Control," Yongho Seok (MediaTek)
  - 11-18-1780, "LB233 CR MAC Miscellaneous," Yongho Seok (MediaTek)
  - 11-18-1799, "CR for 16668," Po-Kai Huang (Intel)
  - 11-18-1800, "CR for Miscelaneous CIDs," Po-Kai Huang (Intel)
  - 11-18-1807, "Proposed Resolutions for Miscellaneous CIDs," Yasuhiko Inoue (NTT)
  - 11-18-1808, "Proposed Resolutions for CIDs related to HE MAC Capabilities," Yasuhiko Inoue (NTT)
  - 11-18-1812, "Resolution for CIDs related to Random Access," Abhishek Patil (Qualcomm)
  - 11-18-1814, "Resolution for CIDs related to Multiple BSSID - Part 2," Abhishek Patil (Qualcomm)
  - 11-18-1815, "Resolution for miscellaneous CIDs," Abhishek Patil (Qualcomm)
  - 11-18-1817, "Figure 9-63j1," Abhishek Patil (Qualcomm)
  - 11-18-1820, "Doze Transition Signaling MoreData," Matthew Fischer (Broadcom Ltd.)

- 11-18-1821, "Maximum RX PPDU Duration Signaling," Matthew Fischer (Broadcom Ltd.)
- 11-18-1822, "Temporarily Limited Connection," Matthew Fischer (Broadcom Ltd.)
- 11-18-1830, "CR for TSPEC," Jarkko Kneckt (Apple)
- 11-18-1831, "OMI comment resolution," Jarkko Kneckt (Apple)
- 11-18-1844, "LB233 CR on Fragmentation," Ming Gan (Huawei Technologies)
- 11-18-1851, "Resolutions to comments to subclause 9.3.1.9," Tomoko Adachi (Toshiba)
- 11-18-1852, "General and Annex G Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
- 11-18-1853, "Resolutions to comments to subclauses 10.3.7, 3.1, 3.2, and 27.5.1.1," Tomoko Adachi (Toshiba)
- 11-18-1855, "Comments Resolution - 27.16.4," Chao-Chun Wang (MediaTek)
- 11-18-1856, "11ax D3.0 Comment Resolution 9.7.1," Liwen Chu (Marvell)
- 11-18-1857, "11ax D3.0 Comment Resolution 27.10.1 27.10.3" Liwen Chu (Marvell)
- 11-18-1858, "11ax D3.0 Comment Resolution 9.7.3," Liwen Chu (Marvell)
- 11-18-1859, "11ax D3.0 Comment Resolution 27.10.4," Liwen Chu (Marvell)
- 11-18-1867, "CR for OPS 2," Laurent Cariou (Intel)
- 11-18-1868, "CR for Clause 4," Guoqing Li (Apple)
- 11-18-1876, "Resolutions to Miscellaneous MAC Comments," Osama Aboul-Magd (HuaweiTechnoloies)
- 11-18-1887, "11ax D3.2 MAC Comment Resolution for Section 27.5," Zhou Lan (Broadcom Ltd.)
- 11-18-1900, "11ax D3.2 MAC Comment Resolution for Section 27.7.7," Zhou Lan (Broadcom Ltd.)
- 11-18-1901, "D3.0 Comment Resolution - Part 5," Youhan Kim (Qualcomm)
- 11-18-1921, "11ax D3.0 sounding comments," Menzo Wentink (Qualcomm)
- 11-18-1932, "Proposed Resolutions to Miscs PHY and MAC CIDs," Peter Loc (Huawei Technologies)
- 11-18-1935, "Resolutions to CIDs 15935 and 16150," Osama Aboul-Magd (Huawei Technologies)
- 11-18-1939, "Comment resolution on MIBs - part 1," Edward Au (Huawei Technologies)
- 11-18-1942, "Comment resolution on PICs," Edward Au (Huawei Technologies)

- 11-18-1958, "CR for CID 16643," Yunbo Li (Huawei Technologies)
- 11-18-1969, "Proposed resolution for CIDs for 27-2-2-Part 2," Kaiying Lv (ZTE)
- 11-18-1975, "11ax D3.0 Comment Resolution 27.5.3.4," Liwen Chu (Marvell Semiconductor)
- 11-18-1987, "D3.0 Comment Resolution on MAC Miscellaneous," Jae Seung Li (ETRI)
- 11-18-1995, "Resolution for CIDs: 15302, 15906, 16750," Huizhao Wang (Quantenna)
- 11-18-1999, "RTS CTS protection coverage," Jarkko Kneckt (Apple)

- MU Submissions
  - 11-18-1803, "CR on MU-RTS/CTS part II," Po-Kai Huang (Intel)
  - 11-18-1812, "Resolution for CIDs related to Random Access - Part 2," Abhishek Patil (Qualcomm)
- SR Submission
  - 11-18-1531, "Spatial Reuse DSC and TPC," Graham Smith (SR Technologies)
  - 11-18-1866, "CR for OBSS_PD 2," Laurent Cariou (Intel)
- TG submissions
  - 11-18-0496, "Disallowed Sub-Channels," Matthew Fischer (Broadcom Ltd.)
  - 11-18-1489, "Operation at 6GHz Band," Liwen Chu (Marvell Semiconductor)
  - 11-18-1500, "CR for 6 GHz - 6 GHz Map," Laurent Cariou (Intel)
  - 11-18-1532, "TGax Coexistence Assurance Document Comments," Eldad Perahia (HP Enterprize)
  - 11-18-1827, "6 GHz operation for 11ax follow up," Wook Bong Lee (Samsing)
  - 11-18-1828, "D3.0 CR for 6GHz Post Association," Wook Bong Lee (Samsing)
  - 11-18-1922, "Considerations on 6 GHz Discovery," Thomas Derham (Broadcom Ltd.)
  - 11-18-1959, "CR for 6GHz - Out-of-band association," Lauernt Cariou (Intel)
  - 11-18-1960, "6 GHz - Out-of-band discovery discussion," Laurent Cariou (Intel)
  - 11-18-1961, "6 GHz association discussion," Laurent Cariou (Intel)

3. **Timeline update**

   Current timeline needs to be updated. Details will be discussed in the January 2019 session.

Current Timeline (to be updated)	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**

January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**
November 2018	**Mandatory Draft Review**
November 2018	**Draft 4.0 and Recirculation Ballot**
February 2019	**Formation of Sponsor Ballot pool**
March 2019	**Draft 5.0 and Recirculation (unchanged)**
July 2019	**Initial Sponsor Ballot**
January 2020	**RevCom submittal and publication**

Goals for the January 2019 session

- Complete the resolution of comments received on draft D3.0, generate draft D4.0, and go to recirculation ballot.

Teleconferences

Following TGax teleconferences were authorized during the September 2018 session.

Thursday	November 29th, 2018	18:00 - 20:00 (ET)
Thursday	December 06th, 2018	10:00 - 12:00 (ET)
Thursday	December 13th, 2018	18:00 - 20:00 (ET)
Thursday	December 20th, 2018	10:00 - 12:00 (ET)
Thursday	January 03rd, 2019	10:00 - 12:00 (ET)

Additional TGax teleconference may be scheduled with 10-day notice if needed.

[Back to Page Top]

September 2018 — Waikoloa, HI

TGax had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1		**TGax (full)** **6 GHz discussion**	**TGax (full)** **6 GHz discussion**	**TGax** **(full)**
AM2		**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**		
PM1	**TGax** **(full)**	**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	**TGax (full)** **COEX discussion with 802.19**
PM2		**TGax** **(PHY ad hoc)** **TGax** **(MAC ad hoc)**	**TGax** **(full)**	
PM3	**TGax** **(SR ad hoc)** **TGax** **(MAC ad hoc)**	**TGax (full)** **(6 GHz discussions)**		

Submissions for MU ad hoc were considered in the MAC ad hoc.

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-18-1373-05, TGax September 2018 Meeting Agenda
  - 11-18-1672-00, TGax September 2018 Closing Report
  - 11-18-1617-00, TGax September 2018 Waikoloa Meeting Minutes

---

Achievements

1. **Work Completed**
   - The TG approved resolutions to 500+ technical comments
   - The plan is to have draft D4.0 ready for recirculation after November meeting.
   - The TG reviewed a number of submissions on 6 GHz discovery and management. More discussion is needed to reach consensus.
   - The TG revisited the coexistence issues with members from 802.15 and 802.18.
   - The TG is planning a 3-day ad hoc meeting in Shenzhen, China the week before the November F2F meeting on November 7-9. The PHY ad hoc has a 2-day meeting on November 8-9.

2. **Technical Submissions**
   TGax received following submissions during the TGax sessions.
   - PHY Submissions
     - 11-18-1258, "Punctured NDP Comment Resolution," Ron Porat (Broadcom Ltd.)
     - 11-18-1434, "CR on HE-SIG-A and HE-SIG-B - Part 1," Ross Jian Yu (Huawei Technologies)
     - 11-18-1435, "CR on HE-SIG-A and HE-SIG-B - Part 2," Ross Jian Yu (Huawei Technologies)
     - 11-18-1436, "CR on HE-SIG-A and HE-SIG-B - Part 3," Ross Jian Yu (Huawei Technologies)
     - 11-18-1441, "CR on HE-SIG-A and HE-SIG-B - Part 4," Xin Zuo (Huawei Technologies)
     - 11-18-1442, "Spec Text Changes Regarding Single Stream Pilot," Ross Jian Yu (Huawei Technologies)
     - 11-18-1452, "CR on Packet Extension," Yujin Noh (Newracom)
     - 11-18-1453, "CR on PHY subcarriers and RU part 1," Yujin Noh (Newracom)
     - 11-18-1459, "Comment Resolution on PHY Introduction Part - 1," Lochan Verma (Qualcomm)
     - 11-18-1460, "Comment Resolution on PHY Introduction Part - 2," Lochan Verma (Qualcomm)
     - 11-18-1492, "Remaining PHY Math comment resolutions," Yan Zhang (Marvell)
     - 11-18-1493, "Changes to D3.0," Xiaogang Chen (Intel)
     - 11-18-1514, "Preamble Comment Resolution," Ron Porat (Broadcom Ltd.)
     - 11-18-1522, "Comment Resolution of Nominal Packet Padding Definition," Hongyuan Zhang (Marvell)
     - 11-18-1534, "D3.0 CR for PHY 28.3.4/28.3.16/28.3.17," Tianyu Wu (Samsung)
     - 11-18-1590, "D3.0 Comment Resolution - Part 1," Youhan Kim (Qualcomm)
     - 11-18-1591, "D3.0 Comment Resolution - Part 2," Youhan Kim (Qualcomm)
     - 11-18-1601, "CR on HE-SIG-A and HE-SIG-B - Part 5," Ross Jian Yu (Huawei Technologies)
   - MAC & MU Submissions
     - 11-18-0496, "Disallowed Sub channels," Matthew Fischer (Broadcom Ltd.)

3. **Timeline update**

There are small adjustments to the TGax Timeline.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**

November 2018	**Mandatory Draft Review**
November 2018	**Draft 4.0 and Recirculation Ballot**
February 2019	**Formation of Sponsor Ballot pool**
March 2019	**Draft 5.0 and Recirculation (unchanged)**
July 2019	**Initial Sponsor Ballot**
January 2020	**RevCom submittal and publication**

Goals for the November 2018 session

- Complete the resolution of comments received on draft D3.0.
- Generate draft D4.0.
- Go to the WG recirculation ballot.

Teleconferences

Following TGax teleconferences were authorized during the September 2018 session.

Thursday	September 20th, 2018	10:00 - 12:00 (ET)
Thursday	September 27th, 2018	20:00 - 22:00 (ET)
Thursday	October 04th, 2018	10:00 - 12:00 (ET)
Thursday	October 11th, 2018	20:00 - 22:00 (ET)
Thursday	October 18th, 2018	10:00 - 12:00 (ET)
Thursday	November 01st, 2018	10:00 - 12:00 (ET)

Additional TGax teleconference may be scheduled with 10-day notice if needed.

[Back to Page Top]

July 2018 — San Diego, CA

TGax had eight sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax** (ad hoc)		**TGax** (with 802.19)	**TGax** (full)
AM2		**TGax** (full)		
PM1	**TGax** (full)			**TGax** (full)
PM2		**TGax** (full)	**TGax** (full)	
PM3				

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-18-1036-05, TGax July 2018 Meeting Agenda
  - 11-18-1330-00, TGax July 2018 Closing Report
  - 11-18-1093-00, Draft TGax July 2018 San Diego Meeting Minutes

---

802.11 WG Letter Ballot #233

- The IEEE 802.11ax draft 3.0 passed the WG Letter Ballot #233 with 86.5 % approval ratio.
  - Visit http://www.ieee802.org/11/LetterBallots.shtml for more information.
- About 2250 comments are received.

Achievements

1. **Work Completed**
   - The TG started the resolution of comments received on draft D3.0
   - Members of 802.19 WG were invited to make a presentation on their concerns related to the TG Coexistence Assurance document.
     - 19-18-0040, ``802.11ax and 802.15.4 HRP_LRP Coexistence," Tim Harrington (Pro-ID)
   - The TG approved the proposed the PAR extension request and the revised CSD accommodating comments received from 802.3 WG.
   - The TG prepared and approved a liaison response to WBA.
     - https://mentor.ieee.org/802.11/dcn/18/11-18-1291-02-00ax-proposed-response-to-liaison-from-wba-on-11ax.docx

2. **Technical Submissions**
   TGax received following submissions during the TGax sessions.
   - PHY Submissions
     - 11-18-0477, "Punctured NDP," Ron Porat (Broadcom Ltd.)
     - 11-18-1183, "Spec text change for error correction on STBC," Jianhan Liu (MediaTek)
   - MAC Submissions
     - 11-18-0496, "Disallow Sub-Channels," Matthew Fischer (Broadcom Ltd.)
     - 11-18-1181, "CR in FTM," Jonathan Segev (Intel)
     - 11-18-1189, "CR for NAV Part 1," Po-kai Huang (Intel)
     - 11-18-1211, "MAC CR subclause 27.16.1," Alfred Asterjadhi (Qualcomm)
     - 11-18-1219, "CR for ER SU Disable," Po-Kau Huang (Intel)
     - 11-18-1220, "CR for Random Access," Po-Kai Huang (Intel)
     - 11-18-1244, "Resolutions for CIDs related to BSS Color," Abhishek Patil (Qualcomm)
     - 11-18-1252, "D3.0 Comment Resolution for CIDs on Clause 6," Jae Seung Lee (ETRI)
     - 11-18-1246, "CR for OMI," Jarkko Kneckt (Apple)
   - MU Submission
     - 11-18-1266, "Resolution for CIDs related to random access - Part 1," Abhishek Patil (Qualcomm)
   - TG submissions
     - 11-18-1227, "CR for 6GHz - Discovery," Laurent Cariou (Intel)
     - 11-18-1229, "CR for 6GHz - Policy," Laurent Cariou (Intel)
     - 11-18-1256, "11ax 6GHz Operation," George Cherian (Qualcomm)
     - 11-18-1258, "CR for Punctured NDP," Ron Porat (Broadcom Ltd.)
3. **Timeline update**
   TG reviewed the timeline - No change.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**

November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot — Passes (86.5%)**
July 2018	**Mandatory Draft Review**
November 2018	**Draft 4.0 and Recirculation Ballot**
February 2019	**Formation of Sponsor Ballot pool**
September 2019	**Initial Sponsor Ballot**
December 2019	**RevCom submittal**

Goals for the September 2018 session

- Continue the resolution of comments on draft D3.0.

Teleconferences

Following TGax teleconferences were authorized during the July 2018 plenary.

Thursday	July 26th, 2018	10:00 - 12:00 (ET)
Thursday	August 02nd, 2018	20:00 - 22:00 (ET)
Thursday	August 09th, 2018	10:00 - 12:00 (ET)
Thursday	August 16th, 2018	20:00 - 22:00 (ET)
Thursday	August 23rd, 2018	10:00 - 12:00 (ET)
Thursday	August 30th, 2018	20:00 - 22:00 (ET)
Thursday	September 20rd, 2018	10:00 - 12:00 (ET)

Additional TGax teleconference may be scheduled with 10-day notice if needed.

[Back to Page Top]

May 2018 — Warsaw, Poland

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	**TGax (full)**
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		
PM1	**TGax (full)**			**TGax (full)**
PM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax** (SR ad hoc) **TGax** (MAC ad hoc)	
PM3	**TGax** (SR ad hoc) **TGax** (MAC ad hoc)	**TGax** (PHY ad hoc) **TGax** (MAC adx hoc)		

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-18-0635-10, TGax May 2018 Meeting Agenda
  - 11-18-0976-00, TGax May 2018 Closing Report
  - 11-18-0888-00, TGax May 2018 Warsaw Meeting Minutes

  - TGax PHY ad hoc group
    - 11-18-0800-01, TGax May 2018 Meeting Agenda - PHY Ad Hoc
  - TGax MAC ad hoc group
    - 11-18-0914-03, TGax May 2018 MAC Ad Hoc Meeting Agenda
    - 11-18-0920-00, TGax MAC Ad hoc May 2018 Meeting Minutes
  - TGax SR ad hoc group
    - 11-18-0912-01, Agenda of the IEEE 802.11ax Spatial Reuse ad hoc group
    - 11-18-0922-00, IEEE 802.11ax Spatial Reuse ad hoc minutes

---

Achievements

1. **Work Completed**
   - The TG completed resolution of comments submitted on draft D2.0.
   - The TG passed a motion to instruct the TGax Editor to prepare draft D3.0 and start a 30-day WG letter Ballot.
   - The TG approved the PAR extension.
   - The TG approved the updated Coexistence Assurance document 11-16/1348r3 that has already been discussed during the TGax teleconference.
   - No changes to the TG timeline.
2. **Technical Submissions**
   TGax received following submissions during the TGax ad hoc meeting and in the TGax sessions.
   - PHY Submissions
     - 11-18-0469, "CR Packet Extension," Ron Porat (Broadcom Ltd.)
     - 11-18-0477, "Punctured NDP," Ron Porat (Broadcom Ltd.)
     - 11-18-0725, "Comment Resolutions on PHY Sounding Part 1," Lochan Verma (Qualcomm)
     - 11-18-0753, "PHY CR on midamble TxEVM," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0754, "CID14038 scrambler," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0755, "HE Capabilities on HE MU single user full BW," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0756, "Capabilities on midamble Tx," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0765, "CR on HE PHY MIB attributes," Edward Au (Huawei Technologies)
     - 11-18-0779, "D2.0 PHY Comment Resolution - Part 3," Youhan Kim (Qualcomm)
     - 11-18-0799, "Comment resolution on CIDs 11727 and12102," Jianhan Liu (MediaTek)
     - 11-18-0803, "Spec text change on PHY padding," Tianyu Wu (Samsung)
     - 11-18-0806, "PHY Miscellaneous CIDs," Bin Tian (Qualcomm)
     - 11-18-0807, "D2.0 DFS Comment Resolution," Youhan Kim (Qualcomm)
     - 11-18-0815, "D2.0 DFS Comment Resolution," Sigurd Schelstraete (Quantenna Communications)
     - 11-18-0819, "comment-resolution-on-cids-for-28-3-part-3," Jianhan Liu (MediaTek)
     - 11-18-0823, "D2.0 CR for SAP and TRIGVECTOR," Tianyu Wu (Samsug)
     - 11-18-0868, "Spec. change on Receiver minimum input sensitivity on 1024-QAM for 20MHz bandwidth, Jianhan Liu (MediaTek)
   - MAC Submissions
     - 11-17-1860, "Resolution for CID 11002," Abhishek Patil (Qualcomm)
     - 11-18-0044, "LB230 MAC CR 27.7 and 27.7.1," Alfred Asterjadhi (Qualcomm)
     - 11-18-0077, "D2.0 comment resolution 27.4.2," Liwen Chu (Marvell)
     - 11-18-0083, "LB230 CR for BSS Load Text," Frank Hsu (MediaTek)

- 11-18-0155, "Resolutions for CIDs related to GCR," Yusuke Tanaka (SONY)
- 11-18-0161, "CR CID 13754," Zhou Lan (Broadcom Ltd)

- 11-18-0445, "ACK non QoS data frame in TB PPDU," Zhou Lan (Broadcom Ltd.)
- 11-18-0692, "Comment Resolution for Random Access," Po-Kai Huang (Intel)
- 11-18-0694, "CIDs resolution for UORA procedure - part 2," Stephane Baron (Canon Research)
- 11-18-0695, "CIDs resolution for UORA procedure - part 1," Stephane Baron (Canon Research)
- 11-18-0707, "CIDs related to MU Cascading," David Xun Yang (Huawei Technologies)
- 11-18-0724, "CIDs related to random access," Abhishek Patil (Qualcomm)
- 11-18-0906, "DL MU MIMO signaling," Guoqing Li (Apple)

◦ SR Submissions
- 11-18-0026, "CR-SRG-and-SRP," Matthew Fischer (Broadcom Ltd.)
- 11-18-0225, "CR-SRG-Management-CID-12044-12304," Matthew Fischer (Broadcom Ltd.)
- 11-18-0456, "lb230-cr-txvector-parameter-bss-color," Yongho Seok (MediaTek)
- 11-18-0579, "11ax D2.0 CR on SR and CCA," Yuichi Morioka (Sony)
- 11-18-0617, "Dynamic OBSS_PD level," Graham Smith (SR Technologies)
- 11-18-0743, "CIDs related to BSS Color," Abhishek Patil (Qualcomm)

◦ TG Submission
- 11-18-0902, "CID 12102: Remove DCM," Sean Coffey (RealTek)

3. **Timeline update**
   TG reviewed the timeline - No change.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot**
July 2018	**Mandatory Draft Review**
February 2019	**Formation of Sponsor Ballot pool**
May 2019	**Initial Sponsor Ballot**
December 2019	**RevCom submittal**

Goals for the July 2018 session

- Start resolving comments received on draft D3.0.

Teleconferences

Following TGax teleconferences has already approved during the March 2018 plenary.

Thursday	May 17th, 2018	10:00 - 12:00 (ET)

Additional TGax teleconference may be scheduled with 10-day notice if needed.

[Back to Page Top]

March 2018 — Rosemont, IL

TGax had ten sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax (full, ad hoc)**	**TGax (MAC & MU ad hoc)**	**TGax (full)**	
AM2		**TGax (PHY ad hoc)** **TGax (MAC & MU ad hoc)**		**TGax (full)**
PM1	**TGax (full)**			
PM2		**TGax (PHY ad hoc)** **TGax (MAC & MU ad hoc)**	**TGax (PHY ad hoc)** **TGax (MAC & MU ad hoc)**	**TGax (full)**
PM3		**TGax (SR ad hoc)** **TGax (MAC & MU ad hoc)**

---

Achievements

1. **Work Completed**
   - Approved resolutions to over 800 technical CIDs.
   - The TG Editor is planning to produce a new revision based on approved resolutions.
   - A TG motion passed to hold an ad hoc meeting in Rennes during the period from February 28th to March 2nd, 2018.
   - No changes to the TG timeline.

2. **Technical Submissions**

TGax received following submissions during the TGax ad hoc meeting and in the TGax sessions.

- MAC/MU Submissions
  - 11-17-1860, "Resolution for CID 11002," Abhishek Patil (Qualcomm)
  - 11-18-0012, "Comment resolutions for 27.15.2, Alfred Asterjadhi (Qualcomm)
  - 11-18-0029, "Default UORA Parameters," Matthew Fischer (Broadcom)
  - 11-18-0044, "Comment resolutions for 27.7 and 27.7.1," Alfred Asterjadhi (Qualcomm)
  - 11-18-0055, "CR for CID 14324," Zhou Lan (Broadcom)
  - 11-18-0056, "CR for CID 14328," Zhou Lan (Broadcom)
  - 11-18-0075, "11ax D2.0 Comment Resolution 27.5.3.2.2," Liwen Chu (Marvell)
  - 11-18-0078, "11ax D2.0 Comment Resolution 27.6.4," Liwen Chu (Marvell)
  - 11-18-0149, "CR for NDP feedback report - part 1," Laurent Cariou (Intel)
  - 11-18-0161, "CR of CID 13754," Zhou Lan (Broadcom)
  - 11-18-0185, "CR of CID 11001," Zhou Lan (Broadcom)
  - 11-18-0200, "Decouple Channel Width Capabilities between VHT and HE PHY Mode," Huizhao Wang (Quantenna)
  - 11-18-0218, "Fragment Flushing BlockAckReq," Matthew Fischer (Broadcom)
  - 11-18-0241, "Comment resolutions for Misc CIDs," Alfred Asterjadhi (Qualcomm)
  - 11-18-0312, "Comment resolutions for 27.6.3," Alfred Asterjadhi (Qualcomm)
  - 11-18-0337, "Comment resolutions for 10.43" Alfred Asterjadhi (Qualcomm)
  - 11-18-0338, "Comment resolutions for 27.16.1," Alfred Asterjadhi (Qualcomm)
  - 11-18-0343, "Comment resolutions for CID 13744," Alfred Asterjadhi (Qualcomm)
  - 11-18-0360, "CIDs related to Random Accessb - Part 2," Abhishek Patil (Qualcomm)
  - 11-18-0361, "visio file for fig 10-1," Abhishek Patil (Qualcomm)
  - 11-18-0362, "CIDs in 10.2.6," Abhishek Patil (Qualcomm)
  - 11-18-0363, "Resolution for CID 13136," Abhishek Patil (Qualcomm)
  - 11-18-0364, "CID 11001," Abhishek Patil (Qualcomm)
  - 11-18-0365, "CIDs related to BSS Color - Part 1," Abhishek Patil (Qualcomm)
  - 11-18-0366, "Resolutions to various CIDs in Trigger Frame format," Abhishek Patil (Qualcomm)
  - 11-18-0367, "Resolutions to CIDs in 27.5.3.3," Abhishek Patil (Qualcomm)
  - 11-18-0368, "Address inconsistencies & ambiguities in 11.1.3.8 (Multiple BSSID topic)," Abhishek Patil (Qualcomm)
  - 11-18-0369, "Resolutions to various CIDs in clause 9," Abhishek Patil (Qualcomm)
  - 11-18-0370, "Comment resolutions for 27.7.5," Alfred Asterjadhi (Qualcomm)
  - 11-18-0371, "Comment resolutions for 27.7.4," Alfred Asterjadhi (Qualcomm)
  - 11-18-0372, "Comment resolutions for 9.4.2.200 part 2," Alfred Asterjadhi (Qualcomm)
  - 11-18-0373, "Comment resolutions for 27.7.3.4," Alfred Asterjadhi (Qualcomm)
  - 11-18-0379, "Comment resolutions for 9.3.3.X," Alfred Asterjadhi (Qualcomm)
  - 11-18-0380, "Comment resolutions for some CIDs in 9.4.2.237," Alfred Asterjadhi (Qualcomm)
  - 11-18-0390, "CIDs related to 27.5.1," Pascal Viger (Canon Research)
  - 11-18-0423, "11ax D2.0 Comment Resolution CID14318," Liwen Chu (Marvell)
  - 11-18-0425, "11ax D2.0 Comment Resolution 9.7.1," Liwen Chu (Marvell)
  - 11-18-0426, "11ax D2.0 Comment Resolution 9.7.3," Liwen Chu (Marvell)
  - 11-18-0427, "11ax D2.0 Comment Resolution 27.10.2," Liwen Chu (Marvell)
  - 11-18-0428, "11ax D2.0 Comment Resolution 27.10.2," Liwen Chu (Marvell)

  - 11-18-0433, "LB230 CR on Fragmentation - Part 2," Ming Gan (Huawei)
  - 11-18-0443, "11ax D1.0 MAC Comment Resolution for 9.4.2.24," Chao-Chun Wang (MediaTek)
  - 11-18-0444, "11ax D2.0 MAC Comment Resolution for 27.16.4," Chao-Chun Wang (MediaTek)
  - 11-18-0455, "LB230 CR TXOP duration-based RTS/CTS," Yongho Seok (MediaTek)
  - 11-18-0512, "11ax D2.0 Comment Resolution for CID 14207," Yunbo Li (Huawei)
- SR Submissions
  - 11-18-0026, "CR SRG and SRP," Matthew Fischer (Broadcom)
  - 11-18-0106, "LB230 CR Spatial Reuse Operation on Secondary Channel," Yongho Seok (MediaTek)
  - 11-18-0225, "CR Spatial Reuse Group Management CID 12044 12304," Matthew Fischer (Broadcom)

        - 11-18-0391, "CID 11775 Should be re-considered," Graham Smith (SR Technologies)
    - PHY Submissions
        - 11-18-0059, "PPE Threshold Field," Hongyuan Zhang (Marvell)
        - 11-18-0110, "11ax Comment Resolutions for PHY Preamble," Yan Zhang (Marvell)
        - 11-18-0111, "11ax Comment Resolutions for PHY Data field," Yan Zhang (Marvell)
        - 11-18-0136, "Comment Resolutions for Clause 28.2.2 (TXVECTOR and RXVECTOR parameters) Part 1," Bo Sun (ZTE)
        - 11-18-0150, "CR for CIDs related to HE ER SU PPDU," Tianyu Wu (MediaTek)
        - 11-18-0151, "CR for PHY PPDU formats," Tianyu Wu (MediaTek)
        - 11-18-0162, "LB230 CR on CID 12060 and 13047," Ming Gan (Huawei)
        - 11-18-0324, "CR on HE-SIG-B part 3," Yujin Noh (Newracom)
        - 11-18-0349, "Comment Resolutions on Clause 28.3.3 (OFDMA and SU Tone Allocation)," Jung Hoon Suh (Huawei)
        - 11-18-0352, "CR for HE-SIG-B," Tianyu Wu (MediaTek)
        - 11-18-0359, "PHY Comment Resolution on 1024 QAM," Ron Porat (Broadcom)
        - 11-18-0404, "Comment Resolutions on PHY INTRODUCTION Part 4," Lochan Verma (Qualcomm)
        - 11-18-0409, "Comment Resolutions on PHY INTRODUCTION Part 5," Lochan Verma (Qualcomm)
        - 11-18-0463, "Proposed Changes to D2.2 Clause 28.3.20, 28.3.21," Xiaogang Chen (Intel)
        - 11-18-0469, "PHY Comment Resolution on Packet Extension," Ron Porat (Broadcom)
        - 11-18-0475, "Comment resolution on CIDs on Clause 28.3 Part 2," Jianhan Liu (MediaTek)
        - 11-18-0476, "Comment resolution on CIDs on Clause 28.3.18.1 for signal leakage to preamble punctured channels," Jianhan Liu (MediaTek)
        - 11-18-0478, "Comment resolution on CID 11896," Jianhan Liu (MediaTek)
        - 11-18-0483, "Corrections to "Number Of HE-LTF Symbols And Midamble Periodicity" subfield," Sigurd Schelstraete (Quantenna)
        - 11-18-0508, "D2.0 PHY Comment Resolution - Part 2," Youhan Kim (Qualcomm)
3. **Timeline update**
   TG reviewed the timeline - No change.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot**
July 2018	**Mandatory Draft Review**
February 2019	**Formation of Sponsor Ballot pool**
May 2019	**Initial Sponsor Ballot**
December 2019	**RevCom submittal**

Goals for the May 2018 session

- Complete comment resolution and initiate a 30-day WG letter ballot.
- Approve a new revision of the Coexistence. Assurance document taking into account the new added band.
- Prepare and approve PAR extension.

Teleconferences

TGax teleconferences are scheduled after the March 2018 session as follows:

Thursday	March 22nd, April 5th, April 19th, 2018	10:00 - 12:00 (ET)
Thursday	March 29th, April 12th, April 26th, 2018	20:00 - 22:00 (ET)
Thursday	May 17th, 2018	10:00 - 12:00 (ET)

TGax PHY calls are scheduled instead of face-to-face ad hoc meeting:

Wednesday	May 2nd, 2018	20:00 - 22:00 (ET)
Thursday	May 3rd, 2018	20:00 - 22:00 (ET)
Friday	May 4th, 2018	10:00 - 12:00 (ET)

[Back to Page Top]

January 2018 — Orlando, FL

TGax had nine sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	
AM2		**TGax** (PHY ad hoc) **TGax** (MAC & MU ad hoc)		**TGax (full)**
PM1	**TGax (full)**			
PM2		**TGax** (PHY ad hoc) **TGax** (MAC & MU ad hoc)	**TGax** (PHY ad hoc) **TGax** (MAC & MU ad hoc)	**TGax (full)**
PM3	**TGax** (PHY ad hoc) **TGax** (MAC & MU ad hoc)	**TGax** (SR ad hoc) **TGax** (MAC & MU ad hoc)

    - 11-18-0239-00, Minutes of the January 2018 meeting of the IEEE 802.11ax Spatial Reuse ad hoc group

Achievements

1. **Work Completed**
   - Approved resolutions for about 750 technical CIDs.
   - Approved resolutions of Editorial CIDs implemented in draft D 2.1.
   - The TG Editor is planning to produce a new revision based on approved resolutions.
   - A TG motion passed to hold an ad hoc meeting in the Bay Area during the period from February 28th to March 2nd, 2018.
   - No changes to the TG timeline.
2. **Technical Submissions**

   TGax received following submissions during the TGax ad hoc meeting and in the TGax sessions.
   - PHY - 25 submissions
     - 11-18-0006, "Misc CR," Ross Jian Yu (Huawei Technologies)
     - 11-18-0023, "Changes to D2.0 Clause 28.2.5, 28.2.6," Xiaogang Chen (Intel)
     - 11-18-0024, "Changes to D2.0 Clause 28.3.5," Xiaogang Chen (Intel)
     - 11-18-0025, "Proposed Changes to D2.0 Clause 28.3.6," Xiaogang Chen (Intel)
     - 11-18-0028, "Proposed Changes to D2.0 on the HE TB NDP feedback," Xiaogang Chen (Intel)
     - 11-18-0036, "Comment Resolutions on PHY INTRODUCTION Part 1," Lochan Verma (Qualcomm)
     - 11-18-0037, "Comment Resolutions on PHY INTRODUCTION Part 2," Lochan Verma (Qualcomm)
     - 11-18-0038, "Comment Resolutions on HE-SIG-A Part 1," Lochan Verma (Qualcomm)
     - 11-18-0046, "Comment Resolutions on PHY INTRODUCTION Part 3," Lochan Verma (Qualcomm)
     - 11-18-0050, "CR on HE-SIG-B part 1," Yujin Noh (Newracom)
     - 11-18-0051, "CR on HE-SIG-B part 2," Yujin Noh (Newracom)
     - 11-18-0057, "D2.0 PHY Comment Resolution," Youhan Kim (Qualcomm)
     - 11-18-0058, "Comment Resolutions on Midamble," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0059, "PPE Threshold Field," Hongyuan Zhang (Marvell Semiconductors)
     - 11-18-0079, "Comment Resolutions on Clause 28.3.15 (SU-MIMO and DL MU-MIMO beamforming)," Kome Oteri (InterDigital)
     - 11-18-0080, "Comment Resolutions on Clause 9.4.1.63 D2.0 (HE Compressed Beamforming Report field)," Kome Oteri (InterDigital)
     - 11-18-0109, "11ax Comment Resolutions for PHY mathematical descriptions," Yan Zhang (Marvell Semiconductors)
     - 11-18-0110, "11ax Comment Resolutions for PHY Preamble," Yan Zhang (Marvell Semiconductors)
     - 11-18-0111, "11ax Comment Resolutions for PHY Data field," Yan Zhang (Marvell Semiconductors)
     - 11-18-0118, "PHY Comment Resolution," Ron Porat (Broadcom Ltd.)
     - 11-18-0136, "Comment Resolutions for Clause 28.2.2 (TXVECTOR and RXVECTOR parameters) Part 1," Bo Sun (ZTE)
     - 11-18-0150, "CR for CIDs related to HE ER SU PPDU," Tianyu Wu (Samsung)
     - 11-18-0151, "CR for PHY PPDU formats," Tianyu Wu (Samsung) - not on the server
     - 11-18-0159, "Comment resolution on CIDs on Clause 28.3 Part 1," Jianhan Liu (MediaTek)
     - 11-18-0162, "LB230 CR on CID 12060 and 13047," Ming Gan (Huawei Technologies)
     - 11-18-0187, "Tx EVM for Beamformed Transmission," Bin Tian (Qualcomm) - not on the server
     - 11-18-0230, "Misc CR Follow up," Ross Jian Yu (Huawei Technologies)
   - MAC 37 submissions
     - 11-17-1837, "11ax D2.0 Comment Resolution 27.5.3.5," Liwen Chu (Marvell Semiconductors)
     - 11-17-1847, "CIDs related to Multiple BSSID topic - Part 1," Abhishek Patil (Qualcomm)
     - 11-17-1850, "Resolution for CIDs in 9.4.2.37," Abhishek Patil (Qualcomm)
     - 11-17-1857, "CIDs related to Multiple BSSID topic - Part 2," Abhishek Patil (Qualcomm)
     - 11-17-1858, "Resolution for CID 13142," Abhishek Patil (Qualcomm)

3. **Timeline update**
   TG reviewed the timeline - No change.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot — Failed (57.77%)** **LB 225: opened Dec. 1st, 2016 and closed Jan. 8th, 2017**
September 2017	**Draft 2.0 and WG Letter Ballot — Failed (62.84%)** **LB 230: opened Oct. 5th, 2017 and closed Nov. 4th, 2017**
May 2018	**Draft 3.0 and WG Letter Ballot**
July 2018	**Mandatory Draft Review**
February 2019	**Formation of Sponsor Ballot pool**
May 2019	**Initial Sponsor Ballot**
December 2019	**RevCom submittal**

Goals for the March 2018 session

- Continue with comment resolution on draft D2.0.

Teleconferences

TGax teleconferences are scheduled after the January 2018 session as follows:

Thursday	January 25th, 2018	20:00 - 22:00 (ET)
Thursday	February 1st, 2018	10:00 - 12:00 (ET)
Thursday	February 8th, 2018	20:00 - 22:00 (ET)
Thursday	February 22nd, 2018	20:00 - 22:00 (ET)

[Back to Page Top]

November 2017 — Orlando, FL

TGax had four sessions during the week.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	
AM2		**TGax (full)**		**TGax (full)**
PM1	**TGax (full)**			
PM2		**TGax (cancelled)**	**TGax (cancelled)**	**TGax (cancelled)**
PM3				

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

  - 11-17-1727-00, TGax November 2017 Orlando Meeting Minutes
  - 11-17-1789-00, TGax November 2017 Closing Report

WG Letter Ballot #230 on IEEE 802.11ax draft 2.0

- Ballot opened on Oct. 5th, 2017 and closed on Nov. 4th, 2017 (30 days).
- Failed with 62.84% approval.
- 3374 comments are collected.

Achievements

1. **Work Completed**
   - The TG almost completed the assignment of comments received on draft D2.0.
     - A lead is identified for various clauses of the draft. The lead is responsible for coordinating resolutions of relevant CIDs.
   - The TG approved resolutions to 36 CIDs.
   - The TG updated its timeline to reflect the outcome of WG LB #230
   - The TG passed a motion to hold an ad hoc meeting in San Diego during the period of January 10 - 12, 2018.
2. **Technical Presentations**
   TGax received 12 submissions. All of the submissions are presented during the week.
   - 11-17-1682, "Comments on TGax D2.0," Robert Stacy (Intel)
   - 11-17-1687, "TGax Editor's Report," Robert Stacy (Intel)
   - 11-17-1717, "Associated Congestion Avoidance Method Based on Dynamic Adjustment of Beacon Interval," Hongyan Li (Xidian Univ.)
   - 11-17-1719, "Contention Based UL-OFDMA Random Access without back-off," Hongyan Li (Xidian Univ.)
   - 11-17-1723, "TPC combined with channel allocation method for OBSS environment," Hongyan Li (Xidian Univ.)
   - 11-17-1730, "PHY CID 17890 Resolution," Hongyuan Zhang (Marvell)
   - 11-17-1731, "PHY CID 17895 Resolution," Hongyuan Zhang (Marvell)
   - 11-17-1763, "CRs for 20 MHz-only STA - RU Restriction," Sungeun Lee (Cypress)
   - 11-17-1764, "CRs for 28.4.2 and 28.4.4," Sungeun Lee (Cypress)
   - 11-17-1766, "D2.0 Comment Resolution for CIDs on MLME SAP (Clause 6)," Jae Seung Lee (ETRI)
   - 11-17-1769, "Discussion on Dynamic Fragmentation Level 3," Huizhao Wang (Quantenna Communications)
   - 11-17-1774, "Resolution for the TBD in Annex C.3," Edward Au (Huawei Technologies)
   - 11-17-1775, "CR for PICS comments on D2.0 - Part 1," Edward Au (Huawei Technologies)
3. **Timeline update**
   TG reviewed the timeline. No change was made.

---

Achievements

1. **Work Completed**
   - The TG completed the comment resolution on comments received during WG LB225 on draft D1.0.
   - The TG approved a motion to prepare draft D2.0 and start a WG LB.
   - Motion passed to affirm the applicability of the IEEE P802.11ax CSD to the modified PAR.
2. **Technical Presentations**

   Following documents are discussed during the TGax teleconferences and the ad hoc meeting after July 2017 session.
   - 11-17-0389, "CIDs-for-27-2-1-part1," Kaiying Lv (ZTE)
   - 11-17-0553, "LB225 11ax D1.0 Comment Resolution 27.10.4 Part 1," Liwen Chu (Marvell)
   - 11-17-0777, "CR TWT IE," Matthew Fischer (Broadcom)
   - 11-17-0811, "Comment Resolution on TIM Broadcast," Jarkko Kneckt (Apple)
   - 11-17-0925, "CR on HE Duration-based RTS," Huizhao Wang (Quantenna)
   - 11-17-1009, "Quiet time period - part 3 (27.26.3.x)," Chao-Chun Wang (MediaTek)
   - 11-17-1010, "Quiet time period - part 4 (9.4.2.223-225)," Chao-Chun Wang (MediaTek)
   - 11-17-1011, "Quiet time period - part 5 (9.6.29.x)," Chao-Chun Wang (MediaTek)
   - 11-17-1034, "Quiet time period - part 6," Chao-Chun Wang (MediaTek)
   - 11-17-1067, "LB225 11ax D1.0 Comment Resolution OMI and Operation Mode," Liwen Chu (Marvell)
   - 11-17-1068, "LB225 11ax D1.0 Comment Resolution 10.7," Liwen Chu (Marvell)
   - 11-17-1072, "Remaining OMI comment resolutions," Jarkko Kneckt (Apple)
   - 11-17-1082, "Comment resolutions for BRP and BSRP trigger frames," Menzo Wentink (Qualcomm)
   - 11-17-1135, "CR QOS SF," Matthew Fischer (Broadcom)
   - 11-17-1173, "Proposed Resolutions to CID 5011, 6900, 6998, and 9056," Osama Aboul-Magd (Huawei Technologies)
   - 11-17-1174, "Clauses 3.2, 3.3, and 3.4 Comment Resolutions," Osama Aboul-Magd (Huawei Technologies)
   - 11-17-1183, "CR for CID 5772, 9476, 9480," Po-Kai Huang (Intel)
   - 11-17-1220, "Clause 10.2 Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
   - 11-17-1248, "Clause 27.1 Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
   - 11-17-1263, "Misc for HE Ops IE," Alfred Asterjadhi (Qualcomm)
   - 11-17-1267, "LB225 11ax D1.0 Comment Resolution 27.10.2, 27.10.3," Liwen Chu (Marvell)

- 11-17-1268, "Clause 4.3.14a Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
- 11-17-1270, "LB225 CR 10.22.2.11 CID 5374," Yongho Seok (MediaTek) Need more discussion
- 11-17-1271, "LB225 CR 9.7.3 CID 9389," Yongho Seok (MediaTek)
- 11-17-1272, "LB225 CR 10.3.2.10.3 CID 9429," Yongho Seok (MediaTek)
- 11-17-1275, "CIDs related to TF," Abhishek Patil (Qualcomm)
- 11-17-1276, "CIDs related to Random Access," Abhishek Patil (Qualcomm)
- 11-17-1277, "Pending CIDs in 27.16," Abhishek Patil (Qualcomm)
- 11-17-1278, "Proposed Resolution for CID 9846," Abhishek Patil (Qualcomm)
- 11-17-1279, "Various CIDs in Clause 9," Abhishek Patil (Qualcomm)
- 11-17-1283, "CR for 10.5 MPDU Fragmentation," Woojin Ahn (WILUS)
- 11-17-1313, "LB225 CR CID 8538 9377," Yongho Seok (MediaTek)
- 11-17-1317, "CR for 10.3.2.10," Kiseon Ryu (LG Electronics)
- 11-17-1335, "CR for 27.3.1," Laurent Cariou (Intel)
- 11-17-1336, "CR for 9.4.2.240," Laurent Cariou (Intel)

- 11-17-1286, "CR DL MU procedure," Zhou Lan (Broadcom)

3. **Timeline discussion**
   TG reviewed the timeline. No change was made.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot**
September 2017	**Draft 2.0 and WG Letter Ballot**
May 2018	**Mandatory Draft Review**
May 2018	**Formation of Sponsor Ballot pool**
November 2018	**Initial Sponsor Ballot**
July 2019	**RevCom submittal**

Goals for the November 2017 session

- Start and complete comment assignment.
- Start comment resolution on draft D2.0.

Teleconferences

TGax teleconferences are scheduled after the September 2017 session as follows:

Approved in July	Thursday	September 28th, 2017	10:00 - 12:00 (ET)
	Thursday	September 21st, 2017	20:00 - 22:00 (ET)
New!	Thursday	November 2nd, 2017	10:00 - 12:00 (ET)

[Back to Page Top]

July 2017 — Berlin, Germany

TGax originally planned 10 sessions during the week.
One ad hoc session was added during the WG mid-week plenary.
Seven out of eleven sessions were assigned to the ad hoc groups.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	**TGax** (MAC ad hoc)
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		
PM1	**TGax (full)**		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax (full)**
PM2	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax** (MU/SR ad hoc) **TGax** (MAC ad hoc)	**TGax** (PHY ad hocs) **TGax** (MAC ad hoc)	**TGax (full)**
PM3		**TGax** (PHY ad hocs) **TGax** (MAC ad hoc)		

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-17-0887-06, TGax July 2017 Meeting Agenda
  - 11-17-1105-00, TGax July 2017 Berlin Meeting Minutes
  - 11-17-1158-00, TGax July 2017 Closing Report
  - TGax PHY ad hoc group
    - 11-17-1099-04, TGax Jul 2017 Meeting PHY Ad Hoc Agenda
    - 11-17-1094-00, TGax July 2017 Berlin PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc group
    - 11-17-1098-03, TGax MAC Ad-hoc July 2017 Meeting Agenda
    - 11-17-1154-00, July 2017 TGax MAC Ad hoc Meeting Minutes
  - TGax MU & SR ad hoc group
    - 11-17-1116-01, TGax July 2017 Meeting MU & SR ad-hoc Agenda
    - 11-17-1148-00, TGax MU and SR ad hoc group meeting minutes — Berlin, July 2017

Achievements

1. **Work Completed**
   - Continued with the comment resolution on draft D1.0.

        - Resolutions of about 480 comments were approved.
        - The TG Editor is planning to produce draft D1.4 based on the resolved comments.
    - Discussed options and need for volunmrees for the .
    - Motin passswd to extend 802.11ax scope to include frequency bands up to 7.125 GHz
    - Ad hoc meeting is planned for September in the Bay area.

2. **Technical Presentations**

    TGax received 48 submissions. All of the submissions are presented during the week.

    - **PHY** — 21 submissions
        - 11-17-0650, "LB 225 — Clause 18.2 Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
        - 11-17-0902, "Comment Resolutions on Clause 28 (HE PHY) Part 1," Lochan Verma (Qualcomm)
        - 11-17-0945, "CRs on 28.3.3.8," Yujin Noh (Newracom)
        - 11-17-0946, "Text modification on HE-SIG-B," Yujin Noh (Newracom)
        - 11-17-0960, "Follow-up on Doppler Design in 802.11ax," Lochan Verma (Qualcomm)
        - 11-17-0961, "Miscellaneous clarifications On HE PHY Part 1," Lochan Verma (Qualcomm)
        - 11-17-0973, "TGax D1.0 Comment Resolutions on 28.3.3.10 and 28.3.3.2," Jinsoo Choi (LG Electronics)
        - 11-17-0985, "CRs for the HE TB NDP feedback," Xiaogang Chen (Intel)
        - 11-17-0986, "CRs for the HE Trigger-based NDP feedback," Xiaogang Chen (Intel)
        - 11-17-0993, "11ax Comment Resolutions on Data Field," Yang Zhang (Marvell)
        - 11-17-0994, "Midamble Design," Hongyuan Zhang (Marvell)
        - 11-17-0995, "Doppler Comment Resolution," Hongyuan Zhang (Marvell)
        - 11-17-0996, "Update on Timing Related Constants and Some Equations," Bin Tian (Qualcomm)
        - 11-17-0998, "N_{SYM} and T_{PE} at RX side for Midamble design," Yujin Noh (Newracom)
        - 11-17-1001, "Comment Resolutions on Clause 28.2.2 (TXVECTOR and RXVECTOR parameters) Part 1," Bo Sun (ZTE)
        - 11-17-1006, "Miscellaneous HE-SIG-B related CIDs," Sigurd Schelstraete (Quantenna)
        - 11-17-1007, "Proposed resolution for CID 9021," Sigurd Schelstraete (Quantenna)
        - 11-17-1016, "Improvement Comment on Clause 28.3.3.4 (Pilot subcarriers)," Jung Hoon Suh (Huawei Technologies)
        - 11-17-1021, "Usage of Doppler Bit in 11ax," Jianhan Liu (MediaTek)
        - 11-17-1050, "Additional Editorial Update Related to CID 9769," Youhan Kim (Qualcomm)
        - 11-17-1063, "DCM Text Correction," Tianyu Wu (MediaTek)
    - **MAC** — 28 submissions
        - 11-17-0389, "Proposed resolution for CIDs for 27-2-1," Kaiying Lv (ZTE)
        - 11-17-0533, "LB225 CR Sub-clause 27.16.1," Yongho Seok (Newracom)
        - 11-17-0553, "LB225 11ax D1.0 Comment Resolution 27.10.4 Part 1," Liwen Chu (Marvell)
        - 11-17-0693, "11ax D1.0 MAC Comment Resolution for Quiet Time Period Part 1," Chao-Chun Wang (MediaTek)
        - 11-17-0759, "Comment Resolution on trigger frame for random access," Jason Yuchen Guo (Huawei Technologies)
        - 11-17-0812, "Trigger Frame for Random Access," Jason Yuchen Guo (Huawei Technologies)
        - 11-17-0925, "LB225 11ax D1.0 Comment Resolution 10.3.x," Huizhao Wang (Quantenna)
        - 11-17-0926, "CR HE MCS NSS Not Supported," Matthew Fischer (Broadcom Limited)
        - 11-17-0957, "Comment resolution for Fragmentation," Suhwook Kim (LG Electronics)
        - 11-17-1002, "Comment resolution for HCF," Suhwook Kim (LG Electronics)
        - 11-17-1009, "11ax D1.0 MAC Comment Resolution for Quiet Time Period Part 3," Chao-Chun Wang (MediaTek)
        - 11-17-1010, "11ax D1.0 MAC Comment Resolution for Quiet Time Period Part 4," Chao-Chun Wang (MediaTek)
        - 11-17-1011, "11ax D1.0 MAC Comment Resolution for Quiet Time Period Part 5," Chao-Chun Wang (MediaTek)
        - 11-17-1014, "Resolution for CIDs on Association Exchange with DL MU," Stephane Baron (Canon Research)
        - 11-17-1023, "LB225 CR Sub-clause 27.11.3," Yongho Seok (Newracom)
        - 11-17-1031, "CR for remaining CIDs related to 27.5.5," Laurent Cariou (Intel)
        - 11-17-1032, "Proposed resolution for comments in 27.5.2," Abhishek Patil (Qualcomm)
        - 11-17-1034, "11ax D1.0 MAC Comment Resolution for Quiet Time Period Part 6," Chao-Chun Wang (MediaTek)
        - 11-17-1044, "CIDs: Acknowledgment related comments," George Cherian (Qualcomm)
        - 11-17-1046, "Proposed Resolution to CID 7043," Kaiying Lv (ZTE)
        - 11-17-1049, "Target RSSI field," Laurent Cariou (Intel) — *Not on the server*
        - 11-17-1052, "HE MCS and NSS Comment resolutions," Alfred Asterjadhi (Qualcomm)
        - 11-17-1053, "Comment resolutions for remaining CIDs in OM Control," Alfred Asterjadhi (Qualcomm)
        - 11-17-1054, "LB225 CR 27.13 (Link Adaptation)," Frank Hsu (MediaTek)

        - 11-17-1055, "LB225 CR CID 7407,"Yongho Seok (Newracom) — *Not on the server*
        - 11-17-1060, "CR on CID 6053," Jeongki Kim (LG Electronics)
        - 11-17-1062, "Proposed resolution for CID 9958," Abhishek Patil (Qualcomm)
        - 11-17-1067, "LB225 11ax D1.0 Comment Resolution OMI and Operation Mode," Liwen Chu (Marvell)
        - 11-17-1068, "LB225 11ax D1.0 Comment Resolution 10.7," Liwen Chu (Marvell)
        - 11-17-1069, "LB225 11ax D1.0 Comment Resolution 9.7.3," Liwen Chu (Mervall) —*Not on the server*
        - 11-17-1070, "Resolution for CID 5863," Kiseon Ryu (LG Electronics)
        - 11-17-1072, "OMI comment resolutions," Jarkko Kneckt (Apple)
        - 11-17-1077, "11ax D1.3 MAC Comment Resolution for 10.3.2.4 and 27.2.2 Part III," Po-Kai Huang (Intel)
        - 11-17-1081, "11ax D1.0 MAC Comment Resolution for 9.3.1.20," Menzo Wentink (Qualcomm)
        - 11-17-1082, "11ax D1.0 MAC Comment Resolution for 9.3.1.23.2/5," Menzo Wentink (Qualcomm)
        - 11-17-1087, "MAC-CR-CIDs 4813-4814," Alfred Asterjadhi (Qualcomm)
        - 11-17-1088, "Editorial fixes," Alfred Asterjadhi (Qualcomm)
        - 11-17-1091, "Proposed resolution for comments related to CIDs in 27.5.2," Jing Ma (NICT) — *Not on the server*
    - **SR** — 3 submissions
        - 11-17-0669, "Proposed resolution for CID 4928," Kaiying Lv (ZTE)
        - 11-17-0941, "CR for 27.9 spatial reuse," Laurent Cariou (Intel)
        - 11-17-1003, "Text DSC, CCAT and OBSS_PD to Resolve SR Comments," Graham Smith (SRT Wireless)
    - **MU** — 3 submissions
        - 11-17-0935, "Comment resolution for UL OFDMA-based random access (UORA)," Patrice Nezou (Canon Research)
        - 11-17-1059, "CR on 27.5.2.6.2 Part 3," Jeongki Kim (LG Electronics)
        - 11-17-1071, "Resolution for CID 6106, 9571, 10173," Kiseon Ryu (LG Electronics)
    - **Others (covered in the TGax full sessions)** — 7 submissions
        - 11-17-0308, "BSS Load Information Element for 11ax," Frank Hsu (MediaTek)
        - 11-17-0711, "Comment Resolution on PHY-CCA.indication," Rojan Chitrakar (Panasonic)
        - 11-17-0913, "P802.11ax PAR Modification to support 6 GHz band," Richard Kennedy (HPE)
        - 11-17-0933, "P802.11ax PAR Modification," Richard Kennedy (HPE)
        - 11-17-1058, "Proposed resolution for comments related to Section 4.3.14a," Guoqing Li (Apple)
        - 11-17-1066, "CR on UL OFDMA in DFS Channels," Youhan Kim (Qualcomm)
        - 11-17-1080, "Providing Reference Waveform Generator For 11ax PHY Specification," Fei Tong (Samsung)
3. **Timeline discussion**
   TG discussed the timeline. No change was made.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and Comment Collection started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot**
September 2017	**Draft 2.0 and WG Letter Ballot**
May 2018	**Mandatory Draft Review**
May 2018	**Formation of Sponsor Ballot pool**
November 2018	**Initial Sponsor Ballot**
July 2019	**RevCom submittal**

Goals for the September 2017 session

- Continue with the resolution of comments on draft D1.0.
- Prepare draft D2.0 and plan for WG letter ballot.

Teleconferences

TGax teleconferences are scheduled after the July 2017 session as follows:

Thursday	July 20th, 2017	10:00 - 12:00 (ET)
Thursday	July 27th, 2017	20:00 - 22:00 (ET)
Thursday	August 3rd, 2017 August 17th, 2017 August 31st, 2017	10:00 - 12:00 (ET)
Thursday	August 10th, 2017 August 24th, 2017	10:00 - 12:00 (ET)
Thursday	September 21st, 2017	20:00 - 22:00 (ET)
Thursday	September 28th, 2017	10:00 - 12:00 (ET)

[Back to Page Top]

May 2017 — Daejeon, South Korea

TGax had 11 sessions during the week.
Six out of eleven sessions were assigned to the ad hoc groups.

	Monday		Tuesday		Wednesday		Thursday
AM1					**TGax (full)**		
AM2	**TGax (full)**		**TGax (full)**				
PM1					**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)	**TGax (full)**
PM2	**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)	**TGax** (SR ad hoc)	**TGax** (MAC ad hoc)	**TGax** (PHY ad hocs)	**TGax** (MAC ad hoc)	**TGax (full)**
PM3	**TGax** (PHY ad hocs)	**TGax** (MAC ad hoc)	**TGax** (SR ad hocs)	**TGax** (MAC ad hoc)			

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-17-0555-05, TGax May 2017 Meeting Agenda
  - 11-17-0749-00, IEEE 802.11 TGax May 2017 Deajeon Meeting Minutes
  - 11-17-0832-00, TGax May 2017 Closing Report
  - TGax PHY ad hoc group
    - 11-17-0783-02, TGax May 2017 Meeting PHY Ad Hoc Agenda
    - 11-17-0850-00, IEEE 802.11 TGax May 2017 PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc group
    - 11-17-0786-02, TGax MAC Ad-hoc May 2017 Meeting Agenda
    - 11-17-0829-00, May 2017 TGax MAC Ad hoc Meeting Minutes
  - TGax MU ad hoc group

- Submissions for the MU ad hoc was presented in the MAC ad hoc session.
- TGax SR ad hoc group
  - 11-17-0797-02, TGax Spatial Reuse Ad Hoc Group May 2017 Meeting Agenda
  - 11-17-0817-00, Minutes of the May 2017 meetings of the Spatial Reuse ad hoc group of IEEE Task Group AX (TGax)

Achievements

1. **Work Completed**
   - Continued with the comment resolution on draft D1.0.
     - Good progress during the ad hoc meeting and this meeting.
     - Resolutions of over 900 comments were approved.
     - The TG Editor is planning to produce draft D1.3 based on the resolved comments.
   - Discussed the need to produce a reference waveform generator similar to that for HT and VHT $#151 looking for volunteers.
   - No ad hoc meeting is planned for June/July.
     - Increase the frequency of the teleconferences during the week of June 26.
2. **Technical Presentations**

   TGax received 48 submissions. All of the submissions are presented during the week.
   - **PHY** — 19 submissions
     - 11-17-0044, "NDP Feedback Report Design," Ron Porat (Broadcom Limited)
     - 11-17-0232, "CR_clause 28.3.6," Xiaogang Chen (Intel)
     - 11-17-0233, "CR_4905," Xiaogang Chen (Intel)
     - 11-17-0288, "CRs on HE-SIG-B 28.3.10.8.4-5 part 1," Yujin Noh (Newracom)
     - 11-17-0289, "CRs on HE-SIG-B terminologies on 28.3.10.8.1-3," Yujin Noh (Newracom)
     - 11-17-0290, "CRs on TX specification," Yujin Noh (Newracom)
     - 11-17-0465, "CR on TXTIME and PSDU_LENGTH," Youhan Kim (Qualcomm)
     - 11-17-0648, "CR on HE-SIG-A," Ron Porat (Broadcom Limited)
     - 11-17-0650, "LB 225 - Cluase 18.2 Comment Resolution," Osama Aboul-Magd (Huawei Technologies)
     - 11-17-0678, "Discussion of CID 9021," Sigurd Schelstraete (Quantenna Communications)
     - 11-17-0690, "CRs on 28.3.10.7.3," Yujin Noh (Newracom)
     - 11-17-0694, "CRs for packet extension in 28.3.12," Sungeun Lee (Cypress)
     - 11-17-0698, "CRS on Miscellaneous PHY CIDs," Bin Tian (Qualcomm)
     - 11-17-0714, "CSD update for 28.3.6," Dongguk Lim (LG Electronics)
     - 11-17-0734, "Doppler Discussions," Hongyuan Zhang (Marvell)
     - 11-17-0736, "HE Link Adaptation," Xiaogang Chen (Intel)
     - 11-17-0769, "CRs for 20MHz-only STA - Part 3," Sungeun Lee (Cypress)
     - 11-17-0773, "Thoughts on Doppler Design in 802.11ax," Lochan Verma (Qualcomm)
     - 11-17-0774, "CID 8975 resolution," Hongyuan Zhang (Marvell)
   - **MAC** — 28 submissions
     - 11-17-0073, "CR for 27.5.2.7 NDP feedback report," Laurent Cariou (Intel)
     - 11-17-0088, "Discussion for CR on 10.22.2.8 TXOP limits," Woojin Ahn (Wilus)
     - 11-17-0340, "CR for 11-1-3-10," Yonggang Fang (ZTE)
     - 11-17-0360, "LB225 CR for Subclause 27.3.3-Part 1," Ming Gan (Huawei Technologies)
     - 11-17-0389, "CIDs-for-27-2-1-part1," Kaiying Lv (ZTE)
     - 11-17-0553, "LB225 11ax D1.0 Comment Resolution 27.10.4 Part 1," Liwen Chu (Marvell)
     - 11-17-0576, "Resolutions for Comments related to Extended Range Beacon," Tomoko Adachi (Toshiba)
     - 11-17-0581, "LB225-MAC-CR-Miscellaneous," Alfred Asterjadhi (Qualcomm)

     - 11-17-0602, "Misc 27_12," Alfred Asterjadhi (Qualcomm)
     - 11-17-0603, "Misc 27_15," Alfres Asterjadhi (Qualcomm)
     - 11-17-0604, "Misc RDP Control," Alfred Asterjadhi (Qualcomm)
     - 11-17-0607, "LB225-MAC-CR-Misc BSR Control," Alfred Asterjadhi (Qualcomm)
     - 11-17-0621, "CRs for Section 27.4 - part 2," George Cherian (Qualcomm)
     - 11-17-0677, "CRs for Section 9.3.1.9 block ack - part 2," George Cherian (Qualcomm)
     - 11-17-0688, "LB225 11ax D1.0 Comment Resolution 27.10.4 - Part II," Chittabrata Ghosh (Intel)

- 11-17-0702, "CR for CID 9574," Kaiying Lv (ZTE)
- 11-17-0727, "LB225 MAC CR for Clause 10-9," James Yee (MediaTek)
- 11-17-0729, "CR for CID 7250, 7251 and 7252," Kiseon Ryu (LG Electronics)
- 11-17-0730, "CR for CID 7255," Kiseon Ryu (LG Electronics)
- 11-17-0733, "Comment Resolution on TIM broadcast," Jason Yuchen Guo (Huawei Technologies)
- 11-17-0735, "CR to CID4850 and CID8153 on TWT," Jarkko Kneckt (Apple)
- 11-17-0744, "CR for 10.3.2.4 and 27.2.2 Part II," Po-Kai Huang (Intel)
- 11-17-0759, "Comment Resolution on CID 9333 and 9969," Jason Yuchen Guo (Huawei Technologies)
- 11-17-0765, "Follow up unify queue size report," Zhou Lan (Broadcom Limited)
- 11-17-0766, "Spec text unify queue size report," Zhou Lan (Broadcom Limited)
- 11-17-0775, "Non-HT definition," Matthew Fischer (Broadcom Limited)
- 11-17-0777, "CR TWT IE," Matthew Fischer (Broadcom Limited)

◦ **MU** — 1 submissions
- 11-17-0751, "Comment Resolution on retransmission of OFDMA random access," Yunbo Li (Huawei Technologies)

◦ **SR** — 5 submissions
- 11-17-0633, "CR 27.9 spatial reuse updates," Matthew Fischer (Broadcom Limited)
- 11-17-0640, "CR 27.2 SRG updates," Matthew Fischer (Broadcom Limited)
- 11-17-0669, "CR for CID 4928," Kaiying Lv (ZTE)
- 11-17-0724, "LBS2 various," Matthew Fischer (Broadcom Limited)
- 11-17-0748, "Supplementary instructions related to OBSS_PD spatial reuse Disallow / Prohibit," Sean Coffey (RealTek)

◦ **Others (covered in the TGax full sessions)** — 10 submissions
- 11-17-0112, "Link Transmit Power," Matthew Fischer (Broadcom Limited)
- 11-17-0123, "Link Transmit Power text," Matthew Fischer (Broadcom Limited)
- 11-17-0308, "BSS Load Information Element for 11ax," Frank Hsu (MediaTek)
- 11-17-0336, "CR for CID 8555 - Virtual CS during UL MU CS," Rojan Chitrakar (Panasonic)
- 11-17-0337, "Explanation of CR for CID 8555," Rojan Chitrakar (Panasonic)
- 11-17-0361, "BSS Load Information in 802.11ax," Ming Gan (Huawei Technologies)
- 11-17-0582, "OBSS_PD/TPC Examined," Graham Smith (SR Technologies)
- 11-17-0665, "Proposed Resolutions to CID 6901 and 7690," Osama Aboul-Magd (Huawei Technologies)
- 11-17-0707, "CR for CID 8555," Po-Kai Huang (Intel)
- 11-17-0711, "CR for PHY-CCA.indication," Rojan Chitrakar (Panasonic)

3. **Timeline discussion**
   TG discussed and updated the timeline.

March 2017 — Vancouver, BC, Canada

TGax had 10 sessions during the week.
Six out of ten sessions were assigned to the ad hoc groups.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		
PM1	**TGax (full)**		**TGax** (MAC ad hoc) **TGax** (PHY ad hoc)	**TGax (full)**
PM2	**TGax** (MAC ad hoc) **TGax** (PHY ad hoc)	**TGax** (MAC ad hoc) **TGax** (PHY ad hoc)	**TGax** (MU/PHY ad hocs) **TGax** (MAC ad hoc)	**TGax (full)**
PM3		**TGax** (MAC ad hoc)

---

Achievements

1. **Work Completed**
    - Continued with the comment resolution on draft D1.0.
        - Very good progress during the ad hoc meeting and this meeting.
        - The TG Editor is planning to generate a new revision of the TG draft (D1.2) and a new revision of the status of the comment resolution.
    - Spatial Reuse issues were discussed at length.
        - Some progress on spatial reuse.
    - Agreed to hold an ad hoc meeting in Seoul, Korea, May 3-5.
        - PHY ad hoc meeting will be only for one day, Friday May 5.
2. **Technical Presentations**

    TGax received 48 submissions. All of the submissions are presented during the week.
    - **PHY** — 11 submissions
        - 11-17-0044, "NDP Feedback Report Design," Ron Porat (Broadcom)
        - 11-17-0078, "RBW of 11ax," Xiaogang Chen (Intel)
        - 11-17-0231, "CR_clause 28.3.5," Xiaogang Chen (Intel)
        - 11-17-0234, "CR_clause 28.3.19_28.3.20," Xiaogang Chen (Intel)
        - 11-17-0247, "CR HE PHY Introduction Part 4," Lochan Verma (Qualcomm)
        - 11-17-0261, "CR HE PHY Transmit Requirements HE_TRIG_PPDU Part 1," Lochan Verma (Qualcomm)
        - 11-17-0290, "CRs on TX specification," Yujin Noh (Newracom)
        - 11-17-0345, "LB225 CR on TXOP_DURATION (28.2.2)," Jeongki Kim (LG Electronics)
        - 11-17-0398, "11ax Comment Resolutions for HE Preamble," Yan Zhang (Marvell)
        - 11-17-0400, "CRs for 20MHz-only STA - Part 1," Sungeun Lee (Cypress)
        - 11-17-0404, "CR on Pre-HE preamble transmission for trigger based PPDU," Ross Jian Yu (Huawei)
        - 11-17-0414, "CR on clause 28-3-11 HE PHY data field," Tianyu Wu (MediaTek)
        - 11-17-0436, "LB225 Comment Resolution of CID 7517," Jianhan Liu (MediaTek)
    - **MAC** — 25 submissions
        - 11-17-0074, "Explanations for CR on 27.5.2.7," Laurent Cariou (Intel)
        - 11-17-0088, "Discussion for CR on 10.22.2.8 TXOP limits," Woojin Ahn (Wilus)
        - 11-17-0239, "LB225-MAC-CR-HT Control subclause 9.2.4.6.X and 10.1 - Block 2," Alfred Asterjadhi (Qualcomm)
        - 11-17-0240, "LB225-MAC-CR-HT Control subclause 9.2.4.6.X and 10.1 - Block 3," Alfred Asterjadhi (Qualcomm)
        - 11-17-0283, "lb225-mac-cr-9-3-1-23," Raja Banerjea (Qualcomm)
        - 11-17-0285 (not available), "LB225-MAC-CR-HE MCS_NSS resolutions," Alfred Asterjadhi (Qualcomm)
        - 11-17-0308, "CR for section 9.4.2 BSS load PPT," Frank Hsu (MediaTek)
        - 11-17-0319, "CR for Section 27.4," George Cherian (Qualcomm)
        - 11-17-0341, "LB225 11ax D1.0 Comment Resolution 10.13," Liwen Chu (Marvell)
        - 11-17-0344, "LB225 CR on EIFS and TXOP_DURATION (10.3.2.3.7 and 27.11.5)," Jeongki Kim (LG Electronics)
        - 11-17-0346, "LB225 CR on TXOP Truncation (10.22.2.9)," Jeongki Kim (LG Electronics)
        - 11-17-0347, "LB225 CR on Intra-PPDU PS (27.14.1)," Jeongki Kim (LG Electronics)
        - 11-17-0353, "LB225-CRs-on-OFDMA-based-random-access-Response," Suhwook Kim (LG Electronics)
        - 11-17-0359, "Comment resolution for CS Required subfield," Raja Banerjea (Qualcomm)
        - 11-17-0360, "LB225 CR for CID5917 and CID8165," Ming Gan (Huawei)
        - 11-17-0361, "BSS Load Information in 802.11ax," Ming Gan (Huawei)
        - 11-17-0362, "LB225 CR for Subclause 9.4.2.218.2," Ming Gan (Huawei)

- 11-17-0384, "LB225, Comment resolution for 10.24.10," Reza Hedayat (Newracom)
- 11-17-0389, "CIDs-for-27-2-1-part1," Kaiying Lv (ZTE)
- 11-17-0395, "LB225-CR-on-Pre-association," Ming Gan (Huawei)
- 11-17-0396, "Association Exchange using Contention based UL OFDMA," Ming Gan (Huawei)
- 11-17-0421, "cr-for-11.49-HE BSS operation," Chao-Chun Wang (MediaTek)
- 11-17-0443, "LB225-CRs-on-OFDMA-based-random-access-Figure," Suhwook Kim (LG Electronics)
- 11-17-0445, "CR on Per-TID All Ack in Multi-STA BlockAck Frame," Geonjung Ko (Wilus)
- 11-17-0448, "Proposed resolution for comments related to CIDs in 27.5.2," Jing Ma (NICT)

◦ **MU** — 9 submissions
- 11-17-0271, "CR for 17.2.2.1 and 17.3.9.10," Po-kai Huang (Intel)
- 11-17-0282, "11-17-xxxx-0x-00ax-lb225-mac-cr-number-of-ss-9-3-1-23," Raja Banerjea (Qualcomm)
- 11-17-0302, "D1.0 MAC Resolution CR for 27.5.2.4," Po-Kai Huang (Intel)
- 11-17-0325, "CR for 27.14.3 OPS," Laurent Cariou (Intel)
- 11-17-0335, "CR for CID 8142 - Random Access acronym," Rojan Chitrakar (Panasonic)
- 11-17-0338, "CR for 27.5.2.4 - Physical CS CIDs," Rojan Chitrakar (Panasonic)
- 11-17-0349, "LB225 CR for 25.5.2.4 Setting of CS Required Bit," Kiseon Ryu (LG Electronics)
- 11-17-0403, "CR-Subclause-27-5-3-MU-Cascading," David Xun Yang (Huawei)
- 11-17-0442, "LB225, CR CIDs 3215, 3216," Reza Hedayat (Newracom)

◦ **SR** — 10 submissions
- 11-16-1063, "Unified SR text DSC, ATPC, inter-BSS," Graham Smith (SR Technologies)
- 11-16-1476, "CR-for section-25-9-spatial-reuse-operation-for-HE-PPDU," Matthew Fischer (Broadcom)
- 11-17-0075, "SRP-based SR Summary and Update," Matthew Fischer (Broadcom)
- 11-17-0163, "DSC as OBSS_PD," Graham Smith (SR Technologies)
- 11-17-0267, "CR for 25.9.2.2 OBSS_PD Spatial reuse," Laurent Cariou (Intel)
- 11-17-0383, "Spatial Reuse Group Challenges," Reza Hedayat (Newracom)
- 11-17-0452, "LB225, CR for CID3222," Reza Hedayat (Newracom)
- 11-17-0455, "Some clarifications on current SR spec text," Laurent Cariou (Intel)
- 11-17-0458, "OBSS_PD: Threshold problems," Sean Coffey (RealTek)
- 11-17-0459 (not available), Kaiying Lv (ZTE)

◦ **Others (covered in the TGax full sessions)** — 5 submissions
- 11-17-0112, "Link Transmit Power," Matthew Fischer (Broadcom)
- 11-17-0328, "Link Adaptation Feedback for Combating Interference," Feng Jiang (InterDigital)
- 11-17-0334, "Proposed Text for Simulation Scenarios," Frank Hsu (MediaTek)
- 11-17-0369, "Some CIDs related to 20MHz operation," Guoqing Li (Apple)
- 11-17-0370, "Some CIDs related to 20MHz operation -- text," Guoqing Li (Apple)

3. **Timeline discussion**

TG discussed and updated the timeline.

Current Timeline		Modified Timeline	
May 2014	**Start of TG**	**May 2014**	**Start of TG**

---

Achievements

1. **Work Completed**
   - The working group letter ballot #225 on the IEEE 802.11ax draft 1.0 was conducted from December 1st, 2016 to January 8th, 2017.
   - The 802.11ax draft 1.0 did *NOT* meet the requirement of >= 75% approval ratio.
   - Over 7300 comments received.
     - About 4700 out of 7300 comments are technical and general comments.
     - Assignment of comments is completed during the first session of the week.
   - The TG started discussing resolutions of comments submitted on draft D1.0.
     - Approximately 200 comments are resolved.
   - Spatial Reuse issues were discussed at length.
     - Slow progress on SRP-based SR.
   - Proposal to include simplified simulation models in the TG simulation scenarios document was discussed and passed straw poll.
   - Agreed to hold an ad hoc meeting in San Diego, from March 8th to 10th, 2017.
   - Vacant positions of ad hoc co-chairs are filled.

MAC	PHY	Multi-User (MU)	Spatial Reuse (SR)
Eric Wong (Apple)	Bo Sun (ZTE)	Sigurd Schelstraete (Quantenna)	Laurent Cariou (Orange)
Reza Hedayat (Newracom)	Jianhan Liu (MediaTek)	Kiseon Ryu (LG Electronics)	Guido R. Hiertz (Ericsson)
" open " → Chao-Chun Wang (MadiaTek)	Hongyuan Zhang (Marvell)	" open " → David Xun Yang (Huawei)	Jae Seung Lee (ETRI)

2. **Technical Presentations**

   TGax received 48 submissions. All of the submissions are presented during the week.
   - **PHY** — 11 submissions
     - 11-17-0044, "NDP Feedback Report Design," Ron Porat (Broadcom)
     - 11-17-0047, "lb225-cr-28_4_3," Yongho Seok (Newracom)
     - 11-17-0056, "CR HE PHY Capabilities_Part_1," Lochan Verma (Qualcomm)
     - 11-17-0060, "comment resolution for the CCA of preamble puncturing," Yunbo Li (Huawei)
     - 11-17-0072, "CID 6124 Resolution: Remove 2x LTF+08.us GI for UL Transmission," Jianhan Liu (MediaTek)
     - 11-17-0077, "Proposed changes to Draft 1.0," Xiaogang Chen (Intel)

    - 11-16-1520-00, IEEE 802.11 TGax, MU Ad hoc September 2016 TGax Meeting Minutes
  - TGax Spatial Reuse (SR) ad hoc group
    - 11-16-1481-02, 802.11ax Spatial Reuse Ad Hoc Group Agenda
    - 11-16-1569-00, TGax Spatial Reuse ad hoc group meeting minutes - San Antonio, November 2016

Achievements

1. **Work Completed**
   - The TG completed the discussion of all the submissions received.
   - Completed resolution of most of the comments received on draft D0.1.
   - Passed a motion to prepare draft D1.0 and start 30-day WG LB.
2. **Technical Presentations**

   TG received 90 submissions which are classified into PHY, MAC, MU, SR and TG submimssions.
   - **PHY** — 29 submissions
     - 11-16-1295, "CC23 PHY CR Miscellaneous Part-1," Yongho Seok (Newracom)
     - 11-16-1340, "CR HE-PHY Miscellaneous Part-3," Lochan Verma (Qualcomm)
     - 11-16-1341, "CR HE-PHY-Introduction-Part-2," Lochan Verma (Qualcomm)
     - 11-16-1356, "Spec text for HE NDP," Yongho Seok (Newracom)
     - 11-16-1370, "Proposed Spec Text for CCA Section," Laurent Cariou (Intel)
     - 11-16-1371, "CR HE-SIG-B part III," Ross Jian Yu (Huawei)
     - 11-16-1372, "Some proposed changes to D0.5," Ross Jian Yu (Huawei)
     - 11-16-1374, "Resolution on CID495 and Removal of Unnecessary PHY TBDs," Yujin Noh (Newracom)
     - 11-16-1375, "Comment Resolution for CID2867 and Text Change Proposal of 26.3.10.8 HE-SIG-B," Yujin Noh (Newracom)
     - 11-16-1377, "Comment resolution on Clauses 26.3.9 and 26.3.10," Yusuke Asai (NTT)
     - 11-16-1387, "Comment resolution on CID2506 and proposed changes," Jinsoo Chio (LG Electronics)
     - 11-16-1393, "EVM Definition for UL OFDMA," Ron Porat (Broadcom)
     - 11-16-1398, "CR for CID 2077," Sriram Venkateswaran (Broadcom)

- 11-16-1399, "Changes to D0.5," Sriram Venkateswaran (Broadcom)
- 11-16-1402, "11ax Receiver Specification," Bin Tian (Qualcomm)
- 11-16-1406, "Spec Text for 11ax Receiver Requirements," Bin Tian (Qualcomm)
- 11-16-1407, "Changes to D0.5," Xiaogang Chen (Intel)
- 11-16-1408, "PHY CRs 26.3.3,26.3.18,26.3.19," Xiaogang Chen (Intel)
- 11-16-1410, "Clause 26 Fixes," Hongyuan Zhang (Marvell)
- 11-16-1411, "TXTIME and RXTIME Fixes," Hongyuan Zhang (Marvell)
- 11-16-1421, "Smoothness Recommendation for 4x HE-LTF," Feng Jiang (Intel)
- 11-16-1427, "Remove TBDs in PHY Transmit Spec.," Yujin Noh (Newracom)
- 11-16-1434, "Miscellaneous HE PHY corrections," Lochan Verma (Qualcomm)
- 11-16-1437, "Updated Text for DCM," Jianhan Liu (MediaTek)
- 11-16-1438, "0.8us GI with 4x HE LTF," Jianhan Liu (MediaTek)
- 11-16-1439, "Error correction to D0.5_on Beam-change text," Jianhan Liu (MediaTek)
- 11-16-1443, "Spec text: Smoothness Recommendation for HE-LTF," Feng Jiang (Intel)
- 11-16-1448, "Remaining CR on secition-26-2-2 TXRXVECTOR Parameters," Ke Yao (ZTE)
- 11-16-1449, "Proposed Text Changes to TXRXVECTOR in Clause 26.2.2," Ke Yao (ZTE)

◦ **MAC** — 36 submissions
- 11-16-1238, "Setting Quiet time period - text," Chao-Chun Wang (MediaTek)
- 11-16-1352, "CC23 MAC CR Miscellaneous Part-1," Yongho Seok (Newracom)
- 11-16-1354, "CC23 CR Annex C," Yongho Seok (Newracom)
- 11-16-1355, "Spec text for 10.22.2.5 and 3.2," Yongho Seok (Newracom)
- 11-16-1358, "CC0-Remaining CIDs on BA," Alfred Asterjadhi (Qualcomm)
- 11-16-1359, "CC0-Some remaining CIDs related to TWT," Alfred Asterjadhi (Qualcomm)
- 11-16-1360, "CC0-HE variant HT control - Some Remaining CIDs," Alfred Asterjadhi (Qualcomm)
- 11-16-1362, "CC0-Complete RTS Enablement," Alfred Asterjadhi (Qualcomm)
- 11-16-1367, "NDP feedback report," Laurent Cariou (Intel)
- 11-16-1368, "Follow-up on MU EDCA parameters," Laurent Cariou (Intel)
- 11-16-1380, "Proposed text changes for TWT in congested environment," Laurent Cariou (Intel)
- 11-16-1381, "Proposed text changes for fragmentation operation," Laurent Cariou (Intel)
- 11-16-1404, "Early TWT SP Termination in TWT Operation," Jayh hyunhee Park (LG Electronics)
- 11-16-1409, "A-MSDU Fragmentation," Matthew Fischer (Broadcom)
- 11-16-1413, "CID 193 BSS Color Disabled Indication," Abhishek Patil (Qualcomm)
- 11-16-1415, "CID 72 BSS Color change mechanism," Abhishek Patil (Qualcomm)
- 11-16-1416, "CC0-HE BSS operation11-16-xxxx-00-00ax-CC0-HE BSS operation," Alfred Asterjadhi (Qualcomm)
- 11-16-1417, "CC0-HE BSS operation," Alfred Asterjadhi (Qualcomm)
- 11-16-1418, "CC0-HE Multirate Support and 2G4 40MHz HE STA," Alfred Asterjadhi (Qualcomm)
- 11-16-1419, "MCS_NSS_BW_PPDU_Selection_for_11ax," Alfred Asterjadhi (Qualcomm)
- 11-16-1420, "TWT Information frames in 11ax," Alfred Asterjadhi (Qualcomm)
- 11-16-1423, "NAV Update Rule Considering UL MU Operation," Geonjung Ko (WILUS)
- 11-16-1424, "Issue on the CWmax value in MU EDCA," Woojin Ahn (WILUS)
- 11-16-1425, "Clarification on applying MU EDCA parameter set," Woojin Ahn (WILUS)
- 11-16-1431, "IEEE 802.11ax Annex G," Osama Aboul-Magd (Huawei Technologies)
- 11-16-1442, "Spec texts for section 25.4 BA," Jeongki Kim (LG Electronics)
- 11-16-1452, "Multiple BSSID and MU," Liwen Chu (Marvell)
- 11-16-1453, "A-MPDU content," Liwen Chu (Marvell)
- 11-16-1454, "Multiple BSSID and MU Discussion," Liwen Chu (Marvell)
- 11-16-1456, "A-MPDU content discussion," Liwen Chu (Marvell)
- 11-16-1458, "Comment Resolution for Sub-clause 25.13.2," Chittabrata Ghosh (Intel)
- 11-16-1459, "Considerations on Quiet Time Period," Jinsoo Ahn (Yonsei Univ.)
- 11-16-1461, "MU BAR comment resolutions," Reza Hedayat (Newracom)
- 11-16-1464, "RD Protocol," Jarkko Kneckt (Apple)
- 11-16-1468, "A-MPDU Content Capabilities," Raja Banerjea (Qualcomm)
- 11-16-1477, "CC23 Proposed Resolution (Update for) TWT Element," Matthew Fischer (Broadcom)

◦ **Multi-User (MU)** — 12 submissions

        - 11-16-1353, "CC23 MAC CR Miscellaneous Part-2," Yongho Seok (Newracom)
        - 11-16-1357, "CC0 Remaining CIDs on sounding," Alfred Asterjadhi (Qualcomm)
        - 11-16-1361, "CC0- Remaining CIDs on MU Operation," Alfred Asterjadhi (Qualcomm)
        - 11-16-1382, "MAC support of preamble puncture," Zhou Lan (Broadcom)
        - 11-16-1383, "Spec Text: MAC support of preamble puncture," Zhou Lan (Broadcom)
        - 11-16-1389, "Comment Resolution for CID 807," Po-Kai Huang (Intel)
        - 11-16-1390, "Spec Text: Revision for NAV Setting Rule under Immediate Response," Po-Kai Huang (Intel)
        - 11-16-1391, "Comment Resolution Random Access miscellaneous," Young Hoon Kwon (Newracom)
        - 11-16-1392, "Comment Resolution CID 2624 and 2738," Young Hoon Kwon (Newracom)
        - 11-16-1426, "DL/UL indication in MU-RTS," Woojin Ahn (WILUS)
        - 11-16-1441, "Consideration on Internal Contention Between Data and Trigger Frame," Jing Ma (NICT)
        - 11-16-1457, "11ax D0.1 Comment Resolution for Clause 25.5.3," David Xun Yang (Huawei)
    - **Spatial Reuse (SR)** — 9 submissions
        - 11-16-0947, "Proposed text changes for OBSS_PD-based SR parameters," Matthew Fischer (Broadcom)
        - 11-16-1063, "Unified SR text DSC, ATPC, inter-BSS," Graham Smith (SR Technologies)
        - 11-16-1064, "Unified SR approach DSC, ATPC and Inter-BSS," Graham Smith (SR Technologies)
        - 11-16-1121, "Spec Texts: Spatial Reuse Indication for Trigger," Po-Kai Huang (Intel)
        - 11-16-1337, "CR on SR CCA rules clause 25.9," Bo Sum (ZTE)
        - 11-16-1403, "SR Backoff Procedure," Jayh Hyunhee Park (LG Electronics)
        - 11-16-1430, "Comment Resolution for SR on BSS Color," Junichi Iwatani (NTT)
        - 11-16-1440, "Proposed Resolutions to CID 2719," Jing Ma (NICT)
        - 11-16-1450, "CR for CID 2492 section 25.9 spatial reuse operation," Kaiying Lv (ZTE)
    - **Others (covered in the TGax full sessions)** — 4 submissions
        - 11-16-0995, "Editor's report," Robert Stacy (Intel)
        - 11-16-1363, "11ax PAR Verification through OFDMA," Suhwook Kim (LG Electronics)
        - 11-16-1414, "Verifying 11axfs PAR by UL MU-MIMO," Jason Yuchen Guo (Huawei)
        - 11-16-1435, "PAR Verification Simulation Followup," James Yee (MediaTek)

Timeline

TG discussed the timeline. No changes since last update.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG, SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and CC started**
November 2016	**Issue Draft 1.0 and start WG Letter Ballot**
May 2017	**Draft 2.0 and WG recirculation ballot**
November 2017	**Mandatory Draft Review**
January 2018	**Formation of Sponsor Ballot pool**
March 2018	**Initial Sponsor Ballot**
December 2018	**RevCom submittal**

Goals for the January 2017 session

- Start Comment Resolutions on the IEEE 802.11ax draft D1.0.

Teleconferences

Weekly teleconferences are scheduled after the November 2016 session.

Thursday	December 1st, 2016	21:00 - 23:00 (ET)
Thursday	December 8th, 2016	21:00 - 23:00 (ET)
Thursday	December 15th, 2016	21:00 - 23:00 (ET)
Tuesday	January 5th, 2017	11:00 - 13:00 (ET)
Thursday	January 12th, 2017	20:00 - 22:00 (ET)

[Back to Page Top]

September 2016 — Warsaw, Poland

The TGax had 11 sessions during the week.
Six out of eleven sessions were assigned to the ad hoc group sessions.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax (full)**	
AM2	**TGax (full)**	**TGax** (MU ad hoc) **TGax** (MAC ad hoc)		**TGax (full)**
PM1			**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax (full)**
PM2	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax** (MU ad hoc) **TGax** (MAC ad hoc)	**TGax (full)**
PM3	**TGax** (PHY ad hoc) **TGax** (SR ad hoc)

Achievements

1. **Work Completed**
   - TG received 90 submissions.
     - Number of submissions: PHY/MAC/MU/SR/TG = 28/43/12/9/6.
       The TG completed the discussion of all the submissions.
       Exact count of resolved CIDs will be published by the Editor.
   - The TG editor is planning to have draft revision D0.5 ready based on resolved comments.
2. **Technical Presentations**

   TG received 90 submissions which are categorized into PHY, MAC, MU, SR and TG.
   - **PHY** — 28 submissions
     - 11-16-1133, "11ax sounding modes reduction," Yan Zhang (Marvell)
     - 11-16-1134, "11ax spec text on sounding modes reduction," Yan Zhang (Marvell)
     - 11-16-1135, "11ax comment resolutions for clause 26.3.5," Yan Zhang (Marvell)
     - 11-16-1136, "11ax comment resolutions for clause 26.3.8," Yan Zhang (Marvell)
     - 11-16-1137, "11ax comment resolutions for clause 26.3.9," Yan Zhang (Marvell)
     - 11-16-1138, "11ax comment resolutions for clause 26.3.10," Yan Zhang (Marvell)
     - 11-16-1148, "CR HE-SIG-A part III," Ross Jian Yu (Huawei)
     - 11-16-1149, "CR HE-SIG-A part II," Ross Jian Yu (Huawei)
     - 11-16-1150, "CR Packet Extension part I," Ross Jian Yu (Huawei)
     - 11-16-1160, "Comment Resolution for CID 355," Eunsung Park (LG Electronics)
     - 11-16-1167, "UL MU Clarifications," Ron Porat (Broadcom)
     - 11-16-1168, "DCM TBDs," Sriram Venkateswaran (Broadcom)
     - 11-16-1169, "CR Duplicate MU MIMO," Sriram Venkateswaran (Broadcom)
     - 11-16-1170, "HE PHY Capabilities," Lochan Verma (Qualcomm)
     - 11-16-1171, "PHY Miscellaneous Part-1," Lochan Verma (Qualcomm)
     - 11-16-1176, "PHY CR Miscellaneous Part-2," Lochan Verma (Qualcomm)
     - 11-16-1179, "PHY section editorial comments on D0.4," Sungeun Lee (Cypress)
     - 11-16-1190, "Tx Quality Requirements," Daewon Lee (Newracom)
     - 11-16-1191, "Comment Resolution for CIDs on PHY Transmit Spec," Daewon Lee (Newracom)
     - 11-16-1192, "Comment Resolution for CID 1450," Daewon Lee (Newracom)
     - 11-16-1193, "HE variant HT Control - HE Link Adaptation," Daewon Lee (Newracom)
     - 11-16-1194, "Removal of Unnecessary PHY TBDs," Daewon Lee (Newracom)
     - 11-16-1202, "CR HE-LTF," Ming Gan (Huawei)
     - 11-16-1227, "cr-on-26-3-7," Shahrnaz Azizi (Intel)
     - 11-16-1232, "Text change proposal of TXTIME in 26.3.19 and 26.4.3," Daewon Lee (Newracom)
     - 11-16-1233, "CR for DCM related CID 503, 504 and 2750," Daewon Lee (Newracom)
     - 11-16-1240, "Packet Extension Factor calculation fix," Yan Zhang (Marvell)
     - 11-16-1242, "spec text for packet extension factor calculation fix," Yan Zhang (Marvell)
   - **MAC** — 43 submissions
     - 11-16-0864, "Comment Resolutions on Clause 6 & 8 comments," Yasuhiko Inoue (NTT)
     - 11-16-0869, "Misc. TWT comment resolution," Zhou Lan (Broadcom)
     - 11-16-0881, "Comment resolution on ROMI," Jayh Park (LG Electronics)
     - 11-16-0882, "Comment resolution on TOMI," Alfred Asterjadhi (Qualcomm)
     - 11-16-0883, "Comment resolution for CID152," JayhPark (LG Electronics)
     - 11-16-0884, "Spec. Text for HE Operation element and AID Assign Rule," Jianhan Liu (MediaTek)
     - 11-16-0913, "SU Multi-TID Rules," Jarkko Kneckt (Apple)
     - 11-16-0917, "Text for TID value of ALL ACK signaling," Woojin Ahn (WILUS)
     - 11-16-0918, "Discussions on Partial BSS Color," Geonjung Ko (WILUS)
     - 11-16-0924, "NAV resetting with RTS/MU-RTS," Weiming Xing (ZTE)
     - 11-16-0925, "Spec text on NAV resetting with RTS/MU-RTS," Weiming Xing (ZTE)
     - 11-16-0941, "CR HE Fragmentation - part 2," Ming Gan (Huawei)
     - 11-16-0942, "CR Service Field," Ming Gan (Huawei)
     - 11-16-0960, "AP access procedure for UL MU operation," Jinsoo Ahn (Yonsei Univ.)

- 11-16-0961, "Consideration on Multi-STA BlockAck Optimization," Hanseul Hong (Yonsei Univ.)
- 11-16-0962, "EDCA rules-follow up 1," Jing Ma (NICT)
- 11-16-0963, "EDCA rules-follow up 2," Jing Ma (NICT)
- 11-16-0998, "Rules for 2 EDCA parameters," Laurent Cariou (Intel)
- 11-16-1110, "Comment Resolution on subclause 10.22.2 and 10.22.4," Yongho Seok (Newracom)
- 11-16-1131, "Comment Resolution on MU Ack Policy," Yongho Seok (Newracom)
- 11-16-1154, "MAC CR for CID 966," Weiming Xing (ZTE)
- 11-16-1157, "Comment resolution on SU_MU ACK procedures," Jeongki Kim (LG Electronics)
- 11-16-1173, "Comment Resolution on Two NAVs - Part II," Po-Kai Huang (Intel)
- 11-16-1180, "Proposed text changes for MU EDCA parameters," Laurent Cariou (Intel)
- 11-16-1181, "CW value after UL MU procedure," Woojin Ahn (WILUS)
- 11-16-1182, "HE Sounding Feedback Segmentation," Liwen Chu (Marvell)
- 11-16-1183, "MU RTS CTS data rate comment," Liwen Chu (Marvell)
- 11-16-1184, "A-MPDU 25.10 25.10.2 comment resolution," Liwen Chu (Marvell)
- 11-16-1185, "A-MPDU 25.10.3 comment resolution," Liwen Chu (Marvell)
- 11-16-1186, "A-MPDU Content Comment Resolution," Liwen Chu (Marvell)
- 11-16-1188, "MAC Capabilities in HE Capabilities IE," Alfred Asterjadhi (Qualcomm)
- 11-16-1189, "CC0-TWT operation," Alfred Asterjadhi (Qualcomm)
- 11-16-1195, "MAC Clarifications," Alfred Asterjadhi (Qualcomm)
- 11-16-1204, "Intra-PPDU Power Save for a Multiple BSSID Set Case," Geonjung Ko (Wilus)
- 11-16-1205, "Text for Intra-PPDU Power Save for a Multiple BSSID Set Case," Geonjung Ko (Wilus)
- 11-16-1210, "Comment Resolution on MU acknowledgement procedure," Junichi Iwatani (NTT)
- 11-16-1211, "CR_CID_122_576_972_2598," Huizao Wang (Quantenna)
- 11-16-1213, "CR TWT and HE element related," Matthew Fischer (Broadcom)
- 11-16-1220, "MU mode EDCA control," Jinsoo Ahn (Yonsei Univ.)
- 11-16-1234, "Spec Text for TWT Protection field," Hanseul Hong (Yonsei Univ.)
- 11-16-1236, "Text for Partial BSS Color and AID Assignment Rule," Geonjung Ko (Wilus)
- 11-16-1237, "Setting Quiet Time Period," Chao-Chun Wang (MediaTek)
- 11-16-1238, "Setting Quiet Time Period - text," Chao-Chun Wang (MediaTek)

◦ **Multi-User (MU)** — 12 submissions
- 11-16-0773, "Comment Resolution Section 25.6 HE Sounding," Raja Banerjea (Qualcomm)
- 11-16-0929, "CR - UL MU Operation," Simone Merlin (Qualcomm)
- 11-16-1152, "DL OFDMA Ack rule for uplink trigger based PPDU," Ming Gan (Huawei)
- 11-16-1158, "Comment resolution on OFDMA random access procedure," Jeongki Kim (LG Electronics)
- 11-16-1162, "Comment Resolution on Retransmission of OFDMA Random Access," Yunbo Li (Huawei)
- 11-16-1163, "Concluding OFDMA M-BA transmission," Zhou Lan (Broadcom)
- 11-16-1177, "comment-resolution-TXOP-truncation," Young Hoon Kwon (Newracom)
- 11-16-1199, "Proposed text changes for DL OFDMA Acknowledge rule for trigger based PPDU," Ming Gan (Huawei)
- 11-16-1222, "Comment Resolution on UL OFDMA Random Access," Chittabrata Ghosh (Intel)
- 11-16-1224, "Random Access Parameter Set (RAPS) element," Chittabrata Ghosh (Intel)
- 11-16-1239, "Trigger Frame MU BAR part 1," Raja Banerjea (Qualcomm)
- 11-16-1241, "Trigger Frame MU BAR part 2," Raja Banerjea (Qualcomm)

◦ **Spatial Reuse (SR)** — 9 submissions
- 11-16-0945, "Clarification for OBSS_PD-based SR parameters," Matthew Fischer (Broadcom)
- 11-16-0947, "Proposed text changes for OBSS_PD-based SR parameters," Laurent Cariou (Intel)
- 11-16-1064, "Unified SR approach DSC, ATPC and Inter-BSS," Graham Smith (SR Technologies)
- 11-16-1155, "SR Comment Resolution for CID994," Kaiying Lv (ZTE) - not available
- 11-16-1161, "Simulation-based evaluation of OBSS_PD-based SR default parameters," Tanguy Ropitault (NIST)
- 11-16-1178, "comment-resolution-SR-RSSI," Young Hoon Kwon (Newracom)
- 11-16-1216, "SR Field SRP Table for HE-Trigger-Based PPDU," James Wang (MediaTek)
- 11-16-1223, "CR for Section 25.9.2 OBSS_PD Spatial reuse," Laurent Cariou (Intel)
- 11-16-1225, "Heads We Win, Tails We Don't Lose: Proposals for Dynamic CCA," Sean Coffey (RealTek)

◦ **Others (covered in the TGax full session)** — 6 submissions
- 11-15-1095, "OFDMA performance in 11ax," Suhwook Kim (LG Electronics)

- 11-16-1143, "11ax PAR Verification," Paul Cheng (MediaTek)
- 11-16-1159, "Summary of Mandatory or Optional Features of 802.11ax," Joonsuk Kim (Apple)
- 11-16-1166, "Meeting PAR requirements with UL OFDMA," Sriram Venkateswaran (Broadcom)
- 11-16-1198, "Preliminary 11ax PAR Verification," Jiyong Pang (Huawei)
- 11-16-1219, "Considerations on CR for 2665 and 2715," Jing Ma (NICT)

3. **Timeline discussion**
   TG discussed and updated the timeline.

Current Timeline		Modified Timeline	
May 2014	**Start of TG**	**May 2014**	**Start of TG**
November 2014	**First draft of the TG SFD approved**	**November 2014**	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**	**January 2016**	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and CC started**	**March 2016**	**Draft 0.1 was approved and CC started**
September 2016	**Issue Draft 1.0 and start WG Letter Ballot**	**November 2016**	**Issue Draft 1.0 and start WG Letter Ballot**
March 2017	**Draft 2.0 and WG recirculation ballot**	**May 2017**	**Draft 2.0 and WG recirculation ballot**
November 2017	**Mandatory Draft Review and formstion of Sponsor Ballot pool**	**January 2018**	**Mandatory Draft Review and formation of Sponsor Ballot pool**
March 2018	**Initial Sponsor Ballot**	**March 2018**	**Initial Sponsor Ballot**
December 2018	**RevCom submittal**	**December 2018**	**RevCom submittal**

Goals for the November 2016 session

- Continue with comment resolutions.
- Prepare draft 1.0 and start WG letter ballot.

Teleconferences

TGax teleconferences are scheduled after the September 2016 session as follows.

Thursday	September 29th, 2016	10:00 - 12:00 (ET)
Thursday	October 20th and 27th, 2016	10:00 - 12:00 (ET)
Thursday	October 30th, 2016	20:00 - 22:00 (ET)
Thursday	November 17th, 2016	10:00 - 12:00 (ET)

[Back to Page Top]

July 2016 — San Diego, CA

The TGax had 11 sessions during the week.
Six out of eleven sessions were assigned to the ad hoc group sessions.

	Monday	Tuesday		Wednesday	Thursday
AM1	**TGax** (full, ad hoc)			**TGax** (full)	
AM2		**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)		**TGax** (full)

	Monday	Tuesday		Wednesday		Thursday
PM1				**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)	**TGax** (full)
PM2	**TGax** (full)	**TGax** (MU ad hoc)	**TGax** (SR ad hoc)	**TGax** (full)		
PM3		**TGax** (PHY ad hoc)	**TGax** (MAC ad hoc)

    - 11-16-1022-00, TGax Spatial Reuse ad hoc group meeting minutes

---

Achievements

1. **Work Completed**
   - TGax received about 90 submissions.
     - Number of submissions: PHY/MAC/MU/SR/TG = 26/34/12/10/8.

     Most of the submissions are proposed resolutions for the comments on the draft 0.1.
     A number of submissions were proposing new text to be added to the draft.
     - A long list of submissions are yet to be considered.
   - Approved the resolutions of about 230 comments discussed during telecons.
     - Exact count of resolved CIDs will be published by the Editor.
     - The TG editor is planning to have draft revision D0.3 ready based on resolved comments.
2. **Technical Presentations**

   Here is the list of 90 submissions.
   - **PHY** — 26 submissions
     - 11-16-0816, "Comment Resolution for CID 2183," Daewon Lee (Newracom)
     - 11-16-0872, "CR HE-SIG-A Part II," Ross Jian Yu (Huawei Technologies)
     - 11-16-0873, "CR HE-SIG-A Part I," Ross Jian Yu (Huawei Technologies)
     - 11-16-0891, "LDPC for 1024QAM," Hongyuan Zhang (Marvell)
     - 11-16-0892, "Spec Text on LDPC for 1024QAM," Hongyuan Zhang (Marvell)
     - 11-16-0893, "11ax Extended Range PPDU," Bin Tian (Qualcomm)
     - 11-16-0894, "HE-LTF Capabilities," Hongyuan Zhang (Marvell)
     - 11-16-0895, "Spec Text for HE-LTF Capabilities," Hongyuan Zhang (Marvell)
     - 11-16-0896, "11ax Beamformee Capabilities," Hongyuan Zhang (Marvell)
     - 11-16-0897, "Spec Text for Beamformee Capabilities," Hongyuan Zhang (Marvell)

- 11-16-0898, "BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
- 11-16-0899, "Spec Text for BW Field in HE-MU Format," Hongyuan Zhang (Marvell)
- 11-16-0900, "PHY Comment Resolution for CID 1052 and 2519," Bin Tian (Qualcomm)
- 11-16-0903, "Gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
- 11-16-0904, "Proposed text for gamma phase rotation for HE PPDU," Yujin Noh (Newracom)
- 11-16-0906, "RU restriction on 20MHz operating STAs," Joonsuk Kim (Apple)
- 11-16-0908, "CR - proposed text on RU restriction of 20MHz STAs," Joonsuk Kim (Apple)
- 11-16-0910, "Minimum Occupied Bandwidth," Ron Porat (Broadcom)
- 11-16-0914, "Bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
- 11-16-0915, "Text for bit field finalization of HE-SIG-A," Lochan Verma (Qualcomm)
- 11-16-0920, "PHY comment resolution for CID 1659,493,494," Xiaogang Chen (Intel)
- 11-16-0922, "PHY CR 1024 QAM," Sriram Venkateswaran (Broadcom)
- 11-16-0923, "PHY CR DCM Constellation Mapping," Sriram Venkateswaran (Broadcom)
- 11-16-0928, "CR on Section 26.3.9.8 - HE-SIG-B," Kaushik Josiam
- 11-16-0937, "11ax Comment Resolutions for Clauses 26.3.2-26.3.9.3-26.3.9.4-26.3.9.5-26.3.10.2- 26.3.10.13," Rui Cao (Marvell)
- 11-16-0964, "Considerations on MAC-PHY interactions during SR operations," Jing Ma (NICT)

- **MAC** — 34 submissions
  - 11-16-0828, "HE Fragmentation - part 1," Alfred Asterjadhi (Qualcomm)
  - 11-16-0829, "Comment Resolution for Section 10.24.10 Block Ack/GCR block ack," Reza Hedayat (Newracom)
  - 11-16-0844, "CC0-Intra_PPDU_PS," Alfred Asterjadhi (Qualcomm)
  - 11-16-0856, "Issue of Buffer Status reporting," Stephane Baron (Canon)
  - 11-16-0860, "comment resolution on A-MPDU format," Yongho Seok (Newracom)
  - 11-16-0861, "comment resolution on mu acknowledgment procedure," Yongho Seok (Newracom)
  - 11-16-0862, "comment resolution on subclause 25.11," Yongho Seok (Newracom)
  - 11-16-0864, "d0.1 comment resolution on clause 6," Yasuhiko Inoue (NTT)
  - 11-16-0867, "CIDs for CIDs: Section 9.3.1.9.3 Compressed BA format," George Cherian (Qualcomm)
  - 11-16-0868, "CIDs for Section 9.3.1.9.7 Multi STA BAs," George Cherian (Qualcomm)
  - 11-16-0869, "Comment resolution section 9.3 TWT," Zhou Lan (Broadcom)
  - 11-16-0871, "Trigger Frame Per User Info Order," Zhou Lan (Broadcom)
  - 11-16-0877, "Comment resolution on CID 783 (TXOP Duration field format)," Jeongki Kim (LG Electronics)
  - 11-16-0878, "Comment resolution on CID 782 (Intra-PPDU PS)," Jeongki Kim (LG Electronics)
  - 11-16-0881, "Comment resolution on ROMI," Jayh Park (LG Electronics)
  - 11-16-0882, "Comment resolution on TOMI," Jayh Park (LG Electronics)
  - 11-16-0883, "Comment resolution for CID 152," Jayh Park (LG Electronics)
  - 11-16-0884, "Spec. Text for HE Operation element and AID Assign Rule," Jianhan Liu (MediaTek)
  - 11-16-0890, "Comment Resolution on NAV Setting of Single and Multiple Protection and Control Response," Po-Kai Huang (Intel)
  - 11-16-0913, "SU Multi-TID Rules," Jarkko Kneckt (Apple)
  - 11-16-0916, "TID value of ALL ACK signaling," Woojin Ahn (Wilus Institute)
  - 11-16-0917, "Text for TID value of ALL ACK signaling," Woojin Ahn (Wilus Institute)
  - 11-16-0918, "Discussions on Partial BSS Color," Geonjung Ko (Wilus Institute)
  - 11-16-0924, "NAV resetting with RTS/MU-RTS," Weimin Xing (ZTE)
  - 11-16-0925, "Spex text on NAV resetting with RTS/MU-RTS," Weimin Xing (ZTE)
  - 11-16-0941, "CR HE Fragmentation - part 2," Ming Gan (Huawei technologies)
  - 11-16-0942, "CR Service Field," Ming Gan (Huawei Technologies)
  - 11-16-0951, "Setting for TXOP Duration Field," Po-Kai Huang (Intel)
  - 11-16-0952, "Spec text trigger frame per user info order," Zhou Lan (Broadcom)
  - 11-16-0953, "Comment Resolution and Spec Text for Setting for TXOP Duration field," Po-Kai Huang (Intel)
  - 11-16-0960, "AP access procedure for UL MU operation," Jinsoo Ahn (Yonsei Univ.)
  - 11-16-0961, "Consideration on Multi-STA BlockAck Optimization," Hanseul Hong (Yonsei Univ.)
  - 11-16-0962, "EDCA rules follow up 1," Jing Ma (NICT)
  - 11-16-0963, "EDCA rules follow up 2," Jing Ma (NICT)
  - 11-16-0966, "CID 71 and CID 190 Resolutions," Jarkko Kneckt (Apple)

        - 11-16-0998, "2 sets of EDCA parameters," Laurent Cariou (Intel)
    - **Multi-User (MU)** — 12 submissions
        - 11-16-0866, "Comment Resolution of Section 26.3.13 MU-MIMO," Kome Oteri (InterDigital)
        - 11-16-0875, "CR for the section 10.3.2.8a CS Condition to Respond CTS," Kiseon Ryu (LG Electronics)
        - 11-16-0876, "CR for the section 25.5.2.4 UL MU CS CCA and CS Required Bit," Kiseon Ryu (LG Electronics)
        - 11-16-0880, "UL MU Transmission Rules - EDCA backoff," Jayh Park (LG Electronics)
        - 11-16-0885, "Comment Resolution on UL MU CS NAV Consideration," Po-Kai Huang (Intel)
        - 11-16-0886, "Comment Resolution for some UL MU CS TBD," Po-Kai Huang (Intel)
        - 11-16-0887, "Spec Text for MU-RTS restriction on HE MU PPDU," Po-Kai Huang (Intel)
        - 11-16-0926, "Soliciting UL_MU_ACK," Raja Banerjea (Qualcomm)
        - 11-16-0929, "CR - UL MU Operation," Simone Merlin (Qualcomm)
        - 11-16-0930, "CR - DL MU Operation," Simone Merlin (Qualcomm)
        - 11-16-0938, "Comment Resolution for Sub-clause 25.10.4," Chittabrata Ghosh (Intel)
        - 11-16-0958, "UL OFDMA for Unassociated STAs," Leonardo Lanante (Kyushu Institute of Tech.)
    - **Spatial Reuse (SR)** — 10 submissions
        - 11-16-0879, "Comment resolution on SR for VHT PPDUs," Jeongki Kim (LG Electronics)
        - 11-16-0889, "Comment Resolution for Spatial Reuse (Intra BSS detection)," Young Hoon Kwon (Newracom)
        - 11-16-0901, "Clarification of SR Fields in HE Trigger Based PPDU," Daewon Lee (Newracom)
        - 11-16-0902, "Proposed Text Changes for SR Fields in HE Trigger-Based PPDU," Daewon Lee (Newracom)
        - 11-16-0905, "SR Fields Clarification," Ron Porat (Broadcom)
        - 11-16-0919, "Discussions on SR Fields in HE Trigger-based PPDU," Geonjung Ko (Wilus Institute)
        - 11-16-0310, "DSC Proposal Text," Graham Smith (SR Technologies)
        - 11-16-0945, "Clarifications for OBSS_PD-based SR parameters," Laurent Cariou (Intel)
        - 11-16-0947, "Proposed text changes for OBSS_PD-based SR parameters," Laurent Cariou (Intel)
        - 11-16-0957, "Comment Resolutions on OBSS_PD Conditions in 25.9.3," James Wang (MediaTek)
    - **Others (covered in the TGax full sessions)** — 8 submissions
        - 11-15-1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
        - 11-16-0835, "EIFS," Alfred Asterjadhi (Qualcomm)
        - 11-16-0870, "Conclusing MAC Trigger Padding," Zhou Lan (Broadcom)
        - 11-16-0907, "20MHz HE devices," Joonsuk Kim (Apple)
        - 11-16-0909, "CR - proposed text on 20 MHz devices," Joonsuk Kim (Apple)
        - 11-16-0949, "MAC trigger frame padding follow up," Zhou Lan (Broadcom)
        - 11-16-0965, "On High Efficiency WLAN (HEW) TG PAR Scope," Osama Aboul-Magd (Huawei Technologies)
3. **Timeline**
   TG discussed the timeline. No changes since last update.

Current Timeline	
May 2014	**Start of TG**
November 2014	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and CC started**
September 2016	**Issue Draft 1.0 and start WG Letter Ballot**
March 2017	**Draft 2.0 and WG recirculation ballot**
July 2017	**MDR (Mandatory Draft Review)**
November 2017	**Formstion of Sponsor Ballot pool**
March 2018	**Initial Sponsor Ballot**
December 2018	**RevCom submittal**

Goals for the September 2016 session

- Continue with Comment Resolutions.

Teleconferences

TGax teleconferences are scheduled after the July 2016 session.

Thursday	August 4th, 2016	20:00 - 22:00 (ET) (approved during the May 2016 session)
Thursday	August 11th and 25th, 2016, September 1st, 2016	10:00 - 12:00 (ET)
Thursday	August 18th, 2016, September 1st and 22nd, 2016	20:00 - 22:00 (ET)

[Back to Page Top]

May 2016 — Waikoloa, HI

The TGax had 10 sessions during the week.
Six out of ten sessions were assigned to the ad hoc groups.

	Monday		Tuesday		Wednesday		Thursday
AM1							
AM2	**TGax** (full)		**TGax** (MU ad hoc)	**TGax** (MAC+SR ad hoc)			**TGax** (full)
PM1					**TGax** (PHY ad hoc)	**TGax** (MAC+SR ad hoc)	
PM2	**TGax** (PHY ad hoc)	**TGax** (MAC+SR ad hoc)	**TGax** (PHY ad hoc)	**TGax** (MU ad hoc)	**TGax** (PHY ad hoc)	**TGax** (MAC+SR ad hoc)	**TGax** (full)
PM3	**TGax** (PHY ad hoc)	**TGax** (MU ad hoc)

    - 11-16-0716-00, May 2016 Waikoloa TGax MU Ad Hoc Meeting minutes

Achievements

1. **Work Completed**
   - TGax received about 70 submissions.
     - Numbers of submissions: PHY/MAC/MUSR/TG = 33/18/9/3/6.

     Majority of the submission were requesting changes to the TG Specification Framework.

     Few submissions were addressing comment resolution mainly of the PHY clause.
   - Agreed to terminate the Specification Framework process. The frame of reference is Draft D0.1.
     - Future submissions shall bring text to continue developing the TG draft.
     - The TG Technical Editor is planning to generate draft D0.2 based on outcome of this meeting.
   - Approved the resolutions of about 200 comments, most of them addressing the PHY clause.
   - Revisited and accepted a new modified timeline.
2. **Technical Presentations**

   70 technical submissions have been received and have been covered during the week.

   A list of the submissions is also available in the agenda document.
   - **PHY** — 33 submissions
     - 11-16-0608, "Beamforming Feedback Report Structure," Sameer Vermani (Qualcomm)
     - 11-16-0610, "CR HE-SIG-A Part I," Ross Jian Yu (Huawei Technologies)
     - 11-16-0611, "Remaining Issues in Trigger Frame Design," Sameer Vermani (Qualcomm)
     - 11-16-0613, "SIG-B Related Issues," Lochan Verma (Qualcomm)
     - 11-16-0614, "Comment Resolution on Clause 26.1.1 Part 1," Lochan Verma (Qualcomm)
     - 11-16-0615, "Comment Resolution on Clause 26.3.12 Part 1," Lochan Verma (Qualcomm)
     - 11-16-0617, "Remaining Topics in Power Control," Bin Tian (Qualcomm)
     - 11-16-0618, "11ax CSD Design," Bin Tian (Qualcomm)
     - 11-16-0619, "PAPR Reduction of HE-SIGB," Bin Tian (Qualcomm)
     - 11-16-0620, "DCM PHY Parameters," Hongyuan Zhang (Marvell)
     - 11-16-0621, "DCM Interleaver," Tianyu Wu (MediaTek)
     - 11-16-0622, "16 QAM Napping for DCM," Sudhir Srinivasa (Marvell)
     - 11-16-0623, "CR on Section 26.3.10.12," Bin Tian (Qualcomm)
     - 11-16-0625, "CR on Section 26.3.6," Bin Tian (Qualcomm)
     - 11-16-0626, "Feedback Element Compression for 802.11ax," Kome Oteri (InterDigital Communications)
     - 11-16-0633, "Left over Issues in RU Signaling for HE-SIGB," Yan Zhang (Marvell)
     - 11-16-0634, "11ax Comment Resolutions for Clauses 26.3.2," Yan Zhang (Marvell)
     - 11-16-0635, "BW indication for Non-contiguous Channel Bonding," Yunbo Li (Huawei Technologies)
     - 11-16-0636, "TXOP Duration field in HE-SIG-A," Jeongki Kim (LG Electronics)
     - 11-16-0637, "Load balancing indication for MU-MIMO over 484-tone and larger RU in OFDMA," Ming Gan (Huawei Technologies)
     - 11-16-0638, "Discussions for Non-contiguous Channel Bonding," John Son (Wilus)
     - 11-16-0639, "Follow-up on HE-SIG-B user-specific field," Jinsoo Choi (LG Electronics)
     - 11-16-0649, "Feedback Tone Map and Quantization," Sriram Venkateswaran (Broadcom)
     - 11-16-0652, "Power scaling of 4 extra tones," Xiaogang Chen (Intel)
     - 11-16-0653, "CR on section 26.3.3," Xiaogang Chen (Intel)
     - 11-16-0654, "CP and LTF Options and Signaling," Ron Porat (Broadcom)
     - 11-16-0655, "On MCS0 DCM Modulation and DCM Capability," Jianhan Liu (MediaTek)
     - 11-16-0656, "1024QAM Modulation," Jianhan Liu (MediaTek)
     - 11-16-0658, "CR on 26.3.7.1," Jinsoo Choi (LG Electronics)
     - 11-16-0659, "CR on 26.3.9.9 and 26.3.5," Eunsung Park (LG Electronics)
     - 11-16-0663, "CR on Secition 26.2.2," Ke Yao (ZTE)
     - 11-16-0681, "Comment Resolution CID 215 2486," Daewon Lee (Newracom)
     - 11-16-0682, "CR CID on PHY data field other," Daewon Lee (Newracom)
   - **MAC** — 18 submissions
     - 11-16-0583, "Backoff Procedure Handling Upon TF Reception," Yu Wang (Ericsson)
     - 11-16-0584, "Need of SDU Fragmentation to Reduce Padding Ratio in UL-OFDMA Transmission," Yu Wang (Ericsson)

- 11-16-0645, "MU Minimum MPDU Start Spacing," Liwen Chu (Marvell)
- 11-16-0646, "HE Beamforming Feedback," Liwen Chu (Marvell)
- 11-16-0657, "In-device Multi-radio Coexistence and UL MU operation," Robert Stacy (Intel)
- 11-16-0673, "Multi-User EDCA," Jinsoo Ahn (Yonsei Univ.)
- 11-16-0674, "EIFS excess problem of Acknowledgement for UL MU procedure," Hanseul Hon (Yonsei Univ.)
- 11-16-0675, "comment resolution for CID2383," Yonggang Fang (ZTE)
- 11-16-0684, "Channel Access Efficiency," Evgeny Khorov (IITP)

◦ **Multi-User (MU)** — 9 submissions
- 11-16-0582, "Random Access RU Allocation in the Trigger Frame," Evgeny Khorov (IITP)
- 11-16-0591, "Issues related to OCW management," Patrice Nezou (Canon)
- 11-16-0592, "Follow up on Issue related to unused UL OFDMA RUs," Stephane Baron (Canon)
- 11-16-0648, "MU-RTS/CTS PHY Format," Po-Kai Huang (Intel)
- 11-16-0661, "Adaptive Random Access UL OFDMA," Leonardo Lanante (Kyushu Institute of Technology)
- 11-16-0662, "Further consideration on channel access rule to facilitate MU transmission opportunity," Jing Ma (NICT)
- 11-16-0664, "Consideration on backoff procedure for UL MU transmission," Jing Ma (NICT)
- 11-16-0665, "Some Notes on Interference Alignment for Downlink Multi-User MIMO," Dzevdan Kapetanovic (Ericsson)
- 11-16-0667, "Signaling of Multi-TID Aggregation Limit," Chittabrata Ghosh (Intel)

◦ **Spatial Reuse (SR)** — 3 submissions
- 11-16-0581, "Proposed changes to SR clause," Soma Tayamon (Ericsson)
- 11-16-0589, "Fractional-Backoff Procedure and Dynamic CCA," Bo Li (Northwestern Polytechnical University)
- 11-16-0647, "Consideration of Spatial Reuse for Trigger Frame," Po-Kai Huang (Intel)

◦ **Others (covered in TGax full sessions)** — 6 submissions
- 11-16-0571, "QoS Handling of Trigger Frame," Yu Wang (Ericsson)
- 11-16-0597, "TG ax Indoor Enterprise Scenarios, Color, DSC and TPC," Graham Smith (SR Technologies)
- 11-16-0604, "Simulation-based evaluation of DSC in enterprise scenario," Tanguy Ropitault (NIST)
- 11-16-0609, "HE NDPA frame format," Ross Jian Yu (Huawei)
- 11-16-0612, "Mandatory/Optional Issues for 802.11ax," Sameer Vermani (Qualcomm)
- 11-16/0629, "Box 5 Calibration Results," Marik Hsiao (MediaTek)

3. **Timeline**

TG discussed and revised the timeline as follows.

Current Timeline		Modified Timeline	
May 2014	**Start of TG**	**May 2014**	**Start of TG**
November 2014	**First draft of the TG SFD approved**	**November 2014**	**First draft of the TG SFD approved**
January 2016	**Proposed TG draft**	**January 2016**	**Proposed TG draft**
March 2016	**Draft 0.1 was approved and CC started**	**March 2016**	**Draft 0.1 was approved and CC started**
July 2016	**Issue Draft 1.0 and start WG Letter Ballot**	**September 2016**	**Issue Draft 1.0 and start WG Letter Ballot**
March 2017	**Draft 2.0 and WG recirculation ballot**	**March 2017**	**Draft 2.0 and WG recirculation ballot**
		July 2017	**MDR (Mandatory Draft Review)**
		November 2017	**Formation of Sponsor Ballot pool**
January 2018	**Initial Sponsor Ballot**	**March 2018**	**Initial Sponsor Ballot**
		December 2018	**RevCom submittal**

Goals for the July 2016 session

- Continue with comment resolutions.

Teleconferences

Weekly teleconferences are planned after the May 2016 session.

Thursday	June 2nd, 2016	10:00 - 12:00 (ET)
Thursday	June 16th, 2016	10:00 - 12:00 (ET)
Thursday	June 23rd, 2016	20:00 - 22:00 (ET)
Thursday	June 30th, 2016	10:00 - 12:00 (ET)
Thursday	July 7th, 2016,	20:00 - 22:00 (ET)
Thursday	July 14th, 2016	10:00 - 12:00 (ET)
Thursday	August 4th, 2016	20:00 - 22:00 (ET)

[Back to Page Top]

March 2016 — Macau

The TGax had 9 sessions during the week.
Five out of nine sessions were assigned to the ad hoc groups.

	Monday	Tuesday	Wednesday	Thursday
AM1				
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full)
PM1	**TGax** (full)		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	
PM2		**TGax** (MAC ad hoc) **TGax** (SR ad hoc)	**TGax** (MAC ad hoc) **TGax** (MU ad hoc)	**TGax** (full)
PM3	**TGax** (SR ad hoc) **TGax** (MU ad hoc)	**TGax** (full)		

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

- TGax
  - 11-16-0235-07, TGax March 2016 Meeting Agenda
  - 11-16-0415-00, IEEE 802.11 TGax March 2016 Macau Meeting Minutes
  - 11-16-0475-00, TGax March 2016 Closing Report

  - TGax PHY ad hoc group
    - 11-16-0421-03, TGax PHY Ad Hoc March 2016 Meeting Agenda
    - 11-16-0509-00, TGax March 2016 Macau PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc group

- 11-16-0427-04, TGax MAC Ad Hoc March 2016 Meeting Agenda
- 11-16-0439-01, March 2016 Macau TGax MAC ad hoc meeting minutes

- TGax Multi-User (MU) ad hoc group
  - 11-16-0419-02, TGax MU Ad-hoc Agenda March 2016
  - 11-16-0466-00, TGax MU Ad Hoc Meeting minutes March 2016

  - 11-16-0422-02, TGax SR Ad Hoc March 2016 Agenda
  - 11-16-0537-00, TGax SR Ad Hoc group March 2016 minutes

Achievements

1. **Passed a number of motions affecting all aspects of the TG Specification Framework**
   - PHY — 22 motions passed.
   - MAC — 17 motions passed.
   - MU — 9 motions passed.
   - SR — 2 motions passes.
2. **TG Documents**
   - Latest revision of the Specification Framework is available at; https://mentor.ieee.org/802.11/dcn/15/11-15-0132-16-00ax-spec-framework.docx
   - Other TG documents
     - Simulation Scenarios: https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
     - Evaluation Methodology: https://mentor.ieee.org/802.11/dcn/14/11-14-0571-12-00ax-evaluation-methodology.docx
     - Channel Models: https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
     - Functional Requirements: https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc
3. **Technical Presentations**

   48 technical submissions have been covered during the week.

   Here is the list of submissions which is also available in the agenda document.
   - **PHY** — 12 submissions
     - 11-15-1354, "SIGA fields and Bitwidths," Ron Porat (Broadcom)
     - 11-16-0203, "Signalling Support for Full Bandwidth MU-MIMO Compressed SIG-B Mode," Lei Huang (Panasonic)
     - 11-16-0319, "I-Q Decoupled OFDM: A Solution To I/Q Imbalance," Shouxing Simon Qu (Blackberry)
     - 11-16-0335, "HE-STF sequences for 160/80+80MHz," Eunsung Park (LG Electronics)
     - 11-16-0343, "Spectral Mask Discussion," Hongyuan Zhang (Marvell)
     - 11-16-0344, "PHY Padding Related Issues," Hongyuan Zhang (Marvell)
     - 11-16-0346, "11ax Pilot Sequence," Bin Tian (Qualcomm)
     - 11-16-0349, "HE-SIG-B Compression Mode," Kaushik Josiam (Samsung)
     - 11-16-0367, "Power Scaling of L-LTF and L-STF," Yakun Sun (Marvell)
     - 11-16-0389, "Sounding Design," Sriram Venkateswaran (Broadcom)
     - 11-16-0395, "Preamble transmission for Uplink OFDMA," Ming Gan (Huawei)
     - 11-16/0397, "HE-SIG-B Signaling Discussions," John Son (WILUS Institute)
   - **MAC** — 18 submissions
     - 11-16-0297, "Results for beacon collisions," Evgeny Khorov (IITP RAS)
     - 11-16-0345, "Simultaneous NAK for MU GCR-BA," Jinsoo Ahn (Yonsei Univ.)
     - 11-16-0347, "Fragmentation for MU frames-Follow up on parameters," Alfred Asterjadhi (Qualcomm)
     - 11-16-0352, "Considerations on MU initial link setup," Woojin Ahn (Yonsei Univ.)
     - 11-16-0353, "MU-RTS/CTS for TWT Protection," Hanseul Hong (Yonsei Univ.)
     - 11-16-0358, "Maximal A-MPDU Size," Liwen Chu (Marvell)
     - 11-16-0359, "Management ACK," Liwen Chu (Marvell)
     - 11-16-0361, "Ack Policy of UL MU frame," Jeongki Kim (LG Electronics)
     - 11-16-0362, "Multi-TID Aggregation Limit," Chittabrata Ghosh (Intel)
     - 11-16-0365, "Multi-STA BA Design," Xiaofei Wang (InterDigital)
     - 11-16-0368, "MAC padding options for legacy trigger frame," Zhou Lan (Broadcom)
     - 11-16-0369, "M-BA aggregated trigger frame," Zhou Lan (Broadcom)

        - 11-16-0377, "Sounding Sequences Clarifications," Simone Merlin (Qualcomm)
        - 11-16-0378, "Extended BA Bitmap," Simone Merlin (Qualcomm)
        - 11-16-0383, "RU Signaling in Trigger Frame," Yunbo Li (Huawei)
        - 11-16-0396, "Issues on BSS Color Bits Collision," Geonjung Ko (WILUS Institute)
        - 11-16-0399, "Considerations on Trigger Frame for Random Access Procedure," Evgeny Khorov (IITP RAS)
        - 11-16-0404, "BlockAck Bitmap," Dengyu Qiao (Huawei)
    - **Multi-User (MU)** — 6 submissions
        - 11-16-0331, "Power Control for Multi-User Transmission in 802.11ax," Kome Oteri (InterDigital)
        - 11-16-0333, "Issue related to unused UL OFDMA RUs," Stephane Baron (Canon)
        - 11-16-0340, "Random Access UL MU Resource Allocation and Indication," Leonardo Lanante (Kyushu Institute of Technology)
        - 11-16-0371, "Further consideration for MU-RTS/CTS," Jing Ma (NICT)
        - 11-16-0379, "Trigger Frame Format," Simone Merlin (Qualcomm)
        - 11-16-0413, "Power Control for UL MU," Arjun Bharadwaj (Qualcomm)
    - **Spatial Reuse (SR)** — 7 submissions
        - 11-16-0212, "Enterprise Scenario DSC and Color," Graham Smith (SR Technplogies)
        - 11-16-0310, "DSC Proposed Text," Graham Smith (SR Technplogies)
        - 11-16-0350, "Enterprise Scenario TPC and DSC," Graham Smith (SR Technplogies)
        - 11-16-0360, "Simulation results of spatial reuse with various MCSs," Junichi Iwatani (NTT)
        - 11-16-0382, "Discussion on Spatial Reuse Operations in 11ax," Yunbo Li (Huawei)
        - 11-16-0403, "Spatial Re-Use with Adaptive CCA and TPC Simulation," Frank Hsu (MediaTek)
        - 11-16-0414, "Adjustment Rules for Adaptive CCA and TPC," James Wang (MediaTek)
    - **Others (covered in the TGax full session)** — 5 submissions
        - 11-15-1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
        - 11-16-0066, "Views on UL MU Features," Joonsuk Kim (Apple)
        - 11-16-0355, "Snapshot of Residential Use 2016," Carol Ansley (ARRIS Group)
        - 11-16-0364, "AID Assign Rules Based on BSS Color and HE Operation Element," Jianhan Liu (MediaTek)
        - 11-16-0394, "Achieving High Efficiency in Medium Access via Roster Mode," Sean Coffey (RealTek)
4. **Draft Specification**
   The TGax approved version 0.1 of the draft specification.

> **< TG Motion >**
> Move to accept document 11-16/0024r1 as the TG draft specification D0.1, and start a 21 day comment collection period.
>
> - The submission is available at: https://mentor.ieee.org/802.11/dcn/16/11-16-0024-01-00ax-proposed-draft-specification.docx
>
> Moved by Robert Stacey, Second by Simone Merlin.
> Result: Y/N/A = 75/0/5, motion passes.

Goals for the May 2016 session

- Comment Resolution.
- Technical presentations.
- Revisit the timeline based on the number of comments received.

Teleconferences

TGax teleconferences are planned before the May 2016 session.

Thursday	April 14th, 2016,	10:00 - 12:00 (ET)

Thursday	April 21st, 2016	20:00 - 22:00 (ET)
Thursday	April 28th, 2016,	10:00 - 12:00 (ET)
Thursday	May 5th, 2016	20:00 - 22:00 (ET)

[Back to Page Top]

January 2016 — Atlanta, GA

The TGax had 10 sessions during the week.
Four out of ten sessions were assigned to the ad hoc groups.

	Monday	Tuesday	Wednesday	Thursday
AM1			**TGax** (full)	
AM2	**TGax** (full)	**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full)
PM1		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)	**TGax** (full)	
PM2	**TGax** (MAC ad hoc) **TGax** (SR ad hoc)		**TGax** (full)	**TGax** (full)
PM3		**TGax** (MU ad hoc)		

Main documents

The meeting agenda and minutes of the TGax and its subgroups, and the TGax closing report can be found here.

    - 11-16-0150-00, January 2016 Atlanta TGax MU Ad Hoc Meeting minutes

Achievements

1. **Passed a number of motions affecting all aspects of the TG Specification Framework**
   - PHY — 30 motions passed.
   - MAC — 9 motions passed.
   - MU — 7 motions passed.
2. **TG Documents**
   - Latest revision (rev. 15) of the Specification Framework is available at; https://mentor.ieee.org/802.11/dcn/15/11-15-0132-15-00ax-spec-framework.docx

- Other TG documents
  - Simulation Scenarios: https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
  - Evaluation Methodology: https://mentor.ieee.org/802.11/dcn/14/11-14-0571-12-00ax-evaluation-methodology.docx
  - Channel Models: https://mentor.ieee.org/802.11/dcn/14/11-14-0882-04-00ax-tgax-channel-model-document.docx
  - Functional Requirements: https://mentor.ieee.org/802.11/dcn/14/11-14-1009-02-00ax-proposed-802-11ax-functional-requirements.doc

3. **Technical Presentations**

   48 technical submissions have been covered during the week.

   A list of the submissions is available in the agenda document.

   - **PHY** — 22 submissions
     - 11-16-0030, "Maximum Tone Grouping Size for 802.11ax Feedback with MU-MIMO," Kome Oteri (InterDigital)
     - 11-16-0033, "1x HE-LTF for ULMUMIMO," Hongyuan Zhang (Marvell)
     - 11-16-0034, "Beamforming with HE-LTF Compression," Hongyuan Zhang (Marvell)
     - 11-16-0036, "CRC Generation for HE-SIG," Yakun Sun (Marvell)
     - 11-16-0037, "Continuous Puncturing for HE-SIGB Encoding," Yakun Sun (Marvell)
     - 11-16-0038, "Sequence for 1x LTF," Daewon Lee (Newracom)
     - 11-16-0039, "RU Allocation in SIG-B," Daewon Lee (Newracom)
     - 11-16-0040, "Issues with Compressed SIG-B Mode," Yujin Noh (Newracom)
     - 11-16-0041, "Link Adaptation for HE WLAN," Yujin Noh (Newracom)
     - 11-16-0044, "MCS Levels and TX EVM Requirement for 1024 QAM," Eunsung Park (LG Electronics)
     - 11-16-0045, "Flexible Wider Bandwidth Transmission," John Son (WILUS)
     - 11-16-0046, "Content for the extra tones in LSIG and RLSIG," Jiayin Zhang (Huawei)
     - 11-16-0047, "Discussion on the HE Extended Range SU PPDU," Jiayin Zhang (Huawei)
     - 11-16-0052, "Remaining HE-LTF Sequence Design," Le Liu (Huawei)
     - 11-16-0053, "Requirements for UL MU Transmissions," Arjun Bharadwaj (Qualcomm)
     - 11-16-0056, "On QPSK DCM Modulation and LDPC Tone Mapper for DCM," Jianhan Liu (MediaTek)
     - 11-16-0071, "Packet Extension Follow Up," Ron Porat (Broadcom)
     - 11-16-0079, "Allocation sizes for BCC in OFDMA," Ken Taniguchi (Toshiba)
     - 11-16-0080, "1x/2x/4x OFDM Symbol in HE SU PPDU with BCC," Heejung Yu (Yeungnam Univ./NEWRACOM)
     - 11-16-0088, "Ng for Compressed Beamforming feedback," Sriram Venkateswaran (Broadcom)
     - 11-16-0089, "Single Stream Pilots in UL MU MIMO," Sriram Venkateswaran (Broadcom)
     - 11-16-0104, "Rate Matching for HE-SIG-B," Daewon Lee (Newracom)
   - **MAC** — 12 submissions
     - 11-16-0015, "Explicit Block Ack Request in DL MU PPDU," Yongho Seok (Newracom)
     - 11-16-0017, "Beacon Collision Avoidance," Evgeny Khorov (IITP)
     - 11-16-0018, "TDMA for Eliminating Hidden Station Effect in Dense Networks," Evgeny Khorov (IITP)
     - 11-16-0028, "Follow Up for Multi-STA BA for SU Transmissions," Xiaofei Wang (InterDigital)
     - 11-16-0029, "TXOP Truncation Enhancement," Xiaofei Wang (InterDigital)
     - 11-16-0042, "BSS Color Settings for a Multiple BSSID Set," Geonjung Ko (WILUS)
     - 11-16-0050, "Fragmentation for MU frames-Follow up on acks," Alfred Asterjadhi (Qualcomm)
     - 11-16-0051, "Response Give Trigger Type," David Xun Yang (Huawei)
     - 11-16-0068, "BSS Color and Multiple BSSID," Liwen Chu (Marvell)
     - 11-16-0069, "Multi-TID A-MPDU in MU Transmission," Liwen Chu (Marvell)
     - 11-16-0087, "NAV cancellation issues on MU protection," Jinsoo Ahn (Yonsei Univ.)
     - 11-16-0102, "High Efficiency Medium Access via Rosters," Sean Coffey (RealTek)
   - **Multi-User (MU)** — 9 submissions
     - 11-16-0031, "Proposed UL MU CS Rules," Lei Wang (Marvell)
     - 11-16-0048, "Protection using MU RTS/CTS," Young Hoon Kwon (Newracom)
     - 11-16-0054, "UL MU CCA Response," Kaiying Lv (ZTE)
     - 11-16-0057, "Indication for UL MU Carrier Sensing," Kiseon Ryu (LG Electronics)
     - 11-16-0065, "Duration/ID field in UL-MU," Tomo Adachi (Toshiba)
     - 11-16-0066, "Views on UL-MU Features," Joonsuk Kim (Apple)
     - 11-16-0067, "MAC Padding in Trigger Frame," Liwen Chu (Marvell)
     - 11-16-0085, "Congestion control for UL MU random access," Woojin Ahn (Yonsei Univ.)

        - 11-16-0091, "Regarding HE NDPA frame for DL Sounding Sequence," Narendar Madhavan (Toshiba)
    - **Spatial Reuse (SR)** — 1 submission
        - 11-16-0060, "Recipient-aware Spatial Reuse," Reza Hedayat (Newracom)
    - **Others (presented in the TGax full session)** — 4 submissions
        - 11-15-1095, "OFDMA Performance in 11ax," Suhwook Kim (LG Electronics)
        - 11-16-0024, "Proposed draft specification," Robert Stacy (Intel)
        - 11-16-0043, "Clarification of SFD Texts," John Son (WILUS)
        - 11-16-0059, "Non-contiguous Channel Bonding in 11ax," Yunbo Li (Huawei)
4. **Draft Specification**
    - Document 11-16-0024-00 was submitted by the TG Editor and it includes a "draft" draft specification.
    - The submission was reviewed by the TG Editor and is available on mentor to be reviewed by TG members.
5. **Plan for Progressing TG Draft**
    - Approve the TG draft specification during the March 2016 meeting.
        - Draft 0.1
    - Start a comment collection (CC) for 30 days on draft 0.1 - Ends some time in April.
    - Comment resolution (May and July)
    - Draft 1.0 in July 2016 and start WG LB.

Goals for the March 2016 session

- Discuss Proposals affecting the TG Specification Framework document
- Approve D0.1 of the TG Draft
- Approve a 30-day Comment Collection Process.

Teleconferences

Three teleconferences are planned before the March 2016 session.

Thursday	February 4th, 2016,	10:00 - 12:00 (ET)
Thursday	February 18th, 2016	20:00 - 22:00 (ET)
Thursday	March 3rd, 2016,	10:00 - 12:00 (ET)

[Back to Page Top]

November 2015 — Dallas, TX

The TGax originally planned 10 sessions during the week.
One session was added during the WG mid-week plenary session.
Five out of eleven sessions were assigned to the ad hoc groups.

	Monday	Tuesday	Wednesday	Thursday
AM1	**TGax** (full, ad hoc)		**TGax** (full)	**TGax** (full)
AM2		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)		**TGax** (full)
PM1	**TGax** (full)	**TGax** (MU ad hoc) **TGax** (SR ad hoc)	**TGax** (PHY ad hoc) **TGax** (SR ad hoc)	**TGax** (full)
PM2			**TGax** (PHY ad hoc) **TGax** (MU ad hoc)	
PM3		**TGax** (PHY ad hoc) **TGax** (MAC ad hoc)

  - 11-15-1232-04, TGax November 2015 Meeting Agenda
  - 11-15-1368-01, IEEE 802.11 TGax November 2015 Dallas Meeting Minutes
  - 11-15-1457-00, TGax November 2015 Closing Report

  - TGax PHY ad hoc group
    - 11-15-1385-03, TGax PHY Ad Hoc November 2015 Meeting Agenda
    - 11-15-1442-00, November 2015 Dallas TGax PHY Ad Hoc Meeting Minutes
  - TGax MAC ad hoc group
    - 11-15-1382-03, TGax MAC Ad Hoc November 2015 Meeting Agenda
    - 11-15-1414-00, Nov 2015 Dallas TGax MAC ad hoc meeting minutes
  - TGax Multi-User (MU) ad hoc group
    - 11-15-1418-02, TGax MU Ad-hoc Agenda November 2015
    - 11-15-1423-01, November 2015 Dallas TGax MU Ad Hoc Meeting minutes
  - TGax Spatial Reuse (SR) ad hoc group
    - 11-15-1403-06, TGax SR Ad Hoc November 2015 Agenda
    - 11-15-1421-01, Minutes of the IEEE 802.11ax Spatial Reuse ad hoc group meeting - Dallas, November 2015

Achievements

1. **Passed a number of motions affecting all aspects of the TG Specification Framework**
   - PHY — 33 motions.
   - MAC — 16 motions.
   - Multi-User (MU) — 12 motions.
   - Spatial Reuse (SR) — 1 motion.
2. **TG Documents**
   - Latest revision of the Specification Framework is available
     - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-10-00ax-spec-framework.docx
   - Approved new revisions of the TGax Simulation Scenario and Evaluation Methodology documents.
     - Simulation Scenarios
     - Evaluation Methodology
   - Other documents
     - TGax Channel Models
     - 802.11ax Functional Requirements
3. **Technical Presentations**
   70 technical submissions have been covered during the week.
   A list of the submissions is here which is also contained in the agenda document.
   - **PHY** — 27 submissions
     - 11-15-1059, "SIG-B Encoding Structure Part II," Ron Porat (Broadcom)
     - 11-15-1289, "Non-Uniform Constellations for 1024-QAM," Thomas Handte (Sony)
     - 11-15-1303, "LTF Sequence Designs," Sungho Moon (Newracom)
     - 11-15-1304, "Supported Resource Allocations in SIG-B," Sungho Moon (Newracom)
     - 11-15-1305, "STBC and Padding Discussions" Hongyuan Zhang (Marvell)
     - 11-15-1309, "Extended Range Support for 11ax," Sameer Vermani (Qualcomm)
     - 11-15-1310, "11ax LDPC Tone Mapper for 160MHz," Bin Tian (Qualcomm)
     - 11-15-1311, "11ax Spectral Mask," Bin Tian (Qualcomm)
     - 11-15-1315, "HE-SIG-B Mapping and Compression," Kaushik Josiam (Samsung)
     - 11-15-1320, "Maximum Tone Grouping Size for 802.11ax Feedback," Kome Oteri (InterDigital)

- 11-15-1321, "Reducing Explicit MIMO Compressed Beamforming Feedback Overhead for 802.11a," Kome Oteri (InterDigital)
- 11-15-1322, "Channel Estimation Enhancement and Transmission Efficiency Improvement Using Beam-Change Indication and 1x HE-LTF," Jianhan Liu (MediaTek)
- 11-15-1323, "HE-STF Sequence," Ensung Park (LG Electronics)
- 11-15-1324, "MCS for HE-SIG-B," Dongguk Lim (LG Electronics)
