IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent of:	Juhyung Son, et al.	Attorney Docket No. 39843-0195IP1
U.S. Patent No.:	11,159,210	
Issue Date:	October 26, 2021	
Appl. Serial No.:	16/731,031	
Filing Date:	December 31, 2019	
Title:	WIRELESS COMMUNICATION METHOD AND WIRELESS COMMUNICATION TERMINAL FOR SIGNALING MULTI-USER PACKET	

PUBLIC ACCESSIBILITY DECLARATION OF

CHRISTOPHER HANSEN, PH.D.

I declare that all statements made herein on my own knowledge are true and that all statements made on information and belief are believed to be true, and further, that these statements were made with the knowledge that willful false statements and the like so made are punishable under Section 1001 of Title 18 of the United States Code.

Date: April 30, 2025

By: _____
Christopher Hansen

SAMSUNG 1026

Table of Contents

I. PROFESSIONAL BACKGROUND.....3

II. THE IEEE 802.11 WORKING GROUP AND TASK GROUP AX 7

III. PUBLIC ACCESSIBILITY ANALYSIS.....12

A. Public Accessibility of Documents Hosted on the IEEE Mentor Website 16

B. Public Accessibility of the P802.11ax/D1.0 Draft 31

1. Option 1: Become a Working Group Voting Member 36

2. Option 2: Obtain the D1.0 Draft as a Non-Voting Member ...40

IV. CONCLUSION.....43

I, Christopher Hansen, do hereby declare the following:

1. I submit this Declaration at the request of Samsung Electronics Co., Ltd. and Samsung Electronics America, Inc. (collectively, "Samsung" or "Petitioners") for consideration by the Patent Trial and Appeal Board in certain *inter partes* review ("IPR") proceedings.

2. I reside in Los Altos, California.

3. I am over eighteen years of age, and I am otherwise competent to testify as to the matters set forth herein if I am called upon to do so.

4. I am being compensated for my time at my standard consulting rate. I am also being reimbursed for expenses that I incur during the course of this work. My compensation is not contingent upon the results of my study and analysis, the substance of my testimony, or the outcome of any proceeding involving the challenged patent or patents. I have no financial interest in the outcome of this matter or in any litigation involving the challenged patent or patents.

I. PROFESSIONAL BACKGROUND

5. I have attached a copy of my curriculum vitae (CV) as Appendix A.

6. I received a Bachelor of Science (B.S.) degree in Electrical Engineering from Rensselaer Polytechnic Institute in 1987. I received a Ph.D. in Electrical Engineering from the University of California, Los Angeles ("UCLA") in 1997.

7. I was employed by Broadcom Corporation ("Broadcom") in Sunnyvale, California from January 2000 to May 2012. From January 2000 to February 2011, I held several titles, including Sr. Staff Scientist, Engineering Manager, and Sr. Principal Scientist. My duties in these roles included, among other things, Institute of Electrical and Electronics Engineers ("IEEE") 802.11 (*i.e.*, Wi-Fi) physical layer ("PHY") application-specific integrated circuit ("ASIC") development. I also participated in Bluetooth standard development during this timeframe. From March 2011 to May 2012, I served as an Associate Technical Director and my duties included, among other things, performing wireless communications technology research and development ("R&D") as well as standards and intellectual property development. Throughout my time at Broadcom, I regularly attended meetings for the IEEE 802.11 Working Group. I submitted technical contributions to Task Group E ("TGe"), Task Group H ("TGh"), and Task Group N ("TGn"). I also regularly accessed and reviewed documents submitted by members of the IEEE 802.11 Working Group, including through the IEEE's 802wirelessworld server and, later, the IEEE Mentor website.

8. I served on the Board of Directors of the Wireless Gigabit Alliance ("WiGig Alliance") from March 2010 to March 2012. Specifically, I served as the Board's Secretary. The WiGig Alliance was a trade association focused on the development and promotion of high-speed wireless communications technology.

The WiGig Alliance collaborated for multiple years with the Wi-Fi Alliance (an industry organization that owns the "Wi-Fi" brand and certifies devices for interoperability and security), and the two organizations eventually merged in 2013.

9. I served as the Vice Chair of the IEEE 802.11ad Task Group ("TGad") from May 2011 to March 2012. TGad developed an amendment to the IEEE 802.11 wireless networking standard focused on directional multi-gigabit (*i.e.*, DMG) technology. In this role, I assisted the task group Chair, Eldad Perahia, and Technical Editor, Carlos Cordeiro, with the operation of the task group meetings and developing the 802.11ad draft standards amendment documents.

10. I was employed as a Senior Wireless System Architect by Apple Inc. ("Apple") in Cupertino, California from June 2012 to July 2013. During my tenure at Apple, I was responsible for, among other things, performing systems engineering for iPhone Operating System ("iOS") Wi-Fi functionality. During this time, I participated in multiple IEEE 802.11 groups, including Task Group AF ("TGaf") and the HEW Study Group, on behalf of Apple. I also regularly accessed and reviewed documents submitted by members of the IEEE 802.11 Working Group, including through the IEEE Mentor server.

11. Since August 2013, I have been employed as President of Covariant Corporation in Los Altos, California. As part of this role, I provide technical

consulting services related to wireless communications, IEEE 802.11/Wi-Fi, signal processing technology, integrated circuits technology, and intellectual property. During the time I have been employed by Covariant, I have continued to regularly attend meetings for multiple IEEE 802.11 task groups. I submitted several technical contributions to Task Group AY ("TGay") (responsible for 802.11ay) which led to new mmWave features, Task Group M ("TGm") (responsible for the 802.11-2020 standard), and the Integrated mmWave Study Group ("IMW SG") (the precursor for TGbq). I received awards from the IEEE for my contributions to TGay and TGm. Appendix B. I have also continued to regularly access and review documents submitted by members of the IEEE 802.11 Working Group, including through the IEEE Mentor server.

12. I served as a member of the Board of Directors for the Professional and Technical Consultants Association ("PATCA") in Silicon Valley, California from March 2017 to March 2024. I was President of the Board of Directors from June 2019 to March 2024. PATCA is a non-profit corporation that supports technical consultants in Silicon Valley and elsewhere.

13. Since June 2020, I have been employed as a Guest Instructor for the UCLA Department of Electrical and Computer Engineering. I teach classes on wireless communications for upper-level undergraduate students and graduate

students in electrical engineering. In these classes, I use examples from the IEEE 802.11 standards.

14. I am a named inventor on over 100 issued United States patents related to wireless communications, signal processing, and integrated circuits.

15. I have been a member of the Institute of Electrical and Electronics Engineers ("IEEE") since 1981 (41 years) and am currently a Senior member. I have participated in the activities of the IEEE Standards Association ("IEEE-SA") continuously since 2000. I have participated in the IEEE 802.11 Wireless Local Area Networks ("WLAN") Working Group as a voting member since 2000.

16. Through my membership at the IEEE and participation in IEEE standards development, I have personal knowledge of the IEEE's policies and procedures, including with respect to documents management practices, the standard development process, as well as organization and operation of IEEE's working groups and task groups.

II. THE IEEE 802.11 WORKING GROUP AND TASK GROUP AX

17. IEEE-SA is an operating unit within the IEEE that develops global standards across a wide range of industries and technologies. The IEEE 802.11 Working Group is part of the IEEE-SA and includes several task groups.

18. A task group is created to develop a draft amendment to the baseline IEEE 802.11 standard. The process for creating an amendment to the baseline

IEEE 802.11 standard is as follows. First, a study group is created by the working group to investigate a new feature or technology. Study group members make contributions and discuss and refine the features that will be a part of the new task group. Then, the study group produces a Project Authorization Request ("PAR"). The PAR must be approved by the study group, the 802.11 Working Group, and IEEE-SA for a task group to be created. Once these steps have been completed, the new task group can begin meeting and taking contributions.

19. The new task group receives technical contributions and votes on technical details as it develops a new draft standard amendment. Next, the task group forwards the draft standard amendment to the 802.11 Working Group for approval. If the draft standard amendment is approved by the 802.11 Working Group, it is presented to the IEEE 802 Sponsor Executive Committee ("SEC") for approval. Finally, if the draft standard amendment is approved by the IEEE 802 SEC, it is presented to the IEEE-SA for final approval. Upon the IEEE-SA's approval, the draft standard amendment transitions into the final form, and becomes an official standard amendment.

20. Task Group AX ("TGax") was formed in May 2014 to develop the IEEE 802.11ax standard amendment. Appendix C. The task group continued to meet until November of 2020. Appendix C. During this time, I followed the

activities of TGax, including reviewing and voting on the 802.11ax standard amendment drafts.

21. During the May 2014 to November 2020 timeframe, the time when TGax was active, the 802.11 Working Group held meetings every two months. Specifically, the 802.11 Working Group held meetings in January, March, May, July, September, and November of each year. Three of the six meetings in any given year were "plenary" meetings, *i.e.*, larger meetings across all IEEE 802 Working Groups. The remaining three 802.11 Working Group meetings in a given year were "interim" meetings, *i.e.*, the members of the 802.11 Working Group and other wireless Working Groups (such as 802.15) met separately from other IEEE 802 Working Groups. In July 2014, around the time when TGax was started, there were 533 members of the 802.11 Working Group, with 321 being voting members. Appendix D at 13. Approximately 300 people would attend each 802.11 Working Group meeting.

22. TGax meetings took place as part of these broader 802.11 Working Group meetings—in other words, TGax met six times per year from May 2014 to November 2020. Appendix C. TGax meeting attendees were generally engineers and researchers interested in wireless local area network ("WLAN") technology. The 802.11ax standard amendment was a major 802.11 Working Group project and, consequently, a majority of the roughly 300 802.11 Working Group meeting

attendees would typically attend each TGax meeting sessions. Attendance at TGax meetings was not restricted only to members of the 802.11 Working Group, however. Other registrants to a plenary or interim meeting could also attend the meeting of the TGax task group, members of other IEEE 802 working groups and any other interested member of the public who registered for the meeting.

23. During the May 2014 to November 2020 timeframe, TGax participants could submit and present technical submissions at TGax meetings. These submissions generally included technical proposals for the standard amendment draft. These submissions were made available to the public through the IEEE Mentor website. Appendix E. After the submission was presented, TGax members would generally vote on whether to incorporate the submission into the current standard amendment draft. Appendix F at 7. If a submission was presented or voted on at a TGax meeting, it was normally uploaded to the IEEE Mentor website before the meeting.

24. As a matter of course, during IEEE standard amendment development, several standard amendment drafts are created and submitted to the "letter ballot" process. The task group editor creates the first one of such drafts (which is considered the first full and complete iteration in the draft process)—draft "D1.0"—once there is an agreement between task group participants with respect to a significant portion of the amendment framework. Once the draft is

completed, it is distributed to IEEE 802.11 Working Group members and a "letter ballot" is initiated whereby working group members can vote to approve or disapprove the draft, as well as provide comments. The task group then iteratively improves the standard amendment by amending the draft to address comments. Note that while D1.0 is generally the first draft submitted for letter ballot voting, earlier drafts are often circulated among the task group for feedback and amendments.

25. During development of the IEEE 802.11ax standard amendment, TGax created and submitted draft "D1.0" (formal title "P802.11ax/D1.0") to letter balloting. Appendix G. Prior to the D1.0 draft, TGax circulated other standard amendment drafts, including drafts D0.1 (Appendix H) and D0.5 (Appendix I).

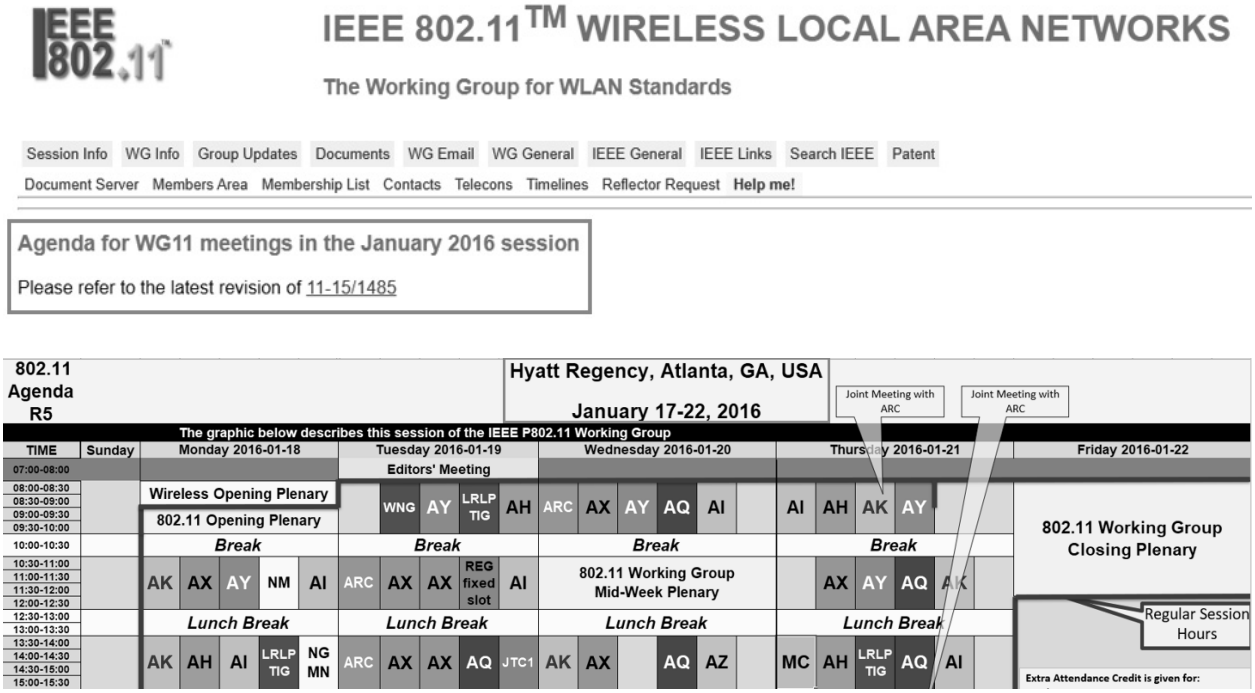
26. TGax meetings were open to the public.[1] Appendix J. However, only "voting members" could vote on technical submissions and letter ballots.

27. During the relevant time period, the IEEE 802.11 Working Group published information about upcoming meetings on its website, which in my experience, was commonly visited by interested members of the public. Indeed,

---

[1] Meeting attendees were required to pay a registration fee, but the fee could be waived for certain visitors, such as academics, professors, and students from educational institutes in the surrounding area.

IEEE is a prominent organization in the field and members of the public interested in wireless networking standards development (e.g., WLAN standards), including engineers in industry and academia, commonly followed events and developments announced on the IEEE 802.11 website. As an example, a January 1, 2016 archive of the 802.11 Working Group website includes a link to an "[a]genda for WG11 meetings in the January 2016 session. Appendix K. The link directs to a spreadsheet with information about the dates, location, and agenda for the January 2016 802.11 Working Group meeting, including the times for TGax working sessions, which are designated by a green "AX." Appendix L.



III. PUBLIC ACCESSIBILITY ANALYSIS

28. Below, I explain in detail how IEEE makes the following two categories of documents accessible to the interested public, namely (1) 802.11

Working Group documents and technical submissions housed on the IEEE Mentor website and (2) TGax standard amendment drafts, including the P802.11/D1.0 draft.

29. Based on my review of U.S. Patent No. 11,159,210 ("the '210 Patent"), the interested public with respect to the subject matter of the '210 Patent would include individuals interested in the development and/or implementation of wireless networking standards (e.g., Wireless Local Area Network ("WLAN") standards), and individuals interested in research related to the same, including the IEEE 802.11 standard, which is the world's leading WLAN standard. The interested public would include, for example, individuals interested in improving IEEE 802.11 network performance (e.g., reliability, speed) in dense networking environments. The interested public would include engineers and researchers working in the wireless communications industry as well as academics, professors, and students in disciplines related to wireless communications. Further, in my experience, many individuals and organizations in industry and academia were interested in continuously tracking development of the IEEE 802.11 standard to facilitate research and/or design of 802.11-based products on an ongoing basis.

30. The interested public would certainly have been aware of the IEEE and the 802.11 standard. At the time of the '210 Patent (*e.g.*, January 9, 2017)—and still today—the 802.11 standard was one of the most widely used wireless

communication standard in the world, including in the field of WLANs. Appendix M at 15.

31. Many members of the interested public would have already been members of IEEE. Other members of the interested public would have subscribed to IEEE publications and/or other publications related to the wireless communications industry including, for example, IEEE Spectrum magazine. Information about standards meetings and developments, including for the 802.11 working group were often highlighted in these publications.

32. The IEEE 802.11ax project was discussed in various publicly disseminated articles such that a member of the interested public would have been aware of the project no later than early 2016.

33. For example, in January 2015, The Beacon—the Wi-Fi Alliance's official blog—published an article by Craig Mathias entitled *Wi-Fi 2015: The Top-10 List*. Appendix N. Mr. Mathias noted "continued work on 802.11ax, which could reach . . . the magical 10 Gbps level of throughput . . . ." Appendix N at 3.

34. In September 2015, IEEE Spectrum magazine published an interview with 802.11 Working Group Vice Chair Dorothy Stanley. Appendix O. When asked "What can we expect next-generation Wi-Fi standards to deliver?", Ms. Stanley noted "the 802.11ax amendment for high- efficiency wireless local area networks. That looks for efficiency in dense deployments such as stadiums,

shopping malls, and subways where you have a lot of people accessing the Wi-Fi system." Appendix O at 4-5

35. The 802.11ax project was discussed extensively in a February 2016 article in the IEEE Wireless Communications magazine entitled *IEEE 802.11ax: High-efficiency WLANs* (Appendix P). As another example, a June 2016 article in the IEEE Vehicular Technology Magazine entitled *Exciting Projects for PHY and MAC Layers of IEEE 802.11* provided details on the 802.11ax project and described it as "the next major generation of Wi-Fi technology evolution after 802.11a" (Appendix Q at 2). From these articles, a member of the interested public would have understood the general scope of TGax's work—namely, "improving the spectrum efficiency and system throughput per area in high-density scenarios of access points and stations in both indoor and outdoor deployments, such as crowded public spaces, public transportation, and dense apartment buildings." (Appendix Q at 2).

36. Moreover, the IEEE maintains a public webpage entitled "Official IEEE 802.11 Working Group Project Timelines" where it publishes status information about past and present 802.11 task groups and projects. Appendix R. Information about the 802.11ax project, including a predicted timeline, is listed on archived versions of the webpage dating back to July 2, 2014 (Appendix S).

IEEE Project and Final Document	Final Doc Type	Project Authorization Request (PAR)	Task Group and Activity	Documentation		Current Status	PAR Approved, Modified, or Extended [Expires]	WG Letter Ballots	
				Session End Snapshot				Draft	Date / Result
				Format & Version	Incorporated Baselines			Predicted Initial	Predicted Recirc
IEEE Std P802.11ax	A	High Efficiency WLAN	TGax	None	802.11REVmc 802.11ai 802.11ah 802.11ak 802.11aq 802.11aj	Actual	2014-03-25		
						Predicted	C	Jul 2016	

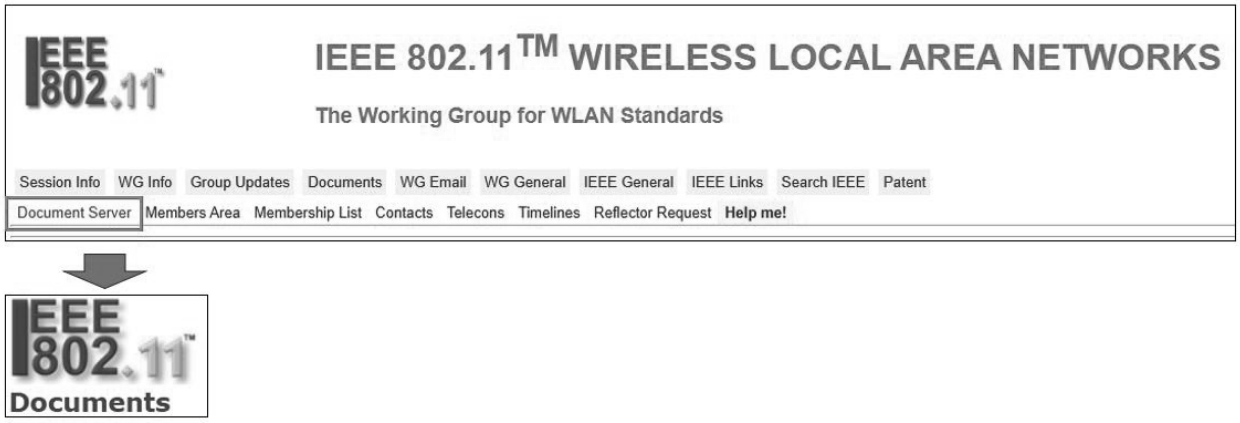
A. Public Accessibility of Documents Hosted on the IEEE Mentor Website

37. The IEEE maintains a public website called IEEE Mentor that houses working documents related to its various working groups and task groups. Appendix T. As discussed above, the IEEE Mentor website hosted TGax working documents and technical submissions while the task group was active. These TGax documents remain on the Mentor website today.

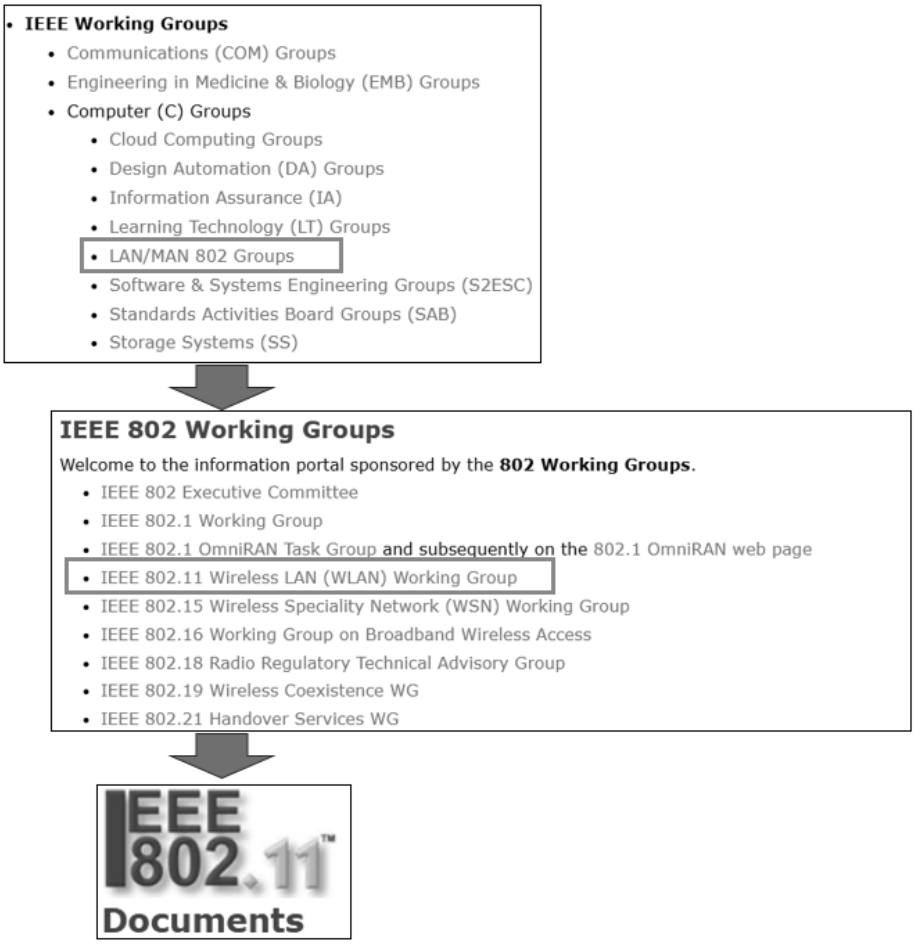
38. Many interested members of the public would have known how to access or navigate to the IEEE Mentor website through their experience tracking activities of the IEEE 802.11 Working Group and tracking ongoing development of the 802.11 standard. Other interested members of the public would have readily located the IEEE Mentor website based on information obtained from any number of public sources. For example, the IEEE Mentor webpage was directly linked to the 802.11 Working Group website through the "Document Server" link, as corroborated by an archived version of the webpage from January 1, 2016. Appendix K. As another example, the June 2016 article *Exciting Projects for PHY and MAC Layers of IEEE 802.11*, referenced above, cites the Mentor webpage in footnotes (Appendix Q at 3). IEEE websites, including Mentor, were also crawled

by commercial search engines, thereby allowing interested members of the public to navigate to the websites by clicking on a link in a list of keyword-based search results. For example, today, a Google.com search for "IEEE 802.11 technical submissions" returns multiple links to the Mentor website in the top flight of search results. Appendix U. Based on my experience, search engines such as Google would have similarly returned links to the Mentor website based on similar keyword searches by the earliest claimed priority date of the '210 Patent (*e.g.*, January 9, 2017). A member of the interested public seeking to stay up-to-date on TGax's development of the 802.11ax standard amendment would have been motivated to review the task group's working documents on the Mentor website.

39. The 802.11 Working Group documents on the IEEE Mentor website—including documents related to TGax—were readily accessible. As described above, clicking on the "Document Server" link on the 802.11 Working Group website would take a user to the "IEEE 802.11 Documents" page on the IEEE Mentor website. This is corroborated by a January 1, 2016 archived version of the 802.11 Working Group website. Appendix K.



40. Alternatively, assuming one accessed the IEEE Mentor website directly (for example, after learning of the webpage through the June 2016 article discussed above or elsewhere), the 802.11 Working Group documents could have been accessed by (1) opening the Mentor home page (Appendix T), (2) selecting "LAN/MAN 802 Groups," which directs the user to the "IEEE 802 Working Groups" page (Appendix V), and (3) selecting "IEEE 802.11 Wireless LAN (WLAN) Working Group," which directs the user to the "IEEE 802.11 Documents" page (Appendix W). The Mentor website operated in the same manner during the time period that TGax was actively developing the 802.11ax standard amendment. This is confirmed by archived copies of the Mentor home page (Appendix X), the "IEEE 802 Working Groups" page (Appendix Y), and the "IEEE 802.11 Documents" page (Appendix Z).



41. The "IEEE 802.11 Documents" page provides a list of documents that have been uploaded related to 802.11 standard projects. Appendix W. The webpage also includes identifying information for each document, including the created date, year, document control number (DCN), revision number, group (*e.g.*, TGax), document title, author and author affiliation (*e.g.*, employer), and the date and time the document was uploaded. Appendix W. The web page also includes a "Download" link for each document. Appendix W. The "IEEE 802.11 Documents" page operated in the same manner during the time when TGax was

active, including as of the earliest claimed priority date of the '210 Patent (*e.g.*, January 9, 2017). Appendix Z.

42. Documents uploaded to the IEEE Mentor website are publicly accessible immediately after they are uploaded. For instance, the screen capture below of the "IEEE 802.11 Documents" page was taken on April 28, 2025, and several documents that were uploaded to the website the same day are available for download. Appendix W. The webpage operated in the same manner during the time when TGax was active, including as of the earliest claimed priority date of the '210 Patent (*e.g.*, January 9, 2017). Appendix Z.

43. The "Group" filter on the "IEEE 802.11 Documents" page can be used to filter the document list to only those documents related to TGax, as shown in the screenshot below. The webpage operated in the same manner during the

time TGax was active, as confirmed by an archived version of the "IEEE 802.11 Documents" page from January 20, 2016. Appendix W.

44. Upon accessing the IEEE Mentor website, a member of the interested public would have been capable of downloading and reviewing any document of interest. The individual would have been capable of locating a document of interest by using the search bar to search for particular documents by document control number ("DCN"), title, author, or affiliation (*i.e.*, company or organization the author(s) are affiliated with). In my experience, sometimes persons interested in the development of particular standards would download all of the files on the IEEE Mentor site and perform offline searches based on document content. For instance, I personally used a tool called "wget" to scrape the documents on the IEEE Mentor website so that I could search their contents. Appendix AA.

45. The Mentor website shows that Joonsuk Kim et al., *HE-SIG-B Structure*, DCN IEEE 802.11-15/0821r2 ("Kim 0821") was uploaded to the

Mentor website on July 15, 2015. Appendix AB. Appendix AC is a true and accurate copy of Kim 0821 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Kim 0821 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed structure for the HE-SIG-B field of the 802.11ax standard amendment could have located Kim 0821 by searching "HE SIG-B." Appendix AB. Further, the Kim 0821 reference was presented at the July 2015 TGax meeting as part of the PHY Ad Hoc session. Appendix AD. A member of the interested public who attended the July 2015 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Kim 0821 reference by DCN. Thus, based on the foregoing, it is my opinion that the Kim 0821 reference was publicly accessible to members of the interested public as of July 15, 2015.

46. The Mentor website shows that Kaushik Josiam et al., *HE-SIG-B Contents*, DCN IEEE 802.11-15/1066r0 ("Josiam 1066") was uploaded to the Mentor website on September 13, 2015. Appendix AE. Appendix AF is a true and accurate copy of Josiam 1066 obtained from the Mentor website. As explained

above, a member of the interested public could have used the search functionality on the Mentor website to locate the Josiam 1066 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed contents for the HE-SIG-B field of the 802.11ax standard amendment could have located Josiam 1066 by searching "HE-SIG-B." Appendix AE. Further, the Josiam 1066 reference was presented at the September 2015 TGax meeting as part of the PHY Ad Hoc session. Appendix AG; Appendix AH. A member of the interested public who attended the September 2015 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Josiam 1066 reference by DCN. Thus, based on the foregoing, it is my opinion that the Josiam 1066 reference was publicly accessible to members of the interested public as of September 13, 2015.

47. The Mentor website shows that Kaushik Josiam et al., *HE-SIG-B Mapping and Compression*, DCN IEEE 802.11-15/1315r1 ("Josiam 1315") was uploaded to the Mentor website on November 10, 2015. Appendix AE. Appendix AI is a true and accurate copy of Josiam 1315 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Josiam 1315 reference by DCN,

title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed HE-SIG-B field of the 802.11ax standard amendment could have located Josiam 1315 by searching "HE-SIG-B." Appendix AE. Further, the Josiam 1315 reference was presented at the November 2015 TGax meeting as part of the PHY Ad Hoc session. Appendix AJ at 24; Appendix AK at 12. A member of the interested public who attended the November 2015 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Josiam 1315 reference by DCN. Thus, based on the foregoing, it is my opinion that the Josiam 1315 reference was publicly accessible to members of the interested public as of November 10, 2015.

48. The Mentor website shows that Le Liu et al., *HE-SIG-B Contents*, DCN IEEE 802.11-15/1335r2 ("Liu 1335") was uploaded to the Mentor website on November 10, 2015. Appendix AE. Appendix AL is a true and accurate copy of Liu 1335 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Liu 1335 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed contents for the HE-

SIG-B field of the 802.11ax standard amendment could have located Liu 1335 by searching "HE-SIG-B." Appendix AE. Further, the Liu 1335 reference was presented at the November 2015 TGax meeting as part of the PHY Ad Hoc session. Appendix AJ at 24; Appendix AK at 15. A member of the interested public who attended the November 2015 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Lui 1335 reference by DCN. Thus, based on the foregoing, it is my opinion that the Liu 1335 reference was publicly accessible to members of the interested public as of November 10, 2015.

49. The Mentor website shows that Yujin Noh et al., *Issues with Compressed SIG-B Mode*, DCN IEEE 802.11-16/0040r0 ("Noh 0040") was uploaded to the Mentor website on January 18, 2016. Appendix AM. Appendix AN is a true and accurate copy of Noh 0040 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Noh 0040 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed compressed SIG-B functionality of the 802.11ax standard amendment could have located Noh 0040 by searching "compressed SIG-B" (note that among

802.11 Working Group members, the terms "HE-SIG-B" and "SIG-B" are used interchangeably). Appendix AM. Further, the Noh 0040 reference was presented at the January 2016 TGax meeting as part of the PHY Ad Hoc session. Appendix AO at 13; Appendix AP at 7. A member of the interested public who attended the January 2016 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Noh 0040 reference by DCN. Thus, based on the foregoing, it is my opinion that the Noh 0040 reference was publicly accessible to members of the interested public as of January 18, 2016.

50. The Mentor website shows that Kaushik Josiam et al., *HE-SIG-B Compression Mode*, DCN IEEE 802.11-15/0349r1 ("Josiam 0349") was uploaded to the Mentor website on March 14, 2016. Appendix AE. Appendix AQ is a true and accurate copy of Josiam 0349 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Josiam 0349 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed HE-SIG B functionality of the 802.11ax standard amendment could have located Josiam 0349 by searching "HE-SIG-B." Appendix AE. Further, the

Josiam 0349 reference was presented at the March 2016 TGax meeting as part of the PHY Ad Hoc session. Appendix AR at 13. A member of the interested public who attended the March 2016 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Josiam 0349 reference by DCN. Thus, based on the foregoing, it is my opinion that the Josiam 0349 reference was publicly accessible to members of the interested public as of March 14, 2016.

51. The Mentor website shows that Dongguk Lim et al., *Comment Resolutions on Clause 28.3.10.8.1*, DCN IEEE 802.11-17/0299r0 ("Lim 0229") was uploaded to the Mentor website on March 8, 2017. Appendix AE. Appendix AS is a true and accurate copy of Lim 0299 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Lim 0229 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed HE-SIG-B functionality of the 802.11ax standard amendment could have located Lim 0299 by searching "HE-SIG-B" (note that the title as shown on Mentor includes "HE-SIG-B" even while the formal title on the document does not). Appendix AE. Thus, based on the foregoing, it is my opinion that the Lim

0299 reference was publicly accessible to members of the interested public as of March 8, 2017.

52. The Mentor website shows that Robert Stacey et al., *Comments on TGax/D1.0*, DCN IEEE 802.11-17/0010r0 ("Stacey 0010") was uploaded to the Mentor website on January 9, 2017. Appendix AT. Appendix AU is a true and accurate copy of Stacey 0010 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Stacey 0010 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the D1.0 draft of the 802.11ax standard amendment, including comments and deliberations about the draft, could have located Stacey 0010 by searching "D1.0." Appendix AT. Thus, based on the foregoing, it is my opinion that the Stacey 0010 reference was publicly accessible to members of the interested public as of January 9, 2017.

53. The Mentor website shows that Lochan Verma et al., *Bit Field Finalization of HE-SIG-A in HE PPDU Formats*, DCN IEEE 802.11-16/0915r2 ("Verma 0915") was uploaded to the Mentor website on July 26, 2016. Appendix AV. Appendix AW is a true and accurate copy of Verma 0915 obtained from the

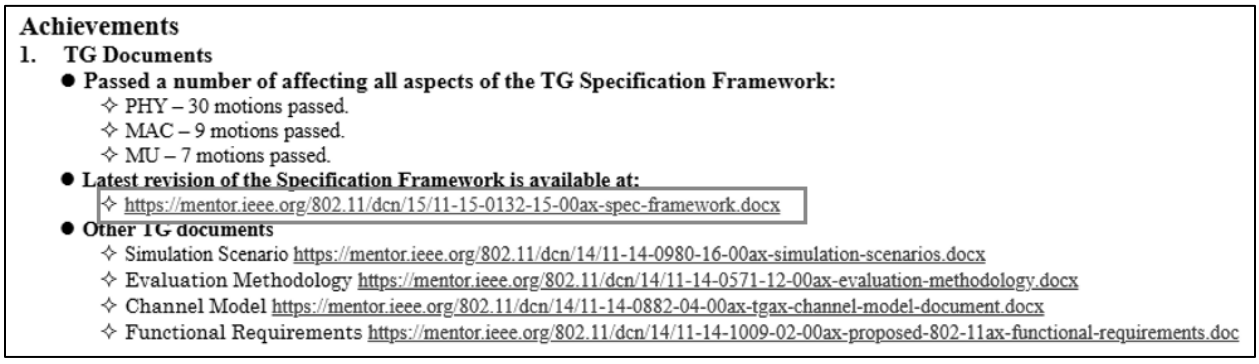
Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Verma 0915 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed HE-SIG-A functionality of the 802.11ax standard amendment could have located Verma 0915 by searching "HE-SIG-A." Appendix AV. Further, the Verma 0915 reference was presented at the July 2016 TGax meeting as part of the PHY Ad Hoc session. Appendix AX at 15, 34. A member of the interested public who attended the July 2016 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Verma 0915 reference by DCN. Thus, based on the foregoing, it is my opinion that the Verma 0915 reference was publicly accessible to members of the interested public as of July 26, 2016.

54. The Mentor website shows that Kaushik Josiam et al., *Proposed Resolutions to Comments on Clause 26.3.9.8*, DCN IEEE 802.11-16/0928r2 ("Josiam 0928") was uploaded to the Mentor website on July 28, 2016. Appendix AE. Appendix AY is a true and accurate copy of Josiam 0928 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Josiam 0928

reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated with). For example, a member of the interested public desiring to learn more about the proposed HE-SIG B functionality of the 802.11ax standard amendment could have located Josiam 0928 by searching "HE-SIG-B" (note that the title as shown on Mentor includes "HE-SIG-B" even while the formal title on the document does not). Appendix AE. Further, an earlier version of the Josiam 0928 reference was presented at the July 2016 TGax meeting. Appendix AZ at 27. A member of the interested public who attended the July 2016 TGax meeting or otherwise reviewed the meeting materials afterward would therefore have been motivated to search for the Josiam 0928 reference by DCN. Thus, based on the foregoing, it is my opinion that the Josiam 0928 reference was publicly accessible to members of the interested public as of July 28, 2016.

55. The Mentor website shows that Robert Stacey, *Specification Framework for TGax*, DCN IEEE 802.11-15/0132r15 ("Stacey 0132") was uploaded to the Mentor website on January 28, 2016. Appendix BA. Appendix BB is a true and accurate copy of Stacey 0132 obtained from the Mentor website. As explained above, a member of the interested public could have used the search functionality on the Mentor website to locate the Stacey 0132 reference by DCN, title, author, or affiliation (i.e., company or organization the author(s) are affiliated

with). Additionally, as of March 7, 2016, the TGax website included a link to Stacey 0132, stating it was the "[l]atest version of the Specification Framework . . . ." Appendix BC. Prior to a task group's creation of formal drafts, the Specification Framework document is the task group's primary work product. Therefore, a member of the interested public wishing to keep apprised of TGax's progress would have been motivated to review the Stacey 0132 reference. Thus, based on the foregoing, it is my opinion that the Stacey 0132 reference was publicly accessible to members of the interested public as of January 28, 2016.



Achievements

1. **TG Documents**
   - **Passed a number of affecting all aspects of the TG Specification Framework:**
     - PHY – 30 motions passed.
     - MAC – 9 motions passed.
     - MU – 7 motions passed.
   - **Latest revision of the Specification Framework is available at:**
     - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-15-00ax-spec-framework.docx
   - **Other TG documents**
     - Simulation Scenario https://mentor.ieee.org/802.11/dcn/14/11-14-0980-16-00ax-simulation-scenarios.docx
     - Evaluation Methodology https://mentor.ieee.org/802.11/dcn/14/11-14-0571-12-00ax-evaluation-methodology.docx

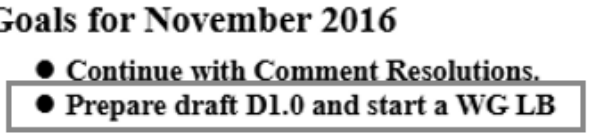
B. Public Accessibility of the P802.11ax/D1.0 Draft

56. A total of 6 drafts of the 802.11ax standard amendment were submitted to the 802.11 Working Group for letter ballot voting—D1.0, D2.0, D3.0, D4.0, D5.0, and D6.0. Appendix BD. Two additional 802.11ax standard amendment drafts—D7.0 and D8.0—were submitted to the broader IEEE SA for letter ballot voting.

57. An interested member of the public keeping abreast of TGax developments would have been aware of P802.11ax/D1.0 ("draft D1.0"), of which Appendix G is a true and accurate copy. For example, the IEEE maintained a public webpage with TGax status information and updates. Appendix BD. By October 13, 2016, the webpage stated that one of TGax's "Goals for November 2016" was to prepare draft D1.0 and begin the related letter ballot process (Appendix BE). Moreover, interested members of the public already would have been aware of earlier 802.11ax standard amendment drafts, including D0.1 and D0.5, and they would expect new drafts to be created as the standard development process progresses.

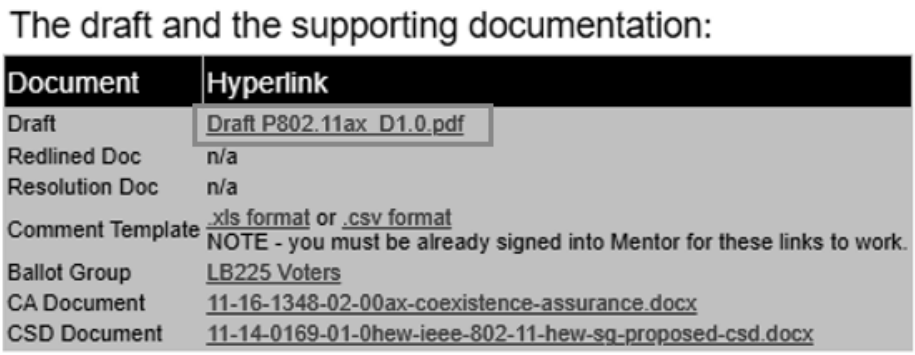


58. Draft D1.0 was also openly discussed at public TGax meetings such that those in attendance would have known about it. For instance, target dates for drafting the D1.0 draft were discussed during the July 2016 and September 2016 TGax meetings (Appendix BF at 27; Appendix BG at 30). At the November 2016 TGax meeting in San Antonio, Texas, TGax members voted for the editor to prepare draft D1.0 of the 802.11ax standard amendment. This vote is documented on page 28 of Appendix BH, which is the meeting minutes from the November 2016 TGax meeting. Later, at the March 2017 TGax meeting, members discussed

received comments related to draft D1.0 as well as proposed resolutions for such comments (Appendix BI at 6). These meetings were open to the public. Appendix J.

59. Draft D1.0 was initially made available to voting members of the IEEE 802.11 Working Group by December 1, 2016. On December 1, 2016, TGax Chair Osama Aboul-Magd sent an email to TGax members stating that "draft D1.0 is available in the member area" (Appendix BJ). This email is archived in the IEEE's public email archive.

60. Also on December 1, 2016, Adrian Stephens—the Chair of the 802.11 Working Group—sent an email to the broader IEEE 802.11 Working Group informing working group members that "the 802.11 Working Group is officially beginning WG Technical Letter Ballot 225 (LB225), which is a Letter Ballot on the question 'Should P802.11ax D1.0 be forwarded to Sponsor Ballot?'" (Appendix BK). The email included a link to instructions for completing letter ballot 225 (Appendix BL). The instructions page featured a link to the draft D1.0 PDF, which was password protected. A voting member of the IEEE 802.11 Working Group could enter their credentials (*i.e.*, username and password) to access the document. This email is archived in the IEEE's public email archive.



61. The IEEE 802.11 Working Group also maintains a webpage that shows the status and results of current and past letter ballots related to 802.11 standard amendment drafts (Appendix BD). Appendix BM—an archived version of the letter ballot webpage dated May 21, 2017—shows that letter ballot number 225 entitled "Technical TGax Draft 1.00" opened on December 1, 2016 and closed on January 8, 2017. The webpage shows the results for the draft D1.0 letter ballot, which received 145 "Approve" votes, 106 "Disapprove" votes, and 25 abstentions. The webpage shows that 371 people were able to vote on the letter ballot (the "Pool"). The webpage further includes a hyperlink to the "Draft P802.11ax_D1.0.pdf" document. Clicking the link would have prompted the user

to enter their voting member login credentials. After entry of the credentials, a voting member would have been able to access draft D1.0.

225	TGax	Technical TGax Draft 1.00	LB# 225	Draft	Draft P802.11ax_D1.0.pdf	2016-12-01	2017-01-08	38	Pool	371
									Approve	145
				Redlined Doc	N/A				Disapprove	106
				Resolution Doc	N/A				Abstain	25
									Return%	74
				Comment	Template				Approve%	58
				Pool	LB# 225 Voters					

62. Working Group voting member credentials for any IEEE 802 working group—not just 802.11—can be used to access the "member area" of the IEEE website. For example, a voting member of the 802.15 Working Group, which develops standards related to Bluetooth technology, would have been able to access the D1.0 draft in the member area of the IEEE website. Therefore, I estimate that at least 300 802.11 Working Group members and at least 300 additional members of other IEEE 802 Working Groups had direct access to the D1.0 document through the IEEE website as of December 1, 2016.

63. Although draft D1.0 was initially posted to a password-protected members area of the IEEE website, this posting in fact would have served to make draft D1.0 accessible to a broad swath of the interested public. As I explained above, many hundreds of individuals among the interested public were voting members in the IEEE 802 Working Group and would have had direct access to draft D1.0 from the member area website immediately upon its posting on December 1, 2016. As I describe in further detail below, any interested member of the public could become a voting member in the IEEE 802 Working Group by

following a straightforward process prescribed by IEEE. Furthermore, draft standard amendments posted to the member area were not closely held only by voting members. On the contrary, voting members commonly shared draft standard amendments like draft D1.0 with non-voting members in industry and academia, or other interested members of the public, upon their release on the members area of the IEEE website. There was, in practice, little expectation of confidentiality for draft standard amendments or other documents posted to the member area, and in my experience, voting members knew and expected that such documents would be shared with non-voting members for a variety of reasons. Below, I provide a description of how an interested member of the public—who was not already a voting member of the 802.11 Working Group—could have accessed draft D1.0, for example, by (1) following the straightforward process for becoming a voting member of the Working Group or (2) obtaining the document as a non-voting member.

1. Option 1: Become a Working Group Voting Member

64. First, any interested member of the public could have obtained access to draft D1.0 by being a voting member in the 802.11 Working Group. The process for becoming a voting member was well-defined and not onerous.

65. In the relevant timeframe leading up to the earliest claimed priority date of the '210 Patent (*e.g.*, January 9, 2017), becoming a "voting member"

simply required attending three meetings of the 802.11 Working Group, with at least two of these meetings being plenary sessions (Appendix J). As explained above, these meetings were generally held every two months and were open to the general public—no prior IEEE membership, special qualifications, or nomination were required to attend the meetings. An interested member of the public could have registered to attend the 802.11 Working Group meetings through the 802.11 Working Group website. Specifically, one could have registered for a working group meeting by (1) going to the IEEE 802.11 Working Group home page, (2) selecting "Session Info," which would open a drop-down menu, (3) select "Future Sessions," which would open the "IEEE 802.11 Future Session Plans" webpage, and (4) selecting "Registration" for a meeting for which registration was open. This is confirmed by archived versions of the 802.11 Working Group website from January 2016. Appendix K; Appendix BN.

66. Prospective 802.11 Working Group meeting attendees were required to pay a registration fee—for instance, between $375 and $975 for the January 2016 meeting in Atlanta, Georgia, depending on when the prospective attendee registered. Appendix BN. However, as explained above, the fee could be waived for certain visitors, such as academics, professors, and students from educational institutes in the surrounding area.

67. Task group leadership tracked attendance at each TGax meeting via electronic sign-in, and upon meeting the requirements for becoming a voting member (i.e., attending the requisite three meetings), participants were provided the login credentials for the "member area" of the IEEE-SA website where they could directly access draft standard amendments such as draft D1.0. Voting member credentials would only be provided at plenary sessions.

68. Login credentials for the "member area" are not unique to each voting member, and they are rarely changed (*e.g.*, the Chair can request a password change at his/her discretion, but rarely does so). When login credentials are updated, voting members receive an automated email from the Chair containing the new credentials. Through the member area, voting members can access standard amendment drafts.

69. Even if an interested member of the public did not become aware of TGax until the beginning of 2016—some one and a half years after the group began working on the 802.11ax standard amendment—they still could have attended any two plenary meetings and one interim meeting to gain "voting member" status before the earliest alleged priority date of the '210 Patent (*e.g.*, January 9, 2017). For example, one could have attended meetings in March 2016 in Macau (plenary session); May 2016 in Waikoloa, Hawaii (interim session); July 2016 in San Diego, California (plenary session); September 2016 in Warsaw, Poland (interim session); November 2016 in San Antonio, Texas (plenary session). Appendix BO. After attending just two previous meetings, one of which was a plenary session, one would have been granted voting privileges and login credentials for the member area of the 802.11 Working Group website at the start of the third meeting (which must be a plenary meeting).

70. A voting member would have been able to directly access draft D1.0 via the members area of the 802.11 Working Group website after the draft was uploaded to the site on December 1, 2016.

2. Option 2: Obtain the D1.0 Draft as a Non-Voting Member

71. Even apart from obtaining direct access to draft D1.0 as a voting member, interested members of the public also would have been capable of accessing draft D1.0 exercising reasonable diligence by obtaining a copy of the draft indirectly from a voting member.

72. In practice, IEEE imposed little if any restriction on the distribution of draft standard amendments like draft D1.0, despite nominally releasing them on the protected members area site. For example, the cover of draft D1.0 states that "[p]ermission is hereby granted for IEEE Standards Committee participants to reproduce this document for purposes of international standardization consideration." (Appendix G at Cover). Further, the "Copyrights" section on page iii of Draft D1.0 states that the document "is made available for a wide variety of both public and private uses," including "the promotion of engineering practices and methods." Appendix G at iii. Voting members of the IEEE 802.11 Working Group understood the document sharing policy to allow free distribution of standard amendment drafts to persons involved and/or interested in standards development. Moreover, the "Updating of IEEE documents" section on page iii

explains that IEEE standards are updated over time, providing interested members of the public with motivation to continually monitor the IEEE members area for new standards drafts. Appendix G at iii.

73. Voting members of the IEEE 802.11 Working Group commonly shared standard amendment drafts with non-voting members, as well as individuals who did not attend 802.11 Working Group or task group meetings at all. For example, in my experience, it was common for voting members to share draft standards with academic colleagues or industry engineers from their respective companies who were not voting members and, in some instances, were not even IEEE members. Based on the roughly 600 IEEE 802 Working Group members with direct access to the document (*see* ¶ 62), I estimate that draft D1.0 would have been disseminated to thousands of additional interested members of the public apart from just voting members by the earliest claimed priority date of the '210 Patent (*e.g.*, January 9, 2017). In other words, there was not an expectation of confidentiality with respect to draft D1.0. The motivation for sharing standard drafts is simple—Wi-Fi standardization impacts a broad range of stakeholders (manufacturers, researchers, inventors, etc.) that may not be able to actively participate in the standardization process. The standardization process is meant to be open and collaborative, and the goals of Wi-Fi standardization are (1) to create a high-quality technical specification and (2) garner support for the standard from

key stakeholders. These goals can be most effectively achieved by soliciting input from stakeholders that are unable to actively participate in the standardization process. This understanding is reflected in the IEEE-SA's policy toward sharing drafts with non-voting members. Many companies and other stakeholders also relied on just a single individual or a small number of individuals to represent their interests in 802.11 Working Group as a voting member, and those individuals would then share draft standard amendments and other developments to a much broader audience within their organizations.

74. Publicly available TGax documents corroborate that draft D1.0 was shared with and/or was made accessible to non-voting members of the 802.11 Working Group. Specifically, a number of submissions from the relevant timeframe (*i.e.*, 2016 to 2017) list non-voting members as authors and include additions or other edits to working drafts of the 802.11ax standard amendment, including the D1.0 draft. For example, a March 2017 submission entitled "Explanations for CT on 27.5.2.7 NDP Feedback Report" refers to a pre-D1.0 draft of the 802.11ax standard amendment and lists Genadiy Tsodik and Leonid Epstein as authors (Appendix BP). This indicates that both Mr. Tsodik and Mr. Epstein had access to the referenced 802.11ax standard amendment draft when they prepared the submission. However, archived 802.11 Working Group membership lists indicate that Genadiy Tsodik was not a voting member at the time of this

submission—he was a "potential member" as of November 2016 and downgraded to an "aspirant" as of May 2017 (Appendix BQ; Appendix BR). The archived membership lists similarly indicate that Leonid Epstein was not a voting member at the time of the submission either—he was an "aspirant" as of both November 2016 and May 2017 (Appendix BQ; Appendix BR).

75. A March 2017 submission entitled "BSS Load Information Element for 11ax" discusses comments to the D1.0 draft and lists Frank Hsu as a co-author, indicating that Mr. Hsu had access to the D1.0 draft (Appendix BS). However, Frank Hsu (Chien-Fang Hsu) was not a voting member—the archived 802.11 Working Group membership logs indicate he was an "aspirant" as of November 2016 and a "potential voter" as of May 2017 (Appendix BQ, Appendix BR).

76. A March 2017 submission entitled "Resolution to CID 7547" includes discussion of the D1.0 draft and lists Ilan Sutskover and Michael Simon as co-authors (Appendix BT). However, neither Mr. Sutskover nor Mr. Simon were voting members—neither is listed in the archived 802.11 Working Group membership logs for November 2016 or May 2017 (Appendix BQ, Appendix BR).

77. Based on the foregoing, it is my opinion that P802.11ax/D1.0, otherwise known as draft D1.0, was publicly accessible to members of the interested public as of December 1, 2016.

IV. CONCLUSION

78. I currently hold the opinions expressed in this declaration. But my analysis may continue, and I may acquire additional information and/or attain supplemental insights that may result in added observations.

I. SUMMARY

- Senior electrical engineer - more than 25 years in industry plus Ph.D. (UCLA 1997).
- Named inventor on more than 125 issued patents, including many related to IEE802.11/Wi-Fi and Bluetooth wireless standards.
- Technical skills encompass wireless network physical layer (PHY) design, systems engineering, communication theory, integrated circuit (IC) design, signal processing, RF/microwave systems, intellectual property, and standardization.
- Experience with multiple successful product developments (802.11 WLAN chipsets and cellular base-station systems), research in new technologies (802.11n MIMO and 60 GHz), and leading standards bodies (IEEE 802.11, Bluetooth SIG, Wireless Gigabit Alliance).

II. EXPERIENCE

Covariant Corporation, Los Altos, California
President — August 2013 – present

- Consulting in wireless communication systems, signal processing, standards, and intellectual property.
- Recent clients include Octoscope, Google, and Peraso Technologies.
- Example projects:
  - Developed and executed IEEE 802.11 standards strategy for a technology startup company. Led standards participation in industry special interest group and IEEE 802.11ay and 802.11md task groups. Developed simulations in Matlab to support standards contributions.

- Developed Matlab tools to predict mmwave system performance including impact of cascade non-linearities and temperature variations.
- Analyzed patent portfolio for potential standards related patents related to IEEE 802.11 standards and Wi-Fi Alliance specifications. Developed claim charts for appropriate patents.
- Developed Matlab simulation tools as part of technical support for patent litigation. Analyzed performance benefits of physical layer features in IEEE 802.11 standards.
- Reviewed C, assembler, Verilog, and VHDL code for technical support in patent litigation.
- Developed and prototyped novel radar detection algorithms in Matlab and C for specialized radio receiver,

Apple, Cupertino, California
Senior Wireless System Architect June 2012 – July 2013

- Analysis of 802.11 wireless networks for iOS products.

Broadcom Corporation, Sunnyvale, California

Associate Technical Director, Office of the CTO	March 2011 – May 2012
Senior Principal Scientist, Office of the CTO	March 2007 - March 2011
Principal Scientist, Office of the CTO	March 2006 - March 2007
Engineering Manager, Wireless LAN Business Unit	June 2004 - March 2006
Senior Staff Scientist, Wireless LAN Business Unit	January 2000 - June 2004

- Analysis and development of new wireless networking technologies for application to WiGig (60 GHz wireless), WirelessHD, Bluetooth, Wimedia Ultrawideband, IEEE 802.11, and 802.15 systems. Investigation of inter-networking, antenna systems, beamforming techniques, signal processing and advanced devices employing multiple wireless technologies.
- Secretary, board member, and vice chair of the Technical Working Group of the Wireless Gigabit Alliance.
- Vice chair of the IEEE 802.11ad (60 GHz MAC/PHY) task group.
- Developed BT/802.11 technology and co-chaired the Bluetooth SIG 802.11 AMP (Alternate MAC/PHY) Study Group. The resulting specification was the hallmark feature of the Bluetooth 3.0 release.
- Developed significant intellectual property related to wireless networks and contributed to the management of company patent portfolio through patent review committee.

- Project manager and lead physical layer (PHY) systems engineer for 802.11n proposal to the IEEE. Key elements of this proposal and further contributions became the basis of the IEEE 802.11n standard including MIMO-OFDM physical layer and enhanced MAC layer for higher throughput wireless networks. Made contributions in the areas of preamble design, advanced channel coding, MIMO-OFDM, channel estimation, and multiple antenna beamforming. (See: https://en.wikipedia.org/wiki/IEEE_802.11n-2009)
- Led Broadcom effort to standardize power control and dynamic frequency selection for wireless networks in IEEE 802.11 Task Group H. Proposal is now part of 802.11h standard. (See: https://en.wikipedia.org/wiki/IEEE_802.11h-2003)
- System engineering for 802.11a/b/g wireless local area network chipsets, including analysis of radio and base-band dsp architectures for the physical layer design. Developed signal processing algorithms, channel models, radio system models, and laboratory radios.
- Designed and developed MATLAB and bit accurate C models for the physical layers of 802.11 WLAN chipsets. These included models for equalizers, convolutional coders/decoders, beamforming, nonlinear distortion in radio transceivers, and radio channels.
- Analyzed and debugged first silicon versions of commercially successful 802.11a/b/g integrated circuit products.
- Developed radar detection and dynamic frequency selection hardware and software for 802.11a chipsets to meet ETSI (European) and FCC (U.S.) regulations.

Excess Bandwidth Corporation (now **Conexant**), Santa Clara, California
Principal Systems Engineer 1998–1999

- System engineering and architecture for HDSL2/G.shdsl digital subscriber line modems, including MATLAB and C code to simulate equalizers, error correcting codes, timing recovery, digital phase locked loops, waiting time jitter, and performance in crosstalk.
- Developed DSP software in C and assembler (TI C6x) for prototype HDSL2/G.shdsl modem. Implemented modules for adaptive equalization, timing recovery, and activation frame handshake.

Amati Communications Corporation (now **Texas Instruments**)
San Jose, California
Senior Research Engineer 1997-1998

- Developed, analyzed, and implemented advanced equalizer training algorithms for discrete multi-tone (DMT) based asymmetric digital subscriber line (ADSL) models.

AT&T Bell Laboratories, Whippany, New Jersey
Member of Technical Staff 1990-1992

- Developed RF and analog circuit designs for AT&T Autoplex 1000 fiber optic micro-cell radio transceiver.
- Managed testing group and developed test program for high power 900 MHz feed-forward linear amplifier used in cellular telephone base stations.

MIT Lincoln Laboratory, Lexington, Massachusetts
Member of Technical Staff 1989-1990

- Developed signal processing software and RF hardware for experimental X-band and Ka-band radar.
- Conducted radar measurements at Lincoln Laboratory sites in Lexington, MA and Kwajalein Atoll, U.S. Marshall Islands.

III. LITIGATION EXPERIENCE

- NXP B.V. v. Broadcom Corp., No. 5:14-cv-826 (N.D. Cal.). Retained on behalf of Broadcom.
- Linex Techs., Inc. v. Hewlett-Packard Co. et al., No. 4:13-cv-00159 (N.D. Cal.). Retained on behalf of Broadcom.
- TomTom Int'l, B.V. v. Broadcom Corp., No. 8:14-cv-475 (C.D. Cal.). Retained on behalf of Broadcom.
- Certain Electronics Products, Including Products with Near-Field Communication ("NFC") System-Level Functionality and/or Battery Power-Up Functionality, Components Thereof, and Products Containing Same, No. 337-TA-950 (ITC). Retained on behalf of Dell.
- NXP B.V. et al. v. Dell Inc., No. 1:14-cv-00146 (D. Del.). Retained on behalf of Dell.
- California Institute of Tech. v. Broadcom Ltd. et al., No. 2:16-cv-3714 (C.D. Cal.). Retained on behalf of Broadcom. Deposed.
- Nokia Techs. Oy et al. v. Apple Inc., Nos. 2:16-cv-1440, 2:16-cv-1441 (E.D. Tex.). Retained on behalf of Apple Inc.

- Certain Electronic Devices, Including Mobile Phones, Tablet Computers, and Components Thereof, Nos. 337-TA-1038, 337-TA-1039 (ITC). Retained on behalf of Apple Inc.

- Ruckus Wireless, Inc., Belkin International, Inc., Amazon.com, Inc., Netgear, Inc., and Roku, Inc. v. Hera Wireless S.A., U.S. Patent and Trademark Office *Inter Partes Review*. Retained on behalf of Ruckus Wireless (Arris, Inc.).

- Certain Mobile Electronic Devices and Radio Frequency and Processing Components Thereof, Inv. No. 3337-TA-1065; Qualcomm Inc. v. Apple Inc, Civ. Action No. 3:17-cv-01375-JAH-MDD. Retained on behalf of Apple.

- VLSI Technology LLC v. Intel Corporation, No. 1:18-cv-00966 (Delaware). Retained on behalf of Intel Corporation.

- Nokia Techs. Oy v. Lenovo (Shanghai) Elects. Tech. Co. Ltd, et al., No. 5:19-cv-427 (E.D.N.C.) and In re Certain Electronic Devices, Including Computers, Tablet Computers, and Components and Modules Thereof, Inv. No. 337-TA-1208 (U.S.I.T.C). Retained on behalf of Lenovo.

- Koss Corporation v. Apple, Inc, No. 6:20-cv-00665 (W.D. Texas). Retained on behalf of Apple, Inc. Deposed.

- Aegis 11 S.A. v. Hisense Company, Ltd. and Hisense USA Corporation, No. 1:20-cv-03891 (N.D. Georgia). Retained on behalf of Hisense.

- Mediatek, Inc. v. NXP Semiconductors, No. 2:21-cv-04970 (C.D. California), In the Matter of Certain Integrated Circuits And Products Containing Same, Inv. No. 337-TA-1272. Retained on behalf of NXP. Deposed. Testified at evidentiary hearing.

- One-E-Way, Inc. v. Apple Inc., No. 2:20-cv-06339-JAK-PD (C.D. Cal.)

- NXP Semiconductors v. Mediatek, Inc. In the Matter of Certain Integrated Circuits And Products Containing Same, Inv. No. 337-TA-1287. Retained on behalf of NXP. Deposed.

- Intellectual Ventures v. General Motors, No. 6:21-cv-1088 (W.D. Texas). Retained on behalf of General Motors.

- XR Communications, LLC v. Hewlett Packard, 6:21-cv-00694 (W.D. Texas). Retained on behalf of Hewlett Packard.

- American Patents, LLC v. Marvell Semiconductors, 6:22-cv-771 (W.D. Texas). Retained on behalf of Marvell Semiconductors.

- TexasLDPC, Inc. v. Broadcom, C.A. No. 18-1966-SB (Delaware). Retained on behalf of Broadcom.

- Atlas Global Technologies v. OnePlus, 6:21-cv-01217-ADA. Retained on behalf of OnePlus.

- LG Electronics Inc. v. TCL Electronics Holding Ltd., 2:22-cv-122-JRG. Retained on behalf of LG Electronics Inc.

- Atlas Global Technologies v. TP-Link, 2:21-cv-430-JRG. Retained on behalf of TP-Link. Deposed. Testified at Trial.

- Panasonic Automotive Systems Co., Ltd. v. UNM Rainforest Innovations, U.S. Patent and Trademark Office *Inter Partes Review*. Retained on behalf of Panasonic.

- Intellectual Ventures I, LLC v. Ubiquiti, Inc., C.A. No. 23-cv-00865-GBW. Retained on behalf of Ubiquiti.

- Motorola Mobility LLC v. Ericsson AB, Certain Cellular Base Station Communications Equipment Components Thereof, And Products Containing Same. ITC 337-TA- . Retained on behalf of Ericsson.

- ASUS Technology. Licensing Inc., et al v. AT&T Corp., et al, Case No. 2:23-cv-00486 (EDTX); ASUS Technology. Licensing Inc., et al v. T-Mobile USA, Inc., Case No. 2:23-cv-00487 (EDTX); ASUS Technology. Licensing Inc., et al v. Cellco Partnership d/b/a Verizon Wireless, et al, Case No. 2:23-cv-00488 (EDTX); Innovative Sonic Ltd., et al v. AT&T Corp., et al Case No. 2:23-cv-00489 (EDTX); Innovative Sonic Ltd., et al v. T-Mobile USA, Inc. Case No. 2:23-cv-00490 (EDTX); Innovative Sonic Ltd., et al v. Cellco Partnership d/b/a Verizon Wireless, et al Case No. 2:23-cv-00491 (EDTX). Retained on behalf of Ericsson for defendants. Deposed.

- Secure Communications Technologies, LLC v. Samsung Electronics Co., Ltd. Case No. 2:24-cv-484 (E.D. Texas). Retained on behalf of Samsung.

IV. EDUCATION

Ph.D., Electrical Engineering 1997
University of California, Los Angeles
Dissertation: *Probing Techniques for Multiuser Channels with Power Control*
Research Area: Wireless and Digital Communications
Advisor: Gregory J. Pottie

M.S., Electrical Engineering 1989
University of Massachusetts, Amherst
Concentration: Signal Processing and Microwave Systems

B.S., Electrical Engineering 1987
Rensselaer Polytechnic Institute

V. HONORS AND AFFILIATIONS

- Institute of Electrical and Electronics Engineers (IEEE) Senior Member.
- Member, Society for Industrial and Applied Mathematics.
- Reviewer, IEEE Communications Magazine, 2014 - present.
- Board of Directors, PATCA - Professional and Technical Consultants Association, Silicon Valley, 2007 - present.
- Vice Chair, IEEE 802.11ad Task Group, 2011-2012.
- Secretary, Wireless Gigabit Alliance, 2010-2012.
- Rockwell graduate fellowship recipient, UCLA, 1992-1996.
- Eta Kappa Nu, Electrical Engineering Honor Society, Rensselaer Polytechnic Institute, 1987.

VI. SKILLS

- Architecture and analysis of wireless digital communication systems, including 802.11a/b/g/n/ac/ad/ax/ay, Bluetooth, Wimedia UWB, WirelessHD, and WiGig.

- DSP Programming (TI TMS320C62x and 320C5x) in C and assembler and general programming in C++, C, Matlab, and Python.
- RF/microwave/mmwave laboratory and over-the-air channel measurements.
- Extra class Amateur Radio license (W6COV) and Commercial General Radiotelephone license.

VII. PUBLICATIONS

C. J. Hansen, “Semi-blind Channel Estimation on 802.11 OFDM Data Symbols”, International Conference on Computing, Networking and Communications (ICNC 2024), February 2024.

VIII. PATENTS

Named inventor on the following United States patents:

US Patent Number	*Patent Title*
11,297,625	Method, system and apparatus for signaling station capabilities to establish wireless connections
11,121,818	Method and apparatus for unsolicited block acknowledgements
10,886,975	Single-carrier wideband beamforming method and system
10,820,328	Method and apparatus for de-centralized spatial reuse in wireless communications systems
10,784,990	Method and apparatus for encoding and modulating data for wireless transmission
10,735,133	Method and apparatus for configurable MIMO processing in wireless communications
10,716,117	Method, system and apparatus for signaling station capabilities to establish wireless connections
10,681,632	System and method for low power signaling in a wireless local area network
10,630,359	Method and apparatus for beamforming training using frames
10,498,419	Method and apparatus for determining direction for transmission to establish wireless connections
10,243,635	Method and apparatus for beamforming training using frames
10,236,964	Method and apparatus for beamforming training in basic service set discovery
10,110,273	Interference mitigation in wireless communication systems
10,015,741	System and method for low power signaling in a wireless local area network
9,960,865	Filtering of Wi-Fi physical layer measurements
9,949,227	Location determination
9,680,563	System and method for partial bandwidth communication
9,596,637	Dynamically adapting wireless communication
9,826,373	WLAN transmitter having high data throughput
9,622,216	Method and system for low rate MAC/PHY for 60 GHz transmission
9,516,483	Wireless communication between stations of differing protocols
9,356,673	Communication device incorporating beamforming handshaking
9,344,535	Multiple protocol wireless communications in a WLAN
9,307,350	Protocol adaptation layer for wireless communications
9,300,368	Method and system for 60 GHz antenna adaptation and user coordination based on base station beacons
9,247,439	High data throughput wireless local area network receiver

9,241,331	Method and system for optimal beamforming in wireless networks
9,198,035	Simple pairing to generate private keys for different protocol communications
9,130,705	Transmitting high rate data within a MIMO WLAN
9,104,569	Method and apparatus for signal detection and decoding
9,037,092	Method, apparatus and computer program for determining whether a received signal comprises a first signal component
9,025,491	High speed data transmission utilizing a high frequency physical layer for a wireless personal area network device
8,996,949	Encoding system and method for a transmitter in wireless communications
8,965,431	Multimode control device for allocating resources to communication devices that use differing protocols and methods for use therewith
8,964,895	WLAN transmitter having high data throughput
8,964,521	Method and system for compromise greenfield preambles for 802.11N
8,929,317	Transmission of wide bandwidth signals in a network having legacy devices
8,917,676	Device and method for transmitting long training sequence for wireless communications
8,909,272	Control device for allocating resources to communication devices that use differing protocols and methods for use therewith
8,897,320	High data throughput WLAN frame format
8,892,056	Protocol adaptation layer for wireless communications
8,891,642	Mixed mode preamble for MIMO wireless communications
8,805,277	Method and system for Bluetooth 802.11 alternate MAC/PHY (AMP) transmit power control (TPC)
8,804,685	Dual mode operation in a wireless network
8,774,327	Adjustable RF receiver
8,750,252	Long training sequence method and device for wireless communications
8,743,994	Feedback of channel information in a closed loop beamforming wireless communication system
8,737,189	Method and system for compromise greenfield preambles for 802.11n
8,725,101	Wireless device and method of operation
8,644,770	Protocol adaptation layer for wireless communications
8,644,284	Dual mode operation in a wireless network
8,638,263	Platform enhancements for planar array antennas
8,634,777	Pairing with directional code sequence
8,630,367	Signaling format for wireless communications

8,620,368	Method and system for 60 GHz antenna adaptation and user coordination based on base station beacons
8,611,821	Communication device that detects and adapts to the presence of other devices and methods for use therewith
8,588,283	Method and system for frame formats for MIMO channel measurement exchange
8,577,416	Transceiver with plural space hopping array antennas and methods for use therewith
8,576,695	Preamble formats for MIMO wireless communications
8,553,659	Method and system for optimal beamforming in wireless networks
8,548,087	Long training sequence for MIMO WLAN systems
8,520,669	High data throughput wireless local area network receiver
8,437,419	Method and system for frame formats for MIMO channel measurement exchange
8,437,362	Asymmetrical MIMO wireless communications
8,407,556	LDPC (low density parity check) coding and interleaving implemented in MIMO communication systems
8,406,204	Transmission of wide bandwidth signals in a network having legacy devices
8,385,844	Transceiver with plural space hopping phased array antennas and methods for use therewith
8,369,784	High speed data transmission utilizing a high frequency physical layer for a wireless personal area network device
8,363,642	High data throughput wireless local area network receiver
8,351,399	MIMO wireless communication greenfield preamble formats
8,345,732	Feedback of channel information in a closed loop beamforming wireless communication system
8,320,877	Method and system for 60 GHz location determination and coordination of WLAN/WPAN/GPS multimode devices
8,284,867	Mixed mode preamble for MIMO wireless communications
8,284,651	Preamble formats for MIMO wireless communications
8,265,185	Method and system for encoding a signal for wireless communications
8,254,407	Asymmetrical MIMO wireless communications
8,233,565	Method and system for high speed wireless data transmission between communication devices
8,213,395	Method and system for dual mode operation in wireless networks
8,195,092	Method and system for utilizing a high frequency PHY layer for high speed data transmission between wireless devices
8,190,162	Radar detection circuit for a WLAN transceiver
8,184,679	RF transceiver having adaptive modulation

8,176,380	Algebraic construction of LDPC (low density parity check) codes with corresponding parity check matrix having CSI (cyclic shifted identity) sub-matrices
8,175,542	Transceiver with plural space hopping phased array antennas and methods for use therewith
8,170,504	Modified preamble for programmable transmitter
8,170,496	Transceiver with space hopping phased array antenna and methods for use therewith
8,170,495	Collaborative pairing transceiver with space hopping phased array antenna and methods for use therewith
8,169,998	Method and system for an AD HOC wireless network with master control of network parameters
8,144,798	Long training sequence for MIMO WLAN systems
8,126,425	Method and system for 60 GHZ location determination based on varying antenna direction and coordination of WLAN/WPAN/GPS multimode devices
8,095,162	Control device for allocating resources to communication devices that use differing protocols and methods for use therewith
8,094,749	Signaling format for wireless communications
8,089,890	Transmitting high rate data within a MIMO WLAN
8,085,871	Adaptive modulation in a multiple input multiple output wireless communication system with optional beamforming
8,081,926	Method and system for multisession communication using multiple physical (PHY) layers
8,081,104	Radar detection circuit for a WLAN transceiver
8,077,810	Apparatus for high data throughput reception in a WLAN
8,059,740	WLAN transmitter having high data throughput
8,041,333	Method and system for 60 GHz antenna adaptation and user coordination based on base station beacons
8,032,167	Multimode control device for allocating resources to communication devices that use differing protocols and methods for use therewith
8,031,806	Mixed mode preamble for MIMO wireless communications
7,995,667	Reduced latency concatenated reed solomon-convolutional coding for MIMO wireless LAN
7,991,056	Method and system for encoding a signal for wireless communications
7,991,009	Preamble formats for MIMO wireless communications
7,978,729	High data throughput WLAN frame format
7,974,591	Modified preamble for programmable transmitter
7,957,450	Method and system for frame formats for MIMO channel measurement exchange
7,940,751	Personal area network data encapsulation in WLAN communications

7,924,943	Method and system for optional closed loop mechanism with adaptive modulations for multiple input multiple output (MIMO) wireless local area network (WLAN) system
7,920,526	Long training sequence method and device for wireless communications
7,912,449	Method and system for 60 GHz location determination and coordination of WLAN/WPAN/GPS multimode devices
7,894,852	Channel reciprocity matrix determination in a wireless MIMO communication system
7,873,022	Multiple input multiple output wireless local area network communications
7,865,142	Method and system for multisession bluetooth communication using multiple physical (PHY) layers
7,840,184	Method and system for utilizing a 60 GHZ PHY layer for high speed data transmission between bluetooth devices
7,826,547	Mixed mode preamble for MIMO wireless communications
7,801,098	Parallel MAC/PHY for enhanced transmission rate in a wireless network
7,796,696	Asymmetrical multiple stream wireless communication using STBC
7,773,565	MIMO wireless communication greenfield preamble formats
7,746,886	Asymmetrical MIMO wireless communications
7,702,291	Radar detection from pulse record with interference
7,701,382	Radar detection circuit for a WLAN transceiver
7,680,059	Multiple protocol wireless communications in a WLAN
7,617,439	Algebraic construction of LDPC (Low Density Parity Check) codes with corresponding parity check matrix having CSI (Cyclic Shifted Identity) sub-matrices
7,593,692	Radar detection circuit for a WLAN transceiver
7,590,429	RF transceiver configuring for a MIMO communication
7,590,189	Signaling format for wireless communications
7,586,881	MIMO wireless communication greenfield preamble formats
7,583,933	Dynamic frequency selection in a wireless communication network
7,570,619	Long training sequence method and device for wireless communications
7,564,914	Method and system for frame formats for MIMO channel measurement exchange
7,558,537	Modified preamble for programmable transmitter
7,555,053	Long training sequence for MIMO WLAN systems
7,539,501	High data throughput wireless local area network receiver
7,516,390	LDPC (Low Density Parity Check) coding and interleaving implemented in MIMO communication systems
7,502,408	RF transceiver having adaptive modulation

7,466,773	WLAN receiver having an iterative decoder
7,444,134	Device and method for transmitting long training sequence for wireless communications
7,423,989	Preamble formats for MIMO wireless communications
7,417,974	Transmitting high rate data within a MIMO WLAN
7,400,643	Transmission of wide bandwidth signals in a network having legacy devices
7,330,501	Orthogonal normalization for a radio frequency integrated circuit
7,324,785	Transmit power control of wireless communication devices
7,269,430	Frame format for high data throughput wireless local area network transmissions
7,242,961	Channel reciprocity matrix determination in a wireless MIMO communication system
7,233,773	Configuring a MIMO communication
7,162,204	Configurable spectral mask for use in a high data throughput wireless communication
7,158,759	Dynamic frequency selection in a wireless communication network
7,020,220	Digital estimation and correction of I/Q mismatch in direct conversion receivers

Discussion on HE-SIG B Structure

- The current SFD [1] defines HE-SIG-B as follows:
  - Downlink HE MU PPDU shall include HE-SIG-B field, and the number of OFDM symbols of HE-SIG-B field is variable.
    - NOTE—The HE-SIG-B field includes information required to interpret HE MU PPDU, and detail is TBD.
  - HE-SIG-B shall use a DFT period of 3.2 μs and subcarrier spacing of 312.5 kHz.
- Background
  - The structure of HE-SIG-B has to be defined with following details
    - How to sort the contents in sequence
      - Encoding sequence is discussed in another presentation [4]
    - For wider bandwidth than 20MHz, how to arrange over frequency bands
    - What information to be signaled
  - In this presentation, we propose a HE-SIG-B structure

Topic 1: Duplicate or Non-duplicate

- HE SIG-A is proposed to have 2 OFDM symbol [2]
  - HE SIG-A is duplicated over operating bandwidth, like 11n/ac
  - HE SIG-B exists only for DL-MU
- For MU, contents in HE SIG-A and HE SIG-B can be separated as follows:
  - HE SIG-A can deliver the information about the PPDU to all STAs
    - STAs do not know about the operating bandwidth yet; so better to be duplicated
  - HE SIG-B sends the information for designated receiving STAs for MU operation
- The remaining question is whether we have duplicated part in HE SIG-B if there is any
  - We may not need another duplicated portion in HE SIG-B, given that HE SIG-A has 48~52 information bits
  - Unless we are lack of number of bits in HE SIG-A to be fully duplicated, we do not need to duplicate any OFDM symbol of HE SIG-B over full bandwidth

Topic 2: Common & User-specific

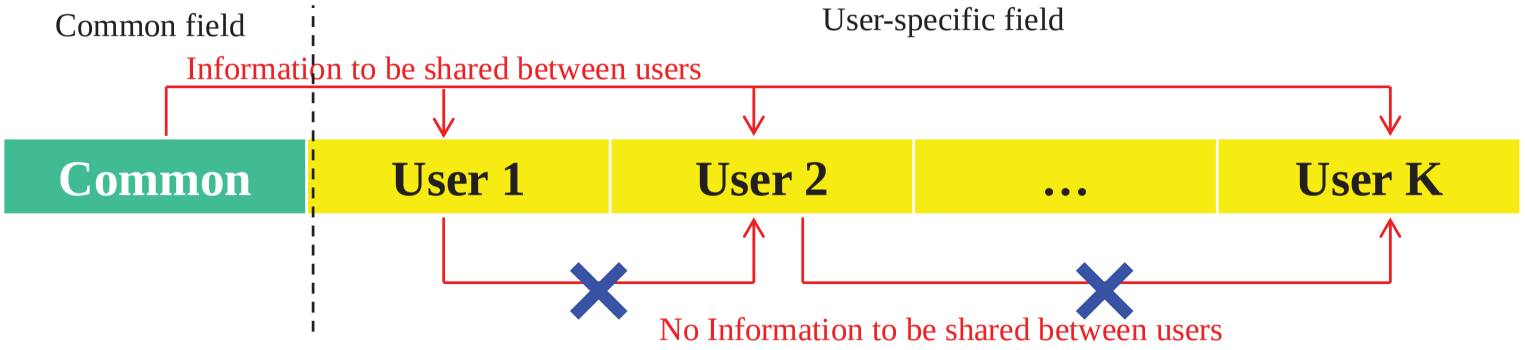
- There are some information, which needs to be decoded by a group of STAs, as common information for DL-MU
  - For example, Resource Unit (RU) allocation needs to be decoded, not by only one specific STA, but by a group of STAs
  - A group includes TBD number of STAs. It can be all or a subset of designated receiving STAs.
  - Those information may not be necessary for the other group of STAs when it is signaled for a subset of STAs
- Common information for a group of receiving STAs can be signaled at once
  - These information may need to be located up front in HE SIG-B, before user-specific information (MCS, Nsts etc. for each user)
  - If the group is a subset of STAs, those information is better to be aligned with the designated group of receiving STAs, so that decoding error does not affect for other group of receiving STAs, in terms of sub-bands
    - We can minimize the impact of OBSS interference, which may occupy some of sub-bands

Common Field in SIG-B

- The information for non-designated STAs to avoid the further un-necessary decoding process can be included in L-SIG & HE SIG-A
- HE SIG-B includes control signaling for recipients of DL-MU PPDU
  - The common field in HE SIG-B has the information which is needed for recipients in common
    - E.g., RU allocation is common information to all or sub-set of recipients
  - The user-specific field in HE SIG-B has the information for a specific user, which is not needed for other users

75

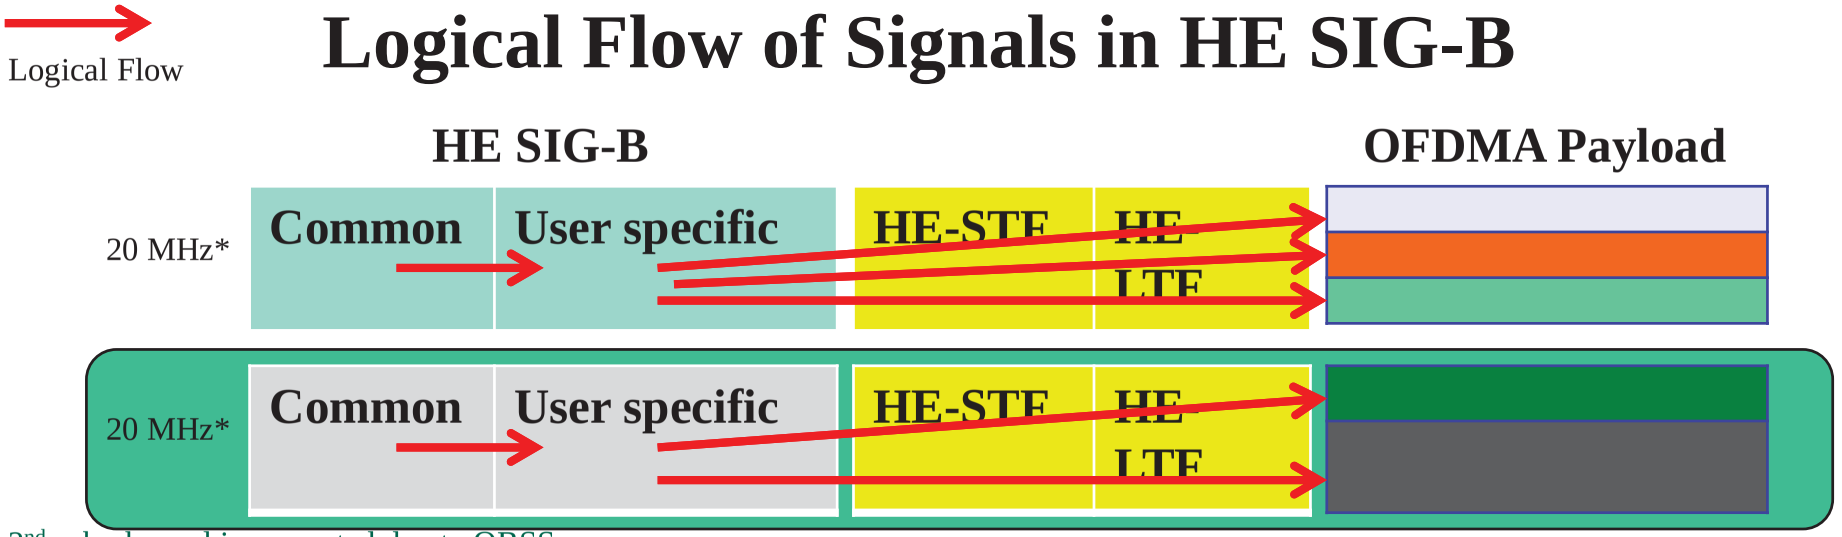
User-specific Field in HE SIG-B



- User-specific field consists of multiple sub-fields
- Per-STA information, one specific subfield may deliver some information for a specific STA, which may not be useful for some other STAs
  - i.e., Information is isolated between designated receiving STAs
- The boundary between common & user-specific field is in the bit-level, not OFDM symbol boundary

* 20MHz is an example

Logical Flow of Signals in HE SIG-B



- Information in SIG-B common field is shared between users within the same sub-band channel
  - E.g., Resource Unit Allocation
- Common/User specific signaling applies to the same sub-band channel
  - In this way, signaling in corrupted sub-band channel does not affect on decoding the PPDU in another sub-band channel
  - We can isolate the signaling to operate the OFDMA PPDU, so that partial interference does not corrupt the whole OFDMA PPDU reception

RU Allocation

- In MU (OFDMA or MIMO (SDMA)) operation, there are many combinations of RUs per bandwidth. Possible RUs [3], depending on the size of operating bandwidth, are
  - 26, 52,106, 242, 484, 996 and 996 x 2 data tones
- Receiving STAs need to know which RU needs to be decoded for themselves in HE SIG-B
- These RU allocation mapping is better to be up front, at common field, in HE SIG-B, because
  - Signaling for RU allocation for all receiving STAs can save the overhead, than individual signaling per STA, and
  - Receiver can prepare for decoding accordingly with early identified RU structure
- We propose to include RU allocation information in the common field of HE SIG-B
  - How to signal RU allocation is TBD

Summary

- We propose the HE signal field structure as follows
  - HE SIG-B does not have any OFDM symbol that is fully duplicated over the operating BW
    - Some part of an OFDM symbol may be duplicated if necessary
  - In HE SIG-B, which exists for DL-MU PPDU
    - We need to signal the control information for designated receiving STAs
    - For DL-MU, we need following information
      - Resource allocation (OFDMA or MU-MIMO)
      - Per-STA information, e.g.,
        - STA-ID
        - MCS
        - Nsts
    - We propose to have two fields in SIG-B
      - Common field, where RU allocation info is included
      - User-specific field, where per-STA info belongs to

Straw poll #1

- Do you agree to add to 11ax SFD that HE SIG-B does NOT have any OFDM symbol duplicated in each 20 MHz of the PPDU bandwidth?

80

Straw poll #2

- Do you agree to add to 11ax SFD that HE SIG-B has the common field followed by the user-specific field, where
  - The common field includes the information for all of designated STAs to receive the PPDU in corresponding bandwidth
  - The user-specific field consists of multiple sub-fields that do not belong to the common field, where one or multiple of those sub-fields are for each designated receiving STA
  - The boundary between the common & the user-specific field is in the bit-level, not the OFDM symbol-level

Straw poll #3

- Do you agree to add to 11ax SFD that the common field in HE SIG-B contains Resource Unit (RU) allocation?

82

TGax PHY Ad Hoc Jul 2015 Meeting Agenda

Date: 2015-07-14

Authors:

Name	Company	Address	Phone	email
Bo Sun	ZTE	ZTE R&D Zone, 710114, Xi'an, China		sun.bo1@zte.com.cn
Yakun Sun	Marvell	5488 Marvell Lane, Santa Clara, CA, 95054, USA		yakunsun@marvell.com
Jianhan Liu	Mediatek Inc.	2860 Junction Ave. San Jose, CA, 95131, USA		jianhan.liu@mediatek.com

IEEE 802.11 TGax
High Efficiency WLAN
PHY Ad Hoc

Co-Chairs:
Bo Sun (ZTE)
Yakun Sun (Marvell)
Jianhan Liu (Mediatek)

Agenda Items

- Call meeting to order
- Patent policy, etc. (Call for Potentially Essential Patents)
- Review ad hoc rules
- Set and approve agenda
- Technical Presentations approved by 802.11ax for presentation this week, and related straw polls
- Any other technical presentations

87

Meeting Protocol, Attendance, Voting & Document Status

- **Please announce your affiliation when you first address the group during a meeting slot**
- **Cell Phones to be silent or Off**
- **Register your attendance via https://imat.ieee.org while on meeting SSID (e.g. Verilan-secure)**
- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, Member's Area**
  - Contact Jon Rosdahl – jrosdahl@ieee.org

Patent Policy and Other Guidelines

- Following 5 slides

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is consistent with the ANSI patent policy and is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 12 and 12a on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

90

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy. Participants:

- **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Personal awareness" means that the participant "is personally aware that the holder may have a potential Essential Patent Claim," even if the participant is not personally aware of the specific patents or patent claims**
- **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of such potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**

Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2

- Early identification of holders of potential Essential Patent Claims is strongly encouraged
- No duty to perform a patent search

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/guides/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/guides/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/board/pat/pat-material.html

92

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/board/pat/index.html

This slide set is available at http://standards.ieee.org/board/pat/pat-slideset.ppt

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

Other Guidelines for IEEE WG Meetings

- All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

Ad Hoc Groups Operation

- A straw poll needs to achieves at least 75% at the ad-hoc level to be converted to a motion at the TG level.
- In the case a consensus can not be reached within an Ad Hoc group (a stalemate that prohibits further progress), the subject is moved to the Task group, if an Ad Hoc straw poll vote to move the subject to the Taskgroup achieves > 50% approval.
- A straw poll affecting the Spec Framework has to start with,
  - Do you agree to add to the TG Specification Frame work document?
    - x.y.z. <feature description>
- For further details, please see 11-15-0075r0
- Minutes of the Ad Hoc group meetings will be available on mentor.

- Contribution presented but straw poll(s) deferred.
- Contribution NOT presented yet.

Tuesday AM2

- **Presented contributions:**
  - SIG-A
    - 11-15/0822r1
    - 11-15/0826r1
  - SIG-B
    - 11-15/0805r2
    - 11-15/0821r1

97

SP1(SP1, 822r1)

Do you agree to add to 11ax SFD that HE-SIG-A is present in all 11ax packets and is two OFDM symbols long when it uses MCS0?

- Information bits in HE-SIGA are jointly encoded as in VHT-SIG-A (using 48 tones or 52 tones is TBD).
- SU packets and UL Trigger based packets do not contain HE-SIG-B symbols.

98

- **Y: 99**
- **N: 4**
- **A: 2**

SP PASSED, READY FOR MOTION

SP2(SP2, 822r1)

Do you agree to add to 11ax SFD that the data field in UL Multi-user transmissions shall immediately follow the HE-LTF section?

66

-Y 94

-N 1

-A 26

SP PASSED, READY FOR MOTION

SP3(826r1)

Do you support that HE-SIG-A have a repetition mode for range extension?

- In the repetition mode, HE-SIG-A symbols are repeated once in time. The bit interleaver is bypassed in the repeated HE-SIG-A symbols?
- The repetition mode should be indicated before HE-SIG-A.

100

- **Y: 83**
- **N: 31**
- **A: 4**

SP FAILED

Wednesday PM1

- **Planned contributions:**
  - Pilot
    - 11-15/824r0, Pilot Design for 11ax Downlink Transmissions, Yujin Noh
  - Padding
    - 11-15/810r0, HE PHY Padding and Packet Extension, Hongyuan Zhang
    - 11-15/887r3, efficient padding for last OFDM symbol, Heejung Yu
  - LTF
    - 11-15/817r0, P Matrix for HE-LTF, Yakun Sun
    - 11-15/845r0, LTF Design for Uplink MU-MIMO, Daewon Lee
    - 11-15/602r4, HE-LTF sequence for UL MU-MIMO, Qinghua Li

SP4 (SP1, 11-15/810r0)

- **Do you agree to add the following text into Section 3.4 HE Data Field of the current SFD:**
  - An 11ax SU PPDU should apply the MAC/PHY pre-FEC padding scheme as in 11ac, to pad toward the nearest of the four possible boundaries ("*a*" factor) in the last Data OFDM symbol(s), and then use post-FEC padding bits to fill up the last OFDM symbol(s).
  - Packet Extension (PE) field is defined at the end of 11ax PPDUs.
    - PE should have the same average power as data field.
- **Y:56/N:28/A:6**
- **SP FAILED**

SP5 (SP, 11-15/887r3)

- **Do you support the concept**

  HE shall include mechanisms to enhance the MAC/PHY padding efficiency by adjusting OFDM symbol duration in the last OFDM symbol for SU transmissions.

- **Y: 23/N: 52/A:13**
- **SP ONLY FOR INFORMATION COLLECTION**

103

SP6 (SP1, 11-15/817r0)

- **Do you agree to add the following text into Section x.x.x in current TGax SFD:**
  - in an OFDMA PPDU, using *N* HE-LTF symbols, an RU with $N_{sts,total}$ shall use the first $N_{sts,total}$ rows of the $N \times N$ P matrix?

- **Y: 64/N: 0/A: 14**

- **SP PASSED. READY FOR MOTION**

104

SP7 (SP, 11-15/845r0)

- **Do you agree that more analysis of implementation complexity and performance on various scenarios is needed for uplink MU-MIMO LTF design?**

105

Y: 37/N: 5/A: 32

SP ONLY FOR INFORMATION COLLECTION

Wednesday PM2

- **Planned contributions:**
  - LTF
    - 11-15/602r4, HE-LTF sequence for UL MU-MIMO, Qinghua Li
  - Coding
    - 11-15/580r1, 11ax coding discussion, Hongyuan Zhang
    - 11-15/816r0, Interleaver and Tone Mapper for OFDMA, Yakun Sun
  - MISC
    - 11-15/813r0, CP Indication for UL MU Transmission, Zhigang Rong
    - 11-15/832r0, Performance evaluation of SU/MU MIMO in OFDMA, Jiyong Pang
    - 11-15/853, Extensible Preamble Format Design, Leonardo Lanante
    - 11-15/865, Discussion of ACI performance and ACI requirements for IEEE 802.11ax, Leif Wilhelmsson
    - 11-15/868, mpact of Frequency Selective Scheduling Feedback for OFDMA, Hakan Persson

106

SP8 (SP, 11-15/602r4)

- **Do you agree to add to TGax Specification Framework Document?**
  - The HE-LTF sequences for UL MU-MIMO shall be generated as follows. For each stream, a common sequence shall be masked repeatedly in a piece-wise manner by a distinct row of the 8x8 P matrix. When the length of the LTF sequence is not divisible by 8, the last M elements of the LTF sequence (M being the remainder after the division of LTF length by 8) shall be masked by the first M elements of the P matrix row.

Y: 39/N: 23/A: 10

SP FAILED

SP9 (SP1, 11-15/580r1)

- Do you agree to add the following text into 11ax SFD?
  - "LDPC is the only coding scheme in the 11ax Data field for allocation sizes 996 tones and 996*2 tones."

108

Y: 68/N:0 /A: 8

SP PASSED. READY FOR MOTION

SP10 (SP2, 11-15/580r1)

- **Do you agree to add the following text into 11ax SFD?**
  - Support of BCC code is limited to less than or equal to four spatial streams (per user in case of MU-MIMO), and is mandatory (for both TX and RX) for RU sizes less than or equal to 242 tones (20MHz).
  - Support of LDPC code for both TX and RX is mandatory for HE STAs declaring support for at least one of HE 80/160/80+80 SU-PPDU bandwidths, or for HE STAs declaring support for more than 4 spatial streams. Otherwise, support of LDPC code for either TX or RX is optional.

109

Y:60 /N:0 /A: 11

SP PASSED. READY FOR MOTION

SP11 (SP3, 11-15/580r1)

- **Do you agree to add the following text into 11ax SFD?**
  - 11ax MCS table shall not have any MCS exclusion, and when LDPC is applied, N_{DBPS} is computed as follows

    $N_{DBPS} = \lfloor N_{CBPS} * R \rfloor$, where R is the coding rate

Y: 52 /N: 0/A:16

SP PASSED. READY FOR MOTION

SP12 (SP1, 11-15/816r0)

- **Do you agree to add into 11ax SFD the following BCC interleaver and LDPC tone mapper parameters table?**

RU (tones)	BCC		LDPC
	N_{col}	N_{rot}	D_{TM}
26	8	2	1
52	16	11	3
106	17	29	6
242	26	58	9
484			12
996			20

Y: 59/N: 0/A:7

SP PASSED. READY FOR MOTION

SP13 (SP, 11-15/813r0)

- **Do you agree to add the following text into 11ax SFD?**
  - **3.y.z CP length of UL OFDMA/MU-MIMO transmission shall be explicitly indicated by AP in the Trigger frame that allocates resources for the UL OFDMA/MU-MIMO transmission. The value of CP length for all users addressed by the Trigger frame shall be the same.**

Y: 57 /N: 1/A:7

SP PASSED. READY FOR MOTION

SP14 (SP, 11-15/832r0)

- **Do you agree to add the following text into 11ax SFD?**
  - MU-MIMO shall only be supported on allocations sizes>=106 tones

113

Y: 57 /N: 0/A: 16

SP PASSED. READY FOR MOTION

HE-SIG-B Structure

- The group agreed the following about HE-SIG-B structure [1]
  - HE-SIG-B is encoded on a per 20 MHz basis using BCC with common and user blocks separated in the bit domain.
  - For bandwidths ≥ 40 MHz, the number of 20 MHz subbands carrying different content is two and with structure as shown in Figure 1. Each square in the figure represents 20 MHz subband and 1/2 represents different signalling information.

Figure 1 - 20 MHz subchannel content for HE-SIG-B for bandwidths ≥ 40 MHz

126

  - HE-SIG-B has a common field followed by a user specific field, where
    - The common field includes the information for all of designated STAs to receive the PPDU in corresponding bandwidth
    - The user specific field consists of multiple sub-fields that do not belong to the common field, where one or multiple of those sub-fields are for each designated receiving STA
    - The boundary between the common and the user specific field is at the bit level and not the OFDM symbol level
  - The common field in HE-SIG-B contains Resource Unit (RU) allocation

In this presentation

- We build on the progress from the last meeting by adding details on
  - The resource allocation information in the common part of HE-SIG-B
    - The size of the resource allocation information
  - Signaling information for each user in the sub-fields of the user –specific part
  - Improving HE-SIG-B efficiency by load balancing for MU-MIMO allocations
    - Arrangement of the common and the user-specific portions for MU-MIMO RUs > 20MHz.

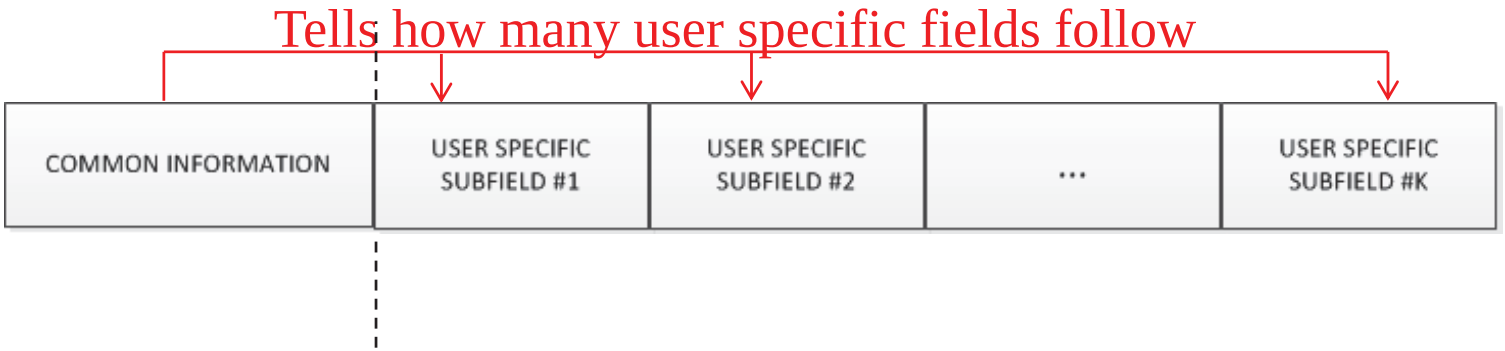
127

Resource Allocation Signaling

- The Resource Allocation signaling in the common portion of HE-SIG-B channel indicates
  - Arrangement of RUs in frequency
    - Indicates the distribution of RU allocations for single (SU-MIMO) and multiple (MU-MIMO) users
  - Number of users multiplexed when those RUs are used for MU-MIMO
- OFDMA tone plan is previous defined [2]
  - Allocation sizes are: 1x26, 1x52, 1x106, 1x242 1x484, 1x996, 2x996
- MU-MIMO multiplexing with OFDMA was also previous discussed [3]:
    - We agreed to support MU-MIMO on only RUs of size ≥ 106 tones
    - Assuming a maximum of 8 users can be multiplexed in MU
- Considering all combinations of RUs and number of users in MU-MIMO allocations, for a 20MHz PPDU BW
  - Number of possible combinations of RUs and #users ~ 175
  - 8 bits of resource allocation signaling are needed

128

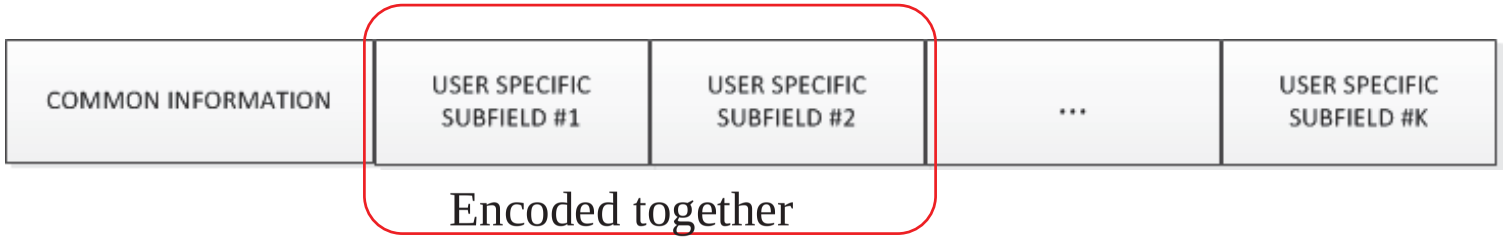
User Specific Fields in HE-SIG-B



- Common information communicates RU arrangement and the number of users for MU-MIMO allocations
- Each user specific field contains information for STA scheduled in the MU- PPDU
  - User specific sub-fields should contain
    - STA-ID for addressing
    - the information necessary to decode the PPDU
      - For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)
      - For each user in a multi-user allocation in a RU: Spatial Configuration Fields, MCS and Coding.
    - Other fields are TBD

User Specific Fields in HE-SIG-B

- In an accompanying contribution [5], we propose encoding groups of user specific information field together with one BCC.

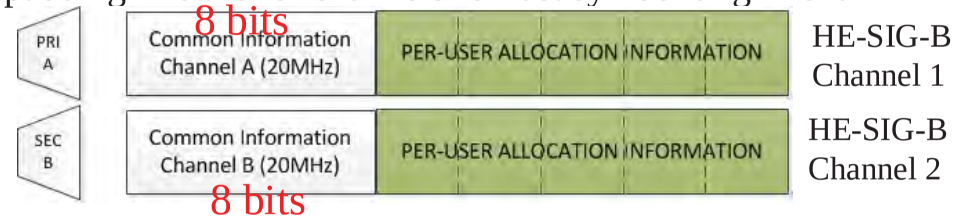


- Each user specific sub-field can carry information for either MU or SU.
  - Each user in a MU–MIMO allocation is separately addressed.
  - Data parsing of the content of user specific sub-fields differs based on SU or MU.
- To enable efficient grouping for joint encoding of user specific sub-fields
  - We prefer that the size of the user specific sub-fields be the same for both SU and MU allocations

HE-SIG-B Multiplexing

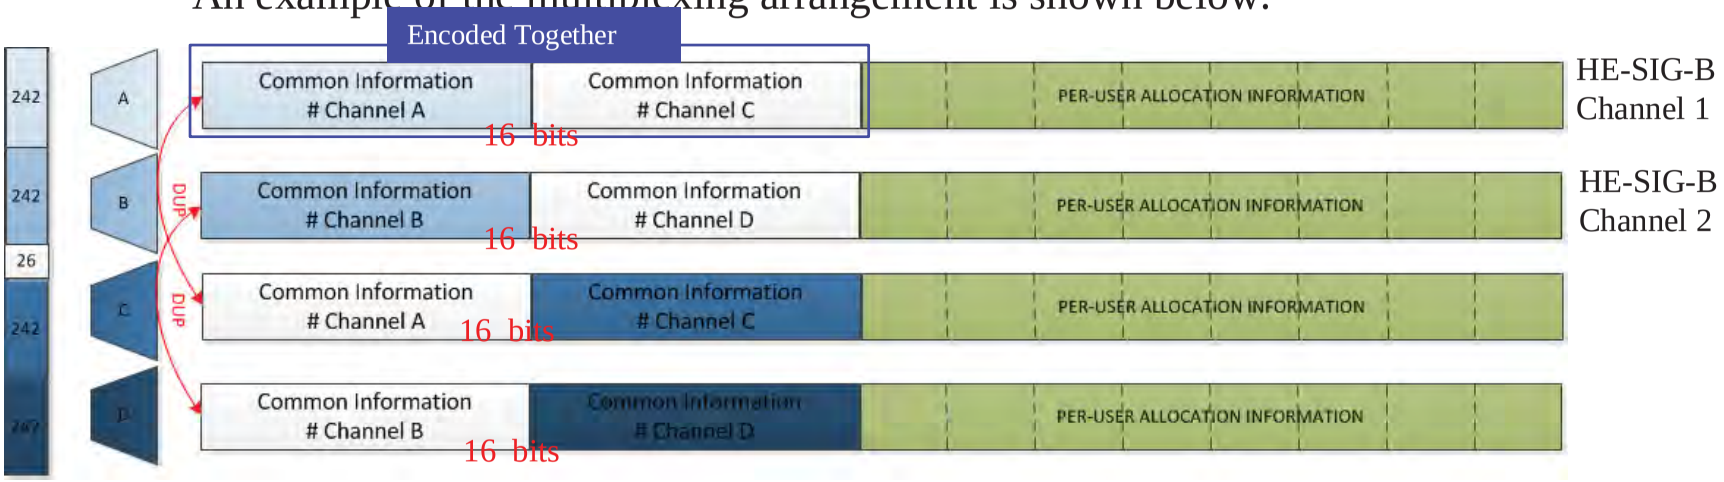
- For 20MHz, the HE-SIG-B construction is straight forward
  - Signal the RU Arrangement + MU information using 8 bits in the common information followed by per-user allocation information
    - STA uses the common information and the position of its allocation to unambiguously identify the RU containing its data

- For 40MHz, the HE-SIG-B has two channels each with different information
  - Each channel carries RU allocation information for users scheduled in the 20MHz segment
    - May require padding in either of channels for last symbol alignment



HE-SIG-B Multiplexing (80MHz)

- Four 20MHz segments have to be mapped to 2 HE-SIG-B channels duplicated per 40MHz [3]
  - 80MHz tone plan not aligned with 20MHz segments.
    - Channel A, B, C, D below refer to 242 tones RUs – and can signal RU arrangements for smaller RUs with-in the 242 tone RUs
      - 8 bits per 242 tone RU – 16 bits total per HE-SIG-B Channel
    - Central 26 tone RU may be signaled separately
  - An example of the multiplexing arrangement is shown below.

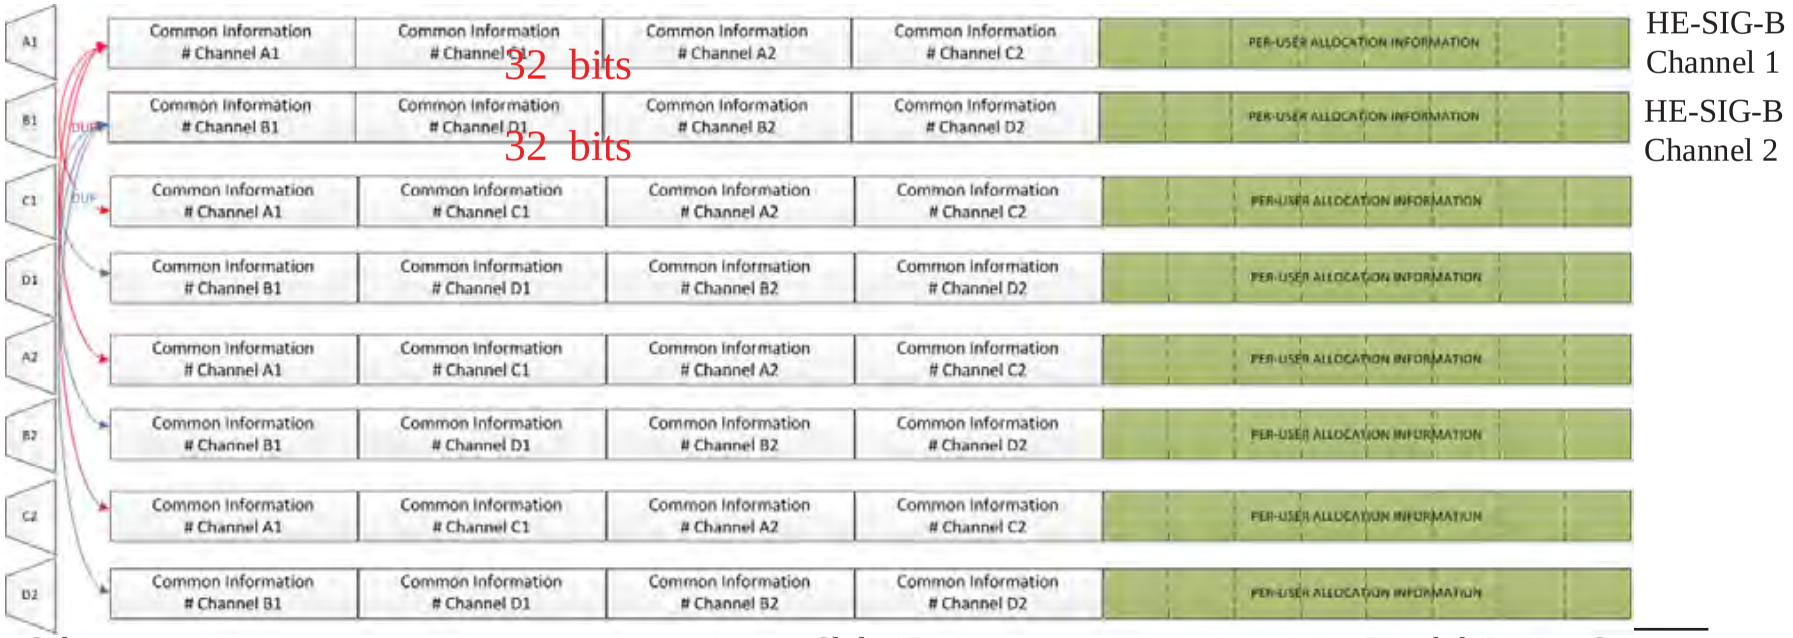


- Duplication of HE-SIG-B channels keeps control information in the 20MHz sub-carriers closest to the data sub-carriers.

Extending Multiplexing Support to 160MHz

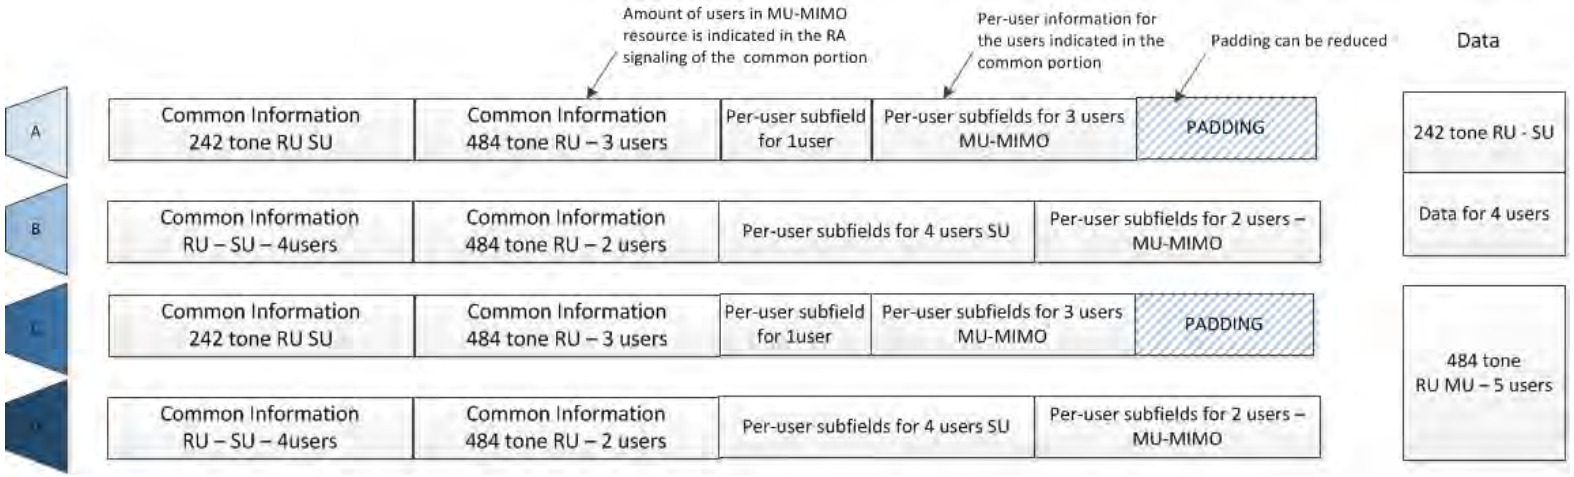
- Eight 20MHz segments have to be mapped to 2 HE-SIG-B channels duplicated per 40MHz
  - 160MHz tone plan built as two concatenated 80MHz tone plans
    - Channel A, B, C, D below refer to 242 tones RUs – and can signal RU arrangements for smaller RUs with-in the 242 tone RUs
      - 32 bits totally for the four channels
    - Two central 26 tone RUs in each 80MHz may be signaled separately.

Example Arrangement:



Load Balancing for large MU-MIMO allocations

- When RU sizes > 20MHz are used, AP divides the per-user content blocks between allocated channels dynamically based on load in each allocated channel
  - Since information spans 2 channels, control is carried over a 20MHz segment of the data - reliability in HE-SIG-B is ensured.
- Common Control Portion:
  - Repeat MU-MIMO allocation *size* in each allocated channel
  - Indicate number of per-user content blocks carried in the corresponding channel
- User specific fields:
  - Transmit per-user content blocks for the subset of users indicated in the common portion



Summary

- Resource Allocation Signaling in the common portion of HE-SIG-B needs 8 bits per 20MHz PPDU and indicates
  - RU Arrangement in the frequency domain
  - If MU-MIMO Capable RUs carry MU-MIMO
    - Number of users multiplexed when those RUs are used for MU-MIMO
- Resource Allocation Signaling indicates the number of user allocation sub-fields that follow the common portion of HE-SIG-B
  - Each user allocation sub-field addresses and STA and gives necessary information to decode data in the PPDU
  - Data parsing of the content of user allocation sub-fields differs based on SU or MU. The size of the sub-field should be the same for both SU and MU.

Summary

- For BW > 20MHz, the mapping of control information to two HE-SIG-B channels is done such that
  - the control information is carried in the same 20MHz segment as the data – ensures reliability.
  - For 80MHz, duplication of HE-SIG-B requires that
    - Control information for 2 segments be carried in each HE-SIG-B channel.
      - 8 bits per 20MHz segment – 16 bits of common control
  - For 160 MHz, control information for 4 segments be carried in each HE-SIG-B channel
    - 32 bits of common control information.
- For MU-MIMO allocations spanning larger than 20MHz BW, the AP can dynamically allocate users to each HE-SIG-B channel to improve load balancing among the two 2 HE-SIG-B channels.

Straw Poll #1

Do you agree to add the following text to the 11ax SFD:

The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit per 20MHz PPDU BW for signaling

- The RU arrangement in frequency domain
- Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations.

The exact mapping of the 8 bit to the RU arrangement and the number of MU-MIMO allocations is TBD.

Signaling for the center 26 unit in 80MHz is TBD

138

Straw Poll #2

Do you agree to add the following text to the 11ax SFD:

The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields

- STA-ID
- For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)
- For each user in a multi-user allocation in a RU: Spatial Configuraiton Fields, MCS and Coding.

Other fields are TBD.

139

Straw Poll #3

Do you agree to add the following text to the 11ax SFD:

The length of the user specific subfield in HE-SIG-B for a single-user allocation is equal to the length of the user specific subfield of each user in a multi-user allocation.

140

Straw Poll #4

Do you agree to add the following text to the 11ax SFD:

For MU-MIMO allocation of RU size > 20MHz, the user-specific subfields is dynamically split between two HE-SIG-B content channels(1/2) and the split is decided by the AP (on a per case basis)

141

TGax September 2015 Meeting Agenda

Date: 2015-08-04

Authors:

Name	Company	Address	Phone	email
Osama Aboul-Magd	Huawei Technologies	303 Terry Fox Drive Kanata, ONT, Canada K2K-3J1	613-287-1405	Osama.aboulmagd@Huawei.com

145

IEEE 802.11 TGax: High Efficiency WLAN Task Group

Bangkok, Thailand

September 13-19, 2015

Chair: Osama Aboul-Magd (Huawei Technologies)
Vice Chair: Simone Merlin (Qualcomm)
Vice Chair: Ron Porat (Broadcom)
Secretary: Yasuhiko Inoue (NTT)
Technical Editor: Robert Stacey (Intel)

Meeting Protocol

- **Please announce your affiliation when you first address the group during a meeting slot**

Attendance

- http://newton.meeting.verilan.com

1. Register

2. Indicate attendance

148

See document 11-15-0xxxr0 for more details

Attendance, Voting & Document Status

- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, member's area**
  - see Jon Rosdahl – jrosdahl@ieee.org
- **Cell Phones Silent or Off**

149

Patent Policy

- **Following 5 slides**

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 14 and 15 on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy.

- **Participants [Note: Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2]:**
  - **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**
- **Early identification of holders of potential Essential Patent Claims is strongly encouraged**
- **No duty to perform a patent search**

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/develop/policies/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/develop/policies/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/about/sasb/patcom/materials.html

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/about/sasb/patcom/index.html

This slide set is available at https://development.standards.ieee.org/myproject/Public/mytools/mob/slideset.ppt

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

Slide #3

Other Guidelines for IEEE WG Meetings

- **All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.**
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

Slide #4

Agenda Items for the Week

- **Approve TG and Telecons minutes since January meeting.**
- **Continue to advance task group documents.**
  - Simulation Scenarios
  - Evaluation Methodology
  - Channel Model
  - Function Requirements
  - Specification Framework
- **Ad Hoc group meetings**
- **Technical Presentations and related straw polls and/or motions**
- **Schedule Telecon times.**

General Flow of the Meeting

- **Monday Sep 14, 10:30 – 12:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Review from November 2014 meeting
  - Call for submissions
  - Agenda setting and approval
  - TG Motions
  - Presentations
  - Recess
- **Monday Sept 14 , 13:30 – 15:30**
  - Ad Hoc Group Meetings
- **Tuesday Sept 15, 10:30 – 12:30**
  - Ad Hoc Group Meetings
- **Tuesday Sept 15, 13:30 – 15:30**
  - Ad Hoc Group Meetings
- **Tuesday Sept 15. 16:00 – 18:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - Recess
- **Wednesday Sept 16 , 08:00 – 10:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - Recess
- **Wednesday Sept 16 , 13:30 – 15:30**
  - Ad Hoc Group Meetings
- **Wednesday Sept 16 , 14:00 – 16:00**
  - Ad Hoc Group Meetings
- **Thursday Sept 17, 08:00 – 10:00**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - Recess
- **Thursday Sept 17, 13:30 – 15:30**
  - Call Meeting to order
  - IEEE 802 and 802.11 IPR Policy and procedure.
  - Presentations
  - TG Motions
  - Goals for May 2015
  - Telecons Schedule
  - Adjourn

TGax Schedule in a Glance

	Monday		Tuesday		Wednesday		Thursday
AM1					TGax		TGax
AM2	TGax		PHY	MAC			
PM1	PHY	MAC	SR	MU	PHY	SR	TGax
PM2			TGax		TGax		
EVE	PHY	MAC	SR	MU			

Submissions (PHY)

11-15/0579	preamble design and autodetection	Hongyuan Zhang	PHY
11-15/0580	11ax Coding Discussion	Hongyuan Zhang	PHY
11-15/810	HE PHY Padding and Packet Extension	Hongyuan Zhang	PHY
11-15/1031	DL MU Signalling	Katsuo Yunoki	PHY
11-15/1051	HE NDP frame for sounding	Young Hoon Kwon	PHY
11-15/1059	SIG-B Encoding Structure Part II	Ron Porat	PHY
11-15/1066	HE-SIG-B Contents	Kaushik Josiam	PHY
11-15/1068	Reliable Transmission Schemes for HE-SIG-B and Data	Jianhan Liu	PHY
11-15/1070	1024 QAM Proposal	??	PHY
11-15/1075	Number of BSS Color bits	Yasuhiko Inoue	PHY
11-15/0826	HE-SIG-A transmission for range extension	Jiayin Zhang	PHY
11-15/1077	HE-SIG-A Content	Jiayin Zhang	PHY
11-15/0853	Extensible Preamble Format Design	Leonardo Lanante	PHY
11-15/1088	LTF Design for Uplink MU-MIMO	Daewon Lee	PHY
11-15/1089	Considerations on PHY Padding and Packet Extension in 11ax	Yujin Noh	PHY
11-15/1091	Considerations on Range Extension with SIG-A Repetition	Yujin Noh	PHY
11-15/1092	Support of 1x/2x/4x OFDM Symbol in HE SU PPDU	Heejung Yu	PHY
11-15/1106	SIG-B Structure	Reza Hedayat	PHY
11-15/1111	SIG-B Resource unit allocation coding	Amin Jafarian	PHY
11-15/1119	Discussions on HE SIG-A Structure	John Son	PHY
11-15/1122	Identifiers in HE PPDUs for power saving	Alfred Asterjadhi	PHY
11-15/0602	HE-LTF squence for UL MU-MIMO	Xiaogang Chen	PHY
11-15/0823	Preamble Design and Auto-Detection for 11ax	Sungho Moon	PHY
11-15/1071	Tone Grouping Factors and NDP format for 802.11ax	Sameer Vermani	PHY

Submissions (MAC)

Requested by WG Leadership

- **Attendance count at the midpoint of each timeslot**
  - Required to be done during TG and ad hoc slots

Agenda for Monday September 14 , 10:30 – 13:30

- **Call meeting to order**
- **Patent policy, etc.**
- **Call for submissions**
- **Set Ad Hoc Groups schedule and approve agenda**
- **Summary from May 2015 meeting**
- **Timeline**
- **SFD review – Editor**
- **TG motions**
  - Approve TG meeting and Telecon minutes since July meeting.
  - Approve the latest SFD revision
- **Ad Hoc group Rules**
- **Presentations**
- **Recess**

Summary from July 2015 Meeting

- **Passed a number of motions affecting the TG Specification Framework. Motions passed related to PHY, MAC, and MU.**
- **Latest revision (not yet approved) of the Specification Framework is available at;**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0132-07-00ax-spec-framework.docx
- **Approved new revisions of the Evaluation Methodology TG documents.**

Approval of TG Minutes (July 2015 Meeting and Telecon Minutes)

- **Approve TGax minutes of meetings and teleconferences from July 2015 Plenary meeting to today:**
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0884-01-00ax-tgax-july-2015-waikoloa-meeting-minutes.docx
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0971-01-00ax-july-meeting-minutes-of-the-spatial-reuse-ad-hoc-group.docx
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0949-01-00ax-july-2015-hawaii-tgax-mu-ad-hoc-meeting-minutes.docx
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0922-01-00ax-july-2015-hawaii-tgax-mac-ad-hoc-meeting-minutes.docx
  - https://mentor.ieee.org/802.11/dcn/15/11-15-0913-00-00ax-ieee-802-11-tgax-july-2015-hawaii-phy-ad-hoc-meeting-minutes.docx

- **Move: Lei Wang Second: Guido**
- **Approved with no objection**

169

SFD Motion

- **Move to accept document 11-15/0132r7 as the current revision of the TG Specification Framework document.**

- **Move Second:**

170

Ad Hoc Group Rules

- A straw poll needs to achieves at least 75% at the ad-hoc level to be converted to a motion at the TG level.
- In the case a consensus can not be reached within an Ad Hoc group (a stalemate that prohibits further progress), the subject is moved to the Task group, if an Ad Hoc straw poll vote to move the subject to the Taskgroup achieves > 50% approval.
- A straw poll affecting the Spec Framework has to start with,
  - Do you agree to add to the TG Specification Frame work document?
    - x.y.z. <feature description>
- For further details, please see 11-15-0075r0
- Minutes of the Ad Hoc group meetings will be available on mentor.

Agenda for Monday September 14 , 13:30 – 15:30

- **Ad Hoc Group Meetings**
  - PHY – World Ballroon B
  - MAC – World Ballroom C

Agenda for Monday September 14 , 19:30 – 21:30

- **Ad Hoc Meetings**
  - PHY: World Ballroom B
  - MAC: World Ballroom C

Agenda for Tuesday September 15, 10:30 – 12:30

Agenda for Thursday September 17, 08:00 – 10:00 and 13:30-15:30

- TG Meeting
- Call Meeting to order
- IEEE 802 and 802.11 IPR Policy and procedure.
- TG Motions – starting at 8:30 am
- SSD and EVM Motions
- Goals for November 2015
- Telecon Schedule
- Presentations
- Adjourn

PHY Motion #36

- **Move to make the following text changes in 11ax SFD (3.3.3 Coding)**
  - *LDPC is the only coding scheme in the HE PPDU Data field for allocation sizes of 484 tones, 996 tones and 996*2 tones.*
  - ….
  - *Support of LDPC code for both TX and RX is mandatory for HE STAs declaring support for at least one of HE 40/80/160/80+80 SU-PPDU bandwidths, ……..*

183

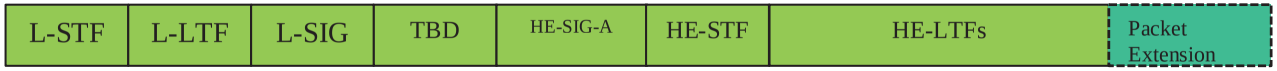
- **Move: Hongyuan Zhang Second: Ron Porat**
- **Accepted with no objection**

- **DCN: 11-15/0580r2 SP Result: 40/0/18**

PHY Motion #37

- **Move to add to the TG Specification Framework:**
  - 4.y.z The spec shall define an HE-NDP for DL Sounding. The frame format of HE-NDP is based on the 11ax SU PPDU format and is shown in the diagram below. The presence and duration of packet extension at the end of HE-NDP is TBD.

Format of HE-NDP



- **Move: Young Hoon Kwon Second: Ron Porat**
- **Accepted with no objectoion**
- **DCN: 11-15/1051r1 SP Result:38/0/4**

PHY Motion #38

- **Move to add the following text to the TGax spec framework document:**

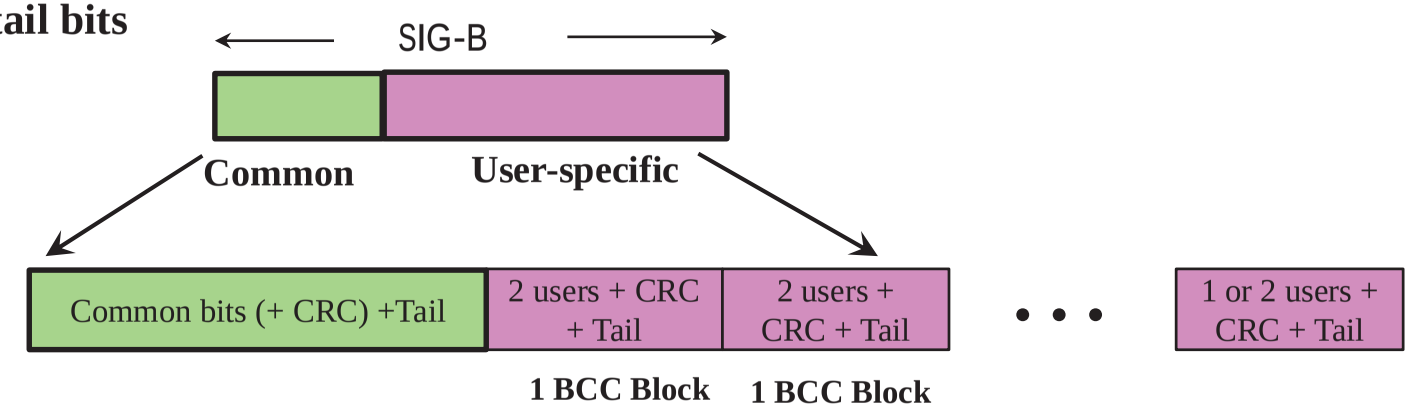
  "802.11ax spec shall not support Ng=1 for sounding feedback. Note that the tone grouping factor, Ng is defined with respect to data tones of the 11ax PPDU. "

- **Move: Sameer Vermani Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1071r2 SP Result:Unanimous**

PHY Motion #39

Move to add the following text to the SFD: The encoding structure of each BCC in SIG-B is as shown in the figure and as described below:

- **2 users are grouped together and jointly encoded in each BCC block in the user specific section of HE SIG-B**
- **The CRC in the common block is TBD**
- **The last user information is immediately followed by tail bits (regardless of whether the number of users is odd or even) and padding bits are only added after those tail bits**



- **Move: Ron Porat** **Second: Yasu Inoue**
- **Accepted with no objection**
- **DCN: 11-15/1059r1** **SP Result: 43/0/21**

PHY Motion #40

- **Move to add the following text to the 11ax SFD:**
  - The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields
  - STA-ID
  - For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)
  - For each user in a multi-user allocation in a RU: Spatial Configuraiton Fields, MCS and Coding.
  - Other fields are TBD.
- **Move: Yasu Inoue Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1066r0 SP Result: 43/0/16**

PHY Motion #41

- **Move to add the following text to the 11ax SFD:**

  –For MU-MIMO allocation of RU size > 20MHz, the user-specific subfields is dynamically split between two HE-SIG-B content channels(1/2) and the split is decided by the AP (on a per case basis)

  - **Move: Yasu Inoue Second: Ron Porat**
  - **Accepted with no objection**
  - **DCN: 11-15/1066r0 SP Result: 39/0/15**

188

PHY Motion #42

- **Move to add the following text to the 11ax SFD:**
  - 1024 QAM is used as an optional feature for SU and MU using resource units equal to or larger than 242 tones in 11ax

189

- **Move: Eunsung Park** **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1070r3** **SP Result: 35/0/18**

PHY Motion #43

- **Move to add to SFD**
  - HE-SIG-A shall include the following fields in SU PPDU.
    - The size of each field is TBD
    - The other fields are TBD

Format indication
TXOP duration
BW
Payload GI
PE
MCS
coding
LTF compression
Nsts
STBC
BF
CRC
tail

- **Move: Jiayin Zhang**
- **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1077r0**
- **SP Result: 53/14/6**

PHY Motion #44

- **Move to add to SFD**
  - HE-SIG-A shall include the following fields in MU DL PPDU.
    - The size of each field is TBD
    - The other fields are TBD

Format indication
TXOP duration
Number of HE-SIG-B symbols
MCS of SIGB
CRC
tail

- Move: Jiayin Zhang
- Second: Ron Porat
- Accepted with no objection
- DCN:11-15/1077r0
- SP Result: 56/14/4

PHY Motion #45

- **Move to add to SFD**
  - HE-SIG-A shall include the following fields in MU UL PPDU.
    - The size of each field is TBD
    - The other fields are TBD

Format indication
TXOP duration
CRC
tail

- Move: Jiayin Zhang
- Second: Ron Porat
- Accepted with no objection
- DCN: 11-15/1077r0
- SP Result: 52/0/16

PHY Motion #46

- **Move to add to the SFD:**
  - The spec shall support adding a BSS COLOR field in the SIG-A field
    - The BSS COLOR field is an identifier of the BSS (size TBD)
- **Move:** Alfred Asterjadhi **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1122r0** **SP Result:60/0/13**

193

PHY Motion #47

- **Move to add the following rules to the SFD:**
  - An HE non-AP STA may enter the Doze state until the end of an HE DL MU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS, and
    - the value derived from any of the STA Identifiers in the SIG-B field does not match its own identifier or that of a broadcast/multicast identifier
  - An HE non-AP STA may enter the Doze state until the end of an HE UL MU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS
- **Move:** Alfred Asterjadhi **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1122r0** **SP Result:52/0/9**

194

PHY Motion #48

- **Move to add to the SFD**
- **An UL/DL Flag field is present in the SIG-A of an HE SU PPDU**
  - The UL/DL Flag indicates whether the frame is Uplink or Downlink
    - The value of this field for TDLS is TBD
- **Move:** Alfred Asterjadhi **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1122r0** **SP Result:55/0/13**

PHY Motion #49

- **Move to add the following rules to the SFD:**
  - An HE STA may enter the Doze state until the end of an HE SU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS, and
    - the value of the UL/DL Flag field indicates that the frame is uplink
- **Move:** Alfred Asterjadhi **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1122r0** **SP Result:50/0/10**

196

PHY Motion # 50

- **Move to assign at least 6 bits for BSS Color field**

- **Move:** Yasuhiko Inoue **Second: Ron Porat**
- **Y/N/A: 52/18/24**
- **Motion fails**
- **DCN:11-15/1075r1** **SP Result: 43/0/6**

Motion to Defer

- **Move to defer PHY Motion #50**
- **Move: Chuck Second Sean Coffey**
- **Y/N/A: 28/35/32**
- **Motion fails**

198

Motion to Amend

- Amend PHY motion #50 to:
- Move to assign at least 6 bits for BSS Color field
- Move: Yasu Inoue
- Second: Chuck
- Y/N/A: 31/23/40
- Motion passes

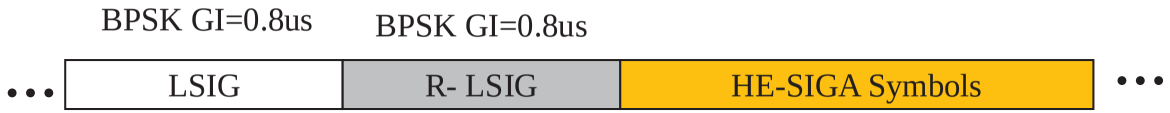
199

PHY Motion #51

Move to add to the SFD as below:

11ax preamble shall have a 4us symbol repeating the L-SIG content, right after the legacy section

– This symbol shall be modulated by BPSK and rate ½ BCC.



- **Move: Hongyuan Zhang** **Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/0579r4** **SP Result: 74/16/5**

PHY Motion #52

- **Move to insert the following in SFD:**
  - In L-SIG, the L-LENGTH field is set to a value not divisible by 3.
  - The value of L_LENGTH mod 3 will be used for signaling of one bit of TBD information.

201

- **Move: Hongyuan Zhang** **Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/0579r4** **SP Result: 71/12/4**

PHY Motion #53

- **Move to add dual sub-carrier modulations (DCM) as optional modulation schemes for HE-SIGB and Payload to 11ax SFD**
  - Dual sub-carrier modulation (DCM) are only applied to BPSK, QPSK and 16QAM modulations.

- **Move: Jianhan Liu Second: ron Porat**
- **Y/N/A:54/2/35**
- **Motion passes**
- **DCN: 11-15/1068r1 SP Result: 66/1/15**

PHY Motion #54

- **Move to add one bit DCM indication in HE-SIGA to 11ax SFD**

- **Move: Jianhan Liu Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1068r1 SP Result: 64/1/12**

PHY Motion #55

- **Move to add to 11ax SFD that HE-SIG-A shall have a repetition mode for range extension**
  - In the repetition mode, HE-SIG-A symbols are repeated once in time. The bit interleaver is bypassed in the repeated HE-SIG-A symbols
  - The repetition mode is indicated before HE-SIG-A.

- **Move: Jiayin Zhang Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/0826r3 SP Result: 68/0/15**

PHY Motion #56

- **Move to add to TGax Specification Framework Document**
  - The HE-LTF sequences for UL MU-MIMO shall be generated as follows. For each stream, a common sequence shall be masked repeatedly in a piece-wise manner by a distinct row of an 8x8 orthogonal matrix. When the length of the LTF sequence is not divisible by 8, the last M elements of the LTF sequence (M being the remainder after the division of LTF length by 8) shall be masked by the first M elements of the orthogonal matrix row.
- **Move:** Xiaogang Chen **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0602r6** **SP Result: 59/1/12**

PHY Motion #57

- **Move to add to TGax Specification Framework Document**
  - The orthogonal matrix used to mask the HE-LTF sequence in SP1 is the 8x8 Pmatrix used in 11ac.

206

- **Move:** Xiaogang Chen **Second: ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0602r6** **SP Result: 52/12/2**

PHY Motion #58

- **Move to add the following text into Section 3.4 HE Data Field of the current SFD:**
  - An 11ax SU PPDU should apply the MAC/PHY pre-FEC padding scheme as in 11ac, to pad toward the nearest of the four possible boundaries ("*a*" factor) in the last Data OFDM symbol(s), and then use post-FEC padding bits to fill up the last OFDM symbol(s).
    - Packet Extension (PE) field is defined at the end of 11ax PPDUs.
    - PE should have the same average power as data field.
- **Move: Hongyuan Zhang Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0810r1 SP Result: 73/0/17**

PHY Motion #59

- **Move to add the following text into SFD:**
  - 11ax shall define the max packet extension modes of 8μs and 16μs, correspond to the short symbol segment padding boundaries ("*a*-factor") according to the following PE duration (T_{PE}) values:
    - Max packet extension mode 8 μs: T_{PE} = [0 0 4 8] μs for $a = 1{\sim}4$ respectively;
    - Max packet extension mode 16 μs: T_{PE} = [4 8 12 16] μs for $a = 1{\sim}4$ respectively.
  - HE Capability field shall define two constellation level thresholds ($threshold_{16}$ and $threshold_{8}$) for a given {NSS, BW} combination, to determine if and when max packet extension modes 8 μs and 16 μs are applied, i.e.
    - 3 bits are used to specify each threshold as the table below.
    - If constellation ≥ $threshold_{16}$ apply max PE 16 μs mode, else if constellation ≥ $threshold_{8}$ apply max PE 8 μs mode, else no packet extension.
    - If no PE is required for all constellations both $threshold_{8}$ and $threshold_{16}$ are set to 111
    - If only max PE 8 μs mode is required, set $threshold_{16}$ to be 111, and $threshold_{8}$ to be the constellation at which max PE 8 μs mode starts
    - If only max PE 16μs mode is required, set $threshold_{16}$ to be the constellation at which max PE 16μs mode starts, and $threshold_{8}$ to be 111
    - When ≥80 MHz is supported, no thresholds are defined for RU size less than or equal to 242 tones (20 MHz); otherwise, thresholds are defined down to a TBD RU size.

Constellation	Threshold Encoding in HE Capability
BPSK	000
QPSK	001
16QAM	010
64QAM	011
256QAM	100
1024QAM (TBD)	101
None	111

  - Move: Hongyuan Zhang
  - Second: Ron Porat
  - Accepted with no objection
  - DCN 11-15/0810r1
  - SP Result: 68/13/5

PHY Motion #60

- **Move to add the following text into SFD:**
  - The number of uncoded bits for each of the first 3 short symbol segments (a=1~3) equals to the number of uncoded bits corresponding to $N_{SD.short}$ subcarriers as specified by the following table, and the number of uncoded bits for the last short symbol segment (a=4) equals to the number of bits of the whole OFDM symbol subtracting the total number of uncoded bits of the first three short symbol segments.

RU Size	$N_{SD.short}$
26	6
52	12
106	24
242	60
484	120
996	240
996x2	492

  - Move: Hongyuan Zhang
  - Second: Ron Porat
  - Accepted with no objection
  - DCN: 11-15/0810r1
  - SP Result: 71/0/15

PHY Motion #61

- **Move to add the following text (this page and next page) into SFD:**

  - HE-SIG-A field contains a "*a-factor*" field of 2 bits, and a "PE-Disambiguity" field of 1 bit, with setting methods as blow:
  - In L-SIG, the L-LENGTH field is set by:

$$L_LENGTH = \left\lceil \frac{TXTIME - 20}{4} \right\rceil \times 3 - 3 + m,\ m = 1 \text{ or } 2$$

where $TXTIME = T_{L_PREAMBLE} + T_{HE_PREAMBLE} + T_{HE_DATA} + T_{PE}$

$T_{HE_DATA} = T_{HE_SYM} \times N_{SYM} = (12.8 + T_{GI}) \times N_{SYM}$

T_{PE} is the PE duration

  - In HE-SIG-A:
  - ***a-factor* field:**

a-factor value	a-factor field encoding
1	01
2	10
3	11
4	00

210

PHY Motion # 61 (Cntd)

– **PE Dis-ambiguity Field:**

- If $T_{PE} + 4 \times \left(\left\lceil \frac{TXTIME - 20}{4} \right\rceil - \left(\frac{TXTIME - 20}{4} \right) \right) \geq T_{SYM}$, where $T_{SYM} = 12.8 + T_{GI}$, set this field to 1; otherwise, set to 0.
- At receiver side, the following equations may be run to compute N_{SYM} and T_{PE} respectively:

$$N_{SYM} = \left\lfloor \left(\frac{L_LENGTH - m + 3}{3} \times 4 - T_{HE_PREAMBLE} \right) / T_{SYM} \right\rfloor - b_{PE_Disambiguity}$$

$$T_{PE} = \left\lfloor \frac{\left(\frac{L_LENGTH - m + 3}{3} \times 4 - T_{HE_PREAMBLE} \right) - N_{SYM} \times T_{SYM}}{4} \right\rfloor \times 4$$

- **Move: Hongyuan Zhang Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0810r1 SP Result: 71/0/15**

PHY Motion #62

- **Move to add the following text into SFD:**
  - When the AP transmits DL-MU packets:
    - All users use the same N_{SYM} and *a-factor* values according to the user with the longest span.
    - Based on *a-factor* value and each user's PE capabilities, compute the PE duration for each user $T_{PE,u}$, and the PE duration of the whole DL-MU PPDU is $T_{PE} = \max_u(T_{PE,u})$.
    - In HE-SIG-A field, the "a-factor" field, the "PE Disambiguity" field, and the "LDPC extra symbol" field, are common for all users.
- **Move: Hongyuan Zhang Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0810r1 SP result: 72/0/14**

PHY Motion #63

- **Move to add the following text into SFD:**
  - For UL-MU packet transmission:
    - AP indicates its desired *Nsym*, *a-factor*, LDPC Extra Symbol indication and *PE* duration values in trigger frame.
    - Possible PE values for UL-MU are TBD.
    - Each user when transmitting the UL-MU PPDU, shall encode and conduct PHY padding using the parameters:
    - N_{SYM} as indicated in the trigger frame;
    - *a-factor* as indicated in the trigger frame;
    - LDPC Extra Symbol as indicated in the trigger frame;
    - Append PE specified in the trigger frame.
- **Move: Hongyuan Zhang Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/0810r1 SP Result: unanimous**

PHY Motion #64

- **Move to add the following text to the 11ax SFD:**
-

  The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit per 20MHz PPDU BW for signaling
  - The RU arrangement in frequency domain
  - Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations.
  - The exact mapping of the 8 bit to the RU arrangement and the number of MU-MIMO allocations is TBD.
  - Signaling for the center 26 unit in 80MHz is TBD
- **Move: Yasu Inoue Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1066r0 SP Result: 56/0/14**

PHY Motion #65

- **Move to add the following text to the 11ax SFD:**
  - The length of the user specific subfield in HE-SIG-B for a single-user allocation is equal to the length of the user specific subfield of each user in a multi-user allocation.
- **Move: Yasu Inoue Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1066r0 SP Result: 54/0/15**

MAC Motion #27

- **Moved to add to the end of Clause 6 (MAC) of the IEEE 802.11 TGax Specification Framework:**
  - "The amendment shall define a HE AP to implement Proxy ARP capability."
- **Move: Guido Hiertz Second: Ron Porat**
- **Y/N/A:29/27/64**
- **Motion fails**
- **DCN:11-15/1015r1 SP Result: 32/8/many**

MAC Motion #28

- **Move to add the following to the IEEE 802.11 TGax Specification Framework**

  6.X.Y: “HE STAs shall support the Multiple BSSID Set.”

217

Move: Guido R. Hiertz **Second: Ron Porat**

Accepted with no objection

DCN:11-15/1014r0 SP Result: 17/2/3

MAC Motion #29

- **Move to add the TGax SFD:**
  - 6.1 General
    In a downlink MU HE PPDU, at most one A-MPDU is allowed to contain one or more MPDUs that solicit an immediate response, except when an immediate response is carried in UL MU PPDU. In such case, one or more A-MPDUs are allowed to contain one or more MPDUs that solicit an immediate response carried in UL MU PPDU.
- **Move:** Yongho Seok **Second: Ron Porat**
- **Approved with no objection**
- **DCN: 11-15/1033r0** **SP Result:17/0/28**

MAC Motion #30

- **Move to add the TGax SFD:**
  - 6.2 Power Save
    HE STA may use a notification of its operating mode changes for 802.11ax power saving mechanism
- **Move:** Yongho Seok **Second: Ron Porat**
- **Approved with no objection**
- **DCN:11-15/1034r0 SP Result: 5/0/39**

MAC Motion #31

- **Move to add the TGax SFD:**
  - 6.2 Power Save
    The 802.11ax Operating Mode Notification behavior should specify a clarification for
    - A channel width that a STA can transmit
    - A number of spatial streams (Tx NSS) that a STA can transmit

- **Move:** Yongho Seok **Second: Ron Porat**
- **Y/N/A:22/9/50**
- **Motion fails**
- **DCN:11-15/1034r0** **SP Result: 5/0/43**

MAC Motion #32

- **Move to add to 11ax SFD:**
  - the spec shall define a mechanism for a transmitting STA to indicate its RX operating mode, i.e. RX NSS, RX channel width, in a transmitted DATA type MAC header, so that the responding STA shall not transmit a subsequent PPDU using an NSS or channel width value not indicated as supported in the RX operating mode of the transmitting STA.
  - The responding STA shall not adopt the new NSS and BW until a time TBD.
- **Move: Guoqing Li Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1060 SP Result: 24/0/12**

MAC Motion #33

- **Move to add the following text in SFD**
  - When a STA receives a CF-End from an OBSS STA, if the last NAV update was caused by an Intra-BSS frame, the STA should not reset its NAV
- **Move:** Jeongki Kim **Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1067r0 SP Result: 29/0/15**

222

MAC Motion #34

- **Move to add the following text to the spec framework**
  - The STA determines whether the detected frame is an inter-BSS or an intra-BSS frame by using BSS color or MAC address in the MAC header. If the detected frame is an inter-BSS frame, under TBD condition, uses TBD OBSS PD level that is greater than the minimum receive sensitivity level
  - NOTE–Maybe extra rules need to be added to ensure that all 11ax STAs can make the decision in a consistent manner.
- **Move: Jianhan Liu Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1063r1 SP Result: 29/6/7**

223

MAC Motion #35

- Move to add the following text into 11ax SFD

4.1 In cascading sequence, when AP does not receive acknowledgements from a STA after sending DL Data MPDUs, AP may recover using one of the following procedures:

  - Transmitting a BAR with SSN value set to the SN of the unacknowledged Data MPDUs
  - Retransmitting unacknowledged Data MPDUs
  - Transmitting additional Data MPDUs along with a BAR with SSN value set to the SN of the unacknowledged Data MPDUs

- **Move: John Son Second: Jinsoo Ahn**
- **Y/N/A: 10/17/49 Motion fails**
- **DCN:11-15/1096r0 SP Result: 11/0/31**

MAC Motion #36

- **Move to add to the TG Specification Frame work document**
  - 4.1. DL-OFDMA may reuse the same sharing mechanism of an EDCA TXOP as DL MU-MIMO.
- **Move:** Jinsoo Ahn **Second: John Son**
- **Accepted with no objection**
- **DCN:11-15/1116r1** **SP Result:11/0/34**

Move to Amend

- **Amend MAC motion #36 as:**
- **Do you agree to add to the TG Specification Frame work document?**
  - 4.1. DL-OFDMA shall reuse sharing an EDCA TXOP mechanism of DL MU-MIMO.
- **to**
- **Move to add to the TG Specification Frame work document**
  - 4.1. DL-OFDMA may reuse the same sharing mechanism of an EDCA TXOP as DL MU-MIMO.
- **Move: Alfred Second: Jinsoo Ahn**
- **Y/N/A:14/0/51 Motion passes**

MAC Motion #37

- **Move to add the following to 11ax SFD**

  Non-AP STAs support using the QoS Control field in QoS Data and QoS Null frames to report per-TID Buffer Status information

Move: Alfred Asterjadhi **Second: Ron Porat**

Accepted with no objection

DCN:11-15/1120r0 **SP Result: 37/0/11**

227

MAC Motion #38

- **Move to add the following to 11ax SFD**

An AP can poll STAs for buffer status reports using the frame carrying the trigger info.

  - The poll can request for specific buffer status information with TBD granularity.

Move: Alfred Asterjadhi **Second: Ron Porat**

Accepted with no objection

DCN:11-15/1120r0 **SP Result: 35/0/12**

MAC Motion #39

- **Move to add the following to 11ax SFD**

The spec shall define an HE variant (of the VHT variant) of the HT Control field that carries one or more control fields for HE control information

- B0 and B1 of the HT Control field in this case are set to 1
- The control fields can be called HE Control field

Move: Alfred Asterjadhi **Second: Ron Porat**

Accepted with no objection

DCN:11-15/1121r0 **SP Result: 30/0/18**

MAC Motion #40

- **Move to modify sub-clause 4.1 of the TG Specification Framework as follows**
  - An AP shall not allocate UL subchannel in any 20 MHz channel that is not occupied by the ~~Trigger frame~~ immediately preceding DL PPDU that contains trigger information. In each 20 MHz channel occupied by the ~~Trigger frame~~ immediately preceding DL PPDU that contains trigger information, there is at least one allocated subchannel for UL transmission.
- **Move: Young Hoon Kwon Second: Reza Hedayat**
- **Accepted with no objection**
- **DCN: 11-15/1052r0 SP Result: 45/3/22**

MAC Motion #41

- **Move to add to the TG SFD:**
  - A HE AP is allowed to broadcast a TBD parameter in the trigger frame to the STAs so that STAs can initiate the random access process after the trigger frames

- **Move: Russell Huang Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1137r1 SP Result: 87/0/19**

MU Motion #12

- **Move to add to the TG Specification Frame work document**
  - 4.y.z. The amendment shall include a mechanism to multiplex acknowledgment frames in response to Multicast receptions under GCR BA operation.
- **Move:** Kazuyuki Sakoda **Second: Guido Hiertz**
- **Accepted with no objection**
- **DCN: 11-15/1043r1** **SP Result:11/0/many**

233

MU Motion #13

- **Move to add to the TG SFD:**
  - The spec shall define a MU-BAR frame to solicit BA/ACKs from multiple STAs in UL MU transmissions
- **Move:** Guoqing Li **Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1053r1** **SP Result: 57/0/4**

234

MU Motion #14

- **Move to add to the SFD**

  4 Multi-user (MU) features

  4.1 General

  STA shall consider CCA status to respond to a Trigger frame under a non-null TBD set of conditions.

Move: Kiseon Ryu Second: Jinsoo Choi

Accepted with no objection

DCN: 11-15/1058r0 SP Result: 47/0/13

MU Motion #15

- Move to add to the TG Specification Frame work document
  - x.y.z. A STA that is polled from a trigger frame for UL MU transmission considers the NAV in determining whether to respond unless one of the following conditions is met
    - the NAV was set by a frame originating from the AP sending the trigger frame
    - the response contains ACK/BA and the duration of the UL MU transmission is below a TBD threshold
    - Other condition TBD
- Move: Po-Kai Huang Second: Chitto
- Accepted with no objection
- DCN:11-15/1062r1SP Result: 46/3/13

MU Motion #16

- **Move to add to the SFD:**
  - The spec shall allow multiple TIDs in a single PSDU between AP and a STA for DL/UL OFDMA/MU-MIMO
  - Multiple TIDs aggregation rules are TBD if necessary
- **Move: Jianhan Liu Second: Hongyuan Zhang**
- **Accepted with no objection**
- **DCN: 11-15/1065r1 SP Result: 39/0/12**

MU Motion #17

- ***Move to add to the TG Specification Framework:***
- ***x.y.z. :***

– The amendment shall define a mechanism to enable multiplexing of the Compressed Beamforming Action frame (CSI feedback) from multiple stations using UL MU(MIMO or OFDMA) mode

– Move: Narendar Madhavan Second: Ron Porat

– Accepted with no objection

– DCN: 11-15/1097r1 SP Result: 24/0/8

MU Motion #18

- ***Move to add to the TG Specification Framework:***
- ***x.y.z. :***

– The amendment shall define a new channel sounding sequence that includes trigger information in order to facilitate UL MU mode of Compressed Beamforming Action frame from multiple STAs.

– Move: Narendar Madhavan Second: Masahito Mori

– Accepted with no objection

– DCN: 11-15/1097r1 SP Result: 21/0/14

MU Motion #19

- **Move to add to the TG SFD:**
  - The spec shall support fragmentation negotiation in A-MPDUs for HE STAs

- **Move:** Chittabrata Ghosh **Second: Po-Kai Huang**
- **Y/N/A: 49/4/31 Motion passes**
- **DCN: 11-15/1102r0 SP Result: 51/0/9**

MU Motion #20

- **Move to include the DL sounding sequence illustrated in Slide 15 (of 802.11-15/1103r0) to the spec framework**
- **Move:** Chittabrata Ghosh **Second: Po-Kai Huang**
- **Accepted with no objection**
- **DCN:11-15/1103r0 SP Result: 40/0/7**

241

MU Motion # 27

- **Move to include in the SFD the following random access procedure:**
  - When an STA has a frame to send, it initializes it's OBO (OFDMA Back-off) to a random value in the range 0 to CWO (OFDMA Contention window)
  - For an STA with non-zero OBO value, it decrements its OBO by 1 in every RU assigned to AID value TBD within the TF-R
  - For an STA, its OBO decrements by a value, unless OBO=0, equal to the number of RUs assigned to AID value TBD in a TF-R
    - OBO for any STA can only be 0 once every TF-R
  - An STA with OBO decremented to 0 randomly selects any one of the assigned RUs for random access and transmits its frame

  - Move: Chittabrata Ghosh Second: Po-Kai Huang
  - Accepted with no objection
- **DCN:11-15/1105r0 SP Result:31/5/8**

242

MU Motion #21

- **Move to add to the spec framework**

The spec shall indicate cascaded sequence of Trigger frames for random access by using a bit in the Trigger frame.

243

- **Move:** Chittabrata Ghosh **Second: Po-Kai Huang**
- **Accepted with no objection**
- **DCN: 11-15/1107r0 SP Result:41/0/11**

MU Motion #22

- **Move to add to the spec framework**

The spec shall include a mechanism that allows the Beacon frame to indicate the target transmission time(s) of one or more Trigger frame(s) that allocates resources for random access.

Move: Chittabrata Ghosh **Second: Po-Kai Huang**

Accepted with no objection

DCN: 11-15/1107 SP Result:40/0/11

MU Motion #23

Move to add the following to the SFD:

- The spec shall allow that the schedule information for OFDMA acknowledgement from STAs is contained in the MAC header of DL MPDU.

- **Move: Lei Wang Second: Kiseon Ryu**
- **Accepted with no objection**
- **DCN: 11-15/1123r1 SP Result:33/0/14**

MU Motion #24

Move to add the following to the SFD

- **The contents of the scheduling information for an UL OFDMA ACK/BA includes;**
  - **UL PPDU Length (9 bits) + RU Allocation (TBD).**

- **Move: Lei Wang Second: Kiseon Ryu**
- **Accepted with no objection**
- **DCN: 11-15/1123r1 SP Result: 33/0/10**

MU Motion #25

- **Move to add the following to the IEEE 802.11 TGax Specification Framework (sec 4.1)**
  - The amendment shall define a mechanism to reduce the MIMO compressed beamforming feedback overhead
- **Move:** Filippo Tosato **Second: Ron Porat**
- **Accepted with no objection**
- **DCN: 11-15/1129r1 SP Result:29/0/13**

247

MU Motion #26

Move to add to the TG Specification Frame work document

Use a reserved bit in BA control field to indicate that the frame is multi-STA BA frame.

248

Move: Yasu Inoue Second: Guido Hiertz

Y/N/A: 18/13/50 Motion fails

DCN:11-15/1086r1 SP Result: 10/0/many

SR Motion #1

- **Move to add to the TG Specification Frame work document**
  - 5.1 Features for operation in dense environments [802.11ax SFD]

A STA should regard an Inter-BSS PPDU with a valid PHY header and that has a receive power/RSSI below the OBSS PD level used by the receiving STA and that meets additional TBD conditions, as not having been received at all (e.g., should not update its NAV), except that the medium condition shall indicate BUSY during the period of time that is taken by the receiving STA to validate that the PPDU is from an Inter-BSS, but not longer than the time indicated as the length of the PPDU payload

- The OBSS PD level is greater than the minimum receive sensitivity level

- **Move: Luojun Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1109r1 SP Result:39/0/12**

SR Motion #2

- **Move to add to Section 5.1 of the SFD:**
  - "The amendment shall include one or more mechanisms to improve spatial reuse by allowing adjustments to one or more of the CCA-ED, 802.11 Signal Detect CCA, OBSS_PD or TXPWR threshold values. The constraints on selecting threshold values are TBD."
- **Move: Filip Mestanov Second: Guido Hiertz**
- **Y/N/A: 35/5/36 Motion Passes**
- **DCN:11-15/1138r1 SP Result: 24/0/18**

250

SR Motion #3

- Move to add to 11ax SFD:

  The specification to consider a procedure that may revise the NAV depending on TBD conditions at the recipient of the ongoing OBSS frame.

Move: Reza Hedayat Second: Ron Porat

Accepted with no objection

DCN:11-15/1104r3 SP Result: 16/0/26

251

SR Motion #4

Move to add the following text into 11ax SFD

- **An 11ax STA regards a valid OBSS PPDU *as not having been received at all (e.g., should not update its NAV), except that the medium condition shall indicate BUSY during the period of time that is taken by the receiving STA to validate that the PPDU is from an Inter-BSS, but not longer than the time indicated as the length of the PPDU payload* if the RXPWR of the received PPDU is below the OBSS_PD threshold and TBD conditions are met, noting that the OBSS_PD threshold is accompanied by a TXPWR value and a reduction in the TXPWR may be accompanied by an TBD increase in the OBSS_PD threshold value.**

252

- **Move: Tianyu Wu** **Second: Ron Porat**
- **Accepted with no objection**
- **DCN:11-15/1069r3** **SP Result: 38/1/18**

Goals for November 2015

- **Continue to advance the TG documents based on submissions.**
  - With priority to the TG Specification Framework document.
- **Technical Presentations**

Conference call times

- **Thursday October 15 10:00 – 12:00 ET**

Yakun Sun	Marvell Semiconductor			yakunsun@marvell.com

Abstract

TGax meeting minutes from the IEEE 802.11 Bangkok PHY Ad hoc session, September, 2015.

IEEE 802.11 Task Group ax PHY Ad Hoc
Sept 2015 Bangkok Meeting

Monday, Sept 13th, 2015, PM1 TGax Session (13:35-15:30)

1. **Meeting called to order by Jianhan Liu (Mediatek) at 13:35.**
   1.1. The agenda is contained in 11-15/1125r1 which is on the server.

2. **Administrative Items**
   2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   2.2. Chair also reminded to do attendance.

3. **Set and approve agenda**
   3.1. Proposed agenda for Monday PM1
      3.1.1. Call Meeting to order
      3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
      3.1.3.Presentations follow the order of DCN.
      3.1.4. Recess
   3.2. Chair asked for approval of the proposed agenda. – Agenda approved.

4. **Presentations**

4.1 11-15/0580r2 11ax Coding Discussions
Hongyuan Zhang (Marvell) presented.

Discussions:
No questions.

SP #1:

- **Do you agree to make the following text changes in 11ax SFD (3.3.3 Coding)?**
  - *LDPC is the only coding scheme in the HE PPDU Data field for allocation sizes of 484 tones, 996 tones and 996*2 tones.*
  - ….
  - *Support of LDPC code for both TX and RX is mandatory for HE STAs declaring support for at least one of HE 40/80/160/80+80 SU-PPDU bandwidths, ……..*

SP Result:
Y40 N0 A18
SP passed.

4.2 11-15/1031r0 DL MU Signaling
Katsuo Yunoki (KDDI R&D Laboratories) Presented

Discussions:

SP #1:

- **Do you agree to add the following text to SFD?**
  The amendment shall define Group ID expression to identify stations multiplexed in DL MU PPDU with MU-MIMO, OFDMA or combined usage of both.

SP Result:
Y1, N many
SP failed

4.3 11-15/1051r0 HE NDP Frame for Sounding
Young Hoon Kwon (Newracom) Presented

Discussions:

Sameer (Qualcomm): Terminology of "OFDM" format
Answer: lack of a good name now.
Hongyuan (Marvell): LTF compression of 2x/4x is open for discussion. Also have issue on the "SU" frame format.
Answer: also due to lack of a good name.

SP:

- **Do you agree to add to the TG Specification Framework:**
  - 4.y.z An HE NDP frame for DL sounding shall use Non-OFDMA (SU) frame format.

Sameer requested to delay the SP after his contribution is presented since they are close related.

Sameer: still wondering if there is a better name for "non-OFDMA". How about just say "SU" frame.
Bin Tian: have we defined "SU" frame? Is it related to data portion? Everyone agrees the intention. Suggest to defer and work offline for a better phrase.
Answer: will work offline to harmonize and bring back.

4.4 11-15/1071r2 Tone grouping Factors and NDP Format for 802.11ax
Sameer Vermani (Qualcomm) presented.

Discussions:

Young Hoon (Newracom): what if AP allows UL OFDMA-type of sounding from multiple STA at the same time?
Sameer: that is a good point. Need to think more. Generally AP has more antenna. BF in UL is less used. Defer the 2nd SP.
Daewon: single stream pilot may not be transmitted over 2x. Outdoor is more freq selective and the steering matrix. May need Ng be smaller.

Sameer: In a real channel Ng can be set back to 2 if such a freq selective has enough rank to support high order MIMO. Our simulation only shows Ng=1 is not required, so we still keep Ng=2 at this moment.

SP1:

- **Do you agree to add the following text to the TGax spec framework document:**

"802.11ax spec shall not support Ng=1 for sounding feedback. Note that the tone grouping factor, Ng is defined with respect to data tones of the 11ax PPDU. "

SP passes unanimously

SP2:

- **Do you agree to add the following text and diagram to the SFD**

The spec shall define an HE-NDP for collecting sounding feedback, whose frame format is shown in the diagram below. The presence and duration of packet extension at the end of HE-NDP is TBD.

SP is deferred.

4.5 11-15/1059r1 SIGB Encoding Structure Part II

Ron Porat (Broadcom) presents.

Discussions:

Daewon: size of CRC, and payload size?

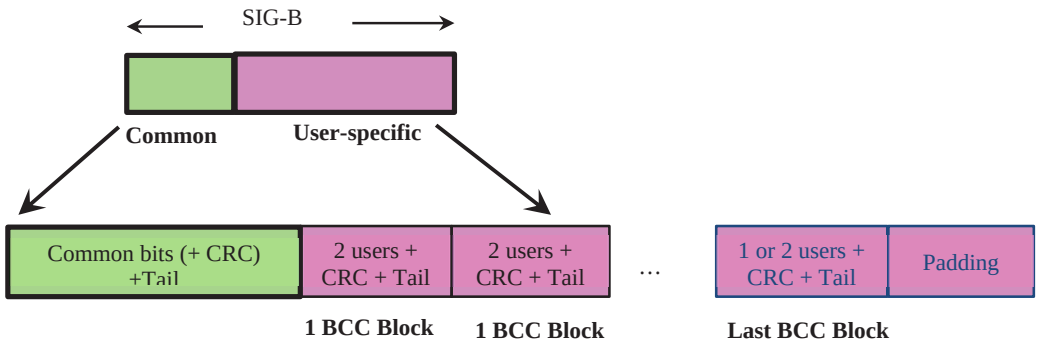
Ron: K is number of user coded together. CRC is 4 bits. Payload size is not important. We are simulating SIGB.

Daewon: overhead changes with K and impacts the performance. So that is why I asked the size of each specific fields.

SP:

Do you agree to add the following text to the SFD: The encoding structure of each BCC in SIG-B is as shown in the figure and as described below:

- 2 users are grouped together and jointly encoded in each BCC block in the user specific section of HE SIG-B
- The CRC in the common block is TBD
- The last user information is immediately followed by tail bits (regardless of whether the number of users is odd or even) and padding bits are only added after those tail bits



Results:
Y43 N0 A21
SP passes

4.6 11-15/1066r0 HE-SIGB contents
Kaushik Josiam (Samsung)

Interdigital: does the 106RU means the all the user has the same ID?
Kaushik: doesn't mean all users have the same user ID

Discussions

SP#1
Do you agree to add the following text to the 11ax SFD:
The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit per 20MHz PPDU BW for signaling

- The RU arrangement in frequency domain
- Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations.

The exact mapping of the 8 bit to the RU arrangement and the number of MU-MIMO allocations is TBD.
Signaling for the center 26 unit in 80MHz is TBD

SP#2
Do you agree to add the following text to the 11ax SFD:
The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields

- STA-ID
- For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)
- For each user in a multi-user allocation in a RU: Spatial Configuraiton Fields, MCS and Coding.

Other fields are TBD.

SP#3
Do you agree to add the following text to the 11ax SFD:

The length of the user specific subfield in HE-SIG-B for a single-user allocation is equal to the length of the user specific subfield of each user in a multi-user allocation.

SP#4
Do you agree to add the following text to the 11ax SFD:
For MU-MIMO allocation of RU size > 20MHz, the user-specific subfields is dynamically split between two HE-SIG-B content channels(1/2) and the split is decided by the AP (on a per case basis)

Monday, Sept 13th, 2015, PM1 TGax Session (19:40-21:30)

1. **Meeting called to order by Jianhan Liu (Mediatek) at 19:40.**
   1.1. The agenda is contained in 11-15/1125r2 which is on the server.

2. **Administrative Items**
   2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   2.2. Chair also reminded to do attendance.

3. **Set and approve agenda**
   3.1. Proposed agenda for Monday PM1
      3.1.1. Call Meeting to order
      3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
      3.1.3.Presentations follow the order of DCN.
      3.1.4. Recess
   3.2. Chair asked for approval of the proposed agenda. – Agenda approved.

4. **Presentations**

4.1 11-15/1066r0 HE-SIGB contents
Kaushik Josiam (Samsung) continued the Q&A from the last session

Discussions:
Amin (Newracom): request to defer SP. Has a very close contribution. Not sure 8bits are enough for the allocations.
KDDI: will a STA need to decode all user specific subfield?
Answer: it is up to the group.
Interdigital: Does this mean only one RU is allocated to one user?
Answer: Doesn't mandate.

SP #1:
Deferred

SP#2
Do you agree to add the following text to the 11ax SFD:
The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields
- STA-ID
- For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)

- For each user in a multi-user allocation in a RU: Spatial Configuraiton Fields, MCS and Coding.

Other fields are TBD.

43Y 0N 17A

SP#3
Deferred.

SP#4
Do you agree to add the following text to the 11ax SFD:
For MU-MIMO allocation of RU size > 20MHz, the user-specific subfields is dynamically split between two HE-SIG-B content channels(1/2) and the split is decided by the AP (on a per case basis)

39Y 0N 15A

4.2 11-15/1051r0 HE NDP Frame for Sounding
Young Hoon Kwon (Newracom) returned for SP

SP:

- **Do you agree to add to the TG Specification Framework:**
  - 4.y.z The spec shall define an HE-NDP for DL Sounding. The frame format of HE-NDP is based on the 11ax SU PPDU format is shown in the diagram below. The presence and duration of packet extension at the end of HE-NDP is TBD.

38Y 0N 4A

4.3 11-15/1111r0 SIG-B Resource unit allocation coding
Amin Jafarian (Newracom)

Shenaz: 4MHz = 52 tone? It is not exact to refer to 4MHz.
Answer: we can rephrase.
Shernaz: slide 4, the user needs to decode the tree to know the number of users
Answer: yes.
Jianhan: it is variable length. How to decode?
Answer: don't need the tail bits, just start to trace back from the minimum codeword length.
Kaushik: how to cover MU-MIMO in signaling?
Answer: don't need to.
Kaushik: how to know the number of users?
Answer: by the SIGB length
Kaushik: there will be ambiguity.
Kaushik: how does two methods compare when you have more than 9 users in 20MHz?
Answer: not practical.
Arjun: if all RU is allocated, 11 bits
Answer: Y
Arjun: again how to decode SIGB?
Answer: Y
Arjun: cannot resolve number of users from SIGB length.

Arjun: cannot signal 484tone.

SP:
Deferred.

4.4 11-15/1070r3 1024 QAM Proposal
Eunsung Park (LG) presents

Sigard: have you simulated CFO?
A: no
Daewon: EVM is TxEVM?
A: Y
Interdigital: no channel estimation loss?
A: No. will do.

SP:

- **Do you agree to add the following text to the 11ax SFD:**
  - 1024 QAM is used as an optional feature for SU and MU using resource units equal to or larger than 242 tones in 11ax?

35Y 0N 18A
SP passes

4.5 11-15/1077r0 HE-SIGA content
Jiayin Zhang (Huawei) presents

Daewon: why BW length is TBD?
Jiayin: there has been proposal on non-contigous channel bonding. So we left some flexibility here.
Daewon: why BW is fixed for SU?
Jiayin: to control implementation complexity, channel bonding is not suggested.
Daewon: PE has been agreed.
Jiayin: still want to keep the field.
Ron: Many proposal have talked about PE.
Daewon: need to think about if to support STBC
Jiayin: for each PPDU to exclude STBC? For some cases we want to keep it.
Interdigital: SR fields to add later on?
Jiayin: need further discussions

SP1

- **Do you agree to add to SFD**
  - HE-SIG-A shall include the following fields in SU PPDU.
    - The size of each field is TBD
    - The other fields are TBD

Format indication
TXOP duration
BW

Payload GI
PE
MCS
coding
LTF compression
Nsts
STBC
BF
CRC
tail

Y53 N14 A6

SP2

- **Do you agree to add to SFD**
  - HE-SIG-A shall include the following fields in MU DL PPDU.
  - The size of each field is TBD
  - The other fields are TBD

Format indication
TXOP duration
Number of HE-SIG-B symbols
MCS of SIGB
CRC
tail

Y53 N14 A6

SP3

- **Do you agree to add to SFD**
  - HE-SIG-A shall include the following fields in MU UL PPDU.
  - The size of each field is TBD
  - The other fields are TBD

Format indication
TXOP duration
CRC
tail

Y52 N0 A16

4.6 11-15/1122r0 **Identifiers in HE PPDUs for power saving**
Alfred Asterjadhi (Qualcomm) presents

SP1

- Do you support to add to the SFD:
  - The spec shall support adding a BSS COLOR field in the SIG-A field
    - The BSS COLOR field is an identifier of the BSS (size TBD)

Newracom: already in 15/0077?
A: no

60Y 0N 3A

SP2

- Do you support adding the following rules to the SFD:
  - An HE non-AP STA may enter the Doze state until the end of an HE DL MU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS, and
    - the value derived from any of the STA Identifiers in the SIG-B field does not match its own identifier or that of a broadcast/multicast identifier
  - An HE non-AP STA may enter the Doze state until the end of an HE UL MU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS

52Y 0N 9A

SP3

- Do you support adding an UL/DL Flag field in the SIG-A of an HE SU PPDU?
  - The UL/DL Flag indicates whether the frame is Uplink or Downlink
    - The value of this field for TDLS is TBD

??: how about RTS/CTS?
A: RTS/CTS in legacy format and not covered here. If it is in HE format, it depends on STA/AP.

55Y 0N 13A

SP4

- Do you support to add the following rules to the SFD:
  - An HE STA may enter the Doze state until the end of an HE SU PPDU if:
    - the value of the PPDU's BSS COLOR field is equal to the BSS COLOR of its BSS, and
    - the value of the UL/DL Flag field indicates that the frame is uplink

55Y 0N 10A

4.7 **d**

Tuesday, Sept 14th, 2015, AM2 TGax Session (10:30-12:30)

1. **Meeting called to order by Jianhan Liu (Mediatek) at 10:30.**
   1.1. The agenda is contained in 11-15/1125r3 which is on the server.

2. Administrative Items

2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
2.2. Chair also reminded to do attendance.

3. Set and approve agenda

3.1. Proposed agenda for Monday PM1
3.1.1. Call Meeting to order
3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
3.1.3.Presentations follow the order of DCN.
3.1.4. Recess
3.2. Chair asked for approval of the proposed agenda. – Agenda approved.

4. Presentations

4.1 11-15/1075r1 **Number of BSS Color bits**

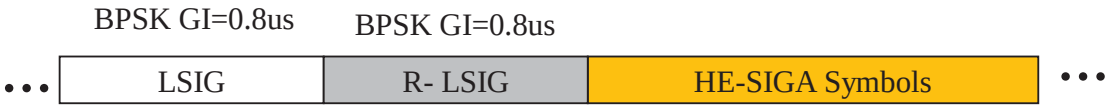
SP:
Do you support to assign 6 bits for BSS Color?

43Y 0N 6A

4.2 **11-15/0579r4 preamble design and autodetection**

SP#1

- **Do you support to add to the SFD as below:**
  11ax preamble shall have a 4us symbol repeating the L-SIG content, right after the legacy section?
  - This symbol shall be modulated by BPSK and rate ½ BCC.



74Y 16N 5A

SP#2

- **Do you agree to insert the following in SFD:**
  - In L-SIG, the L-LENGTH field is set to a value not divisible by 3.
  - The value of L_LENGTH mod 3 will be used for signaling of one bit of TBD information.

71Y 12N 4A

4.3 **11-15/0823r3 Preamble Design and Auto-Detection for 11ax**

SP#1

- **Do you support the following?**

HE PPDU is with a separately encoded signature symbol immediately after L-SIG. The bitwidth of the signature in the signature symbol is TBD.

Withdrawn

4.4 **11-15/1068r1 Reliable Dual Sub-Carrier Modulations (DCM) for HE-SIG-B and Data**

Quantenna: every bit is transmitted on two subcarriers?
A: yes
Quantenna: you can only carry half of data?
A: modulation is up, so data rate is the same
Quantenna: so you are comparing BPSK w/ QPSK?
A: yes, same data rate
Interdigital: how to separate the repetition?
A: k and k+N/2, simplest
Interdigital: compliant with OFDMA?
A: N is the RU size then
Interdigital: if you know where the interference will be, use it to separate bits
A: fixed separation is simulated.
Newracom: what is used on BPSK?
A: it is like MCS10 in 11ah, half data rate with 3dB gain
Newracom: interleaver?
A: no new interleaver design
Marvell: it is equivalent to interleave before or after interleaver.
A: it is TBD how to handle interleaver. Here we are proposing high level concept

SP#1

- **Do you agree to add dual sub-carrier modulations (DCM) as optional modulation schemes for HE-SIGB and Payload to 11ax SFD?**
  - Dual sub-carrier modulation (DCM) are only applied to BPSK, QPSK and 16QAM modulations.

66Y 1N 15A

SP#2

- **Do you agree to add one bit DCM indication in HE-SIGA to 11ax SFD?**

64Y 1N 12A

4.5 **11-15/0826r2 HE-SIG-A transmission for range extension**

Interdigital: why HESIGA RE performance is different with RLSIG?
A: different number of bits.

SP#1

- **Do you support that HE-SIG-A have a repetition mode for range extension?**
  - In the repetition mode, HE-SIG-A symbols are repeated once in time. The bit interleaver is bypassed in the repeated HE-SIG-A symbols?
  - The repetition mode is indicated before HE-SIG-A.

68Y 0N 15A

4.6 **11-15/1091r0 Considerations on Range Extension with SIG-A Repetition**

No discussions

4.7 **11-15/0602r5**

SP1

- **Do you agree to add to TGax Specification Framework Document?**
  - The HE-LTF sequences for UL MU-MIMO shall be generated as follows. For each stream, a common sequence shall be masked repeatedly in a piece-wise manner by a distinct row of an 8x8 orthogonal matrix. When the length of the LTF sequence is not divisible by 8, the last M elements of the LTF sequence (M being the remainder after the division of LTF length by 8) shall be masked by the first M elements of the orthogonal matrix row.

59Y 1N 12A

SP2

- **Do you agree to add to TGax Specification Framework Document?**
  - The orthogonal matrix used to mask the HE-LTF sequence in SP1 is the 8x8 Pmatrix used in 11ac.

Wednesday, Sept 16th, 2015, PM1 TGax Session (13:30-15:30)

1. **Meeting called to order by Jianhan Liu (Mediatek) at 13:35.**
   1.1. The agenda is contained in 11-15/1125r1 which is on the server.

2. **Administrative Items**
   2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   2.2. Chair also reminded to do attendance.

3. **Set and approve agenda**
   3.1. Proposed agenda for Monday PM1
      3.1.1. Call Meeting to order
      3.1.2. IEEE 802 and 802.11 IPR Policy and procedure.
      3.1.3.Presentations follow the order of DCN.
      3.1.4. Recess
   3.2. Chair asked for approval of the proposed agenda. – Agenda approved.

4. **Presentations**

   4.1. 11-15/1088r0 LTF Design for Uplink MU-MIMO

Discussions:

Qinghua: ZF filtering only replies on CSD values or also related to CSI?
A: Only knows CSD values for simple receiver
Bin: For your time domain processing, do you apply windowing?
A: No

SP

- **Do you agree add the following statement to SFD:**
  - CSD parameters, that result in per-stream orthogonality within a HE-LTF OFDM symbol, shall be used in HE-LTF of uplink MU-MIMO transmission.

16Y 5N many ABS

4.2. 11-15/1089r0 Considerations on PHY Padding and Packet Extension in 11ax

Hongyuan: STBC is used for Nss=1~2 and won't be the bottleneck. LDPC with Nss>2 will be.
A: different vendors have different design target.

4.3. 11-15/0810 HE PHY Padding and Packet Extension

Daewon: determine alpha value by tx parameters
A: yes
Daewon: then receiver iteratively compute alpha and PE by PPDU length
A: it is not a concern

- **Do you agree to add the following text into Section 3.4 HE Data Field of the current SFD:**
  - An 11ax SU PPDU should apply the MAC/PHY pre-FEC padding scheme as in 11ac, to pad toward the nearest of the four possible boundaries ("*a*" factor) in the last Data OFDM symbol(s), and then use post-FEC padding bits to fill up the last OFDM symbol(s).
    - Packet Extension (PE) field is defined at the end of 11ax PPDUs.
    - PE should have the same average power as data field.

73Y 0N 17A

- **Do you agree to add the following text into SFD:**
  - 11ax shall define the max packet extension modes of 8μs and 16μs, correspond to the short symbol segment padding boundaries ("*a*-factor") according to the following PE duration (*TPE*) values:
    - Max packet extension mode 8 μs: *TPE* = [0 0 4 8] μs for *a = 1~4* respectively;
    - Max packet extension mode 16 μs: *TPE* = [4 8 12 16] μs for *a = 1~4* respectively.
  - HE Capability field shall define two constellation level thresholds (*threshold16* and *threshold8*) for a given {NSS, BW} combination, to determine if and when max packet extension modes 8 μs and 16 μs are applied, i.e.
    - 3 bits are used to specify each threshold as the table below.

- If constellation ≥ *threshold*$_{16}$ apply max PE 16 µs mode, else if constellation ≥ *threshold*$_{8}$ apply max PE 8 µs mode, else no packet extension.
- If no PE is required for all constellations both *threshold*$_{8}$ and *threshold*$_{16}$ are set to 111
- If only max PE 8 µs mode is required, set *threshold*$_{16}$ to be 111, and *threshold*$_{8}$ to be the constellation at which max PE 8 µs mode starts
- If only max PE 16µs mode is required, set *threshold*$_{16}$ to be the constellation at which max PE 16µs mode starts, and *threshold*$_{8}$ to be 111
- When ≥80 MHz is supported, no thresholds are defined for RU size less than or equal to 242 tones (20 MHz); otherwise, thresholds are defined down to a TBD RU size.

Daewon: now we have mulitiple mode?
A: yes, different than 11ac with 1 mode.

68Y 13N 5A

- **Do you agree to add the following text into SFD:**
  - The number of uncoded bits for each of the first 3 short symbol segments (a=1~3) equals to the number of uncoded bits corresponding to $N_{SD.short}$ subcarriers as specified by the following table, and the number of uncoded bits for the last short symbol segment (a=4) equals to the number of bits of the whole OFDM symbol subtracting the total number of uncoded bits of the first three short symbol segments.

RU Size	$N_{SD.short}$
26	6
52	12
106	24
242	60
484	120
996	240
996x2	492

71Y 0N 15A

- **Do you agree to add the following text (this page and next page) into SFD:**
  - HE-SIG-A field contains a "*a-factor*" field of 2 bits, and a "PE-Disambiguity" field of 1 bit, with setting methods as blow:
  - In L-SIG, the L-LENGTH field is set by:

$$L_LENGTH = \left\lceil \frac{TXTIME - 20}{4} \right\rceil \times 3 - 3 + m,\ m = 1 \text{ or } 2$$

where $TXTIME = T_{L_PREAMBLE} + T_{HE_PREAMBLE} + T_{HE_DATA} + T_{PE}$

$T_{HE_DATA} = T_{HE_SYM} \times N_{SYM} = (12.8 + T_{GI}) \times N_{SYM}$

T_{PE} is the PE duration

- In HE-SIG-A:
- *a-factor* field:

a-factor value	a-factor field encoding
1	01
2	10
3	11
4	00

72Y 0N 15A

- **PE Dis-ambiguity Field:**
  - If $T_{PE}+4\times\left(\left\lceil\frac{TXTIME-20}{4}\right\rceil-\left(\frac{TXTIME-20}{4}\right)\right)\geq T_{SYM}$, where $T_{SYM}=12.8+T_{GI}$, set this field to 1; otherwise, set to 0.
  - At receiver side, the following equations may be run to compute *NSYM* and *TPE* respectively:

$$N_{SYM}=\left\lfloor\left(\frac{L_LENGTH-m+3}{3}\times 4-T_{HE_PREAMBLE}\right)/T_{SYM}\right\rfloor-b_{PE_Disambiguity}$$

$$T_{PE}=\left\lfloor\frac{\left(\frac{L_LENGTH-m+3}{3}\times 4-T_{HE_PREAMBLE}\right)-N_{SYM}\times T_{SYM}}{4}\right\rfloor\times 4$$

71Y 0N 15A

- **Do you agree to add the following text into SFD:**
  - When the AP transmits DL-MU packets:
    - All users use the same *NSYM* and *a-factor* values according to the user with the longest span.
    - Based on *a-factor* value and each user's PE capabilities, compute the PE duration for each user *TPE,u*, and the PE duration of the whole DL-MU PPDU is *TPE* = maxu(*TPE,u*).
    - In HE-SIG-A field, the "a-factor" field, the "PE Disambiguity" field, and the "LDPC extra symbol" field, are common for all users.

72Y 0N 15A

- **Do you agree to add the following text into SFD:**
  - For UL-MU packet transmission:
    - AP indicates its desired *Nsym*, *a-factor*, LDPC Extra Symbol indication and *PE* duration values in trigger frame.
    - Possible PE values for UL-MU are TBD.
    - Each user when transmitting the UL-MU PPDU, shall encode and conduct PHY padding using the parameters:
    - N_{SYM} as indicated in the trigger frame;
    - *a-factor* as indicated in the trigger frame;
    - LDPC Extra Symbol as indicated in the trigger frame;
    - Append PE specified in the trigger frame.

Pass Unanimously

4.4. 11-15/0853r3 Extensible Preamble Format Design

No discussions

4.5. 11-15/1092 Support of 1x/2x/4x OFDM Symbol in HE SU PPDU

No discussions

4.6. 11-15/1119 Discussions on HE SIG-A Structure

Jianhan: pilot tones are the same?
A: TBD

SP:

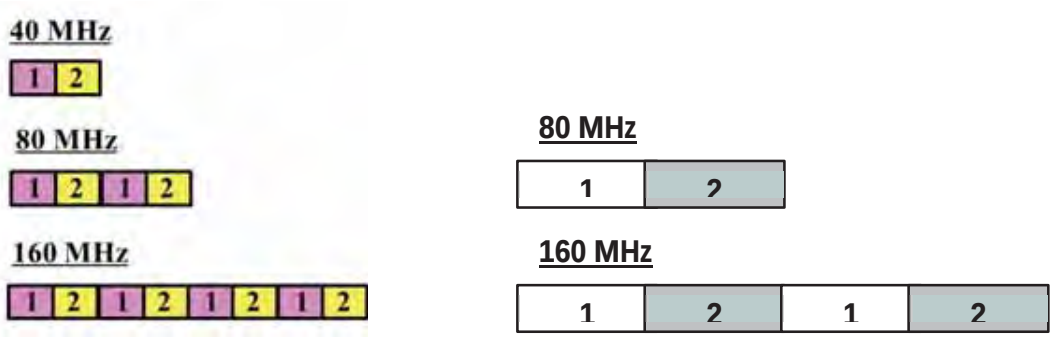
- **Do you agree the following?**
  - Information bits in HE-SIG-A are jointly encoded as in VHT-SIG-A (using 52 tones) with additional pilots on subcarriers of {±27, ±28} before HE-SIG-A symbols.

7Y 0N many ABS

4.7. 11-15/1106r1 SIGB structure

Jianhan: need to indicate the mode
A: yes, in SIGA if per PPDU change.
Ron: why no need for immunity to interference?
A: no much OBSS interference in many scenarios
HW: 1/2/1/2/ have diversity gain.

- **Do you agree to modify the following in 11ax SFD:**
  HE-SIG-B is encoded on a per 20 MHz or 40 MHz basis using BCC with common and user blocks separated in the bit domain
  For bandwidths ≥ 40 MHz, the number of 20 MHz or 40 MHz subbands carrying different content is two and with structure as shown below. Each square in the figure represents 20 MHz (left) or 40MHz (right) subband and 1/2 represents different signaling information. The method to indicate 20MHz or 40MHz basis is TBD.



15Y 27N 22ABS

4.8 11-15/1066r0 HE-SIGB contents

Continue the deferred SP.

SP#1
Do you agree to add the following text to the 11ax SFD:
The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit per 20MHz PPDU BW for signaling

- The RU arrangement in frequency domain
- Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations.

The exact mapping of the 8 bit to the RU arrangement and the number of MU-MIMO allocations is TBD.
Signaling for the center 26 unit in 80MHz is TBD

56Y 0N 14A

SP#3
Do you agree to add the following text to the 11ax SFD:
The length of the user specific subfield in HE-SIG-B for a single-user allocation is equal to the length of the user specific subfield of each user in a multi-user allocation.

54Y 0N 14A

Appendix AI

HE-SIG-B Mapping and Compression

HE-SIG-B

- **Basic structure and contents of the HE-SIG-B for MU-PPDUs were agreed in the last meeting**
  - Two HE-SIG-B channels (per 40MHz) – duplicated for BWs > 40Mhz [2]
  - The contents of the common and user specific sub-fields [3]
  - Number of bits of RU allocation signaling for different bandwidths [3]
  - Load balancing for user redistribution among HE-SIG-B channels when MU-MIMO is used in RUs > 242 tones are used.[3]

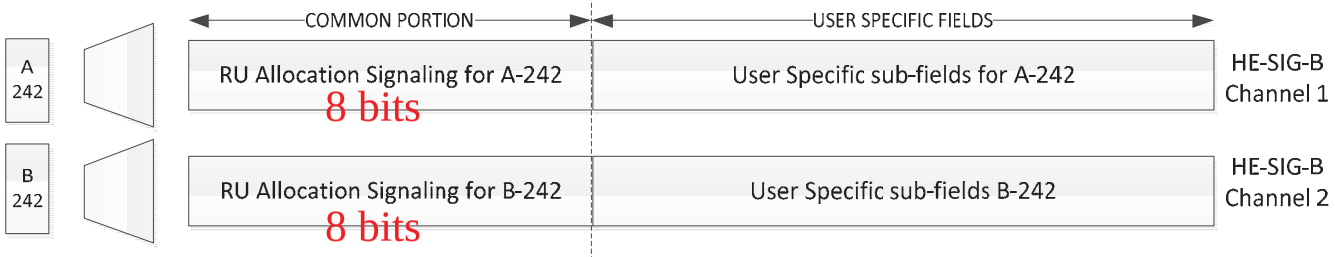
- **This presentation discusses**
  - Mapping of allocation information to the two HE-SIG-B channels.
  - Optimization of HE-SIG-B transmission and the need for indication in HE-SIG-A
    - Compression of common information for MU-MIMO

284

HE-SIG-B Information Mapping

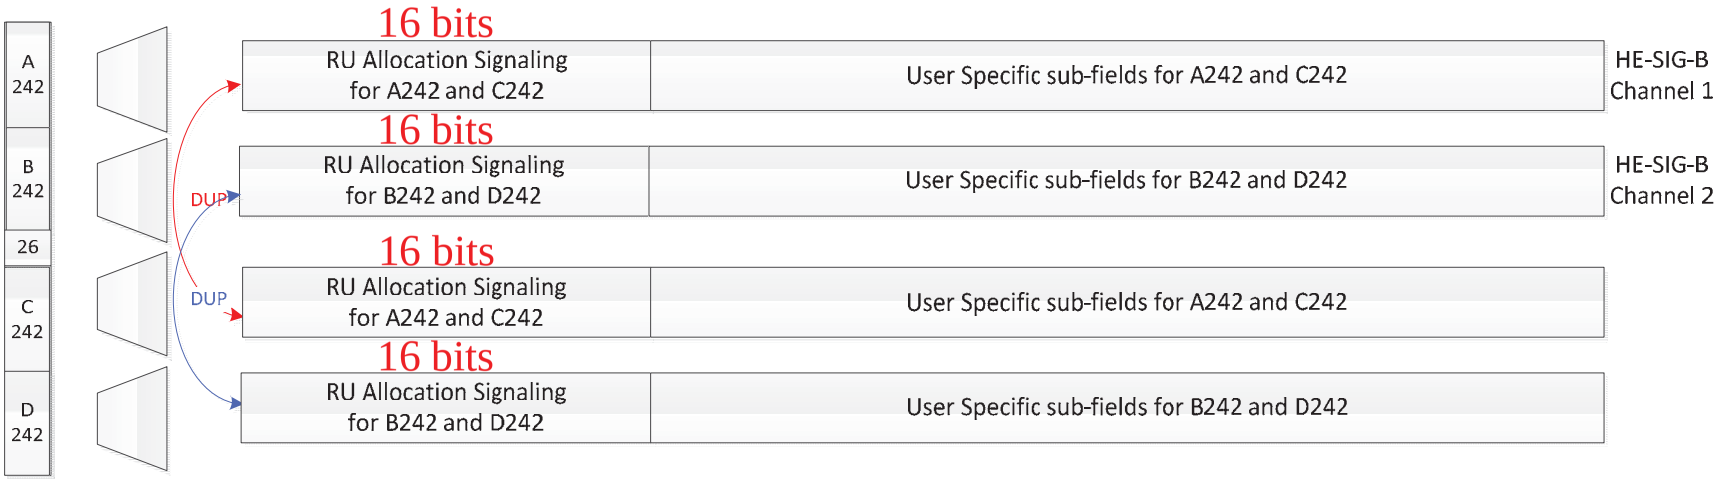
- For 20MHz, the HE-SIG-B information mapping is straight forward
  - Signal the RU Allocation Signaling using 8 bits in the common information fields followed by user specific sub-fields
    - STA uses the RU allocation signaling and the position of its allocation to unambiguously identify the RU containing its data

- For 40MHz, the HE-SIG-B has two channels each with different information
  - Each 20MHz channel carries control information for users scheduled in that 20MHz segment
    - May require padding in either of channels for last symbol alignment



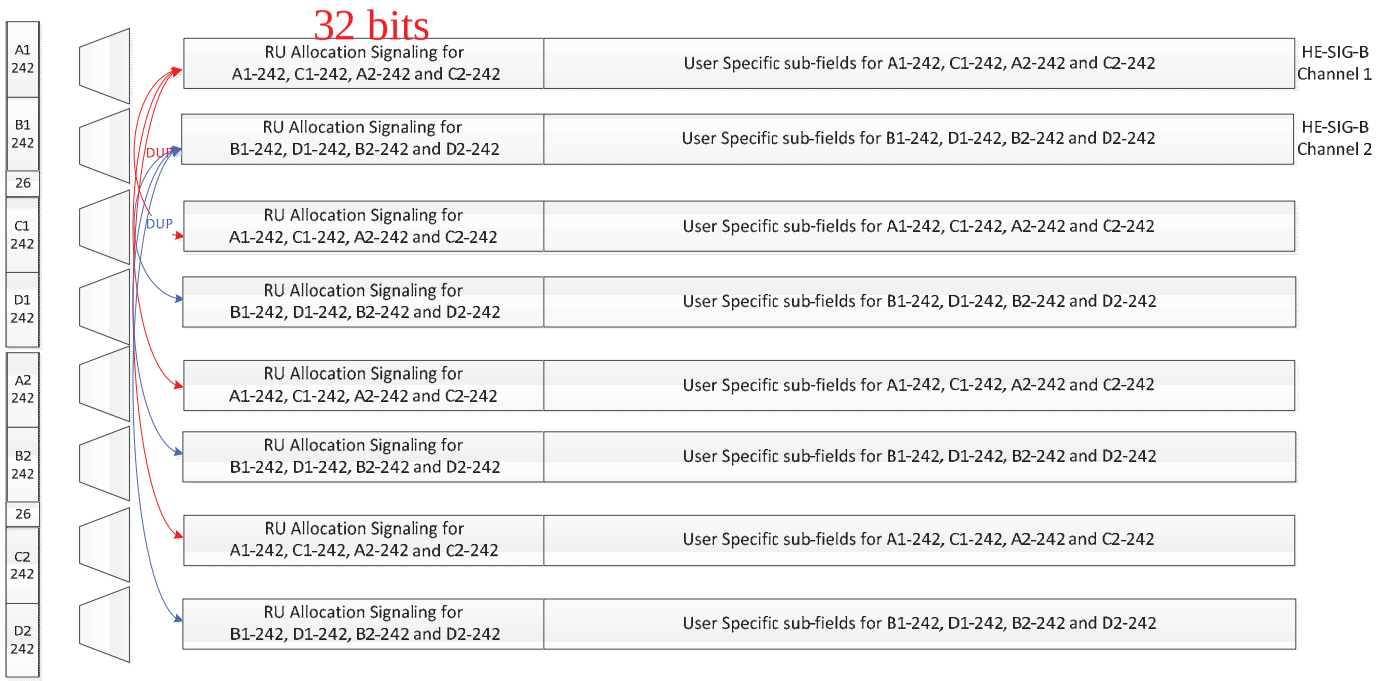
HE-SIG-B Information Mapping (80MHz)

- RU Allocation Signaling of four 20MHz segments have to be mapped to 2 HE-SIG-B channels duplicated per 40MHz [2]
  - 80MHz tone plan not aligned with 20MHz segments.
    - We refer to the 242 tones RUs that span the 20MHz segment– and can signal RU arrangements for smaller RUs with-in the 242 tone RUs - 8 bits per 242 tone RU – 16 bits of RU allocation signaling per HE-SIG-B Channel
    - The allocation signaling for the 26 tone RU around the DC is TBD as captured in the SFD.[1]
  - The default mapping of the RU allocation signaling and the associated user specific sub-fields for the four 242 tone RU segments to two HE-SIG-B channels is shown below



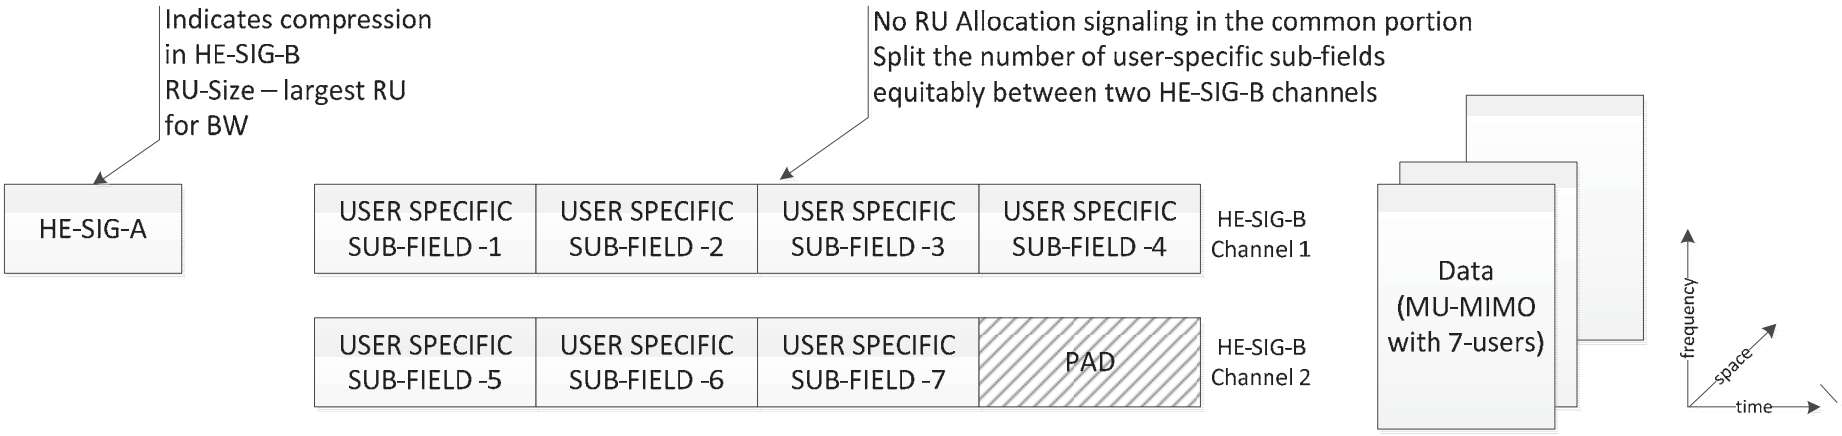
Extending Multiplexing Support to 160MHz

- 160MHz tone plan built as two concatenated 80MHz tone plans
  - RU Allocation Signaling information and the associated user specific sub-fields for four 242 tones RU segments have to be added to each HE-SIG-B channels - 32 bits totally for the four channels
  - The signaling of the two central 26 tone RUs in each 80MHz can be signaled separately and is currently TBD.
  - The default mapping of the RU allocation signaling and the associated user specific sub-fields for the eight 242 tone RU segments to two HE-SIG-B channels is shown below



HE-SIG-B Compression for MU-MIMO

- For MU-MIMO over the entire BW, 1 bit in HE-SIG-A indicates compression.
  - No RU signaling information transmitted in HE-SIG-B
    - RU Size is set to the largest RU for the BW (20MHz – 242 tone RU, 40 – 484, 80– 996, 160 – 2x996)
  - The user specific sub-fields are split equitably between the two HE-SIG-B Channels for efficient load-balancing
    - For k user MU-MIMO PPDU, $1, \ldots \left\lceil \frac{k}{2} \right\rceil$ user specific sub-fields in HE-SIG-B channel 1 and $\left\lceil \frac{k}{2} \right\rceil + 1, \ldots, k$ user specific sub-fields in HE-SIG-B channel 2
    - Pad to end contents in both channels at same OFDM symbol



Summary

- The resource allocation signaling in the common control field and user specific subfields for an STA carried in the HE-SIG-B are transmitted in the same 20MHz sub-channel as the data for 20MHz and 40MHz PPDU.
- The default mapping of the RU allocation signaling and user-specific fields of the component 242 tone RU segments of 80MHz and 160MHz PPDU to the two HE-SIG-B channels are also defined.

289

- When 11ac- style MU-MIMO over the whole bandwidth is used, no RU allocation signaling is necessary in the common portion of the HE-SIG-B
  - One compression bit in the HE-SIG-A indicates full bandwidth MU-MIMO.
  - The user specific fields are split equitably between the two HE-SIG-B channels.
  - Improves efficiency by saving HE-SIG-B overhead.

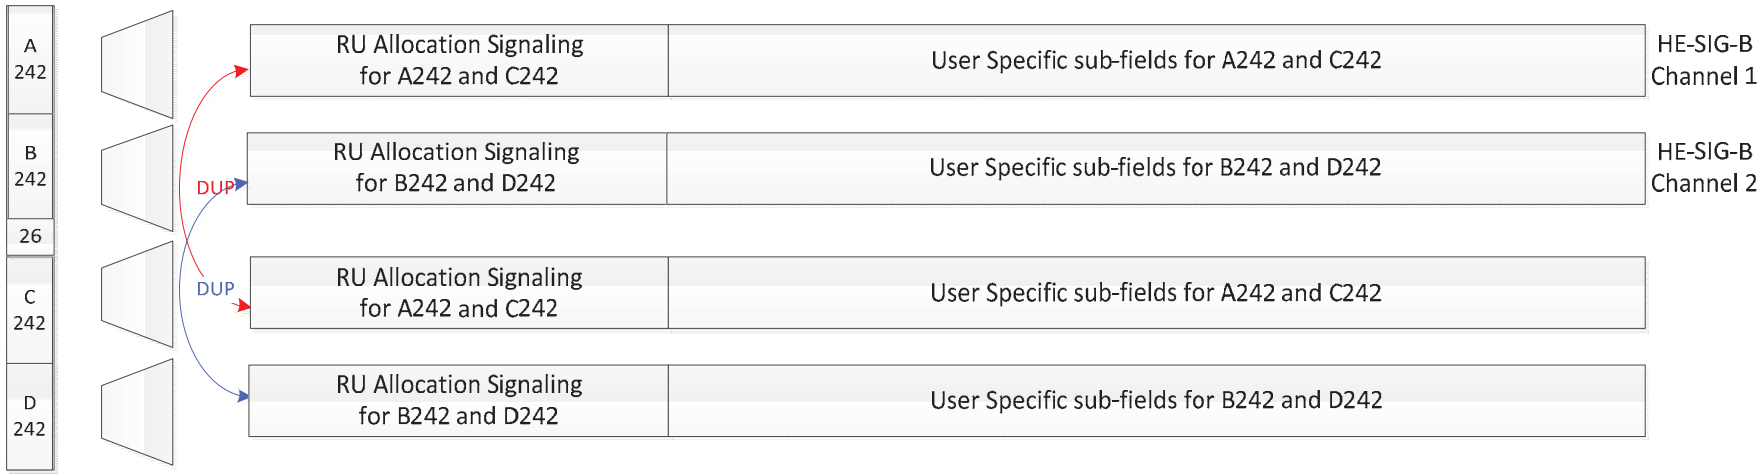
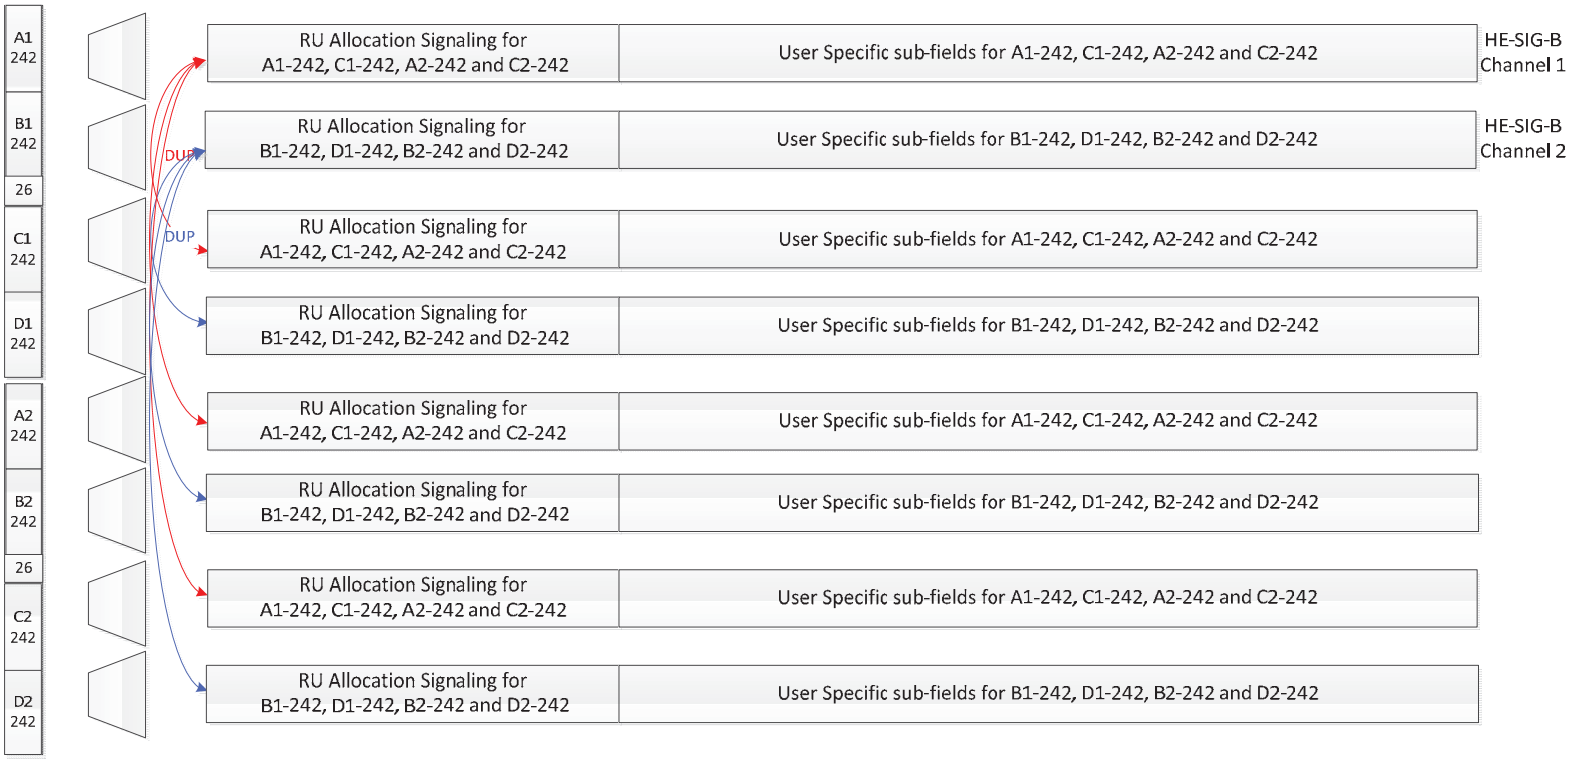
Straw Poll #1

Do you agree to add the following text to the 11ax SFD:

- The resource allocation signaling in the common control field and user specific subfields for an STA carried in the HE-SIG-B are transmitted in the same 20MHz sub-channel as the data for 20MHz and 40MHz PPDU.
- For an 80MHz PPDU, the default mapping per 20MHz as shown in the figure below.



- For a 160MHz PPDU , the default mapping per 20MHz is as shown in the figure below



Straw Poll #2

Do you agree to add the following text to the 11ax SFD:

- A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU.
- In case of full BW MU-MIMO, the following conditions hold:
  - Only applicable for RU sizes 242,484,996,2*996
  - The RU information in HE-SIGB common is not signaled
  - For bandwidths > 20MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels

IEEE 802.11 TGax
High Efficiency WLAN
PHY Ad Hoc

Co-Chairs:
Yakun Sun (Marvell)
Jianhan Liu (Mediatek)
Bo Sun (ZTE)

296

Agenda Items

- Call meeting to order
- Patent policy, etc. (Call for Potentially Essential Patents)
- Set and approve agenda

- Review ad hoc rules
- Technical Presentations approved by 802.11ax for presentation this week, and related straw polls
- Any other technical presentations

Meeting Protocol, Attendance, Voting & Document Status

- **Please announce your affiliation when you first address the group during a meeting slot**
- **Cell Phones to be silent or Off**
- **Register your attendance via https://imat.ieee.org while on meeting SSID (e.g. Verilan-secure)**
- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, Member's Area**
  - Contact Jon Rosdahl – jrosdahl@ieee.org

Patent Policy and Other Guidelines

- Following 5 slides

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is consistent with the ANSI patent policy and is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 12 and 12a on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

300

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy. Participants:

- **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Personal awareness" means that the participant "is personally aware that the holder may have a potential Essential Patent Claim," even if the participant is not personally aware of the specific patents or patent claims**
- **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of such potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**

Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2

- Early identification of holders of potential Essential Patent Claims is strongly encouraged
- No duty to perform a patent search

301

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/guides/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/guides/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/board/pat/pat-material.html

302

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/board/pat/index.html

This slide set is available at http://standards.ieee.org/board/pat/pat-slideset.ppt

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

303

Slide #3

Other Guidelines for IEEE WG Meetings

- All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

304

Slide #4

Ad Hoc Groups Operation

- **Straw Polls are only allowed during Ad Hoc group meeting // no motions, anyone can vote**
- **A straw poll affecting the Spec Framework has to start with,**
  - Do you agree to add to the TG Specification Frame work document?
- **A straw poll needs to achieves at least 75% to be converted to a motion at the TG level.**
- **Each Presentation will be limited to 20 minutes.**

305

Meeting Schedule

	Monday	Tuesday		Wednesday		Thursday
AM1	**TGax**			**TGax**		**TGax**
AM2		PHY	MAC			
PM1	**TGax**	MU	SR	PHY	SR	**TGax**
PM2				PHY	MU	
EVE		PHY	MAC			

306

Submissions

Preamble (SIGA)

- **11-15/1309 Extended Range Support for 11ax**
- **11-15/1353 Preamble Formats**
- **11-15/1357 Extra tones in the preamble**
- **11-15/1372 L-LENGTH Equation Updates**

Data

- **11-15/1289 Non-Uniform Constellations for 1024-QAM**
- **11-15/1305 STBC and Padding Discussions**
- **11-15/1310 11ax LDPC Tone Mapper for 160MHz**
- **11-15/1311 11ax Spectral Mask**
- **11-15/1327 Diversity Mode in OFDMA**
- **11-15/1329 Link Adaptation for HE WLAN**
- **11-15/1331 PHY Padding Capability Signaling**

STF/LTF

- **11-15/1323 HE-STF Sequence**
- **11-15/1303 LTF Sequence Designs**
- **11-15/1334 HE-LTF Sequence Design**
- **11-15/1322 Channel Estimation Enhancement and Transmission Efficiency Improvement Using Beam-Change Indication and 1x HE-LTF**

SIGB

- **11-15/1304 Supported Resource Allocations in SIG-B**
- **11-15/1315 HE-SIG-B Mapping and Compression**
- **11-15/1324 MCS for HE-SIG-B**
- **11-15/1335 HE-SIG-B Contents**
- **11-15/1059 SIG-B Encoding Structure Part II**
- **11-15/1350 Spatial Configuration And Signaling for MU-MIMO**
- **11-15/1354 SIGA fields and Bitwidths**

Sounding and feedback

- 11-15/1320 Maximum Tone Grouping Size for 802.11ax Feedback
- 11-15/1321 Reducing Explicit MIMO Compressed Beamforming Feedback Overhead for 802.11a
- 11-15/1332 Implicit Sounding for HE WLAN
- 11-15/1347 Strategies to reduce MIMO feedback overhead
- 11-15/1349 Sounding for Uplink Transmission

307

Tuesday AM2

- 11-15/1309 Extended Range Support for 11ax
- 11-15/1353 Preamble Formats
- 11-15/1357 Extra tones in the preamble
- 11-15/1372 L-LENGTH Equation Updates
- 11-15/1289 Non-Uniform Constellations for 1024-QAM
- 11-15/1310 11ax LDPC Tone Mapper for 160MHz

308

1309r1 SP#1

- **Do you support adding the following to the spec framework**

“L-STF power is boosted by 3 dB in the extended range preamble”

309

- **Y: 50**
- **N: 4**
- **A: 18**

SP passes

1309r1 SP#2

- **Do you support adding the following to the spec framework**

“L-LTF power is boosted by 3 dB in the extended range preamble”

- **Y: 51**
- **N: 0**
- **A: 22**

SP passes

1353r0 SP #1

Do you support that there are only three pre-HE-STF preamble formats defined as:

- SU format (mandatory) / Trigger based UL
- MU format (mandatory)
- Extended range SU format

311

Yes: 51

No: 2

Abs: 21

SP passes

1353r0 SP #2

Do you support the signaling of the three preamble formats as shown on slide 15?

312

Yes: 55

No: 0

Abs: 21

SP passes

1353r0 SP #3

Do you support that the following are the only mandatory combinations of LTF size and CP size

- **2x LTF+ 0.8uS**
- **2x LTF+ 1.6uS**
- **4x LTF+ 3.2uS**

313

with HE-LTF and payload using the same CP size.

and that LTF size and CP size are jointly signaled using 3 bits.

Yes: 57

No: 0

Abs: 15

SP passes

1353r0 SP #4

Do you support that SIGB only has one CP size equal to 0.8uS

314

Yes: 61

No: 0

Abs: 14

SP passes

1357r1 Straw poll

- **Do you support to:**
  - Allocate 4 extra subcarriers, two at each edge of each 20MHz sub-channel, for L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields in 11ax PPDUs.
    - The 4 subcarriers added to the L-SIG and RL-SIG fields are transmitted with known TBD BPSK constellations (+-1).
    - The number of data subcarriers in HE-SIG-A and HE-SIG-B fields are increased by 4 in each 20MHz sub-channel.
    - L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields are always transmitted with the same total power as L-LTF field (in cases when L-LTF is not being boosted).
  - Y: 46
  - N: 0
  - A: 13
  - **SP Passes**

315

1372r0 Straw Poll

- **Do you agree to make the following changes in red, on the equations in Section 3.3.5 of TGax SFD?**

$$L_LENGTH = \left\lceil \frac{TXTIME - 20}{4} \right\rceil \times 3 - 3 - \boldsymbol{m}, m = 1 \text{ or } 2$$

$$TXTIME = T_{L_PREAMBLE} + T_{HE_PREAMBLE} + T_{HE_DATA} + T_{PE}$$

$$N_{SYM} = \left\lfloor \frac{\left(\frac{L_LENGTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE} \right)}{T_{SYM}} \right\rfloor - b_{PE_\boldsymbol{Disambiguity}}$$

$$T_{PE} = \left\lfloor \frac{\left(\frac{L_LENGTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE} \right) - N_{SYM} \times T_{SYM}}{4} \right\rfloor \times 4$$

Y: 71
N: 0
A: 2
SP passes

316

1289r1 Straw Poll #1

Do you agree that is desirable to achieve the maximum possible gain for 1024-QAM (e.g. make also use of non-uniform constellations)?

317

- **Y/N/A**

Y: 10

N: 5

Abs: many

1289r1 Straw Poll #2

Do you agree that non-uniform constellations shall be used for 1024-QAM?

- **Y/N/A**

- **Y: 10**
- **N: 9**
- **Abs: Many**

1310r0 Straw-poll

- **Do you support to add the following text to 11ax SFD?**
  - 2x996RU employs a segment parser (as in 11ac) between two 996 tones (frequency segments) and the LDPC tone mapper in each 996 tone segment uses D_{TM}=20

- **Y: 57**
- **N: 0**
- **A: 3**

Tuesday Evening

- 11-15/1305 STBC and Padding Discussions
- 11-15/1311 11ax Spectral Mask
- 11-15/1327 Diversity Mode in OFDMA
- 11-15/1329 Link Adaptation for HE WLAN
- 11-15/1331 PHY Padding Capability Signaling

320

1305r0 SP

- Do you agree to add the following text in 11ax SFD?
  - *STBC is an optional feature in 11ax and it is ONLY defined for single spatial stream (Nss=1 and Nsts=2)*
  - *In a MU PPDU all RUs are either STBC or not STBC.*

321

Y: 46

N: 0

A: 12

1311r0 Straw-poll

- **Do you support to add the following to 11ax SFD?**

The spectral masks for 11ax non-OFDMA 20/40/80/160/80+80 MHz PPDU are defined as in slides 13-15?

  - The bandwidth of the applied spectrum mask for a (non-OFDMA) PPDU shall be determined by the bandwidth occupied by the pre HE-STF portion of the preamble in this PPDU, regardless of the BSS bandwidth
  - The spectral mask requirements do not apply to LO leakage

322

  - Y: 49
  - N: 0
  - A: 8

1327r0 Straw Poll 1

Do you agree to add the following to the SFD?

- **Transmission diversity mode (i.e. non-continuous transmission) shall be supported in 11ax.**
  - Transmission diversity mode divides a single encoded packet in half and maps to 13 + 13 (26 RU) or 26 + 26 (52 RU) tones, that are spaced apart in frequency.
  - TBD whether only 26 RU, only 52 RU, or both 26 and 52 RU support transmit diversity mode.

323

- **Y: 12**
- **N: 23**
- **A: 21**

1329r1 Straw Poll #1

- Do you agree to include the following text to TGax SFD:
- **HE link adaptation shall define reference payload size for the reported MCS in MFB.**
  - Reference payload size may be dependent on the frames involved in link adaptation or fixed in specification. Details TBD.

- **Y: 12**
- **N: 1**
- **A: many**

1329r1 Straw Poll #2

- Do you agree to include the following text to TGax SFD:
- **HE link adaptation field, which is part of HE variant of HT control field, consists of MFB and TBD subfields. The MFB subfield includes NSS and MCS subfield.**

325

- **Y: 17**
- **N: 0**
- **A: 37**

1331r0 Strawpoll #1

- To you agree to added the following text in **SFD**:
- **HE padding and packet extension capability field shall be defined separately for STBC and non-STBC transmissions.**
- **HE padding and packet extension capability field content for STBC transmission is limited to Nss = 1.**

326

- **Y: 12**
- **N: 28**
- **A: 16**

1331r0 Strawpoll #2

- Do you agree to the following concept:
- **Maximum T_{PE} of 0us, 8us, or 16us is determined by number of codewords in the last two OFDM symbols (denoted as $N_{CW,left}$) containing information payload.**
- **Maximum T_{PE} capability can be signaled using two threshold values threshold8 and threshold16, which determine the $N_{CW,left}$ threshold for using max T_{PE} of 8us or 16us, respectively. The threshold value will be common for all BW and N_{SS}.**

- **Y:12**
- **N:26**
- **A:13**

Wednesday PM1

- 11-15/1323 HE-STF Sequence
- 11-15/1303 LTF Sequence Designs
- 11-15/1334 HE-LTF Sequence Design
- 11-15/1322 Channel Estimation Enhancement and Transmission Efficiency Improvement Using Beam-Change Indication and 1x HE-LTF
- 11-15/1315 HE-SIG-B Mapping and Compression
- 11-15/1324 MCS for HE-SIG-B

328

1323r1 Straw poll

- **Do you agree to add the following HE-STF sequences for 0.8us and 1.6us periodicity to the 11ax SFD:**
  - ***M*** = {-1 -1 -1 +1 +1 +1 -1 +1 +1 +1 -1 +1 +1 -1 +1}
  - 1x HE-STF sequences

Y: 48, N: 0, A: 12

1303r0 Straw Poll #1

- **Do you agree to add the following texts into the SFD?**
  - A HE LTF for 242SU shall reuse $VHT_{-122,122}$ with the same phase rotation [1, -1, -1, -1].
    - $HELTF_{242SU}$ = $VHTLTF_{-122,122}$ with the phase rotation of VHT80

330

Withdrawn

1303r0 Straw Poll #2

- **Do you agree to add the following texts into the SFD?**
  - HE LTFs for 26RU, 52RU, and 106RU shall use the following sequences:
    - $HELTF_{26RU}$ ={1,-1,1,1,-1,-1,-1,-1,1,1,1,1,-1,1,1,1,1,-1,1,1,1,1,-1,1,1,1,-1,1,1,1,-1,-1,-1,-1,-1}
    - $HELTF_{52RU}$ = {$HELTF_{26RU}$(1:13), -$HELTF_{26RU}$(14:26), -$HELTF_{26RU}$}
    - $HELTF_{106RU}$ = {$HELTF_{26RU}$, 1, -$HELTF_{26RU}$, -$HELTF_{26RU}$, 1, -$HELTF_{26RU}$}

331

Withdrawn

1303r0 Straw Poll #3

- **Do you agree to add the following texts into the SFD?**
  - A HE LTF for 242RU shall use $VHT_{-122,122}$ removing zeros with the phase rotation [1, -1, -1, -1].
    - $HELTF_{242RU}$ = {$VHTLTF_{-122,122left}$(1:60), -$VHTLTF_{-122,122left}$(61:121), -$VHTLTF_{-122,122right}$(1:121)},
      - where $VHTLTF_{-122,122left}$ and $VHTLTF_{-122,122right}$ are 121-length sequences in the left and right sides of 3 DCs in $VHTLTF_{-122,122}$, respectively

332

Withdrawn

1303r0 Straw Poll #4

- **Do you agree to add the following texts into the SFD?**
  - HE LTF sequences for 484RU, 484SU, and 996SU shall be made from concatenations of the HELTF sequence for 242RU in frequency domain, as shown in the followings:
    - $HELTF_{484RU} = \{HELTF_{242RU}, HELTF_{242RU}\}$
    - $HELTF_{484SU} = \{HELTF_{242RU}, 0, 0, 0, 0, 0, HELTF_{242RU}\}$
    - $HELTF_{996SU} = \{1, HELTF_{242RU}, -HELTF_{242RU}, -HELTF_{26RU}(1:13), 0,0,0,0,0, -HELTF_{26RU}(14:26), -HELTF_{242RU}, -HELTF_{242RU}, 1\}$

333

Withdrawn

1334r1 SP#1

- **Do you support to add to SFD**
  - 4x/2x HE-LTF sequences for 80MHz in slide 13-15
  - 4x/2x HE-LTF sequences for 40MHz in slide 20-21
  - 4x/2x HE-LTF sequences for 20MHz in slide 26

334

- Y: 63
- N: 2
- A: 16

1334r1 SP#2

- **Do you support to add to SFD**
  - In all transmission modes, HE-STF and HE-LTF only populate RUs that are populated in the data field.

335

- Y: 74
- N: 6
- A: 15

1334r1 SP#3

- **Do you support to add to SFD**
  - Gamma (tone rotation as defined in 22.3.7.5) is not applied on HE-STF and beyond.
    - TBD in case of a duplicated HE PPDU (if ever defined)

336

- Y: 60
- N: 0
- A: 13

1322r0 Straw Poll #1

- **Do you agree to add 1-bit beam-change indication into HE-SIGA?**
  - Value “1” indicates that spatial mapping is changed
  - Value “0” indicates that spatial mapping is unchanged

337

- **Y: 63**
- **N: 0**
- **A: 14**

Straw poll #2

- **Do you agree that when beam-change indication is “0”, the pre-HE-STF portion preamble shall be spatially mapped in the same way as HE-LTF1 on each tone?**

338

- **Y: 62**
- **N: 0**
- **A: 8**

Straw Poll #3

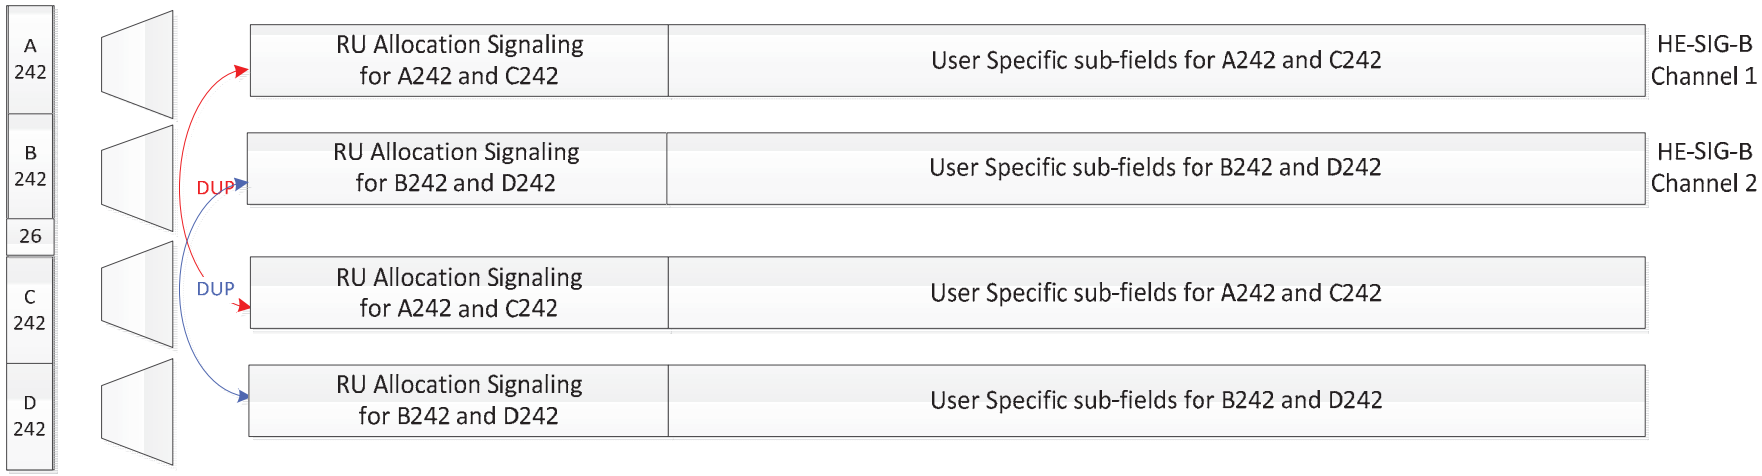
- **Do you agree to add 1x HE-LTF as an optional mode in 11ax for SU PPDU (TBD for MU-MIMO)?**
  - 1xLTF + 0.8us GI is one optional combination as indicated by the "GI and LTF size" sub-field in HE-SIG-A.

339

- **Y: 60**
- **N: 1**
- **A: 14**

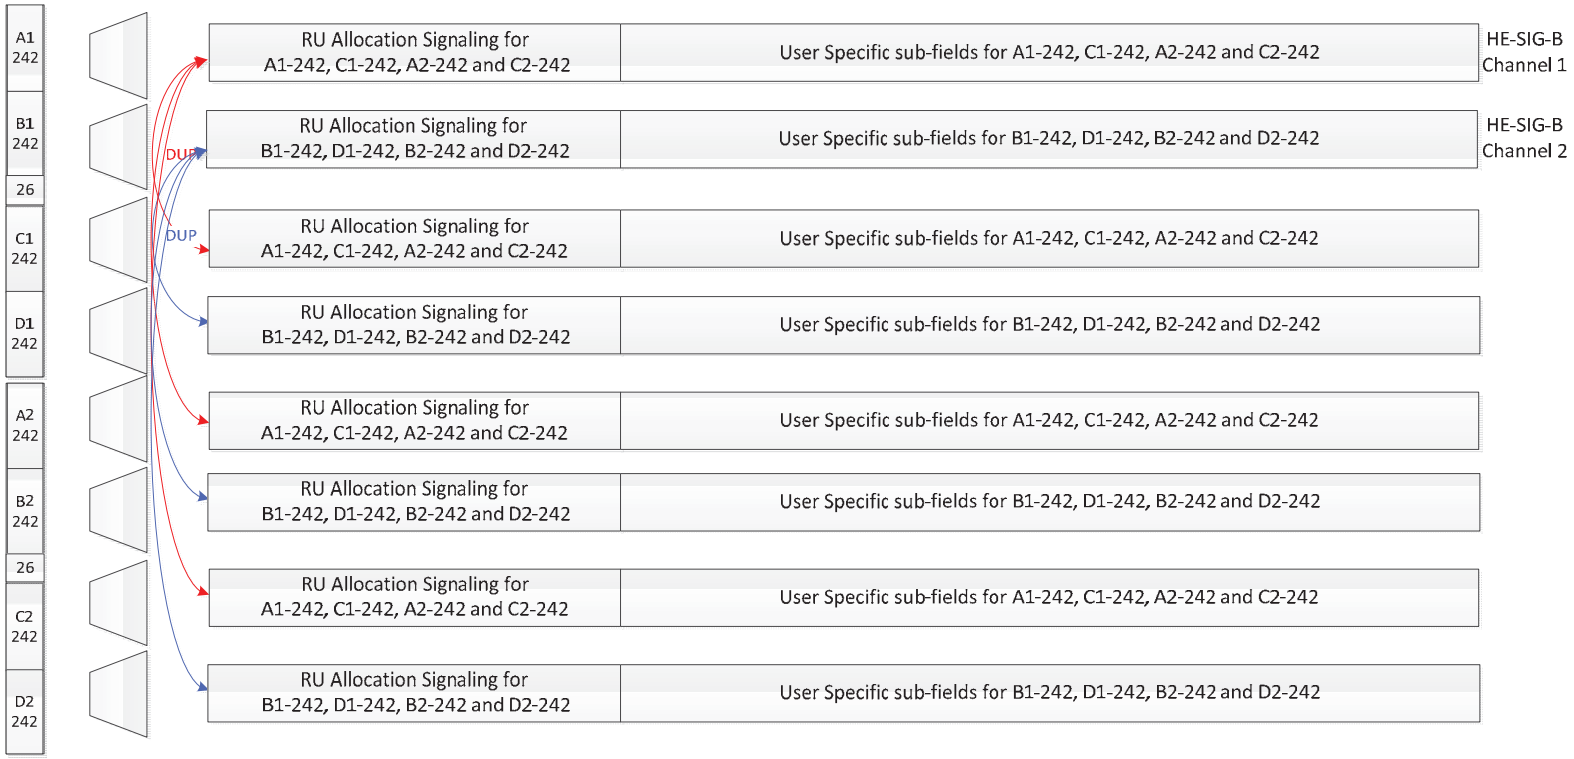
1315r1 Straw Poll #1

- **Do you agree to add the following text to the 11ax SFD:**
- The resource allocation signaling in the common control field and user specific subfields for an STA carried in the HE-SIG-B are transmitted in the same 20MHz sub-channel as the data for 20MHz and 40MHz PPDU.
- For an 80MHz PPDU, the default mapping per 20MHz as shown in the figure below.



340

- For a 160MHz PPDU , the default mapping per 20MHz is as shown in the figure below



No objection

1315r1 Straw Poll #2

- **Do you agree to add the following text to the 11ax SFD:**

- A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU.
- In case of full BW MU-MIMO, the following conditions hold:
  - Only applicable for RU sizes 242,484,996,2*996
  - The RU information in HE-SIGB common is not signaled
  - For bandwidths > 20MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels

342

- **No objection**

Wednesday PM2

- 11-15/1324 MCS for HE-SIG-B (Q&A, SP)

- 11-15/1335 HE-SIG-B Contents
- 11-15/1304 Supported Resource Allocations in SIG-B
- 11-15/1059 SIG-B Encoding Structure Part II
- 11-15/1350 Spatial Configuration And Signaling for MU-MIMO
- 11-15/1354 SIGA fields and Bitwidths

1324r0 Straw poll #1

- **Do you agree to add to TGax Specification Framework Document**
  - Signaling in the first encoded part (HE-SIG-A) has the following MCS values for HE-SIG-B:
    - MCS0, MCS1, MCS2, MCS3, MCS4, MCS5
    - Other MCS is TBD
  - Signaling for HE-SIG-B MCSs has 3 bits
    - If two MCS set for BW≥40MHz are to be signaled, additional TBD bits used
- **Y: 34**
- **N: 0**
- **A: 9**

344

1335r2 SP#1

- **Do you agree to modify the text in IEEE 802.11ax SFD(r9) as follows**
  - Change “The exact mapping of the 8 bit to the arrangement and the number of MU-MIMO allocations is TBD.” to “The mapping of the 8 bits to the arrangement and the number of MU-MIMO allocations is defined in the following lookup table.”

8 bits indices	#1	#2	#3	#4	#5	#6	#7	#8	#9	Num of entries
000 0 0000	26	26	26	26	26	26	26	26	26	1

1335r2 SP#2

- **Do you agree to add the STAID size in the user specific subfields of HE-SIGB is 11bits?**

346

- **Y: 57**
- **N: 0**
- **A: 14**

1335r2 SP#3

- **Do you agree to add a DCM subfield (1-bit) to the user-specific subfields of HE-SIG-B in IEEE 802.11ax SFD(r9) (as shown in red)**
  - For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme), DCM (Dual Sub-Carrier Modulation) and Coding (Use of LDPC)
  - For each user in a multi-user allocation in a RU: Spatial Configuration Fields, MCS, DCM and Coding

347

- **Y: 54**
- **N: 0**
- **A: 19**

1304r1 Straw Poll #1

- **Do you agree to add the following text into the SFD?**
  - The 8 bits in the common field of HE SIG-B includes a state of ‘No STA Assigned’ for which no STA-specific field is transmitted

348

  - Y: 12
  - N: 26
  - A: 16

1304r1 Straw Poll #2

- **Do you agree to add the following text into the SFD?**
  - The number of spatially multiplexed STAs for 106 RU limited to 4
    - For RUs larger than 106, it can be 8 STAs as maximum

349

  - Y: 5
  - N: 34
  - A: 16

1304r1 Straw Poll #3

- **Do you agree to support the following text?**
  - The 8 bits in the common field of HE SIG-B includes explicit states for the existence of the center 26RU of 80MHz

350

  - Y: 9
  - N: 16
  - A: 25

1350r1 SP #1

- **Do you support to add the following text in Section x.x.x in current SFD:**
  - The number of spatially multiplexed user in a DL or UL MU-MIMO transmission is up to 8 (in a given RU)?

351

Y: 46

N: 5

A: 8

1350r1 SP #2

- **Do you support to add the following text in Section x.x.x current SFD:**
  - The Nsts value for each user in a MU-MIMO RU is less than or equal to 4?

352

- **Y: 41**
- **N: 1**
- **A: 7**

1350r1 SP #3

- **Do you support to add the following text in Section x.x.x in current SFD:**
  - A MU-MIMO user block includes a “spatial config” field of 4bit indicating the number of spatial streams for each multiplexed STA. The field is constructed by using the entries corresponding to the value of Nuser of this RU in the following table?

Nuser	B0…B3	Nsts[1]	Nsts[2]	Nsts[3]	Nsts[4]	Nsts[5]	Nsts[6]	Nsts[7]	Nsts[8]	#Entries
2	0000~0011	1~4	1							10

Bo Sun	ZTE Corp.			Sun.bo1@zte.com.cn

Abstract

TGax meeting minutes from the IEEE 802.11 Dallas PHY Ad hoc session, November, 2015.

IEEE 802.11 Task Group ax PHY Ad Hoc
Nov 2015 Dallas Meeting

Tuesday, Nov 10th, 2015, AM2 TGax Session (10:30-12:30)

1. **Meeting called to order by Yakun Sun (Marvell) at 10:30.**
   1.1. The agenda is contained in 11-15/1385r0 which is on the server.

2. **Administrative Items**
   2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   2.2. Chair also reminded to do attendance.

3. **Set and approve agenda**
   3.1. Proposed agenda for Monday PM1
      3.1.1. Presentations follow the order of DCN.
      3.1.2. Recess
   3.2. Chair asked for approval of the proposed agenda. – Agenda approved.

4. **Presentations**

   4.1. 11-15-1309-01-00ax-extended-range-support-for-11ax
   Sameer Vermani (Qualcomm) presented.

   Discussions:
   Sigurd: The proposal is not mainly about range extension.
   Sameer: it assists to achieve real low MCS performance thus to guarantee extended range.
   Daewon: in slide 13, the gain is not in term of data payload. What's the real data gain performance?
   Sameer: Beacon can also be sent in data rate sometimes. It's not intend to achieve data rate performance but extended range.

   SP #1:

   - **Do you support adding the following to the spec framework**
     - **"L-STF power is boosted by 3 dB in the extended range preamble"**

   SP Result: Y50 N4 A18; SP passed.

   SP #2:

   - **Do you support adding the following to the spec framework**
     - **"L-LTF power is boosted by 3 dB in the extended range preamble"**

   SP Result: 51Y/0N/22A; SP passed.

4.2. 11-15-1353-00-00ax-preamble-formats
Ron Porat (BroadCom) Presented

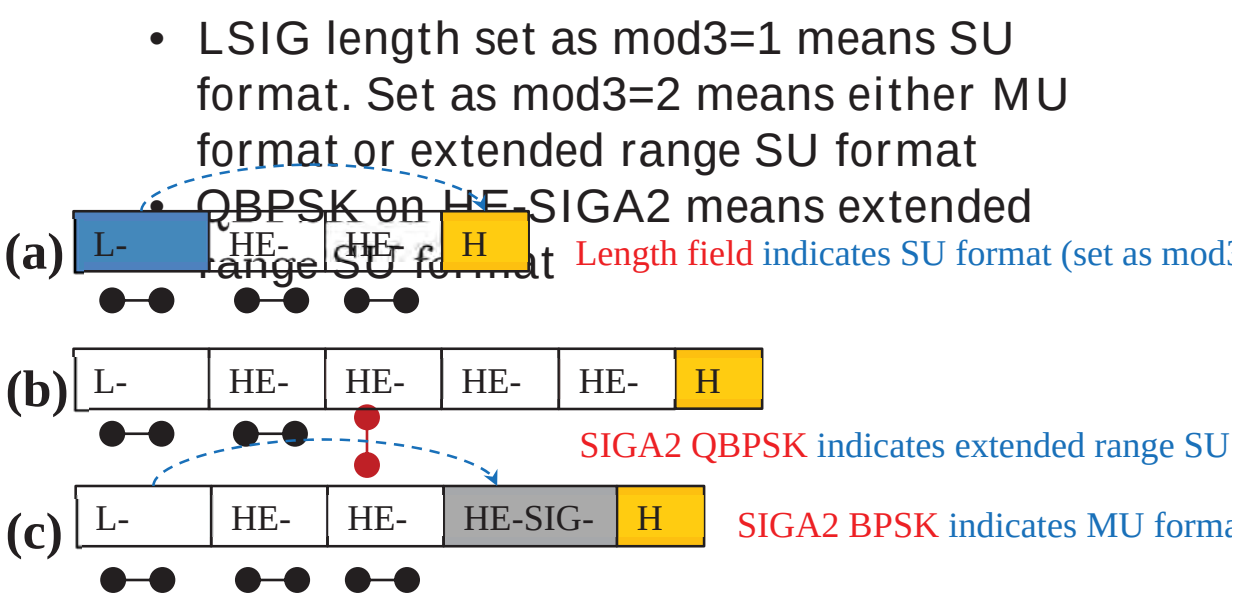
Discussions:
There's some clarification of the proposal.

SP #1:

- **Do you support that there are only three pre-HE-STF preamble formats defined as:**
  - SU format (mandatory) / Trigger based UL
  - MU format (mandatory)
  - Extended range SU format

SP Result: 51Y/2N/21A; SP passed

SP #2:
- **Do you support the signaling of the three preamble formats as shown on slide 15**



SP Result: 55Y/0N/21A; SP passed

SP #3
- **Do you support that the following are the only mandatory combinations of LTF size and CP size**
  - **2x LTF+ 0.8uS**
  - **2x LTF+ 1.6uS**
  - **4x LTF+ 3.2uS**

with HE-LTF and payload using the same CP size.

and that LTF size and CP size are jointly signaled using 3 bits.

SP Result: 57Y/0N/15A; SP passed

SP #4

– **Do you support that SIGB only has one CP size equal to 0.8uS.**

SP Result: 61Y/0N/14A; SP passed

4.3. 11-15-1357-01-00ax-extra-tones-in-the-preamble

Xiaogang Chen (Intel) Presented

Discussions:

No discussion

SP #1:

- **Do you support to:**
  - Allocate 4 extra subcarriers, two at each edge of each 20MHz sub-channel, for L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields in 11ax PPDUs.
    - The 4 subcarriers added to the L-SIG and RL-SIG fields are transmitted with known TBD BPSK constellations (+-1).
    - The number of data subcarriers in HE-SIG-A and HE-SIG-B fields are increased by 4 in each 20MHz sub-channel.
    - L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields are always transmitted with the same total power as L-LTF field (in cases when L-LTF is not being boosted?

SP Result: 46Y/0N/13A; SP passed

4.4. 11-15-1372-00-00ax-l-length-equation-updates

Hongyuan Zhang (Marvell) Presented

Discussions:

Sigurd: correct the typo of “L_LEGNTH” in the last formula for motion text.

SP #1:

- **Do you agree to make the following changes in red, on the equations in Section 3.3.5 of TGax SFD?**

$$L_LENGTH = \left\lceil \frac{TXTIME - 20}{4} \right\rceil \times 3 - 3 - m, m = 1 \text{ or } 2$$

$$TXTIME = T_{L_PREAMBLE} + T_{HE_PREAMBLE} + T_{HE_DATA} + T_{PE}$$

$$N_{SYM} = \left\lfloor \frac{\left(\frac{L_LENGTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE}\right)}{T_{SYM}} \right\rfloor - b_{PE_Disambiguity}$$

$$T_{PE} = \left\lfloor \frac{\left(\frac{L_LEGNTH + m + 3}{3} \times 4 - T_{HE_PREAMBLE}\right) - N_{SYM} \times T_{SYM}}{4} \right\rfloor \times 4$$

SP Result: **71Y/0N/2A; SP passed**

4.5. **11-15-1289-01-00ax-non-uniform-constellations-for-1024-qam**
Dana Ciochina (Sony) Presented

Discussions:
Jianhan: any explanation why using non-uniform constellations is better? Different code rate has different modulation?
Dana: the reliability of uniform constellations is not evenly distributed.
MARVELL: how to handle non-integer in slide 17?
Dana: Both floating and quantified methods could be used.
Someone: this should be defined with new MCS, and the non-uniform constellation is considered for optional MCS modes.
Someone: is PAPR performance considered?
Dana: not considered this time.

SP #1:
- **Do you agree that is desirable to achieve the maximum possible gain for 1024-QAM (e.g. make also use of non-uniform constellations)?**

SP Result: **10Y/5N/Many A; Informative**

SP #2:
- **Do you agree that non-uniform constellations shall be used for 1024-QAM?**

SP Result: **Many Abstain; Informative**

4.6. 11-15-1310-00-00ax-11ax-ldpc-tone-mapper-for-160mhz
Bin Tian (Qualcomm) Presented

Discussions:
Daewon: Segment in 11ac needs special operation, any consideration on the impact of procedure on the proposed design?
Bin: will consider later.

SP #1:
- **Do you support to add the following text to 11ax SFD?**
  - **2x996RU employs a segment parser (as in 11ac) between two 996 tones (frequency segments) and the LDPC tone mapper in each 996 tone segment uses D_{TM}=20**

SP Result: 57Y/0N/3A; SP passed.

----------END OF AM2 TUESDAY----------

Tuesday, Nov 10th, 2015, EV1 TGax Session (19:30-21:30)

5. **Meeting called to order by Yakun Sun (Marvell) at 19:30.**
   5.1. The agenda is contained in 11-15/1385r1 which is on the server.

6. **Administrative Items**
   6.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   6.2. Chair also reminded to do attendance.

7. **Presentations**

7.1. 11-15-1305-00-00ax-stbc-and-padding-discussions
Hongyuan Zhang (Marvell) Presented

Discussions:
Daewon: Agree generally with the conclusion. Wonder if SFBC can be used to replace STBC totally.
Hongyuan: will discuss it once the SFBC proposal is available.

SP #1:
- **Do you agree to add the following text in 11ax SFD?**
  - ***STBC is an optional feature in 11ax and it is ONLY defined for single spatial stream (Nss=1 and Nsts=2)***
  - ***In a MU PPDU all RUs are either STBC or not STBC.***

SP Result: 46Y/0N/12A; SP passed

7.2. 11-15-1311-00-00ax-11ax-sppectral-masks
Bin Tian (Qualcomm) Presented

Discussions:
Daewon: The spectrum mask used for PPDU transmission is based on PPDU bandwidth, it's different from 11ac.
Bin: Yes. We believe it's better to use a 20MHz mask for a20MHz PPDU.

SP #1:
Do you support to add the following to 11ax SFD?
- **The spectral masks for 11ax non-OFDMA 20/40/80/160/80+80 MHz PPDU are defined as in slides 13-15?**
  - **The bandwidth of the applied spectrum mask for a (non-OFDMA) PPDU shall be determined by the bandwidth occupied by the pre HE-STF portion of the preamble in this PPDU, regardless of the BSS bandwidth**
  - **The spectral mask requirements do not apply to LO leakage**

SP Result: 49Y/2N/8A; SP passed

7.3. 11-15-1327-00-00ax-diversity-mode-in-ofdma

Yujin Noh (Newracom) Presented

Discussions:
Bin: typically, 11ax will have more antennas which will cause lots of gain. How this transmission diversity behavior in this case?
Yujin: the proposal doesn't address the antenna gain.
Le: understanding the intention is to find a new RU. While in previous discussion of RU, it's evaluated against system level gain instead of link level gain.
Le: the new RU is only for multicast frame, e.g. trigger frame?
Daewon: It's likely. Though not limit it to trigger frame directly, but AP will not be so stupid to assign such a RU to a big data frame.
Brian: Multicast is not a big issue, and low rate of multicast will take longer time.

SP #1:
Do you agree to add the following to the SFD?
- **Transmission diversity mode (i.e. non-continuous transmission) shall be supported in 11ax.**
  - **Transmission diversity mode divides a single encoded packet in half and maps to 13 + 13 (26 RU) or 26 + 26 (52 RU) tones, that are spaced apart in frequency.**
  - **TBD whether only 26 RU, only 52 RU, or both 26 and 52 RU support transmit diversity mode.**

SP Result: 12Y/23N/21A; SP failed

7.4. 11-15-1329-00-00ax-link-adaptation-for-he-wlan

Yujin Noh (Newracom) Presented

Discussions:
Jianhan: The proposal could be one solution, there could be another solution.
Daewon: We offer this solution and want group's feedback.
Bin: Some of the SP2 content may relate to other group. Suggest to move the SP2 to TG meeting.
Ron: suggest to replace "is composed of " with "contains of" in SP2.

SP #1:
Do you agree to include the following text to TGax SFD:
- **HE link adaptation shall define reference payload size for the reported MCS in MFB.**
  - **Reference payload size may be dependent on the frames involved in link adaptation or fixed in specification. Details TBD.**

SP Result: 12Y/1N/Many A; SP passed

SP #2:
Do you agree to include the following text to TGax SFD:
- **HE link adaptation field, which is part of HE variant of HT control field, consists of MFB and TBD subfields. The MFB subfield consists of NSS and MCS subfield. The MFB subfield includes NSS and MCS subfield.**

SP Result: 17Y/0N/37A; SP passed

7.5. 11-15-1331-00-00ax-phy-padding-capability-signaling

Daewon Lee (Newracom) Presented

Discussions:

Hongyuan: it's too complex with consideration of STBC.
Daewon: Agree that's a challenge. But from our aspect, we prefer this proposal.
Someone: the processing time depends on the devices' capability to decode earlier or longer, not sure if AP can actually capture that information.

SP #1:

To you agree to added the following text in SFD:

- **HE padding and packet extension capability field shall be defined separately for STBC and non-STBC transmissions.**
- **HE padding and packet extension capability field content for STBC transmission is limited to Nss = 1.**

SP Result: 12Y/28N/16A; SP failed

SP #2:

Do you agree to the following concept:

- **Maximum T_{PE} of 0us, 8us, or 16us is determined by number of codewords in the last two OFDM symbols (denoted as $N_{CW,left}$) containing information payload.**
- **Maximum T_{PE} capability can be signaled using two threshold values threshold8 and threshold16, which determine the $N_{CW,left}$ threshold for using max T_{PE} of 8us or 16us, respectively. The threshold value will be common for all BW and N_{SS}.**

SP Result: 12Y/26N/13A; (For information)

----------END OF EV1 TUESDAY----------

Wednesdday, Nov 12th, 2015, EV1 TGax Session (13:30-15:30)

8. Meeting called to order by Yakun Sun (Marvell) at 13:30.

8.1. The agenda is contained in 11-15/1385r2 which is on the server.

9. Administrative Items

9.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.

9.2. Chair also reminded to do attendance.

10. Presentations

10.1. 11-15-1323-01-00ax-he-stf-sequences

Eunsung Park (LGE) Presented

Discussions:

No discussion

SP #1:

- **Do you agree to add the following HE-STF sequences for 0.8us and 1.6us periodicity to the 11ax SFD:**
  - ***M* = {-1 -1 -1 +1 +1 +1 -1 +1 +1 +1 -1 +1 +1 -1 +1}**
  - **1x HE-STF sequences**
    - **20MHz**
      - **$HES_{-112,112}(-112:16:112) = M*(1+j)*sqrt(1/2)$**
      - **$HES_{-112,112}(0) = 0$**
    - **40MHz**
      - **$HES_{-240,240}(-240:16:240) = \{M, 0, -M\}*(1+j)*sqrt(1/2)$**
    - **80MHz**
      - **$HES_{-496,496}(-496:16:496) = \{M, 1, -M, 0, -M, 1, -M\}*(1+j)*sqrt(1/2)$**
  - **2x HE-STF sequences**
    - **20MHz**
      - **$HES_{-120,120}(-120:8:120) = \{M, 0, -M\}*(1+j)*sqrt(1/2)$**
    - **40MHz**
      - **$HES_{-248,248}(-248:8:248) = \{M, -1, -M, 0, M, -1, M\}*(1+j)*sqrt(1/2)$**
      - **$HES_{-248,248}(\pm 248) = 0$**
    - **80MHz**
      - **$HES_{-504,504}(-504:8:504) = \{M, -1, M, -1, -M, -1, M, 0, -M, 1, M, 1, -M, 1, -M\}*(1+j)*sqrt(1/2)$**
      - **$HES_{-504,504}(\pm 504) = 0$**

SP Result: 48Y/0N/14A; SP passed

10.2. 11-15-1303-00-00ax-ltf-sequence-designs

Sungho Moon (Newracom) Presented

Discussions:

Le: slide 6, pilot position is different from what we agreed in SFD. Maybe the PAPR performance re-check is needed. So your proposal is trying to reuse LTF long sequence?

Sungho: Yes.
Someone: the full-band PAPR design is possible.
Sungho: How long to run the sim depends on how many position to search. And our design is based on reuse existing LTF sequence the most as possible.

SPs withdrawn.

10.3. 11-15-1334-01-00ax-he-ltf-sequence-design

Le Liu (Huawei) Presented

Discussions:
Sungho: slide22, 40MHz should be more popular than 20MHz and the PAPR performance of 40MHz is not very good.
Le: not sure whether 40MHz is more popular. And the simulation result is for different cases.
Sungho: the proposed new sequence should have better performance over existing VHT sequence. But the performance over 26 tone RU is not good.
Le: we prioritize overall performance.

SP #1:
Do you support to add to SFD
- **4x/2x HE-LTF sequences for 80MHz in slide 13-15**
- **4x/2x HE-LTF sequences for 40MHz in slide 20-21**
- **4x/2x HE-LTF sequences for 20MHz in slide 26**

SP Result: 63Y/2N/16A; SP passed

SP #2:
Do you support to add to SFD
- **In all transmission modes, HE-STF and HE-LTF only populate RUs that are populated in the data field.**

SP Result: 74Y/0N/15A; SP passed

SP #3:
Do you support to add to SFD
- **Gamma (tone rotation as defined in 22.3.7.5) is not applied on HE-STF and beyond.**
  - **TBD in case of a duplicated HE PPDU (if ever defined)**

SP Result: 60Y/0N/13A; SP passed

10.4. 11-15-1322-00-00ax-channel-estimation-enhancement-and-transmission-efficiency-improvement-using-beam-change-indication-and-1x-he-ltf

Yakun Sun (Marvell) Presented

Discussions:
Sigurd: How the two streams for preamble is transmitted?
Jianhan: same as HE-LTF1
Someone: How to evaluate the bit left in HE-SIG-A?

Jianhan: most critical to PHY and performance enhancement features are prioritized to use HE-SIG-A.
Daewon: Is it necessary to use HE-STF with this design?
Jianhan: in some cases, the proposed bit is used to inform AGC update.
Daewon: in some cases, e.g. short package cases, the performance of proposal is not so good.
Yakun: the feature has promising performance and all implementation will support it. But it's not a right time to decide it's a mandatory IEEE feature or not.

SP #1:
Do you agree to add 1-bit beam-change indication into HE-SIGA?
- **Value "1" indicates that spatial mapping is changed**
- **Value "0" indicates that spatial mapping is unchanged**

SP Result: 63Y/0N/14A; SP passed

SP #2:
Do you agree that when beam-change indication is "0", the pre-HE-STF portion preamble shall be spatially mapped in the same way as HE-LTF1 on each tone?

SP Result: 62Y/0N/8A; SP passed

SP #3:
Do you agree to add 1x HE-LTF as an optional mode in 11ax for SU PPDU (TBD for MU-MIMO)?
- **1xLTF + 0.8us GI is one optional combination as indicated by the "GI and LTF size" sub-field in HE-SIG-A.**

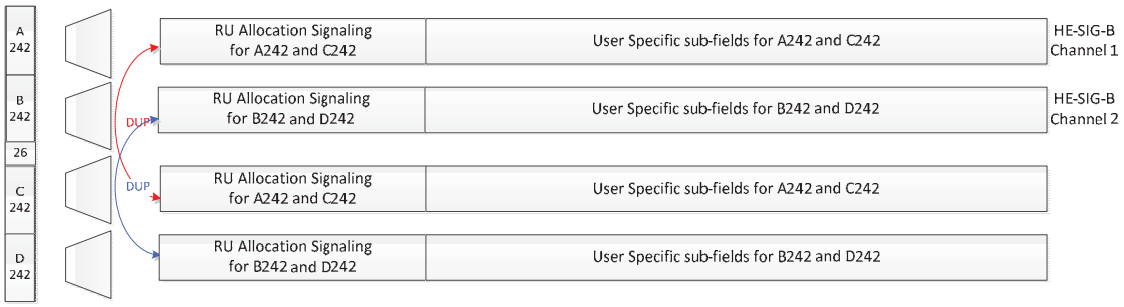
SP Result: 60Y/1N/14A; SP passed

10.5. 11-15-1315-01-00ax-he-sig-b-mapping-and-compression

Kaushik (Samsung) Presented

Discussions:
Sigurd: slide 11, how does the receiver know the position of SIG-B.
Kaushik: the receiver has to decode two 20MHz channels to get complete SIG-B anyway.

SP #1:
Do you agree to add the following text to the 11ax SFD:
- **The resource allocation signaling in the common control field and user specific subfields for an STA carried in the HE-SIG-B are transmitted in the same 20MHz sub-channel as the data for 20MHz and 40MHz PPDU.**
- **For an 80MHz PPDU, the default mapping per 20MHz as shown in the figure below.**



- **For a 160MHz PPDU , the default mapping per 20MHz is as shown in the figure below**

SP Result: **SP passed without objection**

SP #2:

Do you agree to add the following text to the 11ax SFD:

- **A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU.**
- **In case of full BW MU-MIMO, the following conditions hold:**
  - **Only applicable for RU sizes 242,484,996,2*996**
  - **The RU information in HE-SIGB common is not signaled**
  - **For bandwidths > 20MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels**

SP Result: **SP passed without objection**

10.6. 11-15-1324-00-00ax-mcs-for-he-sig-b

Dongguk (LG Electronic) Presented

Discussions:

No discussion

SP #1:

- Do you agree to add to TGax Specification Framework Document
  - Signaling in the first encoded part (HE-SIG-A) has the following MCS values for HE-SIG-B:
    - MCS0, MCS1, MCS2, MCS3, MCS4, MCS5
    - Other MCS is TBD
  - Signaling for HE-SIG-B MCSs has 3 bits
    - If two MCS set for BW≥40MHz are to be signaled, additional TBD bits used

SP Result: 34Y/0N/9A; SP passed (performed at the beginning of PM2, WEDNESDAY)

----------END OF PM1 WEDNESDAY----------

Wednesdday, Nov 12th, 2015, EV1 TGax Session (16:03-18:00)

11. Meeting called to order by Yakun Sun (Marvell) at 16:03.

11.1. The agenda is contained in 11-15/1385r2 which is on the server.

12. Administrative Items

12.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.

12.2. Chair also reminded to do attendance.

13. Presentations

13.1. 11-15-1335-02-00ax-he-sig-b-contents

Le Liu (Huawei) Presented

Discussions:

Sungho: slide 13, the supported user number cannot meet 9 per 20MHz.

Le: the supported user number should be limited by SIG-B length.

SP #1:

Do you agree to modify the text in IEEE 802.11ax SFD(r9) as follows

- **Change "The exact mapping of the 8 bit to the arrangement and the number of MU-MIMO allocations is TBD." to "The mapping of the 8 bits to the arrangement and the number of MU-MIMO allocations is defined in the following lookup table."**

8 bits indices	#1	#2	#3	#4	#5	#6	#7	#8	#9	Num of entries
000 0 0000	26	26	26	26	26	26	26	26	26	1
000 0 0001	26	26	26	26	26	26	26	52		1
000 0 0010	26	26	26	26	26	52		26	26	1
000 0 0011	26	26	26	26	26	52		52		1
000 0 0100	26	26	52		26	26	26	26	26	1
000 0 0101	26	26	52		26	26	26	52		1
000 0 0110	26	26	52		26	52		26	26	1
000 0 0111	26	26	52		26	52		52		1
000 0 1000	52		26	26	26	26	26	26	26	1
000 0 1001	52		26	26	26	26	26	52		1
000 0 1010	52		26	26	26	52		26	26	1

000 0 1100	52		52		26	26	26	26	26	1
000 0 1101	52		52		26	26	26	52		1
000 0 1110	52		52		26	52		26	26	1
000 0 1111	52		52		26	52		52		1
000 1 xxxx	Definition TBD									16
00100 yyy	26	26	26	26	26	106				8
00101 yyy	26	26	52		26	106				8
00110 yyy	52		26	26	26	106				8
00111 yyy	52		52		26	106				8
01000 yyy	106				26	26	26	26	26	8

01001 yyy	106		26	26	26	52		8
01010 yyy	106		26	52		26	26	8
01011 yyy	106		26	52		52		8
011 xxxxx	Definition TBD							32
10 yyy yyy	106		26	106				64
11 0 00yyy	242							8
11 0 01yyy	484							8
11 0 10yyy	996							8
11 0 11yyy	2*996							8
11 1 xxxxx	Definition TBD							32

Note: 'yyy' = 000~111 indicates number of MU-MIMO STAs.
Definition for entries with 'x' bits are TBD.

SP Result: 50Y4/N/18A; SP passed

SP #2:
Do you agree to add the STAID size in the user specific subfields of HE-SIGB is 11bits?

SP Result: 47Y/0N/14A; SP passed

SP #3:
Do you agree to add a DCM subfield (1-bit) to the user-specific subfields of HE-SIG-B in IEEE 802.11ax SFD(r9) (as shown in red) ?

- **For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme), DCM (Dual Sub-Carrier Modulation) and Coding (Use of LDPC)**
- **For each user in a multi-user allocation in a RU: Spatial Configuration Fields, MCS, DCM and Coding**

SP Result: 54Y/0N/19A; SP passed

13.2. 11-15-1304-01-00ax-supported-resource-allocations-in-sig-b

Sungho (Newracom) Presented

Discussions:
Le: slide 5, any consideration of some RU arrangement pattern not supported by the proposal?
Sungho: some cases are actually not used in practical.
Yakun: the receiver has to decode two SIG-B blocks anyway.
Lots of discussion regarding the necessity for receiver to check each of the SIG-B block.
Le: it's too early to define how to handle special cases. We need to discuss how to prioritize these special cases.

SP #1:
Do you agree to add the following text into the SFD?

- **The 8 bits in the common field of HE SIG-B includes a state of 'No STA Assigned' for which no STA-specific field is transmitted**

SP Result: 12Y/26N/16A; SP failed

SP #2:
Do you agree to add the following text into the SFD?
- **The number of spatially multiplexed STAs for 106 RU limited to 4**
  - **For RUs larger than 106, it can be 8 STAs as maximum**

SP Result: 5Y/34N/16A; SP failed

SP #3:
Do you agree to support the following text?
- **The 8 bits in the common field of HE SIG-B includes explicit states for the existence of the center 26RU of 80MHz**

SP Result: 9Y/16N/25A; Informative

13.3. 11-15-1350-01-00ax-spatial-configuration-and-signaling-for-mu-mimo

Yakun Sun (Marvell) Presented

Discussions:
No discussion

SP #1:
Do you support to add the following text in Section x.x.x in current SFD:
- **The number of spatially multiplexed user in a DL or UL MU-MIMO transmission is up to 8 (in a given RU)?**

SP Result: 46Y/5N/8A; SP passed

SP #2:
Do you support to add the following text in Section x.x.x current SFD:
- **The Nsts value for each user in a MU-MIMO RU is less than or equal to 4?**

SP Result: 41Y/1N/7A; SP passed

SP #3:
Do you support to add the following text in Section x.x.x in current SFD:
- **A MU-MIMO user block includes a "spatial config" field of 4bit indicating the number of spatial streams for each multiplexed STA. The field is constructed by using the entries corresponding to the value of Nuser of this RU in the following table?**

Nuser	B0…B3	Nsts[1]	Nsts[2]	Nsts[3]	Nsts[4]	Nsts[5]	Nsts[6]	Nsts[7]	Nsts[8]	#Entries
2	0000~0011	1~4	1							10

	0100~0110	2~4	2							
	0111~1000	3~4	3							
	1001	4	4							
3	0000~0011	1~4	1	1						13
	0100~0110	2~4	2	1						
	0111~1000	3~4	3	1						
	1001~1011	2~4	2	2						
	1100	3	3	2						
4	0000~0011	1~4	1	1	1					11
	0100~0110	2~4	2	1	1					
	0111	3	3	1	1					
	1000~1001	2~3	2	2	1					
	1010	2	2	2	2					
5	0000~0011	1~4	1	1	1	1				6
	0100~0101	2~3	2	1	1	1				
6	0000~0010	1~3	1	1	1	1	1			4
	0011	2	2	1	1	1	1			
7	0000~0001	1~2	1	1	1	1	1	1		2
8	0000	1	1	1	1	1	1	1	1	1

SP Result: **48Y/1N/10A; SP passed**

13.4. 11-15-1059-02-00ax-sig-b-encoding-structure-part-ii

Sriram Venkateswaran (BroadCom) Presented

Discussions:

No discussion

SP #1:

Do you agree to modify the text in Section 3.2.4 of the SFD as follows

- **Two users are grouped together and jointly encoded in each BCC block in the user specific section of HE-SIG-B**
- ~~**The CRC in the common block is TBD**~~
- **The common block has a CRC separate from the CRC of the user specific blocks**

- **The last user information is immediately followed by tail bits (regardless of whether the number of users is odd or even) and padding bits are only added after those tail bits**

SP Result: 56Y/0N/7A; SP passed

13.5. 11-15-1354-00-00ax-siga-fields-and-bitwidths

Ron Porat (BroadCom) Presented

Discussions:

Daewon: More compression mode TBD is not found in any proposal.
Ron: Something between pure MU-MIMO and other operation is under consideration.
Daewon: how to use BW bit for MU transmission?
Ron: potential BW would be 20/40/80/160MHz. But we would think more about BW rules for MU transmission.

SP #1:

Do you support replacing the HE-SIG-A field definitions for SU preamble format in [2] (PHY Motions 43, 46, 48, 54) with the table in slide 11?

Field	#Bits
DL/UL	1
Format Indication	1
BSS Color	6
Spatial Reuse	TBD
TXOP duration	TBD
Bandwidth	2
MCS	4
CP+LTF size	3
Coding	2
Nsts	3
STBC	1
TxBF	1
DCM	1
Packet Extension	3
Beam change	1
CRC	4
Tail	6

SP Result: 54Y/0N/7A; SP passed

SP #2:

Do you support replacing the HE-SIG-A field definition for the MU preamble format [2] (PHY Motions 44, 46, 54) with the table in slide 12?

Field	#Bits
DL/UL	1
BSS Color	6
Spatial Reuse	TBD
TXOP duration	TBD
Bandwidth	>=2
SIGB MCS	3
SIGB DCM	1
SIGB # of symbols	4
SIGB Compression Mode	>=1
# of HE-LTF	3
CP+LTF size	3
LDPC extra symbol	1
Packet Extension	3
CRC	4
Tail	6

SP Result: 50Y/0N/7A; SP passed

SP #3:

Do you support replacing the HE-SIG-A field definition for trigger based UL preamble format in [2] (PHY Motion 45) with the table in slide 13?

Field	#Bits
Format	1
BSS Color	6
TXOP	TBD
Spatial reuse	TBD
Bandwidth	TBD
CRC	4

Tail	6

SP Result: 51Y/0N/10A; SP passed

14. The chair adjourned at 17:40pm

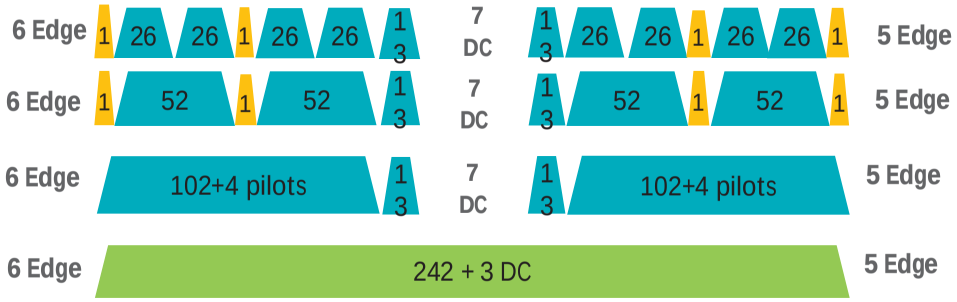
Re-cap

- Agreement on HE-SIG-B common field [1]
  - The RU allocation signaling in the common field of HE-SIG-B signals an 8 bit per 20 MHz PPDU BW for signaling
    - The RU arrangement in frequency domain
    - Number of MU-MIMO allocations: The RUs allocated for MU-MIMO and the number of users in the MU-MIMO allocations
  - The exact mapping of the 8 bit to the arrangement and the number of MU-MIMO allocations is TBD.
  - Signaling for the center 26 unit in 80 MHz is TBD.
- Agreement on HE-SIG-B user specific field [1]
  - The user specific subfields of HE-SIG-B containing the per user dedicated information include the following fields
    - STA-ID
    - For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme) and Coding (Use of LDPC)
    - For each user in a multi-user allocation in a RU: Spatial Configuraiton Fields, MCS and Coding.
  - Other fields are TBD.

In this presentation

- We further discuss the details based on the agreements from the last meeting
  - In HE-SIG-B common
    - Based on the tone plan and RU pattern in 20MHz [2], we design ‘the exact mapping of the 8 bit to the arrangement and the number of MU-MIMO allocations’



HE20 with 7DC for OFDMA

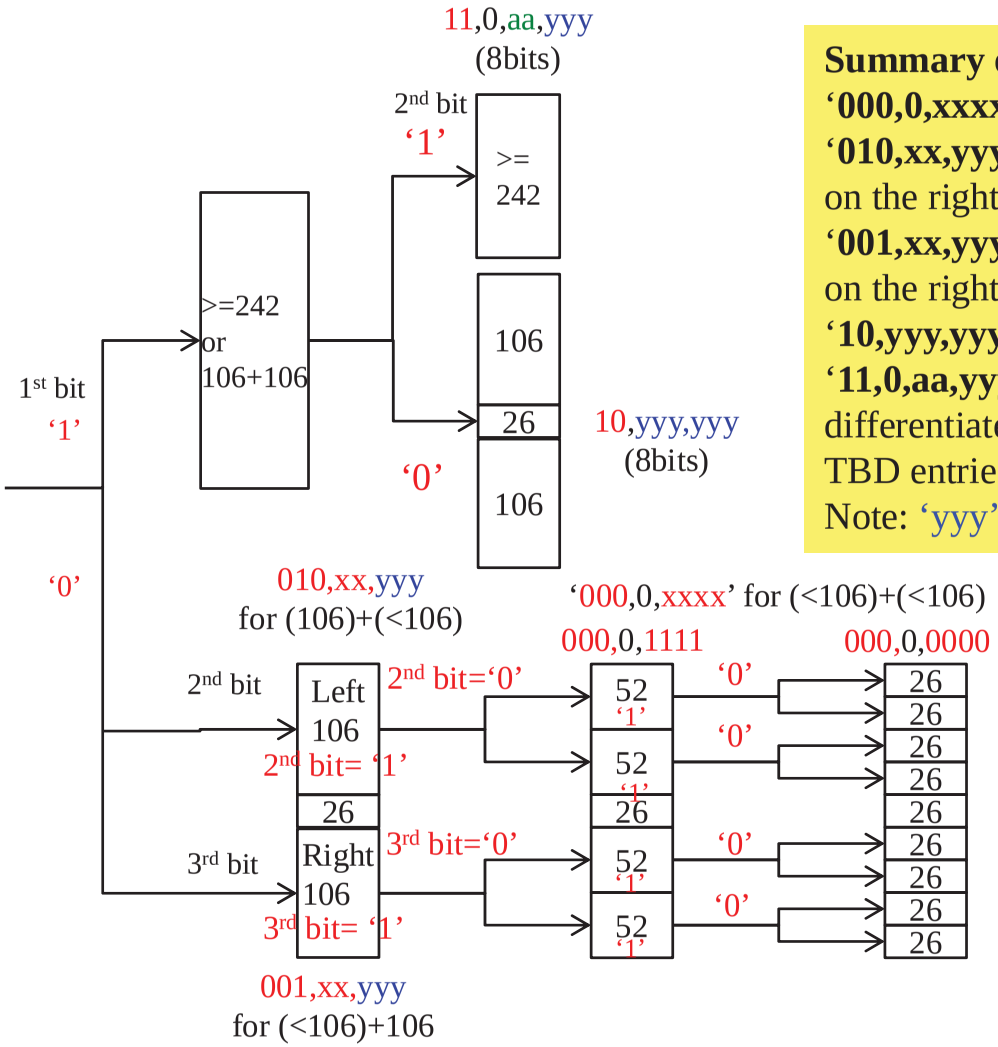
  - In HE-SIG-B user specific field
    - Specify the size of STA-ID
    - Add DCM indication for data portion with reliable performance

OFDMA RU Allocation Signalling

- In case of OFDMA transmission, we design the RU allocation signaling considering the following typical cases → 176 cases
  - All the possible combinations of 26/52/106/242-RU allocation within 20MHz
  - Also the allocation of 484/996/2*996-RU allocation larger than 20MHz
  - MU-MIMO allocation (on RU>=106) position and the number of MU-MIMO STAs
    - If RU>242, distribute the MU-MIMO STA number and user-specific information on each CH within the RU.
    - The total number of MU-MIMO STAs is the summation of the number of MU-MIMO STAs per 20MHz on the RU>242.
- For partial OFDMA (with unallocated RU), the indication of all the possible combination in HE-SIG-B common costs unbearable overhead.
  - There are already 2448 combination cases of partial OFDMA if RU<106.
  - Whether to prioritize and indicate some special cases is TBD.

392

Hierarchical Indication RU allocation signaling



Summary of 8-bit RU allocation signaling:
'**000,0,xxxx**': 26/52 combinations;
'**010,xx,yyy**': 106 on the left +(26/52 combinations) on the right
'**001,xx,yyy**': (26/52 combinations) on the left + 106 on the right
'**10,yyy,yyy**': 106 on the left +106 on the right
'**11,0,aa,yyy**': large RU >=242, aa=00/01/10/11 to differentiate 242/484/996/2*996-RU respectively
TBD entries: '**011,xxxxx**', '**000,1,xxxx**', '**11,1,xxxxx**'
Note: 'yyy' indicate 1~8 STAs on the RU

Lookup Table for 8-bit RU allocation signaling

- 8-bit hierarchical mapping form is equivalent as a table with unique index

8 bits indices	#1	#2	#3	#4	#5	#6	#7	#8	#9	Num of entries
000 0 0000	26	26	26	26	26	26	26	26	26	1
000 0 0001	26	26	26	26	26	26	26	52		1
000 0 0010	26	26	26	26	26	52		26	26	1
000 0 0011	26	26	26	26	26	52		52		1
000 0 0100	26	26	52		26	26	26	26	26	1
000 0 0101	26	26	52		26	26	26	52		1

000 0 0111	26	26	52		26	52		52		1
000 0 1000	52		26	26	26	26	26	26	26	1
000 0 1001	52		26	26	26	26	26	52		1
000 0 1010	52		26	26	26	52		26	26	1
000 0 1011	52		26	26	26	52		52		1
000 0 1100	52		52		26	26	26	26	26	1
000 0 1101	52		52		26	26	26	52		1
000 0 1110	52		52		26	52		26	26	1
000 0 1111	52		52		26	52		52		1
000 1 xxxx	Definition TBD									16
00100 yyy	26	26	26	26	26	106				8
00101 yyy	26	26	52		26	106				8
00110 yyy	52		26	26	26	106				8
00111 yyy	52		52		26	106				8
01000 yyy	106				26	26	26	26	26	8
01001 yyy	106				26	26	26	52		8
01010 yyy	106				26	52		26	26	8
01011 yyy	106				26	52		52		8
011 xxxxx	Definition TBD									32
10 yyy yyy	106				26	106				64
11 0 00yyy	242									8
11 0 01yyy	484									8
11 0 10yyy	996									8
11 0 11yyy	2*996									8
11 1 xxxxx	Definition TBD									32

Note: 'yyy' = 000~111 indicates number of MU-MIMO STAs.
Definition for entries with 'x' bits are TBD.

STAID Options for HE-SIG-B

- STAID is to identify the user specific subfields for the tended STAs.
  - Option1: MAC address (48bit)
    - unique in the whole network, no ambiguity.
    - but unbearable overhead in PHY preamble
  - Option2: AID (11bit)
    - unique within BSS,
    - already exist in MAC
    - moderate overhead, not always fully used
  - Option3: new defined STAID
    - assigned STAID to the active STA, e.g. STA with MU capability
    - Small overhead or variable overhead
    - AP require special mechanism to manage these ID to avoid ambiguity in scheduling.

395

STA ID Ambiguity within BSS

- Although 9-bit AID is used to generate PAID in 11ac, STAs may have same PAID when the number of STA in one BSS is large (even sleeping STA occupies AID), especially for 11ax dense scenarios.

$$(dec(\text{AID}[0:8]) + dec(\text{BSSID}[44:47] \oplus \text{BSSID}[40:43]) \times 2^5) \bmod 2^9 \quad \text{(9-8a)}$$

396

- The scheduler must set restriction not to schedule more than one STA with same PAID considering the complexity in STA.
- Otherwise, we have to rely on the RA in MAC header to let the STA finally identify the packet within BSS.
  - The overall overhead is not saved.
  - It is also not energy efficient for the STA with same PAID because he must decode the PSDU not for himself.

➔Opt2 of 11-bit STAID is preferred to uniquely indicate the scheduled STA.

DCM for Data payload

- Dual Sub-carrier Modulation (DCM) modulates the same information on a pair of sub-carrier *n* and *m* separated far apart, which is beneficial for performance improvement of SIGB as well as data portion [3].
  - Extend range for outdoor scenarios by enhancing the PER performance
  - Improve robustness against narrow-band interferences under dense deployment
    - MU-MIMO detection over RU>=106 also needs robust against instantaneous narrow-band interference.
- We has passed the motion [Motion 12, September 12, 2015]
  - Move to include dual sub carrier modulation (DCM) schemes for HE-SIGB and Payload in the SFD
    - DCM schemes are optional
    - DCM schemes are only applied to BPSK, QPSK, and 16-QAM modulations

DCM Indication

- For each user's data portion, we need 1-bit DCM indication in per user dedicated info in HE-SIG-B.
  - The per user dedicated info (in SIG-B) includes the following:
    - STA_ID + the following fields
      - For allocation that includes one user – Nsts, TxBF, MCS, DCM, Coding
      - For MU-MIMO allocation – Spatial config, MCS, DCM, Coding
    - Other fields are TBD.

398

1-bit DCM bit indicates the modulation of payload

DCM bit per-user specific field of HE-SIGB	Modulation Schemes of Payload
1	MCS x with DCM
0	MCS x

Conclusion

- In HE-SIG-B common, we design ‘the exact mapping of the 8 bit to the arrangement and the number of MU-MIMO allocations’ per 20MHz.
  - The 8-bit lookup table is summarized in slide 14.

- In HE-SIG-B user specific field, we propose
  - STAID size is 11bits to uniquely indicate the tended STA.
  - For SU/MU-MIMO allocation,1-bit DCM indication is added for data portion with reliable performance.

000 0 1110	52		52		26	52		26	26	1
000 0 1111	52		52		26	52		52		1
000 1 xxxx	Definition TBD									16
00100 yyy	26	26	26	26	26	106				8
00101 yyy	26	26	52		26	106				8
00110 yyy	52		26	26	26	106				8
00111 yyy	52		52		26	106				8
01000 yyy	106				26	26	26	26	26	8
01001 yyy	106				26	26	26	52		8
01010 yyy	106				26	52		26	26	8
01011 yyy	106				26	52		52		8
011 xxxxx	Definition TBD									32
10 yyy yyy	106				26	106				64
11 0 00yyy	242									8
11 0 01yyy	484									8
11 0 10yyy	996									8
11 0 11yyy	2*996									8
11 1 xxxxx	Definition TBD									32

Note: ‘yyy’ = 000~111 indicates number of MU-MIMO STAs.
Definition for entries with ‘x’ bits are TBD.

401

SP#2

- Do you agree to add the STAID size in the user specific subfields of HE-SIGB is 11bits**?**

402

- **Y**
- **N**
- **A**

SP#3

- Do you agree to add a DCM subfield (1-bit) to the user-specific subfields of HE-SIG-B in IEEE 802.11ax SFD(r9) (as shown in red)
  - For single-user allocations in a RU: NSTS (Number of Spatial Streams), TxBF (transmit beamforming), MCS (Modulation and Coding Scheme), DCM (Dual Sub-Carrier Modulation) and Coding (Use of LDPC)
  - For each user in a multi-user allocation in a RU: Spatial Configuration Fields, MCS, DCM and Coding

403

- **Y**
- **N**
- **A**

407

Background

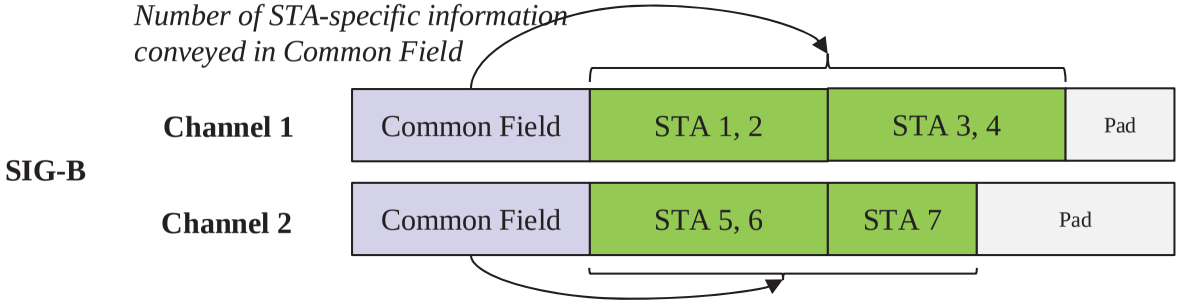
SFD states the following [1]:

- **The encoding structure of each BCC in HE-SIG-B was agreed:**
  - Two users are grouped together and jointly encoded in each BCC block in the user specific section of HE-SIG-B
  - The common block has a CRC separate from the CRC of the user specific blocks
  - The last user information is immediately followed by tail bits (regardless of whether the number of users is odd or even) and padding bits are only added after those tail bits
- **Compressed SIG-B structure was agreed:**
  - A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU. In case of full BW MU-MIMO, the following conditions hold:
    - Only applicable for RU sizes 242, 484, 996, 2*996
    - The RU information in HE-SIG-B common is not signaled
    - For bandwidths > 20 MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels

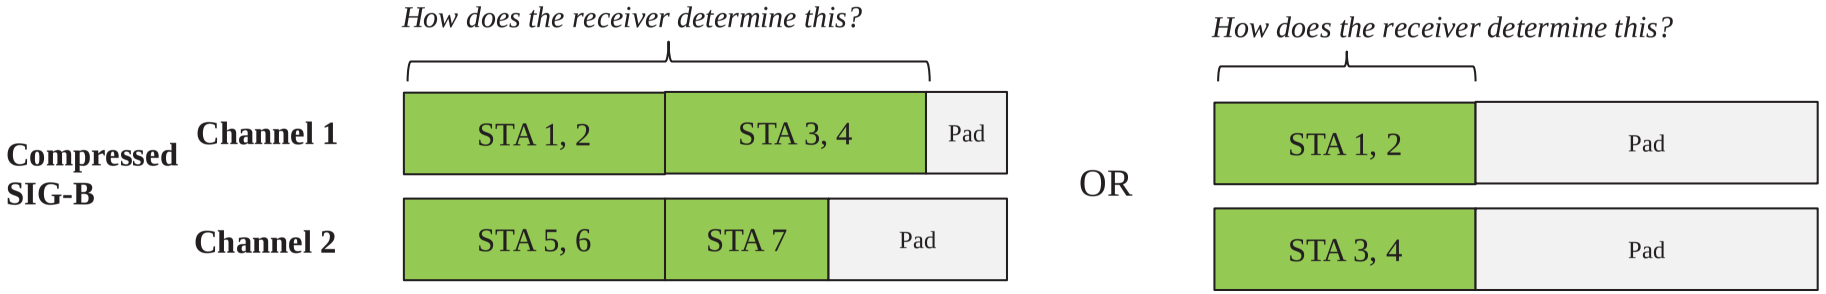
408

HE SIG-B Encoding Structure

In SIG-B, the RU information in the 'Common Field' conveys information regarding number of STA-specific information.



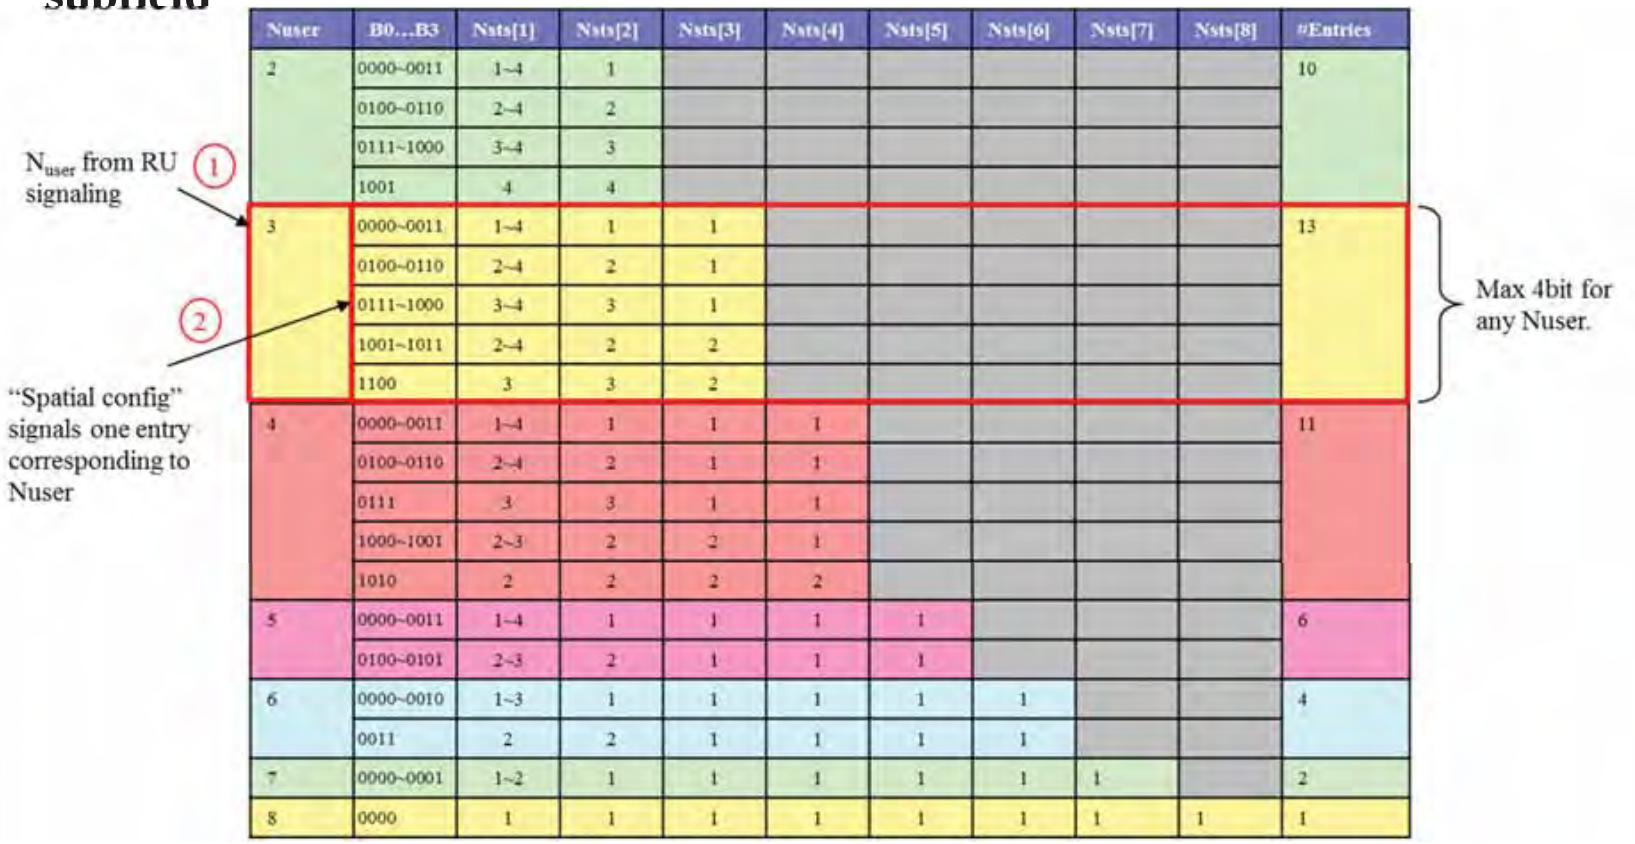
In the compressed SIG-B mode, the RU information in HE-SIG-B common is not signaled to reduce overhead.



409

Ambiguity in the STA-Specific Field

- **Number of scheduled STAs is needed for Parsing 'Spatial configuration subfield'**



Nuser	B0…B3	Nsts[1]	Nsts[2]	Nsts[3]	Nsts[4]	Nsts[5]	Nsts[6]	Nsts[7]	Nsts[8]	#Entries

410

Multiple Hypothesis at the Receiver

- **Blindly determining STA-specific fields**
  - Might be possible with additional receiver complexity.
  - Assumes that CRC of STA-specific fields all pass.
  - Detection and implementation challenges exist if CRC length is small such that false positive probability is quite high.
- **Number of hypothesis depends of number of STAs in compressed SIG-B.**
  - Number of STAs that can be transmitted a function of SIG-B MCS and Number of OFDM SIG-B symbols.
  - Some MCS and number of OFDM symbol combination does result in unique mapping. However, other combinations may require multiple hypothesis.
- **We prefer not to blindly detect this. Explicit signaling allows simpler receiver implementation.**

411

Strawpoll #1

Do you agree to include the following text to TGax SFD:

- **In MU PPDU, the SIG-A shall indicate the number of STAs when compressed SIG-B mode is indicated (i.e. full bandwidth MU-MIMO indicated).**
  - Details TBD

Y/N/A

412

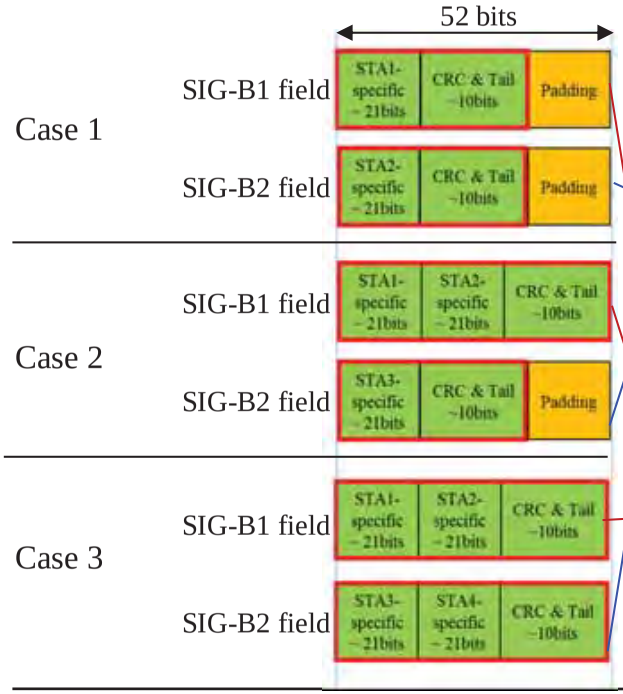
References

[1] 11-15-0132-13-00ax-spec-framework

413

Appendix: Multiple Hypothesis

- **With 2 OFDM symbols in MCS 0 (BPSK ½) 52 bits are available in SIG-B.**
- **Assuming each STA-specific field is approximately 21 bits, 2, 3, or 4 STAs can be multiplexed in 2 OFDM symbols.**
- **To reduce the hypothesis number, the test starts with SIG-B2 decoding .**



The SIG-B channel 2 field has two possibilities of the information lengths;
- Scenario 1) only one STA-specific subfield and CRC/Tail included
- Scenario 2) two STA-specific subfields and CRC/Tail included

➔ **After checking both two scenarios, the format of SIG-B2 determined**

In scenario 1, the same procedure as above is repeated in SIG-B channel 1 to find the number of users

In scenario 2, SIG-B channel 1 must contain 2 users

TGax PHY Ad Hoc Jan 2016 Meeting Agenda

Date: 2016-01-18

Authors:

Name	Company	Address	Phone	email
Bo Sun	ZTE	ZTE R&D Zone, Xi'an, China		sun.bo1@zte.com.cn
Yakun Sun	Marvell	5488 Marvell Lane, Santa Clara, CA, 95054, USA		yakunsun@marvell.com
Jianhan Liu	Mediatek Inc.	2860 Junction Ave. San Jose, CA, 95131, USA		jianhan.liu@mediatek.com

IEEE 802.11 TGax
High Efficiency WLAN
PHY Ad Hoc

Co-Chairs:
Bo Sun (ZTE)
Yakun Sun (Marvell)
Jianhan Liu (Mediatek)

Agenda Items

- Call meeting to order
- Patent policy, etc. (Call for Potentially Essential Patents)
- Set and approve agenda

- Review ad hoc rules
- Technical Presentations approved by 802.11ax for presentation this week, and related straw polls
- Any other technical presentations

Meeting Protocol, Attendance, Voting & Document Status

- **Please announce your affiliation when you first address the group during a meeting slot**
- **Cell Phones to be silent or Off**
- **Register your attendance via https://imat.ieee.org while on meeting SSID (e.g. Verilan-secure)**
- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, Member's Area**
  - Contact Jon Rosdahl – jrosdahl@ieee.org

Patent Policy and Other Guidelines

- Following 5 slides

420

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is consistent with the ANSI patent policy and is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 12 and 12a on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

421

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy.

- **Participants [Note: Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2]:**
  - **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**
- **Early identification of holders of potential Essential Patent Claims is strongly encouraged**
- **No duty to perform a patent search**

422

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/develop/policies/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/develop/policies/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/about/sasb/patcom/materials.html

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/board/pat/index.html

This slide set is available at http://standards.ieee.org/board/pat/pat-slideset.ppt

423

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

424

Slide #3

Other Guidelines for IEEE WG Meetings

- **All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.**
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

425

Slide #4

Ad Hoc Groups Operation

- **Straw Polls are only allowed during Ad Hoc group meeting // no motions, anyone can vote**
- **A straw poll affecting the Spec Framework has to start with,**
  - Do you agree to add to the TG Specification Frame work document?
- **A straw poll needs to achieves at least 75% to be converted to a motion at the TG level.**
- **Each Presentation will be limited to 20 minutes.**

426

Submissions

DCN	Title	Name	Ad Hoc
11-16/0030	Maximum Tone Grouping Size for 802.11ax Feedback with MU-MIMO	Kome Oteri	PHY
11-16/0033	1x HE-LTF for ULMUMIMO	Hongyuan Zhang	PHY
11-16/0034	Beamforming with HE-LTF Compression	Hongyuan Zhang	PHY
11-16/0036	CRC Generation for HE-SIG	Yakun Sun	PHY
11-16/0037	Continuous Puncturing for HE-SIGB Encoding	Yakun Sun	PHY
11-16/0038	Sequence for 1x LTF	Daewon Lee	PHY
11-16/0039	RU Allocation in SIG-B	Daewon Lee	PHY
11-16/0040	Issues with Compressed SIG-B Mode	Yujin Noh	PHY
11-16/0041	Link Adaptation for HE WLAN	Yujin Noh	PHY
11-16/0044	MCS Levels and TX EVM Requirement for 1024 QAM	Eunsung Park	PHY
11-16/0045	Flexible Wider Bandwidth Transmission	John Son	PHY
11-16/0046	Content for the extra tones in LSIG and RLSIG	Jiayin Zhang	PHY
11-16/0047	Discussion on the HE Extended Range SU PPDU	Jiayin Zhang	PHY
11-16/0052	Remaining HE-LTF Sequence Design	Le Liu	PHY
11-16/0053	Requirements for UL MU Transmissions	Arjun	PHY
11-16/0056	On QPSK DCM Modulation and LDPC Tone Mapper for DCM	Jianhan Liu	PHY
11-16/0071	Packet Extension Follow Up	Andrew Blanksby	PHY
11-16/0079	Allocation sizes for BCC in OFDMA	Ken Taniguchi	PHY
11-16/0080	1x/2x/4x OFDM Symbol in HE SU PPDU with BCC	Heejung Yu	PHY
11-16/0088	Ng for Compressed Beamforming feedback	Sriram Venkateswaran	PHY
11-16/0089	Single Stream Pilots in UL MU MIMO	Sriram Venkateswaran	PHY
11-16/0104	Rate Matching for HE-SIG-B	Daewon Lee	PHY

428

Monday PM2

DCN	Title	Name	Ad Hoc
11-16/0030	Maximum Tone Grouping Size for 802.11ax Feedback with MU-MIMO	Kome Oteri	PHY

11-16/0030r1 Straw Poll #1

Do you agree to add the following to Section 7.3 of the Tgax SFD ?

- **802.11ax spec shall support *Ng = 4 and 16* for sounding feedback with SU/MU-MIMO-OFDM(A).**
- ***NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.***

- **36Y/0N/8A**

SP PASSED

11-16/0030r1 Straw Poll #2

Do you agree to add the following to Section 7.3 of the Tgax SFD ?

- **802.11ax spec shall support *Ng = 2 and 8* for sounding feedback with SU/MU-MIMO-OFDM(A).**
- ***NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.***

- **6Y/17N/19A**

SP Failed

11-16/0088r0 Straw Poll #2

- **Do you support adding to the TG Specification Framework:**

  In the MU Exclusive Beamforming Report for the delta SNR, the locations of the feedback tones shall be identical to the tone locations of the compressed V matrices fed back

- **Yes: 34**
- **No : 0**
- **Abstain: 11**

SP PASSED

11-16/0033r0 Straw Poll #1

- Do you agree to add the following text in SFD?
  - 11ax allows 1xLTF as an optional mode in the following cases:
    - SU, with GI = 0.8us only
    - Full-BW UL-MUMIMO, with GI=1.6us only?
    - Full BW DL-MUMIMO, with GI=0.8us TBD

433

- **Y 38**
- **N 0**
- **A 10**

SP PASSED

11-16/0034r0 Straw Poll #1

- Do you agree to add the following text in SFD?
  - *When 1x/2x HE-LTF is transmitted, it is recommended that the spatial mapping matrix applied to HE-STF and beyond is chosen such that it preserves the smoothness of the physical channel, achieved by limiting the variation of each element's real and imaginary values in the spatial mapping matrix across successive tones.*

434

- **Y 35**
- **N 0**
- **A 10**

SP PASSED

11-16/0036r0 Straw Poll

- **Do you support to add the following in the current SFD:**
  - The CRC bits of HE-SIG-A and each coding group of HE-SIG-B are generated as 4 LSB of HT CRC generator output?

435

- **Y 38**
- **N 3**
- **A 10**

SP PASSED

11-16/0037r1 Straw Poll

- **Do you support to add the following to the current SFD:**
  - SIGB bits for each SIGB content channel are continuously encoded with 1 BCC encoder?

436

- **Y 36**
- **N 0**
- **A 14**

SP PASSED

11-16/0104r0 Straw Poll

Do you agree to add the following text to SFD

- **When MCS 2, 4, or 6 is configured for HE-SIGB, up to 2 (zero valued) filler bits are added after each tail bits of HE-SIG-B encoding block (i.e. common field and STA-specific information field) such that length of an encoding block (including the filler bits) is multiple of 3.**

- **When MCS 5 is configured for HE-SIGB, up to 1 (zero valued) filler bits are added after each tail bits of HE-SIG-B encoding block (i.e. common field and STA-specific information field) such that length of an encoding block (including the filler bits) is multiple of 2.**

- **Do you agree to use the 20/40/80/160/80+80MHz 1x HE-LTF sequences in slide 21-24 of 11-16/0053r0?**

441

- **Y 35**
- **N 0**
- **A 15**

SP PASSED

11-16/0039r1 Straw Poll #1

Do you agree with to not support dynamic split (not precluding equal split) of MU-MIMO STA specific information for 2x996 RU (i.e 160MHz MU-MIMO).

442

8Y/6N/Many A

Informative

11-16/0039r1 Straw Poll #2

Do you agree with support equal split and no split (all STA information in one SIG-B channel) of MU-MIMO STA specific information for 2x996 RU (i.e. 160MHz MU-MIMO).

443

9Y/0N/Many A

Informative

11-16/0039r1 Straw Poll #3

Do you agree to include the following text to SFD?

- **At least 1 state is reserved in the 8 bit RU allocation subfield of the HE-SIG-B common field for "no STA-specific information field assigned by the RU allocation subfield'.**
  - Details TBD

444

21 Y/1 N/19A

SP PASSED

11-16/0040r0 Straw Poll #1

Do you agree to include the following text to TGax SFD:

- **In MU PPDU, the SIG-A shall indicate the number of STAs when compressed SIG-B mode is indicated (i.e. full bandwidth MU-MIMO indicated).**
  - Details TBD

13Y/0N/31A

SP PASSED

445

11-16/0041r1 Straw Poll #1

Do you agree to include the following text to TGax SFD:

- **HE link adaptation shall define a fixed reference payload size as MPDU length of Y octets in specifications**
  - "Y" is TBC

11-16/0089	Single Stream Pilots in UL MU MIMO	Sriram Venkateswaran	PHY

11-16/0044r0 Straw Poll #1

Do you agree to add the following new MCS levels as an optional feature to the 11ax SFD:

- MCS10: 1024 QAM with 3/4 code rate
- MCS11: 1024 QAM with 5/6 code rate

448

- **Y: 23**
- **N: 1**
- **A: 10**

SP PASSED

11-16/0044r0 Straw Poll #2

Do you agree to add the following text to the 11ax SFD:

- TX EVM requirement of -35dB is used for MCS 10 and 11

449

- **Y: 24**
- **N: 2**
- **A: 11**

SP PASSED

11-16/0046r0 Straw Poll #1

Do you support to add to the SFD

- The content of 4 extra tones **[-28,-27,27,28]** of L-SIG and RL-SIG in 20MHz HE PPDU is **[-1,-1,-1,1]**

450

- **Y: 33**
- **N: 0**
- **A: 11**

SP PASSED

11-16/0047r0 Straw Poll #1

Do you support to modify the SFD as the red text

- *There are only three pre-HE-STF preamble formats defined:*
  - *SU format (mandatory) / Trigger based UL*
  - *MU format (mandatory)*
  - *Extended range SU format (mandatory)*

  [PHY Motion 68, November 2015, see [6]]

- **Y: 32**
- **N: 9**
- **A: 10**

SP PASSED

451

11-16/0047r0 Straw Poll #2

Do you support to add to SFD

- The HE Extended Range SU PPDU is transmitted only on the primary 20Mhz.

452

- **Y: 38**
- **N: 0**
- **A: 13**

SP PASSED

11-16/0047r0 Straw Poll #3

Do you support to add to SFD

- The HE Extended Range SU PPDU can only be transmitted with MCS0, MCS1, MCS2 and only with 1 spatial stream.

453

- **Y: 37**
- **N: 0**
- **A: 16**

SP PASSED

11-16/0047r0 Straw Poll #4

Do you support to add to SFD

- HE-LTF/HE-STF power is boosted 3dB for BPSK and QPSK including DCM in the HE Extended Range SU PPDU preamble.

454

- **Y: 40**
- **N: 6**
- **A: 12**

SP PASSED

11-16/0045r2 Straw Poll #1

Do you agree to add the following text into 11ax SFD?

- 3.x.x The spec shall support occupied bandwidth of HE PPDU other than 20/40/80/160(80+80)MHz for HE MU PPDU format.

455

- **Y: 22**
- **N: 17**
- **A: 19**

SP FAILED

11-16/0053r0 Straw Poll #1

Do you agree to add the following text in SFD?

- There are two STA classes that support HE trigger-based PPDU with information exchanged as part of the device capability
  - Class A: STAs that are high capability devices and
  - Class B: STAs that are low capability devices

- **Y: 40**
- **N: 2**
- **A: 13**

SP PASSED

456

11-16/0053r0 Straw Poll #2

Do you agree to add the following text in SFD?

- STAs that participate in HE trigger-based PPDU shall support per chain max(P-32,-10dBm) as the min Tx power, with P the max power the STA can transmit at the antenna connector of that chain using MCS0 while meeting the TX EVM and spectral mask requirements. A STA transmitting at and above the min power shall support the EVM requirements for TBD MCS (but at least MCS7)

- **Y: 39**
- **N: 2**
- **A: 13**

SP PASSED

11-16/0053r0 Straw Poll #3

- **Do you agree to add the following text in SFD?**
  - STAs that participate in HE trigger-based PPDU shall support the following absolute Tx power requirements and the RSSI measurement accuracy requirements for the two device classes

Parameter	11ax Minimum Requirements		Comments
	Class A devices	Class B devices	
Absolute Transmit Power accuracy	+/-3dB	+/-9dB	Accuracy of achieving a specified transmit power level
RSSI Measurement Accuracy	+/- 2 dB	+/- 5 dB	Difference between the actual RSSI and the measured RSSI Requirements are valid from minimum RX to maximum RX input power

458

- **Y: 41**
- **N: 1**
- **A: 14**

SP PASSED

11-16/0053r0 Straw Poll #4

Do you agree to add the following text in SFD?

- STAs that participate in HE trigger-based PPDU shall pre-compensate for carrier frequency offset (CFO) error and timing drift. After compensation, the absolute value of residual CFO error with respect to the corresponding Trigger frame shall not exceed **350Hz** for data subcarriers when measured as the 10% point of CCDF of CFO errors in AWGN at a received power of -60dBm in the primary 20MHz. The residual CFO error measurement shall be made on the HE trigger-based PPDU packet after HE-SIGA.

459

- **Y: 39**
- **N: 0**
- **A: 17**

SP PASSED

11-16/0053r0 Straw Poll #5

Do you agree to add the following text in SFD?

- STA that participate in HE Trigger based PPDU transmission shall have timing accuracy of **+/-0.4μs** relative to the Trigger frame. This requirement does not include round trip delay.

- **Y: 39**
- **N: 0**
- **A: 10**

SP PASSED

11-16/0053r0 Straw Poll #6

Do you agree to add the following text in SFD?

- The following TX LO leakage requirements are supported for all transmission modes in 11ax:
  - The power measured at the location of the RF LO using resolution BW 78.125 kHz shall not exceed the maximum of –32 dB relative to the total transmit power and -20 dBm, or equivalently max(P-32,-20), where *P* is the transmit power per antenna in dBm. The transmit center frequency leakage is specified per antenna.

- **Y: 38**
- **N: 0**
- **A: 10**

SP PASSED

11-16/0053r0 Straw Poll #7

Do you agree to add the following text in SFD?

- Transmit center frequency and the symbol clock frequency for all transmit antennas and frequency segments shall be derived from the same reference oscillator

462

- **Y: 41**
- **N: 0**
- **A: 10**

Jianhan Liu	Mediatek			jianhan.liu@mediatek.com

Abstract

TGax meeting minutes for the IEEE 802.11 Atlanta PHY ad hoc session, January, 2016.

IEEE 802.11 Task Group ax PHY Ad Hoc
January 2016 Atlanta Meeting

Monday, Jan. 18th, 2016, PM2 TGax Session

1. **Meeting called to order by Bo Sun (ZTE)**
   1.1. The agenda is contained in 11-15/1385r0 which is on the server.

2. **Administrative Items**
   2.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
   2.2. Chair also reminded to do attendance.

3. **Set and approve agenda**

4. **Presentations**

4.1
11-16-0030-01-00ax-maximum-tone-grouping-size-for-802-11ax-feedback-with-mu-mimo
Kome Oteri (InterDigital Inc.) presented.

Discussions:
Sriram: We have a similar contribution but with slightly different conclusions.
Kome: We do have a couple of strawpolls. Can we run our straw poll?
Chair: We will go through Sriram's contribution, and then have the straw poll.

SP #1:
Do you agree to add the following to Section 7.3 of the Tgax SFD ?
- 802.11ax spec shall support Ng = 4 and 16 for sounding feedback with SU/MU-MIMO-OFDM(A).
- NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.

SP Result: 36Y/0N/15A; SP passed.

SP #2:
Discussions:
Mingyue: The tradeoff of using Ng=8 is not good.

Do you agree to add the following to Section 7.3 of the Tgax SFD ?
- 802.11ax spec shall support *Ng = 2 and 8* for sounding feedback with SU/MU-MIMO-OFDM(A).
- *NOTE—The tone grouping factor, Ng is defined with respect to data tones of the HE PPDU.*

SP Result: 6Y/17N/19A; SP failed

4.2
11-16-0088-00-00ax-ng-for-compressed-beamforming-feedback
Sriram Venkateswaran (Broadcom) Presented

Discussions:
SP #1:
Skipped since it is same as SP#1 in 11-16-0030r1

SP #2:
Do you support adding to the TG Specification Framework:
In the MU Exclusive Beamforming Report for the delta SNR, the locations of the feedback tones shall be identical to the tone locations of the compressed V matrices fed back

SP Result: 34Y/0N/11A; SP passed

4.3
11-16-0033-00-00ax-1x-he-ltf-for-ulmumimo
Hongyuan Zhang (Marvell) Presented

Discussions:

SP #1:
Do you agree to add the following text in SFD?
- **11ax allows 1xLTF as an optional mode in the following cases:**
  - **SU, with GI = 0.8us only**
  - **Full-BW UL-MUMIMO, with GI=1.6us only?**
  - **Full BW DL-MUMIMO, with GI=0.8us TBD**

SP Result: 38Y/0N/10A; SP passed

4.4
11-16-0034-00-00ax-beamforming-with-he-ltf-compression
Hongyuan Zhang (Marvell) Presented

Discussions:
Sigard: Interpolation at the receiver?
Hongyuan: yes.

SP #1:
Discussions:
Sigard: Does the TX have to do it?
Hongyuan: yes. Tx has to maintain the smoothness.

- **Do you agree to add the following text in SFD?**
  - When 1x/2x HE-LTF is transmitted, it is recommended that the spatial mapping matrix applied to HE-STF and beyond is chosen such that it preserves the smoothness of the

physical channel, achieved by limiting the variation of each element's real and imaginary values in the spatial mapping matrix across successive tones.

SP Result: 35Y/0N/10A; SP passed

4.5
11-16-0036-00-00ax-crc-generation-for-he-sig
Yakun Sun (Marvell) Presented

Discussions:
Daewon: if you just truncate the 8-bit CRC, the performance should not be better than the best polynomial.
Yakun: Our simulations show the performance is good enough.
Daewon: did you check the 1 bit or 2bits error cases?
Yakun: we did not.

SP #1:

- **Do you support to add the following in the current SFD:**
  - The CRC bits of HE-SIG-A and each coding group of HE-SIG-B are generated as 4 LSB of HT CRC generator output?

SP Result: 38Y/3N/10A; SP passed

4.6
11-16-0037-01-00ax-continuous-puncturing-for-he-sigb-encoding
Yakun Sun (Marvell) Presented

Discussions:
Daewon: My contribution #104 is related to the straw poll. I just ask if I can present after this presentation.
Chair: you can present after this straw poll.

SP #1:

- **Do you support to add the following to the current SFD:**
  - SIGB bits for each SIGB content channel are continuously encoded with 1 BCC encoder?

- **SP Result: 36Y/0N/14A; SP passed**

4.7
11-16-0104-00-00ax-rate-matching-for-he-sig-b
Daewon (Newracom) Presented

Discussions:
Yakun: In some cases, your padding method loses efficiency.
Daewon: I would say if you want to high efficiency, we should remove all the tail bits.

SP #1:

Do you agree to add the following text to SFD?

- When MCS 2, 4, or 6 is configured for HE-SIGB, up to 2 (zero valued) filler bits are added after each tail bits of HE-SIG-B encoding block (i.e. common field and STA-specific information field) such that length of an encoding block (including the filler bits) is multiple of 3.
- When MCS 5 is configured for HE-SIGB, up to 1 (zero valued) filler bits are added after each tail bits of HE-SIG-B encoding block (i.e. common field and STA-specific information field) such that length of an encoding block (including the filler bits) is multiple of 2.

SP Result: 6Y/22N/17A; SP failed

Tuesday, Jan.19th, 2016, AM2

5. Meeting called to order by Bo Sun (ZTE)

5.1. The agenda is contained in 11-15/1385r1 which is on the server.

6. Administrative Items

6.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.
6.2. Chair also reminded to do attendance.

7. Presentations

7.1
11-16-0038-00-00ax-sequence-for-1x-ltf
Daewon (Newracom) Presented

Discussions:
Le: The index is not divided by 4
Daewon: These are typos.

No Straw poll.

7.2
11-16-0052-00-00ax-remaining-he-ltf-sequence-design
Le (Huawei) Presented

Discussions:
Yakun: The index is not divided by 4
Daewon: These are typos.

SP #1:

- **Do you agree**
  - 4x HE-LTF$_{160MHz}$(-1012:1:1012) =[4x LTF$_{80MHz_primary}$, zeros(1,23), 4x LTF$_{80MHz_secondary}$]
    - 4x LTF$_{80MHz_primary}$ = [L-LTF$_{80M}$, 0, R-LTF$_{80M}$] as agreed for 80MHz 4x HE-LTF;
    - 4x LTF$_{80MHz_secondary}$ = [L-LTF$_{80M}$, 0, (-1)* R-LTF$_{80M}$]
  - 4x HE-LTF$_{80+80MHz}$ = [4x LTF$_{80MHz_primary}$, 4x LTF$_{80MHz_secondary}$]

SP Result: **35Y/0N/14A; SP passed**

SP #2:

- **Do you agree**
  - 2x HE-LTF$_{160MHz}$(-1012:2:1012) = [2x LTF$_{80MHz_primary}$, zeros(1,11), 2x LTF$_{80MHz_secondary}$]
    - 2x LTF$_{80MHz_primary}$ as agreed for 80MHz 2x HE-LTF = [{1st 242-RU}, {2nd 242-RU}, {central 26-RU}, {3rd 242-RU}, {4th 242-RU}];
    - 2x LTF$_{80MHz_secondary}$ = [{1st 242-RU}, (-1)*{2nd 242-RU}, {central 26-RU}, {3rd 242-RU}, (-1)*{4th 242-RU}];
  - 2x HE-LTF$_{80+80MHz}$= [2x LTF$_{80MHz_primary}$, 2x LTF$_{80MHz_secondary}$]

SP Result: **38Y/0N/16A; SP passed**

SP #3:

- Do you agree to use the 20/40/80/160/80+80MHz 1x HE-LTF sequences in slide 21-24?

SP Result: **35Y/2N/15A; SP passed**

7.3
11-16-0039-01-00ax-ru-allocation-in-sig-b
Daewon (Newracom) Presented

Arjun: Your proposal requires STAs to successfully decode both content channels.
Daewon: If the STA does not know which channel its contents is on, the STA must decode both content channels.

SP #1:

Do you agree with not to support dynamic split (not precluding equal split) of MU-MIMO STA specific information for 2x996 RU (i.e. 160MHz MU-MIMO).

SP Result: **8Y/6N/many A; SP failed**

SP #2:
Do you agree with support equal split and no split (all STA information in one SIG-B channel) of MU-MIMO STA specific information for 2x996 RU (i.e. 160MHz MU-MIMO).

SP Result: **9Y/0N/many A; SP failed**

SP #3:

Do you agree to include the following text to SFD?

- At least 1 state is reserved in the 8 bit RU allocation subfield of the HE-SIG-B common field for 'no STA-specific information field assigned by the RU allocation subfield'.
- Details TBD

SP Result: 21Y/1N/19A; SP passed

7.4

11-16-0040-00-00ax-issues-with-compressed-sig-b-mode

Yujin Noh (Newracom) Presented

Discussions:

SP #1:

Do you agree to include the following text to TGax SFD:

- In MU PPDU, the SIG-A shall indicate the number of STAs when compressed SIG-B mode is indicated (i.e. full bandwidth MU-MIMO indicated).
  - Details TBD

SP Result: 13Y/0N/31A; SP passed

7.5

11-16-0041-01-00ax-link-adaptation-for-he-wlan

Yujin Noh (Newracom) Presented

Discussions:

Bin: How does the receiver knows the percentage of PER?
Daewon: The assumption is that you can measure the channel quality.
Hongyuan: The accuracy of the estimated per-tone SNR may be large than the link adation.
Daewon: If you have a better method, we are willing to accept.

SP #1

Do you agree to include the following text to TGax SFD:

- HE link adaptation shall define a fixed reference payload size as MPDU length of Y octets in specification.
  - "Y" is TBD.

SP Result: 10Y/5N/26A; SP failed

Tuesday, Jan 19th, 2016, PM1

8. Meeting called to order by Bo Sun (ZTE)

8.1. The agenda is contained in 11-15/1385r2 which is on the server.

9. Administrative Items

9.1. Chair reminded the IEEE 802 and IEEE 802.11 Policy and Procedure.

9.2. Chair also reminded to do attendance.

10. Presentations

10.1

11-16-0044-00-00ax-mcs-levels-and-tx-evm-requirement-for-1024-qam

Eunsung (LGE) Presented

SP #1:

- **Do you agree to add the following new MCS levels as an optional feature to the 11ax SFD:**
  - MCS10: 1024 QAM with 3/4 code rate
  - MCS11: 1024 QAM with 5/6 code rate

SP Result: 23Y/1N/10A; SP passed

SP #2:

- **Do you agree to add the following text to the 11ax SFD:**
  - TX EVM requirement of -35dB is used for MCS 10 and 11

SP Result: 24Y/2N/11A; SP passed

10.2

11-16-0046-00-00ax-content-for-the-extra-tones-in-lsig-and-rlsig

Jiayin Zhang (Huawei) Presented

SP #1:

Do you support to add to the SFD

- The content of 4 extra tones [-28,-27,27,28] of L-SIG and RL-SIG in 20MHz HE PPDU is [-1,-1,-1,1]

SP Result: 32Y/0N/11A; SP passed

10.3

11-16-0047-00-00ax-discussion-on-the-he-extended-range-su-ppdu

Jiayin Zhang (Huawei) Presented

Discussions:

Sigurd: Will you see the performance difference of extend preamble?

Jiayin: Without extend preamble; data portion will be the bottleneck.

Daewon: What we need to enhance the data portion?
Jiayin: For example, beamforming can be used to improve the data portion performance.
Daewon: I do not think the power boost is good for beamforming?
Jiayin: It depends on how you do beamforming.

SP #1:
Discussions:
Daewon: I will prefer to not making this mandatory.
Sigurd: I think more simulation results needed.

- **Do you support to modify the SFD as the red text**
  There are only three pre-HE-STF preamble formats defined:
    - SU format (mandatory) / Trigger based UL
    - MU format (mandatory)
    - Extended range SU format (mandatory)

SP Result: 32Y/9N/10A; SP passed

SP #2:
- **Do you support to add to SFD**
  - The HE Extended Range SU PPDU is transmitted only on the primary 20MHz.

SP Result: 38Y/0N/17A; SP passed

SP #3:
- **Do you support to add to SFD**
  - The HE Extended Range SU PPDU can only be transmitted with MCS0, MCS1, MCS2 and only with 1 spatial stream.

SP Result: 37Y/0N/16A; SP passed

SP #4:
Discussions:
Sigurd: Are you not compliant if you are not boosted?
Jiayin: Boost is a mandatory.
Jianhan: it is also transparent to the receiver.

- **Do you support to add to SFD**
  - HE-LTF/HE-STF power is boosted 3dB for BPSK and QPSK including DCM in the HE Extended Range SU PPDU preamble.

SP Result: 40Y/6N/12A; SP passed

10.4
11-16-0045-01-00ax-flexible-wider-bandwidth-transmission

John Son (WILUS) Presented

Discussions:
Hongyuan: You need some change on secondary CCA. Per 20MHz CCA, what is the level?
John: We do not have a specific level. Just a concept.
Hongyuan: should be occupied bandwidth.

SP #1:

- **Do you agree to add the following text into 11ax SFD?**
  - 3.x.x The spec shall support occupied HE PPDU bandwidth options other than 20/40/80/160(80+80)MHz for HE MU PPDU format.

SP Result: 22Y/17N/19A; SP failed

10.5
11-16-0053-00-00ax-requirements-for-ul-mu-transmissions
Arjun (Qualcomm) presented.

Discussions:
Daewon: Are both categories are mandatory.
Arjun: No.

SP #1:

- **Do you agree to add the following text in SFD?**

There are two STA classes that support HE trigger-based PPDU with information exchanged as part of the device capability
Class A: STAs that are high capability devices and
Class B: STAs that are low capability devices

SP Result: 40Y/2N/13A; SP passed

SP #2:

- **Do you agree to add the following text in SFD?**
  - STAs that participate in HE trigger-based PPDU shall support per chain max(P-32,-10dBm) as the min Tx power, with P the max power the STA can transmit at the antenna connector of that chain using MCS0 while meeting the TX EVM and spectral mask requirements. A STA transmitting at and above the min power shall support the EVM requirements for TBD MCS (but at least MCS7)
  –

SP Result: 39Y/2N/17A; SP passed

SP #3:

- Do you agree to add the following text in SFD?
  - STAs that participate in HE trigger-based PPDU shall support the following absolute Tx power requirements and the RSSI measurement accuracy requirements for the two device classes

Parameter	11ax Minimum Requirements	Comments

	Class A devices	Class B devices	
Absolute Transmit Power accuracy	+/-3dB	+/-9dB	Accuracy of achieving a specified transmit power level
RSSI Measurement Accuracy	+/- 2 dB	+/- 5 dB	Difference between the actual RSSI and the measured RSSI Requirements are valid from minimum RX to maximum RX input power

SP Result: 41Y/1N/14A; SP passed

SP #4:

- **Do you agree to add the following text in SFD?**
  - STAs that participate in HE trigger-based PPDU shall pre-compensate for carrier frequency offset (CFO) error and timing drift. After compensation, the absolute value of residual CFO error with respect to the corresponding Trigger frame shall not exceed 350Hz for data subcarriers when measured as the 10% point of CCDF of CFO errors in AWGN at a received power of -60dBm in the primary 20MHz. The residual CFO error measurement shall be made on the HE trigger-based PPDU packet after HE-SIGA.

SP Result: 39Y/0N/17A; SP passed

SP #5:

- Do you agree to add the following text in SFD?
  - STA that participate in HE Trigger based PPDU transmission shall have timing accuracy of **+/-0.4μs** relative to the Trigger frame. This requirement does not include round trip delay.

SP Result: 39Y/0N/10A; SP passed

SP #6:

- Do you agree to add the following text in SFD?
  - The following TX LO leakage requirements are supported for all transmission modes in 11ax:
    - The power measured at the location of the RF LO using resolution BW 78.125 kHz shall not exceed the maximum of –32 dB relative to the total transmit power and -20 dBm, or equivalently max(P-32,-20), where *P* is the transmit power per antenna in dBm. The transmit center frequency leakage is specified per antenna.

SP Result: 38Y/0N/17A; SP passed

SP #7:

- Do you agree to add the following text in SFD?
  - Transmit center frequency and the symbol clock frequency for all transmit antennas and frequency segments shall be derived from the same reference oscillator

SP Result: 41Y/0N/10A; SP passed

HE-SIG-B Compression for MU-MIMO

- For MU-MIMO over the entire BW, 1 bit in HE-SIG-A indicates compression. [1]
  - RU Size is set to the largest RU for the BW (20MHz – 242 tone RU, 40 – 484, 80– 996, 160 – 2x996)
  - The SFD states that the user specific sub-fields are split equally between the two HE-SIG-B Channels for efficient load-balancing
  - Only RU signaling is absent in the HE-SIG-B common fields

488

- **In this presentation**
  - Resolve Open Issue of number of user signaling
  - Clarify “equal split” between the two content channels
  - Optimize HE-SIG-B length by not requiring HE-SIG-B common field with compression.

Compression mode - TBDs

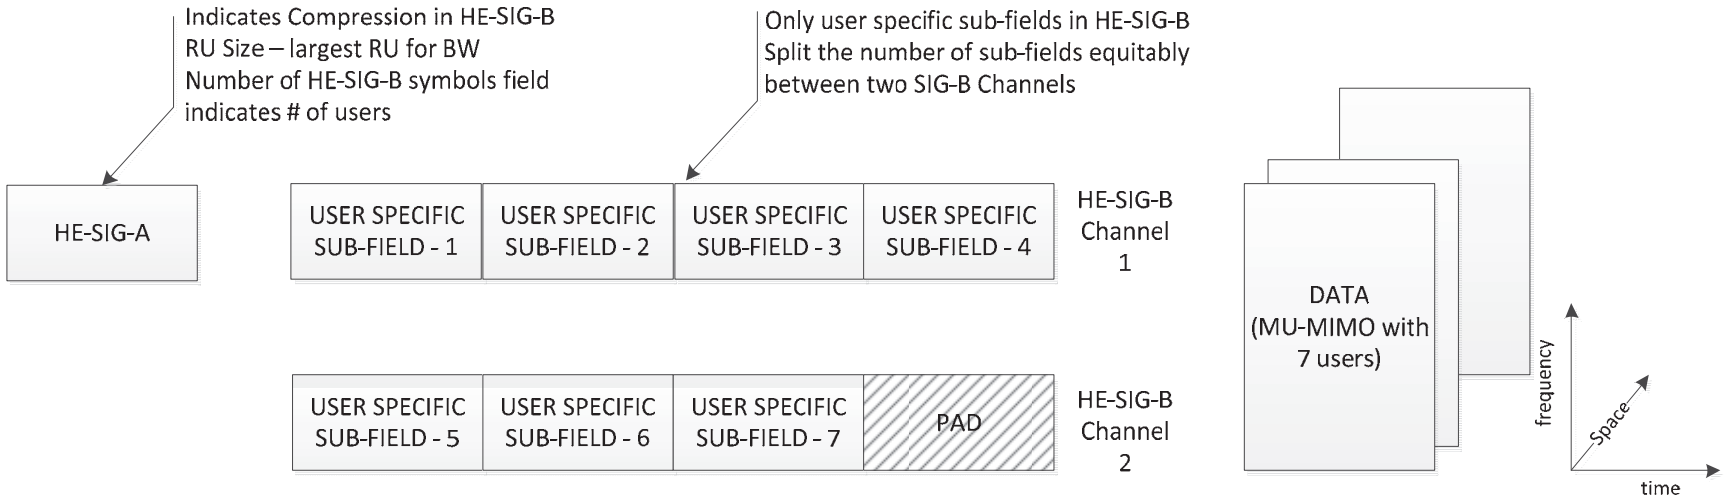
- Need to indicate number of users in full bandwidth MU-MIMO allocation
  - *Solution: The number of HE-SIG-B symbols field in HE-SIG-A is re-purposed to indicate the number of MU-MIMO users, when compression mode is enabled*

- The equal distribution of user fields in the two content channels needs to be clearly stated
  - *Solution: For k user MU-MIMO PPDU,* $1, \ldots \left\lceil \frac{k}{2} \right\rceil$ *user specific sub-fields in HE-SIG-B channel 1 and* $\left\lceil \frac{k}{2} \right\rceil + 1, \ldots, k$ *user specific sub-fields in HE-SIG-B channel 2*

- No common field in HE-SIG-B when full bandwidth MU-MIMO is used
  - *All required signaling fields for full bandwidth MU-MIMO are carried in HE-SIG-A and the user specific sub-fields. Maintains maximum signaling efficiency with respect to 11ac MU-MIMO.*

489

Summary



Indicates Compression in HE-SIG-B
RU Size – largest RU for BW
Number of HE-SIG-B symbols field indicates # of users
Only user specific sub-fields in HE-SIG-B
Split the number of sub-fields equitably between two SIG-B Channels
HE-SIG-A
USER SPECIFIC SUB-FIELD - 1
USER SPECIFIC SUB-FIELD - 2
USER SPECIFIC SUB-FIELD - 3
USER SPECIFIC SUB-FIELD - 4
HE-SIG-B Channel 1
USER SPECIFIC SUB-FIELD - 5
USER SPECIFIC SUB-FIELD - 6
USER SPECIFIC SUB-FIELD - 7
PAD
HE-SIG-B Channel 2

491

Straw Poll #1

- Do you agree to add the following description to the SIGB number of symbols fields in Table 2 in the SFD: HE-SIG-A fields for the HE MU PPDU of the SFD?

Field	Length (bits)	Description	Encoding
SIGB Number Of Symbols	4	Support about 16 users using MCS0 per BCC. When SIGB compression mode is enabled, the SIGB number of symbols are re-purposed to indicate the number of MU-MIMO users	

492

Straw Poll #2

- **Do you agree to modify the HE-SIG-B compression mode description in the SFD [Page 9, line 2-4 in 11-15-0132-15-00ax-spec-framework.docx] as follows:**

  In an HE MU PPDU the HE-SIG-A field shall indicate the number of STAs when full bandwidth MU-MIMO compressed SIG-B mode is indicated. ~~Details are TBD.~~ When SIGB compression mode is enabled, the SIGB number of symbols are re-purposed to indicate the number of MU-MIMO users

  [PHY Motion 111, Janaury 2016, see [26]]

493

Straw Poll #3

- **Do you agree to modify the HE-SIG-B compression mode description in the SFD [Page 9, line 15-20 in 11-15-0132-15-00ax-spec-framework.docx] as follows:**

A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU. In case of full BW MU-MIMO, the following conditions hold:

- Only applicable for RU sizes 242, 484, 996, 2*996
- The ~~RU information in~~ HE-SIG-B common field is not signaled
- For bandwidths > 20 MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels i.e., For k user MU-MIMO PPDU, 1, … $\lceil \frac{k}{2} \rceil$ user specific sub-fields in HE-SIG-B channel 1 and $\lceil \frac{k}{2} \rceil + 1, \ldots, k$ user specific sub-fields in HE-SIG-B channel 2

[PHY Motion 87, November 2015, see [25]]

IEEE 802.11 TGax
High Efficiency WLAN
PHY Ad Hoc

Co-Chairs:
Jianhan Liu (Mediatek)
Yakun Sun (Marvell)
Bo Sun (ZTE)

497

Agenda Items

- Call meeting to order
- Patent policy, etc. (Call for Potentially Essential Patents)
- Set and approve agenda

- Review ad hoc rules
- Technical Presentations approved by 802.11ax for presentation this week, and related straw polls
- Any other technical presentations

Meeting Protocol, Attendance, Voting & Document Status

- **Please announce your affiliation when you first address the group during a meeting slot**
- **Cell Phones to be silent or Off**
- **Register your attendance via https://imat.ieee.org while on meeting SSID (e.g. Verilan-secure)**
- **Make sure your badges are correct**
- **If you plan to make a submission be sure it does not contain company logos or advertising**
- **Questions on Voting status, Ballot pool, Access to Reflector, Documentation, Member's Area**
  - Contact Jon Rosdahl – jrosdahl@ieee.org

Patent Policy and Other Guidelines

- Following 5 slides

500

Instructions for the WG Chair

The IEEE-SA strongly recommends that at each WG meeting the chair or a designee:

- **Show slides #1 through #4 of this presentation**
- **Advise the WG attendees that:**
  - The IEEE's patent policy is consistent with the ANSI patent policy and is described in Clause 6 of the *IEEE-SA Standards Board Bylaws*;
  - Early identification of patent claims which may be essential for the use of standards under development is strongly encouraged;
  - There may be Essential Patent Claims of which the IEEE is not aware. Additionally, neither the IEEE, the WG, nor the WG chair can ensure the accuracy or completeness of any assurance or whether any such assurance is, in fact, of a Patent Claim that is essential for the use of the standard under development.
- **Instruct the WG Secretary to record in the minutes of the relevant WG meeting:**
  - That the foregoing information was provided and that slides 1 through 4 (and this slide 0, if applicable) were shown;
  - That the chair or designee provided an opportunity for participants to identify patent claim(s)/patent application claim(s) and/or the holder of patent claim(s)/patent application claim(s) of which the participant is personally aware and that may be essential for the use of that standard
  - Any responses that were given, specifically the patent claim(s)/patent application claim(s) and/or the holder of the patent claim(s)/patent application claim(s) that were identified (if any) and by whom.
- The WG Chair shall ensure that a request is made to any identified holders of potential essential patent claim(s) to complete and submit a Letter of Assurance.
- It is recommended that the WG chair review the guidance in *IEEE-SA Standards Board Operations Manual* 6.3.5 and in FAQs 12 and 12a on inclusion of potential Essential Patent Claims by incorporation or by reference.

Note: **WG** includes Working Groups, Task Groups, and other standards-developing committees with a PAR approved by the IEEE-SA Standards Board.

501

Participants, Patents, and Duty to Inform

All participants in this meeting have certain obligations under the IEEE-SA Patent Policy. Participants:

- **"Shall inform the IEEE (or cause the IEEE to be informed)" of the identity of each "holder of any potential Essential Patent Claims of which they are personally aware" if the claims are owned or controlled by the participant or the entity the participant is from, employed by, or otherwise represents**
  - **"Personal awareness" means that the participant "is personally aware that the holder may have a potential Essential Patent Claim," even if the participant is not personally aware of the specific patents or patent claims**
- **"Should inform the IEEE (or cause the IEEE to be informed)" of the identity of "any other holders of such potential Essential Patent Claims" (that is, third parties that are not affiliated with the participant, with the participant's employer, or with anyone else that the participant is from or otherwise represents)**
- **The above does not apply if the patent claim is already the subject of an Accepted Letter of Assurance that applies to the proposed standard(s) under consideration by this group**

Quoted text excerpted from IEEE-SA Standards Board Bylaws subclause 6.2

- Early identification of holders of potential Essential Patent Claims is strongly encouraged
- No duty to perform a patent search

502

Slide #1

Patent Related Links

All participants should be familiar with their obligations under the IEEE-SA Policies & Procedures for standards development.

Patent Policy is stated in these sources:

IEEE-SA Standards Boards Bylaws

http://standards.ieee.org/guides/bylaws/sect6-7.html#6

IEEE-SA Standards Board Operations Manual

http://standards.ieee.org/guides/opman/sect6.html#6.3

Material about the patent policy is available at

http://standards.ieee.org/board/pat/pat-material.html

503

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit http://standards.ieee.org/board/pat/index.html

This slide set is available at http://standards.ieee.org/board/pat/pat-slideset.ppt

Slide #2

Call for Potentially Essential Patents

- **If anyone in this meeting is personally aware of the holder of any patent claims that are potentially essential to implementation of the proposed standard(s) under consideration by this group and that are not already the subject of an Accepted Letter of Assurance:**
  - Either speak up now or
  - Provide the chair of this group with the identity of the holder(s) of any and all such claims as soon as possible or
  - Cause an LOA to be submitted

504

Slide #3

Other Guidelines for IEEE WG Meetings

- All IEEE-SA standards meetings shall be conducted in compliance with all applicable laws, including antitrust and competition laws.
  - **Don't discuss the interpretation, validity, or essentiality of patents/patent claims.**
  - **Don't discuss specific license rates, terms, or conditions.**
    - Relative costs, including licensing costs of essential patent claims, of different technical approaches may be discussed in standards development meetings.
      - Technical considerations remain primary focus
  - **Don't discuss or engage in the fixing of product prices, allocation of customers, or division of sales markets.**
  - **Don't discuss the status or substance of ongoing or threatened litigation.**
  - **Don't be silent if inappropriate topics are discussed … do formally object.**

See *IEEE-SA Standards Board Operations Manual*, clause 5.3.10 and "Promoting Competition and Innovation: What You Need to Know about the IEEE Standards Association's Antitrust and Competition Policy" for more details.

505

Slide #4

Ad Hoc Groups Operation

- **Straw Polls are only allowed during Ad Hoc group meeting // no motions, anyone can vote**
- **A straw poll affecting the Spec Framework has to start with,**
  - Do you agree to add to the TG Specification Frame work document?
- **A straw poll needs to achieves at least 75% to be converted to a motion at the TG level.**
- **Each Presentation will be limited to 15 minutes.**

506

508

Straw poll #1

By Eunsung Park (**LG)**

Do you agree to add the following 1x/2x HE-STF sequences for 160/80+80MHz to the 11ax SFD?

1x HE-STF$_{160MHz}$(-1008:16:1008) = [*M*, 1, -*M*, 0, -*M*, 1, -*M*, 0, -*M*, -1, *M*, 0, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

M = {-1 -1 -1 +1 +1 +1 -1 +1 +1 +1 -1 +1 +1 -1 +1}

1x HE-STF$_{80+80MHz}$ = [1x HE-STF$_{80MHz,Prime}$, 1x HE-STF$_{80MHz,Second}$]

1x HE-STF$_{80MHz,Prime}$(-496:16:496) = [*M*, 1, -*M*, 0, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

1x HE-STF$_{80MHz, Second}$(-496:16:496) = [-*M*, -1, *M*, 0, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

2x HE-STF$_{160MHz}$(-1016:8:1016) = [*M*, -1, *M*, -1, -*M*, -1, *M*, 0, -*M*, 1, *M*, 1, -*M*, 1, -*M*, 0, -*M*, 1, -*M*, 1, *M*, 1, -*M*, 0, -*M*, 1, *M*, 1, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

2x HE-STF$_{160MHz}$(±1016) = 0

2x HE-STF$_{160MHz}$(±8) = 0

2x HE-STF$_{80+80MHz}$ = [2x HE-STF$_{80MHz,Prime}$, 2x HE-STF$_{80MHz,Second}$]

2x HE-STF$_{80MHz,Prime}$(-504:8:504) = [*M*, -1, *M*, -1, -*M*, -1, *M*, 0, -*M*, 1, *M*, 1, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

2x HE-STF$_{80MHz,Prime}$(±504) = 0

2x HE-STF$_{80MHz, Second}$(-504:8:504) = [-*M*, 1, -*M*, 1, *M*, 1, -*M*, 0, -*M*, 1, *M*, 1, -*M*, 1, -*M*] *(1+*j*)/sqrt(2)

2x HE-STF$_{80MHz,Second}$(±504) = 0

Y/N/A: 28/0/13

509

Straw Poll #2

By Hongyuan Zhang (Marvell)

Do you agree to add the following text in SFD chapter 3.4?

For 20MHz PPDU, the transmit spectrum shall not exceed the maximum of the interim transmit spectral mask and –53 dBm/MHz at any frequency offset, for both 2.4GHz and 5GHz bands.
For 40MHz PPDU, the transmit spectrum shall not exceed the maximum of the interim transmit spectral mask and –56 dBm/MHz at any frequency offset, for both 2.4GHz and 5GHz bands.
For 80MHz and 160MHz PPDUs, the transmit spectrum shall not exceed the maximum of the interim transmit spectral mask and –59 dBm/MHz at any frequency offset.

510

Y/N/A: 41/0/3

Straw Poll #3

By Hongyuan Zhang (Marvell)

- **Do you agree to replace *Table-3 $N_{SD.short}$* in 3.3.5 Padding and packet extension of SFD to the following table?**

RU Size	*DCM=0: $N_{SD.short}$*	*DCM=1: $N_{SD.short}$*
26	6	**2**
52	12	6
106	24	12
242	60	30
484	120	60
996	240	120
996x2	492	246

Y/N/A: 40/0/5

Straw Poll #4

By Hongyuan Zhang (Marvell)

- **Do you agree to add the following text in SFD 3.3.5**
  - The post-FEC bits are un-specified by 11ax spec
  - The content of PE field is un-specified by 11ax spec

512

Y/N/A: 41/0/5

Straw Poll #5

By Ron Porat (Broadcom)

- Do you agree to add a Doppler bit in SIGA for HE SU and HE SU extended range, in TBD location for HE MU and in the trigger frame?

513

Y/N/A: 37/0/5

Straw Poll #6

By Ron Porat (Broadcom)

Do you agree to add to the spec framework : 1bit is added for STBC indication in SIGA of the MU PPDU?

- This bit indicates STBC for all users in the payload and doesn't apply to SIGB STBC is not applied in MU-MIMO RUs

514

Y/N/A: 39/0/4

Straw Poll #7

By Ron Porat (Broadcom)

- Do you agree to add to the TG Specification Frame work document: in trigger based UL PPDUs, multiple SR fields (>=2) are signaled, where each SR field corresponds to a different subband of the PPDU

515

Y/N/A: 38/0/5

Straw Poll #8

By Bin Tian (QUALCOMM)

Do you agree that 11ax pilot sequences shall reuse the 11ac/ah pilot sequences as shown in slides 13 and 14 in the document 11-16-0346r0?

516

Y/N/A: 43/0/3

Straw Poll #9

By Bin Tian (QUALCOMM)

- **Do you agree that 11ax pilot sequence shall be applied in the same way as in 11ac SSP**
  - Pilot values are shifted on pilot tones from symbol to symbol for each RU
  - Overlaying pilot polarity value: same as in 11ac

Y/N/A:46/0/3

Straw Poll #10

By Kaushik Josiam (Samsung)

- Do you agree to add the following description to the SIGB number of symbols fields in Table 2 in the SFD: HE-SIG-A fields for the HE MU PPDU of the SFD?

Field	Length (bits)	Description	Encoding
SIGB Number Of Symbols	4	When SIGB compression mode is enabled, the number of symbols are re-purposed to indicate the number of MU-MIMO users	

518

Y/N/A:40/0/4

Straw Poll #11

By Kaushik Josiam (Samsung)

- **Do you agree to modify the HE-SIG-B compression mode description in the SFD [Page 9, line 2-4 in 11-15-0132-15-00ax-spec-framework.docx] as follows:**

  –In an HE MU PPDU the HE-SIG-A field shall indicate the number of STAs when full bandwidth MU-MIMO compressed SIG-B mode is indicated. ~~Details are TBD.~~ When SIGB compression mode is enabled, the SIGB number of symbols are re-purposed to indicate the number of MU-MIMO users

  –[PHY Motion 111, Janaury 2016, see [26]]

Y/N/A:42/0/4

519

Straw Poll #12

By Kaushik Josiam (Samsung)

- **Do you agree to modify the HE-SIG-B compression mode description in the SFD [Page 9, line 15-20 in 11-15-0132-15-00ax-spec-framework.docx] as follows:**

A compression bit is carried in the HE-SIG-A MU format to differentiate full BW MU-MIMO from OFDMA MU PPDU. In case of full BW MU-MIMO, the following conditions hold:

- Only applicable for RU sizes 242, 484, 996, 2*996
- The ~~RU information in~~ HE-SIG-B common field is not signaled
- For bandwidths > 20 MHz, the user specific sub-fields are split equitably between the two HE-SIG-B Channels i.e., For k user MU-MIMO PPDU, $1, \ldots \left\lceil \frac{k}{2} \right\rceil$ user specific sub-fields in HE-SIG-B channel 1 and $\left\lceil \frac{k}{2} \right\rceil + 1, \ldots, k$ user specific sub-fields in HE-SIG-B channel 2

[PHY Motion 87, November 2015, see [25]]

Y/N/A:43/0/3

520

Straw Poll #13

By Yakun Sun (Marvell)

Do you support to modify the current SFD as following

The L-SIG, RL-SIG, HE-SIG-A and HE-SIG-B fields are always transmitted with same ~~total~~ power per tone as L-LTF field (in cases when L-LTF is not being boosted). The L-STF has the same total power as the L-LTF?

521

Y/N/A:44/0/3

Straw Poll #14

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

The tones used for channel feedback shall be a subset of the sets given below:

522

NDP bandwidth 20 MHz:
Ng = 4 → [-120:4:-4, 4:4:120] + edge(±2,±122)
Ng = 16 → [-116:16:-4, 4:16:116] + edge(±2,±122)

NDP bandwidth 40 MHz:
Ng = 4/16 → [-244:Ng:-4, 4:Ng:244]

NDP bandwidth 80 MHz:
Ng = 4/16 → [-500:Ng:-4, 4:Ng:500]

Y/N/A:43/0/4

Straw Poll #15

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

2X HE-LTF sequence shall be the only mandatory mode for NDP. 4X HE-LTF shall not be supported in NDP.

523

Y/N/A:39/0/4

Straw Poll #16

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

The NDP

- always has extension of 4uS
- shall support the CP values 0.8 us and 1.6 us

524

Y/N/A:40/0/2

Straw Poll #17

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

AP can request beamforming feedback over partial BW which is less than the NDP BW. The indication of the feedback BW goes in NDPA.

525

Straw poll passed without objection

Straw Poll #18

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

The granularity of channel feedback requested by the AP is a 26 tone RU. The AP signals *start* and *end* 26 tone RUs requested for feedback.

526

Straw poll passed without objection

Straw Poll #19

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

The max Nc for sounding feedback that a BFee can support shall be negotiated through a capability exchange at association.

527

Straw poll passed without objection

Straw Poll #20

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

AP shall control the Ng, quantization, and Nc of the sounding FB in NDPA except in the special case of a NDPA addressed to a single STA which requests SU type feedback. In the aforementioned special case, the STA controls these quantities.

528

Straw poll passed without objection

Straw Poll #21

By Sriram Venkateswaran (Broadcom)

Do you agree to add to the spec framework that

A channel quality indicator only (CQI-only) feedback (exact metric TBD) will be supported by the sounding protocol in 11ax. The request for CQI-only feedback goes in NDPA.

529

Straw poll passed without objection

Straw Poll #22

By John Son (WILUS)

- **Do you agree to add the following text into 11ax SFD?**
  - ***3.1 General***
  - *The non-contiguous channel bonding will be supported in 802.11ax by:*
    - *Transmitting using OFDMA PPDU format by nulling the tones of one or more secondary channels in 80 MHz and 160 (80+80) MHz;*
    - *Modes for non-contiguous channel bonding are TBD;*
    - *Non-contiguous channels within primary or secondary 80 MHz only exists at AP side.*
    - Signaling for non-contiguous channel bonding is contained in BW subfield of HE-SIG-A and/or RU allocation subfield in the common block of HE-SIG-B. Details are TBD.

530

Y/N/A:10/2/many

Straw Poll #23

By Ming Gan (Huawei)

- **Do you agree to add the following text to the IEEE 802.11ax SFD?**

531

UL pre-HE-STF preamble is sent only on the 20MHz- CH(s) where the HE modulated fields are located.

– The UL pre-HE-STF preamble includes legacy preamble, RL-SIG and HE-SIG-A and HE modulated fields refer to HE-STF, HE-LTF and data fields.

Abstract

This submission proposes resolutions for the following comments on 28.3.10.8.1 of TGax D1.0:

4918, 5264, 6117, 8935, 8936, 10062
This resolution is made based on the TGax Draft 1.1

Revisions:

— Rev 0: Initial version of the document.

Interpretation of a Motion to Adopt

A motion to approve this submission means that the editing instructions and any changed or added material are actioned in the TGax Draft. This introduction is not part of the adopted material.

Editing instructions formatted like this are intended to be copied into the TGax Draft (i.e. they are instructions to the 802.11 editor on how to merge the text with the baseline documents).

TGax Editor: Editing instructions preceded by "TGax Editor" are instructions to the TGax editor to modify existing material in the TGax draft. As a result of adopting the changes, the TGax editor will execute the instructions rather than copy them to the TGax Draft.

CID	Clause Number	P.L	Comment	Proposed Change	Resolution
4918	28.3.10.8.1	286.07	Figure is too small to read	Increase size of figure and text. Ditto figures on P286-288. Also, the curved arrows are quite unclear and seem to hide each other. What are they doing? Many seem to be missing - add	Revised TGax Editor : make the changes shown in 11-17/299r0
6117	28.3.10.8.1	286.05	Replace the figure with a high resolution one	As in comment	Revised TGax Editor : make the changes shown in 11-17/299r0
8936	28.3.10.8.1	286.06	Figure is hard to read	Replace with better illustration of HE-SIG-B field	Revised TGax Editor : make the changes shown in 11-17/299r0
10062	28.3.10.8.1	286.13	Figure 26-20 shows BCC block, which does not exist in the draft specification any more.	1 BCC Block in Common Field needs to be changed Common Block Field. 1 BCC Blcok in User Specfic Field needs to be changed as 1 User Block Field.	Revised TGax Editor : make the changes shown in 11-17/299r0

Discussion

As mentioned with multiple CIDs (i.e. 4918, 6117, 8936, 10062), the representation of figure 28-20 is not accurate and it does not apply the correct terminology. So, for the clarification of HE-SIG-B field encoding structure, it should be corrected. And, the terminology of HE-SIG-B field defined in 11-17/xxxxr0 is applied.

Changes to subclause 28.3.13.8.1 related to CIDS: 4918, 6117, 8936, 10062

TGax Editor: Please replace the figure 28-20 in P294L5 of D1.1 as the proposed following figure.

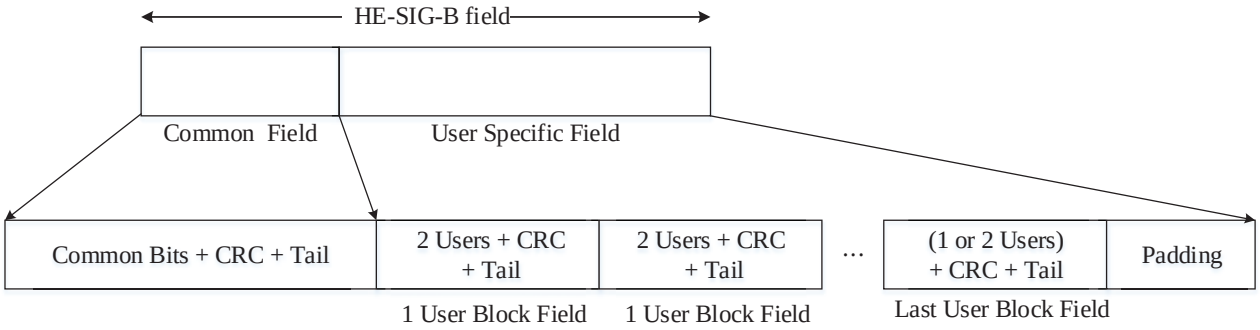

Figure 28-20 HE-SIG-B field encoding structure in each 20 MHz

CID	Clause Number	P.L	Comment	Proposed Change	Resolution
5264	28.3.10.8.1	286.00	Regarding "Each User Block field is made up of two user fields", is it allowed to use the HE MU PPDU for a single user? If so, this statement is incorrect. Please clarify.	as in comment	Revised TGax Editor : make the changes shown in 11-17/299r0
8935	28.3.10.8.1	285.60	"The HE-SIG-B field is separately encoded on each 20 MHz band.". This is not correct.	Replace with a better description, i.e.: two content channels repeated over up to eight 20 MHz subbands. This would be a good place to introduce the concept of content channels BTW.	Rejected

Discussion

CID 5264

Agree in principle with the commenter. The current text described that the User Block field consists of 2 User field except the last user block field. But, as described in P294L34, the HE-MU PPDU can be used for single user and then the HE-SIG-B field only include the one User field. So, it is proper to add the description to clarify after related description.

CID8935

As in comment, in the larger bandwidth than 20MHz (i.e. 40MHz, 80MHz, 160MHz), two content channel of HE-SIG-B is duplicated per 40MHz channel and each content channel is seperately encoded per 20MHz band. Here, the proposed change does not consider the case of one content channel of HE-SIG-B in 20MHz. And it is described well on clause 28.3.10.8.2. So, it does not need the additional description about it,

Changes to subclause 28.3.10.8.1 related to CIDS: 5264

TGax Editor: Please add the underlined texts on page 294 line 37 of D1.1 as following:

When the SIGB Compression field in the HE-SIG-A field of an HE MU PPDU is set to 1 (indicating full bandwidth MU-MIMO transmission) and the Number Of HE-SIG-B Symbols Or MU-MIMO Users field in the HE-SIG-A field of an HE MU PPDU is set to 0 (indicating 1 MU-MIMO user), the User Specific field in the HE-SIG-B field consists of a single User Block field containing one User field for a non-MU-MIMO allocation as shown in Table 28-22 (Fields of the User field for a non-MU-MIMO allocation).

If the Ack Type field is 1, and if the TID is less than or equal to 7, or is equal to 15, then the Per STA Info field indicates the acknowledgement of a single MPDU identified by the value of the TID		2017/1/9 9:42
3064	Abhishek Patil	225	1 27.4.3	159	40	T	N	159.40 27.4.3	32-bit BA is used only if '32-bit BA bitmap' is supported per HE capabilities element format	Add the condition as in the comment		2017/1/9 9:42
3065	Abhishek Patil	225	1 27.4.4	160	30	T	N	160.30 27.4.4	Need to add the procedure for the case where SU Multi TID AMPDU soliciting SU PPDU response [for example, whether the response is always using M-BA, and not with Multi-TID BA if it receives a multi-TID frame in legacy PPDU format]	As in the comment		2017/1/9 9:42
3066	Abhishek Patil	225	1 27.4.4.2	160	52	E	N	160.52 27.4.4.2	Reference(10.3.2.11.2) is not correct in the sentence: "An AP that sends a DL MU PPDU that intends to solicit an immediate response carried in an SU PPDU shall set the Ack Policy to Normal Ack (or Implicit BAR) for at most one of the (A-)MPDUs contained in the soliciting DL MU PPDU (see 10.3.2.11.2 (MU acknowledgement procedure for DL MU PPDU in SU format) for an example of this sequence).	Correct the reference to: "10.3.2.10.2"		2017/1/9 9:42
3067	Abhishek Patil	225	1 27.4.4.3	161	13	E	N	161.13 27.4.4.3	Reference(10.3.2.11.3) is not correct in the sentence: "An AP that sends a DL MU PPDU that intends to solicit an immediate response carried in an HE triggerbased PPDU shall set the Ack Policy to MU Ack ('01') for each of the (A-)MPDUs for which it intends to solicit an immediate response (see 10.3.2.11.3 (MU acknowledgement procedure for HE MU PPDU in MU format) for an example of this sequence)."	Correct the reference to: "10.3.2.10.3"		2017/1/9 9:42
3068	Abhishek Patil	225	1 27.4.4.4	161	38	E	N	161.38 27.4.4.4	Reference(10.3.2.11.4) is not correct in the sentence: A non-AP STA that sends an HE trigger-based PPDU as a response to a Basic variant Trigger frame that intends to solicit an immediate response shall set the Ack Policy to Normal Ack/Implicit BAR (see 10.3.2.11.4 (MU acknowledgement procedure for an UL MU transmission) for an example of this sequence).	Correct the reference to: "10.3.2.10.4"		2017/1/9 9:42

3069 Abhishek Patil	225	1 27.4.4.5	162	14	T	N	162.14 27.4.4.5	AP should not be responding to a STA that sent S/A-MPDU (no Multi-TID) using M-BA if the M-BA is indivudually addressed to the STA.	Modify the sentence as follows: Original text: "The AP shall respond with Ack frame or an individually addressed Multi-STA BlockAck frame to each of the STAs from which a Single MPDU that solicited an immediate response was received, and with a Compressed BlockAck frame or a Multi-STA BlockAck frame to each of the STAs from which an A-MPDU that solicited an immediate response was received, or a Multi-STA BlockAck frame to each of the STA from which a multi-TID A-MPDU that solicited an immediate response was received." Proposed text: "The AP shall respond with Ack frame to each of the STAs from which a Single MPDU that solicited an immediate response was received, and with a Compressed BlockAck frame to each of the STAs from which an A-MPDU that solicited an immediate response was		2017/1/9 9:42
3070 Abhishek Patil	225	1 27.4.45	162	28	T	N	162.28 27.4.45	The following sentence is not relavent, since there can be only one group addressed M-BA in a DL MU PPDU: "A HE AP should only transmit a group addressed Multi-STA Block-Ack frame in a DL MU PPDU to a non-AP HE STA n on the (broadcast RU) RU (26/52/106/242/484/996) that includes the RU used for receiving the immediate preceding HE trigger-based PPDU from STA n"	Replace the sentence with: "The AP shall not include more than one group addressed M-BA in a DL MU PPDU"		2017/1/9 9:42
3071 Abhishek Patil	225	1 27.5.2.2.2	165	50	T	Y	165.50 27.5.2.2.2	Incorrect field reference. Also, the sentence needs to be simplified.	Change the sentence to: "The MAC address of the transmitted BSSID when dot11MultiBSSIDActivated is true and the Trigger frame is destined for STAs associated with more than one AP that are part of the same multiple BSSID set and have indicated support to received such frames via the Rx Control Frame to MultiBSS field in HE Capabilities element."		2017/1/9 9:42
3072 Abhishek Patil	225	1 27.5.2.2.2	165	60	T	N	165.60 27.5.2.2.2	Current sentence is convoluted. Simplify it.	Change sentence to: "If an HE AP does not receive an HE Capabilities element with the Rx Control Frame To MultiBSS field equal to 1 from a STA, then the HE AP shall not send the Trigger frame to the STA if the frame is destined for STAs associated with more than one AP that are part of the same multiple BSSID set."		2017/1/9 9:42
3073 Abhishek Patil	225	1 27.5.2.6.2	173	38	T	N	173.38 27.5.2.6.2	Condition for when the STA should use random access needs to be defined. In the absence of such restriction there will be a lot of un-necessary random access attempts	As in the comment		2017/1/9 9:42
3074 Abhishek Patil	225	1 27.5.2.6.2	173	38	T	N	173.38 27.5.2.6.2	Trigger frame should be able to indicate whether a pre-associated STA is allowed to respond. May be reserve a special AID, if only associated STAs are allowed to respond, Vs AID0 where any STA is allowed to respond	As in the comment		2017/1/9 9:42
3075 Abhishek Patil	225	1 27.6.2	176	20	T	N	176.20 27.6.2	Current sentence is convoluted. Simplify it.	Change sentence to: "If an HE AP does not receive an HE Capabilities element with the Rx Control Frame To MultiBSS subfield in the HE MAC Capabilities Information field equal to 1 from a STA, then the HE AP shall not send the NDP Announcement frame to the STA if the frame is destined for STAs associated with more than one AP that are part of the same multiple BSSID set."		2017/1/9 9:42

3076 Abhishek Patil	225	1 27.7.3.4	187	5	T	N	187.05 27.7.3.4	There needs to be a time limit up to which a TWT scheduled STA will remaining awake to catch the beacon. A non-AP STA which is power constrained sets up a wake TBTT TWT schedule. The current spec language seems to indicate that the STA will remain awake till it receives the beacons. What if the beacon was lost due to collision?	Specify a time period (in addition to the current language) for which the non-AP STA waits for the beacon. We could use the Nominal Minimum TWT Wake Duration field in TWT element to specify this time.	2017/1/9 9:42
3077 Abhishek Patil	225	1 27.8	188	29	T	N	188.29 27.8	The normative behavior for setting the OMI support Capabilities is missing. Please add the normative behavior on setting this field. In addition there needs to be normative behavior on how the AP indicates ROM changes to a plurality of STAs using the OMI A-Control.	Presentation to be provided which would provide normative text which would require the AP to send OMI and receive acknowladge indication from all STAs before changing the parameters.	2017/1/9 9:42
3078 Abhishek Patil	225	1 27.9.2.2	191	60	T	N	191.60 27.9.2.2	Add the ability for AP to set the OBSS PD Min and Max for managed APs	As in the comment	2017/1/9 9:42
3079 Abhishek Patil	225	1 27.9.2.2	191	60	T	N	191.60 27.9.2.2	Add the ability for AP to disable OBSS PD based reuse	As in the comment	2017/1/9 9:42
3080 Abhishek Patil	225	1 27.9.2.2	191	60	T	N	191.60 27.9.2.2	Add a mechanism for a STA to disable OBSS STAs from applying OBSS PD based reuse on top of the PPDU that it is sending.	As in the comment	2017/1/9 9:42
3081 Abhishek Patil	225	1 27.9.2.2	192	16	T	N	192.16 27.9.2.2	Define the rules for OBSS PD based transmissions on secondary channels. It is miissing in the current draft	As in the comment	2017/1/9 9:42
3082 Abhishek Patil	225	1 27.9.2.2	192	16	T	N	192.16 27.9.2.2	Define the interaction between OBSS PD based reuse and SRP based reuse. It is missing in the current draft.	As in the comment	2017/1/9 9:42
3083 Abhishek Patil	225	1 27.11.1	195		T	N	195.00 27.11.1	There are cases (like GCR, FMS) where the traffic is for a limited set of STAs (i.e., not broadcast to all) - in such cases, a STA needs to check the MAC header to see if it is one of the intended recipient.	Add text to clarify that when the STA_ID_LIST indicates 'more than one STA', a STA should check the MAC header to see if it is one of the intended recipient.	2017/1/9 9:42
3084 Abhishek Patil	225	1 27.11.4	196	39	T	N	196.39 27.11.4	Add section reference to setting NAV	Update sentence as follows: "the channel access rules as described in 27.9 (Spatial reuse operation) or reduce power consumption as described in 27.14.1 (Intra-PPDU power save for HE non-AP STAs) or set the NAV as described in 27.2.2 (Updating two NAVs)."	2017/1/9 9:42
3085 Abhishek Patil	225	1 27.11.4	196	43	T	N	196.43 27.11.4	Mention that BSS Color is a 6-bit value	Edit sentence as follows: "An HE STA transmitting an HE Operation element shall select a value in the range 1 to 63 to include in the 6-bit BSS Color subfield of the HE Operation element ..."	2017/1/9 9:42
3086 Abhishek Patil	225	1 27.11.4	196	43	T	N	196.43 27.11.4	Since BSS Color can change when AP determines a prolonged color collision, remove text that states that BSS Color is maintained for the lifetime of the BSS	Remove follow from the sentence: " and shall maintain that single value of the BSS Color subfield for the lifetime of the BSS"	2017/1/9 9:42
3087 Abhishek Patil	225	1 27.11.4	196	49	T	N	196.49 27.11.4	Need to capture the case where the received frame came from an unassociated STA with color value 0	Add text to clarify that this applies only when the received BSS Color value is non-zero	2017/1/9 9:42
3088 Abhishek Patil	225	1 27.11.4	197	8	T	Y	197.08 27.11.4	A non-AP STA may determine BSS Color overlap with a neighboring (OBSS) AP. In such cases, the non-AP STA needs a mechanism to report a color collision to its associated AP.	Define a mechanism where a non-AP STA can autonomously report a color collision to its associated AP.	2017/1/9 9:42
3089 Abhishek Patil	225	1 27.11.5	197	39	T	Y	197.39 27.11.5	HE AP continues to advertise BSS Color even when it has disabled the use of BSS Color. There should be mechanism which requires STAs to use the DURATION/ID value instead of BSS COLOR and TXOP_DURATION field	Add sentence to this section: "An HE AP that has set the BSS Color Disabled value to 1 in HE Operation element shall set the TXOP_DURATION to all 1s."	2017/1/9 9:42
3090 Abhishek Patil	225	1 27.14.1	199	13	E	N	199.13 27.14.1	Fix typo	Fix sentence as follows: "An HE non-AP STA that has dot11IntraPPDUPowerSaveOptionActivated equal to true operates in intra-PPDU power save mode."	2017/1/9 9:42
3091 Abhishek Patil	225	1 27.14.1	199	22	T	N	199.22 27.14.1	Change broadcast to group-addressed	Change broadcast to group-addressed to cover the case of GCR, FMS etc where a sub-set of STAs are addressed by the AP	2017/1/9 9:42

3092	Abhishek Patil	225	1 27.14.2	200	21	E	N	200.21 27.14.2	Clarify sub-field	Add the field name to which the sub-fields belongs to. Suggest changing the sentence as following: "An HE STA that receives a Beacon frame or a management frame containing a TWT element that has a value of 1 in the Broadcast subfield of Control field and a value of 2 in the TWT Flow Identifier subfield of Request Type field may enter the doze state until the start of that TWT SP as described in 27.7.3.3 (Rules for TWT scheduled STA)."	2017/1/9 9:42
3093	Abhishek Patil	225	1 27.14.3.1	200	63	T	N	200.63 27.14.3.1	The operation applies to current TWT SP - the sentence doesn't need to discuss about what happens outside the current TWT SP. Replace "before the next TWT SP" with "in the current TWT SP"	Change sentence as following: "For an HE non-AP STA for which their associated AP set their corresponding bit in the traffic indication virtual bitmap field of the TIM element to 1, if the STA was not served in the current TWT SP then the AP shall set its corresponding bit in the traffic indication virtual bitmap field of the TIM element to 1 in the subsequent TWT SP."	2017/1/9 9:42
3094	Abhishek Patil	225	1 27.16.3.1	207	51	E	N	207.51 27.16.3.1	Keep the field names consistent in the element definition and section description	The element description in section 9.4.2.224 call it dialog token while this section makes reference to a request token. Change reference to 'request token' to 'the token value in the Dialog Token field of the Request element'	2017/1/9 9:42
3095	Abhishek Patil	225	1 28.3.10.8.5	295	23	T	Y	295.23 28.3.10.8.5	There is no terms called Multi-BSSID	Suggest changing the sentence as follows: "For an AP belonging to Multiple BSSID set, the STAID for broadcast to a specific BSS will follow the group addressed AID assignment in the TIM according to the existing rules for TIM assignment in a Multiple BSSID set." Similarly, suggest changing the next bullet to: "For an AP belonging to multiple BSSID set, the STAID for broadcast to all BSS of the AP is et to 2047"	2017/1/9 9:42
3096	Adrian Stephens	225	1 Frontmatter			G	N	Frontmatter	The frontmatter list of dependencies is now out of date with the approval of REVmc, ah and ai.	Update to "IEEE Std 802.11x-2016"	2017/1/9 9:42
3097	Adrian Stephens	225	1 27.5.2.3	167	59	T	Y	167.59 27.5.2.3	There is a TBD in normative text. Gets my automatic "no" vote. "The UserInfo field is addressed to a STA if the AID12 subfield is equal to the AID of the STA and the STA is associated with the AP. If the STA is not associated withthe AP, TBD"	Delete cited text.	2017/1/9 9:42
3098	Adrian Stephens	225	1 G.5	427		T	Y	427.00 G.5	The changes to Annex G are incomplete. They look like a sketch of intended changes that nobody quite could be bothered to complete.	There is no change to ht-txop-sequence. Add alternative for he-mu-sequence. Editorial note - use lower-case in Annex G terms. I see both "He-" and "HE-". Add a definition of the terms "ul-mu-sequence" and "cascading-mu-sequence".	2017/1/9 9:42
3099	Adrian Stephens	225	1 C.3	419		T	Y	419.00 C.3	dot11HEOptionImplemented does not appear in a group	Add it to an dot11SMTbase<n> group. If any your dependencies have added objects to dot11SMTbase13 (which thereby breaks the MIB doctor rules) then add to this group. If dot11SMTbase has not been modified by any of your dependencies, then deprecate dot11SMTbase13, copy to ...14, insert the new object. Update the module compliance statement to cite ...base14.	2017/1/9 9:42
3100	Adrian Stephens	225	1	6	50	E	Y	6.50	"high efficient (HE) dual beacon" - wrong term	efficient->efficiency	2017/1/9 9:42
3101	Adrian Stephens	225	1 4.3.14a	9	21	T	Y	9.21 4.3.14a	"An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" -- only does not live at the end of a sentence. Its intent is ambiguous. Ditto at line 27.	Move or delete the only. For example, move it to after the "support" verb.	2017/1/9 9:42

3102	Adrian Stephens	225	1 8.3.5.2.2	15	22	T	Y	15.22 8.3.5.2.2	Why do we need both USER_INDEX and STA_INDEX? They both seem to describe exactly the same concept. As these both support "multi-user" (not "multi-STA") operation, the existing term is preferable.	Throughout the draft, replace all references to STA_INDEX with USER_INDEX.	2017/1/9 9:42
3103	Adrian Stephens	225	1 9.2.4.5.4	20		E	N	20.00 9.2.4.5.4	"For a frame that is carried in a DL HE MU PPDU" REVmc fixed a lot of "For a". This is not done for a frame, it is present in a frame.	Review all "for a" language, and replace with alternatives, such as "in a" where it does not describe an action performed for a frame.	2017/1/9 9:42
3104	Adrian Stephens	225	1 9.2.6.3	22		E	Y	22.00 9.2.6.3	"Aggregated Control (A-Control)" - don't abbvt. Abvn is bd. Because people will randomly choose one of the two forms to use in different contexts. And, given the license to abbreviate, folks will choose to randomly abbrvt. Witness line 49 uses a different abbreviation of this name. And having a field name that embeds its own abbreviation is dumb (by which I mean that REVmc tediously went through and removed them all from .11ad-introduced material).	Either use "Aggregated Control" (preffered) or "A-Control" throughout.	2017/1/9 9:42
3105	Adrian Stephens	225	1 9.2.4.6.4.5	26	52	E	N	26.52 9.2.4.6.4.5	Scaling factor subfield definition is inherently tabular.	Turn value definitions into a table and reference from here.	2017/1/9 9:42
3106	Adrian Stephens	225	1 9.2.4.6.4.6	27	38	E	Y	27.38 9.2.4.6.4.6	"B5 of the UL Power Headroom subfield is set to 1 to indicate that theminimum transmit power for the current MCS is reached by the STA and set to 0 otherwise" Implementers frequently misinterpret this kind of statement.	Separate B5 into its own field and move description of it into its own para.	2017/1/9 9:42
3107	Adrian Stephens	225	1 9.2.4.6.4.6	27	47	E	Y	27.47 9.2.4.6.4.6	"HE DL HE MU" - ha ha. He He. Ho Ho Ho.	Expunge redundant HEs from this and similar occurances.	2017/1/9 9:42
3108	Adrian Stephens	225	1 9.2.4.6.4.7	28	6	E	N	28.06 9.2.4.6.4.7	Table 9-18d can be clarified.	Start by horizontally straddling cells with the same content. Then you might also replace the text of a cell with "See NOTE 1" (or create better names related to the content) and put the text of the condition in the table footer row. "NOTE 1 - Set to 1 if the lower ..."	2017/1/9 9:42
3109	Adrian Stephens	225	1 9.3.1.9.1	34	10	T	Y	34.10 9.3.1.9.1	Bit numbering of the Reserved field is inconsistent	Change reserved to B5-B11.	2017/1/9 9:42
3110	Adrian Stephens	225	1 9.3.1.9.1	34	25	E	Y	34.25 9.3.1.9.1	"data/management frames" 802.11 has a style guide about capitalization, to ensure consistency. Proper names (i.e., names of frames, elements, sub-elements, fields, subfields...) are capitalized. Also "/" is deprecated because it is often ambiguous - for example it change from "or" to "and" when changing from an inclusive condition to an exclusive one.	Change here to "Data or Management frames". Review all use of "/" and replace with "or" or "and" as appropriate. Review all use of "frame", "element", "field", "subfield" and ensure that a term on the left that names the item is upper case.	2017/1/9 9:42
3111	Adrian Stephens	225	1 9.3.1.9.3	36	24	E	N	36.24 9.3.1.9.3	Table 9-24a Block Ack Bitmap subfield length (octets) values redundantly include units.	Remove redundant "octets" in the values	2017/1/9 9:42
3112	Adrian Stephens	225	1 9.3.1.9.7	38	4	T	N	38.04 9.3.1.9.7	"NOTE--When a Multi-STA BlockAck frame is used to acknowledge a management frame, the TID value is set to 15." If not stated elsewhere, this should not be in a NOTE	If not stated elsewhere, remove "NOTE-".	2017/1/9 9:42
3113	Adrian Stephens	225	1 9.3.1.9.7	38	4	E	N	38.04 9.3.1.9.7	According to IEEE-SA style, Multiple NOTES in a subclause are seqentially numbered.	Number line 64 of previous page to "NOTE 1--" and this to "NOTE 2--" Review all uses of "NOTE--" and insert missing numbering.	2017/1/9 9:42
3114	Adrian Stephens	225	1	38	39	E	Y	38.39	"8 to 13" - inconsistent with previous row	change to "8<en-dash>13"	2017/1/9 9:42

3115 Adrian Stephens	225	1	38	30	E	N	38.30	Dashes in numeric ranges should be "en-dash". Minuses in equations should be en-dashes too.	Review all uses of hyphen separating two integers. (see aside below). Replace any such hyphen with an en-dash. One way to find these using a regular expression is to save the .pdf to accessible text (adobe acrobat), then run a regular expression search on it. AntConc is a free tool that I have used to good effect for this purpose, although other tools are available.	2017/1/9 9:42
3116 Adrian Stephens	225	1 9.3.1.20	40	32	T	Y	40.32 9.3.1.20	I don't see that all the fields in Figure 9-51b are defined in the text that follows it.	Review text that follows and ensure a proper definition for the field is provided. For example The AID11 field appears to have no definition. The definition of Disambiguation is not "proper" in the sense that it does not indicate the meaning of the values of the field, only the intended purpose of the field: "The Disambiguation subfield is set to 1 to prevent a VHT STA from wrongly determining it's AID in the HE STA Info."	2017/1/9 9:42
3117 Adrian Stephens	225	1	46	10	G	Y	46.10	Don't use binary values to represent numeric values - ever. REVmc can tell you why.	Replace binary strings with decimal equivalents in Table 9-25f and the text following it. Make similar changes near "B19-B13". Consider making this into a proper named subfield.	2017/1/9 9:42
3118 Adrian Stephens	225	1	47	56	E	N	47.56	Stylistically, the baseline does not include units in equations.	Remove "octets" from the equation. Insert "(in octets)" in the text above, e.g. after "length of the Padding field". Make similar change at 48.05.	2017/1/9 9:42
3119 Adrian Stephens	225	1	53	26	E	N	53.26	"that elicited this Association Response frame is one." spelled-out numeric values are reserved for small quantities "two frames" not the encoding of fields.	Change "one" to "1". Same change at 54.21 and doubtless other places too.	2017/1/9 9:42
3120 Adrian Stephens	225	1	55	26	E	N	55.26	"pre-sent" - typo	"present"	2017/1/9 9:42
3121 Adrian Stephens	225	1	59	56	E	N	59.56	Table format could do with a table header row	Turn header row into a framemaker table header row. Ditto for following table.	2017/1/9 9:42
3122 Adrian Stephens	225	1			T	N		"The NoFragmentation subfield is reserved when transmitted by an HE STA" When transmitted by an HE STA to an HT or VHT non-HE STA, this statement disallows the HE STA from indicating no use of fragmentation within that BA.	Consider adding "to another HE STA" at the end of the cited text.	2017/1/9 9:42
3123 Adrian Stephens	225	1 9.4.2.200	69	28	T	Y	69.28 9.4.2.200	802.11ah defines the TWT element as extensible. .11ax indicates that the body of the element can be repeated for Broadcast, and presumably relies on the Length field to determine the number of such repeats. These are incompatible.	Change the element ID definition to indicate it is not extensible, or add a count subfield in the Control field.	2017/1/9 9:42
3124 Adrian Stephens	225	1 8.4.2.218.1	76	8	T	Y	76.08 8.4.2.218.1	At 67.16, the HE Capabilities element is defined to be extensible. However at 76.08, the parsing of the PPE Thresholds field presumably relies on the Length field. These are incompatible.	Either add a count field for the PPE Thresholds in the frame format, or declare at 67.16 that the element is not extensible.	2017/1/9 9:42
3125 Adrian Stephens	225	1	78	3	T	N	78.03	Table 9-262 needs a real header row	Turn header row into a framemaker table header row.	2017/1/9 9:42
3126 Adrian Stephens	225	1	79	42	T	Y	79.42	The Maximum AMPDU Length Exponent field needs definition	Add one	2017/1/9 9:42
3127 Adrian Stephens	225	1	93	26	E	N	93.26	Lenght - typo	->Length	2017/1/9 9:42
3128 Adrian Stephens	225	1	67	30	T	Y	67.30	There are no element ID definitions in Table 9-77 for the BSS Color Change ... element and the three Quite Time elements.	Add them.	2017/1/9 9:42

3129	Adrian Stephens	225	1 9.4.2.223	96	24	T	Y	96.24 9.4.2.223	"The Vendor Specific Service ID field contains a public unique identifier assigned by the IEEE." Oh no it doesn't. The IEEE doesn't assign anything. The IEEE registration authority assigns various things like OUIs and CIDs - none of which are 2 octets. (OK, they do provide 2 octet EtherTypes, but there's no way they are going to use that resource for this purpose.)	Remove cited sentence here and wherever it occurs. Add sentence mapping how a value provided by the IEEE Registration Authority is mapped into this field. Define which of the namespaces provided by the IEEE Registration Authority can be used for this purpose.		2017/1/9 9:42
3130	Adrian Stephens	225	1	99	22	T	Y	99.22	The frame formats for the new L3 FRAG frames is not defined.	Add a subclause per new Block Ack frame type describing its format.		2017/1/9 9:42
3131	Adrian Stephens	225	1	99	13	E	Y	99.13	"L3 FRAG DELBA" - gratuitous abbreviation & gratuitous shouting Unnecessary abbreviation obscures meaning and encourages inconsistency. Shouting is just BAD MNNRS.	Replace "FRAG" with "Fragmentation" here and globally.		2017/1/9 9:42
3132	Adrian Stephens	225	1	101	26	T	Y	101.26	The additions to the Mesh Peering frames indicate that .11ax is intended to support mesh operation. But I don't see any changes to other mesh operation (sub-)clauses. For example, how does mesh CCAOP work with triggered frame sequences? What kinds of MU can mesh STAs do? How do the two types of mesh power saving work with .11ax OFDMA power-saving?	As HE is largely about an AP orchestrating its STAs, its model of efficient operation is fundamentally different from mesh. I propose that a statement be added in 4.3.14a that an HE STA is not a mesh STA. In that case remove the changes to 9.6.16. Alternatively define the subset of HE features (probably not including triggered operation, OFDMA, UL or DL MU) that can be used by mesh STAs and opdate the mesh (sub-)clauses to describe this operation.		2017/1/9 9:42
3133	Adrian Stephens	225	1	108	1	T	Y	108.01	"the conditions of various contexts" - tells me nada, zip, nuttin'	Delete sentence or make it say something useful.		2017/1/9 9:42
3134	Adrian Stephens	225	1	108	7	T	Y	108.07	"An HE MU PPDU does not carry more than one A-MPDU that contains one or more MPDUs soliciting an immediate response that is not carried in an HE trigger-based PPDU." Don't you just love the English language? Does the final "that" bind to the "HE MU PPDU", the "more than one A-MPDU" or the "one or more MPDUs"?	Make it unambiguous. For example, break similar conditions into a list. Break it into parts. Name conditions.		2017/1/9 9:42
3135	Adrian Stephens	225	1	110	7	E	N	110.07	"QoS Data frames with multiple TIDs which have no HT-immediate block ack agreement" - that/which confusion.	Request the editor reviews all use of "which" and corrects to "that" or ", which" depending on whether it is introducing a condition or a subsidiary clause. (OK, exception for <preposition> which, which can form a condition too).		2017/1/9 9:42
3136	Adrian Stephens	225	1 10.3.1	113	46	T	Y	113.46 10.3.1	"When HE duration-based RTS is disabled, " - how do we know?	Add reference to condition that describes how we can differentiate - e.g. in a MIB variable setting or a BSS operaton element. Ditto at line 50.		2017/1/9 9:42
3137	Adrian Stephens	225	1	114	5	E	N	114.05	The link to 10.3.2.8a is not a hyperlink.	OK, you can reject this comment, because we are notionally commenting on the printed draft. However, please take it from me that you will save yourself (and the REVmd editors) a heap of time to nip this in the bud now. Otherwise you will forever be correcting stale references. Regular expressions are your friend. 6) Search for (regexp) a) Table [0-9]- b) Figure [0-9]- c) Equation [0-9]- d) Clause [0-9] e) [0-9].[0-9].[0-9] etc...		2017/1/9 9:42

3138	Adrian Stephens	225	1 10.12	128	6	T	Y	128.06 10.12	"when the recipient has not indicated support forreception of fragmented A-MSDUs" This is not a well defined term, and occurs in normative text.	Specify the conditions in terms of mib values or on-the-air signalling.	2017/1/9 9:42
3139	Adrian Stephens	225	1	129	23	E	N	129.23	"one or more immediate response" - gramma. And granpa too.	response->responses	2017/1/9 9:42
3140	Adrian Stephens	225	1	149	10	E	Y	149.10	"The use of HCCA and TSPEC are banned at HE STAs." Multiple problems with this. - passive voice and unusual terminology.	Replace with "An HE STA shall not request the use of HCCA, nor shall it respond with data to a QoS CF-Poll frame. The STA shall not generate TXOP Request frames, nor shall it transmit TXOP Response frames." Note in the case of an HE AP with non-HE "clients", not responding to TXOP requets makes it non-QoS STA compliant. And you might want to allow an HE STA associated with a non-HE BSS to use TXOP requests.	2017/1/9 9:42
3141	Adrian Stephens	225	1	149	11	G	N	149.11	The HE MAC introduction would benefit from an explanation of the relationship of this clause to Clauses 10-11.	Add a more general description. For example you might state that an HE STA that supports a feature described in 27, supports that form of the feature if the feature is also described in Clause 10 or 11.	2017/1/9 9:42
3142	Adrian Stephens	225	1	170	26	G	N	170.26	"A NAV is considered in virtual CS" - awkward	"A non-zero value of NAV indicates virtual CS busy" or similar	2017/1/9 9:42

3151	Ahmadreza Hedayat	225	1 9.2.4.1.8	19	40	T	Y	19.40 9.2.4.1.8	This setnece is not clear and needs rewritting: "An HE AP indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Info field of frames it transmits". A STA indicates that it can set a bit to 1 by setting another bit to 1?	As in the comment	2017/1/9 9:42
3152	Ahmadreza Hedayat	225	1 9.2.4.1.9	19	49	T	Y	19.49 9.2.4.1.9	This setnece is not clear and needs rewritting: "An HE TDLS peer STA indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Capability element it transmits."	As in the comment	2017/1/9 9:42
3153	Ahmadreza Hedayat	225	1 9.2.4.6.4.2	24	21	T	Y	24.21 9.2.4.6.4.2	In 28.3.14.2, instead of TRSSI, Target_{RSSI} is used. Suggest to use the same notation here and there.	As in the comment	2017/1/9 9:42

3154	Ahmadreza Hedayat	225	1 9.2.4.6.4.4	25	5	T	Y	25.05 9.2.4.6.4.4	Need to specify the suggested NSS/MCS is for what bandwidth (if 20/40/80/160 MHz) and what specific RU.	As in the comment	2017/1/9 9:42
3155	Ahmadreza Hedayat	225	1 9.2.4.6.4.6	27	15	T	Y	27.15 9.2.4.6.4.6	Why there is a 2-bit rsereved subfield in UL power headroom? If it is for the purpose of byte-alignment, then need to consider that there is a Control ID of 4 bits for the UL power headroom, leading to total of 12 bits.	Either remove the reserved bits, or update the reserved subfield for what it was intended for.	2017/1/9 9:42
3156	Ahmadreza Hedayat	225	1 9.2.4.6.4.8	28	58	T	Y	28.58 9.2.4.6.4.8	Why there is a 6-bit rsereved subfield in RDP? If it is for the purpose of byte-alignment, then need to consider that there is a Control ID of 4 bits for RDP, leading to total of 10 bits.	Either remove the reserved bits, or update the reserved subfield for what it was intended for.	2017/1/9 9:42
3157	Ahmadreza Hedayat	225	1 9.2.4.6.4.7	27	45	T	Y	27.45 9.2.4.6.4.7	Need to specify whether the BQR is reported based on PD or ED, or e.g. current OBSS-PD or its min defalut value etc.	Specify for what thershold and for what type of channel sensing the BQR report is mesured and reported.	2017/1/9 9:42
3158	Ahmadreza Hedayat	225	1 9.2.4.6.4.7	27	64	T	Y	27.64 9.2.4.6.4.7	The BQR could help both UL MU and DL MU, so the following need to be revised: "Bandwidth Query Report used for bandwidth query report operation to assist DL HE MU transmission"	"Bandwidth Query Report used for bandwidth query report operation to assist DL HE MU transmission and scheduling of UL MU transmission"	2017/1/9 9:42
3159	Ahmadreza Hedayat	225	1 9.2.4.6.4.7	28	6	T	Y	28.06 9.2.4.6.4.7	Table 9-18d is too verbose. The content of this table can be described in a simpler way such as: "Set B_i to 1 if the i_th lower frequency 20MHz channel is available, set to 0 if the 20MHz channel is not available or if its channel availability is not measured".	Suggest to use a simpler description of the content of this table	2017/1/9 9:42
3160	Ahmadreza Hedayat	225	1 9.2.4.6.4.8	28	58	T	Y	28.58 9.2.4.6.4.8	In HE, a STA may grant a RD to its AP and the AP may use it to schedule UL MU transmission, which may include the STA or not. So there should be additional indications where a STA can indicate whether RD grant shall not be used for UL MU transmission, and if so whether the UL MU transmissions shall include the STA (i.e. the AP shall serve the STA during UL MU).	As in the comment	2017/1/9 9:42
3161	Ahmadreza Hedayat	225	1 9.3.1.9.1	34	28	T	Y	34.28 9.3.1.9.1	It is not clear why an AP can set the RA to the broadcast address in this case: "An HE AP that transmits a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields sets the RA field to the address of the recipient STA that requested the Block Ack or to the broadcast address." It seems that setting the RA to "the address of the recipient STA that requested the Block Ack" helps unintended STAs in not unnecessarily process the MBA.	As in the comment	2017/1/9 9:42
3162	Ahmadreza Hedayat	225	1 9.3.1.9.7	38	54	T	Y	38.54 9.3.1.9.7	The content of the third colum of the last row of Table 9-24b seems strange; "N/A" is "Not present". Either set both either to "N/A" or set "Block Ack Bitmap" to "Not prsent".	As in the comment	2017/1/9 9:42
3163	Ahmadreza Hedayat	225	1 9.3.1.23	41	65	T	Y	41.65 9.3.1.23	Looks like this sentence needs more description for the case of a multi-BSSID AP: "The TA field value is the address of the STA transmitting the Trigger frame."	Describe what address a multi-BSSID AP shall set this value to when the AP addresses STAs from one/several BSS	2017/1/9 9:42
3164	Ahmadreza Hedayat	225	1 9.3.1.23	46	6	T	Y	46.06 9.3.1.23	Table 9-25f and the following description is unnecessarily verbose. It'd be more strightforward if similar to the tables 28-3, 28-4, and 28-5 the value of B19-B13 is associated with a set of tone indices.	Follow the same principle as clause 28 (HE PHY) and replace this table and the following description with a strighforward table that maps the value of B19-B13 to a set of tone indices.	2017/1/9 9:42
3165	Ahmadreza Hedayat	225	1 9.3.1.23	47	7	T	Y	47.07 9.3.1.23	There is no descripton of the subfields within SS Allocation.	Add the description and encoding of the two subfields within SS Allocation subfiield.	2017/1/9 9:42
3166	Ahmadreza Hedayat	225	1 9.3.1.23.4	49	28	T	Y	49.28 9.3.1.23.4	This sentence needs more description for the case of a multi-BSSID AP: "NOTE--The TA field value is the address of the STA transmitting the MU-RTS frame."	Describe what address a multi-BSSID AP shall set this value to when the AP addresses STAs from one/several BSS	2017/1/9 9:42

3167	Ahmadreza Hedayat	225	1 9.3.1.23.1	48	23	T	Y	48.23 9.3.1.23.1	The subfields listed in the Trigger-dependent User Info are all the attributes that are relevent to all the STAs in a Trigger frame. For instance the MPDU MU Spacing factor would be applicable to all STAs within a Triger frame equally and there would be no logic for an AP to set this value differently across the STAs. Similarly the TID Aggregation limit; if AP wishes to establish a TID limit would better to do it for all STAs. Also, all the discussions in the TGax related to the AC Preference Level and Preferred AC where related to such preference being established for all teh STAs with a Trigger frame ... There is little benefit to have these subfields in the User Info and better if these subfields appear in a Trigger -dependent Common Info.	As in the comment		2017/1/9 9:42
3168	Ahmadreza Hedayat	225	1 9.3.1.23.3	49	60	T	Y	49.60 9.3.1.23.3	Missing the setting of Trigger Type.	Add: "The Trigger Type subfield is set to 2 to indicate MU-BAR variant."		2017/1/9 9:42

"A non-AP STA that is the recipient, within an HE MU PPDU, of a QoS Data frame or QoS Null frame that solicits an immediate response with Ack Policy equal to MU Ack in the QoS Control field, of an MU-BAR frame, or GCR MU-BAR frame, ..."		2017/1/9 9:42

3185	Ahmadreza Hedayat	225	1 10.7.6.5.2	123	38	T	Y	123.38 10.7.6.5.2	Should DCM be included in this sentence, such that an AP transmits a <HE-MCS, NSS> tuple with DCM=1 when the tuple and DCM is supported by all the recipients etc? "An AP that transmits a Multi-STA BlockAck frame in a non-HT PPDU, HT PPDU, VHT PPDU or HE PPDU shall use a rate, HT-MCS, <VHT-MCS, NSS> tuple or <HE-MCS, NSS> tuple, respectively, that is supported by all the recipients."? Similarly P123L33.	Rewrite it to include DCM.		2017/1/9 9:42
3186	Ahmadreza Hedayat	225	1 10.9	127	22	T	Y	127.22 10.9	"A value of 1 in the Control ID subfield when the transmitting STA changes the receive operating mode, as described in 27.8 (Operating mode indication)."	"A value of 1 in the Control ID subfield when the transmitting STA changes the receive and/or transmit operating mode, as described in 27.8 (Operating mode indication)." or "A value of 1 in the Control ID subfield when the transmitting STA changes the operating mode, as described in 27.8 (Operating mode indication)."	2017/1/9 9:42
3187	Ahmadreza Hedayat	225	1 10.22.2.3	130	1	T	Y	130.01 10.22.2.3	Looks like regardless of receiving and ACK the STA resumes EDCAF backoff counter: "When an HE STA successfully receives the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter countdown. When an HE STA does not receive the corresponding acknowledgement frame in response to the MPDU sent in HE trigger based PPDU, the backoff for the associated EDCAF resumes the backoff counter count-down."	Rewrite. "An HE STA resumes the backoff counter countdown for the associated EDCAF after transmission of an MPDU in HE trigger based PPDU."	2017/1/9 9:42
3188	Ahmadreza Hedayat	225	1 10.22.2.8	133	28	T	Y	133.28 10.22.2.8	Also when the Duration value is non-zero, an HE STA may include frames that solicit an acknowledgment response frame but no other response frames.	"When the Duration field value in the MAC header of an HE trigger-based PPDU is set to 0, the HE trigger-based PPDU shall not include any frame that solicit a control response frame from the AP. When the Duration field value in the MAC header of an HE trigger-based PPDU is non-zero, the HE trigger-based PPDU shall not include any frame that solicit a control response frame from the AP other than Ack, Block-Ack, Multi-STA Block-Ack." Or similar to the language for an RD responder in 10.28.4 (P136L60 of 11ax D1.0): "An HE STA shall not transmit an MPDU (either individually or aggregated within an A-MPDU) in a trigger-based PPDU that is not one of the following frames: Ack, multi-STA BlockAck, QoS data, management"	2017/1/9 9:42
3189	Ahmadreza Hedayat	225	1 27.2.1	149	24	T	Y	149.24 27.2.1	Calrify the case where the STA has received a Color Change Ano. and color switch countdown is not over yet: "The RXVECTOR parameter BSS_COLOR in the received PPDU carrying the frame is the same as the BSS color announced by the AP to which the STA is associated"	As in the comment	2017/1/9 9:42
3190	Ahmadreza Hedayat	225	1 27.2.1	149	38	T	Y	149.38 27.2.1	Calrify the case where the STA has received a Color Change Ano. and color switch countdown is not over yet: "The value of RXVECTOR parameter PARTIAL_AID [5:8] in the received VHT PPDU with the RXVECTOR parameter GROUP_ID equal to 63 is the same as the partial BSS color announced by the AP to which the STA is associated when the Partial BSS Color field in the most recently received HE Operation element is 1."	As in the comment	2017/1/9 9:42

3191	Ahmadreza Hedayat	225	1 9.7.3	109	3	T	Y	109.03 9.7.3	There should be a restriction on aggregation of ACK/BA/M-BA for a STA with a Trigger frame that incudes a User Info for the same STA. Without this restriction, the STA might realize that it has to do a retransmission (from ACK/BA/..) and it has to do the retransmission a SIFS after the current PPDU that includes the ACK/BA and Trigger frames. Suggest to to modify the text in P110L47 third columnn to indicate that at most one of Basic Trigger frame or an ACK/BA/M-BA exists between two HE STAs.	As in the comment		2017/1/9 9:42
3192	Ahmadreza Hedayat	225	1 27.2.2	151	56	T	Y	151.56 27.2.2	This explanation that highlights the benefits of two-NAV setting is more useful to be at the beginning of 27.2.2, or under a general subclause at the beginning of 27.2.	As in the comment		2017/1/9 9:42
3193	Ahmadreza Hedayat	225	1 27.2.3	152	14	T	Y	152.14 27.2.3	The spec does not require an HE AP to send the MU EDCA Parameter set, hence an HE STA may have not received such set at all.	"An UL MU capable non-AP HE STA that receives a Basic Trigger frame that contains a Per User Info field with the AID of the STA, and that receives an immediate response from the AP for the transmitted Triggerbased PPDU, shall update its CWmin[AC], CWmax[AC], AIFSN[AC] and HEMUEDCATimer[AC] state variables to the values contained in the most recently received MU EDCA Parameter Set element sent by the AP to which the STA is associated, if any, for all the ACs from which QoS Data frames were transmitted in the HE trigger-based PPDU."		2017/1/9 9:42
3194	Ahmadreza Hedayat	225	1 27.2.3	152	19	T	Y	152.19 27.2.3	"Each HEMUEDCATimer[AC] shall uniformly count down to 0 when its value is nonzero."	"In an HE STA, each HEMUEDCATimer[AC] shall uniformly count down to 0 when its value is nonzero."		2017/1/9 9:42
3195	Ahmadreza Hedayat	225	1 27.9.1	190	11	T	Y	190.11 27.9.1	SR PPDU is not defined: "When the conditions specified in 27.9 (Spatial reuse operation) are met that allow the transmission of an SR PPDU, an HE STA may transmit an SR PPDU to either an HE STA or a non-HE STA."	Define SR PPDU. Or change SR PPDU to PPDU since there seems "SR" indicates no attributes of the PPDU and rather the channel access method for which the PPDU is being sent.		2017/1/9 9:42
3196	Ahmadreza Hedayat	225	1 27.9.1	190	22	T	Y	190.22 27.9.1	In "... not update its NAV timers based on frames carried in the PPDU ...", for consistency, it should be stated that the STA may not update its NAV based on TXOP field in the HE SIG-A if present	As in the comment		2017/1/9 9:42
3197	Ahmadreza Hedayat	225	1 27.9.1	192	4	T	Y	192.04 27.9.1	SR mode is not defined: "A STA can select an OBSS_PDlevel during its operation under SR mode." Also in P192L7.	Revise or define SR mode.		2017/1/9 9:42
3198	Ahmadreza Hedayat	225	1 27.9.1	191	62	T	Y	191.62 27.9.1	The relationship between OBSS_PD_min with OBSS_PD_min_default is not established. The spec needs to clarify what is the relationship between OBSS_PD_min with OBSS_PD_min_default.	As in the comment		2017/1/9 9:42
3199	Ahmadreza Hedayat	225	1 27.9.1	191	62	T	Y	191.62 27.9.1	The relationship between OBSS_PD_max with OBSS_PD_max_default is not established. The spec needs to clarify what is the relationship between OBSS_PD_max with OBSS_PD_max_default.	As in the comment		2017/1/9 9:42
3200	Ahmadreza Hedayat	225	1 27.9.1	191	1	T	Y	191.01 27.9.1	It is not clear from this clause whether the STA or the AP decides the value of OBSS_PD_min/OBSS_PD_max. Figure 27.6 shows the relationship of OBSS_PD_min and OBSS_PD_max relatively and it does not establish the values of OBSS_PD_min/OBSS_PD_max. The text later introduces OBSS_PD_min_default/OBSS_PD_max_default, but it does not clarify states whether and how an AP or a STA decides on OBSS_PD_min/OBSS_PD_max values.	Clarify whetehr and how a STA or an AP should choose the OBSS_PD_min/OBSS_PD_max values. State whether a non-AP STA shall obtain operating OBSS_PD_min and OBSS_PD_max from its associated AP.		2017/1/9 9:42

3201	Ahmadreza Hedayat	225	1 27.4.1	157	61	T	Y	157.61 27.4.1	Include GCR MU-BAR as well: "An HE STA that receives a BlockAckReq frame or a MU-BAR variant Trigger frame that contains a Compressed BlockAckReq variant in the User Info field addressed to the STA shall respond with a BlockAck frame as defined in 10.24.7 (HT-immediate block ack extensions) or a Multi-STA BlockAck frame as defined in 27.4 (Block acknowledgement).". Also similarly in P158L2: "An HE STA that receives a Multi-TID BlockAckReq frame or a MU-BAR variant Trigger frame that contains a Multi-TID BlockAckReq variant in the User Info field addressed to the STA shall respond with a Multi-STA BlockAck frame ..."	"An HE STA that receives a BlockAckReq frame, a MU-BAR variant Trigger frame that contains a Compressed BlockAckReq variant in the User Info field addressed to the STA, or a GCR MU-BAR variant Trigger frame that contains a Compressed BlockAckReq variant in the Common Info field shall respond with a BlockAck frame as defined in 10.24.7 (HT-immediate block ack extensions) or a Multi-STA BlockAck frame as defined in 27.4 (Block acknowledgement)," and for P158L2: "An HE STA that receives a Multi-TID BlockAckReq frame, a MU-BAR variant Trigger frame that contains a Multi-TID BlockAckReq variant in the User Info field addressed to the STA, or a GCR MU-BAR variant Trigger frame that contains a Multi-TID BlockAckReq variant in the Common Info field shall respond with a Multi-STA	2017/1/9 9:42

3213	Ahmadreza Hedayat	225	1 27.4	161	10	T	Y	161.10 27.4	Both S-MPDU and single-MPDU are used in this clause (P162L10, P161L56, etc). Suggest to use S-MPDU throughout this clause.	As in the comment	2017/1/9 9:42
3214	Ahmadreza Hedayat	225	1 27.4.4.5	162	20	T	Y	162.20 27.4.4.5	"The control response frames for each STA shall be sent in the allocated RU that is identified by the AID of each STA." This is not clear; what is the relation between "allocated RU" and "AID of a STA"? Also there would be one control response frame for each STA, so it should be "The Control response frame for each STA ..."	As in the comment	2017/1/9 9:42
3215	Ahmadreza Hedayat	225	1 27.5.2.6	172	33	T	Y	172.33 27.5.2.6	Identfying each RU for RA by a subfield with AID12=0 is too redundant particularly considering tha 5-byte (out of 6-byte) User Info would practically be the same for all RA RUs. Suggest to allow indication of multiple RA RUs using a single Per-User Info. "An RU for random access shall be identified by an AID12 subfield equal to 0 contained in a User Info field of a Trigger frame."	As in the comment	2017/1/9 9:42
3216	Ahmadreza Hedayat	225	1 9.3.1.23.1	48	20	T	Y	48.20 9.3.1.23.1	Allow a way to indicate the number of RA RUs available in a Trigger frame within the Common-Info field. This helps a STA's implementation/operation.	E.g. add a Trigger-dependent Common Info field for the Basic Trigger frame with a subfield that indicated the number of RA RUs.	2017/1/9 9:42
3217	Ahmadreza Hedayat	225	1 27.8.3	189	18	T	Y	189.18 27.8.3	Should there be a similar sentence for TOM as this sentence from ROM 27.8.2: "The ROM indication allows the OMI initiator to adapt the maximum operating channel width and/or the maximum number of spatial streams it can receive from the OMI responder."	As in the comment	2017/1/9 9:42

3218	Ahmadreza Hedayat	225	1 27.8.2	188	60	T	Y	188.60 27.8.2	"When the OMI initiator changes an OMI parameter from lower to higher, it should make the change for that parameter either after ACK Timeout has expired or after receiving the immediate acknowledgement from the OMI responder." Does an OMI initiator has to wait per this clause? Or if it can perform the transition from lower to higher within a SIFS it should be allowed to do so.	As in the comment		2017/1/9 9:42
3219	Ahmadreza Hedayat	225	1 27.8.2	189	1	T	Y	189.01 27.8.2	There should be a distiction between higher-to-lower vs lower-to-higher BW/SS change for this sentence: "If an OMI mode change is reported during a TXOP then the change should occur at least after that TXOP."	As in the comment		2017/1/9 9:42
3220	Ahmadreza Hedayat	225	1 27.8.2	189	8	T	Y	189.08 27.8.2	Needs rewrtting: "After transmitting the acknowledgement frame immediate response immediate acknowledgement for the frame containing the OMI A-Control field, ..."	"After transmitting the acknowledgement frame immediate response for the frame containing the OMI A-Control field, ..."?		2017/1/9 9:42
3221	Ahmadreza Hedayat	225	1 27.8.2	189	54	T	Y	189.54 27.8.2	" Shall indicate a channel width in the RU Allocation subfield of the Per User Info field of a Trigger frame, containing the AID of the OMI initiator, that is less than or equal to the value specified in the Channel Width subfield of the OMI A-Control field received by the OMI initiator". The relationship between the Channel Width subfield and the RU Allocation subfield should be specified more percisely.	"Shall indicate a channel width in the RU Allocation subfield of the Per User Info field of a Trigger frame, containing the AID of the OMI initiator, that is within the bandwidth specified by the Channel Width subfield of the OMI A-Control field received by the OMI initiator"		2017/1/9 9:42
3222	Ahmadreza Hedayat	225	1 27.9.2.1	190	30	T	Y	190.30 27.9.2.1	There should be an exception for response frames (e.g. CTS, ACK, and BA etc) here. Otherwise a STA ignores an OBSS TXOP whose intended recipient happens to be nearby, e.g. within -62dBm or -72dBm reach. This causes significant interference to the OBSS recipient which could have been ignored if response frames where excluded from OBSS-PD rule.	Suggest to add exceptions for any response frame such as CTS, ACK, BA etc. The exception could be similar to the currently-listed exceptions for Public Action frames.		2017/1/9 9:42
3223	Ahmadreza Hedayat	225	1 27.5.1.2	163	3	T	Y	163.03 27.5.1.2	It'd be worthwhile to clarify the restrictions on group-addressed MPDUs across RUs; e.g, only one RU can carry MPDUs with broadcast address, and at most one RU for a given group-address ID etc. "The Type and Subtype subfields in the Frame Control field and address type (individually addressed or group addressed) of MPDUs may be different across A-MPDUs in different RUs within a same HE MU PPDU."	As in the comment		2017/1/9 9:42
3224	Ahmadreza Hedayat	225	1 27.5.1.2	163	43	T	Y	163.43 27.5.1.2	If a STA gain access via RA and sends BQR then it's an unsolicied BQR and should be gathered in the upper clause P163L26: "... the STA shall follow the rules defined in 27.5.2.6 (UL OFDMA-based random access) to gain access to a random RU and generate the HE trigger-based PPDU when the Trigger frame contains one or more random RU(s)."	As in the comment		2017/1/9 9:42
3225	Ahmadreza Hedayat	225	1 27.5.2.2.2	167	15	T	Y	167.15 27.5.2.2.2	"The AP may assign any value defined in Table 9-25i (Preferred AC subfield encoding) in the AC Preference Level subfield in the Trigger Dependent User Info field to 1 for an HE STA and identified by the AID12 subfield of the User Info field of a Basic Trigger frame." This paragraph needs rewritting; the Preferred AC subfield (table 9-25i) is a 2-bit subfield and the doesn't related to AC Preference Level subfield with 1 bit.	As in the comment		2017/1/9 9:42
3226	Ahmadreza Hedayat	225	1 27.5.2.2.2	167	15	T	Y	167.15 27.5.2.2.2	There should be a behavior for the AP in what value to set for the Preferred AC subfield, and the Preferred AC subfield should be set according to the winning AC etc.	As in the comment		2017/1/9 9:42

3227	Ahmadreza Hedayat	225	1 27.5.2.2.2	167	38	T	Y	167.38 27.5.2.2.2	These sentence "An AP may use any AC for sending a PPDU that contains only Trigger frames." needs to be combined with the following paragraph: "An AP may send the Trigger frame using any access category and follows the rules defined in 10.22.2 (HCF contention based channel access (EDCA)) for obtaining and sharing the TXOP."	As in the comment		2017/1/9 9:42
3228	Ahmadreza Hedayat	225	1 27.5.2.2.2	166	49	T	Y	166.49 27.5.2.2.2	Better to refer to "... HE variant HT Control fields with an UL MU Response Scheduling A-Control subfield" as "UL MU Response Scheduling A-Control field" as in the rest of 27.5.	As in the comment		2017/1/9 9:42
3229	Ahmadreza Hedayat	225	1 27.5.2.3	167	58	T	Y	167.58 27.5.2.3	Cover the case of random access and AID=0 here as well: "If the STA is not associated with the AP, TBD."	As in the comment		2017/1/9 9:42
3230	Ahmadreza Hedayat	225	1 27.5.2.3	167	58	T	Y	167.58 27.5.2.3	"If the STA is not associated with the AP, TBD." Specify the TBD.	As in the comment		2017/1/9 9:42
3231	Ahmadreza Hedayat	225	1 27.5.2.4	170	61	T	Y	170.61 27.5.2.4	By "The AP shall set the CS Required subfield to 1 except when all solicited HE trigger-based PPDUs contain an Ack or BlockAck frame and the Length subfield in the Common Info field of the Trigger frame is less than or equal to 418.", only when all RUs seek a response frame CS=0, leading to the cases where one or more RUs (but not all) seel a response frame and the AP would set CS=1; i.e. those STAs sending response frame have to sense the medium for transmitting their response frame. This is a departure from legacy behavior where STAs sende response frames (except CTS) without CS. Need to fix this either by having individual CS or by defining the AP behvior to avoid such cases.	As in the comment		2017/1/9 9:42
3232	Ahmadreza Hedayat	225	1 27.5.2.3	169	56	T	Y	169.56 27.5.2.3	Add the BQRP and GCR MU-BAR: "If the Trigger Type field of a Trigger frame is not Basic Trigger, then the STA shall include in the response A-MPDU at least one MPDU of the required type. A Beamforming Report Poll Trigger frame solicits HE Compressed Beamforming Feedback frames (see 27.6 (HE sounding protocol), an MU BAR Trigger frame solicits BlockAck frames (see 27.4 (Block acknowledgement)), and a BSRP Trigger frame solicits QoS Null frames (see 27.5.2.5 (HE buffer status feedback operation for UL MU). The MPDUs included in the response shall not solicit a response."	"If the Trigger Type field of a Trigger frame is not Basic Trigger, then the STA shall include in the response A-MPDU at least one MPDU of the required type. A Beamforming Report Poll Trigger frame solicits HE Compressed Beamforming Feedback frames (see 27.6 (HE sounding protocol), an MU BAR Trigger frame or a GCR MU-BAR frame solicits BlockAck frames (see 27.4 (Block acknowledgement)), a BSRP Trigger frame solicits QoS Null frames (see 27.5.2.5 (HE buffer status feedback operation for UL MU), and a BQRP Trigger frame solicits QoS Null frames. The MPDUs included in the response shall not solicit a response."	2017/1/9 9:42
3233	Ahmadreza Hedayat	225	1 27.5.2.3	170	1	T	Y	170.01 27.5.2.3	Is there a required type frame for Basic Trigger frame? If so then need to clarify it here ... "If the Trigger Type field of the soliciting Trigger frame is Basic Trigger and the STA does not have a frame of the required type, the STA shall either not transmit a response or transmit one or more QoS Null frames."	As in the comment		2017/1/9 9:42
3234	Ahmadreza Hedayat	225	1 27.5.2.3	170	9	T	Y	170.09 27.5.2.3	This needs to be revised to consider the role of Preferred AC subfield of a Basic Trigger frame: "A STA that is an intended receiver of a Basic Trigger frame may include MPDUs with any TID in the HE trigger-based PPDU sent in response to a Trigger frame subject the rules of 27.10.4 (AMPDU with multiple TIDs)."	As in the comment		2017/1/9 9:42

3235	Ahmadreza Hedayat	225	1 27.5.2.4	170	50	T	Y	170.50 27.5.2.4	If any of the 20MHz channels containing the allocated RU is not ailde then the STA shall not sent the TB PPDU; "... if the STA detects that the 20 MHz channels containing the allocated RUs are not all idle, then the STA shall not transmit anything in the allocated RUs."	" ... if the STA detects that any of the 20 MHz channels containing the allocated RUs is not all idle, then the STA shall not transmit anything in the allocated RUs."	2017/1/9 9:42
3236	Ahmadreza Hedayat	225	1 27.5.2.6	172	35	T	Y	172.35 27.5.2.6	In D1.0, random access RUs are only allowed to be within a Basic Trigger frame; "An HE AP may transmit a Basic Trigger frame or a BSRP Trigger frame that contains one or more RUs for random access."	Either remove the reference to BSRP, or update the spec so that RA RUs can be included withion a BSRP Trigger frame (and if so then any other variant should be included?)	2017/1/9 9:42
3237	Ahmadreza Hedayat	225	1 27.5.2.6.2	173	30	T	Y	173.30 27.5.2.6.2	"For an initial HE trigger-based PPDU transmission or following a successful HE trigger-based PPDU transmission, when an HE STA obtains the value of OCWmin from the HE AP indicated in the RAPS element, it shall set the value of OCW to the OCWmin and shall initialize its OBO counter to a random value in the range of 0 and OCWmin."	"For an initial HE trigger-based PPDU transmission or following a successful HE trigger-based PPDU transmission, an HE STA shall set the value of OCW to the OCWmin obtained from the most recent OCWmin indicated in the RAPS element from the HE AP, and shall initialize its OBO counter to a random value in the range of 0 and OCWmin."	2017/1/9 9:42
3238	Ahmadreza Hedayat	225	1 27.5.2.6.2	173	49	T	Y	173.49 27.5.2.6.2	This is not the best use of RA RUs: "If the selected RU is considered busy as a result of either physical or virtual carrier sensing, then the HE STA shall not transmit its HE trigger-based PPDU in the randomly selected RU and it randomly selects any one of the RUs that are assigned to AID value 0 in the subsequent Trigger frame." It'd be better if the spec let the STA to pick another RA RU from the same Trigger frame (instead of referring to the next Trigger frame).	As in the comment	2017/1/9 9:42
3239	Ahmadreza Hedayat	225	1 27.5.2.6.2	174	1	T	Y	174.01 27.5.2.6.2	The STA may seek to retransmit the frame via other access methods (and not to seek RA again); "If a STA transmits an HE trigger-based PPDU that solicits an immediate response in a random access RU and the expected response is not received, the transmission is considered unsuccessful and the STA invokes the UL OFDMA-based random access retransmission procedure as defined in 27.5.2.6.3 (Retransmission procedure for random access)."	"... the STA invokes the UL OFDMA-based random access retransmission procedure as defined in 27.5.2.6.3 (Retransmission procedure for random access), if the STA decides to retransmit during an upcoming random access opportunity."	2017/1/9 9:42
3240	Albert Petrick	225	1 27.7.4	186	8	T	Y	186.08 27.7.4	TWT scheduling STA and TWT scheduled STA are described. The text states "Either STA can tear down an established negotiation...." It's not clear if "Either STA" means the scheduling STA and the scheduled STA.	Rewrite sentence for clarity and expand on "Either STA"	2017/1/9 9:42
3241	Albert Petrick	225	1 10.13.2	128	42	T	Y	128.42 10.13.2	HE Capabilities Element clause number incorrect	Change clause number to "9.4.2.218"	2017/1/9 9:42
3242	Albert Petrick	225	1 28.5	373	28	E	Y	373.28 28.5	Units "Mbps" in Table 28-47 through Tables 28-102 not consistent with units "Mb/s" in text, tables and figures in IEEE 802.11-2016.	Change "Mbps" to "Mb/s" in Tables 28-47 through Table 28-102. There are 54 tables that need updating!	2017/1/9 9:42
3243	Albert Petrick	225	1 28.3.12	338	43	E	Y	338.43 28.3.12	Figure 28-35 to small to read or print	Redraw figure use larger text font and align across page	2017/1/9 9:42

Add bit "B25:" in Definition column before the word "Indicates" Add bits "B25:" in Encoding column before the word "If"	2017/1/9 9:42
3285	Albert Petrick	225	1 9.4.2.218.3	85	20	T	Y	85.20 9.4.2.218.3		Add clarity and call out bit positions in Table 9-262aa for subfield "Number Of Sounding Dimensions For < 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B46-B48 in Definition column Change to: "B46-B48 represents the beamformer's capability.....for an HE NDP."	2017/1/9 9:42
3286	Albert Petrick	225	1 9.4.2.218.3	82	15	E	Y	82.15 9.4.2.218.3		Table 9-262aa, "Definition column" missing period at end of sentence	Fix. Add period after 2.4 GHz.	2017/1/9 9:42
3287	Albert Petrick	225	1		2	T	Y			.11ax D1.0 makes reference to IEEE P802.11REVmc-D8.0, which is essentially IEEE P802.11-2016 (the new rollup baseline standard) and soon to be published in 2017. Once it is published, P802.11REVmc-D8.0 will be removed from the IEEE 802.11 working group members area on the website and will not be available in public domain on the IEEE 802.11 work group document server for public use. All references in .11ax D1.0 to clauses in the baseline standard should be made to IEEE P802.11-2016 and not to IEEE P802.11REVmc-D8.0.	Remove IEEE P802.11REVmc(TM)/D8.0 and replace with IEEE P802.11-2016	2017/1/9 9:42
3288	Albert Petrick	225	1			G	Y			The title of the column headers in ALL of the tables need to be formatted; 1) center text in title. 2) lock 1st row of table to continue on next page.	Fix and format ALL tables headers (1st row) and enable 1st row to roll-over on next page when tables don't fit on current page.	2017/1/9 9:42
3289	Albert Petrick	225	1			G	Y			Throughout .11ax D1.0 there are references where some bits have hyphens and others do not e.g., 1 bit, and 1-bit . The text, Tables and Figures should be consistent using "hyphens" as used in IEEE 802.11-2016.	Fix. Include hyphens in text, Tables and Figures similar to the format utilized in baseline IEEE 802.11-2016	2017/1/9 9:42
3290	Albert Petrick	225	1			G	Y			Throughout .11ax D1.0 cross-reference links in text to tables, figures, equations, clauses and sub-clauses either broken, and non-existent.	Fix cross-reference links in text, tables, figures, equations and external links	2017/1/9 9:42

3291	Albert Petrick	225	1			G	Y			Throughout .11ax D1.0 the alignment of the terms in equations and spacing between paragraph text and equations need to be centered on the pages.	Fix spacing of terms in equations and space of text between equations.	2017/1/9 9:42
3292	Albert Petrick	225	1 3.4	7	13	E	Y	7.13 3.4		hyphen error -- hyphen between the words frequency and division "Orthogonal frequency-division multiple access" The use of hyphens should be consistent with what is used in IEEE 802.11-2016.	Remove hyphen after "frequency"	2017/1/9 9:42
3293	Albert Petrick	225	1 4.3.14a	9	33	T	Y	9.33 4.3.14a		"RU" not defined	Add definition for "RU" in clause 3.4 Definitions, acronyms, and abbreviations	2017/1/9 9:42
3294	Albert Petrick	225	1 6.3.4.2.2	11		E	Y	11.00 6.3.4.2.2		primitive parameter misaligned	Fix alignment	2017/1/9 9:42
3295	Albert Petrick	225	1 6.3.7.4.2	12	25	E	Y	12.25 6.3.7.4.2		primitive parameter misaligned	Fix alignment	2017/1/9 9:42
3296	Albert Petrick	225	1 27.4.2	158	30	E	Y	158.30 27.4.2		multi-TID not capitalized	change "multi-TID" to "Multi-TID"	2017/1/9 9:42
3297	Albert Petrick	225	1 27.4.2	158	51	E	Y	158.51 27.4.2		multi-TID not capitalized	change "multi-TID" to "Multi-TID"	2017/1/9 9:42
3298	Albert Petrick	225	1 27.4.4	160	160	E	Y	161.60 27.4.4		multi-TID not capitalized	change "multi-TID" to "Multi-TID"	2017/1/9 9:42
3299	Albert Petrick	225	1 27.4.4.1	160	45	E	Y	160.45 27.4.4.1		multi-TID not capitalized	change "multi-TID" to "Multi-TID"	2017/1/9 9:42
3300	Albert Petrick	225	1			E	Y			multi-TID not capitalized	Make global change in .11ax D1.0: change "multi-TID to Multi-TID"	2017/1/9 9:42
3301	Albert Petrick	225	1 25.5.2.3	167	69	T	Y	167.69 25.5.2.3		"TBD" is a placeholder and not allowed in drafts in WG letter ballots as per IEEE 802.11 WG policies.	Remove TBD	2017/1/9 9:42
3302	Albert Petrick	225	1 27.3.3.4	154	39	T	Y	154.39 27.3.3.4		The "L3 Frag BA Request frame", "L3 Frag BA Response" and "BA Response frame" are not defined and ambiguous. There are no figures, tables, text or timing flow between Requests and Responses.	Define "L3 Frag BA Request frame" and "L3 Frag BA Response", BA Response frames, add figures, tables and describe a procedure for L3 dynamic fragmentation.	2017/1/9 9:42
3303	Albert Petrick	225	1 27.6.2	177	19	T	Y	177.19 27.6.2		Text in sentence references table "Table YY-1". Table doesn't exist in .11ax D1.0 or in IEEE 802.11-2016	Fix reference and add table or delete sentence referencing table	2017/1/9 9:42
3304	Albert Petrick	225	1 27.6.2	177	43	T	Y	177.43 27.6.2		Figure 27-3 Example of sounding protocol not correct.	Re-draw diagram. Fix sounding protocol diagram to illustrate alignment of SIFS timing as beamformee from beamformer.	2017/1/9 9:42
3305	Albert Petrick	225	1 27.6.2	178	6	T	Y	178.06 27.6.2		Figure 27-4 Example of sounding protocol not correct.	Re-draw diagram. Fix sounding protocol diagram to illustrate alignment of SIFS timing, identify the beamformee "1 thru n" and spell out the word "TRIG" in UL TRIG PPDU	2017/1/9 9:42
3306	Albert Petrick	225	1 27.6.2	178	7	T	Y	178.07 27.6.2		"CSI" in Figure 27-4 is not defined or referenced in text	Expand on the term "CSI" and describe this term in the text with relationship with HE beamformee.	2017/1/9 9:42
3307	Albert Petrick	225	1 27.16.1	204	56	E	Y	204.56 27.16.1		Sentence misaligned spacing	Left just "A STA fro which do11HEOptionImplemented..... "	2017/1/9 9:42
3308	Albert Petrick	225	1 28.3.14.3	342	47	E	Y	342.47 28.3.14.3		Period missing at end of sentence	Add period at the end of sentence.	2017/1/9 9:42
3309	Albert Petrick	225	1 28.3.17.6.4	349	16	E	Y	349.16 28.3.17.6.4		Sentence misaligned spacing	left justify "issue a PHY-CCA.inidication(BUSY, {secondary40}),"	2017/1/9 9:42
3310	Albert Petrick	225	1 28.3.17.6.4	349	44	E	Y	349.44 28.3.17.6.4		Sentence misaligned spacing	left justify "PHYCCA. Indication(BUSY, {primary}),.....and"	2017/1/9 9:42
3311	Albert Petrick	225	1 28.3.17.6.4	349	27	E	Y	349.27 28.3.17.6.4		Sentence misaligned spacing	left justify "present and on of the ....or"	2017/1/9 9:42
3312	Albert Petrick	225	1 28.3.17.6.4	349	46	E	Y	349.46 28.3.17.6.4		Sentence misaligned spacing	Change "BUSY, {secondary40}}" to "BUSY,{secondary40}}"	2017/1/9 9:42
3313	Albert Petrick	225	1 28.3.17.6.4	349	21	E	Y	349.21 28.3.17.6.4		Sentence misaligned spacing	Change "max(-72 dBm, OBSS_PD)" to " "max (-72 dBm, OBSS_PD)"	2017/1/9 9:42
3314	Albert Petrick	225	1 28.3.18.2	353	62	T	Y	353.62 28.3.18.2		Spectral flatness procedure needs more clarity	Delete the sentence: "Demodulate the HE PPDUs .....procedure:" and place with the following sentence. " The HE PPDUs shall be demodulated using the following (or equivalent) procedure:"	2017/1/9 9:42
3315	Albert Petrick	225	1 28.4.3	372	48	T	Y	372.48 28.4.3		Table 28-46 - HE PHY characteristics lists the aPSDUMaxLength set to 6,500,631 octets. It's not clear in the table or text what assumptions were made and how the length is calculated.	Add a NOTE at the bottom of Table 28-46 stating the assumptions and the calculation (Eq.) for determining the PSDU maximum. E.g., 1024-QAM 5/6 rate coding rate, LDPC, 160 MHz channel bandwidth, 8 spatial streams, LDPC.	2017/1/9 9:42
3316	Albert Petrick	225	1 28.3.10.7.2	277	58	E	N	277.58 28.3.10.7.2		LDPC misspelled in Table 28-17	Change "LPDC" to "LDPC" in Bandwidth column of Table 28-17	2017/1/9 9:42
3317	Albert Petrick	225	1 28.3.6.4	250	43	T	Y	250.43 28.3.6.4		Four extra tones insertion; mapping not correct for Construction of L-SIG.	In f) Change "{-1, -1, -1, 1}" to {-1, -1, 1, 1}"	2017/1/9 9:42

3318	Albert Petrick	225	1 28.3.6.5	251	11	T	Y	251.11 28.3.6.5		Four extra tones insertion; mapping not correct for Construction of RL-SIG	In f) Change "{-1, -1, -1, 1}" to {-1, -1, 1, 1}"	2017/1/9 9:42
3319	Albert Petrick	225	1 9.3.1.23	45	11	T	Y	45.11 9.3.1.23		"Doppler subfield indicates a high doppler mode of transmission." Definition, clarification and technical details are not in .11axD1.0 with respect to the range of doppler spread and operating conditions triggering "high doppler mode". In Table 9-262aa pg. 83 "doppler procedure" defines 2-bits and references for "doppler" and makes reference to STAs using a "Doppler Procedure" for HE PPDUs transmissions. Critical technical details on the doppler procedure are lacking in .11axD1.0.	Either remove all references to Doppler in .11axD1.0 (text and in Table 9-262aa) including STA doppler support or add detailed technical content on Doppler Procedure for HE PPDU transmissions in support of clause of 9.3.1.23 and Table 9-262aa.	2017/1/9 9:42
3320	Albert Petrick	225	1 9.4.2.218.3	83	41	T	Y	83.41 9.4.2.218.3		Table 9-262aa defines HE-PHY Capabilities Information field. Doppler subfield makes reference to Doppler Procedure. There is no text on "Doppler procedure" procedure needs to be defined.	Add technical detail content or remove "Doppler subfield from Table 262aa	2017/1/9 9:42
3321	Albert Petrick	225	1 9.3.1.23	45	11	T	Y	45.11 9.3.1.23		Doppler is not defined in clause 3.4 of IEEE 802.11-2016 (802.11 REVmc D8.0)	Add "Doppler" definition in clause 3.4 Definitions, acronyms, and abbreviations	2017/1/9 9:42
3322	Albert Petrick	225	1 27.3.3.1	153	19	E	Y	153.19 27.3.3.1		Extra period	Remove extra period from the end of the sentence.	2017/1/9 9:42
3323	Albert Petrick	225	1 27.3.4.1	155	44	E	Y	155.44 27.3.4.1		Paragraph misaligned	left justify paragraph	2017/1/9 9:42
3324	Albert Petrick	225	1 27.5.2.5	171	43	E	Y	171.43 27.5.2.5		Extra parenthesis	Remove extra parenthesis at the end of sentence.	2017/1/9 9:42
3325	Albert Petrick	225	1 27.5.2.5	171	40	T	Y	171.40 27.5.2.5		"ACs (#2190, 2191)" are remaining CID placeholders and not part of draft .11ax D1.0	Remove references to CIDs #2190, and 2191	2017/1/9 9:42
3326	Albert Petrick	225	1 27.5.2.5	171	41	E	Y	171.41 27.5.2.5		Table number missing for Table 9-XX (Delta TID subfield encoding).	Add Table number 9-18c	2017/1/9 9:42
3327	Albert Petrick	225	1 9.3.1.22	42	7	E	Y	42.07 9.3.1.22		Figure 9-52d Common Info field B20-B21 has a spelling error for "GIAnd LTF Type"	Change "GIAnd" to "GI And"	2017/1/9 9:42
3328	Albert Petrick	225	1 9.4.2.218.1	76	2	E	Y	76.02 9.4.2.218.1		Extra period	Remove extra period from the end of sentence.	2017/1/9 9:42
3329	Albert Petrick	225	1 9.4.2.218.5	89	38	E	Y	89.38 9.4.2.218.5		Extra period	Remove extra period from the end of sentence.	2017/1/9 9:42
3330	Albert Petrick	225	1 9.4.2.218.5	89	13	E	Y	89.13 9.4.2.218.5		Bit positions B0 - Bn not labeled on Figure 9-589cp--PPE Thresholds Info field format	Update Figure 9-589cp with Bit positions B0-Bn for groups of 3 bits per PPET16 and PPET8 subfields.	2017/1/9 9:42
3331	Albert Petrick	225	1 10.3.2.8a.1	116	3	E	Y	116.03 10.3.2.8a.1		Extra period	Remove extra period from the end of sentence.	2017/1/9 9:42
3332	Albert Petrick	225	1 27.4.4.5	162	26	E	Y	162.26 27.4.4.5		Extra period	Remove extra period at the end of sentence after the word "context"	2017/1/9 9:42
3333	Albert Petrick	225	1 27.5.2.2.1	164	46	E	Y	164.46 27.5.2.2.1		Extra period	Remove extra period at the end of sentence after the word "allocation)"	2017/1/9 9:42
3334	Albert Petrick	225	1		2	T	Y		3287	.11ax D1.0 makes reference to IEEE P802.11REVmc-D8.0, which is essentially IEEE P802.11-2016 (the new rollup baseline standard) and soon to be published in 2017. Once it is published, P802.11REVmc-D8.0 will be removed from the IEEE 802.11 working group members area on the website and will not be available in public domain on the IEEE 802.11 work group document server for public use. All references in .11ax D1.0 to clauses in the baseline standard should be made to IEEE P802.11-2016 and not to IEEE P802.11REVmc-D8.0.	Remove IEEE P802.11REVmc(TM)/D8.0 and replace with IEEE P802.11-2016	2017/1/9 9:42
3335	Albert Petrick	225	1 27.5.2.2.1	164	53	E	Y	164.53 27.5.2.2.1		Period missing at end of sentence	Add period at end of sentence after the word "S-MPDUs))"	2017/1/9 9:42
3336	Albert Petrick	225	1			G	Y		3288	The title of the column headers in ALL of the tables need to be formatted; 1) center text in title. 2) lock 1st row of table to continue on next page.	Fix and format ALL tables headers (1st row) and enable 1st row to roll-over on next page when tables don't fit on current page.	2017/1/9 9:42
3337	Albert Petrick	225	1			G	Y		3289	Throughout .11ax D1.0 there are references where some bits have hyphens and others do not e.g., 1 bit, and 1-bit . The text, Tables and Figures should be consistent using "hyphens" as used in IEEE 802.11-2016.	Fix. Include hyphens in text, Tables and Figures similar to the format utilized in baseline IEEE 802.11-2016	2017/1/9 9:42
3338	Albert Petrick	225	1 27.5.2.2.1	164	56	E	Y	164.56 27.5.2.2.1		Period missing at end of sentence	Add period at end of sentence after the word "behavior))"	2017/1/9 9:42

3339 Albert Petrick	225	1			G	Y		3290	Throughout .11ax D1.0 cross-reference links in text to tables, figures, equations, clauses and sub-clauses either broken, and non-existent.	Fix cross-reference links in text, tables, figures, equations and external links	2017/1/9 9:42
3340 Albert Petrick	225	1			G	Y		3291	Throughout .11ax D1.0 the alignment of the terms in equations and spacing between paragraph text and equations need to be centered on the pages.	Fix spacing of terms in equations and space of text between equations.	2017/1/9 9:42
3341 Albert Petrick	225	1 3.4	7	13	E	Y	7.13 3.4	3292	hyphen error -- hyphen between the words frequency and division "Orthogonal frequency-division multiple access" The use of hyphens should be consistent with what is used in IEEE 802.11-2016.	Remove hyphen after "frequency"	2017/1/9 9:42
3342 Albert Petrick	225	1 27.5.2.2.1	164	59	E	Y	164.59 27.5.2.2.1		Period missing at end of sentence	Add period at end of sentence after the word "TIDs))"	2017/1/9 9:42
3343 Albert Petrick	225	1 4.3.14a	9	33	T	Y	9.33 4.3.14a	3293	"RU" not defined	Add definition for "RU" in clause 3.4 Definitions, acronyms, and abbreviations	2017/1/9 9:42

3551	Albert Petrick	225	1 9.4.1.64	64	18	T	Y	64.18 9.4.1.64	3439	Equation (9-2) is referenced in the text and in Table 9-76f HE MU Exclusive Beamforming Report information, and is not linked or referenced to any other documents. Equation (9-2) should be linked and referenced to its location IEEE 802.11-2016 (Rev D8.0) and clarified as a "Note" at the end of Table 9-76f.	Add note for equation 9-2 in text and/or add the following underlined text (without the underline) and reference link in Table 9-76f as a Note: "as defined in Equation (9-2) in clause 9.4.1.51 (MU Exclusive Beamforming Report Field)"	2017/1/9 9:42
3552	Albert Petrick	225	1 9.4.2.218.3	86	28	T	Y	86.28 9.4.2.218.3		Missing "Reserve" Subfield, and text for Definition and Encoding in Table 9-262aa. The Reserve subfield should correspond to the 7 bit positions B65 -B71 in Figure 9-589CI.	At the end of Table 9-262-aa. Add "Reserved" in Subfield column. Add text (see underlined text) "B65 - B71 (7-bits) are reserved." Encoding column leave blank.	2017/1/9 9:42
3553	Albert Petrick	225	1 9.4.1.64	64	30	T	Y	64.30 9.4.1.64	3440	Equation (9-2) reference in Table 9-76f calls out subcarrier k=scidx(0) and k=scidx(1). Equation 9-2 in IEEE 802.11-2016 (Rev D8.0) in clause 9.4.1.51 specifies k=sscidx(0) and k=sscidx(1) There appears to be an ambiguity in equation in 9-2 and with k=scidx(_)	Fix references for subcarrier k=scidx(0) and k=scidx(1) in Table 9-76f (lines 30-54) to match assumptions with equation 9-2 in clause 9.4.1.51 in IEEE 802.11-2016 (Rev D8.0)	2017/1/9 9:42
3554	Albert Petrick	225	1 9.4.2.218.3	86	31	T	Y	86.31 9.4.2.218.3		Class A STAs are declared "high capability devices" and class B STAs as "low capability devices" This is the only reference in .11axD1.0 to these terms. Class A and class B STAs are defined in sub-clause 28.3.14 (Transmit requirements for an HE trigger-based PPDU). Transmit power accuracy and RSSI measurement accuracy are discussed in detail e.g., Table 28-40. To eliminate ambiguities, "low and high capability devices" should be defined and referenced back to clause 28.3.14.	Add definition for "low and high capability" devices in clause 28.3.14, and add text reference back to clause 28.3.14. Add underline text (without the underline) to read: "Class A STAs are high capability devices and class B STAs are low capability devices as described in 28.3.14 (Transmit requirements for an HE trigger-based PPDU).	2017/1/9 9:42
3555	Albert Petrick	225	1 28.4.2	371	36	T	Y	371.36 28.4.2	3441	Clarify "aSignalExtension" referenced from Table 19-25	Add the following underlined text (without the underline): and is aSignalExtension (0us for 5 GHz band, 6us for 2.4 GHz band)	2017/1/9 9:42
3556	Albert Petrick	225	1 18.2	147	15	T	Y	147.15 18.2		The "Value" column in Table 18-1 (TXVECTOR parameters) is defined for the Parameter. For example, the "Value" for CBW20 or CBW40 are ambiguous. The description of these Values need additional clarification and a reference subclause, similar to those in Table 17-1 in subclause 17.2.2.1 of .11axD1.0, or Table 18-1, 18-3 in IEEE 802.11-2016, and IEEE 802.11-REVmc - D8.0.	Add text to describe what is meant by CBW20 or CBW40, Static or Dynamic in the Value column and provide reference subclauses.	2017/1/9 9:42
3557	Albert Petrick	225	1 28.4.2	371	39	E	Y	371.39 28.4.2	3443	Missing period	Add period at the end of sentence after "false"	2017/1/9 9:42
3558	Albert Petrick	225	1 18.2	147	15	T	Y	147.15 18.2		The "Value" column in Table 18-3 (RXVECTOR parameters) is defined for the Parameter. For example, the "Value" for CBW20 or CBW40 are ambiguous. The description of these Values need additional clarification and a reference subclause, similar to those in Table 18-3 in subclause 17.2.2.1 of .11axD1.0, or Tables 18-1, 18-3, in IEEE 802.11-2016, and IEEE 802.11-REVmc - D8.0.	Add text to describe what is meant by CBW20 or CBW40, Static or Dynamic in the Value column and provide reference subclauses.	2017/1/9 9:42
3559	Albert Petrick	225	1 9.2.5.2	32	1	E	Y	32.01 9.2.5.2	3444	Format error - sentence alignment	Sentence format needs to be left justified.	2017/1/9 9:42

3560	Albert Petrick	225	1 28.3.18.4.4	355	38	T	Y	355.38 28.3.18.4.4		The EVM for MCS7 (-27 dB) is based on the maximum tx power of MCS7. Clarification is needed why it is being used for BPSK...64-QAM as shown in Table 28-45. The EVM value was selected for UL OFDMA PPDUs. This should be noted or expanded in the text in clause 28.3.18.4.4	Add the following underlined text (without the underline) in the "Note" on line 40 in Table 28-45 as follows: "which EVM is test is conducted. "EVM of -27 dB, is used when the Tx Power is less than the maximum power of MCS7, and assists the AP in managing RUs for UL OFDMA PPDU transmissions."	2017/1/9 9:42
3561	Albert Petrick	225	1 9.3.1.9.1	34	12	T	Y	34.12 9.3.1.9.1	3446	In Figure 9-33 (BA Control Field) Bit (B5) in the Reserve sub-field is marked as deleted (strikethrough) as shown. The Reserved subfield now shows 7-bits (B6-B11). The text does not describe B5. Define B5 or correct Figure 9-33	Fix as commented	2017/1/9 9:42
3562	Albert Petrick	225	1 9.4.2.218.2	76	47	E	Y	76.47 9.4.2.218.2		In Figure 9-589ck - (HE MAC PHY Capabilities Information field format) subfield "Group Addressed Multi-STA BlockAck In DL MU Support" is mark as having 4-bits. This is not correct. There is 1-bit assigned (B24).	Change Bits "4" to "1" for subfield "Group Addressed Multi-STA BlockAck In DL MU Support" in Figure 9-589ck.	2017/1/9 9:42
3563	Albert Petrick	225	1 B.4.27.2	413	45	E	Y	413.45 B.4.27.2	3447	Numbering / letter (5GHz) spacing issue in Table B.4.27.2 HEW PHY features	Change "5GHz" to "5 GHz"	2017/1/9 9:42

The RSSI_LEGACY is defined, but the PHY legacy preamble is not. It's not define or referenced in the IEEE 802.11-2016 baseline. This should be defined and referenced back to the IEEE 802.11-2016 baseline standard.	Add definition for PHY legacy preamble in clause 3.4 Definitions, acronyms, and abbreviations with reference back to IEEE 802.11-2016 figures, text or subclause	2017/1/9 9:42
3610	Albert Petrick	225	1 9.4.2.218.3	93	25	E	Y	93.25 9.4.2.218.3	3479	Table 9-262aa, missing period at the end of sentence	Fix. In the "Definition column", Add period "." after the "duration" on lines 25 and 29.	2017/1/9 9:42
3611	Albert Petrick	225	1 25.5.2.3	167	69	T	Y	167.69 25.5.2.3	3301	"TBD" is a placeholder and not allowed in drafts in WG letter ballots as per IEEE 802.11 WG policies.	Remove TBD	2017/1/9 9:42
3612	Albert Petrick	225	1 28.3.18.2	354	46	E	Y	354.46 28.3.18.2		Extra digit in Table 28-44	Change "+3441" to "+344"	2017/1/9 9:42
3613	Albert Petrick	225	1 9.4.2.218.3	83	34	E	Y	83.34 9.4.2.218.3	3481	Table 9-262aa, missing period and colon in sentence.	Fix. In the "Definition column, Add period "." after the "stream" on lines 35 and 39. In Encoding column Add ":" after B18 on line 34 and B19 on line 37.	2017/1/9 9:42
3614	Albert Petrick	225	1 27.3.3.4	154	39	T	Y	154.39 27.3.3.4	3302	The "L3 Frag BA Request frame", "L3 Frag BA Response" and "BA Response frame" are not defined and ambiguous. There are no figures, tables, text or timing flow between Requests and Responses.	Define "L3 Frag BA Request frame" and "L3 Frag BA Response", BA Response frames, add figures, tables and describe a procedure for L3 dynamic fragmentation.	2017/1/9 9:42
3615	Albert Petrick	225	1 28.3.14.3	342	12	E	Y	342.12 28.3.14.3		Spelling error with MCS 7	Change "MCS 7" to "MCS7"	2017/1/9 9:42
3616	Albert Petrick	225	1 27.6.2	177	19	T	Y	177.19 27.6.2	3303	Text in sentence references table "Table YY-1". Table doesn't exist in .11ax D1.0 or in IEEE 802.11-2016	Fix reference and add table or delete sentence referencing table	2017/1/9 9:42
3617	Albert Petrick	225	1 28.3.14.3	342	10	E	Y	342.10 28.3.14.3		Spelling error with MCS 0	Change "MCS 0" to "MCS0"	2017/1/9 9:42
3618	Albert Petrick	225	1 27.6.2	177	43	T	Y	177.43 27.6.2	3304	Figure 27-3 Example of sounding protocol not correct.	Re-draw diagram. Fix sounding protocol diagram to illustrate alignment of SIFS timing as beamformee from beamformer.	2017/1/9 9:42
3619	Albert Petrick	225	1 28.3.14.3	342	36	E	Y	342.36 28.3.14.3		In Table 28-40 in the Case A column, there is a hyphen character.	Remove hyphen "-" character and leave cell blank	2017/1/9 9:42
3620	Albert Petrick	225	1 9.4.2.218.3	83	40	E	Y	83.40 9.4.2.218.3	3484	Table 9-262aa, missing period and colon in sentence.	In the Definition column, Add colon ":" after B20 and B21. Add period after "procedure." on lines 41 and 43. In Encoding column Add colon after B20 on line 40 and B21 on line 43. Add extra line space between lines 41 and 42.	2017/1/9 9:42
3621	Albert Petrick	225	1 27.6.2	178	6	T	Y	178.06 27.6.2	3305	Figure 27-4 Example of sounding protocol not correct.	Re-draw diagram. Fix sounding protocol diagram to illustrate alignment of SIFS timing, identify the beamformee "1 thru n" and spell out the word "TRIG" in UL TRIG PPDU	2017/1/9 9:42

3622	Albert Petrick	225	1 28.3.16	344	45	E	Y	344.45 28.3.16		In Figure 28-36 (HE NDP PPDU format) the PE field is the Packet Extension field. The text should reference this field.	Change "Packet Extension" to "Packet Extension (PE)"	2017/1/9 9:42
3623	Albert Petrick	225	1 9.4.2.218.3	83	58	E	Y	83.58 9.4.2.218.3	3486	Table 9-262aa, missing period at the end of sentence.	Add period after "MU-MIMO" on line 58.	2017/1/9 9:42
3624	Albert Petrick	225	1 27.6.2	178	7	T	Y	178.07 27.6.2	3306	"CSI" in Figure 27-4 is not defined or referenced in text	Expand on the term "CSI" and describe this term in the text with relationship with HE beamformee.	2017/1/9 9:42
3625	Albert Petrick	225	1 9.4.2.218.3	82	11	T	Y	82.11 9.4.2.218.3	3488	Add clarity and call out bit position in Table 9-262aa for subfield "Dual Band Support" corresponding to those bit positions in Figure 9-589cl	Add bit B0 in Definition column Change to: "B0 indicates support of both...."	2017/1/9 9:42
3626	Albert Petrick	225	1 27.16.1	204	56	E	Y	204.56 27.16.1	3307	Sentence misaligned spacing	Left just "A STA fro which do11HEOptionImplemented..... "	2017/1/9 9:42
3627	Albert Petrick	225	1 9.4.2.218.3	84	26	T	Y	84.26 9.4.2.218.3	3490	Add clarity and call out bit position in Table 9-262aa for subfield "UL HE MU PPDU Payload Support" corresponding to those bit positions in Figure 9-589cl	Add bit B30 in Definition column Change to: "B30 indicates that the STA supports the reception of....."	2017/1/9 9:42
3628	Albert Petrick	225	1 28.3.16	344	36	E	Y	344.36 28.3.16		Remove space between sentences	Delete lines 35 and 36. The text should read as follows: NDP is the only HE sounding format. The format of an HE NDP PPDU is shown in Figure 28-36 (HE NDP PPDU format).	2017/1/9 9:42
3629	Albert Petrick	225	1 28.3.14.3	342	47	E	Y	342.47 28.3.14.3	3308	Period missing at end of sentence	Add period at the end of sentence.	2017/1/9 9:42
3630	Albert Petrick	225	1 9.4.2.218.3	84	31	T	Y	84.31 9.4.2.218.3	3492	Add clarity and call out bit position in Table 9-262aa for subfield "SU Beamformer" corresponding to those bit positions in Figure 9-589cl	Add bit B31 in Definition column Change to: "B31 indicates support for operation as an SU beamformer."	2017/1/9 9:42
3631	Albert Petrick	225	1 28.3.17.4	347	13	E	Y	347.13 28.3.17.4		Extra line space between paragraphs	Remove line 13	2017/1/9 9:42
3632	Albert Petrick	225	1 9.4.2.218.3	84	36	T	Y	84.36 9.4.2.218.3	3494	Add clarity and call out bit position in Table 9-262aa for subfield "SU Beamformee" corresponding to those bit positions in Figure 9-589cl	Add bit B32 in Definition column Change to: "B32 indicates support for operation as an SU beamformee."	2017/1/9 9:42
3633	Albert Petrick	225	1 9.4.2.218.3	84	40	T	Y	84.40 9.4.2.218.3	3496	Add clarity and call out bit position in Table 9-262aa for subfield "MU Beamformer" corresponding to those bit positions in Figure 9-589cl	Add bit B33 in Definition column Change to: "B33 indicates support for operation as an MU beamformer."	2017/1/9 9:42
3634	Albert Petrick	225	1 28.3.17.6.4	349	16	E	Y	349.16 28.3.17.6.4	3309	Sentence misaligned spacing	left justify "issue a PHY-CCA.inidication(BUSY, {secondary40}),"	2017/1/9 9:42
3635	Albert Petrick	225	1 9.4.2.218.3	84	6	T	Y	84.06 9.4.2.218.3	3267	Add clarity and call out bit positions in Table 9-262aa for subfield "Beamforemee STS For < 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B34-B36 in Definition column Change to: "B34-B36 indicates the maximum number of space-time streams the STA can receive in an HE NDP."	2017/1/9 9:42
3636	Albert Petrick	225	1 28.3.17.6.4	349	15	E	Y	349.15 28.3.17.6.4		Paragraph misaligned	Left justify paragraph	2017/1/9 9:42
3637	Albert Petrick	225	1 9.4.2.218.3	84	56	T	Y	84.56 9.4.2.218.3	3272	Add clarity and call out bit positions in Table 9-262aa for subfield "NTST Total For < 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B37-B39 in Definition column Change to: "B37-B39 indicates the maximum value for.....partial bandwidth."	2017/1/9 9:42
3638	Albert Petrick	225	1 28.5	373	28	E	Y	373.28 28.5	3242	Units "Mbps" in Table 28-47 through Tables 28-102 not consistent with units "Mb/s" in text, tables and figures in IEEE 802.11-2016.	Change "Mbps" to "Mb/s" in Tables 28-47 through Table 28-102. There are 54 tables that need updating!	2017/1/9 9:42
3639	Albert Petrick	225	1 28.3.17.6.4	349	44	E	Y	349.44 28.3.17.6.4	3310	Sentence misaligned spacing	left justify "PHYCCA. Indication(BUSY, {primary}),.....and"	2017/1/9 9:42
3640	Albert Petrick	225	1 9.4.2.218.3	85	6	T	Y	85.06 9.4.2.218.3	3276	Add clarity and call out bit positions in Table 9-262aa for subfield "Beamformee STS for > 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B40-B42 in Definition column Change to: "B40-B42 indicates the maximum number for.....HE NDP."	2017/1/9 9:42
3641	Albert Petrick	225	1 9.4.2.218.3	85	13	T	Y	85.13 9.4.2.218.3	3281	Add clarity and call out bit positions in Table 9-262aa for subfield "NSTS Total For > 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B44-B45 in Definition column Change to: "B43-B45 indicates the maximum value for.....partial bandwidth."	2017/1/9 9:42
3642	Albert Petrick	225	1 28.1.1	209	16	E	Y	209.16 28.1.1	3250	Period missing at end of sentence	Add period at the of sentence after "band"	2017/1/9 9:42
3643	Albert Petrick	225	1 28.3.17.6.4	349	27	E	Y	349.27 28.3.17.6.4	3311	Sentence misaligned spacing	left justify "present and on of the .....or"	2017/1/9 9:42
3644	Albert Petrick	225	1 9.4.2.218.3	85	20	T	Y	85.20 9.4.2.218.3	3285	Add clarity and call out bit positions in Table 9-262aa for subfield "Number Of Sounding Dimensions For < 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B46-B48 in Definition column Change to: "B46-B48 represents the beamformer's capability.....for an HE NDP."	2017/1/9 9:42

3645	Albert Petrick	225	1		2	T	Y		3287	.11ax D1.0 makes reference to IEEE P802.11REVmc-D8.0, which is essentially IEEE P802.11-2016 (the new rollup baseline standard) and soon to be published in 2017. Once it is published, P802.11REVmc-D8.0 will be removed from the IEEE 802.11 working group members area on the website and will not be available in public domain on the IEEE 802.11 work group document server for public use. All references in .11ax D1.0 to clauses in the baseline standard should be made to IEEE P802.11-2016 and not to IEEE P802.11REVmc-D8.0.	Remove IEEE P802.11REVmc(TM)/D8.0 and replace with IEEE P802.11-2016	2017/1/9 9:42
3646	Albert Petrick	225	1 9.4.2.218.3	85	22	E	Y	85.22 9.4.2.218.3	3509	Missing period at end of sentence in Definition column of Table 9-262aa.	Add period at the end of sentence "HE NDP"	2017/1/9 9:42
3647	Albert Petrick	225	1			G	Y		3288	The title of the column headers in ALL of the tables need to be formatted; 1) center text in title. 2) lock 1st row of table to continue on next page.	Fix and format ALL tables headers (1st row) and enable 1st row to roll-over on next page when tables don't fit on current page.	2017/1/9 9:42
3648	Albert Petrick	225	1 9.4.2.218.3	85	26	T	Y	85.26 9.4.2.218.3	3511	Add clarity and call out bit positions in Table 9-262aa for subfield "Number Of Sounding Dimensions For > 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B48-B51 in Definition column Change to: "B49-B51 represents the beamformer's capability.....for an HE NDP."	2017/1/9 9:42
3649	Albert Petrick	225	1 28.3.17.6.4	349	46	E	Y	349.46 28.3.17.6.4	3312	Sentence misaligned spacing	Change "BUSY, {secondary40}}" to "BUSY,{secondary40}}"	2017/1/9 9:42
3650	Albert Petrick	225	1 28.1.1	209	19	E	Y	209.19 28.1.1	3258	Period missing at end of sentence	Add period at the of sentence after "band"	2017/1/9 9:42
3651	Albert Petrick	225	1			G	Y		3289	Throughout .11ax D1.0 there are references where some bits have hyphens and others do not e.g., 1 bit, and 1-bit . The text, Tables and Figures should be consistent using "hyphens" as used in IEEE 802.11-2016.	Fix. Include hyphens in text, Tables and Figures similar to the format utilized in baseline IEEE 802.11-2016	2017/1/9 9:42
3652	Albert Petrick	225	1			G	Y		3290	Throughout .11ax D1.0 cross-reference links in text to tables, figures, equations, clauses and sub-clauses either broken, and non-existent.	Fix cross-reference links in text, tables, figures, equations and external links	2017/1/9 9:42
3653	Albert Petrick	225	1			G	Y		3291	Throughout .11ax D1.0 the alignment of the terms in equations and spacing between paragraph text and equations need to be centered on the pages.	Fix spacing of terms in equations and space of text between equations.	2017/1/9 9:42
3654	Albert Petrick	225	1 9.4.2.218.3	85	28	E	Y	85.28 9.4.2.218.3	3514	Missing period at end of sentence in Definition column of Table 9-262aa.	Fix. Add period at the end of sentence "HE NDP."	2017/1/9 9:42
3655	Albert Petrick	225	1 28.3.17.6.4	349	21	E	Y	349.21 28.3.17.6.4	3313	Sentence misaligned spacing	Change "max(-72 dBm, OBSS_PD)" to " "max (-72 dBm, OBSS_PD)"	2017/1/9 9:42
3656	Albert Petrick	225	1 28.1.1	209	22	E	Y	209.22 28.1.1	3265	Period missing at end of sentence	Add period at the of sentence after "band"	2017/1/9 9:42
3657	Albert Petrick	225	1 3.4	7	13	E	Y	7.13 3.4	3292	hyphen error -- hyphen between the words frequency and division "Orthogonal frequency-division multiple access" The use of hyphens should be consistent with what is used in IEEE 802.11-2016.	Remove hyphen after "frequency"	2017/1/9 9:42
3658	Albert Petrick	225	1 9.4.2.218.3	85	29	E	Y	85.29 9.4.2.218.3	3516	Missing period at end of sentence in Encoding column in Table 9-262aa.	Add period at the end of sentence "reserved."	2017/1/9 9:42
3659	Albert Petrick	225	1 28.3.18.2	353	62	T	Y	353.62 28.3.18.2	3314	Spectral flatness procedure needs more clarity	Delete the sentence: "Demodulate the HE PPDUs .....procedure:" and place with the following sentence. " The HE PPDUs shall be demodulated using the following (or equivalent) procedure:"	2017/1/9 9:42
3660	Albert Petrick	225	1 4.3.14a	9	33	T	Y	9.33 4.3.14a	3293	"RU" not defined	Add definition for "RU" in clause 3.4 Definitions, acronyms, and abbreviations	2017/1/9 9:42

Add bit B60 in Definition column Change to: "B60: indicates the non-AP STA supports....."	2017/1/9 9:42
4677	Albert Petrick	225	1 9.4.2.218.3	83	58	E	Y	83.58 9.4.2.218.3	3486	Table 9-262aa, missing period at the end of sentence.	Add period after "MU-MIMO" on line 58.	2017/1/9 9:42
4678	Albert Petrick	225	1 CAdocument	3		T	Y	3.00 CAdocument		In clause "5.2 Spatial Reuse", has a grammar issue and reference to 20 MHz and 40 MHz should reference "channel bandwidths for more clarity.	In clause "3 Coexistence with non-802.11 systems" Add underlined text (without the underline) and remove strikethrough text in the last sentence of the this clause as follows: "For 2.4 GHz, we refer to 20.3.21.4 [5] (which corresponds to 802.11n), which corresponds to the same rules for 20 and 40 MHz channel bandwidths described in the paragraph above."	2017/1/9 9:42
4679	Albert Petrick	225	1 9.4.2.218.3	86	14	T	Y	86.14 9.4.2.218.3	3538	Add clarity and call out a "Note" reference in Table 9-262aa for subfield "DL MU-MIMO on Partial BW" in the Encoding column.	Add change to read: "Note: This field is reserved for an AP."	2017/1/9 9:42
4680	Albert Petrick	225	1 28.1.1	212	27	E	Y	212.27 28.1.1	3956	Period missing at end of sentence	Add period at the of sentence after "applicable"	2017/1/9 9:42
4681	Albert Petrick	225	1 9.4.2.218.3	82	11	T	Y	82.11 9.4.2.218.3	3488	Add clarity and call out bit position in Table 9-262aa for subfield "Dual Band Support" corresponding to those bit positions in Figure 9-589cl	Add bit B0 in Definition column Change to: "B0 indicates support of both...."	2017/1/9 9:42
4682	Albert Petrick	225	1 28.1.1	211	38	E	Y	211.38 28.1.1	3868	Period missing at end of sentence	Add period at the of sentence after "receive)"	2017/1/9 9:42
4683	Albert Petrick	225	1 CAdocument	3		T	Y	3.00 CAdocument		Clause "5.2 Spatial Reuse": coexistence with this mode of operation needs to be consistent with technical draft .11axD1.0 clause 27.9 (Spatial reuse operation) In .11axD1.0, Table 28-17 makes reference to Spatial Reuse section needing more development.	Update as commented	2017/1/9 9:42
4684	Albert Petrick	225	1 9.4.2.218.3	86	16	T	Y	86.16 9.4.2.218.3	3540	Add clarity and call out bit position in Table 9-262aa for subfield "PPE Threshold Present" corresponding to those bit position in Figure 9-589cl.	Add bit B61 in Definition column Change to: "B61: indicates whether or no the PPE....."	2017/1/9 9:42

4685	Albert Petrick	225	1 9.4.2.218.3	84	26	T	Y	84.26 9.4.2.218.3	3490	Add clarity and call out bit position in Table 9-262aa for subfield "UL HE MU PPDU Payload Support" corresponding to those bit positions in Figure 9-589cl	Add bit B30 in Definition column Change to: "B30 indicates that the STA supports the reception of....."	2017/1/9 9:42
4686	Albert Petrick	225	1 9.4.2.6	68	60	E	Y	68.60 9.4.2.6	4452	Period missing at end of sentence	Add period at the of sentence after "reserved"	2017/1/9 9:42
4687	Albert Petrick	225	1 CAdocument	3		E	Y	3.00 CAdocument		Grammar issues in clause "5.4 New OFDM Waveform Design"	In clause "5.4 New OFDM Waveform Design": Add underlined text (without the underline) and remove strikethrough text from paragraph as follows: "In 802.11n (in 2.4 GHz) and 802.11n/ac (in 5 GHz) the 20 MHz channelization uses a 64pt FFT with edge tones at +/-28. In 802.11ax (in both 2.4 and 5 GHz) the 20 MHz channelization uses a 256pt FFT with edge tones at +/-122. More spectrum is occupied within the channel bandwidth with the new 802.11ax OFDM waveform design. That said, due Due to the narrower subcarrier spacing (312.5 kHz for 802.11n/ac vs 78.125 kHz for 802.11ax), the spectral rolloff for 802.11ax will be sharper and will result is yield less out-of-band emissions beyond +/- 11 MHz as shown in (see the figure below).	2017/1/9 9:42
4688	Albert Petrick	225	1 9.4.2.218.3	86	18	T	Y	86.18 9.4.2.218.3	3542	Add clarity and call out bit position in Table 9-262aa for subfield "SRP-based SR Support" corresponding to those bit position in Figure 9-589cl.	Add bit B62 in Definition column Change to: "B62: indicates that the STA supports SRP-based....."	2017/1/9 9:42
4689	Albert Petrick	225	1 9.4.2.218.3	84	31	T	Y	84.31 9.4.2.218.3	3492	Add clarity and call out bit position in Table 9-262aa for subfield "SU Beamformer" corresponding to those bit positions in Figure 9-589cl	Add bit B31 in Definition column Change to: "B31 indicates support for operation as an SU beamformer."	2017/1/9 9:42
4690	Albert Petrick	225	1 28.1.1	212	35	E	Y	212.35 28.1.1	3962	Period missing at end of sentence	Add period at the of sentence after "least 4"	2017/1/9 9:42
4691	Albert Petrick	225	1 CAdocument	4		T	Y	4.00 CAdocument		In clause "5.4 New OFDM Waveform Design": Reference is made spectral rolloff between .11a/g, .11n /ac and .11ax for 20 MHz channel bandwidth. There is no reference or discussion where figure and plot (s) originated e.i., 802.11 documents, drafts, simulations etc.	Add reference to documents where plots originated and text (short description of plots).	2017/1/9 9:42
4692	Albert Petrick	225	1 9.4.2.218.3	86	19	E	Y	86.19 9.4.2.218.3	3544	In Table 9-262aa, missing period after sentence.	Add period "." at the end of sentence after "operation."	2017/1/9 9:42

4695	Albert Petrick	225	1 CAdocument	3		E	Y	3.00 CAdocument		In clause "6 Definitions": There are missing periods at the end of the sentences	Add period " . " at the end of the sentences after the word "next" and after the word "protection"	2017/1/9 9:42
4696	Albert Petrick	225	1 9.4.2.218.3	86	21	T	Y	86.21 9.4.2.218.3	3546	Add clarity and call out bit position in Table 9-262aa for subfield "Power Boost Factor +^r Support" corresponding to those bit position in Figure 9-589cl.	Add bit B63 in Definition column Change to: "B63: indicates that the STA supports....."	2017/1/9 9:42
4697	Albert Petrick	225	1 9.4.2.6	68	62	E	Y	68.62 9.4.2.6	4460	Period missing at end of sentence	Add period at the of sentence after "reserved"	2017/1/9 9:42
4698	Albert Petrick	225	1 9.4.2.218.3	84	40	T	Y	84.40 9.4.2.218.3	3496	Add clarity and call out bit position in Table 9-262aa for subfield "MU Beamformer" corresponding to those bit positions in Figure 9-589cl	Add bit B33 in Definition column Change to: "B33 indicates support for operation as an MU beamformer."	2017/1/9 9:42
4699	Albert Petrick	225	1 CAdocument	4		T	Y	4.00 CAdocument		In clause "7 References", reference [1] Draft P802.11axD1.0 has no cross-reference in the body of the text. References [4] IEEE Std 802.11ac-2013 and [5] IEEE 802.11REVmcD8.0 should reference to the IEEE P802.11-2016. In the near future, IEEE 802.11REVmcD8.0 will be removed from the IEEE 802.11 members area of the website. IEEE 802.11REVmcD8.0 is IEEE P802.11-2016.	Site references [4] and [5] to IEEE P802.11-2016. Add a note to reference [1] Draft P802.11axD1.0 (general content reference.)	2017/1/9 9:42
4700	Albert Petrick	225	1 28.1.1	212	39	E	Y	212.39 28.1.1	3970	Period missing at end of sentence	Add period at the of sentence after "supported"	2017/1/9 9:42
4701	Albert Petrick	225	1 9.4.2.200	69	32	E	Y	69.32 9.4.2.200	4463	Figure 9-589av misaligned	Align figure to fit on page	2017/1/9 9:42

4702	Albert Petrick	225	1 9.4.2.218.3	84	6	T	Y	84.06 9.4.2.218.3	3267	Add clarity and call out bit positions in Table 9-262aa for subfield "Beamforemee STS For < 80 MHz" corresponding to those bit positions in Figure 9-589cl. Missing period at the end of sentence.	Add bits B34-B36 in Definition column Change to: "B34-B36 indicates the maximum number of space-time streams the STA can receive in an HE NDP."	2017/1/9 9:42
4703	Albert Petrick	225	1 28.1.1	211	42	E	Y	211.42 28.1.1	3880	Period missing at end of sentence	Add period at the of sentence after "puncturing"	2017/1/9 9:42
4704	Albert Petrick	225	1 9.4.2.218.3	86	22	E	Y	86.22 9.4.2.218.3	3548	In Table 9-262aa, missing period after sentence.	Add period at the end of sentence after "range [0.5, 2]."	2017/1/9 9:42
4705	Alfred Asterjadhi	225	1 3.2	4	26	E	Y	4.26 3.2		Underline is missing	Add underline to the paragraph of item j)	2017/1/9 9:42
4706	Alfred Asterjadhi	225	1 3.2	6	22	E	Y	6.22 3.2		VHT is already defined in the first sentence of this definition, so "very high throughput" is redundant here. There are a couple of places where this occurs throughout the subclause as indicated in the proposed change.	In page/lines 6/22, 6/26, remove "very high throughput", "non-high throughput", and the enclosing parenthesis of the subsequent word "VHT", "non-HT", respectively.	2017/1/9 9:42
4707	Alfred Asterjadhi	225	1 3.2	6	45	E	Y	6.45 3.2		This definition applies to both HE and VHT. Remove VHT from VHT STA.	As in comment.	2017/1/9 9:42
4708	Alfred Asterjadhi	225	1 3.2	6	50	T	Y	6.50 3.2		Some issues with this definition: 1) Replace first occurrence of "BSS" with "basic service set (BSS)", replace "PHY modes", with "physical layer (PHY) protocol data unit (PPDU)", replace "efficient" with "efficiency", replace "HE extended range PHY" with "HE extended range single user (ER SU) PPDU", replace "HE_EXT_SU PHY format" with "HE ER SU PPDU", and replace "non-HE" with "non-HT". Also "in the whole BSS coverage" is arguable. Even when the AP does not use ER SU PPDUs for Beacons the legacy beacon covers the "whole BSS". It is a matter of perspective. Perhaps better to say, expanding the BSS coverage or something like that.	As in comment.	2017/1/9 9:42
4709	Alfred Asterjadhi	225	1 3.2	6	55	E	Y	6.55 3.2		Replace "HE" with "high efficiency (HE)".	As in comment.	2017/1/9 9:42
4710	Alfred Asterjadhi	225	1 3.4	7	11	T	Y	7.11 3.4		OBO is not OFDMA backoff, but OFDMA random access backoff, Find a fancy acronym that reflects it. Same observation with OCW. Apply it throughout.	As in comment.	2017/1/9 9:42
4711	Alfred Asterjadhi	225	1 3.4	7	18	E	Y	7.18 3.4		Only MU RTS is listed in the list of acronyms. Either of the two options is fine: Either remove MU RTS, or keep it and add the other trigger variants.	As in comment.	2017/1/9 9:42
4712	Alfred Asterjadhi	225	1 4.3.14a	9	20	E	Y	9.20 4.3.14a		These two items can be merged into one: "An HE non-AP STA is also a VHT non-AP STA except when the STA supports only 20 MHz channel width. Also in P9L26 the second item is not needed as an HT non-AP STA can be a 20 Mhz so it is covered by the first item.	As in comment.	2017/1/9 9:42
4713	Alfred Asterjadhi	225	1 4.3.14a	9		T	Y	9.00 4.3.14a		These items whether are main or not is subjective at this point and maybe not correct. E.g., dynamic fragmentation level 0 is actually no fragmentation (highly a new MAC feature).	As in comment.	2017/1/9 9:42
4714	Alfred Asterjadhi	225	1 4.3.14a	9	60	T	Y	9.60 4.3.14a		This paragraph is very partial. Depending on the purpose of it, either expand it to cover the case being discussed correctly or remove it.	As in comment.	2017/1/9 9:42
4715	Alfred Asterjadhi	225	1 8.3.5.2.2	15	35	T	Y	15.35 8.3.5.2.2		There are two cases HE DL MU PPDU and HE UL MU PPDU. This statement applies to the DL MU PPDU, while for the UL MU PPDU it is the transmitter identifier. Also it is not really an index of the user (well actually yes) but for consistency specify it as the AID of the user (and add a reference to 27.11.1 (STA_ID_LIST). Similar observation for the next subclause 8.3.5.3.2.	As in comment.	2017/1/9 9:42

4716	Alfred Asterjadhi	225	1 8.3.5.3.2	15	56	T	Y	15.56 8.3.5.3.2	"request" should be "indication". Also need to keep consistency on how we call this PPDU. Maybe define an acronym HE Trigger Based PPDU (HE TB PPDU) and stick with it throughout the draft.	As in comment.	2017/1/9 9:42
4717	Alfred Asterjadhi	225	1 8.3.5.10.3	16	1	T	Y	16.01 8.3.5.10.3	This additional generation is applicable to HE STAs. Also refer to the general spatial reuse subclause rather than to the OBSS-PD pased subclause only.	Replace paragraph with: "This primitive can additionally be generated by the MAC sublayer for the local HE PHY entity when the spatial reuse conditions defined in 27.9 (Spatial Reuse) are met.	2017/1/9 9:42
4718	Alfred Asterjadhi	225	1 8.3.5.12.2	16	15	T	Y	16.15 8.3.5.12.2	The conditions in this table are becoming too cumbersome. Find a hierarchical way to categorize an HT STA that is not a VHT STA, an HE STA that is not a VHT STA and so on. And itemize the list so that it is clear which STA follows which CCA sections. Also since an HE STA can also be a VHT STA or an HT STA then it needs to be clear which rules are followed and when.	As in comment.	2017/1/9 9:42
4719	Alfred Asterjadhi	225	1 8	15	1	T	Y	15.01 8	There are new features in 11ax that need additional updates to these clause's rules. Namely spatial reuse, preamble puncturig, UL MU, DL MU transmissions, etc.	Ensure that the clause is properly amended so that all the appropriate exceptions for a decent 11ax operatoin are added.	2017/1/9 9:42
4720	Alfred Asterjadhi	225	1 9.2.4.1.3	19	25	T	Y	19.25 9.2.4.1.3	I am aware that ANA is going to determine the assigned subtype value for this field once the LB approval has reached 75%. But the table has the value 0011 striked out, which logically means that the value 0011 would be the one assigned for this purpose. Ask ANA to allocate 0011 for the Subtype value or if ANA does not know yet then find a way that it is clear that the number is not assigned yet. Also we already have the term Trigger defined in REVmc so it would be good to have a unique name that would avoid confusion. It could be as simple as UL Trigger.	As in comment.	2017/1/9 9:42
4721	Alfred Asterjadhi	225	1 9.2.4.1.8	19	35	T	Y	19.35 9.2.4.1.8	There is a bunch of elements that have the QoS Info field, namely QoS Capabilities, EDCA Parameter Set, MU EDCA parameter elements. Add a note so that it is clear where this field is contained, so that it is known what "frames" contain it. Also B7 of the QoS Info field when transmitted by AP is currently reserved. Need to add the exception that for an HE AP that bit is actually the same as the non-AP STA case (More Data Ack).	As in comment.	2017/1/9 9:42
4722	Alfred Asterjadhi	225	1 9.2.4.1.10	19	57	E	Y	19.57 9.2.4.1.10	I see more than "two purposes" below. This sentence was actually modified in 11ah. So please ensure consistency across amendments.	As in comment.	2017/1/9 9:42
4723	Alfred Asterjadhi	225	1 9.2.4.5.4	20	27	T	Y	20.27 9.2.4.5.4	MU Ack name is not completely correct due to the fact that the PPDU is actually called Trigger-based ppdu. So I would suggest to change it TBP Ack or something like that, reflecting the correct intention.	As in comment.	2017/1/9 9:42
4724	Alfred Asterjadhi	225	1 9.2.4.5.4	20	45	T	Y	20.45 9.2.4.5.4	This paragraph can be written better. Rephrase this paragraph as suggested in the proposed change.	"When the frame is carried in a HE DL MU PPDU: The addressed recipient returns an Ack, BlockAck, or Multi-STA BlockAck frame carried in HE TB PPDU, after SIFS, (see 10.3.2.11.2 (Acknowledgement procedure for HE MU PPDU in MU format) and 27.4.4.3 (DL MU PPDU soliciting an HE trigger-based PPDU response)."	2017/1/9 9:42
4725	Alfred Asterjadhi	225	1 9.2.4.6.1	21	60	T	Y	21.60 9.2.4.6.1	Table 9-9a already shows what this paragraph is defining as such it is redundant.	Remove the paragraph in P21L60-65.	2017/1/9 9:42
4726	Alfred Asterjadhi	225	1 9.2.4.6.4.1	22	48	E	Y	22.48 9.2.4.6.4.1	Already defined A-Control in L43. So no need to call it below. Replace "Aggregate Control" with "A-Control" in L48, and in L55.	As in comment.	2017/1/9 9:42

4727	Alfred Asterjadhi	225	1 9.2.4.6.4.1	23	24	T	Y	23.24 9.2.4.6.4.1	Add acronyms for each of these Control fields so that it is easy to refer to them. 1) "UL MU Response Scheduling" => T"rigger-based Response Scheduling (TRS)", 2) Operating Mode (OM)", "HE Link Adaptation" => Link Adaptation (LA), 3) UL Power Headroom (UPH)". Use these acronyms, followed by "A-Control" throughout once defined here.	As in comment.	2017/1/9 9:42
4728	Alfred Asterjadhi	225	1 9.2.4.6.4.1	23	34	E	Y	23.34 9.2.4.6.4.1	Link to BQR is not alive and for RDP is missing. Fix link for BQR and add the one for RDP in the 4th column of the Table.	As in comment.	2017/1/9 9:42
4729	Alfred Asterjadhi	225	1 9.2.4.6.4.2	23	59	E	Y	23.59 9.2.4.6.4.2	Since the PPDU is a Trigger-based PPDU I suggest we call this field TB PPDU Length.	Replace "UL PPDU Length" with "TB PPDU Length" throughout.	2017/1/9 9:42
4730	Alfred Asterjadhi	225	1 9.2.4.6.4.2	23	60	E	Y	23.60 9.2.4.6.4.2	"and is set to the number of OFDM symbols the Data field of the HE trigger-based PPDU minus 1" => "and is set to N_sym minus 1, where N_sym is the number of OFDM symbols of the Data field of the HE TB PPDU".	As in comment.	2017/1/9 9:42
4731	Alfred Asterjadhi	225	1 9.2.4.6.4.2	24	21	E	Y	24.21 9.2.4.6.4.2	"TRSSI" => "T_RSSI", and "F_VAL, except for the value 31..." => F_VAL, where F_VAL is the value of the UL Target RSSI subfield, except for the value 31..."	As in comment.	2017/1/9 9:42
4732	Alfred Asterjadhi	225	1 9.2.4.6.4.3	24	63	T	Y	24.63 9.2.4.6.4.3	Similar observation here. Saying UL MU is misleading. The operation refers to the generation of TB PPDUs. Maybe call the field "TB UL MU Disable"?	As in comment.	2017/1/9 9:42
4733	Alfred Asterjadhi	225	1 9.2.4.6.4.3	24	55	T	Y	24.55 9.2.4.6.4.3	N_ss is called twice in the same subclause to identify tx and rx ss. To avoid confusion specify the variables as N_rx, ss, and N_tx, ss.	As in comment.	2017/1/9 9:42
4734	Alfred Asterjadhi	225	1 9.2.4.6.4.2	24	27	T	Y	24.27 9.2.4.6.4.2	"The UL MCS subfield indicates the MCS, from MCS0 to MCS3, to be used by the receiving STA for the HE trigger-based PPDU (see 28.5 (Parameters for HE-MCSs))." needs to specify the encoding of the field	Add prior to "(see 28.5 (Parameters for HE-MCSs))." the following: ". The UL MCS subfield contains the 2 LSBs of the HE MCS Index field, and 2 MSBs of the MCS is set to 0".	2017/1/9 9:42
4735	Alfred Asterjadhi	225	1 9.2.4.6.4.5	27	12	E	Y	27.12 9.2.4.6.4.5	Wrong reference. Replace "10.9 (HT operation)" with "10.13.1 (A-MPDU contents)"	As in comment.	2017/1/9 9:42
4736	Alfred Asterjadhi	225	1 9.2.4.6.4.6	27	34	E	Y	27.34 9.2.4.6.4.6	Some editorial changes to the paragraph are proposed to remove redundancy.	Replace the paragraph with "The 5 LSBs (B0-B4) of the UL Power Headroom subfield indicate the available power headroom in units of one dB, for the current MCS. The UL Power Headroom subfield contains a value from 0 to 31 that maps to power headroom values from 0 dB to 31 dB. B5 of the UL Power Headroom subfield is set to 1 to indicate that the minimum transmit power for the current MCS is reached by the STA and is set to 0 otherwise."	2017/1/9 9:42
4737	Alfred Asterjadhi	225	1 9.2.4.6.4.7	28	45	E	Y	28.45 9.2.4.6.4.7	Suggested changes to remove redundancies. Replace first paragraph with "The Control Information subfield, when the Control ID subfield is 5, contains the Bandwidth Query Report (BQR) used for BQR delivery that can assist HE DL MU operation (see 27.5.1.3 (HE bandwidth query report operation for DL MU))." And remove the paragraph in P27L64-65.	As in comment.	2017/1/9 9:42
4738	Alfred Asterjadhi	225	1 9.2.4.6.4.7	28	6	T	Y	28.06 9.2.4.6.4.7	Having the mapping as a table didn't actually help in removing the redundancy and providiing a concise definition of this field. Perhaps better to specify the bit locations settings as a function of the operating channel width. In any case think of finding a way to put this in a more concise way. Also remove the "may" in the note as normative verbs cannot be placed in clause 9. Also remove "section", and add full subclause, and figure titles to the references in the note.	As in comment.	2017/1/9 9:42

4739	Alfred Asterjadhi	225	1 9.2.4.7.1	29	26	E	Y	29.26 9.2.4.7.1	All these parenthesis in the cells make this table very long. For a cleaner table move references in the Note rows. Also I don't dare to ask adding non-HE to the first row second column... Shouldn't it be for simplicity non-HT PPDU and Non-HT duplicate PPDU?	As in comment	2017/1/9 9:42
4740	Alfred Asterjadhi	225	1 9.2.4.6.4.8	28	60	T	Y	28.60 9.2.4.6.4.8	Suggest to rephase the first two paragraphs of this subclause as follows: "The Control Information subfield, when the Control ID subfield is 6, contains reverse direction information used by HE STAs for RDP operation (see 10.28 (Reverse direction protocol)). The AC Constraint subfield is defined in Table 9-10 (AC Constraint subfield values), except that a value of 1 indicates to an HE STA that the response can contain RD Data frames from the same or higher AC(s), as defined in 10.28.4 (Rules for RD responder).	As in comment.	2017/1/9 9:42
4741	Alfred Asterjadhi	225	1 9.4.2.1	67	10	T	Y	67.10 9.4.2.1	There are a couple of elements missing in this list: BSS Color Change Announcement, Quiet Time Period Setup element, its request and its response (which by the way is it needed to have 3 elements for the same procedure? Why not simply have a bit or smth in one element that makes this differentiation> See my other comment in the same logic.	Add the missing rows for those elements that are defined.	2017/1/9 9:42
4742	Alfred Asterjadhi	225	1 9.4.2.221	94	27	T	Y	94.27 9.4.2.221	Only UL MU Capable STAs update their MIBs. And they do so when certain conditions occure as defined in10.2.4.2. Change to something like this: The most recent MU EDCA Parameter Set element is used by an "UL MU Capable STA" to update the appropriate MIB variables, "as defined in 10.2.4.2 (HCF contention based channel access (EDCA))."	Add quoted text as in comment.	2017/1/9 9:42
4743	Alfred Asterjadhi	225	1 10.2.4.2	113	20	T	Y	113.20 10.2.4.2	There needs to be a statement, similar to the baseline, regarding the interval during which the new values are taken into consideration for MU ECA Parameters as well, when a parameter change occurs. Also the MIB variables are missing for the MU EDCA case.	Add the following :An UL MU Capable STA shall update its MIB attributes that correspond to fields in an MU EDCA Parameter Set element within an interval of time equal to one beacon interval after receiving an updated MU EDCA parameter set." Also define the MIB variables for MU EDCA parameter and explicitly call out that the same baseline update procedure is used by AP and STA to update the MU MIBs.	2017/1/9 9:42
4744	Alfred Asterjadhi	225	1 9.4.2.221	94	63	T	Y	94.63 9.4.2.221	This sentence is unclear. Rephrase it so that it is clear that this is the time during which the STA is supposed to use the MU EDCA parames.	Replace with "The MU EDCA Timer field indicates the duration of time, in units of 8 TUs, during which the HE STA uses the provided MU EDCA parameters for the corresponding AC, as defined in 27.2.3 (Obtaining an EDCA TXOP for UL MU capable STAs).	2017/1/9 9:42
4745	Alfred Asterjadhi	225	1 10.2.4.2	113	113	T	Y	114.13 10.2.4.2	What is the expectation when the AP wants to not use MU EDCA Parameters anymore? Does it decide to not include the MU EDCA Parameter Set in the Beacon, or does it continue including it and always specify the same values in the MU and normal EDCA Parameter Set elements? Clarify (noting that the second option requires to keep 16 redundant octets in the Beacon).	As in comment.	2017/1/9 9:42
4746	Alfred Asterjadhi	225	1 10.2.1	1258	1258	T	Y	1270.58 10.2.1	Need to update the MAC architecture (Figure 10-1) and respective definitions to host the enhancements for HE (UL MU, etc).	As in comment.	2017/1/9 9:42

4747	Alfred Asterjadhi	225	1 27.2.3	152	17	T	Y	152.17 27.2.3	Time references when to update these state variables are missing, especially for the timer.	Add the following at the end of the paragraph: "The backoff counter maintenance corresponding to the updated state variables shall follow the rules in 10.22.2.2 (EDCA backoff procedure), and the updated HEMUEDCATimer[AC] shall start at the end of the immediate response (if any is sent by the AP).	2017/1/9 9:42
4748	Alfred Asterjadhi	225	1 27.2.3	152	18	T	Y	152.18 27.2.3	Perhaps it is already clear but better to add a note that only the Basic Trigger frame causes a switch to the MU EDCA parameters, and only when QoS Data are sent.	Add the following note: "The non-AP STA is not required to update its state variables to the values contained in the MU EDCA Parameter Set element if it the Trigger frame addressed to it is not a Basic Trigger frame or if it transmits frames that are not QoS Data frames in the HE TB PPDU response."	2017/1/9 9:42
4749	Alfred Asterjadhi	225	1 10.9	126	46	E	Y	126.46 10.9	Not all 10.9 is present in the draft, so this instruction is not correct. Also there is some part that is underlined but actually is baseline (P127L38-42). Also this subclause need to be modified to be inline with the new amendment style.	As in comment.	2017/1/9 9:42
4750	Alfred Asterjadhi	225	1 10.9	126	63	T	Y	126.63 10.9	There are 7 control fields defined and only 3 MIB variables here. There has to be one MIB for each of the 7. Add the remaining 4 MIB variables to the list.	As in comment.	2017/1/9 9:42
4751	Alfred Asterjadhi	225	1 10.9	127	14	E	Y	127.14 10.9	Some editorial fixes in this paragraph: in the HE Capabilities Information field" => "in the HE MAC Capabilities Information field", "receive operating mode" => "operating mode", 10.31.4 => 27.13, add at the end of the items: "A value of 6 in the Control ID subfield when the transmitting STA follows the reverse direction procedure, as described in 10.29 (Reverse direction protocol)"	As in comment.	2017/1/9 9:42
4752	Alfred Asterjadhi	225	1 10.12	128	10	E	Y	128.10 10.12	Redundant sentence that can be avoided by adding a reference where this behavior is defined. Add "as defined in 27.3 (Fragmentation)" at the end of the second sentence and remove the third sentence.	As in comment.	2017/1/9 9:42
4753	Alfred Asterjadhi	225	1 10.13.2	128	36	T	Y	128.36 10.13.2	The maximum length of the A-MPDU per-EOF that an HE STA can receive is actually signaled by a combination of the values of the MALE (Maximum A-MPDU Length Exponent) fields in the HT, VHT, and HE Capabilities element. As such this statement is not correct. Fix the inconsistency inline with the definition of these fields in the HE Capabilities, and VHT, HT Caps (similarly in P129L5). Also the term "padding in this sentence is ambiguous. At first read i thought that this applies to padding, but actually refers to the A-MPDU max length, or does it? Remove "padding" or somehow clarify that it relates to the A-MPDU length, e.g., adding a reference to 9.7.1 (A-MPDU format). Also in the VHT case.	As in comment.	2017/1/9 9:42
4754	Alfred Asterjadhi	225	1 10.13.2	107	1	T	Y	107.01 10.13.2	The MPDU length for HE follows the same rules as the one for VHT. Replace "VHT PPDU" with "VHT or HE PPDU" in this equation.	As in comment.	2017/1/9 9:42
4755	Alfred Asterjadhi	225	1 10.7.6.5.2	123	34	T	Y	123.34 10.7.6.5.2	Move these two paragraphs to subclause 27.15.3 (MCS, NSS, BW and DCM selection) after ensuring that there is no redundancy in the provided normative behavior.	As in comment.	2017/1/9 9:42
4756	Alfred Asterjadhi	225	1 10.7.10	126	1	T	Y	126.01 10.7.10	Is DCM considered an MCS? If yes (which I think it should) then specify what is the non-HT refence rate for the conversion in this table, or somewhere else.	As in comment.	2017/1/9 9:42
4757	Alfred Asterjadhi	225	1 9.7.3	107	65	T	Y	107.65 9.7.3	This sentence is confusing "The further restrictions of A-MPDU content are defined in the conditions of various contexts."	Replace it with "The content of an A-MPDU depends on the context at which it is transmitted as defined in the tables below."	2017/1/9 9:42

4758	Alfred Asterjadhi	225	1 9.7.3	108	7	T	Y	108.07 9.7.3	I don't think this sentence is needed because both cases are allowed for an HE MU PPDU, and both of them are defined in clause 10. So remove this sentence as it brings no new informaiton. If necessary modify it to say that an HE DL MU PPDU can carry more than one A_MPDU that ... as defined somewhere in clause 10 (where acknowledgment procedures are defined).	As in comment.		2017/1/9 9:42
4759	Alfred Asterjadhi	225	1 9.7.3	108	50	T	Y	108.50 9.7.3	What is so special about the A-MPDU transmitted by an AP in an HE BSS that needs the addition of it in the Control response context? If there is nothing special then remove the following part "or the A-MPDU is transmitted by AP in an HE BSS".	As in comment.		2017/1/9 9:42
4760	Alfred Asterjadhi	225	1 9.7.3	111	48	T	Y	111.48 9.7.3	The case of an AP sending a multi-STA BlockAck frame as a response to TB PPDUs from multi STAs is missing in the control response context. Also it is good to explicitly call out the two cases: when the M-BA contains Ack and when it contains BlockAck so that it is clear that the M-BA is not neccessarily tied to the HT_Immediate agreement.	As in comment. Also referring in one case (third column) to not HE BSS and in another to HE STAs is confusing. Make this an itemized list specifying the condition on a per receiving STA basis. Same observations for the third column of the other two preceding Tables (Data no immediate resp, and Data immediate resp) and for the conditions on the multi-STA BlockAck frame.		2017/1/9 9:42
4761	Alfred Asterjadhi	225	1 9.7.3	111	32	T	Y	111.32 9.7.3	This note has nothing to do with this context because delayed BA is deprecated, and Trigger plue BlockAck can be added only in the Data enabled immediate response context. Remove this note (eventually add it to the immediate response context).	As in comment.		2017/1/9 9:42
4762	Alfred Asterjadhi	225	1 9.7.3	110	36	T	Y	110.36 9.7.3	There is only one of the following cases. So no need to organize this way the second column. Also it is not technically correct because it would mean that a BAR and a Multi-TID BAR can be present (but that is not the case). Add the following sentence as the first sentence of the second column: "In a single TID A-MPDU context:" Replace the newly added paragraph in the second column with the following sentence: " In a multi-TID A-MPDU context: At most one Multi-TID BlockAckReq frame with one or more TIDs that correspond to established HT-immediate block ack agreements. It is not present if a BlockAckReq frame is present. This is the last MPDU in the A-MPDU."	As in comment.		2017/1/9 9:42
4763	Alfred Asterjadhi	225	1 9.7.3	110	7	T	Y	110.07 9.7.3	These items (third column) are confusing as certain frames presence has nothing to do with the others. See proposed change for a possible organization as part of the single TID A-MPDU context, and multi-TID A-MPDU context.	Define a single TID A-MPDU context that applies to non-DMG STAs (to HE STAs as well [first round of conditions in this colum falls in this category]). And specify that Data frames without HT-immediate block agreement, and Action frames are not allowed in this context. Define a multi-TID A-MPDU context that applies to HE STAs only which specifies that: "Of these, at most one of the following is present: - QoS Data frames from more than one TID, each TID corresponding to an HT-immediate blockack agreement if the recepient supports multi-TID A-MPDU aggregation. - A BAR frame or a Multi-TID BAR frame with TID(s) that correspond to HT-immediate blockack agreement(s) for which QoS Data frames are not present in the A-MPDU. If the recipient supports ack-enabled multi-TID A-MPDU one or more of the following is		2017/1/9 9:42

4764	Alfred Asterjadhi	225	1 9.7.3	110	51	T	Y	110.51 9.7.3	This row has nothing in common with the above ones. Also MU BAR cannot be aggregated along with other Data (if can be as a self contained frame in the S_MPDU context)	Place the row that contains the Trigger as an independent row, which second column contains the following "Zero or more Basic or BSRP Trigger frames if the A-MPDU is transmitted by an AP. The BSRP Trigger frame can be present only when the receiving STA indicates support of its reception in the A-MPDU context (see 27.5.2.5 (HE buffer status feedback operation for UL MU))." Also there is no need for a third column for this case so remove it. Also make the same change for the Trigger row in Table 9-426.	2017/1/9 9:42
4765	Alfred Asterjadhi	225	1 9.4.2.200	69	32	T	Y	69.32 9.4.2.200	There are some issues in this Figure. First some parts are missing (TWR field is 8, 2, or 0 in length, Broadcast TWT ID needs to be underlined). Also in order to avoid confusion between a normal TWT element and a broadcast TWT element I suggest having two Figures, one for TWT element (with one TWT parameter set, as in baseline), and another one for broadcast TWT element (with one or more TWT parameter sets, this to be tied to the value broadcast = 1 and wake TBTT interval value 0).	As in comment.	2017/1/9 9:42
4766	Alfred Asterjadhi	225	1 9.4.2.200	69	55	T	Y	69.55 9.4.2.200	The Broadcast TWT ID is present when the Broadcast field is 1, however the functionality of the Broadcast TWT ID depends on the value of the Wake TBTT interval value. If the value is 0 then this is a broadcast TWT element. If the value is 1 then this is a TWT request/response that is negotiating the broadcast TWT IDs of that (those) particular value(s).	As in comment. Impacts also the paragraph that describes the definition of Wake TBTT Negotiation in the next paragraph (which as is refers only to when the Broacast is 0 and need to add the case when broadcast is 1). Also to generalize call this field something else (as Wake TBTT is restrictive now). Also please make these changes to all those fields that depend on these settings in the remaining paragraphs of this subclause.	2017/1/9 9:42
4767	Alfred Asterjadhi	225	1 9.4.2.200	70	21	T	Y	70.21 9.4.2.200	Couple or more things: There is another table that performs a similar function in 10.43.smth. Maybe just keep that one and undo the changes to this table. This table also contains some inconsistencies (compared to (27.7.3.4 Negotiation of wake TBTT and listen interval) some values are not right), compared to 10.43.1 (TWT overview) it does not contain the listing in dependency of the broadcast field values.)	As in comment (my preference is to have one Table, and that contains all possible combos in one place).	2017/1/9 9:42
4768	Alfred Asterjadhi	225	1 9.4.2.218	76	18	T	Y	76.18 9.4.2.218	Somebody has to do some work here to ensure that each capability bit here: - Has a corresponding normative setting somewhere in >9 clauses. - Uses consistent terminology (support/supported/capable). - Has a reference to the subclause where the normatvie behavior is defined (perhaps in the definition cell (for all of them). - Has an explicit indication of the setting if its values depend on other caps (e.g., Minimum Fragment Size is reserved if Fragmentation Support is 0 and so on) - Maximum A-MPDU Lenght Support's cells are empty because the text is outside the table. Need to add it here.	As in comment.	2017/1/9 9:42
4769	Alfred Asterjadhi	225	1 9.4.2.218.4	86	48	T	Y	86.48 9.4.2.218.4	m and n are not defined. Define them and on what values combos they depend on.	As in comment.	2017/1/9 9:42
4770	Alfred Asterjadhi	225	1 9.4.2.218.4	88	34	T	Y	88.34 9.4.2.218.4	How do you indicate support for NSS = 8 with this encoding?	If the NSS indicates the number of NSS as an unsigned integer then there is no value for NSS =8. Please clarify.	2017/1/9 9:42

4771	Alfred Asterjadhi	225	1 9.4.2.219	91	4	T	Y	91.04 9.4.2.219	The operation of HE STAs is not controlled by the presence of the VHT Operation element because the HE Operation IE has the VHT Operation Information field. Remove the occurrence of VHT Operation element from this sentence.Also specify the meaning of the VHT Operation Information field when sent in 2.4Gigs.	As in comment.	2017/1/9 9:42
4772	Alfred Asterjadhi	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	Duplicated (conflicting) definition of the BSS Color field. Remove the first occurrence.	As in comment.	2017/1/9 9:42
4773	Alfred Asterjadhi	225	1 9.4.2.219	91	60	T	Y	91.60 9.4.2.219	HE Duration Based does not say much. Replace it with something that gives the idea of a TXOP based duration threshold. Also provide a reference to the subclause where the normative behavior for setting this field is defined. And most importantly where the STA that receives this information updates its MIB variable that controls RTS enablement.	As in comment.	2017/1/9 9:42
4774	Alfred Asterjadhi	225	1 9.4.2.219	92	7	T	Y	92.07 9.4.2.219	This paragraph is not very clear in defining the setting of the Max BSSID Indicator and Tx BSSID Indicator field. Please rephrase it to make the definition clearer. And add a reference to the normative describing subclause	As in comment.	2017/1/9 9:42
4775	Alfred Asterjadhi	225	1 9.4.2.219	92	28	T	Y	92.28 9.4.2.219	This paragraph describes normatvie behavior related to the non-AP STA and cannot be located in this subclause. Move the paragraph somewhere in subclause 27 (e.g., 27.11.4(BSS COLoR).	As in comment.	2017/1/9 9:42
4776	Alfred Asterjadhi	225	1 9.4.2.219	92	40	T	Y	92.40 9.4.2.219	In one PHY format = in non-HT format.	As in comment.	2017/1/9 9:42
4777	Alfred Asterjadhi	225	1 10.43.1	137	43	T	Y	137.43 10.43.1	The Reject TWT case is missing in the description. Please add for completeness. Also it would be beneficial to provide a list of what types of individual TWTs, and broadcast TWTs can be negotiated, depending on the setting of the Broadcast, Wake TBTT Interval Negotiation, since they govern TWT Setup for Individual TWTs, Broadcast TWTs, and TBTTs.	As in comment.	2017/1/9 9:42
4778	Alfred Asterjadhi	225	1 10.43.1	138	7	T	Y	138.07 10.43.1	Broadcast field value is missing in some of these entries. Need to be added and clarify in the third column the dependency of the Wake TBTT, Bcast fields settings and the type fo TWT agreement that is setup. Also instead of using "Don't care" use "Any". Actually since the broadcast TWT cases are valid for HE STAs only I suggest this table only covers the case of individual TWT (with Wake TBTT = 0 and Broadcast = 0) and then another table is added in clause 27 that covers the other combinations (citing as much as possible from the basic table).	As in comment. And editorial: this table is a new insertion so no need for underlines and strikesthoughs.	2017/1/9 9:42
4779	Alfred Asterjadhi	225	1 10.43.1	138	18	T	Y	138.18 10.43.1	Instead of putting the combinations that are not allowed, it would be best to put those that are allowed and specify in the last row: other combinations are not allowed. Also some of these rows are not correct (e.g., page 139L52, there is unsolicited TWT responses that are allowed).	As in comment.	2017/1/9 9:42
4780	Alfred Asterjadhi	225	1 11	141	1	T	Y	141.01 11	Move as much text from clause 11 to clause 27 as possible, under the new editorial style guide.	As in commnet.	2017/1/9 9:42
4781	Alfred Asterjadhi	225	1 11.23	143	53	T	Y	143.53 11.23	Amendments to enable TDLS for HE STAs are partial. Review baseline and add HE qualifiers wherever necessary. Or create a subclasue in 27 that cotnains these amendments.	As in comment.	2017/1/9 9:42

4782	Alfred Asterjadhi	225	1 11.49.1	144	32	T	Y	144.32 11.49.1	The case of Partial BSS Color is 0 is missing. Specify that when that bit is 0 then the AP uses the AID assignment rules of baseline.	As in comment.	2017/1/9 9:42
4783	Alfred Asterjadhi	225	1 27.81	188	29	T	Y	188.29 27.81	This paragraph does not provide the full picture for the OMI optionality at the STA, and mandatroy at the AP. Please rephrase such that it is clear that OMI A-Control field can be sent to a STA that has declared support of its reception (tie to HE Caps), and specify that an HE STA may set the HE Caps to 1 while the HE AP shall set it to 1.	As in comment.	2017/1/9 9:42
4784	Alfred Asterjadhi	225	1 27.8.2	189	5	T	Y	189.05 27.8.2	"Rx Channel Width" => "Channel Width". "To sent PPDUs" => "as transmit parameters for sending PPDUs"	As in comment.	2017/1/9 9:42
4785	Alfred Asterjadhi	225	1 27.8.2	189	8	E	Y	189.08 27.8.2	This paragraph is awkward. Please replace with: "The OMI responder may transmit subsequent SU PPDUs or MU PPDUs that are addressed to the OMI initiator after sending the immediate response for the frame containing the OMI A-Control field.	As in comment. Also there is no ROM Initiator. Please replace it with OMI Initiator (initiator actually throughout).	2017/1/9 9:42
4786	Alfred Asterjadhi	225	1 27.13	198	61	T	Y	198.61 27.13	This subclause seeems incomplete. Please complete it in terms of expected norm behavior at RX, at TX, etc.	As in comment	2017/1/9 9:42
4787	Alfred Asterjadhi	225	1 27.14.2	200		T	Y	200.00 27.14.2	Some of this text applies to the Cascade Indication setting for the Trigger frame from the AP side, which would be more appropriate to be in the TWT subclause. It is appropriate to clarify that the reception of this Trigger frame for random access is classified as an early termination period.	Please organize the subclause such that the normative behavior from AP side is contained in one subclause and the normatvie behavior from STA side is contained in one subclause (in terms of early termination events). If necessary add declarative statements to indicate where such a behavior is defined. Similar considerations for power save in congested environment.	2017/1/9 9:42
4788	Alfred Asterjadhi	225	1 27.14.2	200	30	T	Y	200.30 27.14.2	The other condition is missing. Specify that when the OBO counter is 0 the STA transmits a Trigger-based PPDu in the selected resource (and provide a subclause reference where the norm behavior is defined.	As in comment.	2017/1/9 9:42
4789	Alfred Asterjadhi	225	1 27.15.2	201	37	T	Y	201.37 27.15.2	This capability has nothing to do with the reception of the HE trigger-based PPDU. It has to do with the reception of the UL MU PPDU as provided by motioned comment resolution 11/16/1419r0. Also keep consistency of the capability field name, in the HE Caps, and here.	As in comment.	2017/1/9 9:42
4790	Alfred Asterjadhi	225	1 27.10.2	192	41	T	Y	192.41 27.10.2	There is an exception here for A-MPDUs that are contained in HE PPDUs, that is multi-TID A-MPDU. Please add a reference to the subclause that defines Multi-TID A-MPDU here and in the next subclause.	As in comment.	2017/1/9 9:42
4791	Alfred Asterjadhi	225	1 27.10.3	192	63	T	Y	192.63 27.10.3	The MPDU start spacing requirements for the Trigger-based PPDU also depends on the MU Minimum Start Spacing field of the Trigger frame.	Specify that the minimum start spacing also depends on the value of the MU Start Spacing(?) field of the User Info field of that STA in the Trigger frame.	2017/1/9 9:42
4792	Alfred Asterjadhi	225	1 27.10.3	193	19	T	Y	193.19 27.10.3	This is not true anymore when the A-MPDU si an Ack-enabled multi-TID A-MPDU AMT A-MPDU, where an EOF eq 0 can follow an EOF eq 1.	As in comment.	2017/1/9 9:42
4793	Alfred Asterjadhi	225	1 27.10.4	193	34	T	Y	193.34 27.10.4	A multi-TID A-MPDU can also contain QoS Data frames of one TID and one Action frame and still be called MT A-MPDU. Ensure this definition is consistent. Also there is a certain independence between multi-TID A-MPDU that contains contiguous valued EOFs and multi-TID A-MPDU that contains non-contiguous EOFs. Please use two different terms for these cases so that it is clear that they are not the same, and as such tx, rx and operation for these MPDUs.	As in comment.	2017/1/9 9:42

4794	Alfred Asterjadhi	225	1 27.10.4	194	35	T	Y	194.35 27.10.4	The UL MU PPDU case carrying the MT A-MPDU is missing. Add UL MU PPDU to the list	As in comment.	2017/1/9 9:42
4795	Alfred Asterjadhi	225	1 27.10.4	194	51	T	Y	194.51 27.10.4	Is the presence of an Action frame in the MT A-MPDU contained in the TB PPDU subject to the multi-TID aggregation limit? Seems not but just in case please clarify. Also please check that normative behaviors are not redundantly listed in different subclauses. From a quick check there is normatvie behavior that is redundant in different subclauses.	As in comment.	2017/1/9 9:42
4796	Alfred Asterjadhi	225	1 9.7.3	110	53	T	Y	110.53 9.7.3	The presence of the MU BAR in the second column is inconsistent with trigger frame types listed in the third column and with the normative behaviors described in clause 27.	Remove MU-BAR from the second column.	2017/1/9 9:42
4797	Alfred Asterjadhi	225	1 27.5.1.1	162	44	T	Y	162.44 27.5.1.1	This sentence is not clear "An AP shall not transmit to a STA an HE MU PPDU with the HE-SIG-B allocating spatial streams to more than one recipient STA, unless the STA sets the Downlink MU-MIMO On Partial Bandwidth Rx subfield of the HE Capabilities element to 1.". Please clarify what the intention is.	As in comment	2017/1/9 9:42
4798	Alfred Asterjadhi	225	1 27.5.1.1	162	49	T	Y	162.49 27.5.1.1	It is not the transmission that is padded but the PSDU in each RU. PLease rephrase.	As in commnet.	2017/1/9 9:42
4799	Alfred Asterjadhi	225	1 27.5.1.1	162	56	T	Y	162.56 27.5.1.1	Unicast is not defined. Define it prior to its use.	As in comment.	2017/1/9 9:42
4800	Alfred Asterjadhi	225	1 27.5.1.2	163	8	T	Y	163.08 27.5.1.2	Some more details are needed here for completeness. I sugges to itemize what possible values the AID can have in the SIG-B (and potentlially have a reference to 27.11). For example: AID 0 is broadcast, AID 1 to n can be broadcast for the multi BSSID case, AID 2046 is this AID to indicate unallocated RU, 2047 is the broadcast AID for all BSSs of the multiBSS and so on.	As in comment.	2017/1/9 9:42
4801	Alfred Asterjadhi	225	1 27.5.1.2	163	13	T	Y	163.13 27.5.1.2	This is not enough. It has to be clear what the MPDU that is sent in the broadcast RU contains. E.g., can it be a broadcast MPDU that was sent in legacy PPDU? If yes then what is the STA receiving both expected to do?	As in comment.	2017/1/9 9:42
4802	Alfred Asterjadhi	225	1 27.5.1.3	163	37	T	Y	163.37 27.5.1.3	It seems BQR Trigger frame is not allowed in the A-MPDU content (See 9.7.3). I don't think it is the case. Please amend to fix the inconsistency.	As in comment.	2017/1/9 9:42
4803	Alfred Asterjadhi	225	1 27.5.1.3	163	36	T	Y	163.36 27.5.1.3	This is a weird way to say that reception of the BQR Trigger frames is optional. Find a less weird way to say the same.	As in comment.	2017/1/9 9:42
4804	Alfred Asterjadhi	225	1 27.5.1.3	163	46	T	Y	163.46 27.5.1.3	QoS Data cannot be added because the BQR variant Trigger frame does not have TID AGG limit and MU Minimum Start Spacing indications, etc. Please remove QoS Data from the sentence. Also no need to indicate that "when the AP has indicated its support in the A-BQR Support... because the AP sends the BQR variant Trigger frame only if it supports Rx of the info.	As in comment.	2017/1/9 9:42
4805	Alfred Asterjadhi	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	There is many details that are not defined in this feature. Either define the missing details or remove it. Also what is a very high number of STAs?	As in comment.	2017/1/9 9:42
4806	Alfred Asterjadhi	225	1 17.5.3	175	33	T	Y	175.33 17.5.3	It seems that the cascading sequence as defined here does not cover all possible combinations. For example an SU PPDU that has this content can still be called part of a cascading sequence. Unless it is not allowed.	As in comment.	2017/1/9 9:42

4807	Alfred Asterjadhi	225	1 17.5.3	175	41	T	Y	175.41 17.5.3	Cascading sequence and cascading indication have nothing to do with each other. Please find alternate names for one of them to avoid confusion.	As in comment.	2017/1/9 9:42
4808	Alfred Asterjadhi	225	1 27.15.2	201	26	T	Y	201.26 27.15.2	The 242-tone ER SU PPDU can be transmitted to another STA if the other STA supports either DCM or 106tone RU. Otherwise what is the benefit? Please clarify the conditional reception (inlien with filosophy of P202L51).	As in comment.	2017/1/9 9:42
4809	Alfred Asterjadhi	225	1 27.5.2.1	163	60	T	Y	163.60 27.5.2.1	"in either UL OFDMA, UL MU-MIMO, or both," is redundant since the trigger-based PPDU already defines the allowed modes	remove "in either UL OFDMA, UL MU-MIMO, or both,"	2017/1/9 9:42
4810	Alfred Asterjadhi	225	1 27.5.2.1	164	3	T	Y	164.03 27.5.2.1	use field name instad of bit number. Same in other lines	as in comment	2017/1/9 9:42
4811	Alfred Asterjadhi	225	1 27.5.2.1	164	14	T	Y	164.14 27.5.2.1	This para is reduntant with the next one	Remove this para and keep the next one starting at line19	2017/1/9 9:42
4812	Alfred Asterjadhi	225	1 27.5.2.1	164	24	T	Y	164.24 27.5.2.1	UL OFDMA PPDU is not defined. Is it meant to be triger-based PPDU with no more than one SS per user?	Define UL OFDMA PPDU or contextualy add more details to define the intended type of PPDU	2017/1/9 9:42
4813	Alfred Asterjadhi	225	1 27.5.2.2.1	164	58	T	Y	164.58 27.5.2.2.1	what else can the AP send, or in which frames? These bullets define only may conditions, but no restrictions	add a reference to A-MPDU context and other restrictions where a trigger frame may not be included	2017/1/9 9:42
4814	Alfred Asterjadhi	225	1 27.5.2.2.1	165	13	T	Y	165.13 27.5.2.2.1	the Ack, This rule is ambiguous, especially on the second part of the sentence. "BlockAck or Multi-STA BlockAck frame shall be the first MPDU in the A-MPDU and a Trigger frame shall follow the Ack, BlockAck or Multi-STA BlockAck frame"	Clarify indicating that "at least one" of Ack/MA/M-BA shall be the first, and tha the trigger shall follow the first frame. Also verify these rules are consistent with the A-MPDU context rules	2017/1/9 9:42
4815	Alfred Asterjadhi	225	1 27.5.2.2.1	165	27	T	Y	165.27 27.5.2.2.1	"The AP shall apply the Trigger Frame MAC Padding field with duration corresponding to the longest value among all STAs that have requested extra MinTrigProcTime through Trigger Frame MAC Padding Duration capability." Which are "all the STAs"? even STAs that are not allocated by this trigger frame?	Clarify that the statement refers to only the STAs are allocated by this trigger frame	2017/1/9 9:42
4816	Alfred Asterjadhi	225	1 27.5.2.2.1	165	31	T	Y	165.31 27.5.2.2.1	This para is reduntant. The previous one is sufficient	Remove this para	2017/1/9 9:42
4817	Alfred Asterjadhi	225	1 27.5.2.2.2	165	60	T	Y	165.60 27.5.2.2.2	confusing construction of the sentence "If an HE AP does not receive an HE Capabilities element with the Rx Control Frame To MultiBSS field equal to 1 from a STA, the HE AP shall not send a Trigger frame whose destination STAs associate with more than one APs to the STA."	Reword the sentence	2017/1/9 9:42
4818	Alfred Asterjadhi	225	1 27.5.2.2.3	167	38	T	Y	167.38 27.5.2.2.3	this para is redundant. Concepts are better explained at the previous para	Remove this paragraph	2017/1/9 9:42
4819	Alfred Asterjadhi	225	1 27.5.2.3	167	57	T	Y	167.57 27.5.2.3	If the STA is not associated with the AP, TBD.	Define the TBD. If the STA is not associated with the AP, a value of 0 indicates the allocation of a random access RU which can be used also by non-associated STAs	2017/1/9 9:42

4830	Alfred Asterjadhi	225	1 27.5.2.4	170	37	T	Y	170.37 27.5.2.4	"If one or both of the NAVs are considered and the considered NAV's counter is not zero." which NAVs? Explicitly state. Also, what are the cases where one or the other or both NAV are considered?	Please clarify.	2017/1/9 9:42
4831	Alfred Asterjadhi	225	1 27.5.2.4	170	61	T	Y	170.61 27.5.2.4	By followng this rule then the behavior described at line 29 will never be used. Simply say that the STA considers the ED and NAV if CS Required is 1 and does not if the CS Required is 0.	either keep line 29 or keep this one	2017/1/9 9:42
4832	Alfred Asterjadhi	225	1 10.22.2.4	130	38	T	Y	130.38 10.22.2.4	"During an EDCA TXOP, Address 2 field excluding the Individual/Group bit of all control frames sent by a TXOP holder shall be set to the same address value." change to baseline?	Clarify what the intention is.	2017/1/9 9:42
4833	Alfred Asterjadhi	225	1 10.22.2.7	132	33	T	Y	132.33 10.22.2.7	i) it is not clear what "the RU Allocation subfields of the MU-RTS frame for all intended receiver are equal to the BW subfield in the Common Info field of the MU-RTS frame" means. The two fields that are compared are encoded in quite different ways. ii) in the 'otherwise' case, the 'preceding PPDU' may be an MU-RTS, but the previous bullet that is supposed to describe the MU-RTS case does not cover all the MU-RTS cases, pointing to the 'otherwise', hence there is a loop and something missing.	Make sure there is a defiend behavior for all the cases	2017/1/9 9:42
4834	Alfred Asterjadhi	225	1 10.3.1	113	50	T	Y	113.50 10.3.1	"When HE duration-based RTS is enabled". No mention of where that is indicated. Is it referring to a MIB or to a field somewhere? dot11DurationRTSThreshold: can it be configured through a management message? (I found no such possibility) If not, this mechanism is not enforcing anything.	Specify that this dotBLAH shall be set to the most recent value of the HE Duration Based field of the HE Operation element transmitted by the AP to which it is associated.	2017/1/9 9:42
4835	Alfred Asterjadhi	225	1 10.3.2.8a.3	117	36	T	Y	117.36 10.3.2.8a.3	SCRAMBLER_INITIAL_STATE is not a defined RX/TX vector	define the tx/rx vector parameter	2017/1/9 9:42
4836	Alfred Asterjadhi	225	1 10.3.2.10.1	118	47	T	Y	118.47 10.3.2.10.1	This statement may not be true for HE, since there are new BA formats, fragmentation and new rules.	Remove the reference to HE in this statement	2017/1/9 9:42
4837	Alfred Asterjadhi	225	1 10.3.2.10.1	118	55	T	Y	118.55 10.3.2.10.1	"Responses to A-MPDUs within a VHT MU PPDU or an HE MU PPDU for DL transmissionthat are not immediate responses to the VHT MU PPDU or the HE MU PPDU for DL transmission are transmitted in response to explicit BlockAckReq frames by the AP" This is an option, but not the only one	BARs can also be sent in response to an implicit block ack request in one of the following PPDUs	2017/1/9 9:42
4838	Alfred Asterjadhi	225	1 10.3.2.10.1	118	48	T	Y	118.48 10.3.2.10.1	"MU PPDU for DL transmission" is not defined.	change to MU PPDU sent by an AP STA	2017/1/9 9:42
4839	Alfred Asterjadhi	225	1 27.7.2	181	33	T	Y	181.33 27.7.2	The UL MU Response Scheduling A-Control field can be considered as a Trigger frame if at least it allocates resources for the STA to deliver BSRs.	Clarify the specified condition.	2017/1/9 9:42
4840	Alfred Asterjadhi	225	1 27.7.2	181	55	T	Y	181.55 27.7.2	What does the fact that the STA follows APSD have to do with TWT? Please clarify. Also ensure that these conditions are the same for both individual and broadcast TWT for consistency.	As in comment	2017/1/9 9:42
4841	Alfred Asterjadhi	225	1 27.7.2	182	8	T	Y	182.08 27.7.2	These are the conditions for individually negotiated TWTs, not for TFs with random access. Please remove the condition on random access allocation. Also the term Cascade Indication is confusing as it is also use fro MU Cascade operation.	Clarify as suggested in the comment.	2017/1/9 9:42
4842	Alfred Asterjadhi	225	1 27.7.2	182	10	T	Y	182.10 27.7.2	These are exclusive conditions (based on EOSP setting of the soliciting frame) on whether the soliciting frame does or does not solicit an acknowledgment. Ensure that this consistency is clear.	As in comment.	2017/1/9 9:42

4843	Alfred Asterjadhi	225	1 27.7.3.1	182	44	T	Y	182.44 27.7.3.1	The STA can also negotiate the Broadcast ID. This needs to be stated here for completeness. Also please add references to the normative behaviors for the different features, from TWT scheduled STA perspective (TFRs, power save for congested nets and so on.)	As in comment.	2017/1/9 9:42
4844	Alfred Asterjadhi	225	1 27.7.3.1	183	28	T	Y	183.28 27.7.3.1	It needs to be clear that these TWT elements in this perspective are "TWT Setup" frames rather than broadcast TWT. Also to avoid confusion please clarify setup in a clear way for both wake TBTT and broadcast IDs in one place so that it is easier to interpret.	As in comment.	2017/1/9 9:42
4845	Alfred Asterjadhi	225	1 27.7.3.2	183	51	T	Y	183.51 27.7.3.2	need to specify the value of the Wake TBTT Negotiation field. Also the STA "may" have membership in Broadcast TWT IDs as a result fo the negotiation of broadcast IDs..	As in comment.	2017/1/9 9:42
4846	Alfred Asterjadhi	225	1 27.7.3.2	183	60	T	Y	183.60 27.7.3.2	PLease list the possible values of this fields (Wake TBTT and broadcast, and their interpretation) when they are part of the TWT setup prceudre	As in comment. For both these paragraphs.	2017/1/9 9:42
4847	Alfred Asterjadhi	225	1 27.7.4.3	184	2	T	Y	184.02 27.7.4.3	Too limited. The AP should not include the AID of the STA in the Trigger frame in certain cases, but in other cases it could, e.g., the STA is in AM mode, etc.	As in comment.	2017/1/9 9:42
4848	Alfred Asterjadhi	225	1 27.7.3.2	184	23	T	Y	184.23 27.7.3.2	Outside of a trigger-enabled TWT. Same as the case of individual TWT descriptions.	As in comment	2017/1/9 9:42
4849	Alfred Asterjadhi	225	1 27.7.3.2	184	30	T	Y	184.30 27.7.3.2	As mentioned in the previous comment. the UL MU Response Schedulign can be considered a Trigger frame if it allows the STA to also send BSRs.	As in comment.	2017/1/9 9:42
4850	Alfred Asterjadhi	225	1 27.7.3.2	184	36	T	Y	184.36 27.7.3.2	"The TWT scheduling STA should schedule delivery of DL BUs during unannounced TWT SPs." is too vague. Cant the AP schedule DL BUs delivery when the STA has declared to be in awake state?	As in comment.	2017/1/9 9:42
4851	Alfred Asterjadhi	225	1 27.7.3.2	185	18	T	Y	185.18 27.7.3.2	Make sure that these rules are consistent with those of the individual TWT agreement case. Also not clear the context of the AM mode in this condition. Seems out of place.	As in comment.	2017/1/9 9:42
4852	Alfred Asterjadhi	225	1 9.3.1.8	33	65	T	Y	33.65 9.3.1.8	The BlockACKReq includes the BAR Control which also has the encoding of the BlockAckReq frame variant, and for different variants there can be a different length. Similar observation for the M-BA, that can have different lengths. Clarify that the lenghts that are defined as of now (11ax) are also applicable for future amendments to ensure forward compatibility.	Presentation to be provided	2017/1/9 9:42

4908 Brian Hart	225	1 27.16.2	206	22	T	Y	206.22 27.16.2	BSS color is defective with highly overlapped BSSs yet different colors. With mobile APs, ensuring highly overlapped BSSs always have the same color is infeasible	Define that non-fixed APs use BSS color = 0 (no color). This is a repeat of a D0.1 comment but was misunderstood during that CR. Being mroe specific, consider AP1 very near to AP2 and two STAs which are on either side of the APs: STA1 ---> AP1, AP2 <--- STA2. STA1 and STA2 want to transmit to AP1 and AP2 respectively. AP1 is a fixed AP, with a BSS color. AP2 is a mobile AP with an initially well-chosen (and different) BSS color who has now wandered very close to AP1. STA1 and STA2 hear each other at say -77 or -72 or -67 dBm. Roughly speaking, under the proportional rule, because STA1 and STA2 have different colors, they can both transmit as long as they drop their TX power by 5 or 10 or 15 dB, respectively. And if they do transmit, then their transmissions collide at AP1 and AP2 - badness. This mitigated by RTS/CTS, but no STA has ever had to transmit an RTS because the	2017/1/9 9:42
4909 Brian Hart	225	1 27.16.2	206	22	T	Y	206.22 27.16.2	Unless every associated STA guarantees to awaken and read the BSS Color Change Announcement element in the Beacon at some minimum interval, the AP has no safe way to set the Color Switch Countdown field in this element so all STAS receive it in time. Without this, a color change will create more problems than it solves.	This BSS Color feature is grossly under-engineered for mobile devices and real-world issues. Re-analyze considering what can go wrong instead of what can go right. Fix the various instabilities arising from BSS Color, especially with mobile APs	2017/1/9 9:42

4910 Brian Hart	225	1 27.16.2	206	22	T	Y	206.22 27.16.2	Since clients might sleep for say 2 sec between beacon reading times, then a color change may take multiples of that before it can happen, which is uselessly slow for a mobile AP, such as one mounted on a bus.	This BSS Color feature is grossly under-engineered for mobile devices and real-world issues. Re-analyze considering what can go wrong instead of what can go right. Fix the various instabilities arising from BSS Color, especially with mobile APs. BTW, a looming change in BSS Color doesn't even change the Check Beacon field in the TIM frame, which shows how little thought has been put into this feature	2017/1/9 9:42
4911 Brian Hart	225	1 27.16.2	206	22	T	Y	206.22 27.16.2	Due to the dangerous power of a BSS Color change frame in the hands of a script kiddie, there should (must!) be protected dual of this frame	This BSS Color feature is grossly under-engineered for mobile devices and real-world issues. Re-analyze considering what can go wrong instead of what can go right. Fix the various instabilities arising from BSS Color, especially with mobile APs	2017/1/9 9:42
4912 Brian Hart	225	1 28.3.10.7.2	280	6	T	Y	280.06 28.3.10.7.2	NOTE 1 looks pretty darn normative to me	Rewrite ot avoid a note. Perhaps add a section elsewhere and a xref to it from here	2017/1/9 9:42
4913 Brian Hart	225	1 28.3.10.7.2	281	27	T	Y	281.27 28.3.10.7.2	40M .. other 2 fields indicate identical values ... is ambiguous. Assume we have ab for P40 and cd need ot be defined . Is c=a, d=b,? OR c=b, d=a, or what?	Define what is identical to what	2017/1/9 9:42

4915 Brian Hart	225	1 28.3.10.7.4	283	18	T	Y	283.18 28.3.10.7.4	"each containing 26 bits" is not true due to the memory of a BCC encoder. The first bits smear into the second symbol	Don't bother with A1 and A2. Just have HE-SIG-A with 52 bits. Affects several places. Ditto for HE Extended which I have ot guess should be perceived as 52+52 bits .. because here actually the distinction becomes really important. Are "A1 and A3" BCC encoded as a unit (with the state from A1 initializing the BCC encoder for A3", then "A2 and A4" are encoded as a unit? The para at P284L32 is GROSSLY unclear / misleading on this vital question	2017/1/9 9:42
4916 Brian Hart	225	1 28.3.10.7.4	284	46	E	Y	284.46 28.3.10.7.4	Data	data	2017/1/9 9:42
4917 Brian Hart	225	1 28.3.10.8.2	286	34	T	Y	286.34 28.3.10.8.2	Organization of HESIGB is mixed up. Start with data contents (28.3.10.8.1) and continued details 28.3.10.8.4 and 28.3.10.8.5, then work down to encoding / modulaiton / frequency mapping!	Reorganize: start with fields, and meaning of fields, then encoding then modulation then freq-domain mapping [Editor can take care of this but this MUST be done to convert me into a yes voter]	2017/1/9 9:42
4918 Brian Hart	225	1 28.3.10.8.1	286	7	T	Y	286.07 28.3.10.8.1	Figure is too small to read	Increase size of figure and text. Ditto figures on P286-288. Also, the curved arrows are quite unclear and seem to hide each other. What are they doing? Many seem to be missing - add	2017/1/9 9:42
4919 Brian Hart	225	1 28.3.10.8.1	287	15	E	N	287.15 28.3.10.8.1	Para is rather big to chew on	Break into 3 paras, at L22 and L37	2017/1/9 9:42
4920 Brian Hart	225	1 28.3.10.8.1	287	23	T	Y	287.23 28.3.10.8.1	It is very hard to discern if a STA with an RU within one 20M subchannle is guaranteed to get its PER STA Info field on that 20 M channel, or if it has to look at both 20M subchannels	Add an explicit statement here or somewhere underwhat circumstances "load balancing" of PER STA Info is allowed and when it is not. There is a para at P288L44 - but this only for Compression = 0. LB is referred to at P297L20 but this is for larger Rus only. This is all just too vague	2017/1/9 9:42
4921 Brian Hart	225	1 28.3.10.8.1	288	44	T	Y	288.44 28.3.10.8.1	"when SIGB Compression field ... is set to 0" - what happens when it is set to 1? Is that the content earlier in this section? If so be explicit	"when SIGB Compression field ... is set to 0" - what happens when it is set to 1? Is that the content earlier in this section? If so be explicit	2017/1/9 9:42
4922 Brian Hart	225	1 28.3.10.8.4	290	40	T	Y	290.40 28.3.10.8.4	"full bandwidth 80" is only use here (i.e. is undefined). And a naive reading would look at the last row of fig 28-4 (996 subcarriers) But there is no 26 RU there	Define "full bandwidth 80". I assume it must have a center tone 26?	2017/1/9 9:42
4923 Brian Hart	225	1 28.3.10.8.4	290	44	T	Y	290.44 28.3.10.8.4	"allocated ... with the same value" doesn't make sense	"and the contents of both allocations are the same" / "signal the same allocation" etc	2017/1/9 9:42
4924 Brian Hart	225	1 28.3.10.8.4	290	51	T	Y	290.51 28.3.10.8.4	"160 ... the center 26-tone RU" but aren't there two center 26 tone RUs in this case? Also I cannot make sense of the 160/80+80M text	Rewrite for greater clarity. Also, define the "otherwise" at L45 and L51, since this would help the explanation of this field	2017/1/9 9:42

4925	Brian Hart	225	1 27.15.4.3	203	54	T	Y	203.54 27.15.4.3	From deep practical experience, these rules are the workhorse and pot of gold for high density networks (during 11a, and 11n days, and continuing into VHT days). However D1.0 continues with the "should" logic that was a weak VHT compromise given the pre-ratification product being developed. However, given how early we are in 11ax, there is no technical or practical reason why this "should" shouldn't be upgraded to a "shall".	Replace "should" by "shall" in section 27.15.4.3 (2x)	2017/1/9 9:42
4926	Brian Hart	225	1 27.9.2.1	190	21	T	Y	190.21 27.9.2.1	This CCARESET is trying to say "don't let this PPDU cause CCA to report busy to the MAC". And a reset stops the reporting it cold. But if the PHY is oding mid PPDU detrection (e..g cyclic extension autocorr) then the PPDU can still be detected after the CCARESET	Add a new parameter to CCARESET. Call it "isResetDueToInterBssPpdu" or similar. This will signify: 1) if the PHY does intra PPDU detection, (say cyclic extension autocorrelation or DSSS spreading sequence xcorr), then don't retrigger on something with the same characteristics after a CCARESET until the end of the PPDU. And 2) the parameter will also indicate that CCA issues an IDLE indication immediately after a CCARESET primitive if isResetDueToInterBssPpdu is included and true.	2017/1/9 9:42
4927	Brian Hart	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	"The BSS Color field is an unsigned integer whose value is the BSS color of the BSS corresponding to the AP which transmitted this element, except that a value of 0 in this field indicates that there is no BSS color for this BSS." - BSS Color is also needed for IBSSs otherwise they get priority over infra BSSs	Actually this para looks like an inferior version of the para at P91L44. So delete lines 39-42. Also generalize "AP" as appropriate at P92L19/28 para, P149L40, P150L10, P197L1-28, etc	2017/1/9 9:42
4928	Brian Hart	225	1 27.2.1	149	16	T	Y	149.16 27.2.1	OBSS interference should be minimized with NDP PPDUs in order that MU works reliably.	Therefore the proportional CCA rule should be disabled during NDP PPDUs (and, related concern, PPDUs containing FTM frames). Changes at P190L30	2017/1/9 9:42
4929	Brian Hart	225	1 28.1.1	209	15	E	N	209.15 28.1.1	Unclear language	Insert commas etc. "STA with greater than or equal ot 80M capability is" => "STA, with greater than or equal ot 80M capability, is" or "STA, that has greater than or equal ot 80M capability, is"	2017/1/9 9:42
4930	Brian Hart	225	1 28.1.1	210	25	T	Y	210.25 28.1.1	If a STA supports more than 4SS, it's not a low complexity / low cost device. N oreason for it not to support LDPC	Ditto P210L29. Strike out "except when the STA is ... 20 MHz only non-AP STA". Need to update P210L60 et passim also	2017/1/9 9:42
4931	Brian Hart	225	1 28.1.1	210	31	T	Y	210.31 28.1.1	"LDPC when declaring support for MCS10 and MCS11"	Is this for TX or RX or both? And all supported PPDU types, RU sizes etc? Be specific	2017/1/9 9:42
4932	Brian Hart	225	1 9.4.2.218.4	71	29	T	Y	71.29 9.4.2.218.4	Maximum thruput per area is achieved at a middling MCS - not too low (sets NAV too far away) and not too high (area that must be suppressed in order to achieve an adequate SINR for MCS10/11 is inefficiently high). But the HE Operation/HE Capability signalling does not permit 64QAM MCSs to be deleted	Use the Reserved values to lower the max MCS to 4/5/6 as an AP's policy choice for the BSS for high density deployments	2017/1/9 9:42
4933	Brian Hart	225	1 28.1.1	210	37	E	N	210.37 28.1.1	Two bullets when 1 suffices	Combine bullets at L37 and 42 "0.8 and 1.6us ..."	2017/1/9 9:42
4934	Brian Hart	225	1 28.1.1	210	49	T	Y	210.49 28.1.1	"applicable" in "all RU sizes and locations applicable to the 20 MHz channel width" is vague	Provide a rigorous definition: e.g. via a cross reference to a table.	2017/1/9 9:42
4935	Brian Hart	225	1 28.1.1	211	7	T	Y	211.07 28.1.1	If 11n taught us anything, long range modes should be mandatory or deleted from the draft. The status quo involves too many MAC work-arounds and/or little likelihood of adoption	Make this mandaotry or remove this mode	2017/1/9 9:42
4936	Brian Hart	225	1 28.1.1	211	54	T	Y	211.54 28.1.1	Maximum number of SSs per user, at 4, is too low	AP antenna counts will only increase: min value should be 8 for practically important client antenna counts. See also P212L32	2017/1/9 9:42
4937	Brian Hart	225	1 28.1.1	211	62	T	Y	211.62 28.1.1	Maximum number of SSs for explicit feedback, at 4, is too low	AP antenna counts will only increase: min value should be 8 for practically important client antenna counts. See als P12L35	2017/1/9 9:42

4938	Brian Hart	225	1 28.1.1	212	2	E	N	212.02 28.1.1	So many missing articles!	in the 5G band. P212L5. "in the 5 G band"; P218L43 "in the case of an HE-MU PPDU". P237L19 - this para needs about 11 articles to be added. P238L13 - this para needs a lot of articles to be added. P238L62 "the RUs in the current". P238L60 "the SIGB". P240L40 - this para needs a lot of articles to be added. P240L54 "the Trigger frame". P245L32, add two articles. P260L10/30/40 "at the rth". P282L39. "The same ... both".P287L23 "and a User Specific field"	2017/1/9 9:42

5010	Carol Ansley	225	1 9.3.1.23	47		E	Y	47.00	9.3.1.23	Confusing Wording: "The Padding field of the Trigger frame, if present, is an integer number of octets >= 2: Padding field starts with special STAID[11:0] as 0xFFF and the rest bits of the Padding field are all set to one. 0xFFF is reserved as the special value to indicate the start of the MAC padding.	Suggest: "The Padding field of the Trigger frame, if present, is an integer number of octets >= 2. The Padding field may start with special STAID[11:0] = 0xFFF and the other bits of the Padding field are set to one to indicate the start of the MAC padding." I'm not sure if this is what was meant by the original text.	2017/1/9 9:42
5011	Carol Ansley	225	1			G	Y			I am concerned that the current draft has not been shown to provide the level of performance improvement specified in the PAR. While a lot of work has gone into this draft, it seems premature to stop work on the technical aspects if there are any other improvements that could be added to help this amendment reach its avowed goal.		2017/1/9 9:42
5012	Chao Chun Wang	225	1 9.3.1.23	47	24	T	N	47.24	9.3.1.23	For "target RSSI" in Trigger frame's per-user info, HT mentioned this value is normalized by 20 MHz bandwidth. However, D1.0 never mentioned this part in Table 9-25g.	Spec should add this statement about normalization unit to prevent interop issue	2017/1/9 9:42
5013	Chao Chun Wang	225	1 9.2.4.6.4.5			T	N		9.2.4.6.4.5	For BSR, trigger frame can using the type of BSRP to query the necessary information by AP itself. However, there is no trigger type for "UL power headroom"	Spec should define a new type for "UL power headroom". With this type, AP can decide when to query A-Control with this value by itself, rather than event-driven report by STA.	2017/1/9 9:42
5014	Chao Chun Wang	225	1 9.2.4.6.4.7			T	N		9.2.4.6.4.7	For BQR, trigger frame can using the type of BQRP to query the necessary information by AP itself. However, there is no trigger type for "UL power headroom" 1) Spec should define a new type for "UL power headroom". With this type, AP can decide when to query A-Control with this value by itself, rather than event-driven report by STA.	Spec should define a new type for "UL power headroom". With this type, AP can decide when to query A-Control with this value by itself, rather than event-driven report by STA.	2017/1/9 9:42
5015	Chao Chun Wang	225	1 9.4..2.221	94	64	E	N	94.64	9.4..2.221	The term, Basic variant Trigger frame, in " ... after reception of a Basic variant Trigger frame ..." is different from the definition in 9.3.1.23.1. In 9.3.1.23.1 Basic Trigger variant clause, trigger frame is described as, "If the Trigger frame is a Basic Trigger variant, ...". The "Basic variant Trigger frame" appears three times and "Basic Trigger variant" appear 14 times in the specification.	Revising the inconsistency of the usage of the terminology	2017/1/9 9:42
5016	Chao Chun Wang	225	1 27.5.2.1	164		E	N	164.00	27.5.2.1	The following two paragraphs are hard to read and have errors that make it very confusing. (1) "A STA shall not transmit a Trigger frame assigning an MU-MIMO RU in an UL OFDMA PPDU when the RU does not span that entire PPDU bandwidth to a STA from which it has not received an HE Capabilities element with B23 of the UL MU subfield of the HE PHY Capabilities Information field set to 1." and (2) "A STA shall not transmit a Trigger frame soliciting a full bandwidth UL MU-MIMO HE trigger-based PPDU from a STA from which it has not received an HE Capabilities element with B22 of the UL MU subfield of the HE PHY Capabilities Information field set to 1."	Revising the sentences as follows: (1) An AP shall not transmit a trigger frame assigning an MU-MIMO RU, which does not span the entire PPDU bandwidth, to a STA from which it has not received an HE Capabilities element with B23 of the UL MU subfield of the HE PHY Capabilities Information field set to 1 and (2) An AP shall not transmit a Trigger frame soliciting a full bandwidth UL MU-MIMO HE trigger-based PPDU from a STA from which it has not received an HE Capabilities element with B22 of the UL MU subfield of the HE PHY Capabilities Information field set to 1.	2017/1/9 9:42

5017	Chao Chun Wang	225	1 27.5.2.1.1	165	T	N	165.00 27.5.2.1.1	Clauses 27.5.2.2 Rules for soliciting UL MU frames has the following statement, "A non-AP STA shall not send a Trigger frame or an MPDU carrying an UL MU Response Scheduling A-Control field." To more efficiently support peer-to-peer operations in HE BSS, a non-AP STA that is capable of managing operation with basic trigger variant frame should be allowed to send trigger frame for soliciting OFMDA frames from multiple STAs. It is beneficial for HE STAs and BSS.	Adding text to support MU OFDMA-capable non-AP STA to manage basic trigger variant frame operation in peer-to-peer mode. commentator will submit text.		2017/1/9 9:42
5018	Chao Chun Wang	225	1 27.5.2.6	172	T	N	172.00 27.5.2.6	The following cells are all part of the one comment. The clauses describing the UL OFDMA RA is very confusing and problematic. List of issues are below.	Revising the clauses to (1) Reduce the number of combinations of type of access an AP can schedule in one trigger frame. For example, associated STA only or associated STA for data frame only, unassociated STA only or unassociated STA for management frame and e.t.c. (2) Disallow a trigger frame to allocate both scheduled and random access RUs. A trigger frame shall either have all RA RUs or all scheduled RUs. The commentator volunteer to re-write the clauses.		2017/1/9 9:42
5019	Chao Chun Wang	225	1		T	N		(1) Is UL OFDMA RA for associated or unassociated STA? It seems UL OFDMA RA can not be accessed by un-associated STAs, since an STA must announce its support of UL OFDMA RA in HE capabilities element. It is stated in clause ... "A STA shall set the UL OFDMA RA Support subfield in the HE Capabilities element to 1 if it supports UL OFDMA-based random access and set it 0, otherwise." But on clause ...., the specification also stat that AP will indicate whether an un-associated STA can access the RU slots as stated in clause ...			2017/1/9 9:42
5020	Chao Chun Wang	225	1		T	N		... if the value of the AID12 subfield of the User Info field is equal to the AID of the STA or to 0 (indicating a random access allocation). A value of 0 also indicates that nonassociated STAs can transmit on the allocated resource using the random access procedure as described in 27.5.2.6 (UL OFDMA-based random access).			2017/1/9 9:42
5021	Chao Chun Wang	225	1		T	N		The option to support UL OFMA RA for un-associated STAs is also problematic. If an AP does not know whether there are un-associated STAs waiting for UL OFDMA RA opportunities and whether the un-associated STAs are capable of supporting UL OFDMA RA, how an AP would schedule RA RU for un-associated STAs. There is also no evidence that including the option will benefit HE BSS			2017/1/9 9:42

5022	Chao Chun Wang	225	1			T	N		(2) The rules (or lack of it) about how UL OFDMA RA should be used create a huge challenge for chip design. The D 1.0 specification allows AP to allocated UL OFDMA RA opportunities in one trigger frame for associated and un-associated STAs, and for management and date frames with no restriction on the size of the frames. The D 1.0 specification also allows AP to allocated UL OFDMA RA RU with UL OFDMA scheduled RU. The number of combinations and varieties of receiving frame types, scheduled and random accessed, associated and unassociated, data and management frames; posing a huge challenge for the design of receiver while the option provides little benefit.		2017/1/9 9:42
5023	Chao Chun Wang	225	1			T	N		There are a couple of issues with the unrestricted use of UL OFMA RA in trigger-access opportunity. (a) Un-associated STA can't send data frame while associated STA may send both data and management frames. (b) The management functions for associated, and un-associated STA are different and the size of frames may be very different. (c) It is unclear why an AP would schedule RUs for un-associated STAs and not using all available RUs for associated STAs to send UL data. (d) Mixing UL OFMA RA opportunities in one triggered-access duration for associated and un-associated STAs makes little sense. There are many parameters need to consider by AP in order to decide the suitable duration for the UL transmission slot. Any remedy to address the duration issue tends to increase the complexity of the feature.		2017/1/9 9:42

5039	Christopher Hansen	225	1 4.3.14a	9	21	T	Y	9.21 4.3.14a		The text "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" seems to imply that 40 MHz and wider bandwidths are not allowed.	I assume that 20 MHz is mandatory but wider bandwiths are optional. Suggest using this language (or similar) instead.	2017/1/9 9:42
5040	Christopher Hansen	225	1 28.3.2.1	227	53	T	Y	227.53 28.3.2.1		The text "The DL MU transmission allows an AP to simultaneously transmit frames to more than one non-AP STAs." restricts transmission from one AP to another. This is un-necessary.	Remove "non-AP"	2017/1/9 9:42
5041	Christopher Hansen	225	1 28.3.11.5.1	318	27	T	Y	318.27 28.3.11.5.1		It is almost 2017 and we are defining a PHY with a binary convolutional code from the 1950s. This is backwards. Let's move on and use LDPC codes exclusively.	Remove this entire sub-clause.	2017/1/9 9:42
5042	Christopher Hansen	225	1 28.3.11.5.2	318	27	T	Y	318.27 28.3.11.5.2		The LDPC codes and encoding method (shortening and puncturing) developed in 802.11n are poor performing and obsolete. Remove this reference and allow new codes to be used for 802.11ax.	We need to form an 802.11ax subcomittee for LDPC codes and take new submissions.	2017/1/9 9:42
5043	Chunyu Hu	225	1 27.9	190	1	T	Y	190.01 27.9	8094	The MAC operation of the SRP mechanism is not described.	Provide a description of the MAC protocol for the SRP spatial reuse parameter. Expect a submission detailing a set of proposed changes.	2017/1/9 9:42
5044	Chunyu Hu	225	1 10.3.2.8a.2	117	5	T	Y	117.05 10.3.2.8a.2	8095	There might be more than one recipient of an MU-RTS.	Change "sent by the receipient of the MU-RTS frame" to "sent by any recipient of the MU-RTS frame"	2017/1/9 9:42
5045	Chunyu Hu	225	1 10.3.2.8a.2	117	10	T	Y	117.10 10.3.2.8a.2	8096	Why is the MU-RTS not allowed to be sent in an HE PPDU? There is no sense to having such a restriction.	Remove the cited line which disallows MU-RTS from being sent using an HE PPDU format.	2017/1/9 9:42
5046	Chunyu Hu	225	1 10.7.6	123	29	T	Y	123.29 10.7.6	8099	Due to power differences and other considerations, a situation can arise when the transmitter of a response frame using the standard required response MCS value is employing an MCS that will not work for the link because of the asymmetry, e.g. tx power asymmetry. Allow a STA to dictate the response PPDU MCS to avoid this problem.	Allow the transmitter of a response eliciting MPDU to include an indication of an appropriate MCS for the response MPDU. Expect a submission detailing some changes.	2017/1/9 9:42

5047	Chunyu Hu	225	1 9.3.1.9.7	38	35	T	Y	38.35 9.3.1.9.7	There is no explicit language anywhere stating what the allowed responses to single VHT are - I assume, without any explicit language, that both ACK and MBA are allowed	Clarify - even if the comment is correct, at least add a note pointing this out to avoid the possibility that an AP responds with ACK and a non-AP STA refuses it.	2017/1/9 9:42
5048	Chunyu Hu	225	1			T	Y		Size of the MBA response bitmap can be chosen by the MBA transmitter without constraint, so the STA that elicits the MBA cannot predict the duration of MBA - this is probably only a problem for SU PPDU eliciting frame because the MU PPDU includes a trigger for response which includes a duration value		2017/1/9 9:42
5049	Chunyu Hu	225	1 27.10.4	193	54	E	Y	193.54 27.10.4	A multi-TID A-MPDU may contain multiple noncontiguous nonzero length MPDU delimiters with EOF subfield equal to 1, one for each TID that solicits Ack and/or multiple noncontiguous nonzero length MPDU delimiters with EOF subfield equal to 0, one for each TID that solicits BlockAck.	Need to break setence after "one for each TID that solicit ACK" as the remaining statement is in parallel to "may contain multiple noncontiguous ...". Suggest to add ';' or ':'. Current way is confusing/misleading.	2017/1/9 9:42
5050	Chunyu Hu	225	1 10.13			T	Y	10.13	In IEEE 802.11-2016 publication, 10.13.3, page 1368, it's stated that QoS Null frame transmitted by DMG STA are not subject to this spacing, i.e., no MPDU delimiters with zero length need to be inserted after the MPDU immediately preceding the QoS Null frame in an A-MPDU. 11ax allows certain control and management frames to be aggregated with DATA frames. BAR/ACK/BA/MBA/Action/Trigger frame in A-MPDU doesn't need to comply the minimum MPDU spacing time following this QoS-Null example.	Shuold be ammended to 10.13	2017/1/9 9:42
5051	Chunyu Hu	225	1 9.2.4.6.4.2	50		T	Y	50.00 9.2.4.6.4.2	When AP uses a-control field (control ID = 0) to request UL OFDMA response, AP specifies only specifies MCS and RU allocation info. It's assumed that BCC will be used. However, as stated in 28.3.11.5, LDPC is the only encoding schemem for RU 484/996/2x996. This implies that the AP cannot solicit UL-OFDMA response using a-control/RSP field when the RU allocated to the non-AP exceeds RU484.	Should amend state clearly the limitation of using UL MU response scheduling; or amend to allow using MCS0-3/BCC for RU484/996/2x996 size to make this schedule flexible. Prefer the latter.	2017/1/9 9:42
5052	David Kloper	225	1 9.2.4.6.4.3	24	54	T	Y	24.54 9.2.4.6.4.3	Is this limiting SS that can be allocated to a User, or aggregate number of SS in an MU-MIMO transmission?	Please add clarification.	2017/1/9 9:42
5053	David Kloper	225	1 9.2.4.6.4.3	24	62	T	Y	24.62 9.2.4.6.4.3	This should only limit UL MU for sending of buffered data, and not prohibit UL MU allocation for immediate Block Acknowledments. Otherwise it would prohibit DL MU.	Please add clarification.	2017/1/9 9:42
5054	David Kloper	225	1 9.2.4.6.4.5	27	3	T	Y	27.03 9.2.4.6.4.5	This legacy definition does not have sufficient information to enable the correct UL MU allocation. The size should include MPDU headers, and AMPDU delimiters or it will often underestimate the allocation.	Please update definition to include all MAC layer overhead required to transfer the MSDU.	2017/1/9 9:42
5055	David Kloper	225	1 9.2.4.6.4.5	27	12	T	Y	27.12 9.2.4.6.4.5	Since this field is intended to allow UL MU allocation, it must only include MSDU that are available for sending in immediate response to a Trigger frame. Inclusion of buffered traffic that the MAC is not prepared to deliver would result in overallocation.	Please add clarification.	2017/1/9 9:42
5056	David Kloper	225	1 9.2.4.6.4.5	27	12	T	N	27.12 9.2.4.6.4.5	Since we can now carry MMPDU and MPDU in the same AMPDU, should these sizes include MMPDU as well as MSDU?	Please add clarification.	2017/1/9 9:42

5057	David Kloper	225	1 9.3.1.9.3	37	15	T	Y	37.15 9.3.1.9.3	The A-MSDU aggregation is often performed at a different layer than A-MPDU aggregation. As such we should allow fragmentation of A-MSDU. There are multiple references to prohibiting this, and we appear to allow reception of fragmented A-MSDU to be optional. See AMSDU Fragmentation support, p 76.	Update all references.	2017/1/9 9:42
5058	David Kloper	225	1 9.3.1.9.7	38	6	T	Y	38.06 9.3.1.9.7	What is the procedure to identify that all MPDU in an AMPDU were received successfully? An MPDU with a good/bad FCS is easy, but what about delimiters being bad causing an MPDU to be lost. A detailed proceedure is required in order to enable this.	A procedure should be defined that is not error prone.	2017/1/9 9:42
5059	David Kloper	225	1 9.3.1.23	47	34	T	Y	47.34 9.3.1.23	The range of values does not match range of dBm targets.	Adjust ranges to match	2017/1/9 9:42

5071	Der-Zheng Liu	225	1 28.3.18.1	351	36	G	Y	351.36 28.3.18.1	To add limitation of -59dBm/MHz at frequency offset greater than 39.5 MHz for 80MHz	The transmit spectrum shall not exceed the maximum of the interim transmit spectrum mask and -59 dBm/MHz at any frequency offset greater than 39.5 MHz.	2017/1/9 9:42
5072	Der-Zheng Liu	225	1 28.3.18.1	352	7	G	Y	352.07 28.3.18.1	To add limitation of -62dBm/MHz at frequency offset greater than 79.5 MHz for 160MHz	The transmit spectrum shall not exceed the maximum of the interim transmit spectrum mask and -62 dBm/MHz at any frequency offset greater than 79.5 MHz.	2017/1/9 9:42

5073	Der-Zheng Liu	225	1 28.3.18.1	352	8	G	Y	352.08 28.3.18.1	To change to be -62dBm/MHz for 160MHz	Figure 28-40 (Example transmit spectral mask for a 160 MHz mask PPDU) shows an example of the resulting overall spectral mask when the -40 dBr spectrum level is above -62 dBm/MHz.	2017/1/9 9:42
5074	Der-Zheng Liu	225	1 28.3.18.1	352	49	G	Y	352.49 28.3.18.1	To add limitation of -59dBm/MHz at frequency offset greater than 39.5 MHz for 80+80MHz	The transmit spectrum shall not exceed the maximum of the interim transmit spectrum mask and -59 dBm/MHz at any frequency offset greater than 39.5 MHz.	2017/1/9 9:42
5075	Der-Zheng Liu	225	1 10.3.2.8a	117	42	T	Y	117.42 10.3.2.8a	For the example of Figure 10-9a, if only one of STA1 and STA2 respones a valid CTS frame, AP should recognite as successful respone. But if STA1 is busy, AP would still sent DL MU PPDU, and STA1 would be not protected by this MU-RTS/CTS procedure.	The MU-RTS/CTS procedure allows an AP to protect an MU transmission. An HE AP may transmit an MU-RTS frame to solicit simultaneous CTS responses from one or more HE STAs. Need to find out a better solution for some hidden node issue caused by the simultaneous CTS responses.	2017/1/9 9:42
5076	Der-Zheng Liu	225	1 10.3.2.8a	117	42	T	Y	117.42 10.3.2.8a	For the example of Figure 10-9c, STA1 should sent a CTS frame response on primary 20MHz channel indicated by MU-RTS, if the primary 20MHz is idle. However, if there is a hidden node for AP and STA2, which interferes STA1 on secondary 20 MHz channel, STA1 still would sent the CTS frame response. Right? In this case, AP sent a DL MU PPDU to STA1 and STA2, STA1 may be collided by this hidden node for AP.	A CTS frame sent in response to an MU-RTS frame shall be transmitted on the 20 MHz channels indicated in the RU Allocation subfield of the User Info field of the MU-RTS frame when the indicated 20 MHz channels are all idle. If any 20 MHz channel indicated in the RU Allocation subfield of the User Info field is busy, the CTS frame response shall not be transmitted. 1. Need to find out a better solution for some hidden node issue caused by the CTS frame response on a smaller BW channel indicated by MU-RTS. 2. Why not to limit the CTS frame response with the same full bandwith?	2017/1/9 9:42
5077	Der-Zheng Liu	225	1 9.4.2.218.1	76	2	E	Y	76.02 9.4.2.218.1	To remove one of double dots.	The HE Capabilities element is defined in Figure 9-589cj (HE Capabilities element format).	2017/1/9 9:42

Provide the function of relation between number of LTF symbol and total number of space time stream like as table 21-13 in 802.11-2016.	2017/1/9 9:42
5108	Dong Guk Lim	225	1 28.3.10.10	301	43	T	Y	301.43 28.3.10.10	In an HE MU PPDU and HE trigger-based PPDU, NHE-LTF is indicated to STA by using the fields of HE-SIG-A and available number of LTF symbol is 1,2,4,6,8 described in 28.3.10.7.2. and this value can be determined by the Nsts,total. So, we need the obvious function like as table 21-13.	Chage the reference Table 28-12 (Frequently used parameters) with Table 21-13.	2017/1/9 9:42
5109	Dong Guk Lim	225	1 9.3.1.23	44	23	E	N	44.23 9.3.1.23	A wrong table is referred, so correct the table reference.	Change Table 22-13 with Table 21-13.	2017/1/9 9:42
5110	Dong Guk Lim	225	1 27.6.4	179	14	E	N	179.14 27.6.4	Reference is wrong. Correct it .	Change 26.1.4 (PPDU formats) with 28.3.4 HE PPDU formats	2017/1/9 9:42
5111	Dong Guk Lim	225	1 27.15.4.1	203	10	E	N	203.10 27.15.4.1	Reference is wrong. Correct it .	Change the reference 26.5 with 28.5	2017/1/9 9:42
5112	Dorothy Stanley	225	1 3	3	1	T	Y	3.01 3	Resource Unit and RU is a major new concept and terminology for 802.11. Need to and a definition in 3.2 and add RU to acronym list in 3.4. (For example, does RU apply to MU in general for both MU-MIMO and OFDMA, or just OFDMA?)	As in comment	2017/1/9 9:42
5113	Dorothy Stanley	225	1 3	3	1	T	Y	3.01 3	Define DL HE MU PPDU	As in comment	2017/1/9 9:42
5114	Dorothy Stanley	225	1 3	3	1	T	Y	3.01 3	Define UL HE MU PPDU	As in comment	2017/1/9 9:42
5115	Dorothy Stanley	225	1 3	3	1	T	Y	3.01 3	Define DL MU PPDU	As in comment	2017/1/9 9:42
5116	Dorothy Stanley	225	1 4.3.14a	9	18	T	Y	9.18 4.3.14a	Regarding, "An HE non-AP STA supporting 20 MHz, 40 MHz, 80 MHz, 160 MHz and 80+80 MHz is also a VHT non-AP STA", an HE non-AP STA supporting 20 MHz, 40 MHz and 80 MHz should also be an VHT non-AP STA	correct the statement	2017/1/9 9:42
5117	Dorothy Stanley	225	1 4.3.14a	9	21	T	Y	9.21 4.3.14a	Regarding, "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only", am I interpreting this correctly that an HE non-AP STA will only operate in 20 MHz? I'm guessing that tne intent is we want all HE non-AP STAs to support 20 MHz-only operation. If so, change the sentence to "An HE non-AP STA shall support 20 MHz-only operation"	As in comment	2017/1/9 9:42

5118	Dorothy Stanley	225	1 4.3.14a	9	27	T	Y	9.27 4.3.14a	Regarding, "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only", am I interpreting this correctly that an HE non-AP STA will only operate in 20 MHz? I'm guessing that tne intent is we want all HE non-AP STAs to support 20 MHz-only operation. If so, change the sentence to "An HE non-AP STA shall support 20 MHz-only operation"	As in comment	2017/1/9 9:42
5119	Dorothy Stanley	225	1 4.3.14a	9	29	T	Y	9.29 4.3.14a	UL MU-MIMO a main PHY feature, and needs to be added to this list.	As in comment	2017/1/9 9:42
5120	Dorothy Stanley	225	1 4.3.14a	9	49	T	Y	9.49 4.3.14a	There is entire MAC section called UL MU. This needs to be added to the list	As in comment	2017/1/9 9:42
5121	Dorothy Stanley	225	1 4.3.14a	9	49	T	Y	9.49 4.3.14a	There is entire MAC section called Spatial Reuse. This needs to be added to the list	As in comment	2017/1/9 9:42
5122	Dorothy Stanley	225	1 9.2.4.6.4.2	24	11	T	Y	24.11 9.2.4.6.4.2	Is DL TX Power conducted power or EIRP? Please clarify.	As in comment	2017/1/9 9:42
5123	Dorothy Stanley	225	1 9.2.4.6.4.2	24	27	T	Y	24.27 9.2.4.6.4.2	Why is UL MCS limited to MCS 0-3? In dense deployments, we will want higher MCS's. Please clarify.	As in comment	2017/1/9 9:42
5124	Dorothy Stanley	225	1 9.2.4.6.4.3	24	59	T	Y	24.59 9.2.4.6.4.3	What does a station that supports 160 MHz but not 80+80 MHz set Channel Width to? Please clarify.	As in comment	2017/1/9 9:42
5125	Dorothy Stanley	225	1 9.2.4.6.4.3	24	63	T	Y	24.63 9.2.4.6.4.3	UL MU is a critical feature in order to achieve the goal of high efficiency. Why are we allowing devices to disable UL MU operation? If this is for power save, then perhaps only allow devices to not support UL MU if their uplink duty cycle is very, very low.	As in comment	2017/1/9 9:42
5126	Dorothy Stanley	225	1 9.2.4.6.4.5	25	32	T	Y	25.32 9.2.4.6.4.5	While queue size is definitely important to the AP in order to schedule UL MU, there are other metrics that are important as well. For example, knowing that the client is experiencing excessive jitter and latency on the uplink or has low battery life will be useful.	Modify BSR accordingly	2017/1/9 9:42
5127	Dorothy Stanley	225	1 9.2.4.6.4.7	27	47	T	Y	27.47 9.2.4.6.4.7	Regarding "Bandwidth Query report operation to assist HE DL HE MU transmission", why is this report for DL only? When the AP schedules RUs to clients in uplink, wouldn't it be important to know uplink 20 MHz sub-channel availability around the client?	Modify BQR accordingly	2017/1/9 9:42
5128	Dorothy Stanley	225	1 9.3.1.9.1	34	10	T	Y	34.10 9.3.1.9.1	The start of reserved was changed from B5 to B6 in Figure 9-33. But there is no new label for B5.	Add label for B5	2017/1/9 9:42
5129	Dorothy Stanley	225	1 9.3.1.23	44	37	T	Y	44.37 9.3.1.23	Is AP Tx Power conducted or EIRP? Please clarify.	As in comment	2017/1/9 9:42
5130	Dorothy Stanley	225	1 9.3.1.23	44	13	T	Y	44.13 9.3.1.23	Its rediculous to have two LTF types for just the UL MU-MIMO PPDU. Save a bit in Trigger frame and PHY implementation complexity by just selecting single stream pilots which we used in 11ac and removing Mask LTF.	As in comment	2017/1/9 9:42
5131	Dorothy Stanley	225	1 9.3.1.23	45	11	T	Y	45.11 9.3.1.23	I don't see anywhere a definition for "high doppler mode of transmission". Please define or delete this field throughout the spec.	As in comment	2017/1/9 9:42
5132	Dorothy Stanley	225	1 9.3.1.23.6	51	30	T	Y	51.30 9.3.1.23.6	Regarding, "9.3.1.23.6 GCR MU-BAR variant", while we're modifying GCR and multicast, we need to address the issue that multicast only uses legacy rates.	expand the rate set available for multicast	2017/1/9 9:42
5133	Dorothy Stanley	225	1 9.3.3.1	52	43	E	Y	52.43 9.3.3.1	change pre-sent to present	As in comment	2017/1/9 9:42
5134	Dorothy Stanley	225	1 9.4.2.218.2	77	54	T	Y	77.54 9.4.2.218.2	What is Maximum Number of Fragmented MSDU's set to if Fragmentation Support is 0? Please clarify.	As in comment	2017/1/9 9:42
5135	Dorothy Stanley	225	1 9.4.2.218.2	78	4	T	Y	78.04 9.4.2.218.2	What is Minimum Fragment Size set to if Fragmentation Support is 0? Please clarify.	As in comment	2017/1/9 9:42
5136	Dorothy Stanley	225	1 9.4.2.218.2	78	14	T	Y	78.14 9.4.2.218.2	What does an HE AP STA set this field to? Please clarify.	As in comment	2017/1/9 9:42
5137	Dorothy Stanley	225	1 9.4.2.218.2	79	42	T	Y	79.42 9.4.2.218.2	The information is blank in Table 9-262z for "Maximum AMPDU Length Exponent"	Add information	2017/1/9 9:42
5138	Dorothy Stanley	225	1 9.4.2.218.2	79	57	T	Y	79.57 9.4.2.218.2	What does an HE AP STA set this field to? Please clarify.	As in comment	2017/1/9 9:42

5139 Dorothy Stanley	225	1 9.4.2.218.3	82	26	T	Y	82.26 9.4.2.218.3	Regarding B5, if an AP establishes a 40 MHz BSS, and the non-AP STA sets B5 0, then the AP can never assign an RU to the non-AP STA? Or in other words, the non-AP STA will never participate in OFDMA? If this is the case, it is a bad idea and will greatly reduce efficiency. We should at least make the 20 MHz non-AP STAs participate in OFDMA in the primary channel.	As in comment	2017/1/9 9:42
5140 Dorothy Stanley	225	1 9.4.2.218.3	82	30	T	Y	82.30 9.4.2.218.3	Regarding B6, if an AP establishes a 40 MHz or 80 MHz BSS, and the non-AP STA sets B6 0, then the AP can never assign an RU to the non-AP STA? Or in other words, the non-AP STA will never participate in OFDMA? If this is the case, it is a bad idea and will greatly reduce efficiency. We should at least make the 20 MHz non-AP STAs participate in OFDMA in the primary channel.	As in comment	2017/1/9 9:42
5141 Dorothy Stanley	225	1 9.4.2.218.3	83	46	T	Y	83.46 9.4.2.218.3	I couldn't find "Doppler procedure" defined anywhere. Either define the procedure or delete the field.	As in comment	2017/1/9 9:42
5142 Dorothy Stanley	225	1 9.4.2.218.3	83	46	T	Y	83.46 9.4.2.218.3	Regarding the field "UL MU", this field is much more specific as to whether the STA supports UL MU-MIMO	Change name of the field to "UL MU-MIMO"	2017/1/9 9:42
5143 Dorothy Stanley	225	1 9.4.2.218.3	84	26	T	Y	84.26 9.4.2.218.3	Regarding the field UL HE MU PPDU Payload Support", please clarify. It is reserved for non-AP STA, so does that mean that non-AP STAs are disallowed to support or mandatory to support? Does this really indicate behavior for all STA type, or is it really for just for HE AP? I can't find the use of the field anywhere in the draft. Why is the capability element needed? In fact, there doesn't even appear to be a definition for UL HE MU PPDU, so add one.	as in comment	2017/1/9 9:42
5144 Dorothy Stanley	225	1 9.4.2.218.3	84	30	T	Y	84.30 9.4.2.218.3	Regarding "SU Beamformer", what does "Set to 1 if sent by an HE AP with support for 4 or more spatial streams." mean? Does is mean that a AP STA always sets it to 1 if it supports 4+ SS and that being an SU beamformer is then mandatory? Please clarify.	as in comment	2017/1/9 9:42
5145 Dorothy Stanley	225	1 9.4.2.218.3	84	36	T	Y	84.36 9.4.2.218.3	Regarding "SU Beamformee", what does "Set to 1 if sent by a non-AP STA." mean? Does is mean that a non-AP STA always sets it to 1 and that being an SU beamformee is mandatory? Please clarify.	as in comment	2017/1/9 9:42
5146 Dorothy Stanley	225	1 9.4.2.218.3	84	40	T	Y	84.40 9.4.2.218.3	Regarding "MU Beamformer", what does "Set to 1 if sent by an AP." mean? Does is mean that an AP always sets it to 1 and that being an MU beamformee is mandatory? Please clarify. what does "Set to 0 if sent by a non-AP STA." mean? Does is mean that a non-AP STA always sets it to 0 and that being an MU beamformer is prohibited? Please clarify. if the above is true, then why do we need this capability bit? AP is mandatory, non-AP is disallowed - don't need a capability bit for this, just a shall statement somewhere.	as in comment	2017/1/9 9:42
5147 Dorothy Stanley	225	1 9.4.2.218.3	84	40	T	Y	84.40 9.4.2.218.3	I don't see MU Beamforee capability bit. Does that mean its mandatory for AP and non-AP? Please clarify.	as in comment	2017/1/9 9:42
5148 Dorothy Stanley	225	1 9.4.2.218.3	84	49	T	Y	84.49 9.4.2.218.3	Regarding "Beamformee STS", what are the settings for MU beamformee? Please clarify.	as in comment	2017/1/9 9:42
5149 Dorothy Stanley	225	1 9.4.2.218.3	84	49	T	Y	84.49 9.4.2.218.3	Regarding "NSTS Total...", Please clarify whether this is for DL MU-MIMO Beamformee or SU Beamformee or both.	as in comment	2017/1/9 9:42

5150 Dorothy Stanley	225	1 9.4.2.218.3	85	6	T	Y	85.06 9.4.2.218.3	Regarding "Beamformee STS...", what are the settings for MU beamformee? Please clarify.	as in comment	2017/1/9 9:42
5151 Dorothy Stanley	225	1 9.4.2.218.3	85	13	T	Y	85.13 9.4.2.218.3	Regarding "NSTS Total...", Please clarify whether this is for DL MU-MIMO Beamformee or SU Beamformee or both.	as in comment	2017/1/9 9:42
5152 Dorothy Stanley	225	1 9.4.2.218.3	85	20	T	Y	85.20 9.4.2.218.3	Regarding "Number Of Sounding Dimensions...", what are the settings for MU beamformer? Please clarify.	as in comment	2017/1/9 9:42
5153 Dorothy Stanley	225	1 9.4.2.218.3	85	26	T	Y	85.26 9.4.2.218.3	Regarding "Number Of Sounding Dimensions...", what are the settings for MU beamformer? Please clarify.	as in comment	2017/1/9 9:42
5154 Dorothy Stanley	225	1 9.4.2.218.3	86	11	T	Y	86.11 9.4.2.218.3	Regaring, "DL MU-MIMO on Partial BW". Does this imply that reception by a non-AP STA of DL MU-MIMO on full BW is mandatory? Please clarity and indicate where the shall statement is for this.	as in comment	2017/1/9 9:42
5155 Dorothy Stanley	225	1 9.4.2.218.3	86	18	T	Y	86.18 9.4.2.218.3	Define SRP	as in comment	2017/1/9 9:42
5156 Dorothy Stanley	225	1 9.4.2.218.3	86	18	T	Y	86.18 9.4.2.218.3	I can't find the use of "SRP-based SR Support" field anywhere in the draft. Why is the capability element needed?	as in comment	2017/1/9 9:42
5157 Dorothy Stanley	225	1 9.4.2.218.3	86	30	T	Y	86.30 9.4.2.218.3	Regarding "A STA that declares support for HE trigger-based PPDUs", how does a STA declare support? i.e. what field is set?	as in comment	2017/1/9 9:42
5158 Dorothy Stanley	225	1 9.4.2.219	91	50	T	Y	91.50 9.4.2.219	What is PE? Please define.	As in comment	2017/1/9 9:42
5159 Dorothy Stanley	225	1 10.3.1	113	45	T	Y	113.45 10.3.1	"HE duration-based RTS" sounds like a name of a function/feature. But I don't see any definition for it.	Define the protocol for establishing "HE duration-based RTS". Perhaps turn 10.3.2.4a into something useful.	2017/1/9 9:42
5160 Dorothy Stanley	225	1 10.3.2.4	114	62	T	Y	114.62 10.3.2.4	Regarding, "A STA shall update the NAV...", this seems pretty broad. Would legacy STAs now be required to update NAV based on new HE information? Or are we counting on the fact that legacy STAs would not be able to decode this PHY format? Perhaps limit this to HE STA?	as in comment	2017/1/9 9:42
5161 Dorothy Stanley	225	1 10.3.2.4	115	38	T	Y	115.38 10.3.2.4	How is the "HE duration-based RTS threshold" used by the non-AP HE STAs?	Define the protocol and provide normative language for how the non-AP HE STAs behaves upon receipt of this threshold. Perhaps turn 10.3.2.4a into something useful.	2017/1/9 9:42
5162 Dorothy Stanley	225	1 10.3.2.4	115	38	T	Y	115.38 10.3.2.4	Clarify that "HE duration-based RTS threshold" is in the HE Operation Parameters field	as in comment	2017/1/9 9:42
5163 Dorothy Stanley	225	1 10.3.2.4a	115	46	T	Y	115.46 10.3.2.4a	Regarding "10.3.2.4a Duration-based RTS/CTS. In dense environments, managing RTS usage by an AP can help the overall interference situation since the AP may have better view of the network situation.", while this a good start in adding control by the AP over non-AP STAs other aspects of client management need to addressed. In an large, dense, managed ESS, the network has much better visibility into the best selection of AP and band that the client should initially associate with and then subsequently select during roaming. The network also needs to be able to control usage of probe request and probe response in an ESS in improve network efficiency.	Add tighter management by the network of client association and roaming	2017/1/9 9:42
5164 Dorothy Stanley	225	1 10.28	136	19	T	Y	136.19 10.28	Regarding, "10.28 Reverse direction protocol", this was added in 11n to address TCP ACK delivery, but was hardly (or not at all) implemented in any devices. Rather than continue to modify RDP, introduce TCP ACK Proxy. And while we're crossing layer boundaries, mechanisms to limit traffic at layer 2 due to higher layer discovery would also improve network efficiency.	define such protocols	2017/1/9 9:42

5165	Dorothy Stanley	225	1 11.1.3.10	141	36	T	Y	141.36 11.1.3.10	We had dual-beacon in 11n with STBC. Noone implemented it. Why are we introducing yet another dual-beacon? Delete this to reduce complexity in the spec.	as in comment	2017/1/9 9:42
5166	Dorothy Stanley	225	1 27.1	149	10	T	Y	149.10 27.1	is "are banned" normative?	change sentence to a "shall not"	2017/1/9 9:42
5167	Dorothy Stanley	225	1 27.2.1	149	19	T	Y	149.19 27.2.1	How does "received frame" equate to the HE receive procedure? To elaborate, in Figure 28-51 PHY receive state machine, BSS color filtering occurs after CRC OK check of HE-SIG-A. However, that doesn't mean the frame can be received. The most obvious example is mismatch in PHY modes (e.g. 2-SS PPDU trying to be received by 1-SS receiver) With respect to "or MAC address", then yes then entire frame needs to be properly received.	With respect to RXVECTOR parameters located in the HE-SIG-A, "received frame" should probably be changed to "valid CRC of HE-SIG-A or valid CRC of VHT-SIG-A".	2017/1/9 9:42
5168	Dorothy Stanley	225	1 27.2.1	149	25	T	Y	149.25 27.2.1	If the BSS_COLOR is zero in the PPDU, and the BSS color of the AP is zero, is the frame still classified as intra-BSS?	as in comment	2017/1/9 9:42
5169	Dorothy Stanley	225	1 27.2.2	151	32	T	Y	151.32 27.2.2	Regarding "A STA shall update the basic NAV with the duration information indicated by the RXVECTOR parameter TXOP_DURATION if and only if all the following conditions are met:" and "The STA does not receive a frame with the duration information indicated by a Duration field in the PSDU of the PPDU carrying the RXVECTOR parameter TXOP_DURATION", aren't these contradicatory statements? Please clarify intent.	as in comment	2017/1/9 9:42
5170	Dorothy Stanley	225	1 27.2.2	151	56	T	Y	151.56 27.2.2	The language "Maintaining two NAV is beneficial in dense deployment scenarios where a STA requires protection from frames transmitted by STAs within its BSS, i.e., intra-BSS, and avoid interference from frames transmitted by STAs in neighboring BSS, i.e., inter-BSS." doesn't seem to match the rules. Consider the situation where an HT STA and HE STA are both associated to the same AP in the same BSS. The HT STA transmits a 2-SS PPDU. The HE STA is only capable of receiving 1-SS PPDUs. My understanding is that this PPDU would be unclassified by the HE STA in terms of intra-BSS PPDU or inter-BSS PPDU since MAC addresses in the frame would not be decodable by the HE STA. So the basic NAV duration would be updated, not the intra-BSS NAV.	Define how STAs are "intra-BSS" protected in the presence of undecodable PPDUs. Or modify this paragraph to actually match the defined rules.	2017/1/9 9:42
5171	Dorothy Stanley	225	1 27.2.2	151	57	E	Y	151.57 27.2.2	"Maintaining two NAV is..."	change to "Maintaining two NAVs is..."	2017/1/9 9:42
5172	Dorothy Stanley	225	1 27.2.3	152	21	T	Y	152.21 27.2.3	what's an "OMI A-Control field"?	Change to "Operating Mode subfield in A-Control subfield" in all locations where "OMI A-Control field" is used, or define "OMI A-Control field"	2017/1/9 9:42
5173	Dorothy Stanley	225	1 27.4.1	157	23	E	Y	157.23 27.4.1	"recipient (see 10.24.7.1 (Introduction)." missing end parenthesis	change to "recipient (see 10.24.7.1 (Introduction))."	2017/1/9 9:42
5174	Dorothy Stanley	225	1 27.4.1	157	48	T	Y	157.48 27.4.1	"An HE STA that supports Multi-STA BlockAck shall examine each received Multi-STA sent by an STA with which it has a BA agreement." A few issues with this sentence: 1) what is meant by "shall examine each received Multi-STA"? Was the intent to examine Per STA Info subfields for each STA identified in the BA? 2) "an STA" should be "a STA" or "an HE STA"	as in comment	2017/1/9 9:42

5175	Dorothy Stanley	225	1 27.4.1	158	15	T	Y	158.15 27.4.1	I don't think a STA associates with a BSSID. Change "An HE non-AP STA that is associated with a nontransmitted BSSID" should be "An HE non-AP STA that is associated with BSS with a nontransmitted BSSID". Then fix the end of the sentence as well, change to "whose RA is set either to the (nontransmitted) BSSID of the BSS it is associated with"	as in comment	2017/1/9 9:42
5176	Dorothy Stanley	225	1 27.4.2	159	5	E	Y	159.05 27.4.2	change "an STA" to "a STA" or "an HE STA"	as in comment	2017/1/9 9:42

5198	Dorothy Stanley	225	1 27.8.3	189	36	T	Y	189.36 27.8.3	There is nothing in 27.5.2 describing what happens when UL MU Disable subfield is 1. UL MU is a critical feature for enhancing efficiency. What is the rationale for allowing non-AP STAs to disable UL MU operation?	Describe the purpose of allowing non-AP STAs to disable UL MU operation	2017/1/9 9:42
5199	Dorothy Stanley	225	1 27.8.3	189	36	T	Y	189.36 27.8.3	It seems like there needs to be a requirement that the non-AP STA does not discontinue participating in UL MU until it gets an acknowledgement from the AP. For example, if the AP did not receive the TOM, then it may continue to include the non-AP STA in UL MU exchanges.	Mandate that the non-AP STA needs to wait to discontinue participating in UL MU until it gets an acknowledgement from AP. Essentially even though this is part of TOM, processing of the trigger by the non-AP STA is a receive function.	2017/1/9 9:42
5200	Dorothy Stanley	225	1 27.9.1	190	12	T	Y	190.12 27.9.1	There is no definition for "SR PPDU"	define SR PPDU	2017/1/9 9:42
5201	Dorothy Stanley	225	1 27.9.2.1	190	24	T	Y	190.24 27.9.2.1	The language here uses "Inter-BSS PPDU", but in 27.2.1 the language uses "Inter-BSS frame". Is there an implied difference? Or are we using different terminology for the same thing?	unify terminology	2017/1/9 9:42
5202	Dorothy Stanley	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	"SR Backoff procedure for SR delayed case." This supposed sentence doesn't make any sense, but perhaps it was meant to be a section heading? Need to fix this.	as in comment	2017/1/9 9:42
5203	Dorothy Stanley	225	1 27.9.2.2	191	7	T	Y	191.07 27.9.2.2	I do not see how "OBSS_PD_min" and "OBSS_PD_max" are set. I interpret this as that the non-AP STAs may set them to whatever they please. To properly manage the interference environment, the AP must have control over the OBSS_PD_min and max level the non-AP STAs use.	Define a protocol whereby the AP can dictate the OBSS_PD_min level that is used by the non-AP STAs. Included in this must be the ability to disable SR, by setting OBSS_PD_min and OBSS_PD_max both to -82dBm. And define that OBSS_PD_min and OBSS_PD_max are set by the non-AP STAs to the default values only in the absense of direction from the AP.	2017/1/9 9:42

5204	Dorothy Stanley	225	1 27.9.2.2	191	62	T	Y	191.62 27.9.2.2	what does "default" mean? Does that mean a user or vendor can change these values to something else? Define what is meant by "OBSS_PD_min_default" and "OBSS_PD_max_default". Or in otherwords, how are these variables and values used.	as in comment	2017/1/9 9:42
5205	Dorothy Stanley	225	1 27.9.2.2	191	62	T	Y	191.62 27.9.2.2	Can the STA set OBSS_PD_min or OBSS_PD_max to an arbitray value, e.g. -50dBm? Please clarify	Define that OBSS_PD_min and OBSS_PD_max are set by the non-AP STAs to the default values only in the absense of direction from the AP. Perhaps define that APs always set OBSS_PD_min and OBSS_PD_max to default value.	2017/1/9 9:42
5206	Dorothy Stanley	225	1 27.9.2.2	192	1	E	Y	192.01 27.9.2.2	"considering the antenna connector definition section 3.1"	grammar doesn't seem correct. Perhaps change to "refer to the antenna connector definition in Section 3.1"	2017/1/9 9:42
5207	Dorothy Stanley	225	1 27.9.2.2	192	11	T	Y	192.11 27.9.2.2	The unconstrained condition needs to be changed to "If OBSS_PD_Level <= OBSS_PD_min"	as in comment	2017/1/9 9:42
5208	Dorothy Stanley	225	1 27.9.2.2	192	18	T	Y	192.18 27.9.2.2	For proper management of an ESS to achieve our goal of high efficiency, the AP needs to be able to dictate the non-AP STA's transmit power level to lower levels than what may be calculated by TXPWR_max. This is especially important in dense environments. Furthermore, we need this capability even beyond the context of SR and UL MU, e.g. tx power levels when transmitting SU PPDU	define such a protocol.	2017/1/9 9:42
5209	Dorothy Stanley	225	1 27.9.2.2	192	20	T	Y	192.20 27.9.2.2	Define UL TB PPDU	as in comment	2017/1/9 9:42
5210	Dorothy Stanley	225	1 27.10.2	192	40	T	Y	192.40 27.10.2	Regarding, "HE STA that transmits an DL HE MU PPDU", can a non-AP STA transmit a DL HE MU PPDU?	as in comment	2017/1/9 9:42
5211	Dorothy Stanley	225	1 27.11.2	196	19	T	Y	196.19 27.11.2	Regarding, "A STA transmitting an HE PPDU in a direct path to a (T)DLS peer STA", we need additional control by the network over peer-to-peer operation. Specifically, channel selection in an dense ESS is critical in achieving high efficiency. The network must be able to dictate which channels may be used by clients in order to manage interference.	define such a protocol	2017/1/9 9:42
5212	Dorothy Stanley	225	1 27.11.3	196	20	T	Y	196.20 27.11.3	Always setting BEAM_CHANGE to 1 if NSS is > 2 makes no sense. If this is truly the case, you don't need this parameter as NSS provides the same information. And why is BEAM_CHANGE aways set to 1 for the first PPDU in a TXOP?	as in comment	2017/1/9 9:42
5213	Dorothy Stanley	225	1 27.11.4	196	54	T	Y	196.54 27.11.4	"may ignore the HE PPDU" - its not about ignoring the PPDU, its about following modified CCA rules	change sentence to "...and 63 may follow the spatial reuse rules as described in 27.9 (Spatial reuse operation).	2017/1/9 9:42
5214	Dorothy Stanley	225	1 27.11.4	196	63	T	Y	196.63 27.11.4	Regarding "BSS_COLOR equal to 0 shall not discard the HE PPDU", there is nothing restricting APs from setting the BSS Color to 0. In 9.4.2.219, the value 0 is defined as "indicates that there is no BSS color for this BSS". Is the intention of this requirement to really not discard any SU PPDUs from APs with BSS Color set to 0? Or is the intention more limited to the previous paragraph where a SU PDDU is sent to a non-member and we set BSS_COLOR to 0.	clarify	2017/1/9 9:42
5215	Dorothy Stanley	225	1 27.11.5	197	53	T	Y	197.53 27.11.5	Regarding "The RXVECTOR parameter FORMAT of the soliciting PPDU is not equal to HE_SU, HE_MU, or HE_EXT_SU", I'm not following the logic. Is it trying to say that don't set to all one's if the soliciting PPDU is equal to HE trigger-based PPDU? Please clarify.	as in comment	2017/1/9 9:42

5216	Dorothy Stanley	225	1 27.14.1	199	11	T	Y	199.11 27.14.1	If the APs set BSS Color to zero, then the determinition of intra-PPDU based on matching BSS Color is not going to be correct quite often. I believe we need some exceptions for the BSS Color equal 0 situation.	as in comment	2017/1/9 9:42
5217	Dorothy Stanley	225	1 27.15.2	201	28	T	Y	201.28 27.15.2	Can an HE non-AP STA transmit an HE MU PPDU? Please clarify.	as in comment	2017/1/9 9:42
5218	Dorothy Stanley	225	1 27.15.2	201	38	T	Y	201.38 27.15.2	"UL MU PPDU Support" isn't defined	define	2017/1/9 9:42
5219	Dorothy Stanley	225	1 27.15.2	201	38	T	Y	201.38 27.15.2	pg 9, line 31 states "Mandatory support for DL and UL OFDMA", which seems to conflict with the intent here that there is an HE Capability that allows the STA to not support UL MU	clarify	2017/1/9 9:42
5220	Dorothy Stanley	225	1 27.15.2	201	42	T	Y	201.42 27.15.2	I think this statement is categorically wrong "An HE STA shall send Control frames in non-HT PPDU format following the rules defined in 10.7.6" because there are a lot of conditions in 10.7.6 that do not require non-HT PPDU format.	Perhaps change the sentence to "An HE STA shall send Control frames following the rules defined in 10.7.6 (Rate selection for Control frames)) with the following exceptions:"	2017/1/9 9:42
5221	Dorothy Stanley	225	1 27.15.2	202	4	T	Y	202.04 27.15.2	I don't see a definition for ER SU PPDU	add definition	2017/1/9 9:42

5380	Geonjung Ko	225	1 9.3.1.23	47	48	T	Y	47.48 9.3.1.23	Equation 9-ax1 and 9-ax2 define the length of the Padding field in the Trigger frame and the length is the maximum length among the length for receiving STAs required to respond to the Trigger frame. Therefore when the Trigger frame includes User Info fields with the AID12 field set to 0, the random access of some STAs can be restricted by the Padding length.	The Padding length longer than the value defined by the equation should be allowed. When the Trigger frame includes User Info fields with the AID12 field set to 0, the length defined by the equation 9-ax1 and 9-ax2 can be the minimum length.	2017/1/9 9:42
5381	Geonjung Ko	225	1 28.3.20	369	5	T	Y	369.05 28.3.20	An AP does not need to issue a PHY-RXSTART.indication primitive in response to a HE trigger-based PPDU that does not overlap the primary channel, if the PPDU is not solicited by the AP.	An AP shall issue a PHY-RXSTART.indication primitive in response to a PPDU that does not overlap the primary channel, if the PPDU is the HE trigger-based PPDU the AP solicited. If the PPDU is the HE trigger-based PPDU that does not overlap the primary channel and the PPDU is not solicited by the AP, the AP shall not issue the primitive.	2017/1/9 9:42
5382	Geonjung Ko	225	1 28.3.20	369	5	E	Y	369.05 28.3.20	the HE-trigger based PPDU -> the HE trigger-based PPDU	As per comment	2017/1/9 9:42
5383	Geonjung Ko	225	1 28.3.20	369	8	T	Y	369.08 28.3.20	According to the baseline spec, the secondary channel means a 20 MHz channel. Therefore, it should be the secondary 20 MHz channel, secondary 40 MHz channel, or secondary 80 MHz channel.	As per comment	2017/1/9 9:42
5384	Geonjung Ko	225	1 27.2.2	150	57	T	Y	150.57 27.2.2	When an AP solicits an immediate response from a STA using the UL MU operation, the solicited STA may not respond to the Trigger frame after the CS mechanism. In this case, the STA shall set its NAV.	In case that the STA is solicited an immediate response by the frame but the STA cannot respond to the frame, the STA shall update its NAV.	2017/1/9 9:42
5385	Geonjung Ko	225	1 27.9	190	1	T	Y	190.01 27.9	Although the Spatial Reuse field is in the HE-SIG-A, the spec does not define the related operation.	The SRP-based Spatial Reuse operation should be defined.	2017/1/9 9:42
5386	Geonjung Ko	225	1 27.5.2.6.2	173	31	T	Y	173.31 27.5.2.6.2	We need a clarification on what "the HE AP" means. For a STA which associated with an AP, "the HE AP" would be the AP that the STA associated with. Also it should be clarified for a STA which has not associated with any APs. Without the clarification, the STA would initialize its OBO counter every time the STA receives a Beacon frame from neighboring APs.	A STA which associated with an AP initializes its OBO counter on the reception of the RAPS element from the associated AP. A STA which has not associated with any APs initializes its OBO counter on the reception of the RAPS element from the intended AP.	2017/1/9 9:42

5387	Geonjung Ko	225	1 27.11.4	196	44	T	Y	196.44 27.11.4	A BSS may change its BSS Color (Subclause 27.16.2 Selecting and advertising new BSS Color) during the operation.	The BSS shall maintain the single value of the BSS Color subfield of the HE Operation element for the lifetime of the BSS or until the BSS changes the BSS Color to the new value.	2017/1/9 9:42
5388	Geonjung Ko	225	1 27.11.4	196	49	T	Y	196.49 27.11.4	An HE STA may not receive the HE Operation element at the BSS Color change TBTT. In this case, the HE STA shall set the TXVECTOR parameter BSS_COLOR of an HE PPDU to the value indicated in the BSS Color Change Annoucement element, not in the HE Operation element.	As per comment	2017/1/9 9:42
5389	Geonjung Ko	225	1 28.2.2	226	22	T	Y	226.22 28.2.2	BSS_COLOR can be set to the value within the range 0 to 63, but sometimes the usage of value 0 is not the AP's choice. For example, if the intended recipient of a PPDU is not a member of a transmitting STA's BSS, then BSS_COLOR is set to 0 (Subclause 27.11.4 BSS_COLOR).	As per comment	2017/1/9 9:42
5390	Geonjung Ko	225	1 27.16.2	206	39	T	Y	206.39 27.16.2	We need a clarification on what is BSS Color change TBTT when the HE extended range SU PPDU format Beacon is used. When the Dual Beacon is used, two kinds of Beacon frames have different TBTTs.	Even if the STA receives any Beacon frame between Beacon frames of two PPDU formats, all STAs in the BSS shall start to use the BSS Color at the same time. e.g. at the TBTT of non-HE format Beacon frame.	2017/1/9 9:42
5391	Geonjung Ko	225	1 9.4.2.222	95	24	T	Y	95.24 9.4.2.222	When an AP uses the Dual Beacon, even if the STA receives any Beacon frame between Beacon frames of two PPDU formats, all STAs in the BSS shall start to use the BSS Color at the same time. e.g. at the TBTT of non-HE format Beacon frame. Need a clarification on a setting of the Color Switch Countdown field.	When an AP uses the Dual Beacon, a value of 0 indicates that the switch occurs at the current TBTT if the element is carried in a non-HE format Beacon frame or at the next TBTT of a non-HE format Beacon frame if the element is not carried in a nonHE format Beacon frame.	2017/1/9 9:42
5392	Geonjung Ko	225	1 27.5.2.6.2	173	31	T	Y	173.31 27.5.2.6.2	When an AP uses the Dual Beacon, a non-AP STA that receives RAPS elements from both Beacon frames of two PPDU formats would initialize its OBO counter twice. Then the STA may have less probability to access the random access RU than a STA that receives one Beacon frame.	When an AP uses the Dual Beacon, the STA should use the RAPS element from one format of Beacon frame.	2017/1/9 9:42
5393	Geonjung Ko	225	1 9.4.2.220	93	14	T	Y	93.14 9.4.2.220	When an AP uses the Dual Beacon, a non-AP STA that receives RAPS elements from both Beacon frames of two PPDU formats would initialize its OBO counter twice. Then the STA may have less probability to access the random access RU than a STA that receives one Beacon frame.	When an AP uses the Dual Beacon, the RAPS element should be included only in one format of Beacon frame between two formats of Beacon frames.	2017/1/9 9:42
5394	Geonjung Ko	225	1 27.2.1	150	15	T	Y	150.15 27.2.1	Partial BSS Color information can be included in the Partial AID field. Therefore, the decision made by using the MAC address should take precedence over the decision made by using the RXVECTOR parameter GROUP_ID and PARTIAL_AID.	As per comment	2017/1/9 9:42
5395	Geonjung Ko	225	1 27.5.2.6.2	173	37	T	Y	173.37 27.5.2.6.2	Although a STA receives a User Info field with the AID12 subfield set to 0, the STA may not have a capability to send a frame using the RU indicated by the User Info field. For example, a 20 MHz only HE STA cannot transmit a PPDU using a RU not within the primary 20 MHz channel.	If a STA is not able to transmit a frame using the RU indicated by the User Info field with the AID12 subfield set to 0, the STA should not decrement its OBO counter on the User Info field indicating the RU not capable to transmit a frame. Also when the OBO counter decrements to 0, the STA should not select the RU which is not capable.	2017/1/9 9:42
5396	Geonjung Ko	225	1 27.5.2.6.2	173	37	T	Y	173.37 27.5.2.6.2	Although a STA receives a User Info field with the AID12 subfield set to 0, the STA may not have a capability to send a frame as indicated in the User Info field. For example, the MCS subfield in the Common Info field may indicate the value which is not supported by the STA.	If a STA does not have a capability to transmit a frame as indicated by the User Info field with the AID12 subfield set to 0, the STA should not decrese its OBO counter on the User Info field and when the OBO counter is 0, the STA should not select the RU allocated by the User Info field.	2017/1/9 9:42
5397	Geonjung Ko	225	1 27.5.2.2.3	167	38	T	Y	167.38 27.5.2.2.3	It seems that the sentence of line 33 includes the sentence of line 38.	Please remove the sentence.	2017/1/9 9:42

5398	Geonjung Ko	225	1 9.3.1.23	41	47	E	Y	41.47 9.3.1.23	Currently the Trigger farme includes the RA field.	The bracket is not required in the figure.	2017/1/9 9:42
5399	Geonjung Ko	225	1 27.5.2.6.2	173	36	T	Y	173.36 27.5.2.6.2	The spec does not instruct that a STA receiving a Trigger frame soliciting the STA shall ignores the rest of User Info fields (after the User Info field with the AID12 subfield set to the STA's AID). In case that the STA is scheduled by the Trigger frame and its OBO counter decrements to zero, the scheduled STA should use the RU allocated by the User Info field with the AID12 subfield set to the STA's AID. Also the STA shall initialize its OBO counter to avoid the collision on the next random access opportunity. Allowing the scheduled STA to decrease its OBO counter can make the STA to transmit a frame using a random access RU quickly. The collision is avoided by the OBO counter of the random number and the random RU selection.	When a Trigger frame includes the User Info field with its AID12 subfield set to 12 LSBs of the AID of a STA, if the scheduled STA decrements its OBO counter to zero, the STA shall not use the RU allocated by the User Info field with the AID12 subfield set to 0 and the STA shall initialize its OBO counter.	2017/1/9 9:42
5400	Geonjung Ko	225	1 9.4.2.222	95	40	E	Y	95.40 9.4.2.222	Figure caption.	New BSS Color field format -> New BSS Color Information field format	2017/1/9 9:42
5401	Geonjung Ko	225	1 27.5.2.6.2	173	1	T	Y	173.01 27.5.2.6.2	There is always the Beacon frame from the transmitted BSSID, but Beacon frames from the nontransmitted BSSIDs may not exist. Moreover, a STA cannot determine whether a Trigger frame is soliciting STAs only associated with the BSS of the transmitted BSSID or at least two BSSs using the TA field. STAs associated with the BSS of the nontransmitted BSSID should have an opportunity to participate in the random access. Also all of STAs associated with BSSs of the transmitted BSSID and nontransmitted BSSIDs need to have fair opportunities.	STAs associated with BSSs of nontransmitted BSSIDs should use the RAPS element in a Beacon frame from the transmitted BSSID. Also it should be allowed that STAs associated with the BSS of the transmitted BSSID decrement OBO counters on the Trigger frame with the TA field set to the nontransmitted BSSID and STAs associated with BSSs of nontransmitted BSSIDs decrement OBO counters on the Trigger frame with the TA fiels set to the transmitted BSSID.	2017/1/9 9:42
5402	Geonjung Ko	225	1 27.10.4	193	58	T	Y	193.58 27.10.4	A multi-TID A-MPDU may contain A-MPDU subframes with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero value. The STA that receives the A-MPDU acknowledges successful receptions of MPDUs in the above mentioned A-MPDU subframes with Per STA Info fields indicating an Ack. The TID value of a frame in an A-MPDU subframe with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero value is unique among TID values of frames in the A-MPDU. Therefore, when every unsuccessful receptions of MPDUs are for a MPDU in an A-MPDU subframe with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero, the Per STA Info field without Block Ack Starting Sequence Control and Block Ack Bitmap can acknowledge the successful reception of all MPDUs of a TID value without the ambiguity.	An HE STA that receives a multi-TID A-MPDU shall respond with a Multi-STA BlockAck frame that contains - One Per STA Info field indicating an Ack for each successfully received MPDU that solicits a response that is preceded by a nonzero length MPDU delimiter whose EOF is 1 (TID value equals that of the QoS Data/QoS Null frame or 15 for the Action frame), - One Per STA Info field indicating a BlockAck for each TID of a successfully received MPDU that solicits a response that is preceded by a nonzero length MPDU delimiter whose EOF is 0 (TID value equals that of the QoS Data frame), - One Per STA Info field with the Ack Type subfield set to 1 for each TID of a successfully received MPDU that solicits a response that is preceded by a nonzero length MPDU delimiter whose EOF is 0 (TID value equals that of the QoS Data frame) only when every unsuccessful receptions are for	2017/1/9 9:42

5403 Geonjung Ko	225	1 9.3.1.9.7	38	6	T	Y	38.06 9.3.1.9.7	According to the subclause 27.10.4 (A-MPDU with multiple TIDs), a multi-TID A-MPDU may contain A-MPDU subframes with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero value. The STA that receives the A-MPDU acknowledges successful receptions of MPDUs in the above mentioned A-MPDU subframes with Per STA Info fields indicating an Ack. The TID value of a frame in an A-MPDU subframe with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero value is unique among TID values of frames in the A-MPDU. Therefore, when every unsuccessful receptions of MPDUs are for a MPDU in an A-MPDU subframe with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero, the Per STA Info field without Block Ack Starting Sequence Control and Block Ack Bitmap can acknowledge the successful reception of all	If the Ack Type subfield is 1 and the TID value of the Per AID TID Info subfield is less than 8 or equal to 15, then the Block Ack Starting Sequence Control and Block Ack Bitmap subfields are not present and the Per STA Info subfield acknowledges successful reception of a single MPDU "or all the MPDUs" indicated by the TID of the Per AID TID Info subfield.		2017/1/9 9:42
5404 Geonjung Ko	225	1 10.13.7	129	8	T	Y	129.08 10.13.7	A multi-TID A-MPDU may contain multiple A-MPDU subframes with the EOF subfield set to 1 and the MPDU Length subfield set to nonzero value. However, in the baseline spec, the EOF field can be set to 1 if the A-MPDU subframe's MPDU Length field is nonzero and the subframe is the only subframe that has a nonzero MPDU Length field. Therefore, the setting rule of the EOF field should be changed for an HE STA.	If an A-MPDU subframe's MPDU Length field is nonzero, the subframe is the only subframe that has a nonzero MPDU Length field and the TID value of the MPDU is not the same with TID values of other MPDUs in the A-MPDU, the EOF field may be set to 1.		2017/1/9 9:42

5450 Graham Smith	225	1 9.3.1.9.1	34	23	T	Y	34.23 9.3.1.9.1	"The RA field of the BlockAck frame that is not a Multi-STA BlockAck variant is set to the TA field of the soliciting frame or the address of the recipient STA whose data/management frames are acknowledged." Why did you change the existing text, it looked pretty clear as it was. Then insert a para so as to differentiate the HE additions.	Revert cited sentence back to original and then add para break.	2017/1/9 9:42
5451 Graham Smith	225	1 9.3.1.9.1	34	25	T	Y	34.25 9.3.1.9.1	"An HE AP that transmits a Multi-STA BlockAck frame with different values of the AID subfield in Per STA Info subfields sets the RA field to the broadcast address. An HE AP that transmits a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields sets the RA field to the address of the recipient STA that requested the Block Ack or to the broadcast address." Why not then simply set the RA to the broadcast address and make this bit really simple for the AP?	Keep it simple and just set the RA to broadcast address. Replace all cited text with "An HE AP that transmits a Multi-STA BlockAck frame sets the RA field to the broadcast address."	2017/1/9 9:42
5452 Graham Smith	225	1 9.3.1.9.1	34	30	T	Y	34.30 9.3.1.9.1	"An HE non-AP STA transmits a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields and sets the RA field to the TA field of the soliciting frame or the address of the recipient STA whose data/management frames are acknowledged." Why do we have the instruction for the AID here? This is for the RA which is set to the address of the recipient.	Replace all cited text with "An HE non-AP STA transmits a Multi-STA BlockAck frame sets the RA field to the TA field of the soliciting frame or the address of the recipient STA whose data/management frames are acknowledged."	2017/1/9 9:42

5453	Graham Smith	225	1 27.2.1	16	149	T	Y	17.49 27.2.1	This intra inter BSS stuff is a concern. The uses for this are OBSS_PD spatial reuse, intra-PPDU power save and the two NAV idea. The decision to transmit over another packet has nothing to do with whether they are in different BSSs. OBSS_PD has no indications of how to pick a value and although it seems on the surface a good idea to never transmit over an intra PPDU, if the STA wanders away it should be encouraged to transition not be extra protected. If transmitting over causes any packet to fail, then it is wrong whether it is in the same BSS or not. The inter_BSS Power save idea saves what? Any STA that determines the packet is not send to it, can doze if it wants. But it still has to have read the packet duration and the NAV to do this, so can't see why inter_BSS packet is any different and what time does it really save if using the color etc? Two NAVs is strange as	Delete Intra and Inter BSS detection.		2017/1/9 9:42
5454	Graham Smith	225	1 27.2.1	27	149	T	Y	28.49 27.2.1	"The RA field, TA field or BSSID field of the received frame with the Individual/Group bit forced to the value 0 is the same as the BSSID of AP to which the STA is associated" The forcing the Individual/Group bit to 0 only applied to RA and TA fields, not to the BSSID. Needs rewording.	To read "The RA field or TA field of the received frame with the Individual/Group bit forced to the value 0, or the BSSID field, is the same as the BSSID of AP to which the STA is associated"		2017/1/9 9:42
5455	Graham Smith	225	1 27.2.1	31	149	T	Y	32.49 27.2.1	"..and the RA field, TA field or BSSID field of the received frame with the Individual/Group bit forced to the value 0 is same as the BSSID of any member of the Multiple BSSID Set"	To read "and the RA field, TA field of the received frame with the Individual/Group bit forced to the value 0, or the BSSID field, is the same as the BSSID of any member of the Multiple BSSID Set"		2017/1/9 9:42
5456	Graham Smith	225	1 27.2.1	46	149	T	Y	47.49 27.2.1	"A frame received by the STA is an inter-BSS frame if one of the following conditions is true:" Having ploughed through the intra-BSS conditions, do we really need to have all these? Why not simply say if none of the intra-BSS conditions is met, then the frame is considered and inter-BSS frame?	Replace with "Otherwise a frame received by the STA is an inter-BSS frame." AND delete P150L15-16.		2017/1/9 9:42
5457	Graham Smith	225	1 27.2.2	24	150	T	Y	25.50 27.2.2	"An HE non-AP STA shall maintain two NAV timers" This should not be mandatory. It goes totally against the basic contention for 802.11. If two BSSs are next to each other and overlapping (as per the cell enterprise scenario 3CH) then maintaining a special NAV for each BSS does not make sense. It could cause chaos as the two BSSs cannot now share. At the best this should be deleted, at the least it should be optional.	Replace cited text with"An HE non-AP STA may maintain two NAV timers", or delete the entire section.		2017/1/9 9:42
5458	Graham Smith	225	1 27.2.2	36	150	T	Y	37.50 27.2.2	"basic NAV" is the inter-BSS or don't know, note the non capitalized 'b'. This therefore re-defines NAV as not using intra-BSS packet durations. Surely this IS the basic NAV. What is the justification for doing this seperation anyhow? If either is nonzero then the medium is busy. The NAV is always set by the last received packet so even in this two NAV case, one of them will be set. So I fail to see the difference.	Scrap this idea		2017/1/9 9:42

5459	Graham Smith	225	1 27.2.2	57	151	T	Y	58.51 27.2.2	" Maintaining two NAV is beneficial in dense deployment scenarios where a STA requires protection from frames transmitted by STAs within its BSS, i.e., intra-BSS, and avoid interference from frames transmitted by STAs in neighboring BSS, i.e., inter-BSS. " The whole idea of NAV is to keep the medium clear for a time to allow the packet exchange to complete. Hence the claim that this provides protection to intra packets is nothing new, also nothing to do with dense environments, so this statement is meaningless.	Delete this or explain better what the diffrerence is. This is nothing new.		2017/1/9 9:42
5460	Graham Smith	225	1 27.2.2	60	151	T	Y	61.51 27.2.2	"For example, in a TXOP initiated by the associated AP for UL MU transmission, the intra-BSS NAV of the STA can be set by the AP to prevent the STA from contending the channel, and the basic NAV will not be updated by the associated AP so that NAV set by inter-BSS PPDU can be considered in UL MU CS as described in 27.5.2.4 (UL MU CS mechanism)." I try to understand the example. So the intra NAV is set, as normal, but the basic NAV is not. The example then says look at 27.5.2.4. I look but there all I see is "If one or both of the NAVs are considered and the considered NAV's counter is nonzero, then the virtual CS indicates busy." (P170L37) So if either NAV is set, which it will be, the medium is busy. Try as I might I don't get it.	Either use an example that actually explains the idea and shows that it actually does something, or, if this is not possible, lose this dual NAV idea.		2017/1/9 9:42
5461	Graham Smith	225	1 27.2.2	33	150	E	Y	34.50 27.2.2	"For the two NAVs maintained by an HE STA, one is identified as intra-BSS NAV, and the second one is identified as basic NAV." Awkward. Better to put this at line 25.	At P150L25 add new sentence, to read "The two NAV timers are identified as intra-BSS NAV, and basic NAV." AND delete cited sentence.		2017/1/9 9:42
5462	Graham Smith	225	1 27.2.2	37	150	E	Y	38.50 27.2.2	"Note that the method of identifying a PPDU as intra-BSS or inter- BSS is described in 27.2.1 (Intra-BSS and inter-BSS frame detection)." Why not just "(see 27.2.1 (Intra-BSS and inter-BSS frame detection))"?	After "intra-BSS or inter-BSS add (see 27.2.1 (Intra-BSS and inter-BSS frame detection)). AND delete cited text		2017/1/9 9:42
5463	Graham Smith	225	1 27.2.2	44	150	T	Y	45.50 27.2.2	Why do we need a duration for a PS-Poll? And why the same as the duration for any data frame (ACK + SIFS)? A PS-poll does not get Ack'd (I think), and also does this mean the PS-Poll has to be sent as an HE frame? I just don't see where the advantage of this 2 NAV idea comes from. Also why point out a duration is a duration? This obsession with inter and intra is beyond me, it just gets more and more complicated. Maintaining 2 NAVs is not trivial, the advantages are not obvious if at all, and making it mandatory seems adsurd .	Delete Lines 40 - 48		2017/1/9 9:42
5464	Graham Smith	225	1 27.2.2	57	150	T	Y	58.50 27.2.2	"The STA is not solicited an immediate response by the PPDU carrying the frame." This does not read right.	Should it be "The PPDU carrying the frame is not soliciting an immediate response from the STA."		2017/1/9 9:42

This plus the following sentences are a very long winded way of trying to say that the CCA level is adjusted with bandwidth. Simply state that if the bandwidth fiffers from 20MHz the value is increased by 10 log (Bandwidth/20MHz)	Replace L39-49 with "If the bandwidth of the received PPDU differs from 20 MHz, then the value of the OBSS_PDlevel is increased by 10 LOG (bandwidth/20 MHz)"		2017/1/9 9:42
5492	Graham Smith	225	1 27.9.2.2	7	191	T	Y	8.91 27.9.2.2	In the formula the underscaore has gone missing for the OBSS_PD max and min so as to agree with the figure.	Insert underscores for the OBSSPDmax and OBSSPDmin		2017/1/9 9:42
5493	Graham Smith	225	1 27.9.2.2	10	191	T	Y	11.91 27.9.2.2	The figure and accompanying text breaks the terms used int eh formula. The figure needs to be moved down to come after present P192L2 and also the word 'where' needs to be inserted before TXPWRref. Maybe indent as well for clarity	edits as per comment		2017/1/9 9:42

5494	Graham Smith	225	1 27.9.2.2	3	192	T	Y	4.92 27.9.2.2	"A STA can select an OBSS_PDlevel during its operation under SR mode." No idea what SR mode is supposed to mean, what is it? Is it given permission? This gets important when we consider the next sentence on L7. Also, which is much more important, this says a STA can effectively select any OBSS_PD level. No explaination as to how to go about it, this is the path to anarchy, the whole point about SR is that rules are needed to stop some STAs from simply ignoring all other STAs. As the opening sentence says that adjusting the TX PWR is a 'may', then this can be interpreted, correctly, that OBSS_PD applies to any inter_BSS packet, so haviug no rule for setting the effective CCA level is a huge omission. DSC has defined exactly how to do it. In addition, there is no need to set the effective CCA threshold for inter-BSS packets, it makes no	What is SR mode? Adopt text in 16/1063			2017/1/9 9:42
5495	Graham Smith	225	1 27.9.2.2	3	192	T	Y	4.92 27.9.2.2	"This level can be dynamically adjusted or can be static". No explaination or help is given for setting this very important parameter. The only method that has been examined is DSC. There has been general agreement that the effective CCA can be set relative to the range of the STA from its AP, and DSC has been well researched on this. We cannot just leave this value setting open as that will not allow any testin or simulation to take place and simply lewaves the whole SR process up in the air.	Adopt text in 16/1064			2017/1/9 9:42
5496	Graham Smith	225	1 27.9.2.2	11	192	T	Y	12.92 27.9.2.2	Equation 27-1 . The first line says that TXPRmax is unconstrained if OBSS_PDlevel=OBSS_PDmin. Surely it should be =< ?	Change = to =<			2017/1/9 9:42
5497	Graham Smith	225	1 27.9.2.2	62	191	T	Y	63.91 27.9.2.2	OBSS_PDmin_default = -82 dBm and OBSS_PDmax_default = -62 dBm. Are you defining new parameters or just providing simple default values. These terms do not appear in the equation so this is wrong and should simply be a statement that these values can be used a defaults.	Replace with "Recommended value for OBSS_PDmin is -82dBm and for OBSS_PDmax = -62 dBm."			2017/1/9 9:42
5498	Graham Smith	225	1 27.9.2.2	20	192	E	Y	21.92 27.9.2.2	I don't think that "TB" is defned anywhere. I assume it means 'trigger based'	Define TB			2017/1/9 9:42
5499	Graham Smith	225	1 27.9.2.2	16	192	T	Y	17.92 27.9.2.2	"If a STA regards an inter-BSS PPDU as not having been received at all using a specific OBSS_PDlevel," This is not the description of the OBSS_PD idea as per P190L19-34. Surely this is supposed to refer to the reception of an inter-BSS packet at a signal strength less than OBSS_PDlevel. Actually this has nothing to do with what follows as the TXPWR is set by the OBSS_PD value selection irrespective if there is a packet received or not. If the STA selects a particular OBSS_PD then it sets the TXPWR accordingly.	Delete cited text			2017/1/9 9:42

5500	Graham Smith	225	1 27.9.2.2	16	192	T	Y	17.92 27.9.2.2	"If a STA regards an inter-BSS PPDU as not having been received at all using a specific OBSS_PDlevel, the STA's power as measured at the output of the antenna connector, shall be equal or lower than the TXPWRmax, calculated with this specific OBSS_PDlevel with Equation (27-1)," Does the STA only adjust TXPWR when receiving an inter_BSS packet? That does not agree with teh rule as per P191L5-7 and equation 27-1 where it seems to say that if the TA chooses a particular OBSS_PD level, then the TXPWR is always set accordingly - nothing to do with reception. OR is this not the case? - very confusing.	Reword as "The STA's power as measured at the output of the antenna connector, shall be equal or lower than the TXPWRmax, calculated with the chosen OBSS_Pdlevel, as per Equation (27-1)."		2017/1/9 9:42
5501	Graham Smith	225	1 27.9.2.2	19	192	T	Y	20.92 27.9.2.2	"for the transmissions of any PPDU (including UL TB PPDU) until the end of the TXOP that the STA gains once its backoff reaches zero. The STA may increase the OBSS_PDlevel during the backoff procedure, its maximum transmit power being adjusted as defined above." All this is not required. The STA must use a maximum TXPWR once it chooses its OBSS_PD level. No need to describe the actions for a transmit power.	Delete cited text. This complete sentence L16-22 should read "The STA's power as measured at the output of the antenna connector, shall be equal or lower than the TXPWRmax, calculated with the chosen OBSS_Pdlevel, as per Equation (27-1)."		2017/1/9 9:42
5502	Graham Smith	225	1 27.9.2.2	22	192	T	Y	23.92 27.9.2.2	"The minimum OBSS_PDlevel used by the STA shall be above the received signal strength of the inter-BSS PPDU, which means that the maximum TXPWRmax shall be calculated with OBSS_PDlevel equal to the received signal strength of the inter-BSS PPDU, with Equation (27-1)." Again, the actual signal level has nothjing to do with this 'scheme'. The STA choses an OBSS_PD and thus sets its max TXPWR, that's it. I don't like it, but that that is what is previously described. It does not vary its TXPWR based upon the received signal strength.	Delete cited text.		2017/1/9 9:42
5503	Graham Smith	225	1 27.9.2.2	1	191	T	Y	2.91 27.9.2.2	This clause is confusing in that on one hand it seems to say that a STA selects an OBSS_PD level (no indication of how) and then sets its TXPWR accordingly. It does not make it clear whether this is a mandatory link between the TXPWR and OBSS_PD. If not mandatory I can't see why any STA would ever do it as by so doing it opens itself up to interference from STAs which do not do it. If it is mandatory then again I can't see why any STA would ever implement it - but they want to, go ahead. At the end of the clause it seems to be talking about only setting the TXPWR when receiving an inter-OBSS packet, but this does not make sense as the TXPWR is fixed by the selection as an OBSS_PD level. If this scheme is to be kept, (and I would argue that it should not be), then at least make it clear what it actually is and how it is to be implemented.	Clarify what the scheme is or delete the scheme.		2017/1/9 9:42
5504	Graham Smith	225	1 27.11.6	22	198	T	Y	23.98 27.11.6	"Spatial Reuse field is carried in the TXVECTOR parameter SPATIAL_REUSE of an HE PPDU and indicates spatial reuse information (See 27.9.2 (OBSS_PD-based spatial reuse operation))." I see no mention of SPATIAL_REUSE in 27.9.2. Also SR_Delay setting is sort of mentioned but not described anywhere, same with SR_Restricted entry. It looks like this text precedes the acceptanceor description of the feature. Delete.	Delete 27.11.6		2017/1/9 9:42

5506 Graham Smith	225	1 27.14.1	11	199	T	Y	12.99 27.14.1	Yet another power save scheme. In this case it is stating that a STA can go into power save if it is not interested in the received packet. Hmm...it can do that now withut the need to define what packets the STA is not interested in. In general if the packet is not for the STA, having checked the NAV/duration a STA could doze if it wants. There is no need to go through all this text which, as I said, merely defines a packet that the STA need not decode. I can't see the need for this at all and furthermore it involves no interoperability at all and is at the discretion of the STA - if it wants to doze then let it.	Delete the scheme it adds nothing new.	2017/1/9 9:42
5507 Graham Smith	225	1 27.14.2	21	200	T	Y	23.00 27.14.2	"value of 1 in the Broadcast subfield a value of 2 in the TWT Flow Identifier subfield". Is there a missing 'and', or a missing 'or". Which is it?	Add an "and" or "or" as appropriate.	2017/1/9 9:42
5508 Graham Smith	225	1 27.14.2	25	200	T	Y	27.00 27.14.2	"If random access allocations are made in a sequence of Trigger frames within a trigger-enabled TWT SP, then all the Trigger frames in the sequence shall have the Cascade Indication field set to 1, except for the last Trigger frame in the sequence, which shall have the Cascade Indication field set to 0." THis definitive requirement, I assume, is repeated somewhere else as this is not a requirement of the power save idea. A STA may choose to use the Cascade Indication field to enter the doze state, but how the and what the Cascade Indication fields are set should be in the appropriate place not here.	Either delete the cited text or make it a note, or make a reference.after "Cascade Indication field" in line 30.	2017/1/9 9:42

I can find "Tx Rx HE MCS NSS Support" is that it? Also I only find detailed "Tx Rx HE MCS Support field" (Hmm... That's also an error). Which is it?	First correct Figure 9-589qj "Tx Rx HE MCS NSS Support" to read "Tx Rx HE MCS Support" Then change cited text to "Tx Rx HE MCS Support field in the HE Capabilities element"	2017/1/9 9:42
5519 Graham Smith	225	1 9.4.2.218.4	53	86	E	Y	53.86 9.4.2.218.4	"indicates the highest NSS value minus 1, supported by the STA" Comma usage seems wrong, either delete it or add another after "value".	Delete comma in cited text.	2017/1/9 9:42
5520 Graham Smith	225	1 9.4.2.218.4	60	86	T	Y	60.86 9.4.2.218.4	"Channel Bandwidth Set field at each NSS and MCS indicated in the Highest NSS Supported M1 and Highest MCS Supported subfield". Where is this "Channel Bandwidth Set" field? A search in this documment finds 4 occurances of the same sentence but I can't find a Figure or Table with it in. Add further information as to where this field is, in all four locations	Add information as to the whereabouts of the the Channel Bandwidth Set field at P86L60, P86L63, P87L34, P87L37.	2017/1/9 9:42
5521 Graham Smith	225	1 9.4.2.218.5	59	88	E	Y	59.88 9.4.2.218.5	"number of NSS values minus one for". Before at P86L53 it used "value minus 1," (Comment to remove the comma). So do we use "minus 1" or "minus one"? Admittedly 802.11-2016 does not help as there are 12 "minus 1" and 5 ",minus one". But in this document we have 17 "minus 1" and only this occurance of "minus one". So a clear decision, change it to "minus 1".	replace "minus one" in cited text to "minus 1".	2017/1/9 9:42
5522 Graham Smith	225	1 27.16.1	34	204	T	Y	36.04 27.16.1	"A STA that is starting an HE BSS shall be able to receive and transmit at each of the <HE-MCS, NSS> tuple values indicated by the Basic HE-MCS And NSS Set field of the HE Operation parameter of the MLMESTART. request primitive and shall be able to receive at each of the <HE-MCS, NSS> tuple values indicated by the Supported HE-MCS and NSS Set field of the HE Capabilities parameter of the MLMESTART. request primitive." This seems backwards to me. Surely the point is that the STA must set these tuples to agree with what it supports, not "shall be able to receive and transmit".	Replace cited text with "A STA that is starting an HE BSS shall set each of the <HE-MCS, NSS> tuple values in the Basic HE-MCS And NSS Set field of the HE Operation parameter and the HE Capabilities parameter of the MLMESTART. request primitive."	2017/1/9 9:42
5523 Graham Smith	225	1 27.16.1	39	204	T	Y	41.04 27.16.1	"The basic HE-MCS and NSS set is the set of <HE-MCS, NSS> tuples that are supported by all HE STAs that are members of an HE BSS." But according to the previous sentence the STA starting the HE BSS can set these as it wants. Surely a basic set is fixed and agreed to be common for all HE BSSs. If not, then don't use "basic". I don't know what "Basic" is meant to convey here but it does need to be spelled out.	Please define what exactly "basic set " is. Is it fixed or set by the originating STA? Also what criteria does it use to set these? Is it really up to the originating STA? Whatever it is, let's please spell it out.	2017/1/9 9:42
5524 Graham Smith	225	1 27.16.1	39	204	T	Y	41.04 27.16.1	P204 lines 39 - 49. It is very unclear as to what, why or how the originalting STA is supposed to set up the basic set. Is there an Annex explaining how the STA decides? Is the idea to limit HE STAs from joining? But what about legacy VHT or HT STAs? I have to admit I don't get it. Why can't the AP STA simply advertize what it can do, I don't see what defining a basic set adds.	Look again at this Basic set feature. It needs to be explained why it is a godd idea and what it adds. If it is a good idea it needs to be explained somewhere how a STA may use it for whatever purpose it is intended for. My recommendation, delete it.	2017/1/9 9:42

5525	Graham Smith	225	1 9.4.2.218.4	34	86	T	Y	34.86 9.4.2.218.4	I am wondering if it is possible to make this Tx Rx HE MCS Support field more complicated? We indicate the highest NSS and MCS, and then indicate, via the bitmaps, the BWs supported. Then we add the Tx and Rx NSS Descriptors. But, the bitmap indicates if Descriptor fields are present, so it is not possible to simply indicate the highest NSS and MCS and BW supported, we have to then add the Descriptors. The description seems to say that the descriptors can be omitted but not if the BW bitmaps can be. So many things come to mind. Should we not indicate which fields are optional for a start, and then get the text to be clear.	Indicate which fields are optional in FIG 9-589cm. Then make clear how the bit maps are used if the 'Descriptor" fields are not present.		2017/1/9 9:42
5526	Graham Smith	225	1 9.4.2.218.4	53	86	T	Y	53.86 9.4.2.218.4	P86 Lines 53 - 65. It looks as though this para is supposed to be summary but it fails miserably. It jumps striaght to the Descriptor description without making it clear what the Bitmaps do. It is unclear how the BWs are supported. It talks about a Channel Bandwidth Set which I can't find. The combination of bitmap and Descriptors seems to be a catch-all to allow any and every combination of BW, MCS and NSS - do we really want to do this? Do we really expect a mixture of BW and NSS for example? I can accept that the MCS may vary for a higher BW, say, but do we expect the number of SS to change? I have problems with this...maybe the description is not clear, maybe we need a table to provide examples? Maybe this summary should not be here and maybe should be at the end of the clause.	Move summary, if that's what it is meant to be (not sure as it seems to be repeated on next page,(but that's another comment) to after the individual field descriptions, and provide examples on how it is used.		2017/1/9 9:42
5527	Graham Smith	225	1 9.4.2.218.4	58	86	T	Y	58.86 9.4.2.218.4	"The Highest NSS Supported M1 subfield indicates the highest NSS value minus 1, supported by the STA that transmitted this subfield. The Highest NSS Supported M1 value is applicable to both transmissions and receptions but does not necessarily apply to all combinations of PPDU bandwidth and MCS. The PPDU bandwidth and MCS values that do not support the NSS value indicated in this subfield are described in the Tx MCS NSS Descriptors and Rx MCS NSS Descriptors subfields, if present." This trhe third sentence concerns the last fields and should be associated with those fields. Delete from end of second sentence to end of para.	Delete from end of second sentence to end of para. This description should be moved to after the Descriptor description.		2017/1/9 9:42
5528	Graham Smith	225	1 9.4.2.218.4	30	87	T	Y	30.87 9.4.2.218.4	"The PPDU bandwidth and NSS values that do not support the MCS value indicated in this subfield are described in the Tx MCS NSS Descriptors and Rx MCS NSS Descriptors subfields, if present. If no Tx MCS NSS Descriptors subfield is present, then the STA supports transmission of all combinations of PPDU bandwidth identified by the Channel Bandwidth Set field at each NSS and MCS indicated in the Highest NSS Supported M1 and Highest MCS Supported subfields. If no Rx MCS NSS Descriptors subfield is present, then the STA supports reception of all combinations of PPDU bandwidth identified by the Channel Bandwidth Set field at each NSS and MCS indicated in the Highest NSS Supported M1 and Highest MCS Supported subfields." This para is describing the Highest MCS supported. Leave it at that. We should describe the fields in order, not suddenly	Delete cited text and/or move this text to the end after the description for the Descriptors.		2017/1/9 9:42

5529	Graham Smith	225	1 9.4.2.218.4	56	87	T	Y	56.87 9.4.2.218.4	"If all of the bits of the Tx BW Bitmap subfield and all of the bits of the Rx BW Bitmap subfield are zero, then none of the subfields of the Tx Rx HE MCS Support field beyond Highest MCS Supported need to be present." If the bits are zero then that implies that the fields are present. Therefore the RX and Tx bitmaps have to be present? In addition the field is then only 6 bits. It looks as though the bit fields always have to be there.	Change cited text as follows: "If all of the bits of the Tx BW Bitmap subfield and all of the bits of the Rx BW Bitmap subfield are zero, then the Tx MCS NSS Descriptors and Rx MCS NSS Descriptor sub fields are not present."	2017/1/9 9:42
5530	Graham Smith	225	1 9.4.2.218.4	59	87	T	Y	59.87 9.4.2.218.4	"If either the Tx BW Bitmap subfield or the Rx BW Bitmap subfield has at least one bit set to 1, then both the Tx BW Bitmap subfield and the Rx BW Bitmap subfield are present, even if one of these subfields has the value of all zeros." The bit fields always need to be there based upon previous description (and comment). Simply delete this	Delete cited text.	2017/1/9 9:42
5531	Graham Smith	225	1 9.4.2.218.4	18	88	T	Y	18.88 9.4.2.218.4	Figure 9-589cn. Why 4 bits for the MCS? The Highest MCS only needed 3 (0 to 7). If you add another bit you will need to add a table explaining how the bits are used. Suggest MCS sub field is cut to 3 bits, then add in the text that the coding is as per Table 9-262ab.	MCS sub field cut to 3 bits, then add in the text that the coding is as per Table 9-262ab.	2017/1/9 9:42
5532	Graham Smith	225	1 9.4.2.218.4	64	87	T	Y	64.87 9.4.2.218.4	"Each Tx MCS NSS Descriptor indicates the value of the highest supported NSS for the indicated MCS for a specific bandwidth of operation" seems straightforward. We have a bit map telling us that this is the highest MCS and NSS supported for this BW. So what is the next text trying to say? "...and for all MCS that are higher than the indicated MCS up to but not including the next MCS in the set for this bandwidth"? Each Tx MCS NSS Descriptor indicates the value of the highest supported NSS for the indicated MCS for a specific bandwidth of operation How can we have an MCS that is higher but not including the next above the MCS to this one that is indicated as the highest? Sorry does not make any sense - is this the highest MCS or not? Either delete the second part of the text or dscribe better what you are trying to convey.	Either delete the second part of the cited text or describe better what you are trying to convey.	2017/1/9 9:42
5533	Graham Smith	225	1 9.4.2.218.4	1	88	T	Y	1.88 9.4.2.218.4	"MCS values that are lower than the lowest specified MCS within a set of Tx MCS NSS Descriptor fields implicitly support transmission of PPDUs using the highest NSS value indicated in the Highest NSS Supported subfield." Confused by the use of "set of" Tx MCS NSS Descriptor fields. A set would indicate all, up to 5, of the sub fields. So do we look through all the fields (up to five I guess), find the lowest MCS, and assume that for all BW MCSs below this use the highest NSS? This seems pretty confusing and I don't understand if this is really practical. Do we think that devices will support different NSSs for a set BW as the MCS changes? Surely we want the device to simply indicate for each BW, the max NSS and MCS and leave it at that?	Delete cited text or explain better what is intended.	2017/1/9 9:42

5534	Graham Smith	225	1 9.4.2.218.4	6	88	T	Y	6.88 9.4.2.218.4	"Each Rx MCS NSS Descriptor indicates the value of the highest supported NSS for the indicated MCS for a specific bandwidth of operation" seems straightforward. We have a bit map telling us that this is the highest MCS and NSS supported for this BW. So what is the next text trying to say? "...and for all MCS that are higher than the indicated MCS up to but not including the next MCS in the set for this bandwidth"? Each Rx MCS NSS Descriptor indicates the value of the highest supported NSS for the indicated MCS for a specific bandwidth of operation How can we have an MCS that is higher but not including the next above the MCS to this one that is indicated as the highest? Sorry does not make any sense - is this the highest MCS or not? Either delete the second part of the text or dscribe better what you are trying to convey.	Either delete the second part of the cited text or describe better what you are trying to convey.		2017/1/9 9:42
5535	Graham Smith	225	1 9.4.2.218.4	8	88	T	Y	8.88 9.4.2.218.4	"MCS values that are lower than the lowest specified MCS within a set of Rx MCS NSS Descriptor fields implicitly support transmission of PPDUs using the highest NSS value indicated in the Highest NSS Supported subfield." Confused by the use of "set of" Rx MCS NSS Descriptor fields. A set would indicate all, up to 5, of the sub fields. So do we look through all the fields (up to five I guess), find the lowest MCS, and assume that for all BW MCSs below this use the highest NSS? This seems pretty confusing and I don't understand if this is really practical. Do we think that devices will support different NSSs for a set BW as the MCS changes? Surely we want the device to simply indicate for each BW, the max NSS and MCS and leave it at that?	Delete cited text or explain better what is intended.		2017/1/9 9:42
5536	Graham Smith	225	1 9.4.2.218.4	27	88	T	Y	27.88 9.4.2.218.4	"The MCS subfield of the Tx MCS NSS Descriptor and Rx MCS NSS Descriptor subfields indicates an MCS value encoded as an unsigned integer." Why be different than the Table 9-262ab? MCS0-7 are mandatory? Just use 3 bits and be consistent.	Change cited text to "The MCS subfield of the Tx MCS NSS Descriptor and Rx MCS NSS Descriptor subfields indicates an MCS value encoded as per Table 9-262ab". Also change Fig 9-589cn accordingly.		2017/1/9 9:42
5537	Graham Smith	225	1 9.4.2.218.4	37	88	T	Y	37.88 9.4.2.218.4	Why do we need this final 'last' bit? If the bit map works, it is clear which is the last one. Get rid of this and simply have 2 reserved bits (MCS should be 3 bits)	Delete text from P88 Lines 37 to 40. Change Fig 9-589cn such that MCS is 3 bits and Last MCS NSS is replaced with "Reserved" (2 bits)		2017/1/9 9:42
5538	Graham Smith	225	1 9.4.2.218.5	21	89	T	Y	21.89 9.4.2.218.5	"PPE threshold values appear in increasing NSS value and increasing RU index value order, where lower numbered PPE Thresholds Info field bits contain PPE threshold values corresponding to lower numbered NSS values and within a set of PPE Threshold subfields corresponding to a single value of NSS, lower numbered PPE Thresholds Info field bits contain PPE threshold values corresponding to lower numbered RU index values" Starts off pretty clear but then proceeds to confuse. Dont think the rest is actually making ot any clearer, suggest it is kept simple. End sentence at the first comma and delete from there.	At the first comma end sentence and delete from there. "PPE threshold values appear in increasing NSS value and increasing RU index value order."		2017/1/9 9:42
5539	Graham Smith	225	1 3.4	18	7	T	Y	18.07 3.4	I think "RU" should be added here. It is not defined until almost at the end of the draft but is referred to in many places prior to that. Also maybe consider including it in 3.2.	Add RU in 3.4 and possibly in 3.2		2017/1/9 9:42
5540	Graham Smith	225	1 9.4.2.218.5	60	88	T	Y	60.88 9.4.2.218.5	"are included in the PPE Thresholds Info field." Should be "subfield"	Change 'field' to 'subfield'		2017/1/9 9:42

5541 Graham Smith	225	1 9.4.2.218.5	59	88	T	Y	59.88 9.4.2.218.5	"The NSS M1 subfield contains an unsigned integer that is equal to the number of NSS values minus one for which PPE threshold values are included in the PPE Thresholds Info field". All well and good but we have no idea what NSSs are actually referred to. If we simply have, say 4 NSSs how do I know if the NSS is 1-4, or 3-7? I don't get it, can you please clarify this as I can't see this working.	Clarify as per comment. Can't propopse a solution as I can't tell how this is supposed to work. Is it supposed to be the number starting at MCS0, for example?	2017/1/9 9:42
5542 Graham Smith	225	1 9.4.2.218.5	63	88	E	Y	63.88 9.4.2.218.5	"according to their RU Allocation Index values". Add reference to Table 9-262ae	after RU Allocation Index values add "(see Table 9-262ae)"	2017/1/9 9:42
5543 Graham Smith	225	1 9.4.2.218.5	21	89	T	Y	21.89 9.4.2.218.5	"PPE threshold values appear in increasing NSS value and increasing RU index value order". Why are these called PPE Threshold values when they are Constellation indexes? I can't see the connection. The PPE Threshold, I think, is 8 or 16us, but that is not what appears in this field. I think its OK to call it the PPE Threshold Info field, but the info, although used to get the PPE Threshold, is not the actual value. I think maybe use "PPET16 and PPET8 subfields"?	Replace cited text with "The PPEt16 and PPET8 Constellation indexes appear in increasing NSS value and increasing RU index value order."	2017/1/9 9:42
5544 Graham Smith	225	1 9.4.2.218.5	1	90	T	Y	1.90 9.4.2.218.5	"The PPET8 for NSSn for RUb subfield and PPET16 for NSSn for RUb subfield values are combined to determine the Maximum PE value for HE PPDUs that are transmitted to the STA sending this field and using NSS = n and an RU allocation corresponding to RU Allocation Index b, for each value of NSS and RU specified by the field." This is describing what a STA does with the Constellation indexes not anything to do with describing the contents of the field. This behavior belongs elsewhere, presumeablky in 28.3.13? HAving said that, the sentence itself has problems: how does one combine two constellation indexes?, and how does the second half of the sentence present any further information than the first half (it seems to repeat the same but differently in an attempt to confuse the reader)?	Replace cited text with "The PPET8 for NSSn for RUb subfield and PPET16 for NSSn for RUb subfield values are examined to determine the Maximum PE value for HE PPDUs that are transmitted to the STA sending this field (see XXX)" Then the rest of this description should be moved to another section maybe 28.3.13.	2017/1/9 9:42
5545 Graham Smith	225	1 9.4.2.218.5	1	90	T	Y	1.90 9.4.2.218.5	Table 9-262ad is a mess. What do the rows mean, do both columns need to be satisfied or either? I assume both. What is the "result of a comparison of index x" mean? I have no idea what the rule is. It looks as though we are comparing the constellation index of a PPDU to the PPET8 and PPET16 constellation indexes but there has been no indication of how the indexes are chosen. To be honest there has to be a better way of doing this. This entire section needs re-writing and possibly re-thinking.	Rewrite L1 - 35 and clarify what it is trying to convey. Also this text should not be here. This section should be simply the description of the field.	2017/1/9 9:42
5546 Graham Smith	225	1 9.4.2.218.5	42	88	T	Y	42.88 9.4.2.218.5	PPE Thresholds field. This has proved a struggle to understand and to try to see why it seems to be so convoluted. One suggestion that may help might be to add a sentence at the begininning that explained the use of this field.	Add at beginning such as "The PPE Thresholds field is used to determine the maximum packet extension value (see 28.3.12) for an HE PPDU of a particular RU allocation size and NSS value."	2017/1/9 9:42

5547 Graham Smith	225	1 9.4.2.218.5	21	89	T	Y	21.89 9.4.2.218.5	"Each PPET8 for NSSn for RUb subfield and PPET16 for NSSn for RUb subfield contains an integer that corresponds to a constellation index value related to the transmission constellation of an HE PPDU as defined in Table 9-262ac (Constellation index)." There is no indication of what is the criteria for entering the constellation index. Is the minimum constellation for 8 or 16us? it is the maximum? Should the 16 be higher or equal to the 8? What is it? Need to add some words so that it is clear as to how the index corresponds to the 8 or 16 us threshold.	Add some words so that it is clear as to how the index corresponds to the 8 or 16 us threshold.		2017/1/9 9:42
5548 Graham Smith	225	1 9.4.2.218.5	38	89	E	Y	38.89 9.4.2.218.5	" Table 9-262ac (Constellation index)." Delete second full stop.	Delete second full stop		2017/1/9 9:42
5549 Graham Smith	225	1 9.4.2.218.5	14	90	T	Y	14.90 9.4.2.218.5	Table 9-262ad. Can't help but feel this would be better replaced by pseudo code or simple equations.	Replace Table with something along the lines of: "For NSSn and RUb, and Constellation index of HE PPDU, x IF AND (x >= PPET8, OR(x< PPET16, PPET16 = 0)) THEN Maximum PE value = 8 us IF AND (OR(x >= PPET8, PPET8 = 0),x>= PPET16)) THEN Maximum PE value = 16 us ELSE Maximum PE value = 0 us"		2017/1/9 9:42
5550 Graham Smith	225	1 9.4.2.218.5	42	88	T	Y	42.88 9.4.2.218.5	I have made a lot of comments on this section and this is my final one. Can it be explained why we need this when we have a simple Default PE Duration field in the HE Operation Parameters field? Has it been shown that specifying a PE threshold is needed and then effectively setting a PE for every NSS and RU and BW actually is better or more efficient that this default setting? Could a simple, expanded Default PE duration have been much simpler?	Consider if a set of default values could have achieved this. What is the overriding factor for this NSS, BW or RU? I don't know enough about the need for the PE, but is there no way simple 'max' combinations of these 3 could be used for 0, 4, 8, 12 and 16us, similar to the "Basic HE-MCS and NSS Set field format, for example?		2017/1/9 9:42
5551 Graham Smith	225	1 9.4.2.219	39	91	T	Y	39.91 9.4.2.219	"The BSS Color field is an unsigned integer whose value is the BSS color of the BSS corresponding to the AP which transmitted this element, except that a value of 0 in this field indicates that there is no BSS color for this BSS." Thie information in this sentence appears to be repeated in the next para. Suggest this is deleted and the second para edited to include the 'no color' rule.	Dlete cited text. Then edit next para to read as follows as follows: "The BSS Color field is an unsigned integer whose value is the BSS Color of the BSS corresponding to the AP, IBSS STA, mesh STA or TDLS STA that transmitted this element, except that a value of 0 in this field is used if there is no BSS color for this BSS, or one or more intended recipient STAs of an HE PPDU is not a member of a transmitting STA's BSS."		2017/1/9 9:42
5552 Graham Smith	225	1 9.4.2.219	49	91	T	Y	49.91 9.4.2.219	"The Default PE Duration subfield indicates the PE duration in units of 4 ++s, for an HE trigger-based PPDU that is solicited with UL MU Response Scheduling in the A-Control subfield." How does this tie up wit the PETT I don't see how it is used, make a reference to where and how it is used.	Add a reference to where and how this default is used.		2017/1/9 9:42
5553 Graham Smith	225	1 9.4.2.219	60	91	T	Y	60.91 9.4.2.219	"The HE Duration Based RTS Threshold field enables..." Should be 'subfield'.	Change "field" to "subfield"		2017/1/9 9:42
5554 Graham Smith	225	1 9.4.2.219	55	91	T	Y	55.91 9.4.2.219	"...AP requires the non-AP HE STAs..." Associated STAs I assume.	Cited text to read "AP requires non-AP HE STAs that are associated with it..."		2017/1/9 9:42
5555 Graham Smith	225	1 9.4.2.219	60	91	T	Y	60.91 9.4.2.219	"The HE Duration Based RTS Threshold field enables an HE AP to manage..." This corresponds to dot11DurationRTSThreshold of which there is no mention in this paragraph.	Add reference to dot11DurationRTSThreshold		2017/1/9 9:42

5556 Graham Smith	225	1 9.4.2.219	60	91	T	Y	60.91 9.4.2.219	dot11DurationRTSThreshold has been introduced as an alternative to the octet based dot11RTSThreshold. I note that "HE" is missing so one implies that the TG felt that duration was a better parameter than octets and this implies it could be for all STAs, not just HE ones. Was this the intention? If so "HE duration based RTS is not correct and it is solely "duration based RTS" and so the question arises, "should this be available for all STAs?" The original RTS Threshold is on a per station basis, I don't think it is advertized or specified by a STA or AP (I need to check that). So in this case is this HE Duration based RTS field something only an AP sends to control its BSS or is it something a STA also sends. Can it be different for a STA and its AP, the opeing sentence seems to indicate it is for AP control? If so, where are the rules or informationa as to ewhere to set it? Needs	Add reference to text on how to set the value - is it only for an AP to set? Can a STA set different values to tis AP, what happens if it does?			2017/1/9 9:42
5557 Graham Smith	225	1 10.3.1	50	113	T	Y	51.13 10.3.1	"When HE duration-based RTS is enabled, the use of the RTS/CTS mechanism is under control of dot11DurationRTSThreshold." I note that 'HE' is missing from the dot11DurationRTSThreshold. So presumeably any STA could use the duration based RTS threshold, but only an HE STA will advertize it. Is that the real intention? In looking at the HE duration based RTS threshold subfield in the HE Operation Parameter field it appears as though it is for an AP to make its STA use duration RTS. Is this intended only for HE STAs?	Clarify if only HE STAs or not.			2017/1/9 9:42
5558 Graham Smith	225	1 10.3.2.4	47	114	T	Y	48.14 10.3.2.4	"If the STA is not an HE STA and When the received frame's RA is equal to the STA's own MAC address, the STA shall not update its NAV. If the STA is an HE STA and the STA is solicited for an immediate response by the PPDU carrying the received frame, the STA shall not update its NAV. If the STA is an HE STA, the STA is a TXOP holder, and the frame is solicited by the STA, then the STA shall not update its NAV." The original text simply said if the STA is the recipient (RA = STA) then do not update NAV. I think that in both of these examples that an HE STA does not update NAV this is still true? Does this now create conditions where the HE STA, receiving a packet now does update the NAV? I suspect it would be beter to leave this alone and not make the indicated changes.	Remoive the changes from cited text.			2017/1/9 9:42
5559 Graham Smith	225	1 10.3.2.4	14	115	T	Y	15.15 10.3.2.4	"The exact time of updating the NAV is described as follows." Do we need this? It does not add anything except to make the reader think tghat there is some very exact measurement taking place. Delete.	Delete cited text.			2017/1/9 9:42

5560	Graham Smith	225	1 10.3.2.4a	48	115	T	Y	49.15 10.3.2.4a	"In dense environments, managing RTS usage by an AP can help the overall interference situation since the AP may have better view of the network situation. To improve spectrum utilization, RTS usage should be duration-based, rather than length-based." This is a very general comment. There is no explianation of why duration based RTS should be better than packet length. It may be true but this would not convince anyone. PAcket length RTS was seldom used, if at all, so what does duration based bring and why would it be used?	Write a better reasoning as to why duration based RTS is either superior or will improve matters.		2017/1/9 9:42
5561	Graham Smith	225	1 10.3.2.8a	7	116	T	Y	8.16 10.3.2.8a	Figure 10-9a, Would STA1 and STA2 reply CTSs together? If so the AP may well not be able to hear them as they will interfere with each other. Same with the Acks. True CTS responds at SIFS but what happens in this case, is it such that the AP does not care? Should really add some text to explain the fighure.	Add text to explain that the CTS and Ack responses are ignored, if that is the case.		2017/1/9 9:42
5562	Graham Smith	225	1 10.3.2.8a	33	116	T	Y	34.16 10.3.2.8a	Figure 10-9b. As in Fig 10-9a the CTS and ACKs coincide ans hence may not be heard by the AP. Does this matter or is it simply ignoresd by the AP which is only interested in the Trigger frame and the Multi-STA Block Ack. If tyhis is so needs some explanatory words	Add text to explain that the CTS and Ack responses are ignored, if that is the case.		2017/1/9 9:42
5563	Graham Smith	225	1 10.3.2.8a.2	64	116	T	Y	65.16 10.3.2.8a.2	"If a PHY-RXSTART.indication primitive does not occur during the CTSTime-out interval, the STA shall conclude that the transmission of the MU-RTS frame has failed, and this STA shall invoke its backoff procedure upon expiration of the CTSTimeout interval." But the figures 10-9a and 9b show the CTS responses clashing and the CTS will not be received and the STA will retry with the same result. Will this ever work because the CTSs could clash forever.	Explain how the CTS s can be received and the MU-RTS not retried ad infinitum.		2017/1/9 9:42
5564	Graham Smith	225	1 10.3.2.10.3	7	120	E	Y	8.20 10.3.2.10.3	Space required before "Specifically"	Add space before "Specifically"		2017/1/9 9:42

5652	Guoqing Li	225	1 27.4.2	159	16	T	N	159.16 27.4.2	This sentence misses the case of the acknoledgement of the action frame	Clarify	2017/1/9 9:42
5653	Guoqing Li	225	1 27.4.3	159		T	N	159.00 27.4.3	The descripton is confusing. For example, if the buffer size is 31, it meets conditions of both paragraphs where one says the bigmap length shall be 64 and the other says it could be 64 or 256.	Change the second paragraph to "if....is within [65, 256], ...	2017/1/9 9:42
5654	Guoqing Li	225	1 27.4.3	159	36	T	N	159.36 27.4.3	if buffer size is 128, can the recipient dynamcally changing the bitmap length between 64 and 256? The sentence in this paragraph is not clear on this.	Clarify	2017/1/9 9:42
5655	Guoqing Li	225	1 27.4.3	159		T	N	159.00 27.4.3	The descripton is confusing. For example, if the buffer size is 31, it meets conditions of the hree paragraphs, which one can the STA uses?	change the second paragraph to "if....is within [65,1286], ...", and change third paragraph to "...within [129-256]..."	2017/1/9 9:42

5656	Guoqing Li	225	1 27.7.1	180		T	N	180.00 27.7.1	The implementation of a STA supporting the role of scheduling TWT is different from the role of scheduled STA. The capability indication should separate these two.	Separate these two capabilities, one for scheduling STA and one for scheduled STA	2017/1/9 9:42
5657	Guoqing Li	225	1 27.7.2	180	44	T	N	180.44 27.7.2	"..otherwise it is an iimpclit TWT", this sentence is misleading in that it reads like trigger-enabled and implicit are two equavalent alternativies. However, even if a TWT is trigger-enabled, it is still an implicit TWT since the impleit subfield shall set to 1.	change to "..otherwise it is not a trigger-enabled TWT"	2017/1/9 9:42
5658	Guoqing Li	225	1 27.7.2	182	6	T	N	182.06 27.7.2	Why the condition includes the exsistence of an random RU?	remove "and does not allcoate any random RU during an unannounced TWT"	2017/1/9 9:42
5659	Guoqing Li	225	1 27.7.2	182	6	T	N	182.06 27.7.2	If cascade indication is 0 allows STA to go to doze mode, then the cascade indication is similar to an EOSP indication. This needs to be defined in the trigger frame format and other parts that explain what this indication is. It is more than an indication that there will not be trigger anymore. This is also related to whether the AP is allowed to send DL traffic or not.	remove case 1) from the early TWT SP termination event list, or define more clearly that this indication is similar to EOSP bit.	2017/1/9 9:42
5660	Guoqing Li	225	1 27.7.2	182		T	N	182.00 27.7.2	case 3 and 2 are more related to whether the frame is solicitng an acknoledgement or not. And even in case 2) the STA recevies a frame with EOSP bit set to 1 which is the condition in 3).	Clarify the difference between case 3) and 2)	2017/1/9 9:42
5661	Guoqing Li	225	1 27.7.2	182	20	T	N	182.20 27.7.2	The QoS Info field in REVmc is difined differently for AP and STA, and for AP the format of the QoS info field does not contain "more data ACK" field. This is inconsistent with this paragraph which assumes both requesting and responding STA can use this field to indicate the support of more data ACK.	Modify the QoS info field to include a field called "More Data ACK" field for AP.	2017/1/9 9:42
5662	Guoqing Li	225	1 27.7.3.1	182	39	T	N	182.39 27.7.3.1	This sentence implies that a STA cannot use broadcast TWT if it has indivitual TWT. However, I don't think this is reasonable. A STA may use individual TWT to transfer periodic regular data which is predicable and use broadcast TWT for any other data that is less predictable and bursty.	remove this sentence	2017/1/9 9:42
5663	Guoqing Li	225	1 27.7.3.2	184	15	T	N	184.15 27.7.3.2	The sentence here is confusing. The trigger field is to indicate there the TWT is trigger enabled or not. It does not indicate whether it is implicit or not.	change to "othersie, it shall set the "trigger field to 0 to indicate a non-trigger-enabled TWT"	2017/1/9 9:42
5664	Guoqing Li	225	1 27.7.3.2	185	18	E	N	185.18 27.7.3.2	It is better to spell out AM as active mode	spell out "AM"	2017/1/9 9:42
5665	Guoqing Li	225	1 27.7.3.2	185	12	T	N	185.12 27.7.3.2	This paragraph seems to conflict with the previous paragraph which says the STA doesn't need to follow AP operation during CP while the previous paraph says the STA shall follow the AP operation during CP. The condition for the two cases are not clearly specified.	Clarify	2017/1/9 9:42
5666	Guoqing Li	225	1 27.7.3.3	185	47	E	N	185.47 27.7.3.3	Regarding the first "TWT SP termination event" in this line, the terminlogy in other part of this section is "early TWT SP termination event", need to be consistent to avoid confusion.	change the first "TWT SP termination event" in this line to "Early TWT SP termination event",	2017/1/9 9:42
5667	Guoqing Li	225	1 27.7.3.3	185	47	E	N	185.47 27.7.3.3	Regarding the second "TWT SP ternination event" in this line, it is referring to the end of the this SP. To diferentiate it from the early SP termination event, it is better to use another terminology such as "normal TWT SP termination event".	changethe the second "TWT SP termination event" in this line to "normal TWT SP termination event" or define TWT SP Termination event such that it includes early terination event and the even that the adjustedMinimumTWTWakedu dration has passed.	2017/1/9 9:42
5668	Guoqing Li	225	1 27.4.4.2	160	57	T	N	160.57 27.4.4.2	Why the A-MPDU in this case cannot contain Action frame? What about the case the A-MPDU is VHT single MPDU in A-MPDU?	Remove this constraint	2017/1/9 9:42
5669	Guoqing Li	225	1 27.7.3.3	185	62	E	N	185.62 27.7.3.3	This pagraph should be a third bullitin following the previous two bullitins	edit accordingly	2017/1/9 9:42

5670	Guoqing Li	225	1 27.7.3.3	186		T	N	186.00 27.7.3.3	As I understand, a STA need to send PS-Poll or APSD trigger during a TWT SP to fetch DL BU if the TWT SP is announced. The STA does not send PS-Poll or APSD trigger if the SP is unannounced. This paragraph only applies to announced SP which need to be clarifeid	Line 21, change to "...frame within that TWT SP if the TWT SP is announced"	2017/1/9 9:42
5671	Guoqing Li	225	1 27.7.3.4	186	46	T	N	186.46 27.7.3.4	Not all TWT element paramters are reserved. For example, the broadcast ID. Please see page 72, line 35047 which says how to set broadcast ID when the command type is request for braodcast TWT.	Clarify so that it is consistent with section 9.2.2.200	2017/1/9 9:42
5672	Guoqing Li	225	1 27.7.3.4	186	58	T	N	186.58 27.7.3.4	Not all TWT element paramters are reserved. For example, the broadcast ID. Please see page 72, line 35047 which says how to set broadcast ID when the command type is request for braodcast TWT.	Clarify so that it is consistent with section 9.2.2.200	2017/1/9 9:42
5673	Guoqing Li	225	1 9.4.2.200	72	35	T	N	72.35 9.4.2.200	This paragraph says how to set Broadast ID for broadcast TWT. However, in secton 27.7.3.4, line 46 and 58, it indicates that broadcast ID is reserved.	clarify so that it is consistent with section 27.7.3.4	2017/1/9 9:42
5674	Guoqing Li	225	1 27.14.3.1	200	59	T	N	200.59 27.14.3.1	Can a non-AP STA still send data through EDCA in this TWT SP when the AP set its TIM bit to 0? It's better to clarify this point.	Clarify	2017/1/9 9:42
5675	Guoqing Li	225	1 27.14.3.1	200	63	T	N	200.63 27.14.3.1	in "if the STA was not served before...", what does "served" mean here? The AP send trigger to the STA? or the AP send the STA's DL BU to the STA?	Clarify	2017/1/9 9:42
5676	Guoqing Li	225	1 27.14.2	199	60	T	N	199.60 27.14.2	As I understand, TWT element does not containt "start time of the trigger frame", it contains start time of the TWT SP. And contains indication for trigger-enabled SP and indication for random access RU. As such, the sentence here is not accurate.		2017/1/9 9:42
5677	Guoqing Li	225	1 27.14.2	200	21	E	N	200.21 27.14.2	Missing an "and" between "has a value of 1 in the broadcast sufield" and "a value of 2..."	change to "has a vlaue of 1 in the broadcast subfield and a value of 2..."	2017/1/9 9:42
5678	Guoqing Li	225	1 27.8.2	189	8	E	N	189.08 27.8.2	This sentence is badly written	change to "after transmitting the acknowledgement frame for the frame containing the OMI A-Control..."	2017/1/9 9:42
5679	Guoqing Li	225	1 27.8.3	189	29	T	N	189.29 27.8.3	Why this sentence is a note. It should be another bullitin item followig the previous bullitin.	Make this sentence a bulitin item followintg the previous one.	2017/1/9 9:42
5680	Guoqing Li	225	1 27.9.1	190	12	T	N	190.12 27.9.1	What is SR PPDU? The HE PHY does not define such an PPDU format. Seems to me, SR PPDU is a PPDU that can be initaited simultaneously using the SR mechiasm defined here which is otherwise not possible using legacy sensing mechanism. If so, this needs to be clarified since there is such PHY PPDU format called SR PPDU.	Either define SR PPDU, or clarify using different terminology.	2017/1/9 9:42
5681	Guoqing Li	225	1 27.9.2.1	190	34	T	N	190.34 27.9.2.1	why spatial reuse cannot be applied to group addressed public action frame?		2017/1/9 9:42
5682	Guoqing Li	225	1 9.3.1.23.4	50	40	T	N	50.40 9.3.1.23.4	How to set Doppler field in MU-RTS is not specified	Specify how to set the Doppler field in MU-RTS	2017/1/9 9:42
5683	Guoqing Li	225	1 27.9.2.1	190	50	E	N	190.50 27.9.2.1	Heading format is incorrect	Correct the heading format	2017/1/9 9:42
5684	Guoqing Li	225	1 27.2.3	152	25	T	N	152.25 27.2.3	what does "updating its EDCA access" mean when UL MU is disabled? What happens to the counters in this case? Regenerate according to new EDCA parameters? Or count down to zero then start using the new EDCA parameters?	Clarify	2017/1/9 9:42
5685	Guoqing Li	225	1 27.4.4.2	160	58	T	N	160.58 27.4.4.2	Why DL MU PPDU soliciting SU resposne cannot contain action frame soliciting a response?	Clarify	2017/1/9 9:42
5686	Guoqing Li	225	1 27.2.1	150	13	T	N	150.13 27.2.1	What if STA sends an HE MU PPDU? It's not forbidden in the spec, and thereforethis condition is not accurate since this HE MU PPDU may come from its own BSS.	Clarify	2017/1/9 9:42
5687	Guoqing Li	225	1 4.2.14a	9	29	T	N	9.29 4.2.14a	The mandatory support on tone more than 242 do not apply to 20MHz only devices. Though obvious this needs to be clarified.	Clarify that the RU tone more than 242 are not mandatory for 20MHz only device.	2017/1/9 9:42

5688	Guoqing Li	225	1 27.9.2.2	192	1	E	N	192.01 27.9.2.2	"considering..." is not a complete sentence.	change to something like "please refer to section 3.1 for the definition of antenna connector".	2017/1/9 9:42
5689	Guoqing Li	225	1 27.9.2.2	192	3	T	N	192.03 27.9.2.2	SR mode is not defined. It is better to define the mode in the beginning of this section.	Define what exactly is SR mode. For example, " a mode that a STA operates in a PD level that is differnet from legacy PD threshold on OBSS PPDUs"	2017/1/9 9:42
5690	Guoqing Li	225	1 27.9.2.2	192	23	T	N	192.23 27.9.2.2	"the minimum OBSS_Pdlevel...", the wording of this sentence is confusing. Isnt that the min of this value is -82?	Clarify	2017/1/9 9:42
5691	Guoqing Li	225	1 27.9.2.2	191	62	T	N	191.62 27.9.2.2	If there is a default value for OBSS_Pdmin and max, does it mean the STA can alter these values to be different from the default values? Who set these values then? AP or the STA can altler these min and max values on its own? It's better to have AP set these values, but I do not see AP broadcasting such values.	Clarify	2017/1/9 9:42
5692	Guoqing Li	225	1 27.10.2	192	40	E	N	192.40 27.10.2	Multiple sentences are refering to the use of 10.13.6, it's better to combine these sentences to avoid confusion.	Edit the paragraph to combine the sentences	2017/1/9 9:42
5693	Guoqing Li	225	1 27.10.3	193	1	E	N	193.01 27.10.3	the first paragraph is not complete, I assume it's a continuation from the previoius pagragraph	change to ",and provided that..." to complete the sentence	2017/1/9 9:42
5694	Guoqing Li	225	1 9.4.2.218.2	78	20	T	N	78.20 9.4.2.218.2	I think the multi-TID aggregation support is referring to wehther and how many TIDs the STA can receive (not transmit) in an A-MPDU. This is consistent with page 193 line 11 and 12.	change to "indicates the number of TIDs...that the STA can receive in a multi-TID AMPDU...."	2017/1/9 9:42
5695	Guoqing Li	225	1 27.10.4	194	27	E	N	194.27 27.10.4	"allocated"-->"allocates"	"allocated"-->"allocates"	2017/1/9 9:42
5696	Guoqing Li	225	1 27.10.4	194	40	T	N	194.40 27.10.4	"when any of the buffers is empty", this part of the setnence does seem necessary and only adds confusion.	Remove "when any of the buffer is empty"	2017/1/9 9:42
5697	Guoqing Li	225	1	9	60	E	N	9.60	There is no terminology as "MU OFDMA", I think it should be "OFDMA"	change "MU OFDMA" to "OFDMA"	2017/1/9 9:42
5698	Guoqing Li	225	1 27.5.1.1	162	53	T	N	162.53 27.5.1.1	The reference to HE MU PPDU should not be the padding section for trigger-based PPDU, it should refer to the DL MU PPDU padding section	Correct the reference	2017/1/9 9:42
5699	Guoqing Li	225	1 27.5.1.1	162	45	T	N	162.45 27.5.1.1	Do line 44-47 and line 56-59 say the same thing?	Clarify	2017/1/9 9:42
5700	Guoqing Li	225	1 27.5.1.1	162	56	T	N	162.56 27.5.1.1	There is terminology called "DL OFDMA with MIMO PPDU"	Use a difined terminology	2017/1/9 9:42
5701	Guoqing Li	225	1 27.5.1.1	162	58	T	N	162.58 27.5.1.1	There is no field called "DL OFDMA With MIMO Support field" in HE Capabilities Element	Use a defined terminology or define it.	2017/1/9 9:42
5702	Guoqing Li	225	1 27.5.2.1	164	14	T	N	164.14 27.5.2.1	There is no terminology called MU-MIMO RU and UL OFDMA PPDU. I think what this sentence means is "An AP shall not ....assigning spatial streams to more than one STA in an RU in the response trigger-based PPDU when the RU does not span..."	Clarify as suggested	2017/1/9 9:42
5703	Guoqing Li	225	1 27.5.2.1	164	19	T	N	164.19 27.5.2.1	There is no terminology called "UL MU-MIMO HE trigger-based PPDU"	Delete "UL MU-MIMO" from the sentence.	2017/1/9 9:42
5704	Guoqing Li	225	1 27.5.2.1	164	24	T	N	164.24 27.5.2.1	There is no terminology called "UL OFDMA PPDU"	Use a difined terminology	2017/1/9 9:42
5705	Guoqing Li	225	1 27.5.2.1	164	46	E	N	164.46 27.5.2.1	There is an extra . After "..random access allocation)".	Remove the extra period.	2017/1/9 9:42
5706	Guoqing Li	225	1 27.5.2.1	164	50	T	N	164.50 27.5.2.1	Comparing to the first bullitin which has "one or more trigger frames", the second bullitin here says "an UL MU Response scheduling", it reads like only one MPDU in the PPDU can include an UL MU response scheduling subfield. However, I don't think that's the intention of this bullitin. Multiple MPDUs can carry the UL MU response scheduling A-Control field each addressed to differnet STAs. This needs to be clarified.	Clarify, remove "An" from beginning of the sentence.	2017/1/9 9:42
5707	Guoqing Li	225	1 27.11.1	196	2	T	N	196.02 27.11.1	2047 is used as start of MAC padding on page 165 line 35 and here it's used to indicate STAs in all BSS when multiBSS is acviated. How does a STA identify if it's for start of the MAC padding or for STAs in all BSS?	Clarify	2017/1/9 9:42

5708	Guoqing Li	225	1 27.5.2.2.2	165	47	T	N	165.47 27.5.2.2.2	Why both false and true conditions are in the sentence? I think only this sentence is for the case when dot11MultiBSSIDactivated is false.	remove "when dot11MultiBSSIDactivated is false"	2017/1/9 9:42
5709	Guoqing Li	225	1 27.5.2.2.2	165	51	T	N	165.51 27.5.2.2.2	"intend to communciate" is not an accurate wording. A more suitable word is "is capable of communicating"	"intend to"-->"is capable of communicating"	2017/1/9 9:42
5710	Guoqing Li	225	1 27.5.2.2.2	165	54	T	N	165.54 27.5.2.2.2	There is no field called "multiple BSSUD support field". I think this refers to the "RX Control Frame to MultipleBSS" field in HE Capabilties Element.	change the terminology to be consistent	2017/1/9 9:42
5711	Guoqing Li	225	1 27.5.2.2.2	165	54	T	N	165.54 27.5.2.2.2	What is the meaning of "RX Control Frame to MultiBSS"? Is it capable to receive trigger frame destined to more than one BSS or it's the capability of the STA assocaited with non transmitted BSS to be able to receive frame with TA=transmitted BSSID?	Clarify	2017/1/9 9:42
5712	Guoqing Li	225	1 27.5.2.2.3	167	39	T	N	167.39 27.5.2.2.3	Iit's not clear whhich case this paragraph apply to. Does this pagraph applies to the case when trigger is the only frame in the PPDU? Does it cover the case where trigger is aggregated with data? The trigger-frame only PPDU case is already covered in the paragraph above it.	Clarify	2017/1/9 9:42
5713	Guoqing Li	225	1 27.5.2.3	167	59	T	N	167.59 27.5.2.3	There is a TBD in the spec. Define this TBD bahvior.	Define this "TBD" behavior	2017/1/9 9:42
5714	Guoqing Li	225	1 27.5.2.3	167	59	T	N	167.59 27.5.2.3	why there is a case that the STA is not associated with the AP and can receive a trigger frame destined for it? Is it for pre-associated STA during random access?	Specify how this works, or delete.	2017/1/9 9:42
5715	Guoqing Li	225	1 27.5.2.3	168	8	T	N	168.08 27.5.2.3	section 27.2.2 deals with how to update intra and inter NAV, but it doesn't specify how to set TXOP_Duration parameter. Either this is a wrong reference or section 27.2.2 should be more specific about how to set TXOP_duration field when responding a trigger frame.	Either refer to the right reference or specify how to set TXOP_duration parameter in section 27.2.2.	2017/1/9 9:42
5716	Guoqing Li	225	1 27.5.2.3	169	23	T	N	169.23 27.5.2.3	section 27.2.2 deals with how to update intra and inter NAV, but it doesn't specify how to set TXOP_Duration parameter. Either this is a wrong reference or section 27.2.2 should be more specific about how to set TXOP_duration field when responding a trigger frame.	Either refer to the right reference or specify how to set TXOP_duration parameter in section 27.2.2.	2017/1/9 9:42
5717	Guoqing Li	225	1 27.5.2.3	169	52	T	N	169.52 27.5.2.3	missing "and" between the reference of 9.7.3 and 27.10.3	add "and" between the two reference sections.	2017/1/9 9:42
5718	Guoqing Li	225	1 27.5.2.3	170	1	T	N	170.01 27.5.2.3	If the trigger is basic trigger, then there is not required type. Please clarify.	Clarify	2017/1/9 9:42
5719	Guoqing Li	225	1 27.5.2.3	170	26	T	N	170.26 27.5.2.3	line 26-32 seem to miss the condition mentioned in line 53-54.	Add the condition that the soliciting PPDU contains an UL MU response schedulig A-Control field to the list.	2017/1/9 9:42
5720	Guoqing Li	225	1 27.5.2.5	171	40	E	N	171.40 27.5.2.5	remove (#2190,2191)	remove (#2190,2191)	2017/1/9 9:42
5721	Guoqing Li	225	1 27.5.2.5	171	41	E	N	171.41 27.5.2.5	Correct the figure number 9-XX	Correct the figure number 9-XX	2017/1/9 9:42
5722	Guoqing Li	225	1 27.5.2.5	172	49	T	N	172.49 27.5.2.5	This note should be written in normative text with "shall" language	change to something like "A STA shall not transmit ....if it does not receive..."	2017/1/9 9:42
5723	Guoqing Li	225	1 27.5.2.6.2	173	46	E	N	173.46 27.5.2.6.2	missing a space between 0 and if	add a space between "0" and "if"	2017/1/9 9:42
5724	Guoqing Li	225	1 27.5.2.6.2	174	4	T	N	174.04 27.5.2.6.2	If the transmissiong using OFDMA-RA fails, can the MPDU be transmitted using regular UL OFDMA if it gets a regular trigger or can it use EDCA to transmit this failed MPDU? The text reads like that this is not allowed, however I think this should be allowed.	Clarify	2017/1/9 9:42
5725	Guoqing Li	225	1 27.5.3	175	36	T	N	175.36 27.5.3	I don't think this is correct. The AP could return OFDMA BA to multiple A-MPDUs in the proceeding TRIG PPDU. So the word "at most..." is not correct.	Remove this sentence.	2017/1/9 9:42
5726	Guoqing Li	225	1 27.5.3	175	43	T	N	175.43 27.5.3	What does "that AMPDU" mean? I think an HE MU PPDU that contains an AMPDU which aggregates data and trigger starts the cascade sequence. If so, this needs to be clarified.	Clarify	2017/1/9 9:42

5727 Guoqing Li	225	1 27.5.3	175	60	T	N	175.60 27.5.3	the receives for the DL HE MU PPDU must be different from hat of the following trigger-based PPDU since the former's receive is the non-AP STAs and the latter one's receiver is AP. This sentence does not add anything but can cause misunderstanding.	Remove this sentence.	2017/1/9 9:42
5728 Guoqing Li	225	1 27.6.1	176	9	E	N	176.09 27.6.1	It's better to change to "Similar to VHT sounding protocol..."	change to "Similar to VHT sounding protocol..."	2017/1/9 9:42
5729 Guoqing Li	225	1 4.3.14a	9	35	T	N	9.35 4.3.14a	I don't think 40MHz is mandatory at 2.4GHz, so this sentence is not accurate.	Clarify	2017/1/9 9:42
5730 Guoqing Li	225	1 4.3.14a	9	38	T	N	9.38 4.3.14a	Missing 80+80 in this sentece.	add "/80+80MHz" after "160MHz".	2017/1/9 9:42
5731 Guoqing Li	225	1 4.3.14a	9	40	T	N	9.40 4.3.14a	I think DL MU-MIMO support is mandatory. However, this sentence reads like that DL MU-MIMO is only mandatory if the HE AP supports 4 or more spatial streams.	Change to "by an HE AP and the HE AP shall support 4 or more..."	2017/1/9 9:42
5732 Guoqing Li	225	1 4.3.14a	9	60	E	N	9.60 4.3.14a	change "MU OFDMA" to "OFDMA"	change "MU OFDMA" to "OFDMA"	2017/1/9 9:42
5733 Guoqing Li	225	1 4.3.14a	9	64	T	N	9.64 4.3.14a	"scheduled trigger frame are sent...", this sentece reads like such scheduled trigger frame is mandatory behavior. However, whether HE AP setups scheduled trigger frame is part of scheduling algorithm and shouldn't be mandated.	Chagne to soemthign like the following, "Schedueld trigger frame can be sent..."	2017/1/9 9:42
5734 Guoqing Li	225	1 27.11.4	196	52	T	N	196.52 27.11.4	"from the HE STA with which...", should this HE STA be HE AP?	Change to "from the HE AP with which..."	2017/1/9 9:42
5735 Guoqing Li	225	1 27.11.2	196	12	T	N	196.12 27.11.2	Why only extended range SU PPDU is excluded in this case. If the intention is to ask 3rd party device to set NAV when transmitting RTS or CTS, then HE SU PPDU should also be included.	Chagne "an HE extended range SU PPDU" to "an HE SU PPDU or HE extended range SU PPDU"	2017/1/9 9:42
5736 Guoqing Li	225	1 27.13	199	5	E	N	199.05 27.13	This sentence doesn't seem to be in right grammer. Also, missing a "the" before "the recommended MCS"	Correct	2017/1/9 9:42
5737 Guoqing Li	225	1 27.14.2	200	1	E	N	200.01 27.14.2	The first sentence is not well written. Suggest to remove the text within the parenthesis.	Remove the text in paranthesis	2017/1/9 9:42
5738 Guoqing Li	225	1 27.14.2	200	22	T	N	200.22 27.14.2	Even if the TWT flow identifier indicates that this TWT doesn't contain random RU, I think the STA can still go to doze until the start of the SP if the AP doesn't indicate presence of DL traffic in TIM, right? If so, then there is no need to mention the ramdom access here.	Clarify	2017/1/9 9:42
5739 Guoqing Li	225	1 27.11.6	198	28	T	N	198.28 27.11.6	For SU PPDU, can the spatial reuse be set to SR_restricted? The allowed setting for SU PPDU vs. MU PPDU is not clear.	Clarify	2017/1/9 9:42
5740 Guoqing Li	225	1 27.14.2	200	22	T	N	200.22 27.14.2	I think this subsection (power save with UL OFDMA-based random access) only apply to the case when this Beacon doesn't beong to the beacon that the STA is supposed to monitor. Otherwise, if this is a Beacon that the STA is supposed to wake up and monitor based on braodcast TWT Setup, then the STA need to wake up at the start of the TWT SP anyway no matter whether it will contain random RU or not in order to get triggered by AP.	Clarify	2017/1/9 9:42

Creat a new RXTIME formula in this case, similar to the 11ac RXTIME formular with SignalExtension added. Refer to this new RXTIME formula if the SIGA CRC fails	2017/1/9 9:42
5784	Hongyuan Zhang	225	1 28.3.14.3	342	58	T	Y	342.58 28.3.14.3	"A STA that transmits an HE trigger-based PPDU shall have timing accuracy of +/-0.4 ++s relative to the actual ending time of the PPDU carrying the Trigger frame. This requirement does not include round trip delay."--the word "actual ending time" needs to be clarified. Same applies to 17.3.9.10 for PPDUs carrying MU-RTS.	Use better word, for example "the last sample of the PPDU as indicated by the preamble"	2017/1/9 9:42
5785	Hongyuan Zhang	225	1 28.3.14.3	342	58	T	Y	342.58 28.3.14.3	For VHT packets with short GI carrying trigger frame, the RXTIME is computed based on (21-106), which rounds to the next 4us boundary, therefore it is contradictory with the statement of "actual ending time".	Disallow SGI for HT/VHT PPDUs carrying a HE Trigger frame	2017/1/9 9:42
5786	Hongyuan Zhang	225	1 9.4.2.218.3	84	49	T	Y	84.49 9.4.2.218.3	Too many capabilities related Beamformee STS: "Beamformee STS for <=80", "NSTS_total for <=80MHz", same two capabilities for >80mHz. Almost all exisiting client devices have same numbers for these two capabilities, it is better to merge these two capabilities	Merge to "Beamformee STS for <=80MHz" and "Beamformee STS for >80MHz", each of them represents the single NSTS_total upper limit that a STA may receive in either an NDP or an DL-MUMIMO PPDU.	2017/1/9 9:42
5787	Hongyuan Zhang	225	1 28.3.10.7.2	275	34	T	Y	275.34 28.3.10.7.2	Undefined mechanism when the "Doppler" bit in SIGA is set to 1, also applicable to HE-SIG-A of HE-MU PPDU format.	Either define the PHY mechanism when Doppler bit is set to 1, or change this bit to reserved,	2017/1/9 9:42
5788	Hongyuan Zhang	225	1 27.5.2.7	174	22	T	Y	174.22 27.5.2.7	The NDP feedback report PHY format is not defined.	Either define the PHY mechanism for NDP feedback report, or remove this subclause and other related placehodlers.	2017/1/9 9:42

5789	Hongyuan Zhang	225	1 9.4.2.218.3	84	12	T	Y	84.12 9.4.2.218.3	Only maximum constellation capability for DCM in SIGB is meaningful, the max NSS capability is only applied for DCM in Data field.	B25:24, and B28:27 are for max constellation support for DCM in both Data and SIGB; B26 and B29 are for max Nss support for DCM in Data field only.	2017/1/9 9:42
5790	Hongyuan Zhang	225	1 9.4.2.218.4	86	42	T	Y	86.42 9.4.2.218.4	In 11n, all BW modes (20 and 40MHz) have the same MCS and Nss capabilities; in 11ac all BW modes within {20, 40, 80}MHz have ths same MCS and Nss capabilities, while 160/80+80MHz may define a different Nss capability; now in 11ax it seems that the presence of "Tx MCS Nss Descriptions" and "Rx MCS NSS Descriptions" fields allow any BW modes to define a different Max Nss and Max MCS capabilities, and different Nss may defined different max MCS too. Do we really need this level of flexibility? For example, for a 80MHz capable device it seems very natrual that the same number of Nss should be supported for 20, 40 and 80MHz modes because almost all the necessary hardware are already physically present. This unnecessary flexibility makes the AP rate control much more complex than the previous generations.	Consolidate the MCS/Nss capabilities, make them common for 20/40/80MHz like in 11ac.	2017/1/9 9:42
5791	Hongyuan Zhang	225	1 28.1.1	210	57	T	Y	210.57 28.1.1	4xLTF and 0.8us GI is missing for the optional PHY feature.	Add 4xLTF and 0.8us GI in a new bullet	2017/1/9 9:42

5850 Hyunhee Park	225	1 27.5.2.6.2	173	64	T	Y	173.64 27.5.2.6.2	If the Ack policy of QoS Null frame in random access is No ACK, the retransmission procedure cannot guarantee. For clarification, the Ack policy of QoS Null frame (e.g., BSR frame) should be the Normal Ack in random access.	Add below sentence in P174L6 (section 27.5.2.6.2 Random access procedure). "When a non-AP STA sends one or more QoS Null frames in an HE trigger-based PPDU in a random RU assigned by AID 0 in a Basic Trigger frame or in a BSRP Trigger frame, Ack Policy subfield of the QoS Null frame shall be set to Normal Ack."	2017/1/9 9:42
5851 Hyunhee Park	225	1 9.2.4.6.4.3	24	44	T	Y	24.44 9.2.4.6.4.3	In the Control information subfield of OMI, Channel Width is not distingushed for Rx or Tx. The Control information subfield of OMI should be revised (for example, (1) adding Tx Channel Width or (2) adding Rx/Tx indication, deleting Tx NSS, etc.)	Add Tx Channel Width in Fugure 9-15d.	2017/1/9 9:42
5852 Hyunhee Park	225	1 27.7.3.3	185	39	T	Y	185.39 27.7.3.3	P185L39 says "A TWT scheduled STA should not initiate trandsmission of frames to the TWT scheduling STA outside of broadcast TWT SPs and within trigger-enabled TWT SPs". In this case, the EDCA backoff procedure is unclear when the backoff count is finished outside of broadcast TWT SP and within trigger-enabled TWT SP. Therefore, the EDCA backoff procedure of tirgger-enabled TWT should be clarified.	Add below sentence in P185L41 for clarification of EDCA backoff procedure. "The backoff for the associated EDCAF should not countdown outside trigger-enable TWT SPs."	2017/1/9 9:42
5853 Hyunhee Park	225	1 27.2.3	152	20	T	Y	152.20 27.2.3	Basically, the HE STA enters the doze state outside trigger-enabled TWT SPs. In this case, HEMUEDCATimer doesn't need to countdown.	Add below sentence in P152P20 for clarification of HEMUEDCATimer. "The HEMUEDCATimer[AC] should not countdown outside trigger-enabled TWT SPs."	2017/1/9 9:42

5854	Hyunhee Park	225	1 27.2.3	152	11	T	Y	152.11 27.2.3	When the STA receives the Trigger frame from the AP, it shall update its CW, AIFSN, EDCA Timer in the most recently received MU EDCA Parameter Set element. In addition, when the STA sends the OMI A-Confrol field to change UL MU enable mode, in this case, it may update it CW, AIFSN, EDCA Timer in most recently received MU EDCA parameter set element. Because the UL MU enable means that it will be scheduled from the Trigger frame by the AP. Right now the change of MU EDCA parameter is quite restricted. If the STA sends the OMI A-Control field with UL MU enable, it means the STA wants to operate MU operation mode with MU EDCA parameter. Furthermore, in order to relieve of fairness between the legacy STA and MU operated STA, the MU operated STA should use MU EDCA parameter even though it requests UL MU enable	Add an update rule of CW, AIFSN and HEMUEDCATimer when an UL MU capable non-AP HE STA sends the OMI A-Confrol field to enable UL MU operation.		2017/1/9 9:42
5855	Hyunhee Park	225	1 9.2.4.6.4.4	25	9	E	N	25.09 9.2.4.6.4.4	Mistake in section number "see 9.31.4" for HE link adaptation.	Replace with "see 27.13 (Link adaptation uisng the HE variant HT Control field)".		2017/1/9 9:42
5856	Hyunhee Park	225	1 9.4.2.200	73	31	E	N	73.31 9.4.2.200	Mistake in word "STAT".	Replace with "STA"		2017/1/9 9:42
5857	Hyunhee Park	225	1 27.2.4	188	10	T	Y	188.10 27.2.4	TheTWT Flow Identifier for a Broadcast TWT element has several restrictions depending on the TWT Flow Identifier value. For flexiblity, the Flow ID should be changed for each broadcast TWT SP. For this, the TWT Information frame described in 27.7.4 can be used for each broadcast TWT SP in order to change Flow ID.	Define the change procedure of Flow ID for broadcast TWT SP by using the TWT information frame.		2017/1/9 9:42
5858	Hyunhee Park	225	1 27.5.2.6.1	172	35	T	Y	172.35 27.5.2.6.1	For random access, an HE AP may transmit a Basic Trigger frame or a BSRP Trigger frame that contains one or more RUs. However, BQRP is not described for random access. When the assigned RUs for random access are busy, a BSR and BQR inforamtion should be sent in random access. In addition, if the channel status is busy, the BSR and BQR information can be sent in random access. Therefore, the BSR and BQR information can be aggregated.	Define an aggregation method for BSR and BQR information for random access.		2017/1/9 9:42
5859	Hyunhee Park	225	1 27.5.2.6.2	173	46	E	N	173.46 27.5.2.6.2	Mistake the sentence in L46	Please put a period between "AID value 0" and "If".		2017/1/9 9:42
5860	Hyunhee Park	225	1 27.5.2.6.2	173	54	T	Y	173.54 27.5.2.6.2	If the selected RU size for random access is quite small, the STA cannot send frames in random access through the selected RU. For clarification, an RU selection rule should be defined in random access. When the selected RU size is small in random access, how the STA operate to send frames? There are many candidate optoins, for example, re-selection, fragmentation, non-transmission, etc. For clarification, an RU selection rule should be defined in random access.	Define an RU selection rule considering the RU size in random access.		2017/1/9 9:42

5861	Hyunhee Park	225	1 10.22.2.8	133	31	T	Y	133.31 10.22.2.8	In 11ax, if the AP configures EDCA TXOP parameter by itself and it obtains a TXOP duration for DL/UL MU transmission, but without any restriction, the legacy STAs associated in the BSS and the OBSS (non-)AP STAs may suffer from starvation because of the excessive long TXOP duration. Especially in dense environment, the fairness problem of OBSS STAs can be critical when the TXOP duration is determined by only the AP without any restriction. Therefore the MU TXOP Limit should be defined. The MU TXOP Limit should be defined. Since the multi-TID aggregation should be permitted within not exceeded the MU TXOP Limit. E.g., the multi-TID aggregation should be permitted within not exceeded the MU TXOP limit. In addition, if the AP is a TXOP holder and it performs multi-TID aggregation and/or MU transmission, in this case the	Define the MU TXOP Limit.		2017/1/9 9:42
5862	Hyunhee Park	225	1 9.4.2.220	93	46	E	N	93.46 9.4.2.220	Mistake in "Octets" in Figure 9-589cu.	Replace with "Bits" in Figure 9-589cu.		2017/1/9 9:42
5863	Hyunhee Park	225	1 27.14	201	11	T	Y	201.11 27.14	A STA may enter the Doze state for the TXOP duration when it receives a frame which is not intended to it in 11ac Spec. However, if a STA enters the Doze state for a TXOP duration after receiving an OBSS frame, it may miss an intra-BSS frame intended for it. Moreover, neither BSS color nor TXOP duration field is defined in VHT SIG field, a STA cannot distinguish OBSS frame from intra-BSS frame and cannot enter the TXOP PS after receiving only VHT preamble. In 11ax, since the BSS color is defined, the TXOP PS should be defined for more efficient power save in 11ax. HE TXOP power save mechanism should be defined as that an HE STA has no intended frame to receive for a TXOP to enter the Doze state, and sleep until the end of the TXOP in 11ax.	Define an HE TXOP PS.		2017/1/9 9:42
5864	Hyunhee Park	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	The OBSS_PD SR backoff procedure was passed as when the receiving STA validates the conditions for spatial reuse operation by using OBSS_PD level, it shall invoke an SR backoff procedure by resuming the backoff counter countdown for the associated EDCAF. For clarification, an SRP-based SR backoff procedure should be defined. In the spec draft, SR backoff procedure is incomplete. Especially P190L50 says "SR Backoff procedure for SR delayed case". For clarification, the backoff procedures for SR delayed case and SR restricted case, respectively.	Define the SRP-based SR backoff procedure.		2017/1/9 9:42

5905	James Yee	225	1 11.1.3.10	141	50	T	Y	141.50 11.1.3.10		Rather than stating different elements may be carried, it should be specified what are identical elements and contents that must be carried in both types of Beacon frames.	As suggested.	2017/1/9 9:42
5906	James Yee	225	1 27.2.3	152	13	T	Y	152.13 27.2.3		By when should the non-HE STA update its QoS state variables based on the most recent MU EDCA Parameter Set element values? It seems open ended to just require "shall update".	Change "shall update" to "shall, before it transmits the nex PPDU of an affected AC, update"	2017/1/9 9:42
5907	James Yee	225	1 27.7.2	180	58	T	Y	180.58 27.7.2		It is not very clear which rules are superceded by which even though the text only says "respective rules".	Please clarify.	2017/1/9 9:42
5908	James Yee	225	1 27.2.3	152	30	G	Y	152.30 27.2.3	5889	The 2nd sentence of the paragraph describing the EDCA Parameter Set Update Count is a repeat of the description in 9.4.2.29 (802.11-2016) and is unnecessary.	Delete the sentence.	2017/1/9 9:42
5909	James Yee	225	1 9.4.2.219	91	44	T	Y	91.44 9.4.2.219		This paragraph starting with "The BSS Color field" is largely a repeat of the previous paragraph. Delete the previous paragraph and replace "is used" with "indicates that there is no BSS Color for this BSS and".	As suggested.	2017/1/9 9:42
5910	James Yee	225	1 9.4.2.219	92	19	T	Y	92.19 9.4.2.219		Having the AP 'recommend' an action is vague and anthropomorphic. Is the intent here to indicate that by setting the value to 1 then the STAs may "disable the use of BSS Color ..."? If yes, then that should be stated clearly.	As suggested.	2017/1/9 9:42
5911	James Yee	225	1 9.4.2.221	94	31	G	Y	94.31 9.4.2.221		The 2nd sentence of the paragraph describing the EDCA Parameter Set Update Count is a repeat of the description in 9.4.2.29 (802.11-2016) and is unnecessary.	Delete the sentence.	2017/1/9 9:42
5912	James Yee	225	1 9.4.2.221	94	30	T	Y	94.30 9.4.2.221		"same as the field defined in 9.4.1.17 (QoS Info field)" should more specifically refer to "same as the QoS Info field defined in 9.4.1.17 (QoS Info field) when sent by the AP"	As suggested.	2017/1/9 9:42

5913	James Yee	225	1 27.5.2.2.2	166	62	T	Y	166.62 27.5.2.2.2	I suppose setting the TID Aggregation Limit to 1 means only 1 TID is used and there is no aggregation, but it seems simpler to assign a value of 0 for a STA that has indicated no support for Multi-TID.	As suggested.	2017/1/9 9:42
5914	James Yee	225	1 9.31.2.3	41	60	T	Y	41.60 9.31.2.3	How are multiple User Info fields carried in the Trigger Frame when sent via broadcast? Is there a limit to the number of AID12 values can be present? What if the same AID12 value appears more than once? It's also not clear how multiple User Info fields are parsed by the recipient since the number of User Info fields present is not indicated.	Please clarify. For simplicity limit the number of User Info fields.	2017/1/9 9:42
5915	James Yee	225	1 9.31.2.3	47	5	T	Y	47.05 9.31.2.3	"DCM is not be used" should be clarified to say "DCM is not to be used with the HE trigger-based PPDU response".	As suggested.	2017/1/9 9:42
5916	James Yee	225	1 27.13	199	1	T	Y	199.01 27.13	The text refers to "The HE-MCS subfield of the MFB subfield of HE link adaptation field" but there is no MFB subfield defined in the HE Link Adaptation field. The overall description of the HE Link Adaptation procedure is unclear.	Please clarify.	2017/1/9 9:42
5917	James Yee	225	1 9.4.2	67	1	T	Y	67.01 9.4.2	With the introduction of new features such as OFDMA and UL MU MIMO, the existing BSS load elements (9.4.2.160 & 9.4.2.28), which address STA numbers, primary/secondary channel busy condition and DL MU-MIMO underutilization (11ac) are not sufficient for addressing the BSS load status in a 11ax BSS. A further enhanced BSS Load element needs to be defined.	Add a new information element to define 11ax BSS Load. The new IE shall address utilization status of OFDMA as well as UL/DL MU MIMO, as well as provisions to allow future extensions.	2017/1/9 9:42
5918	James Yee	225	1 9.4.2	67	1	T	Y	67.01 9.4.2	Four PPDU formats are defined for HE operations, but current power capability element (9.4.2.15 in 802.11-2016) defines only one set of max/min power for all types of PPDU. The power capability element should be enhanced to provide different PPDU formats to identify maximum and minimum transmit power.	Modify current transmit power capability element (section 9.4.2.15 in 802.11-2016) to accommodate different HE PPDU formats. Since 11ax AP needs more information about STAs' transmit power capabilities, in addition to default power accuracy defined along with device's category, the element should allow reporting with more accurate transmit power accuracy achievable by the STA.	2017/1/9 9:42
5919	James Yee	225	1 9.4.2.139	68	56	T	Y	68.56 9.4.2.139	Level 3 dynamic fragmenation is described in 27.3.3.4, 27.3.4.4 and elsewhere in this draft, but is not mentioned in the description of HE Fragmentation Operation of this section. This inconsistency needs to be corrected.	Add statements for setting the HE Fragmentation Operation field to Level 3 dynamic fragmentation. Or, remove Level 3 dynamic fragmentation from the draft.	2017/1/9 9:42
5920	James Yee	225	1 9.4.2.218.4	86	44	T	Y	86.44 9.4.2.218.4	In Figure 9-589cm, there is no defintion of m and n in the text that follows.	Add explanation of n and m in Figure 9-589cm to the text of section 9.4.2.218.4	2017/1/9 9:42
5921	James Yee	225	1 9.4.2.219	92	40	T	Y	92.40 9.4.2.219	In "The subfield set to 0, if the HE AP transmits beacons in one PHY format.", it is not clear which PHY format is to be used.	Add text to explain what "one PHY format" means and if any specific format is required.	2017/1/9 9:42
5922	James Yee	225	1 9.4.2.219	92	7	T	Y	92.07 9.4.2.219	The meaning of "corresponds" here is not clear. Although the term is used in 11.1.3.8 (of 802.11-2016 and the proposed changes in this draft), even the usage there is vague and should be defined more clearly in terms of multiple BSSID set.	Clarify what actions or properties are required for an AP to "correspond"	2017/1/9 9:42
5923	James Yee	225	1 9.4.2.219	92	11	T	Y	92.11 9.4.2.219	The definition of MaxBSSID indicator is not clear. Should properly reference to 9.4.2.46 and clearly provide HE AP behavior exceptions.There could also be multiple Multiple BSSID elements from multiple APs or the HE AP has its own Multiple BSSID element.	Clarify the defintion of MaxBSSID idicator and how to set it up when there are multiple sources of Multiple BSSID elements.	2017/1/9 9:42

5924	James Yee	225	1 9.4.2.219	92	14	T	Y	92.14 9.4.2.219	The non-zero value here is the same as the MaxBSSID from the Multiple BSSID element? The setting of a non-zero value here contradicts the value setting of MaxBSSID indicator defined in line 11 in the same paragraph.	Clarify if any non-zero value can be set or the non-zero value needs to be set as the same as the MaxBSSID indicator.	2017/1/9 9:42
5925	James Yee	225	1 9.4.2.219	92	7	E	Y	92.07 9.4.2.219	The format and flow of this paragraph describing MaxBSSID Indicator and Tx BSSID Indicator are a bit convoluted. Please improve.	As suggested.	2017/1/9 9:42
5926	James Yee	225	1 9.3.1.9.7	38	12	T	Y	38.12 9.3.1.9.7	The meaning of "all the MPDUs carried in the eliciting A-MPDU" is not clear. Does it include all MPDUs of any TIDs in the eliciting A-MPDU?	Please clarify.	2017/1/9 9:42
5927	James Yee	225	1 27.3.3.2	153	57	T	Y	153.57 27.3.3.2	The text only specifies MSDU. Is MMPDU also allowed for Level 1 Dynamic Fragmentation?	Please clarify.	2017/1/9 9:42
5928	James Yee	225	1 27.3.3.4	154	36	T	Y	154.36 27.3.3.4	Level 3 Dynamic fragmentation use is allowed under many constraints such as HT immediate ack and AMPDU sequence number range. The extra L3 Frag negotiation needed increases overhead. However, the usage scenarios and potential gain are not clear.	Provide the level 3 dynamic fragmentation usage scenarios and justify benefit/gain worthy of the complexity. Otherwise, suggest to remove level 3 dynamic fragmenation.	2017/1/9 9:42
5929	James Yee	225	1 27.3.4.1	155	39	T	Y	155.39 27.3.4.1	The receiving STA supporting dynamic defragmentation does not need to follow receiver timer rules defined in 10.6. Does this mean a receiver can has its own time-out mechanism for defragmentation? If no, what time-out rules shall the receiver follow?	Please clarify.	2017/1/9 9:42
5930	James Yee	225	1 27.2.2	150	22	T	Y	150.22 27.2.2	With more and more 802.11 devices operating in multiple modes, a STA may grab the channel and allocate partial or whole TXOP time for peer-to-peer communication or other proprietary usage, so that inter BSS STAs receiving the NAV request may not always be forbidden to access the channel. However, in the current text, STAs that receive any NAVs are not able to access the channel. A STA can give an indication showing that its intention to grab the channel does not disable channel access for inter BSS STAs. To improve overall network utilization, it is required to add such indication to enable inter-BSS NAV only mechanism.	Suggest adding mechanisms to enable single NAV (inter-NAV or intra-NAV) update, such as an additional PHY signaling or a specific MAC frame.	2017/1/9 9:42
5931	James Yee	225	1 10.3.2.4	115	31	T	Y	115.31 10.3.2.4	NAVTimeout is not defined for MU-RTS.	Amend corresponding statement in 802.11-2016 with necessary changes to include the case for MU-RTS.	2017/1/9 9:42
5932	James Yee	225	1 10.3.2.8a.2	117	5	T	Y	117.05 10.3.2.8a.2	It is not clear that if MU-RTS is sent on multiple 20MHz channels but CTS is only received on serveral of them, can the transmitter of MU-RTS proceed with the frame exchange sequence on the channels without a corresponding CTS reception?	Suggest that those channels without CTS reception corresponding to the MU-RTS should not to be used for transmission during the NAV obtained. Otherwise, statements should be added in the spec to explicitly say the transmission of MU-RTS on those channel is still interpreted as successful.	2017/1/9 9:42
5933	James Yee	225	1 10.3.2.8a.2	117	25	T	Y	117.25 10.3.2.8a.2	The specs says a MU-RTS receiver shall only respond to a CTS frame if the RU allocation subfield in the User Info of the received MU-RTS is either the primary 20 MHz channel, primary 40 MHz channel, primary 80 MHz channel, 160 MHz channel, or 80+80 MHz channel of the MU-RTS receiver. But such requirement does not exist for the MU-RTS transmitter in 10.3.2.8a.2. It is also not clear if such a requirement implies the secondary channel (or any RU on the secondary channl) of a MU-RTS receiver is never used during the MU-RTS reservation.	Either remove this requirement on the receiver side or add corresponding requirement on the transmiter side.	2017/1/9 9:42

5934	James Yee	225	1 10.3.2.8a.3	117	39	T	Y	117.39 10.3.2.8a.3	The spec implies that the reason why the data rate used for the non-HT PPDU reposnse shall be 6Mb/s is provided in 17.1.1. But such explanation does not exist there.	Either remove the reference link or add corresponding explanation in 17.1.1.	2017/1/9 9:42
5935	James Yee	225	1 10.3.2.10.1	118	55	E	Y	118.55 10.3.2.10.1	Space missing before "that" in "Responses to A-MPDUs within a VHT MU PPDU or an HE MU PPDU for DL transmission_that are not"	As suggested	2017/1/9 9:42
5936	James Yee	225	1 27.9.2.2	192	21	E	Y	192.21 27.9.2.2	A conjunction is missing between "The STA may increase the OBSS_PDlevel during the backoff procedure" and "its maximum transmit power being adjusted as defined above".	Add "such that" before "its".	2017/1/9 9:42
5937	James Yee	225	1 27.5.2.3	167	30	T	Y	167.30 27.5.2.3	The spec says the backoff procedure described in 9.22.2.2 applies to UL MU but there is nothing about UL MU in 9.22.2.2 at this point so it is not clear which of thoes rules apply. For example in 9.22.2.2 (10.22.2.2 in 802.11mc) it says "an HT STA may retransmit unacknowledged MPDUs within the same TXOP or in a subsequent TXOP". Does this also apply to an HE STA?	Please clarify.	2017/1/9 9:42
5938	James Yee	225	1 27.14.1	199	12	T	Y	199.12 27.14.1	Besides intra-PPDU power save for HE non-AP STAs, allowing them to enter doze mode till the end of an inter-BSS PPDU TXOP with received power > OBSS_PDmax may further save some power.	As suggested	2017/1/9 9:42
5939	James Yee	225	1 27.11.6	198	34	T	Y	198.34 27.11.6	More information should be provided regarding the behavior of SR_Restricted.	As suggested	2017/1/9 9:42
5940	James Yee	225	1 28.3.10.7.2	274	7	T	Y	274.07 28.3.10.7.2	The spec provided two reference sections (27.9 and 27.11.6) for "SRP-based spatial reuse" but nothing about "SRP-based spatial reuse" can be found there. The definition of "SRP-based spatial reuse" is not clear	Please clarify.	2017/1/9 9:42
5941	James Yee	225	1 28.3.10.7.2	274	12	T	Y	274.12 28.3.10.7.2	It is not clear what exactly the behavior of "SR_Delay" is and more information should be provided in 27.9.2.1 and 27.11a.	Please clarify.	2017/1/9 9:42
5942	James Yee	225	1 28.3.10.7.2	282	29	T	Y	282.29 28.3.10.7.2	Definition of SRP, TX PWRAP and Acceptable Receiver Interference levelAP are not provided.	Please clarify.	2017/1/9 9:42
5943	James Yee	225	1 27.5.1.3	163	27	T	Y	163.27 27.5.1.3	The spec says "A non-AP STA reports its channel availability information (unsolicited BQR) to the AP to which it is associated using the BQR A-Control field of frames it transmits as defined below...". It is not clear what is the definition of "a channel is available". For example, does it requires CCA idle during an interval of PIFS immediately in prior?	Please clarify.	2017/1/9 9:42
5944	James Yee	225	1 27.5.1.3	163	46	T	Y	163.46 27.5.1.3	The spec says "The STA shall include in the HE trigger-based PPDU one or more QoS Null or QoS Data frames containing the BQR A-Control field with the channel availability information...". It is not clear what is the definition of "a channel is available" in this context.	Suggest to generate the response according to inter-NAV.	2017/1/9 9:42
5945	James Yee	225	1 27.5.1.3	163	46	T	Y	163.46 27.5.1.3	The spec says "The STA shall include in the HE trigger-based PPDU one or more QoS Null or QoS Data frames containing the BQR A-Control field with the channel availability information of the STA ...". It should also mention if the BQR A-Control field shall be the same or what happens if they are not exactly the same (e.g. the last BQR A-Control recevied shall be used).	As suggested	2017/1/9 9:42
5946	James Yee	225	1 9.2.4.6.4.2	24	21	E	Y	24.21 9.2.4.6.4.2	The definition of Fval for TRSSI calculation is missing.	Please clarify.	2017/1/9 9:42

5947	James Yee	225	1 10.9	127	47	T	Y	127.47 10.9	The spec says "At most one Control subfield with a given Control ID value shall be present in the A-Control field of QoS Data or Management frames carried in an (A-)MPDU". It is not clear what to do if more than one A-Control field of a given Cotnrol ID subfield is received in QoS Data or Management frames in an (A-)MPDU.	Please clarify.	2017/1/9 9:42
5948	James Yee	225	1 27.8.2	188	48	T	Y	188.48 27.8.2	The information provided by ROM is partially overlapping with the informatiom from BQR. It is not clear if there is a rule how one relates to the other.	Please clarify.	2017/1/9 9:42
5949	James Yee	225	1 27.8.2	189	3	T	Y	189.03 27.8.2	The spec says "The OMI responder shall use the values indicated by the Rx Channel Width and Rx NSS subfields of the most recently received OMI A-Control field sent by the OMI initiator to send PPDUs to the OMI initiator in subsequent TXOP". It seems the channel availability information obtained from BQR is not considered here.	Please clarify.	2017/1/9 9:42
5950	James Yee	225	1 9.4.2.224	96	53	T	Y	96.53 9.4.2.224	The spec requires the Quiet Period Offset field is set to the offset of the start of the first quiet period from the Quiet Time Period Request. But since Quiet Time Period Request element defines a periodic sequence of quiet periods, it seems easier for implementations to just define an absoulte anchor point for the first quiet period instead of using an offset.	As suggested	2017/1/9 9:42
5951	James Yee	225	1 9.4.2.225	97	30	T	Y	97.30 9.4.2.225	Since the Quiet Time Period is periodic, it is not clear why in the response element, the first apperance of this period is expressed in offest and not an absolute time. It should be easier for implementations to just define an absoulte anchor point for the first quiet period instead of using an offset.	As suggested	2017/1/9 9:42
5952	James Yee	225	1 27.16.3.2	207	15	T	Y	207.15 27.16.3.2	The spec only provides the methods to setup new Quiet Time Periods. But once a periodic Quiet Time Period is configured, there should be some ways to cancel it when necessary.	As suggested	2017/1/9 9:42
5953	James Yee	225	1 28.3.14.3	342	20	T	Y	342.20 28.3.14.3	Table 28-40 currently specifies two classes of devices based on TX power and RSSI measurement accuracy, with +/- 3dB as the smallest minimum requirement. However, based on current technologies, we believe 3 dB is too large for devices targetting high performance.	Suggest to add a new A+ device category whose tranmit power and RSSI measurment accuracy minimum requirement is +/- 2 dB. Accordingly, the 'Device Class' field in the HE PHY Capabilities IE in 9.4.2.218.3 will require 1 more bit to express the new device class.	2017/1/9 9:42
5954	James Yee	225	1 28.3.14.3	342	53	T	Y	342.53 28.3.14.3	The carrier sense requirement is -82 dBm and -82 dBm is also the receiver minimum input level sensitivity of lowest MCS in the draft spec. The CFO/SFO requirements shown here are only defined at receive power of -60 dBm, which is not enough to help receivers usually decoding packets with power much lower than -60 dBm.	Suggest to add more CFO/SFO constraints for power below -60 dBm, such as -72 dBm, -82 dBm and even lower power.	2017/1/9 9:42
5955	James Yee	225	1 9.3.1.23	42	61	T	Y	42.61 9.3.1.23	Is it explicitly disallowed for two Trigger frames to be sent in succession? If not, then the benefits of the Cascade Indication feature is unclear.	Remove the Cascade Indication feature.	2017/1/9 9:42
5956	James Yee	225	1 9.3.1.23	42	32	T	Y	42.32 9.3.1.23	For BSR/BQR, trigger frame can use the type of BSRP/BQRP to query the necessary information by AP itself. However, there is no trigger type for "UL power headroom. With this type, AP can decide when to query A-Control with this value by itself, rather than event-driven report by STA.	Considering defining a new trigger type for "UL power headroom".	2017/1/9 9:42

5957	Jarkko Kneckt	225	1 27.7	179		T	Y	179.00 27.7	The BC TWT is not optimized for stand-by power save where the non-AP STA maintains association with the AP in minimum overhead and does not have DL or UL data to transmit in every TWT SP.	Please define a TWT Flow Identifier for broadcast TWT that is optimized to maintain association with minimum power consumption in non-AP STA. Alternatively optimize TWT Flow Identifiers 1 and 2 for stand-by power save.	2017/1/9 9:42
5958	Jarkko Kneckt	225	1 11.2.2.6	141	12	T	Y	141.12 11.2.2.6	The use of PS-Poll frame together with the TWT power save mechanism could be clarified and justified. The PS-Poll should be used only with announced TWT. The TWT SP intiated by PS-Poll should be terminated like any TWT SP, i.e. no data should be transmitted outside of TWT SP.	Please clarify how TWT and PS-Poll frames are used. It would make sense that if a PS-Poll frame is transmitted within the TWT SP and termiantion of the TWT SP also cancels the solicited DL PPDU transmission regardless if it has not been yet transmitted.	2017/1/9 9:42
5959	Jarkko Kneckt	225	1 9.4.2.200	72	26	T	Y	72.26 9.4.2.200	The Triggered TWT SP should define that AP shall transmit a Trigger frame or a frame with Reverse Direction Grant indication in the Triggered TWT SP. In both cases the AP schdules UL transmission resources for the STA. The transmission of the frame with Reverse Direction Grant is useful when data transmission is random or the AP does not have precise knowledge of the amount of UL data that a STA has or when few STAs wake up for the TWT SP. The Trigger frame and frame with RDG enables the AP to allocate transmission resource for the non-AP STA . When frame with RDG is transmitted, the transmission resources are not wasted, if the non-AP STA does not have traffic to transmit for the whole allocated resource.	Please change the text p.72, l.26 to read:" includes Trigger frames or farmes with reverse direction grant. The Trigger field is set to 1 to indicate that at least one Trigger frame or a frame with reverse direction grant is transmitted during the TWT SP."	2017/1/9 9:42
5960	Jarkko Kneckt	225	1 10.9	127	37	T	Y	127.37 10.9	The guidance for the reverse direction protocol A-Control field use is missing from the clause.	Please add the following sentence to line 37: "A value of 6 in the Control ID subfield when the transmitting STA follows the reverse direction protocol procedure as described in 10.28 (Reverse Direction Protocol)."	2017/1/9 9:42
5961	Jarkko Kneckt	225	1 9.2.4.6.4.1	23	37	E	N	23.37 9.2.4.6.4.1	The content of the Control Information subfield for reverse direction protocol is not provided	Please add to Table 9-18a to Content of the RDP:" See 9.2.4.6.4.8 (Reverse direction protocol (RDP))"	2017/1/9 9:42
5962	Jarkko Kneckt	225	1 9.2.4.6.4	22	38	E	N	22.38 9.2.4.6.4	The maximum number of title levels in 802.11 specifications is 5. A-Control field is currently using 6 title levels.	Please change the A-Control field to use five title levels.	2017/1/9 9:42
5963	Jarkko Kneckt	225	1 27.7.1	179	60	T	Y	179.60 27.7.1	A STA should be aware of broadcast TWTs with TWT Flow identifier value 3. The AP may use this type of TWT Flows to organize opportunistic power save for all STAs. It is beneficial that STAs know how long they may be in Doze state and when the TIM or FILS discovery frames will be transmitted. Also a STA should be aware of the timing of hte UL OFDMA random access opportunities.	Please change the text in p.179 l.60: "STAs should be aware of the broadcast TWTs with TWT Flow Type values 2 and 3 in order to knw the Trigger frame transmissions for the UL OFDMA random access and to benefit from the opportunistic power save. The STAs need not be mad aware of other TWT values..."	2017/1/9 9:42
5964	Jarkko Kneckt	225	1 27.7.3.1	182	31	T	Y	182.31 27.7.3.1	The broadcast TWT element may be present in the TIM frame and in FILS Discovery frame, not only in the Beacon and Probe response. The individually addressed and broadcast addressed probe response frames have the same alternatives for the transmission payload. It is not clear why the TWT element cannot be transmitted in the individually addressed probe response. In many cases the scanning STAs receive both broadcast and individually addressed probe responses.	Please change the text: "... broadcast TWT element in TIM frame, FILS Discovery frame, and in Probe Response frame."	2017/1/9 9:42
5965	Jarkko Kneckt	225	1 10.12	128	8	E	N	128.08 10.12	frame is unclear definition.	Change: "within a single QoS Data frame" to: "within a single QoS Data MPDU"	2017/1/9 9:42

5966	Jarkko Kneckt	225	1 27.7.2	180	49	T	Y	180.49 27.7.2	The TWT Channel subfield should not force the STA to operate only in 20 MHz mode during the TWT SPs. If TWT SPs with different TWT Channel values overlap it is not clear how STA operates. Should the STA operate in multiple 20 MHz channels or in the larger BW. The RX Operating mode also coordinates the BW of the STA. When BW signaling through ROMI and TWT signaling complicates the BW handling.	Please clarify whether the TWT Channel define the primary channel of the STA for the TWT duration. Please clarify what is meant by 20 MHz operation. Please clarify how a STA operates if it is served by two or more overlapping TWT SPs with different TWT Channel values. Please clarify how ROMI and TWT Channel signaling interact.	2017/1/9 9:42
5967	Jarkko Kneckt	225	1 27.7.2	180	51	T	N	180.51 27.7.2	It is not clear what mechanisms are included to the "NAV protection mechanism"; required by the protection field of the TWT.	Please clarify whether a transmission of a data frame with non-zero Duration field as the first frame in the TXOP belongs to the NAV protection mechanisms required by the Protection field?	2017/1/9 9:42
5968	Jarkko Kneckt	225	1 10.22.2.7	133	5	T	Y	133.05 10.22.2.7	It is unclear may there be just one Trigger frame or multiple trigger frames in a TXOP with TXOP Limit set to 0.	Please change to:"5) A basic trigger variant Trigger frame."	2017/1/9 9:42
5969	Jarkko Kneckt	225	1 10.22.2.8	132	64	T	Y	132.64 10.22.2.8	Please clarify can an HE MU PPDU contain a Trigger frame or UL MU Response scheduling HE Variant HT Control field to allocate resources for UL MU acknowledgements transmission.	Please add clarification are Trigger frames or UL MU response scheduling A-Control fields to solicit UL BAs allowed in HE MU DL PPDUs when the TXOPLimit is 0.	2017/1/9 9:42
5970	Jarkko Kneckt	225	1 10.43.1	137	56	T	Y	137.56 10.43.1	Table 9-262k in p.71, line 19 defines operation TWT Grouping. The TWT grouping response frame is not included to the Table 10-19a. Please add guidance for handling TWT Grouping response frame to the table 10-19a.	Please clarify how TWT Grouping Response frame is interpretted by the HE STAs. Alternatively, please define that the TWT Grouping Response frame is not used in 802.11ax.	2017/1/9 9:42
5971	Jarkko Kneckt	225	1 11.2.2.6	141	58	T	Y	141.58 11.2.2.6	It is unclear can an HE non-AP STA operate in both U-APSD and TWT at the same time.	The TWT power save mechanism is superior to U-APSD power save. For instance, scheduling support and faster service period termination make TWT better. If TWT is supported by the AP and the non-AP STA, the STA shall operate only in TWT mode.	2017/1/9 9:42
5972	Jarkko Kneckt	225	1 11.2.2.6	141	62	T	Y	141.62 11.2.2.6	An HE AP should be allowed to transmit Multi-TID A-MPDU containing BUs from multiple ACs as a response to the PS-Poll frame.	Please allow an HE AP to transmit frames from multiple AC as a response to the PS-Poll frame from HE non-AP STA.	2017/1/9 9:42
5973	Jarkko Kneckt	225	1 11.2.2.17	143	48	T	Y	143.48 11.2.2.17	Currently the Check Beacon field is updated when the Broadcast TWT element is added or removed from Beacon. To avoid Beacon bloat, the Broadcast TWT element should not be present in every beacon frame, but then the Check Beacon field may request that non-AP STAs receive the Beacon unnecesserily which may increase the non-AP STA power consumption. It would be better to update the Check Beacon field when information in Broadcast TWT element is modified. Also some description should be added that TWT element may not be present in every beacon.	Change the n) Inclusion of a Broadcast TWT element to n) Modification of a Broadcast TWT element. Also please add a note saying that Broadcast TWT element may not be present in every Beacon frame and modified TWT broadcast element means a change in the parameter value.	2017/1/9 9:42
5974	Jarkko Kneckt	225	1 11.49.1	144	30	E	N	144.30 11.49.1	New subclause 11.49 HE BSS operation does not specify HE BSS operating rules. Also the name of the clause 11.49.1 AID assign rule is misleading. First thoughts of the content of the clause are how to allocate or assign AID to new STA in the association.	Find more suitable title and location in the specification to describe how the HE STA may use spatial reuse with VHT PPDU transmissions.	2017/1/9 9:42
5975	Jarkko Kneckt	225	1 11.49.1	144	32	T	Y	144.32 11.49.1	Where is the Partial BSS Color field? Please provide the name of the frame and other details.	Please clarify where is the Partial BSS Color field.	2017/1/9 9:42
5976	Jarkko Kneckt	225	1 11.49.1	144	34	T	Y	144.34 11.49.1	The alllocated AID (5:8) and the use of the field is not described.	Please clarify how the AID field is being used and what is happening in the clause. Also please specify how a STA should use the information in the clause.	2017/1/9 9:42
5977	Jarkko Kneckt	225	1 27.3.3.2	153	47	E	N	153.47 27.3.3.2	The S-MPDU is not defined in abreviations.	Add to clause 3.4 an abbereviation and acronym for the S-MPDU.	2017/1/9 9:42

5978	Jarkko Kneckt	225	1 27.3.3.2	154	1	E	N	154.01 27.3.3.2	The name of the clause 10.13.8 is incorrect. 802.11mc D8.0 has a title 10.13.8 Transport of VHT single MPDUs	Please correct the name of the clause.	2017/1/9 9:42
5979	Jarkko Kneckt	225	1 27.4.2	158	31	E	N	158.31 27.4.2	There seems to be additional only word	Please delete the word only in the line 31.	2017/1/9 9:42
5980	Jarkko Kneckt	225	1 27.5.1.3	163	43	T	Y	163.43 27.5.1.3	It is unclear whether BQRP Trigger variant that allocates RUs for random access requires that a HE trigger-based PPDU transmitted in the RU for random access contains a BQR information in the A-Control field.	Please clarify is a STA that detects RUs for random access required to transmit BQR reports in a Trigger-based PPDU in a RU allocated for random access. Please clarify is the same requirement used for other Trigger variants as well?	2017/1/9 9:42
5981	Jarkko Kneckt	225	1 27.5.1.3	163	43	T	Y	163.43 27.5.1.3	The non-AP STA should not be forced to perform random access. The use of random access for the BQR transmission should be voluntary for the STAs. If all STAs are required to transmit BQR in random access when a Trigger contains random access RUs, the power consumption of hte STA increases unnecessarily and transmisison overhead in random access becomes high.	The non-AP STAs transmission in the Rus allocated for random access should be optional. Change the wording to say that if RUs for random access are included a non-AP STA may respond...	2017/1/9 9:42
5982	Jarkko Kneckt	225	1 27.5.1.3	163	47	T	N	163.47 27.5.1.3	The BQR support in AP and STA is already described in lines 35 -39. The second bullet has a lot of repetition.	delete the end of hte sentence. Delete:"when the AP has indicated...".	2017/1/9 9:42
5983	Jarkko Kneckt	225	1 27.5.2.2.1	164	63	T	Y	164.63 27.5.2.2.1	The standard should not encourage to put more than one Trigger frame to the A-MPDU, because multiple Trigger generate overhead and the Trigger frames will be located right after each other.	Change may to should not. Change the text to read:" More than one Trigger frame should not be aggregated..."	2017/1/9 9:42
5984	Jarkko Kneckt	225	1 27.5.2.2.3	167	34	E	N	167.34 27.5.2.2.3	Sentences in line 34 and 38 are the related to the Trigger frame transmission rules and should be discussed in the same chapter.	Please delete the sentence in line 38 - 39 and change the sentence in line 34: "An AP may use any AC for sending a PPDU that contains only Trigger frames and follows the rules defined in 10.22.2 (HCF contention based channel access(EDCA)) for obtaining and sharing the TXOP."	2017/1/9 9:42
5985	Jarkko Kneckt	225	1 27.5.2.3	167	53	E	N	167.53 27.5.2.3	Missing :	Add : to the end of the line.	2017/1/9 9:42
5986	Jarkko Kneckt	225	1 27.5.2.3	167	53	T	Y	167.53 27.5.2.3	An HE Trigger-based PPDU may be transmitted as a response to UL OFDMA based random access. The UL OFDMA random access should be referred in the clause 27.5.2.3 to include description of all mechanisms to send HE Trigger-based PPDU.	Add a reference to UL OFDMA random access as one possibility to send HE Triggered PPDU.	2017/1/9 9:42
5987	Jarkko Kneckt	225	1 27.5.2.3	169	61	E	N	169.61 27.5.2.3	The clause is not listing all Trigger types. Please add BQR response and reference.	Add reference to BQR and GCR variant MU-BAR response generation.	2017/1/9 9:42
5988	Jarkko Kneckt	225	1 27.5.2.3	169	61	T	Y	169.61 27.5.2.3	QoS Data or QoS Null frame may be used as a response to BSRP and BQR. Currenly only QoS Null is listed.	Add QoS Data as one response frame.	2017/1/9 9:42
5989	Jarkko Kneckt	225	1 27.5.2.3	170	1	T	Y	170.01 27.5.2.3	The required frame type should be specified for the Basic Trigger frame.	Change the text to read: " ... and the STA does not have a data or management frame to transmit, the STA shall..."	2017/1/9 9:42
5990	Jarkko Kneckt	225	1 27.5.2.4	170	22	E	N	170.22 27.5.2.4	The reference should be done to clause directly.	Change the sentence to read:" ED-based CCA for UL MU CS follows the procedure defined in 21.3.18.5.2 (CCA sensitivity for opearation classes requiring CCA-ED)...	2017/1/9 9:42
5991	Jarkko Kneckt	225	1 27.5.2.4	170	29	E	N	170.29 27.5.2.4	The text should discuss on the value of the Length field	change: " ... and the value of the Length..."	2017/1/9 9:42
5992	Jarkko Kneckt	225	1 27.5.2.4	170	32	T	Y	170.32 27.5.2.4	The current conditions are not in the most simple format. The most important issue for the UL MU CS is when the CS indicates idle. Also the conditions when one or two NAVs are being used are not confusing.	The virtual CS indicates idle, if: - the response generated by the STA contains an ACK frame or a BlockAck frame and the value of the Length subfield in the Common Info field of the TRigger frame is less than or equal to 418 - if one NAV is considered, the NAV was set by an intra-BSS frame, - if two NAVs are considered, the duration of the basic NAV is zero.	2017/1/9 9:42

5993	Jarkko Kneckt	225	1 27.5.2.4	170	43	E	Y	170.43 27.5.2.4	Text is long and complicated to understand. A single clause is referred multiple times. The use of acronyms is not consistent. The ED-CCA use is described in more details, Virtual CS use is not included to text.	Change to:" If the CS required subfield in a Trigger frame is set to 1, the STA may transmit an HE trigger-based PPDU when Virtual CS is idle and the CCA-ED indicates idle for each 20 MHz channels containing the allocated RUs for SIFS duration after receiving the PPDU that contains the Trigger frame.	2017/1/9 9:42
5994	Jarkko Kneckt	225	1 27.5.2.4	170	56	E	N	170.56 27.5.2.4	The busy/idle state of medium should be written more clearly.	Change to:" ...trigger-based PPDU even if the Virtual CS or CCA-ED of the 20 MHz channels containing RUs indicate busy".	2017/1/9 9:42
5995	Jarkko Kneckt	225	1 27.5.2.5	171	26	T	Y	171.26 27.5.2.5	The non-AP STA could benefit, if it could indicate its Buffer status report for all TIDs that it has buffered traffic. An exception to the Multi-TID aggregation rules could be made to allow QoS Null frames that are not acknowledged addition to any Multi-TID aggregated A-MPDU	Please allow non-AP STA to aggregate QoS Null frames that do not require ACK from any TID to A-MPDU to be able to indicate buffer status report for all TIDs that the non-AP STA has buffered traffic.	2017/1/9 9:42
5996	Jarkko Kneckt	225	1 27.5.2.5	171	44	T	N	171.44 27.5.2.5	The unsolicited BSR should be allowed to transmit as a response to all Trigger variants, except MU-RTS.	Change to: " Note 1-The STA can send an unsolicited BSR is a response to all variants of the Trigger frame, except MU-RTS variant...	2017/1/9 9:42
5997	Jarkko Kneckt	225	1 27.5.2.5	172	19	T	N	172.19 27.5.2.5	Aggregating the BSR control frame with data, control and management frame is unlikely. It is more likely that BSR control frame is aggregated with control, data OR management frame.	Change to:" aggregated with control, data or management frames..."	2017/1/9 9:42
5998	Jarkko Kneckt	225	1 27.5.2.5	172	20	T	Y	172.20 27.5.2.5	Unclear statements that may be interpretted differently resulting to interoperability problems.	Please clarify what is meant with "asks for acknowledgement" and "has high priority to be transmitted".	2017/1/9 9:42
5999	Jarkko Kneckt	225	1 27.5.2.6.1	172	34	T	Y	172.34 27.5.2.6.1	Currently every STA in proximity may perform UL OFDMA random access in every RU for UL OFDMA random access. The AP should be able to indicate that only associated STAs are allowed transmit in the random access RU. This ensures that the associated STAs are able to use UL OFDMA random access to transmit buffer status reports which reduces data transmission latency.	Please, allocate new AID value, for instance 1, to dedicate the UL OFDMA random access RU only for the associated non-AP STAs.	2017/1/9 9:42
6000	Jarkko Kneckt	225	1 27.5.2.6.1	172	35	T	Y	172.35 27.5.2.6.1	27.5.2.6.1 states that only basic variant or BSRP variant trigger may contain random access opportunities. 27.5.1.3 has a contradiction stating that BQR variant Trigger may include Rus for random access. The random access should be possible for all Trigger variants except MU-RTS.	Delete the sentence in lines 35 and 36 and add the following sentence:" One or more RUs for UL OFDMA random access may be included to all trigger frame variants, except to MU-RTS variant."	2017/1/9 9:42
6001	Jarkko Kneckt	225	1 9.3.3.6	53	36	T	Y	53.36 9.3.3.6	The RAPS information (OCWMIn and OCWMAx) should be present in the (re)association response. This allows the UL OFDMA random access immediately after the association.	Please add the RAPS information part of the HE Operation parameters, or add the RAPS element to the Association Response frame body.	2017/1/9 9:42
6002	Jarkko Kneckt	225	1 6.3.3.3.2	11	42	T	Y	11.42 6.3.3.3.2	The RAPS information should be returned in BSSDescription table of the MLME-SCAN.confirm.	Please add the RAPS information part of the HE Operation parameters, or add the RAPS element to the BSSDescription table.	2017/1/9 9:42
6003	Jarkko Kneckt	225	1 9.3.3.8	54	31	T	Y	54.31 9.3.3.8	The RAPS information (OCWMIn and OCWMAx) should be present in the (re)association response. This allows the UL OFDMA random access use	Please add the RAPS information part of the HE Operation parameters, or add the RAPS element to the Re-Association Response fare body.	2017/1/9 9:42
6004	Jarkko Kneckt	225	1 27.5.6.1	172	39	T	Y	172.39 27.5.6.1	The RAPS element should be included to association and reassociation response frames	Please allow the RAPS element to be part of the (re) assocation response frame.	2017/1/9 9:42
6005	Jarkko Kneckt	225	1 27.5.2.6.2	173	30	T	Y	173.30 27.5.2.6.2	The OCWmin value use for UL MU OFDMA random access is not clearly defined. Is the OCW set to OCWMin value everytime a new OCWMin value is obtained by the STA?	Please clarify does a reception of new OCWMin value set the OCW value to OCWMin.	2017/1/9 9:42
6006	Jarkko Kneckt	225	1 27.5.2.6.3	174	9	T	Y	174.09 27.5.2.6.3	The PPDU itself cannot fail. The reception of the PPDU or the reception of the immediate response may fail.	Clarify what is failed. Does the reception of the HE Trigger-based PPDU fail or does the immediate response fail?	2017/1/9 9:42

6007 Jarkko Kneckt	225	1 27.5.2.6.3	174	15	T	Y	174.15 27.5.2.6.3	The OCW value should be updated for each failed transmission, not only if a frame is retransmitted. Currently it is not clear how OCW is handled if the STA transmits a new frame.	Change the text:" If a response to a HE Trigger-based PPDU transmitted in random RU requiring immediate response is not received, the STA shall update its OCW to 2 X OCW +1, until the the OCW reaches value of OCWmax.	2017/1/9 9:42
6008 Jarkko Kneckt	225	1 27.5.2.6.3	174	24	T	Y	174.24 27.5.2.6.3	The clause 27.5.2.7 seems relate to the clause 27.6. The clause 27.5.2.7 is unclear and difficult to understand.	Please merge clause 27.5.2.6.3 with the clause 27.6 and delete the clause 27.5.2.7.	2017/1/9 9:42
6009 Jarkko Kneckt	225	1 27.5.3	174	32	T	Y	174.32 27.5.3	The sentence:" A TXOP can include both ..." is confusing. The cascading operation is described more clearly starting form line 34.	Delete the sentence in the line 32.	2017/1/9 9:42
6010 Jarkko Kneckt	225	1 27.6.2	176	50	T	Y	176.50 27.6.2	The Operating Mode Notification frame and the Operating Mode Indication subfield control the value of the RX NSS parameter. i.e. a non-AP STA does not have two separate RX NSS parameters as described in the current text. The last received Operating Mode Notification frame or Operating Mode Indication subfield defines the value of the RX NSS parameter.	Combine the bullets in line 50 and 57 into a single bullet. There is only a single RX NSS value.The Operating Mode Notification frame or the Operating Mode Indication HE Variant of the HT Control field that is received most recently defines the value of the RX NSS field.	2017/1/9 9:42
6011 Jarkko Kneckt	225	1 27.6.2	177	44	T	Y	177.44 27.6.2	The figure 27-3 colors are very interesting. Why there are red and blue box? What does green and yellow color indicate? Why some text is in red and other in black?	Please simplify the figure and unify its colors. Please provide legend for the colors.	2017/1/9 9:42
6012 Jarkko Kneckt	225	1 27.6.2	178	5	T	Y	178.05 27.6.2	The figure 27-4 colors are interesting. Why HE is in red? There could be just one Trigger and response that is repeated 1 ... N times. Please consider changing the green color to no color.	Please simplify the figure and unify its color coding and provide legend for the colors.	2017/1/9 9:42
6013 Jarkko Kneckt	225	1 27.8.3	189	39	T	Y	189.39 27.8.3	The NOTE is currently unclear. The NOTE sounds like a STA with UL MU Disable would respond to some Trigger frame variants.	Change the Note :"... that it will not respond to any variant of the Trigger frame."	2017/1/9 9:42
6014 Jarkko Kneckt	225	1 27.8.3	189	45	E	N	189.45 27.8.3	The TOMI description has repetition. The lines 26 - 27 and lines 45 - 46 define the maximum number of TX NSS a STA may use.	Delete the lines 45-46, because they repeat the message of the lines 26-27.	2017/1/9 9:42
6015 Jarkko Kneckt	225	1 27.8.3	189	48	T	Y	189.48 27.8.3	The TOMI description has repetition. The lines 29 -30 and lines 48 - 49 define the maximum channel width a STA may use.	Delete the lines 48 - 49, and change the note in line 29-30 to normative text.	2017/1/9 9:42
6016 Jarkko Kneckt	225	1 27.8.3	189	52	T	Y	189.52 27.8.3	The OMI information should be received from the OMI Initiator, not received by the OMI initiator.	Change the sentence in line 52 to read:"... of spatial streams that is indicated in the TX NSS subfield of the OMI A-Control field that is last received from the OMI initiator.	2017/1/9 9:42
6017 Jarkko Kneckt	225	1 27.8.3	189	54	T	Y	189.54 27.8.3	The Channel Width subfield of the ROMI should be allocated from the primary channel, not from other channels. The Current wording in TOMI field limits the maximum RU Bandwidth, but does not ensure that the indicated RU Bandwidth is in the primary channel.	Add to the end of the sentence in the line 57:" and allocated in the primary channel. "	2017/1/9 9:42
6018 Jarkko Kneckt	225	1 27.9.1	190	7	T	Y	190.07 27.9.1	It is unclear how the spatial reuse improves power saving? The spatial reuse may improve the transmission latency and system throughput in dense deployments. Perhaps as outcome of improved latency and throughput, the non-AP STA power efficiency is improved.	Please clarify how spatial reuse Improves non-AP STA power efficiency.	2017/1/9 9:42
6019 Jarkko Kneckt	225	1 27.9.1	190	11	E	N	190.11 27.9.1	There is unclear reference.	Please change the reference to 27.9.2.	2017/1/9 9:42
6020 Jarkko Kneckt	225	1 27.9.1	190	10	T	Y	190.10 27.9.1	The SR PPDU is not defined. The following clauses do not use the term SR PPDU so the general introduction and the actual description text do not match.	Clarify the general spatial reuse operation. specify the term SR PPDU if ti is used by spatial reuse definition or delete the term.	2017/1/9 9:42
6021 Jarkko Kneckt	225	1 27.9.2.1	190	36	T	Y	190.36 27.9.2.1	The sentence starting in line 36 seems to add a new condition that is not considered in the bulleted list in lines 23 -34. The new condition should be part of the bulleted list, not an exception to it.	Write the sentence as part of the bulleted list above.	2017/1/9 9:42

6022 Jarkko Kneckt	225	1 27.9.2.1	190	39	T	Y	190.39 27.9.2.1	The condition in the lines 39 - 42 is difficult to read. There seems to be first one condition then description what is done if the condition is fulfilled and then again some more conditions. Write first all conditions and then the performed operation, if the conditions are met.	Mnodify the sentence. Write all conditions first and then the operation if the conditions are fulfilled. Please ensure that all opeation alternatives are wirtten to the normative text.	2017/1/9 9:42
6023 Jarkko Kneckt	225	1 27.9.2.1	190	50	E	N	190.50 27.9.2.1	Missing title format, or unclear sentence.	Please delete the text in line 50	2017/1/9 9:42
6024 Jarkko Kneckt	225	1 27.9.2.1	190	59	T	Y	190.59 27.9.2.1	The lines 59 - 62 seems to relate to operation is allowed if the conditions in lines 20 - 34 are met. The statement in the lines 59 - 62 should be moved as next text after the conditions to ensure correct understanding of the operation.	Move the sentences in lines 59 - 62 to follow the conditions introduced in the lines 20 - 34.	2017/1/9 9:42
6025 Jarkko Kneckt	225	1 27.9.2.1	190	36	T	Y	190.36 27.9.2.1	The spatial reuse rules are not easy-to-understand. Is the reuse allowed only for the PPDU duration when HE MU PPDU is transmitted and in all other cases the channel may be considered as IDLE and there is no limitation of the duration when the spatial reuse may be performed?	Please clarify.	2017/1/9 9:42
6026 Jarkko Kneckt	225	1 27.9.2.1	190	26	T	Y	190.26 27.9.2.1	The use of the spatial reuse parameter in the RXVECTOR should be clarified or at least there should be a reference to its operation rules.	Please clarify how RXVECTOR parameter are used.	2017/1/9 9:42
6027 Jarkko Kneckt	225	1 27.9.2.1	190	19	T	Y	190.19 27.9.2.1	Can a PHY-CCA.indication indicate something else than BUSY followed by the RXSTART.indication? If the PHY-CCA Indication can have other value in this case, then it should be clarified how the STA operates in these situations. If the PHY-CCA cannot have other value, then the condition is not needed.	Please clarify the question in the comment.	2017/1/9 9:42
6028 Jarkko Kneckt	225	1 27.9.2.2	191	3	T	Y	191.03 27.9.2.2	What is system level performance?	Please clarify. Perhaps it relates to throughput, non-AP STA power consumption and latency.	2017/1/9 9:42
6029 Jarkko Kneckt	225	1 27.9.2.2	192	20	E	N	192.20 27.9.2.2	UL TB PPDU is not the correct name.	Please change to HE Trigger-based PPDU.	2017/1/9 9:42
6030 Jarkko Kneckt	225	1 27.10.4	194	35	T	Y	194.35 27.10.4	It would be beneficial to carry multi-TID A-MPDU in all SU PPDU types between HE STAs. Non-HE SU PPDUs have shorter preamble duration than HE SU PPDUs which may improve throughput.	Please allow A-MPDU Multi-TID aggregation to be transmitted in all SU PPDU types between HE STAs.	2017/1/9 9:42
6031 Jarkko Kneckt	225	1 27.10.4	195	20	T	Y	195.20 27.10.4	Can a Multi-TID A-MPDU be transmitted as a response to Trigger frame which type is other than Basic Variant Trigger frame?	Please clarify may Multi-TID A-MPDU be transmitted as a response to any Trigger frame variant, except MU-RTS.	2017/1/9 9:42
6032 Jarkko Kneckt	225	1 27.13	199	1	T	Y	199.01 27.13	The use of HE-MCS subfield in link adaptation is very loosely defined. It is not clear how the AP and the STA use the link adaptation information.	Please provide some more details how the link adaptation is used by the non-AP STA and the AP. Please describe how to recommended MFB should be used by the transmitter and the receiver. Especially it is interesting to know how non-AP STA can use link adaptation for Triggered transmissions.	2017/1/9 9:42
6033 Jarkko Kneckt	225	1 27.7.2	180	53	T	Y	180.53 27.7.2	The protection field of TWT parameters should be set to 0 in the Triggered and unannounced TWTs, because the AP should have flexibility to decide whether it desires to use NAV protection mechanism.	Please add a sentence:" The TWT Protection field shall be set to 0 in Triggered and unannounced TWTs."	2017/1/9 9:42
6034 Jarkko Kneckt	225	1 10.22.2.8	133	64	T	Y	133.64 10.22.2.8	Please clarify can any number of buffer status reports and all required bandwidth query reports be triggered in a TXOP with TXOPLimit value 0. In general it could be a good principle to allow transmission of any number of Trigger frames soliciting a specific response type transmission in an AC with TXOPLimit set to 0.	Please add clarification are Trigger frames to solicit buffer status reports and bandwidth query allowed in a TXOP with TXOPLimit set to value 0.	2017/1/9 9:42

6035	Jarkko Kneckt	225	1			T	Y		Currently all group addressed frames transmitted in the DL MU PPDU use AID value 0. The group addressed frames contain IP Multicast data and MAC level BSS discovery frames, like FILS discovery frames. The IP multicast data is typically encrypted and only used by the associated STAs. The discovery frames are used by the non-associated STAs that look for network for association. The discovery and data type of the group addressed frames should be transmitted under separate AID values to enable the non-AP STAs to select which frames they receive. fewer reception operations reduce power consumption. New AID value for discovery information allows more frequent discovery information transmissions without increasing the power consumption of the associated STAs. More frequent power consumption reduces scanning delays and scaning power consumption of the non-AP HE	Please allocate new AID value, for instance 1, to indicate RU allocation for broadcast discovery information transmission in HE DL MU PPDUs.		2017/1/9 9:42
6036	Jarkko Kneckt	225	1			T	Y		Currently, the AID may be allocated to a STA only in association. There should be a mechanims to allocate preassociation AID to be able to transmit MU DL PPDUs and HE Trigger-based PPDUs to preassociated STAs.	Please allow the AP to distribute preassociation AID in probe response frame or as part of the UL OFDMA based random access.		2017/1/9 9:42
6037	Jarkko Kneckt	225	1 27.14.2	199	53	E	N	199.53 27.14.2	The power save with UL OFDMA-based random access is related to broadcast TWT operations. The clause should be part of the clauses that define broadcast TWT operations.	Move the clause 27.14.1 as part of the Broadcast TWT clauses, for instance to new clause 27.7.3.5.		2017/1/9 9:42
6038	Jarkko Kneckt	225	1 27.14.2	200	5	T	Y	200.05 27.14.2	The Figure 27-7 is hard to understand. The trigger frame start time is shown to be long and the transmission of the Trigger frame is not started in the beginning of the trigger frame start time. There is a trigger frame that is transmitted before the TF Start time.	Please clarify the figure. The Trigger Frame start time does not look like correctly drawn to the figure.		2017/1/9 9:42
6039	Jarkko Kneckt	225	1 27.14.2	200	28	T	Y	200.28 27.14.2	The BC TWT Flow ID value 2 is used for TWTs that include random access RUs. Each TWT service period has a nominal minimum duration that defines the maximum time that STAs may transmit in the service period. The maximum duration of the TWT SP is not described in the UL OFDMA random access. Also EOSP and more data fields use in the TWT SP termination are not explained.	Please refer to the TWT SP termination rules in UL OFDMA random access. The TWT SP duration, EOSP and More Data fields should terminate the TWT SP for all power save mode STAs.		2017/1/9 9:42
6040	Jarkko Kneckt	225	1 27.14.2	200	35	T	N	200.35 27.14.2	If a non-AP STA in power save mode has transmitted during the UL OFDMA random access and the TWT SP initiated by the UL OFDMA random access has been terminated, the non-associated STA should have easy way to continue data exchange at the following TWT flows.	Please allow the non-associated STA to assign preassociation AID and to wake at the next TWT SP of the same TWT flow that it was used for the UL OFDMA random access. This ensures that AP knows when the non-associated STA is again available for the data transmission, allows the non-AP STA in power save mode to operate in Doze state and reduces contention during random access.		2017/1/9 9:42
6041	Jarkko Kneckt	225	1 27.14.3	200	37	E	N	200.37 27.14.3	The title of the opportunistic power save does not need to mention congested environment	Delete the congested environment from the title of the clause 27.14.3.		2017/1/9 9:42

6042	Jarkko Kneckt	225	1 27.14.2	200	30	T	Y	200.30 27.14.2	Currently the Cascade indication is used to indicate the end of the RU allocations for random access and that no more Trigger frames will be transmitted in the TWT SP. Two indications in the same field may complicate the TWT SP handling and random access termination. A trigger frame without RU allocated for the random access could indicate that there will not be more RUs allocated for the UL OFDMA random access in this TWT SP. This would allow different handling of the STAs that have already an AID and STAs that are performaning the random access. It is likely that first HE Triggered PPDUs are short and contain a many RUs for random access. At the end of the TWT SP there may be larger PPDUs that are used to exchagne data. If there is just the Cascade indication to control STAs availability, the STAs performing random access may need to be available unnecessarily.	Please allow STAs that are performing UL OFDMA random access return to Doze when a Trigger frame does not contain RU allocated for random access.	2017/1/9 9:42
6043	Jarkko Kneckt	225	1 27.14.2	200	30	T	Y	200.30 27.14.2	A Cascade Indication set to 0 indicates the last Trigger frame that contains UL OFDMA random access RUs. Clause 27.7.3.3 P185 L54 has a different logic for Cascade Indication handling: A non-AP STA may return to Doze, if the Trigger has Cascade Indication set to 0 and there is no RU allocated to the STA. The definition in P185 would allow a STA to continue TWE SP if it receives a Trigger with Cascade Indication set to 0 and has RUs allocated for the STA, in definition P200, the TWT SP will be terminated regardless of the allocated RUs.	Please unify the handling of the Cascade indications in TWT SPs. The TWT SP should be terminated if Cascade Indication has value 0 and there is no allocated Rus for the STA.	2017/1/9 9:42
6044	Jarkko Kneckt	225	1 27.7.3.2	184	1	T	Y	184.01 27.7.3.2	The opportunistic PS seems to suggest that any active mode non-AP STA is added to the opportunistic TWT SP, unless the FILS Discovery or TIM frame at the beginning of the opportunistic TWT SP indicate that the STA will not get service. In page 184L1 there is a contradicting statement.	Please modify the statement in the P184L1. The AP may include AID of the STA in power save mode only if it has established a membership to a broadcast TWT. The active mode STAs may be triggered at any time.	2017/1/9 9:42
6045	Jarkko Kneckt	225	1 27.14.3.2	201	15	T	Y	201.15 27.14.3.2	Please clarify that STAs in power save mode may establish a membership with opportunistic TWT if the power save mode STA desires to wake up at the beginning of the opportunistic TWT SP. Just to set a STA to Doze in opportunistic TWT SP does not need a membership establishment.	Please add a clarification that a non-AP STA should establish a BC TWT membership with opportunistic PS, if the non-AP STA desires to wake up at the beginning of the TWT SP.	2017/1/9 9:42
6046	Jarkko Kneckt	225	1 27.14.3.1	200	62	T	Y	200.62 27.14.3.1	The TIM, FILS Discovery and Beacon frame should contain two TIM elements for two different use: 1. for Opportunistic PS to indicate which STAs may get service 2. To indicate to STAs in power save mode DL Buffered traffic and which HE STAs should be available to receive and respond to a Trigger frame. Two TIM elements improve non-AP STA stand-by power save as well as opportunistic PS is available for the whole TXOP duration.	Please specify two TIM elements to Beacon, FILS Discovery and TIM frames. One TIM element is for opportunistic PS indicating will the AP Trigger the STA and the other TIM element is for stand-by PS indicating buffered DL traffic and whether the AP expects the STA to respond to the Trigger frame. If the AP does not expect the STA to respod to the Trigger, the STA may return immediately to Doze.	2017/1/9 9:42
6047	Jarkko Kneckt	225	1 27.16.3.2	207	22	E	N	207.22 27.16.3.2	The MLME primitives for QTP should be defined in the clause 6.3	Please introduce the QTP MLME primitives in clause 6.3	2017/1/9 9:42
6048	Jarkko Kneckt	225	1 27.16.3.3	208	18	T	N	208.18 27.16.3.3	If an HE AP has associated legacy non-AP STAs and the AP has established quiet period, then is the AP allowed to send data to the legacy STAs, or beacons during the quiet period.	Please clarify.	2017/1/9 9:42

6049	Jarkko Kneckt	225	1 9.4.2.200	73	3	T	N	73.03 9.4.2.200	How STAs that have established TWT Flow ID 1 or 2 transmit UL DATA? The recommendations do not allow UL data transmission.	Please allow UL and DL data frames transmission at the end of the TWT SP. Thus, the first part of the TWT may be used to exchange short signaling packets and the last part could be used for the data transmissions. Transmitting data in the same TWT SP simplifies the TWT handling.	2017/1/9 9:42
6050	Jarkko Kneckt	225	1 27.8.3	189	15	T	Y	189.15 27.8.3	The UL MU Disable field in transmit operation mode suspends the UL MU operations. When the UL MU operations are suspended the STA may only use EDCA to transmit data. In high congestion the TXOP obtaining with EDCA increases contention and adds transmission delays. The STA should be capable to use reverse direction grant to allow the non-AP STA to transmit UL. The use of RDG reduces contention in the channel, shortens the channel access delays and reduces the power consumption of the non-AP STA.	Please add UL MU operation mode to the transmission operation mode where the AP uses reverse direction grant to schedule UL transmission resources to the non-AP STA.	2017/1/9 9:42
6051	Jarkko Kneckt	225	1 9.4.2.200	69	17	T	Y	69.17 9.4.2.200	The Trigger field in the TWT currently controls whether the AP shall send a Trigger to a STA in TWT SP. The TWT should not force AP to send Trigger frames, the Triggering should be taken into use when EDCA is not performing well and AP should have flexibility to control this transition.	Delete the Trigger field in the Request Type field of the TWT element.	2017/1/9 9:42
6052	Jeongki Kim	225	1 27.14.1	199	21	T	Y	199.21 27.14.1	Intra-BSS PPDU Power saving is a micro sleep PS method based on the PPDU duration in order to minimize the STA's power consumption. In DL MU PPDU, if there is no its STA ID in STA list of SIG-B of Intra-PPDU, the STA can enter the Doze state. However, in DL MU PPDU, an A-MPDU for a STA can carry longer padding frames rather than other A-MPDUs. When the padding is very long, it's efficient for the STA to enter the Doze state during padding frames.	Add the operation mentioned in the comment into subclause 27.14.1	2017/1/9 9:42
6053	Jeongki Kim	225	1 27.14.2	200	31	T	Y	200.31 27.14.2	A Trigger frame can carry the trigger information for both scheduled STAs and OFDMA random access STAs. Although the trigger information for OFDMA random access STAs is included in some consecutive Trigger frames(not all) in a TXOP, random access STAs should be awake until receving the Trigger frame including Cascade indication set to 0. A Trigger frame for random access need to carry the information of whether random access RUs will be allocated in the next consecutive TFs in a TXOP or not	As mentioned in comment, add the related operation into subclause 27.14.2 and update the related fields in a Trigger frame	2017/1/9 9:42
6054	Jeongki Kim	225	1 27.9.2	190	15	T	Y	190.15 27.9.2	Currently, Spatial reuse is adopted for OBSS packets. In enterprise network, the SR considering ESS is more useful than considering BSS. As proposed in 947r18, AP should be able to send the BSSs list belonging to an ESS/a Group and in that case SR should be considered in the other BSSs except for the BSSs list sent by the AP	As proposed in 947r18, includes the BSSs list belonging to a ESS in a Beacon and add the related operation in the specs	2017/1/9 9:42

6055	Jeongki Kim	225	1 27.14.1	199	20	T	Y	199.20 27.14.1	BSS Color can be disabled by BSS Color Disabled subfield set to 1. In BSS Color Disabled case, Intra-PPDU PS based on BSS Color is disabled. In subclause 27.14.1, the related text needs to be updated as follows.	Change the related text as follows. -- The PPDU is an HE MU PPDU where the RXVECTOR parameter BSS_COLOR is the BSS color of the BSS with which the STA is associated, the RXVECTOR parameter UL_FLAG is 0, and the RXVECTOR parameter STA_ID_LIST does not include the identifier of the STA or the broadcast identifier(s) intended for the STA and the most recently received HE Operation element from the AP to which it is associated contained a value of 0 in the BSS Color Disabled subfield. -- The PPDU is an HE MU PPDU, HE SU PPDU or HE extended range SU PPDU and one of the following conditions are true: * The RXVECTOR parameter BSS_COLOR is the BSS color of the BSS with which the STA is	2017/1/9 9:42
6056	Jeongki Kim	225	1 27.2.2	151	12	T	Y	151.12 27.2.2	When BSS Color is diabled, the STA should not update its Intra-BSS NAV with the TXOP_DURATION of the received Intra-BSS PPDU. In subclause 27.2.2, the related texts should be updated.	Change the related text in 27.2.2 as follows: -- The PPDU that carried information of the RXVECTOR parameter is identified as intra-BSS according to the rule described in 27.2.1 (Intra-BSS and inter-BSS frame detection) and the most recently received HE Operation element from the AP to which it is associated contained a value of 0 in the BSS Color Disabled subfield	2017/1/9 9:42
6057	Jeongki Kim	225	1 10.3.2.3.7	114	32	T	Y	114.32 10.3.2.3.7	When BSS Color is diabled, EIFS can be invoked if BSS Color is disabled although a valid TXOP_DURARION is present in the received Intra-BSS PPDU because Intra-BSS NAV is not updated by TXOP_DURATION. Therefore, the EIFS related text should be updated.	Change the related text in 10.3.2.3.7 as follows: EIFS shall not be invoked if a valid TXOP_DURATION parameter is present in the RXVECTOR of a received HE PPDU and the most recently received HE Operation element from the AP to which it is associated contained a value of 0 in the BSS Color Disabled subfield	2017/1/9 9:42
6058	Jeongki Kim	225	1 27.2.1	150	16	T	Y	150.16 27.2.1	Group ID and Partial AID as well as BSS Color can be RXVECTOR paramters in VHT PPDUs.	Change the text as following: RXVECTOR parameters (e.g., BSS_COLOR in HE PPDUs or GROUP_ID and PARTIAL_AID in VHT PPDUs).	2017/1/9 9:42

6119	Jian Yu	225	1	301	64	T	Y	301.64	Add 4X HE-LTF and 0.8us GI as an optional mode	As in comment	2017/1/9 9:42
6120	Jian Yu	225	1	317	14	T	Y	317.14	B7-B15 can be used to indicate the length of a S-MPDU, so that the overhead caused by the delimtier can be 0.	As in comment and will bring a proposal	2017/1/9 9:42

6121	Jian Yu	225	1	282	51	T	Y	282.51	"L = 20" should be "L = 41 for the HE-SIG-B User Block field that contains information for two STAs, L=20 when the last User Block field contains information for one STA."	Modify as in comment	2017/1/9 9:42
6122	Jianhan Liu	225	1 Annex B		34	E	N	Annex B	In Annnex B, "HEW" should be chaned to "HE"	Change "HEW" to "HE"	2017/1/9 9:42
6123	Jianhan Liu	225	1 28.3.10.7.2	275	35	T	N	275.35 28.3.10.7.2	In "Table 28-16--HE-SIG-A field of an HE SU PPDU and HE extended range SU PPDU", B15 is defined as Doppler bit to indicate if Dopploer mode is applied. However, Doppler mode is not clearly defined.	Define the "Doppler Mode" in detail	2017/1/9 9:42
6124	Jianhan Liu	225	1 9.3.1.23	43	43	T	N	43.43 9.3.1.23	In "Table 9-25c--GI And LTF Type subfield encoding" includes option of 2x LTF+0.8us GI. Since the trigger-based PPDU has timing synchronizaion requirement of +/- 0.4 us, 0.8us GI is too short.	Remove the option 2x LTF + 0.8 ++s GI	2017/1/9 9:42
6125	Jianhan Liu	225	1 28.3.17.6.4	349	7	T	N	349.07 28.3.17.6.4	add the CCA rule for preamble puncturing	add the CCA rule for preamble puncturing	2017/1/9 9:42
6126	Jianhan Liu	225	1 28.2.2	221	18	E	N	221.18 28.2.2	change "channel bonding" to "preamble puncturing"	change "channel bonding" to "preamble puncturing"	2017/1/9 9:42
6127	Jing Ma	225	1	86	18	G	Y	86.18	Clarify SRP-based SR operation described here which is supposed to indicated by this subfield. SRP-based SR operation description is not clear in the draft.	as the comment	2017/1/9 9:42
6128	Jing Ma	225	1	99	12	G	N	99.12	Define the exact L3 FRAG ADDBA Request frame action field format	as the comment	2017/1/9 9:42
6129	Jing Ma	225	1	99	16	G	N	99.16	Define the exact L3 FRAG ADDBA Response frame action field format	as the comment	2017/1/9 9:42
6130	Jing Ma	225	1	99	18	G	N	99.18	Define the exact L3 FRAG ADDBA Response frame action field format	as the comment	2017/1/9 9:42
6131	Jing Ma	225	1	153	47	E	N	153.47	Clarify the definition of S-MPDU in the draft to avoid confusion. There is another description "sub frames of A-MPDU" in the draft. Does S-MPDU mean sub frame of A-MPDU?	Make the descriptions consistent or clarify the definition and describe the difference	2017/1/9 9:42
6132	Jing Ma	225	1	151	56	G	N	151.56	Clarify the benefit of updating two NAVs more clearly. The description about the need to run two NAVs in the draft is not clear enough. What if update one NAV considering OBSS-based SR operation (described in 27.9) which is simpler than running two NAVs.	as the comment	2017/1/9 9:42
6133	Jing Ma	225	1	154	26	E	N	154.26	Suggest to change "10.13.8 (Transport of S-MPDU)" which is not present in baseline (802.11-2016) to the "10.13.8 (Transport of VHT single MPDU)" which is present in baseline (802.11-2016)	as the comment	2017/1/9 9:42
6134	Jing Ma	225	1	155	53	E	N	155.53	Suggest to change the title of subclause 27.3.4.2 from "27.3.4.2 Level 1 dynamic defragmentation" to "27.3.4.2 Level 1 dynamic fragmentation"	as the comment	2017/1/9 9:42
6135	Jing Ma	225	1	157	49	G	N	157.49	A BA agreement supported Multi-STA BlockAck operation should be specified, because in baseline, the Block Ack session is established between a originator and a recipient by exchanging ADDBA Request frame, ADDBA Response, ADDBA DEL frame. A BA agreement session established among a originator and multiple recipients should be specified.	as the comment	2017/1/9 9:42
6136	Jing Ma	225	1	163	53	E	N	163.53	Suggest to change the title of subclause 27.5.2 from "UL MU operation" to 'HE UL MU operation' for keeping it consistent with 27.5. 1 HE DL MU operation	as the comment	2017/1/9 9:42
6137	Jing Ma	225	1	164	45	E	N	164.45	Suggest to remove a redundant period in the sentence.	as the comment	2017/1/9 9:42
6138	Jing Ma	225	1	168	45	E	N	168.45	Suggest to remove a redundant 'shall be set to' in the sentence.	as the comment	2017/1/9 9:42
6139	Jing Ma	225	1	174	17	T	Y	174.17	Clarify whether the short & long retry counter should be updated or not for every retransmission in random access operation	as the comment	2017/1/9 9:42

6140	Jing Ma	225	1	194	35	E	N	194.35	Suggest to revise the typo 'HE ER SU PPDU' to 'HE EX SU PPDU'	as the comment	2017/1/9 9:42
6141	Jing Ma	225	1	207	21	E	N	207.21	According to the description written below Figure 27-8, the 'Request AP MAC' and 'Requester AP' should be 'Responder AP MAC' and 'Responder AP SME' respectively in Figure 27-8	as the comment	2017/1/9 9:42
6142	Jing Ma	225	1	274	6	G	Y	274.06	Clarify SRP-based spatial reuse operation which is supposed to be disallowed by Spatial Reuse bits here. SRP-based SR operation description is not clear in the draft.	as the comment	2017/1/9 9:42
6143	Jing Ma	225	1		40	G	Y		Clarify SRP-based spatial reuse operation. There are some indication bits in frames which are defined to set or disallow SRP-based spatial reuse operation, but SRP-based SR operation description is not clear in the draft.	as the comment	2017/1/9 9:42
6144	Jing Ma	225	1	174	24	G	N	174.24	Clarify more details about NDP feedback report procedure such as which kind of trigger frame and how to solicit NDP feedback report.	as the comment	2017/1/9 9:42
6145	Jing Ma	225	1	175	40	G	N	175.40	Clarify what the last PPDU of MU cascading sequence means. Should it be DL HE PPDU or UL HE trigger-based PPDU, or either of them?	as the comment	2017/1/9 9:42
6146	Jing Ma	225	1	175	56	T	N	175.56	Clarify the contents possibly including in the HE trigger-based PPDU in the MU cascading sequence for avoiding confusion.	as the comment	2017/1/9 9:42
6147	Jing Ma	225	1	175	5	T	N	175.05	Clarify the operation in case of that HE MU PPDU and HE trigger-based PPDU exchange failure happens during the MU cascading sequence transmission. E.g. in Figure 27-2, if the first exchange of HE MU PPDU of AP and HE trigger-based PPDUs from STA1 and STA2, should AP invoke backoff procedure for the next try?	as the comment	2017/1/9 9:42
6148	Jing Ma	225	1	175	62	T	N	175.62	Recovery procedure should be specified in MU cascading sequence operation	as the comment	2017/1/9 9:42
6149	Jing Ma	225	1	190	12	E	N	190.12	Add a definition of SR PPDU for avoiding confusion.	as the comment	2017/1/9 9:42
6150	Jing Ma	225	1	190	50	G	N	190.50	the SR backoff procedure for SR delayed case (described form line 50 ~57) is covered by SR backoff procedure specified from line 59 ~ 61. Because the PHYCCARESET.request primitive is already specified to be issued at the end of the PPDU in case of SR_delayed (form line 36 ~ 37), the STA may resume its backoff procedure when the STA'S MAC sublayer issues the PHYCCARESET.request primitive at the end of PPDU, following the specification of SR backoff procedure described from line 59 ~ 61. Suggest to merge SR delayed case backoff procedure and SR backoff procedure together as "If an HE STA's MAC sublayer issues a PHY-CCARESET.request primitive and not update its NAV timer as allowed above, the HE STA may resume its backoff procedure when the medium condition is IDLE as defined in 10.22.2.2 (EDCA	as the comment	2017/1/9 9:42
6151	Jinjing Jiang	225	1 9.3.1.23.3	50	13	T	Y	50.13 9.3.1.23.3	Can MU-BAR frame solicit a ACK frame?	Please clarify	2017/1/9 9:42
6152	Jinjing Jiang	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	an HE MU PPDU could also be Uplink transmission from a STA of the same BSS to the associated AP	change to downlink HE MU PPDU	2017/1/9 9:42
6153	Jinjing Jiang	225	1 27.9.2.1	190	50	T	Y	190.50 27.9.2.1	the sentence is redudant or not complete	delete it or clarify	2017/1/9 9:42
6154	Jinjing Jiang	225	1 27.5.2.6.1	172	35	T	Y	172.35 27.5.2.6.1	It seems only basic trigger and BSRP trigger could initiate random acess OFDMA, how about other variants, such as BQRP?	Please clarify	2017/1/9 9:42
6155	Jinjing Jiang	225	1 27.5.3	175	35	T	Y	175.35 27.5.3	Multi-STA Block Ack frame is a variant of BloackAck frame.	change to "at most one Ack or BlockAck frame...."	2017/1/9 9:42

6156	Jinjing Jiang	225	1 27.14.2	199	62	E	Y	199.62 27.14.2	The figure is not readable; it seems in the draft TF is not universally used for the acronym of Trigger Frame	redraw the figure; remove "(TF)"	2017/1/9 9:42
6157	Jinjing Jiang	225	1 27.8.2	189	8	T	Y	189.08 27.8.2	The sentence is broken. Meanwhile, it seems not very necessary to have this paragraph.	Rewrite the sentence or delete it	2017/1/9 9:42
6158	Jinjing Jiang	225	1 27.8.3	189	25	T	Y	189.25 27.8.3	The AP as the TOM initiator should be singled out rather than meshed in the descriptions for STAs	Put line 25 at the beginning of this section and clearly mention whether AP can have TOM indication	2017/1/9 9:42
6159	Jinjing Jiang	225	1 27.2.3	152	19	T	Y	152.19 27.2.3	The HEMUEDCATimer[AC] should be reset/restarted upon each triggered event including the AC	As in the comments	2017/1/9 9:42
6160	Jinjing Jiang	225	1 27.2.3	152	18	T	Y	152.18 27.2.3	There should be recommended guideline for HEMUEDCATimer setting to ensure channel access fairness between SU and MU	Please provide the details	2017/1/9 9:42
6161	Jinjing Jiang	225	1 27.5.2.6.2	173	36	E	Y	173.36 27.5.2.6.2	"AID value 0" should be changed into "AID 0"	As in the comments	2017/1/9 9:42
6162	Jinjing Jiang	225	1 27.5.1.1	162	49	E	Y	162.49 27.5.1.1	"The transmission of each RU" should be "The transmission on each RU"	As in the comments	2017/1/9 9:42
6163	Jinjing Jiang	225	1 27.5.1.3	163	19	T	Y	163.19 27.5.1.3	It is confusing to see "HE bandwidth query report opertion for DL MU" belongs to the DL MU operation. It should be similar to buffer status report operation, residing in the UL MU operation	As in the comments; please clarify	2017/1/9 9:42
6164	Jinjing Jiang	225	1 27.5.1.3	163	35	T	Y	163.35 27.5.1.3	The paragraph from line 35 to 50 should be rewritten to reflect that if an HE AP solicits the BQR report, the STA shall include in the HE trigger-baseed PPUD blabla...Current texts seems mandating the BAR A-Control fields in HE trigger-based PPDU even not being queried by the AP	As in the commnets	2017/1/9 9:42
6165	Jinjing Jiang	225	1 27.5.1.2	163	3	T	Y	163.03 27.5.1.2	Here HE MU PPDU payload seems only describing the DL version, how about the UL one	Add "DL" in front of the subsection title	2017/1/9 9:42
6166	Jinjing Jiang	225	1 27.5.2.2.1	165	1	T	Y	165.01 27.5.2.2.1	line 1-6 is a duplicate of line 18-19	As in the comments	2017/1/9 9:42

6220 John Coffey	225	1 3.2	6	41	E	Y	6.41 3.2	"An high efficiency STA"?	Change "an" to "a".	2017/1/9 9:42
6221 John Coffey	225	1 3.2	6	44	E	Y	6.44 3.2	Why is the TA "represented by" the address defined in the text that follows. It *is* the address defined in the text that follows.	Change "It is represented by" to "The TA is".	2017/1/9 9:42
6222 John Coffey	225	1 3.2	6	47	E	Y	6.47 3.2	The "but with" text is too informal and colloquial for a Definitions section.	Change "by the IEEE ... set to 1" to "equal to the IEEE medium access control (MAC) individual address of the transmitting VHT STA in all bits except for the Individual/Group bit, which is set to 1."	2017/1/9 9:42
6223 John Coffey	225	1 3.2	6	50	T	Y	6.50 3.2	The definition of an HE dual beacon starts with an action: "A BSS transmits beacons in two PHY modes ...". This is very unclear. The BSS shall transmit beacons in two PHY modes? Or the BSS may transmit beacons in two PHY modes? And either way, what is this doing in a definitions section?	Rewrite the definition so that it defines the term purportedly being defined. In particular, if or when a BSS uses HE dual beacons, are both beacons "HE dual beacons", or is only the one transmitted in HE_EXT_SU PY format a dual beacon? Or is it the case that neither is, and instead the BSS is in "HE dual beacon mode"? And isn't it normally the case that beacons are transmitted by an "AP", not a BSS? Clarify.	2017/1/9 9:42
6224 John Coffey	225	1 3.2	6	50	E	Y	6.50 3.2	Case disgareement: "The beacons ... enables".	Change "enables" to "enable".	2017/1/9 9:42
6225 John Coffey	225	1 3.2	6	52	E	Y	6.52 3.2	What is meant by "in the whole BSS coverage"? It seems that something like "the whole area covered by the BSS" must be intended. But this raises more questions than it answers. The BSS coverage is normally defined by the area covered by the normal beacon: if a STA can't hear beacons, it isn't in the BSS in any useful sense. So the dual beacons, and the entire "extended range" functionality *expands* the BSS coverage. Is this the intention? If so, it would be better to say so, rather than claiming a different benefit.	Change "the whole BSS coverage" to "the entire coverage area of the BSS, as newly expanded by the HE dual beacon modes".	2017/1/9 9:42
6226 John Coffey	225	1 3.2	6	52	E	Y	6.52 3.2	The sentence "The beacons transmitted ... whole BSS coverage" describes a purported benefit of the feature being defined. Why is this kind of advocacy included in a definitions section? The section should stick to definitions and stay away from advertising and boosterism.	Delete the sentence.	2017/1/9 9:42
6227 John Coffey	225	1 3.2	6	50	E	Y	6.50 3.2	"High Efficient"?	Change to High Efficiency (or "Highly Efficient" if you like).	2017/1/9 9:42
6228 John Coffey	225	1 3.2	6	50	T	Y	6.50 3.2	The entire HE dual beacon mode purportedly enables increased BSS coverage. In dense deployments this will reduce spatial reuse, and thus will run counter to the main aims of the project. It serves to clutter up an already bloated draft amendment.	Delete the definition of HE dual beacon and all references to it in the draft.	2017/1/9 9:42
6229 John Coffey	225	1 4	9	20	E	Y	9.20 4	"... support operation in 20 MHz channel bandwidth only" is peculiar. The impression is given that 40 MHz and wider channels may not be used. Why is the "only" needed here?	Delete "only".	2017/1/9 9:42
6230 John Coffey	225	1 4	9	26	E	Y	9.26 4	"... support operation in 20 MHz channel bandwidth only" is peculiar. The impression is given that 40 MHz channels may not be used. Why is the "only" needed here?	Delete "only".	2017/1/9 9:42
6231 John Coffey	225	1 4	9	51	E	Y	9.51 4	Inconsistent style: other elements of the list no not end with a full stop.	Delete the full stop.	2017/1/9 9:42
6232 John Coffey	225	1 4	9	65	T	Y	9.65 4	"The Trigger frame schedule may be set" is unclear in multiple ways. Why the definite article? Is there only one possible schedule? The text also suggests that Trigger frames are usually scheduled (or always scheduled?).	Change to "Trigger frames may be scheduled ...".	2017/1/9 9:42

6233	John Coffey	225	1 4	9	51	T	Y	9.51 4	Is this "basic trigger" or "Basic Trigger"? The usage is inconsistent even on this page. In a list of what is mandatory it should be clear.	Change to "Basic Trigger".	2017/1/9 9:42
6234	John Coffey	225	1 4	9	65	T	Y	9.65 4	The sentence refers to "the" non-AP STA. This is very confusing. Which one?	Rewrite the sentence so that it makes sense.	2017/1/9 9:42
6235	John Coffey	225	1 4	9	64	T	Y	9.64 4	"Scheduled Trigger frames are sent" is unclear in several ways. Is this intended to convey that Scheduled Trigger frames shall be transmitted by APs, or that they may be transmitted?	Rewrite the sentence so that it is clear whether the behavior described is optional or mandatory.	2017/1/9 9:42
6236	John Coffey	225	1 4	9	64	E	Y	9.64 4	Generally throughout the draft frames are "transmitted". Here and in a handful of other cases they are "sent". It would be better to choose one term and stick to it.	Change "sent" to "transmitted".	2017/1/9 9:42

6258 John Coffey	225	1 9.2.4.6.4.2	24	18	E	Y	24.18 9.2.4.6.4.2	Missing article: "all AP's antennas".	Change to "all the AP's antennas".	2017/1/9 9:42
6259 John Coffey	225	1 9.2.4.6.4.2	24	21	E	Y	24.21 9.2.4.6.4.2	Missing punctuation, inconsistent usage: "except for the value 31 that indicates" doesn't look quite right, and it's also inconsistent with the usage in the previous paragraph.	Change to "except for the value 31, which indicates".	2017/1/9 9:42
6260 John Coffey	225	1 9.2.4.6.4.3	24	63	E	Y	24.63 9.2.4.6.4.3	Confusing text: why "the" non-AP STA? Which one? Later in the paragraph we have "An AP".	Change "the" to "a".	2017/1/9 9:42
6261 John Coffey	225	1 9.2.4.6.4.4	25	9	E	Y	25.09 9.2.4.6.4.4	Missing or incorrect cross-reference: section 9.31.4 is referenced but no such section exists in the draft.	Correct it.	2017/1/9 9:42
6262 John Coffey	225	1 9.2.4.6.4.4	25	25	E	Y	25.25 9.2.4.6.4.4	The phrase "recommended number of spatial streams" is cryptic. More information should be provided about which party is recommending what to which other party.	Provide additional, clarifying information.	2017/1/9 9:42
6263 John Coffey	225	1 9.2.4.6.4.7	27	47	E	Y	27.47 9.2.4.6.4.7	"HE DL HE MU" has a superfluous "HE.	Delete the second instance of "HE".	2017/1/9 9:42
6264 John Coffey	225	1 9.2.4.6.4.7	27	64	E	Y	27.64 9.2.4.6.4.7	Inconsistent terminology: in "DL HE MU transmission", the STA type is in the middle, whereas in practically every oher instance the type is at the beginning.	Change "DL HE MU" to "HE DL MU".	2017/1/9 9:42
6265 John Coffey	225	1 9.2.4.6.4.7	28	14	E	Y	28.14 9.2.4.6.4.7	Inconsistent usage: in this entry, the two cases are separated by ba comma, whereas in all others they're separated by an "and".	Change "," to "and".	2017/1/9 9:42
6266 John Coffey	225	1 9.2.5.2	31	19	E	Y	31.19 9.2.5.2	Inconsistent usage: here we have "a MU-BAR", whereas in most other cases we have "an MU-BAR". It would be better to choose one form and to stick to it.	Change "a" to "an".	2017/1/9 9:42
6267 John Coffey	225	1 9.2.5.2	31	33	E	Y	31.33 9.2.5.2	"... time required to transmit multiple BlockAck frames" is inexact.	Add "associated" or "applicable" somewhere.	2017/1/9 9:42
6268 John Coffey	225	1 9.2.5.2	32	4	E	Y	32.04 9.2.5.2	Repeated text: "time already used time".	Delete one instance of "time".	2017/1/9 9:42
6269 John Coffey	225	1 9.2.5.7	32	44	E	Y	32.44 9.2.5.7	Missing article: "in HE trigger-based PPDU".	Change to "in an HE trigger-based PPDU".	2017/1/9 9:42
6270 John Coffey	225	1 9.2.5.7	32	44	E	Y	32.44 9.2.5.7	"... rule of setting ..."? This is the only instance of "rule of" in the entire draft, and it seems odd. "Rule of law", "rule *for* setting".	Change to "rule for setting".	2017/1/9 9:42
6271 John Coffey	225	1 9.3.1.5	33	19	E	Y	33.19 9.3.1.5	Inconsistent usage: throughout the draft we have "an" HE STA, but here we have "a" HE STA.	Change "a" to "an".	2017/1/9 9:42

6272 John Coffey	225	1 9.3.1.8.1	33	45	T	Y	33.45 9.3.1.8.1	Inconsistent usage: here we have "The TA field value is". In many (most?) other places in the draft we have "The TA field is". What distinction is intended between these two forms? If no distinction is intended, the same form should be used.	Delete "value".	2017/1/9 9:42
6273 John Coffey	225	1 9.3.1.8.1	33	49	T	Y	33.49 9.3.1.8.1	Inconsistent usage: here we have "The TA field value is". In many (most?) other places in the draft we have "The TA field is". What distinction is intended between these two forms? If no distinction is intended, the same form should be used.	Delete "value".	2017/1/9 9:42
6274 John Coffey	225	1 9.3.1.9.1	34	22	E	Y	34.22 9.3.1.9.1	"The RA field of the BlockAck frame that is not a Multi-STA BlockAck variant"?	Change "the BlockAck frame" to "a BlockAck frame".	2017/1/9 9:42
6275 John Coffey	225	1 9.3.1.9.1	34	38	T	Y	34.38 9.3.1.9.1	Inconsistent usage: here we have "The TA field value is". In many (most?) other places in the draft we have "The TA field is". What distinction is intended between these two forms? If no distinction is intended, the same form should be used.	Delete "value".	2017/1/9 9:42
6276 John Coffey	225	1 9.3.1.9.1	34	51	E	Y	34.51 9.3.1.9.1	"... does not ... and ..."?	Change the last "and" to "or".	2017/1/9 9:42
6277 John Coffey	225	1 9.3.1.9.1	35	47	E	Y	35.47 9.3.1.9.1	Inconsistent usage: "in the Table". This construction appears many times in the draft, but nevertheless it doesn't even have consistency as an argument in its favor, since "in Table x.y" also appears many times.	Change "in the Table" to "in Table".	2017/1/9 9:42
6278 John Coffey	225	1 9.3.1.9.7	37	24	E	Y	37.24 9.3.1.9.7	Superfluous comma.	Delete it.	2017/1/9 9:42
6279 John Coffey	225	1 9.3.1.9.7	38	36	E	Y	38.36 9.3.1.9.7	Incorrect rendering of defined term: "VHT Single MPDU". The baseline defines "VHT single MPDU".	Change "VHT Single MPDU" to "VHT single MPDU".	2017/1/9 9:42
6280 John Coffey	225	1 9.3.1.9.7	39	39	E	Y	39.39 9.3.1.9.7	Inconsistent usage: "in the Table". This construction appears many times in the draft, but nevertheless it doesn't even have consistency as an argument in its favor, since "in Table x.y" also appears many times.	Change "in the Table" to "in Table".	2017/1/9 9:42
6281 John Coffey	225	1 9.3.1.9.7	39	52	E	Y	39.52 9.3.1.9.7	Inconsistent usage: "in the Table". This construction appears many times in the draft, but nevertheless it doesn't even have consistency as an argument in its favor, since "in Table x.y" also appears many times.	Change "in the Table" to "in Table".	2017/1/9 9:42
6282 John Coffey	225	1 9.3.1.20	40	24	E	Y	40.24 9.3.1.20	Inconsistent usage: here we have the STA Info "subfield", whereas everywhere else in the draft it's the STA Info "field". If the same thing is intended, the same term should be used.	Change "subfield" to "field". (Or change all instances of "STA Info field" to "STA Info subfield" throughout the draft.)	2017/1/9 9:42
6283 John Coffey	225	1 9.3.1.20	41	1	E	Y	41.01 9.3.1.20	Missing space: "inTable".	Change to "in Table".	2017/1/9 9:42
6284 John Coffey	225	1 9.3.1.20	41	2	E	Y	41.02 9.3.1.20	Missing full stop.	Add full stop.	2017/1/9 9:42
6285 John Coffey	225	1 9.3.1.20	41	28	E	Y	41.28 9.3.1.20	" ... it's ..." Tut, tut.	Fix.	2017/1/9 9:42
6286 John Coffey	225	1 9.3.1.20	41	29	E	Y	41.29 9.3.1.20	Inconsistent usage: here we have the "HE STA info" field or subfield or whatver, whereas in the rest of the draft we have simply "STA Info" field or subfield. If the same item is being referenced, the same term should be used.	Delete "HE".	2017/1/9 9:42
6287 John Coffey	225	1 9.3.1.20	41	29	E	Y	41.29 9.3.1.20	Missing noun: HE STA Info what?	Chage to "HE STA Info field".	2017/1/9 9:42
6288 John Coffey	225	1 9.3.1.23	41	59	E	Y	41.59 9.3.1.23	Missing space: "STA.If"	Add space.	2017/1/9 9:42
6289 John Coffey	225	1 9.3.1.23	41	61	E	Y	41.61 9.3.1.23	Missing space: "address.If".	Add space.	2017/1/9 9:42
6290 John Coffey	225	1 9.3.1.23	41	65	T	Y	41.65 9.3.1.23	Inconsistent usage: here we have "The TA field value is". In many (most?) other places in the draft we have "The TA field is". What distinction is intended between these two forms? If no distinction is intended, the same form should be used.	Delete "value".	2017/1/9 9:42
6291 John Coffey	225	1 9.3.1.23	44	62	E	Y	44.62 9.3.1.23	Inconsistent usage: "For HE trigger-based PPDU".	Change to "For an HE trigger-based PPDU".	2017/1/9 9:42
6292 John Coffey	225	1 9.3.1.23	45	7	E	Y	45.07 9.3.1.23	Inconsistent usage: "When operating 40 MHz". Sundry variations appear throughout the draft. It would be better to select one and stick to it.	Change to "For 40 MHz channel width".	2017/1/9 9:42
6293 John Coffey	225	1 9.3.1.23	45	7	E	Y	45.07 9.3.1.23	"in 2.4GHz": missing article and missing space (inconsistent usage).	Change to "in the 2.4 GHz".	2017/1/9 9:42

6294 John Coffey	225	1 9.3.1.23	45	7	E	Y	45.07 9.3.1.23	Missing article: "to same values". At a stretch this construction might be acceptable if consistently followed, but the very next sentence has an article included.	Change to "to the same values".	2017/1/9 9:42
6295 John Coffey	225	1 9.3.1.23	45	8	E	Y	45.08 9.3.1.23	Missing article: "SR field 3 is set to same value". Inconsistent usage within the same sentence.	Change to "SR field is set to the same value".	2017/1/9 9:42
6296 John Coffey	225	1 9.3.1.23	45	11	E	Y	45.11 9.3.1.23	Missing capitalization. "Doppler" is a proper noun.	Change "doppler" to "Doppler".	2017/1/9 9:42
6297 John Coffey	225	1 9.3.1.23	45	16	E	Y	45.16 9.3.1.23	Missing term: "in the HE-SIG-A2 of the"	Change to "in the HE-SIG-A2 subfield of the".	2017/1/9 9:42
6298 John Coffey	225	1 9.3.1.23	45	14	E	Y	45.14 9.3.1.23	Missing article and missing term: "in HE-SIG-A2 of the".	Change to "in the HE-SIG-A2 subfield of the".	2017/1/9 9:42
6299 John Coffey	225	1 9.3.1.23	45	17	E	Y	45.17 9.3.1.23	Missing term: "in the HE-SIG-A2 of the"	Change to "in the HE-SIG-A2 subfield of the".	2017/1/9 9:42
6300 John Coffey	225	1 9.3.1.23	45	37	E	Y	45.37 9.3.1.23	Missing space" access.User".	Add space.	2017/1/9 9:42
6301 John Coffey	225	1 9.3.1.23	45	38	E	Y	45.38 9.3.1.23	Peculiar usage: "not equals to 0".	Change to "not equal to 0".	2017/1/9 9:42
6302 John Coffey	225	1 9.3.1.23	46	27	E	Y	46.27 9.3.1.23	The text "for a 20 MHz, 40 MHz, and 80 MHz PPDU" seems odd (case agreement, for one thing).	Change to "for 20 MHz, 40 MHz, and 80 MHz PPDUs".	2017/1/9 9:42
6303 John Coffey	225	1 9.3.1.23	46	33	E	Y	46.33 9.3.1.23	Confusing language: "in an increeasing order". Why "an"? Is there more than one order?	Delete "an".	2017/1/9 9:42
6304 John Coffey	225	1 9.3.1.23	46	42	E	Y	46.42 9.3.1.23	Confusing language: "in an increeasing order". Why "an"? Is there more than one order?	Delete "an".	2017/1/9 9:42
6305 John Coffey	225	1 9.3.1.23	46	52	E	Y	46.52 9.3.1.23	Confusing language: "in an increeasing order". Why "an"? Is there more than one order?	Delete "an".	2017/1/9 9:42
6306 John Coffey	225	1 9.3.1.23	46	47	E	Y	46.47 9.3.1.23	Missing details: the sentence beginning "Similar ordering" invites the reader to fill in details. Why not provide the details directly?	Delete the sentence beginning with "Similar ordering" and replace it with text providing the relevant details.	2017/1/9 9:42
6307 John Coffey	225	1 9.3.1.23	46	54	E	Y	46.54 9.3.1.23	Missing details: the sentence beginning "Similar ordering" invites the reader to fill in details. Why not provide the details directly?	Delete the sentence beginning with "Similar ordering" and replace it with text providing the relevant details.	2017/1/9 9:42
6308 John Coffey	225	1 9.3.1.23	46	59	E	Y	46.59 9.3.1.23	Inexact (and inconsistent) usage: inappropriate use of imperative.	Change sentence to 'It is set to 0 for BCC and is set to 1 for LDPC."	2017/1/9 9:42
6309 John Coffey	225	1 9.3.1.23	47	3	T	Y	47.03 9.3.1.23	"A value of 1 indicates that the HE trigger-based PPDU shall use DCM as defined in 28.3.11.15". But DCM (as defined in 28.3.11.15) is an optional mode. Is the idea that the bit can only be set to 1 if the STA has indicated support for DCM? What is the expected behavior if the STA has not indicated support for DCM but this bit is set to 1 anyway?	Add text restricting the cases in which the bit can be set to 1, and providing error recovery if the bit is set incorrectly.	2017/1/9 9:42
6310 John Coffey	225	1 9.3.1.23	47	5	E	Y	47.05 9.3.1.23	Ungrammatical language: "A value of 0 indicates that DCM is not be used."	Change to "... is not to be used". Or to "is not being used". Or "... shall not be used" (to mirror the language in the preceding sentence, to which it corresponds).	2017/1/9 9:42
6311 John Coffey	225	1 9.3.1.9.7	38	39	E	Y	38.39 9.3.1.9.7	Throughout the draft, usage oscillates between "is as defined in Table/Figure" and "is defined in Table/Figure". The latter seems to have the majority. It would be better to choose one variant and to stick to it.	Delete "as".	2017/1/9 9:42
6312 John Coffey	225	1 9.3.1.9.7	38	19	E	Y	38.19 9.3.1.9.7	Throughout the draft, usage oscillates between "is as defined in Table/Figure" and "is defined in Table/Figure". The latter seems to have the majority. It would be better to choose one variant and to stick to it.	Delete "as".	2017/1/9 9:42
6313 John Coffey	225	1 9.3.1.9.7	39	38	E	Y	39.38 9.3.1.9.7	Throughout the draft, usage oscillates between "is as defined in Table/Figure" and "is defined in Table/Figure". The latter seems to have the majority. It would be better to choose one variant and to stick to it.	Delete "as".	2017/1/9 9:42

6335	John Coffey	225	1 9.4.1.63	58	14	E	Y	58.14 9.4.1.63	Clumsy language: "explanation on". Whether it is incorrect, or simply a rare alternative to "explanation of", it should be changed.	Change to "explanation of".	2017/1/9 9:42
6336	John Coffey	225	1 9.4.1.63	58	17	E	Y	58.17 9.4.1.63	Strange run-on sentence: "... Beamforming Feedback Matrix subfield), Nc is ...". Why is there a comma here?	Change comma to full stop.	2017/1/9 9:42
6337	John Coffey	225	1 9.4.1.63	58	16	E	Y	58.16 9.4.1.63	Puzzling and ambiguous construction: in the sentence beginning "The explanation on ...", are we to understand that 19.3.12.3.6 is in Table 9-67?	Clarify in one way or another. For example, it might be worth splitting this sentence up into several shorter ones.	2017/1/9 9:42
6338	John Coffey	225	1 9.4.1.63	58	18	E	Y	58.18 9.4.1.63	Missing conjunction: ", Nr is".	Change to ", and Nr is".	2017/1/9 9:42
6339	John Coffey	225	1 9.4.1.63	58	24	T	Y	58.24 9.4.1.63	In the context of a draft specification, what exactly is meant by the wording "The beamforming matrix V is formed by the beamformee as follows"? Is this intended as a mandatory requirement, or is it a recommendation? At present it's worded simply as a statement of fact. If the beamformee carries this step out incorrectly, would the device be non-compliant with the specification?	Rewrite to clarify whether the actions described are mandatory or optional.	2017/1/9 9:42
6340	John Coffey	225	1 9.4.1.63	58	24	E	Y	58.24 9.4.1.63	Detailed accounts of receiver behavior are not generally included in other places of the draft or in the base standard. Since we're defining a standardized air interface, receiver details are normally not included.	Reowrd to eliminate the receiver point of view. This can be done by changing the description to what the transmitter is conveying and/or a description of what a receiver may do.	2017/1/9 9:42
6341	John Coffey	225	1 9.4.1.63	58	26	T	Y	58.26 9.4.1.63	Imprecise language: "estimates the ... channel, and based on that channel ...". As worded, the basis appears to be the channel, not the estimated channel. If the esimated channel is meant, say so.	Change "based on that channel" to "based on that estimated channel".	2017/1/9 9:42
6342	John Coffey	225	1 9.4.1.63	63	23	E	Y	63.23 9.4.1.63	Unusual usage: "with the column l".	Change to "with column l".	2017/1/9 9:42
6343	John Coffey	225	1 9.4.1.64	64	6	E	Y	64.06 9.4.1.64	Confusing wording: "for each of the space time stream (1 to Nc)".	Change to "for each space time stream" or "for each of the space time streams".	2017/1/9 9:42
6344	John Coffey	225	1 9.4.1.64	64	9	E	Y	64.09 9.4.1.64	In the sentence "Starting from the lowest frequency subcarrier and continuing to the highest frequency subcarrer.", where is the verb?	Add a verb or otherwise rephrase.	2017/1/9 9:42
6345	John Coffey	225	1 9.4.1.64	64	11	E	Y	64.11 9.4.1.64	Missing article: "for delta SNR subfield".	Add "the" after "for".	2017/1/9 9:42
6346	John Coffey	225	1 9.4.1.64	64	11	E	Y	64.11 9.4.1.64	Is this the "delta SNR subfield" or the "Delta SNR subfield"? As a named subfield it should be capitalized.	Change "delta SNR" to "Delta SNR".	2017/1/9 9:42
6347	John Coffey	225	1 9.4.2.169	68	56	T	Y	68.56 9.4.2.169	Confusing variation in terms: here we have "HE fragmentation Operation subfield", whereas elsewhere we have "HE Fragnentation Operation subfield". Are these variants all describing the same thing? If so, the same term must be used.	Change "HE fragmentation Operation subfield" to "HE Fragmentation Operation subfield".	2017/1/9 9:42
6348	John Coffey	225	1 9.4.2.169	68	57	T	Y	68.57 9.4.2.169	Confusing variation in terms: here we have "HE fragmentation operation subfield", whereas elsewhere we have "HE Fragnentation Operation subfield" (and earlier in the same paragraph we have "HE fragmentation Operation subfield). Are these variants all describing the same thing? If so, the same term must be used.	Change "HE fragmentation operation subfield" to "HE Fragmentation Operation subfield".	2017/1/9 9:42
6349	John Coffey	225	1 9.4.2.169	69	59	E	Y	69.59 9.4.2.169	Superfluous comma: ", otherwise".	Delete comma.	2017/1/9 9:42
6350	John Coffey	225	1 9.4.2.200	71	4	E	Y	71.04 9.4.2.200	Unclear wording: "... contains 0s as the TWT ..." looks at first sight as if the TWT whatever contains 0s. In context it seems that the "as" means "because" here. The stray clause tacked on at the end by a comma doesn't help.	Change "as" to "because".	2017/1/9 9:42
6351	John Coffey	225	1 9.4.2.200	71	4	E	Y	71.04 9.4.2.200	The sentence in the fifth column has independent clasues linked by a comma without a coordinating conjunction. This is ungrammatical usage and it hurts clarity.	Change the comma to a semicolon.	2017/1/9 9:42
6352	John Coffey	225	1 9.4.2.200	73	9	T	Y	73.09 9.4.2.200	Garbled text: "Feedback can be contained is the QoS Control field".	Change "is" to "in".	2017/1/9 9:42
6353	John Coffey	225	1 9.4.2.200	73	34	T	Y	73.34 9.4.2.200	Garbled text: "Feedback can be contained is the QoS Control field".	Change "is" to "in".	2017/1/9 9:42

6354 John Coffey	225	1 9.4.2.200	74	4	E	Y	74.04 9.4.2.200	Anthropomorphism: "the TWT requesting STA expects". The STA is an object and does not "expect" anything.	Reword to remove the anthoropomorphism.	2017/1/9 9:42
6355 John Coffey	225	1 9.4.2.200	74	7	E	Y	74.07 9.4.2.200	Anthropomorphism: "the TWT requesting STA expects". The STA is an object and does not "expect" anything.	Reword to remove the anthoropomorphism.	2017/1/9 9:42
6356 John Coffey	225	1 9.4.2.200	74	21	E	Y	74.21 9.4.2.200	Inconsistent usage / "wicked which": here we have "which corresponds", whereas in most other places in the draft we have "that corresponds".	Change "which" to "that".	2017/1/9 9:42
6357 John Coffey	225	1 9.4.2.200	74	27	E	Y	74.27 9.4.2.200	Inconsistent usage / "wicked which": here we have "which corresponds", whereas in most other places in the draft we have "that corresponds".	Change "which" to "that".	2017/1/9 9:42
6358 John Coffey	225	1 9.4.2.200	74	36	E	Y	74.36 9.4.2.200	Independent clauses linked by a comma without a coordinating conjunction.	Change comma to semicolon.	2017/1/9 9:42
6359 John Coffey	225	1 9.4.2.200	74	43	E	Y	74.43 9.4.2.200	Superfluous comma: ", is not present".	Delete comma.	2017/1/9 9:42
6360 John Coffey	225	1 9.4.2.200	74	59	E	Y	74.59 9.4.2.200	Missing space: "BSS.The".	Add space.	2017/1/9 9:42
6361 John Coffey	225	1 9.4.2.200	75	20	E	Y	75.20 9.4.2.200	Incomplete case switch: "that (those) TWTs" reads as "that TWTs or those TWTs". To be consistent the "TWTs" needs to be modified also.	Change "TWTs" to "TWT(s)".	2017/1/9 9:42
6362 John Coffey	225	1 9.4.2.200	75	49	E	Y	75.49 9.4.2.200	Incomplete case switch: "that (those) TWTs" reads as "that TWTs or those TWTs". To be consistent the "TWTs" needs to be modified also.	Change "TWTs" to "TWT(s)".	2017/1/9 9:42
6363 John Coffey	225	1 9.4.2.200	75	50	T	Y	75.50 9.4.2.200	The second case here is when the relevant STA is not an S1G STA, whereas earlier in the same section (P75 L20) the condition is "within an HE BSS". Is there some distinction intended? Can TWT be used in non-S1G, non-HE BSSs?	Change "is not an S1G STA" to "is an HE STA".	2017/1/9 9:42
6364 John Coffey	225	1 9.4.2.218.2	77	21	E	Y	77.21 9.4.2.218.2	Inconsistent usage: here we have "Indicates if the STA supports", whereas elsewhere in the same table we have "Indicates support by an HE STA". It would be better to pick one form and to stick to it.	Change "Indicates if the STA supports" to "Indicates support by an HE STA for".	2017/1/9 9:42
6365 John Coffey	225	1 9.4.2.218.2	77	39	E	Y	77.39 9.4.2.218.2	In the Definitions column, we have "a STA", whereas elsewhere in the same column we (mostly) have "an HE STA". Is any distinction intended? If not, the same term should be used.	Change "a STA" to "an HE STA".	2017/1/9 9:42
6366 John Coffey	225	1 9.4.2.218.2	77	40	E	Y	77.40 9.4.2.218.2	Inconsistent usage: we have both "a S-MPDU" and "an S-MPDU" in the draft. Though the former is used more often, the latter seems correct.	Change "a S-MPDU" to "an S-MPDU".	2017/1/9 9:42
6367 John Coffey	225	1 9.4.2.218.2	77	41	E	Y	77.41 9.4.2.218.2	Inconsistent usage: we have both "a S-MPDU" and "an S-MPDU" in the draft. Though the former is used more often, the latter seems correct.	Change "a S-MPDU" to "an S-MPDU".	2017/1/9 9:42
6368 John Coffey	225	1 9.4.2.218.2	77	43	T	Y	77.43 9.4.2.218.2	Use of undefined term: "Single MPDU". From the capitalization, it must be inferred that this is a defined term, but where is the definition? The draft also uses "single MPDU", and for good measure both "VHT Single MPDU" and "VHT single MPDU". The baseline	Clarify.	2017/1/9 9:42
6369 John Coffey	225	1 9.4.2.218.2	77	46	T	Y	77.46 9.4.2.218.2	Use of undefined term: "Single MPDU". From the capitalization, it must be inferred that this is a defined term, but where is the definition? The draft also uses "single MPDU", and for good measure both "VHT Single MPDU" and "VHT single MPDU". The baseline	Clarify.	2017/1/9 9:42

6446 John Coffey	225	1 9.4.2.219	92	14	E	Y	92.14 9.4.2.219	Missing article: "to non-zero value".	Change to "to a non-zero value".	2017/1/9 9:42
6447 John Coffey	225	1 9.4.2.219	92	23	T	Y	92.23 9.4.2.219	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6448 John Coffey	225	1 9.4.2.219	92	28	E	Y	92.28 9.4.2.219	Incorrect form of article / inconsistent usage: here we have "a HE non-AP STA", whereas in most other places in the draft we have "an HE non-AP STA".	Change "a" to "an".	2017/1/9 9:42
6449 John Coffey	225	1 9.4.2.219	92	28	E	Y	92.28 9.4.2.219	Missing word or article: "from associated AP".	Change to "its associated AP".	2017/1/9 9:42
6450 John Coffey	225	1 9.4.2.219	92	29	E	Y	92.29 9.4.2.219	Missing article: "should not exclusively use BSS Color paramter".	Change to "should not exclusively use the BSS Color parameter".	2017/1/9 9:42
6451 John Coffey	225	1 9.4.2.219	92	29	E	Y	92.29 9.4.2.219	Missing article or wrong case: "in making decision".	Change to "in making a decision" or "in making decisions".	2017/1/9 9:42

6452 John Coffey	225	1 9.4.2.219	92	29	T	Y	92.29 9.4.2.219	Normative statement that is contradicted later in the same paragraph: "should not exlusively use". At the end of the paragraph we find that this only applies if there has been no intervening contrary signaling from the AP. The conflict is minor but unnecessary, and it would be better to avoid it.	Reword to eliminate the contradiction: for example, if the most recently received HE Element from that AP contains a 1, then ... etc.	2017/1/9 9:42
6453 John Coffey	225	1 9.4.2.220	93	53	E	Y	93.53 9.4.2.220	Missing qualifier / inconsistent usage: here we have "STA" whereas elsewhere we have "HE STA".	Change "a STA" to "an HE STA".	2017/1/9 9:42
6454 John Coffey	225	1 9.4.2.220	93	62	E	Y	93.62 9.4.2.220	Missing word / awkward suage: "retransmission attempts of UL OFDMA random access".	Change to "retransmission attempts of UL OFDMA transmissions".	2017/1/9 9:42
6455 John Coffey	225	1 9.4.2.219	92	30	E	Y	92.30 9.4.2.219	Incorrect conjunction: the sentence structure is not entirely clear but it seems reasonable to assume that the last "and" could be followed by another instance of "should not exclusively use ...". But in that case the conjunction is wrong.	Change "and" to "or".	2017/1/9 9:42
6456 John Coffey	225	1 9.4.2.219	92	30	E	Y	92.30 9.4.2.219	Inconsistent usage: "the non-AP STA". Since "HE non-AP STA" has been mentioned earlier in the paragraph, it is arguably permissible to use "non-AP STA" or even simply "STA" here, but for consistency and clarity purposes it seems better to use terms consistently.	Change "the non-AP STA" to "the HE non-AP STA".	2017/1/9 9:42
6457 John Coffey	225	1 9.4.2.219	92	31	E	Y	92.31 9.4.2.219	Missing article / inconsistent usage: "HE non-AP STA" at beginning of sentence.	Change to "An HE non-AP STA".	2017/1/9 9:42
6458 John Coffey	225	1 9.4.2.219	92	32	T	Y	92.32 9.4.2.219	Vague and imprecise language: "(re)enable BSS Color related features". What precisely does "related" mean here? For example, the ability of an AP to recommend disabling BSS Color use by associated STAs is clearly "related" to BSS Color; is this included or not? It is, to be sure, not too hard to guess that the intention was that it is not included, but the specification should not put the reader in the position to have to guess.	Change "BSS Color related features" to a list or reference to a list of exactly which features are meant.	2017/1/9 9:42
6459 John Coffey	225	1 9.4.2.221	94	4	E	Y	94.04 9.4.2.221	Inconsistent terminology: here we have "non-AP STAs" whereas in most places in the draft we have "HE non-AP STAs".	Change "non-AP STAs" to "HE non-AP STAs".	2017/1/9 9:42
6460 John Coffey	225	1 9.4.2.221	94	32	E	Y	94.32 9.4.2.221	Inconsistent erminology: here we have "non-AP STA", whereas in most places in the draft we have "HE non-AP STAs".	Change "non-AP STAs" to "HE non-AP STAs".	2017/1/9 9:42
6461 John Coffey	225	1 9.4.2.221	94	37	E	Y	94.37 9.4.2.221	Missing article: "The format of [A, B, C, and D] fields".	Change to "The format of the [A, B, C, and D] fields".	2017/1/9 9:42
6462 John Coffey	225	1 9.4.2.221	94	39	T	Y	94.39 9.4.2.221	Here format is "illustrated" in the Figure, whereas in most other places in the draft, format is "defined" in a figure. Is the present statement normative or is it an explanatory restatement of an explicit definition somewhere else?	If this is intended to be the definition, change "illusrated" to "defined".	2017/1/9 9:42
6463 John Coffey	225	1 9.4.2.221	94	52	T	Y	94.52 9.4.2.221	Here format is "illustrated" in the Figure, whereas in most other places in the draft, format is "defined" in a figure. Is the present statement normative or is it an explanatory restatement of an explicit definition somewhere else?	If this is intended to be the definition, change "illusrated" to "defined".	2017/1/9 9:42
6464 John Coffey	225	1 9.4.2.221	94	59	T	Y	94.59 9.4.2.221	Here format is "illustrated" in the Figure, whereas in most other places in the draft, format is "defined" in a figure. Is the present statement normative or is it an explanatory restatement of an explicit definition somewhere else?	If this is intended to be the definition, change "illusrated" to "defined".	2017/1/9 9:42
6465 John Coffey	225	1 9.4.2.223	95	51	E	Y	95.51 9.4.2.223	Solecism: "an STA-to-STA operation".	Delete "an".	2017/1/9 9:42
6466 John Coffey	225	1 9.4.2.223	95	55	T	Y	95.55 9.4.2.223	Variant terms used for the same feature: "STA-2-STA operation". A matter of a few sentences earlier we have "STA-to-STA". Which is it?	Change "STA-2-STA" to "STA-to-STA".	2017/1/9 9:42
6467 John Coffey	225	1 9.4.2.223	96	19	E	Y	96.19 9.4.2.223	Missing article: "is set to duration".	Change to "is set to a duration".	2017/1/9 9:42

6469	John Coffey	225	1 9.4.2.223	96	23	T	Y	96.23 9.4.2.223	Vague and uninformative language: "indicates a specified operation". Which oiperation? Where is it specified?	Provide additional, clarifying information. If this operation is specified elsewhere in the draft, say so and provide a reference. If the specification is by the vendor, and thus outside the scope of this draft, delete the word "specified".	2017/1/9 9:42
6470	John Coffey	225	1 9.4.2.223	96	23	T	Y	96.23 9.4.2.223	Ambiguous langauge: "The Vendor Specific Service ID field indicates a specified operation, and the HE STA that supports it". Does "it" refer to the Vendor Specific Service ID field or the specified operation?	Clarify.	2017/1/9 9:42
6471	John Coffey	225	1 9.4.2.224	96	32	T	Y	96.32 9.4.2.224	The format of the element is "shown" in the Figure. In many other places in the draft, format is defined in figures. In the present instance, is this showing really a definition? If so, say so.	Change "shown" to "defined".	2017/1/9 9:42
6472	John Coffey	225	1 9.4.2.224	96	62	E	Y	96.62 9.4.2.224	Missing article: "is set to duration".	Change to "is set to the duration".	2017/1/9 9:42
6473	John Coffey	225	1 9.4.2.225	97	43	T	Y	97.43 9.4.2.225	Vague and uninformative language: "indicates a specified operation". Which oiperation? Where is it specified?	Provide additional, clarifying information. If this operation is specified elsewhere in the draft, say so and provide a reference. If the specification is by the vendor, and thus outside the scope of this draft, delete the word "specified".	2017/1/9 9:42
6474	John Coffey	225	1 9.4.2.225	97	43	E	Y	97.43 9.4.2.225	Solecism: incorrect use of definite article: "the HE STA supporting it". Is there just one HE STA supporting it?	Change "the" to "an" or "any".	2017/1/9 9:42
6475	John Coffey	225	1 9.6.8.36	99	61	E	Y	99.61 9.6.8.36	Independent clauses linked by a comma without a coordinating conjunction.	Change comma to semicolon.	2017/1/9 9:42
6476	John Coffey	225	1 9.6.29.3	105	4	E	Y	105.04 9.6.29.3	Missing article: "sent by HE STA".	Change to "sent by an HE STA".	2017/1/9 9:42
6477	John Coffey	225	1 9.6.29.3	105	5	E	Y	105.05 9.6.29.3	Missing article: "indicated by Quiet Time Period Request element".	Change to "indicated by the Quiet Time Period Request element".	2017/1/9 9:42
6478	John Coffey	225	1 9.7.1	106	4	T	Y	106.04 9.7.1	In the first and third elements of the list, it is stated that "The content of these octets is unspecified. However in the second element we have no such phrase. Since there can be more than zero EOF Padding Subframes, either the content needs to be specified or a note added to say that the content is left unspecified.	Either the content needs to be specified or a note added to say that the content is left unspecified.	2017/1/9 9:42
6479	John Coffey	225	1 9.7.1	106	36	E	Y	106.36 9.7.1	Inconsistent usage: we have both "a S-MPDU" and "an S-MPDU" in the draft. Though the former is used more often, the latter seems correct.	Change "a S-MPDU" to "an S-MPDU".	2017/1/9 9:42
6480	John Coffey	225	1 9.7.1	107	3	T	Y	107.03 9.7.1	In equation (9-5), L_MPDU is defined for VHT, HT, and DMG PPDUs, but not foe HE PPDUs. What is the definition for HE PPDUs?	Modify equation (9-5) to add a definition of L_MPDU for HE PPDUs.	2017/1/9 9:42
6481	John Coffey	225	1 9.7.1	107	15	T	Y	107.15 9.7.1	The last sentence of the Note discusses HT and VHT PPDUs, but not HE PPDUs. What pattern is followed by HE PPDUs?	Modify the Note to describe the pattern for HE PPDUs.	2017/1/9 9:42
6482	John Coffey	225	1 9.7.3	107	35	E	Y	107.35 9.7.3	Incorrect conjunction: "An A-MPDU carried in an HE SU PPDU, HE extended range SU PPDU, HE trigger-based PPDU and HE MU PPDU". It will be a rare A-MPDU that is carried in all four of these.	Change "and" to "or".	2017/1/9 9:42
6483	John Coffey	225	1 9.7.3	107	53	E	Y	107.53 9.7.3	Superfluous verbiage: what difference does the word 'all" make here, and how would the meaning change if it was deleted?	Delete "all".	2017/1/9 9:42
6484	John Coffey	225	1 9.7.3	107	53	T	Y	107.53 9.7.3	Instead of "(all) HE trigger-based PPDUs addressed to the same AP", it would be more precise to write "HE trigger-based PPDUs transmitted simultaneously to the same AP", or in response to the same HE trigger frame, or something. HE trigger-based PPDUs transmitted at different times do not have to carry the same value, even if they are addressed to the same AP.	Change "all HE trigger-based PPDUs addressed to the same AP" to "HE trigger-based PPDUs transmitted simultaneously to the same AP".	2017/1/9 9:42

6485	John Coffey	225	1 9.7.3	107	65	E	Y	107.65 9.7.3	Incorrect and superfluous definite article: "The further restrictions".	Change to "Further restrictions".	2017/1/9 9:42
6486	John Coffey	225	1 9.7.3	108	19	T	Y	108.19 9.7.3	"The 4095-octet limit does not apply to A-MPDUs carried in VHT or DMG PPDUs". Well and good, but what about HE PPDUs?	Add appropriate statement about HE PPDUs.	2017/1/9 9:42
6487	John Coffey	225	1 9.7.3	108	40	T	Y	108.40 9.7.3	Garbled text, unclear meaning: "by a TXOP holder, TXOP responder that does not include or solicit an immediate response". Apart from being ungrammatical, does the clause starting "that" apply to both TXOP holder and TXOP responder or just to the latter? Here we are left to try to guess from the change tracking marks.	Change "TXOP holder, TXOP responder" to "TXOP holder or TXOP responder" (if that is what is meant).	2017/1/9 9:42
6488	John Coffey	225	1 9.7.3	108	50	E	Y	108.50 9.7.3	Missing article: "transmitted by AP".	Change to "transmitted by an AP".	2017/1/9 9:42
6489	John Coffey	225	1 9.7.3	108	50	E	Y	108.50 9.7.3	Ungrammatical construction: "transmitted by (an) AP in an HE BSS that also needs to transmit one of the following". It is the AP, not the HE BSS, that might need to transmit one of the following.	Reword appropriately.	2017/1/9 9:42
6490	John Coffey	225	1 9.7.3	109	24	E	Y	109.24 9.7.3	Inconsistent usage: here we have "In [...]: If" (capital), whereas elsewhere in the draft, including several instances in the same table entry, we have "In [...]: if" (lower case).	Change "If" to "if".	2017/1/9 9:42
6491	John Coffey	225	1 9.7.3	110	12	E	Y	110.12 9.7.3	Missing article: "except HE BSS".	Change to "except an HE BSS".	2017/1/9 9:42
6492	John Coffey	225	1 9.7.3	110	14	E	Y	110.14 9.7.3	Inconsistent usage / "wicked which": here we have "which corresponds", whereas in most other places in the draft we have "that corresponds".	Change "which" to "that".	2017/1/9 9:42
6493	John Coffey	225	1 10.3.2.4	115	8	E	Y	115.08 10.3.2.4	Missing article: "carried information". Some information?	Change to "carried the information".	2017/1/9 9:42
6494	John Coffey	225	1 10.3.2.4	115	8	E	Y	115.08 10.3.2.4	Missing article: "is not HE trigger-based PPDU triggered by the STA".	Change to "is not an HE trigger-based PPDU triggered by the STA".	2017/1/9 9:42
6495	John Coffey	225	1 10.3.2.4	115	18	E	Y	115.18 10.3.2.4	Odd and ungrammatical construction: "before the end of the PPDU, in this case, this NAV update operation".	Change to "before the end of the PPDU, in which case the MAV update operation".	2017/1/9 9:42
6496	John Coffey	225	1 10.3.2.4	115	40	E	Y	115.40 10.3.2.4	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42
6497	John Coffey	225	1 10.3.2.4a	115	49	E	Y	115.49 10.3.2.4a	Unclear wording: "managing RTS use by an AP". Apparently what is meant is management by an AP of RTS usage throughout the BSS, not management of the use of RTS by the AP specifically.	Reword to clarify.	2017/1/9 9:42
6498	John Coffey	225	1 10.3.2.4a	115	49	E	Y	115.49 10.3.2.4a	Situation situation: the word is used twice in the same sentence. It's both vague and colloquial and it would be better if it wasn't used at all. It doesn't appear anywhere else in the draft.	Reword to eliminate use of "situation".	2017/1/9 9:42
6499	John Coffey	225	1 10.3.2.4a	115	50	E	Y	115.50 10.3.2.4a	Missing article: "may have better view".	Change to "may have a better view", or (better) reword to eliminate the phrase entirely.	2017/1/9 9:42
6500	John Coffey	225	1 10.3.2.8a.1	116	4	E	Y	116.04 10.3.2.8a.1	Repeated full stops.	Remove one full stop.	2017/1/9 9:42
6501	John Coffey	225	1 10.3.2.8a.3	118	34	E	Y	118.34 10.3.2.8a.3	Awkward usage: "follow the synchronization requirement as defined". The word 'as" contributes nothing.	Delete "as".	2017/1/9 9:42
6502	John Coffey	225	1 10.3.2.10.1	118	55	E	Y	118.55 10.3.2.10.1	Missing space: "transmissionthat".	Add space.	2017/1/9 9:42
6503	John Coffey	225	1 10.3.2.10.1	119	8	T	Y	119.08 10.3.2.10.1	Use of undefined term: "Single MPDU". From the capitalization, it must be inferred that this is a defined term, but where is the definition? The draft also uses "single MPDU", and for good measure both "VHT Single MPDU" and "VHT single MPDU". The baseline	Clarify.	2017/1/9 9:42
6504	John Coffey	225	1 10.3.2.10.1	119	12	E	Y	119.12 10.3.2.10.1	Why "could"? The use of the conditional tense is puzzling, as indeed it was in the previous sentence. There are no other occurrences of 'could" in the draft. In present tense, "can" would seem inappropriate in context: "might" would be preferable".	Change tense and use "might" instead of "can".	2017/1/9 9:42
6505	John Coffey	225	1 10.3.2.10.3	120	7	E	Y	120.07 10.3.2.10.3	Missing space: "medium.Specifically".	Add space.	2017/1/9 9:42
6506	John Coffey	225	1 10.3.2.10.3	120	8	E	Y	120.08 10.3.2.10.3	Missing article: "sent in HE trigger-based PPDU".	Change to "sent in an HE trigger-based PPDU".	2017/1/9 9:42

6507	John Coffey	225	1 10.3.2.10.3	120	8	E	Y	120.08 10.3.2.10.3	Missing article: "acknowledgement in HE MU PPDU".	Change to "acknowledgement in an HE MU PPDU".	2017/1/9 9:42
6508	John Coffey	225	1 10.3.2.10.3	120	8	E	Y	120.08 10.3.2.10.3	Missing article: "in response to (A)-MPDU".	Change to "in response to a(n) (A)-MPDU".	2017/1/9 9:42
6509	John Coffey	225	1 10.3.2.10.3	120	58	E	Y	120.58 10.3.2.10.3	Inconsistent (and awkward) usage: here we have "a HE trigger-based PPDU", whereas in virtually every other place in th draft, we have "an HE trigger-based PPDU".	Change "a" to "an".	2017/1/9 9:42
6510	John Coffey	225	1 10.3.2.10.3	121	55	T	Y	121.55 10.3.2.10.3	Garbled text: "A STA may use a BlockAckReq frame to solicit the acknowledgment frames" from, presumably, some other STA. But which one? The text goes on to say ", to whom the STA sent the QoS Data frame(s)", which makes it sound as if the STA is soliciting acknowledgment frames from the acknowledgment frames.	Reword to identify the STA(s) from which the acknowledgment frames are solicited.	2017/1/9 9:42
6511	John Coffey	225	1 10.3.2.10.3	121	55	E	Y	121.55 10.3.2.10.3	Anthoropomorphism: "to whom". The destination was an object, not a person.	Reword to eliminate the anthropomorphism.	2017/1/9 9:42
6512	John Coffey	225	1 10.3.2.10.3	121	56	E	Y	121.56 10.3.2.10.3	Anthoropomorphism: "from whom". The origin was an object, not a person.	Reword to eliminate the anthropomorphism.	2017/1/9 9:42
6513	John Coffey	225	1 10.3.2.10.3	121	58	E	Y	121.58 10.3.2.10.3	Inconsistent article form: here we have "a HE trigger-based PPDU", whereas almost everywhere else in the draft we have "an HE trigger-based PPDU".	Change to "an HE trigger-based PPDU".	2017/1/9 9:42
6514	John Coffey	225	1 10.3.5	121	5	T	Y	121.05 10.3.5	A STA may use RTS/CTS when it is "necessary" to distribute the NAV or when it is "necessary" to establish protection. Here "necessary" seems too strong a word: whether establishing protection is "necessary" depends on whether other STAs would transmit if protection was not established, which is never known to a STA. Perhaps this isn't what is intended by "necessary", but if not, why is the word there? We would have more-or-less the same meaning without it.	Delete "when it is necessary" (two places).	2017/1/9 9:42
6515	John Coffey	225	1 10.3.5	122	1	T	Y	122.01 10.3.5	"When HE duration-based RTS is enabled, a non-AP STA shall ...". Shouldn't that be an HE non-AP STA?	Change "a non-AP STA" to "an HE non-AP STA".	2017/1/9 9:42
6516	John Coffey	225	1 10.3.5	122	40	T	Y	122.40 10.3.5	"... static fragmentation is used". It seems that what is intended is that dynamic fragmentation is not used, not that static fragmentation is necessarily used.	Change "static fragmentation is used" to "only static fragmentation may be used".	2017/1/9 9:42
6517	John Coffey	225	1 10.7.9	125	35	E	Y	125.35 10.7.9	Inconsistent usage: here we have "and", whereas elsewhere in the table in similar contexts we have "or".	Change "and" to "or".	2017/1/9 9:42
6518	John Coffey	225	1 10.9	127	11	T	Y	127.11 10.9	Unresolved "<reference>".	Resolve it.	2017/1/9 9:42
6519	John Coffey	225	1 10.13.2	128	42	E	Y	128.42 10.13.2	Inconsistent usage: in this paragraph we have "for an HT PPDU", "for a VHT PPDU", and "for a DMG STA" in the appropriate places, but there is no corresponding text for an HE PPDU.	Immediately before the closing full stop, add " (for an HE PPDU)".	2017/1/9 9:42
6520	John Coffey	225	1 10.22.2.2	129	28	E	Y	129.28 10.22.2.2	Case agreement issue: "one or more immediate response". It seems that usage varies but that the majority convention is to use the plural in such cases. (As is done further down on the same page, at line 34, for example.)	Change to "one or more immediate responses".	2017/1/9 9:42
6521	John Coffey	225	1 10.22.2.2	129	47	E	Y	129.47 10.22.2.2	Spurioiis square bracket: "TXOP holder]".	Delete square bracket.	2017/1/9 9:42
6522	John Coffey	225	1 10.22.2.2	130	2	E	Y	130.02 10.22.2.2	Missing article: "in HE".	Change to "in an HE".	2017/1/9 9:42
6523	John Coffey	225	1 10.22.2.2	130	2	E	Y	130.02 10.22.2.2	Inconsistent form: here we have "HE trigger based PPDU", whereas almost everywhere else in the draft we have "HE trigger-based PPDU". It would be better to keep the term consistent.	Change to "HE trigger-based PPDU".	2017/1/9 9:42
6524	John Coffey	225	1 10.22.2.2	130	7	E	Y	130.07 10.22.2.2	Missing article: "in HE".	Change to "in an HE".	2017/1/9 9:42
6525	John Coffey	225	1 10.22.2.2	130	7	E	Y	130.07 10.22.2.2	Inconsistent form: here we have "HE trigger based PPDU", whereas almost everywhere else in the draft we have "HE trigger-based PPDU". It would be better to keep the term consistent.	Change to "HE trigger-based PPDU".	2017/1/9 9:42

6526	John Coffey	225	1 10.22.2.2	130	12	E	Y	130.12 10.22.2.2	Inconsistent form: here we have "HE trigger based PPDU", whereas almost everywhere else in the draft we have "HE trigger-based PPDU". It would be better to keep the term consistent.	Change to "HE trigger-based PPDU".	2017/1/9 9:42
6527	John Coffey	225	1 10.22.2.4	130	38	E	Y	130.38 10.22.2.4	Missing article: "Address 2 field".	Change to "the Address 2 field".	2017/1/9 9:42
6528	John Coffey	225	1 10.22.2.5	131	17	E	Y	131.17 10.22.2.5	Inapposite use of indefinite articles: "For an HT STA, a VHT STA, and an HE STA, an EDCA TXOP is obtained". This makes it sound as if the statement applies to one example of each.	Change to "For HT STAs, VHT STAs, and HE STAs, an EDCA TXOP is obtained".	2017/1/9 9:42
6529	John Coffey	225	1 10.22.2.5	131	20	T	Y	131.20 10.22.2.5	Missing case: the editing to accommodate the HE case has had the effect of rendering the timing undefined for the HT case operating at 2.4 GHz. Without the addition of the underlined text, it's clear that the relevant interval is PIFS, but with the addition we have "PIFS interval for the 5 GHz band or DIFS interval for an HE STA operating in the 2.4 GHz band." What about an HT STA operating in the 2.4 GHz band?	Revise the definition to fill in the missing case.	2017/1/9 9:42
6530	John Coffey	225	1 10.22.2.6	131	31	E	Y	131.31 10.22.2.6	Wrong article: "transmitted in the VHT MU PPDU".	Change to "transmitted in a VHT MU PPDU".	2017/1/9 9:42
6531	John Coffey	225	1 10.22.2.6	131	41	E	Y	131.41 10.22.2.6	Wrong article: "in the HE MU PPDU". Is there just one?	Change to "in an HE MU PPDU".	2017/1/9 9:42
6532	John Coffey	225	1 10.22.2.7	131	24	E	Y	131.24 10.22.2.7	Missing article: "than RXVECTOR parameter".	Change to "than the RXVECTOR parameter".	2017/1/9 9:42
6533	John Coffey	225	1 10.22.2.7	132	25	E	Y	132.25 10.22.2.7	Wrong article: "if the RTS frame".	Change to "if an RTS frame".	2017/1/9 9:42
6534	John Coffey	225	1 10.22.2.7	132	39	E	Y	132.39 10.22.2.7	Singular used where plural required: "for all intended receiver".	Change to "for all intended receivers".	2017/1/9 9:42
6535	John Coffey	225	1 10.22.2.9	133	37	E	Y	133.37 10.22.2.9	Independent clauses linked by a comma without a coordinating conjunction.	Change comma to semicolon.	2017/1/9 9:42
6536	John Coffey	225	1 10.22.2.9	133	37	E	Y	133.37 10.22.2.9	Unusual phrasing: "if any of the following conditions", when the text goes on to list two conditions.	Change "any" to "either".	2017/1/9 9:42
6537	John Coffey	225	1 10.22.2.9	133	38	T	Y	133.38 10.22.2.9	What is meant by the phrase "otherwise it resets the NAV"? Is this descriptive or normative?	Change "it resets" to "it shall reset" (if this is what is intended).	2017/1/9 9:42
6538	John Coffey	225	1 10.24.10.3	134	41	E	Y	134.41 10.24.10.3	Missing article: "the STA shall transmit BlockAck frame".	Change to "a BlockAck frame".	2017/1/9 9:42
6539	John Coffey	225	1 10.24.10.3	134	47	E	Y	134.47 10.24.10.3	Missing space: "ackretransmission".	Add space.	2017/1/9 9:42
6540	John Coffey	225	1 10.24.10.3	134	63	E	Y	134.63 10.24.10.3	Wrong case: "BlockAck frame" (from group members 3 and 4).	Change to "BlockAck frames".	2017/1/9 9:42
6541	John Coffey	225	1 10.28.3	136	38	T	Y	136.38 10.28.3	"Can" used where shall / should / may required.	Change "can" to "may" (if that is what is intended).	2017/1/9 9:42
6542	John Coffey	225	1 10.28.4	137	9	E	Y	137.09 10.28.4	Wrong article: "the non-HE RD responder".	Change to "a non-HE responder".	2017/1/9 9:42
6543	John Coffey	225	1 10.28.4	137	10	E	Y	137.10 10.28.4	Wrong article: "the HE RD responder".	Change to "an HE RD responder".	2017/1/9 9:42
6544	John Coffey	225	1 10.28.4	137	17	E	Y	137.17 10.28.4	Wrong article: "the non-HE RD responder".	Change to "a non-HE responder".	2017/1/9 9:42
6545	John Coffey	225	1 10.28.4	137	18	E	Y	137.18 10.28.4	Wrong article: "the HE RD responder".	Change to "an HE RD responder".	2017/1/9 9:42
6546	John Coffey	225	1 10.43.1	137	48	E	Y	137.48 10.43.1	Typo: "tha".	Change to "that".	2017/1/9 9:42
6547	John Coffey	225	1 10.43.1	137	49	T	Y	137.49 10.43.1	Inconsistent use of defined term: here we have "accept TWT", whereas elsewhere we have "Accept TWT".	Change "accept TWT" to "Accept TWT".	2017/1/9 9:42
6548	John Coffey	225	1 10.43.1	137	50	T	Y	137.50 10.43.1	Inconsistent use of defined term: here we have "alternate TWT", whereas elsewhere we have "Alternate TWT".	Change "alternate TWT" to "Aternate TWT".	2017/1/9 9:42
6549	John Coffey	225	1 10.43.1	137	51	T	Y	137.51 10.43.1	Inconsistent use of defined term: here we have "dictate TWT", whereas elsewhere we have "Dictate TWT".		2017/1/9 9:42
6550	John Coffey	225	1 10.43.1	139	48	E	Y	139.48 10.43.1	Typo: "is a not a".	Change to "is not a".	2017/1/9 9:42
6551	John Coffey	225	1 11.1.3.8	141	22	T	Y	141.22 11.1.3.8	Incorrect use of definite article: "An HE STA that communicates with the HE AP whose MaxBSSID Indicator field is set to n". Why "the" HE AP? Is there only one? In the relevant text in section 9, all that is said is that the AP sets the MaxBSSID field to a non-zero value.	Change "the HE AP" to "an HE AP".	2017/1/9 9:42
6552	John Coffey	225	1 11.1.3.8	141	23	E	Y	141.23 11.1.3.8	Incorrect form of imperative: "shall decodes".	Change to "shall decode".	2017/1/9 9:42
6553	John Coffey	225	1 11.1.3.10	141	32	E	Y	141.32 11.1.3.10	Superfluous definite article: "to ensure the BSS discoverability".	Delete "the".	2017/1/9 9:42
6554	John Coffey	225	1 11.1.3.10	141	32	T	Y	141.32 11.1.3.10	Inconsistent usage of defined terms: here we have "beacon frames", whereas everywhere else in the drfat, including several places in the same section, we have "Beacon frames".	Change "beacon frames" to "Beacon frames".	2017/1/9 9:42

6555 John Coffey	225	1 11.1.3.10	141	33	E	Y	141.33 11.1.3.10	Solecism: "for the whole BSS coverage".	Change to "to ensure coverage of the whole BSS" or delete the phrase entirely.	2017/1/9 9:42
6556 John Coffey	225	1 11.1.3.10	141	43	T	Y	141.43 11.1.3.10	There's something odd about this idea of dual beacons. Superficlally, the idea is attractive: the extended range SU modes (purportedly) extend range, so it's natural to think of some way of conveying beacon information to the new, extended range. But there are many modes that extend range beyond 6 Mb/s: LDPC, DCM, STBC, TxBF, as well as HE_EXT_SU, with all permissible combinations (many optional). If the principle is that every mode has a corresponding beacon, then we have a nightmare of beacon proliferation. If instead the principle is that we have a common beacon understandable by all, why, we have that already with the good old 6 Mb/s normal beacon. The text in the current draft has the feel of a half-worked out add-on. It would be better to do this properly or not at all. Incidentally there is not one word about extended range in the PAR or CSD, so this is	Delete this sentence and all references to dual beacons in the draft.	2017/1/9 9:42
6557 John Coffey	225	1 11.1.3.10	141	36	E	Y	141.36 11.1.3.10	Incorrect use of definite article: "The HE AP that transmits Beacon frames in two PHY formats". Is there just one?	Change to "An HE AP ...".	2017/1/9 9:42

6563 John Coffey	225	1 11.2.2.8	142	57	E	Y	142.57 11.2.2.8	The marathon sentence "A STA that stays awake to receive group addressed BUs shall elect to receive all group addressed non-STBC transmissions or all group addressed STBC transmissions and remain awake until the More Data subfield of the appropriate type (non-STBC or STBC) of group addressed BUs indicates there are no further buffered group addressed BUs of that type, or until a TIM is received indicating there are no more buffered group addressed BUs of that type, or until an FMS Descriptor element is received indicating that there are no further buffered group addressed BUs for which the STA has previously received an FMS Response element in a frame that has a value in Address 1 that matches its MAC address or that has an Address 1 value that is a group address corresponding to a group of which it is a member and that was transmitted by the	Break this sentence into several sentences, or at the very least several subclauses separated by item identifiers. Add a table and a diagram.	2017/1/9 9:42
6564 John Coffey	225	1 11.2.2.8	143	5	E	Y	143.05 11.2.2.8	Superfluous word: "shall operate exactly as if". What is the difference between operating "exactly" as if and operating merely "as if"? For example, elsewhere (28.3.11.8) we see that "the operation of the interleaver is the same as if": are we to conclude that the operation doesn't have to be "exactly" the same, since there the word is omitted?	Delete "exactly".	2017/1/9 9:42

6565	John Coffey	225	1 11.2.2.8	143	8	E	Y	143.08 11.2.2.8	Superfluous word: "shall operate exactly as if". What is the difference between operating "exactly" as if and operating merely "as if"? For example, elsewhere (28.3.11.8) we see that "the operation of the interleaver is the same as if": are we to conclude that the operation doesn't have to be "exactly" the same, since there the word is omitted?	Delete "exactly".	2017/1/9 9:42
6566	John Coffey	225	1 11.2.2.8	143	12	E	Y	143.12 11.2.2.8	Superfluous word: "shall operate exactly as if". What is the difference between operating "exactly" as if and operating merely "as if"? For example, elsewhere (28.3.11.8) we see that "the operation of the interleaver is the same as if": are we to conclude that the operation doesn't have to be "exactly" the same, since there the word is omitted?	Delete "exactly".	2017/1/9 9:42
6567	John Coffey	225	1 11.49.1	144	37	T	Y	144.37 11.49.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6568	John Coffey	225	1 17.3.9.10	145	55	E	Y	145.55 17.3.9.10	Typo: "when measured as the 10% point".	Change to "when measured at the 10% point".	2017/1/9 9:42
6569	John Coffey	225	1 17.3.9.10	145	57	T	Y	145.57 17.3.9.10	Incorrect statement of mandatory requirement: "The residual CFO error measurement shall be made on the". This is a mandatory statement about how a measurement is to be made on a device to verify whether that device is compliant or not; it's not a requirement on the device itself. The device itself doesn't have to make any measurements at all. Apparently what is intended is to clarify the meaning of the requirement on the device from the previous sentence. It would be better to say so explicitly.	Reword to clarify that this text acts as part of the definition of the residual CFO error, and not as a requirement that any measurement has to be performed.	2017/1/9 9:42
6570	John Coffey	225	1 17.3.9.10	145	61	E	Y	145.61 17.3.9.10	Wrong form of indefinite article: "an non-HT".	Change to "a non-HT".	2017/1/9 9:42
6571	John Coffey	225	1 17.3.9.10	145	65	E	Y	145.65 17.3.9.10	Inconsistent form: here we have "HE trigger based PPDU", whereas almost everywhere else in the draft we have "HE trigger-based PPDU". It would be better to keep the term consistent.	Change to "HE trigger-based PPDU".	2017/1/9 9:42
6572	John Coffey	225	1 17.3.9.10	145	65	E	Y	145.65 17.3.9.10	Wrong case: "requirement for HE trigger(-)based PPDU".	Change "PPDU" to "PPDUs".	2017/1/9 9:42
6573	John Coffey	225	1 27.1	149	7	E	Y	149.07 27.1	This is the only place in the draft where the term "banned" occurs, and it isn't present anywhere in the 2016 rollup of the base standard either. Let's not introduce new terms for basic concepts where they are not needed.	Change to "HE STAs shall not use HCCA or TSPEC".	2017/1/9 9:42
6574	John Coffey	225	1 27.2.1	149	18	T	Y	149.18 27.2.1	From the text "An HE STA determines whether a received frame is an inter-BSS or an intra-BSS frame by using ...", it is not clear whether a normative requirement is being described. That is, the text tells us how an HE STA makes this determination, but not whether it is required to make the determination in the first place.	Clarify whether this is a requirement or not. If so, say so explicitly. If not, reword to make it clear that there is no requirement.	2017/1/9 9:42
6575	John Coffey	225	1 27.2.1	149	18	T	Y	149.18 27.2.1	Various methods are given for "determining" whether a received frame is an inter-BSS or intra-BSS frame. With the (possible) exception of MAC address, they all have some probability of false classification. As such, it seems that what is being described is an estimate of the inter-BSS / intra-BSS classification, not a definitive determination. If that's the case, it is misleading to write that the HE STA "determines" anything.	Reword appropriately. For example, if it's intended that the HE STA must make some attempt at a classiifcation, but that it doesn't necessarily have to use the MAC address, then change to something like "An HE STA shall attempt to classify received frames as inter-BSS or intra-BSS using one or more of the following criteria", etc.	2017/1/9 9:42

6576	John Coffey	225	1 27.2.1	149	18	T	Y	149.18 27.2.1	The text discusses a determination of whether a received frame is inter-BSS or intra-BSS, but at the end of the section it's mentioned (or acknowledged) that frames may satisfy one or more conditions for both. It's very murky what happens then. The draft goes on to provide one way of making a decision (check the MAC address) but doesn't say whether it's required or not. So we don't know (a) if the HE STA is required to do any of this; (b) if it starts the process, is it required to run all the methods or just some?; (c) if it's not required to run all the methods, can it give up its attempt to classify if it gets conflicting answers from the ones it tries?	Reword appropriately.	2017/1/9 9:42
6577	John Coffey	225	1 27.2.1	149	18	T	Y	149.18 27.2.1	The text discusses a determination of whether a received frame is inter-BSS or intra-BSS, but at the end of the section it's mentioned (or acknowledged) that frames may not satisfy any of the conditions. Given this possibility, it is misleading to state that the STA makes a determination about whether the frame is one or the other.	Reword appropriately to allow for the possibility that the HE STA may be unable to make a determination.	2017/1/9 9:42
6578	John Coffey	225	1 27.2.1	149	26	T	Y	149.26 27.2.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6579	John Coffey	225	1 27.2.1	149	39	T	Y	149.39 27.2.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6580	John Coffey	225	1 27.2.1	149	50	T	Y	149.50 27.2.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6581	John Coffey	225	1 27.2.1	150	9	T	Y	150.09 27.2.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6582	John Coffey	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	Why does an HE AP interpret each HE MU PPDU as inter-BSS?	Clarify.	2017/1/9 9:42
6583	John Coffey	225	1 27.2.1	150	17	T	Y	150.17 27.2.1	"the decision made by using the MAC address takes precedence". The entire section is written in a way that makes requirements frustratingly elusive. The present text is one example among many. Since the text says "the decision", are we to conclude that it is mandatory for the STA to process the MAC address for all received frames? if a STA decided--for power save purposes of for any other reason--to make the conservative decision that the received PPDU should count as both intra-BSS and inter-BSS, would that impact any other device in the network negatively? If not, why insist on HE STAs processing the MAC address? Or more basically, is this in fact what the draft requires?	Clarify this and the entire section. In doing so, please make appropriate and precise use of the key words "shall", "should", and "may", as appropriate.	2017/1/9 9:42
6584	John Coffey	225	1 27.2.1	150	20	T	Y	150.20 27.2.1	The section consists of a long (and none-too-clearly written) set of procedures on "determining" whether PPDUs are intra-BSS or inter-BSS. It seems that this is intended to be mandatory. If mandatory, it doesn't appear anywhere nearly useful enough to justify encumbering devices (dual NAV doesn't count). If optional, it doesn't justify cluttering up the draft.	Delete this section and all references to it in the draft.	2017/1/9 9:42
6585	John Coffey	225	1 27.2.1	150	36	E	Y	150.36 27.2.1	Missing text: "or cannot".	Change to "or that cannot".	2017/1/9 9:42
6586	John Coffey	225	1 27.2.1	150	37	E	Y	150.37 27.2.1	The text "the method of identifying a PPDU as intra-BSS or inter-BSS" conveys the idea that a PPDU can definitely be so identified. Since the text also acknowledges in several places that such a decision may not be possible, this is misleading.	Reword to clarify.	2017/1/9 9:42
6587	John Coffey	225	1 27.2.2	151	37	E	Y	151.37 27.2.2	Garbled text: "if a PS-Poll is received carried in a received HE SU PPDU ...".	Reword to clarify.	2017/1/9 9:42
6588	John Coffey	225	1 27.2.2	151	56	E	Y	151.56 27.2.2	Singular used where plural required: "by intra-BSS PPDU".	Change to "intra-BSS PPDUs".	2017/1/9 9:42

6589	John Coffey	225	1 27.2.2	151	57	E	Y	151.57 27.2.2	Singular used where plural required: "by inter-BSS PPDU".	Change to "inter-BSS PPDUs".	2017/1/9 9:42
6590	John Coffey	225	1 27.2.2	151	57	E	Y	151.57 27.2.2	Inconsistent usage: "two NAV". In the previous sentence it's "two NAVs".	Change to "two NAVs".	2017/1/9 9:42
6591	John Coffey	225	1 27.2.2	151	58	E	Y	151.58 27.2.2	Missing word(s) or garbled syntax: "where a STA requires protection from ... or avoid interference". This maps to 'where a STA requires avoid interference".	Revise appropriately.	2017/1/9 9:42
6592	John Coffey	225	1 27.2.2	151	60	E	Y	151.60 27.2.2	Singular used where plural required: "in neighboring BSS".	Change to "in neighboring BSSs".	2017/1/9 9:42
6593	John Coffey	225	1 27.2.2	151	64	T	Y	151.64 27.2.2	The illustrative example is extraordinarily unconvincing. Is this really the best justification for forcing all HE STAs to go through the extended rigmarole of classifying every PPDU as intra-BSS or inter-BSS? Even taking the example at face value, what is gained by having the STA set its "intra-BSS NAV" when it receives its AP's initial frame, as opposed to setting the plain old NAV? Either way that STA wouldn't be permitted to transmit, so what has all the extra processing and classification bought? The straightforward way would be to have all STAs other than those addressed by the AP to set the (N.B. "the", since there would be only one) NAV. The NAV is one of the basic underpinnings of the entire current success of 802.11 and extraordinary justification should be necessary before any changes are made to it.	Delete this section, the definition of dual NAV, and all references to dual NAV in the draft.	2017/1/9 9:42
6594	John Coffey	225	1 27.2.3	152	11	E	Y	152.11 27.2.3	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42
6595	John Coffey	225	1 27.2.3	152	22	E	Y	152.22 27.2.3	Independent clauses linked by a comma without a coordinating conjunction.	Change comma to semicolon.	2017/1/9 9:42

6676	John Coffey	225	1 27.5.2.3	167	48	E	Y	167.48 27.5.2.3	Superfluous word: "that contains [...] or contains [...]". It would be reasonable to write 'That contains X or that contains contains Y", and better to write "That contains X or Y". The construction in the draft is odd.	Delete the second instance of "contains".	2017/1/9 9:42
6677	John Coffey	225	1 27.5.2.3	167	67	T	Y	167.67 27.5.2.3	UNRESOLVED TBD. DRAFTS MUST BE COMPLETE BEFORE BEING SENT TO LETTER BALLOT. IT IS UNACCEPTABLE TO HAVE ANY UNRESOLVED TBDs AND THIS SHOULD HAVE DISQUALIFIED THE LETTER BALLOT FROM BEING LAUNCHED.	Resolve the TBD.	2017/1/9 9:42
6678	John Coffey	225	1 27.5.2.3	168	46	E	Y	168.46 27.5.2.3	Rhubarb rhubarb.	Fix.	2017/1/9 9:42
6679	John Coffey	225	1 27.5.2.3	168	51	E	Y	168.51 27.5.2.3	Rhubarb rhubarb.	Fix.	2017/1/9 9:42
6680	John Coffey	225	1 27.5.2.3	168	59	E	Y	168.59 27.5.2.3	Wrong article" set to the value based on". If it's just "based on", it would be better to use the indefiniet article.	Change "the" to "a".	2017/1/9 9:42
6681	John Coffey	225	1 27.5.2.3	169	1	T	Y	169.01 27.5.2.3	Ungrammatical and confusing text: what is the "containing an UL MU Response Scheduling A-Control subfield" referring to? By setting this text off in commas, it seems it doesn't refer to the soliciting MPDU(s) (which would cause a case agreement problem). But read literally, the clause set off in commas seems to refer to the STA.	Rewrite to clarify. If the clause set off by commas referes to the soliciting MPDU(s), remove commas and correct case. If it refers to the HE trigger-based PPDU, move it earlier in the sentence, to follow "HE trigger-based PPDU".	2017/1/9 9:42
6682	John Coffey	225	1 27.5.2.3	169	8	E	Y	169.08 27.5.2.3	Missing article: "of [X], [Y], [Z] and [W] fields".	Add "the" after "of".	2017/1/9 9:42
6683	John Coffey	225	1 27.5.2.3	169	12	E	Y	169.12 27.5.2.3	Superfluous comma: "BSS_Color, and DCM". In a list of two elements where "and" is used, a comma is not needed and indeed just confuses the matter.	Delete comma.	2017/1/9 9:42
6684	John Coffey	225	1 27.5.2.3	169	35	E	Y	169.35 27.5.2.3	Wrong article: "The STA that responds". Is there just one?	Change "The" to "A".	2017/1/9 9:42
6685	John Coffey	225	1 27.5.2.3	169	41	T	Y	169.41 27.5.2.3	Inconsistent terminology: here we have "the trigger-based PPDU", whereas almost everywhere else in the draft we have "the HE trigger-based PPDU". If the same thing is intended, the same term should be used.	Change to "the HE trigger-based PPDU".	2017/1/9 9:42
6686	John Coffey	225	1 27.5.2.3	169	53	E	Y	169.53 27.5.2.3	Missing text: "and subject to".	Change to "and is subject to".	2017/1/9 9:42
6687	John Coffey	225	1 27.5.2.3	169	60	E	Y	169.60 27.5.2.3	Inconsistent terminology: here we have "MU BAR", whereas in almost every other case we have "MU-BAR". It would be better to choose one form and to stick to it.	Add hyphen.	2017/1/9 9:42
6688	John Coffey	225	1 27.5.2.3	170	15	E	Y	170.15 27.5.2.3	Awkward usage: "with a same HE trigger-based PPDU".	Change to "within the same HE trigger-based PPDU".	2017/1/9 9:42
6689	John Coffey	225	1 27.5.2.4	170	48	E	Y	170.48 27.5.2.4	Superfluous and ungrammatical "of": "multiple of 20 MHz".	Delete "of".	2017/1/9 9:42
6690	John Coffey	225	1 27.5.2.4	170	61	T	Y	170.61 27.5.2.4	A question of clarification: the AP does not have to set CS Required = 1 when all HE trigger-based frames contain an Ack or BlackAck frame. When taken together with the rest of the draft, does this mean that all solicited HR trigger-based frames may contain ONLY an Ack or BlackAck? Or may these HE trigger-based frames contain other data aggregated with or piggybacked onto the Ack or BlockAck? The latter should be clearly unacceptable, as it would permit a radical departure from the fundamental groundrules of the entire technology via the simple expedient of tacking an Ack or BlockAck onto other data.	Clarify that the condition means that all solicited HE trigger-based frames shall contain ONLY an Ack or BlockAck.	2017/1/9 9:42
6691	John Coffey	225	1 27.5.2.4	170	61	T	Y	170.61 27.5.2.4	Why is there an exception to the usual CS rules when the HE trigger-based frames contain an Ack or BlockAck? The CS rules are there to ensure coexistence, and any departure from them needs to be justified by (at least) a demonstrated infeasibility of any alternative. Here that has not been demonstrated and it seems it could not be demonstrated: the existing rules have served the technology very well, including Acks and BlockAcks.	Remove the exception for the case where all solicitied HE trigger-based PPDUs contain an Ack or BlockAck.	2017/1/9 9:42

6692	John Coffey	225	1 27.5.2.4	170	63	T	Y	170.63 27.5.2.4	It seems from this text that an AP can unilaterally permit STAs to transmit "without regard to the busy-idle state of the medium" (line 56 above) for a time up to 584 microseconds (line 2 of the next page). Yes, there are some restrictions, but on the other hand we should note that when this permission is granted, mutliple STAs are simultaneously permitted to ignore the normal rules. This seems very strange. No such permission should ever be given unless there is a strong showing of necessity, which doesn't seem to be the case here. Even if the mechanism is included, there should be much stronger safeguards before it is invoked.	Delete the CS Required bit and all text associated with CS Required = 0 in the draft.	2017/1/9 9:42
6693	John Coffey	225	1 27.5.2.5	171	11	E	Y	171.11 27.5.2.5	"to assist its AP in allocating UL MU resources in an efficient way." In a technical specification, there should be minimal advocacy / advertising / marketing: the text should be kept as factual as possible. In this case, what is gained by the inclusion of the words "in an efficient way", and how would the meaning change is they are deleted?	Delete "in an efficient way".	2017/1/9 9:42
6694	John Coffey	225	1 27.5.2.5	171	40	E	Y	171.40 27.5.2.5	Superfluous text, apparently left over from editing notes: "(#2190, #2191)".	Delete.	2017/1/9 9:42
6695	John Coffey	225	1 27.5.2.5	171	41	T	Y	171.41 27.5.2.5	Incomplete cross-reference: "Table 9-XX".	Add full table number.	2017/1/9 9:42

6709	John Coffey	225	1 27.5.2.6.2	173	50	T	Y	173.50 27.5.2.6.2	"If the selected RU is considered busy": this raises the question of how HE devices in OBSSs should consider the initial tirgger frame, assuming they are able to decode it. One plausible rule is that they should interpret the medium as busy, just as if an initial CTS-to-Self had been transmitted (even though the following transmission(s) will be UL from other STAs, not DL by the original trransmitter). But another way of looking at it is that as a policy issue, we're in a contention-based access mode, albeit one that only HE devices understand, and that devices in OBSSs may still contend for the medium and use it if it's idle. It's not clear which of these is intended here; perhaps the OBSS STAs simply set their Inter-BSS NAV and we have the first possibility by default. If so, it seems the wrong approach. The amendment is supposed to provide high efficiency in dense environments and as a	Clarify the rules for HE devices in OBSSs. Clarify or specify, as appropriate, that such devices may access the medium notwithstanding receipt of the initial trigger frame.	2017/1/9 9:42
6710	John Coffey	225	1 27.5.2.6.2	173	52	E	Y	173.52 27.5.2.6.2	Grammatical error: "does not decrements". It either "decrements" or "does not decrement".	Change to "does not decrement".	2017/1/9 9:42
6711	John Coffey	225	1 27.5.2.6.2	174	19	T	Y	174.19 27.5.2.6.2	How does coexistence with deployed legacy devices, especially those in OBSSs, work? Here it seems that the HE AP transmits an initial trigger frame, which holds all devices within range off the medium for the signaled duration. Perhaps HE devices in OBSSs may still transmit (this is not clear), but certainly legacy devices in OBSSs cannot. These legacy devices may suffer a huge loss of access to the medium if use of this mode becomes prevalent. Essentially, instead of the HE non-AP STAs that take advantage of this mode having to fight their own way to the top via ordinary EDCA, their AP unilaterally seizes the medium with AP priority and these devices then share the rarified space with each other. This is far too favorable to HE devices and some controls are necessary. At the very least recomemnded practices for best behavior need to be specified.	Provide specifications for recommended behavior for APs that use this mode, that will have the effect of allowing fair access to the medium by legacy devices in OBSSs. (Note: a sketch of one approach that would be acceptable can be found in doc. IEEE 802.11/16-0102r1, slides 20-23.)	2017/1/9 9:42
6712	John Coffey	225	1 27.5.2.6.2	174	19	T	Y	174.19 27.5.2.6.2	In some ways the random access OFDMA modes are an odd fit for the 11ax project: one of the main benefits of OFDMA is the potential increase in efficiency from the removal of most contention-based overhead (collisions, RTS, CTS, unused backoffs slots). This potential increase in efficiency may provide a net gain even after accounting for the new, considerably longer, HE preambles. But with random access OFDMA we still have the contention overhead but now with the new, longer, preambles as well. Perhaps there's an arguable potential range difference, but once again range extension isn't part of the project. A stronger justification is that 11ax will involve OFDMA as a major component, and it's difficult to jump straight from contention-based access to fully scheduled operation; perhaps there should be a way of bridging the two modes of operation. However even	Permit the AP to send an immediate supplementary frame identifying RU's and for each RU a list of STAs. These STAs may access the RU if it's not already in use. If none on the list does (or are seen to do so), other STAs start counting down their OCW backoff counters as in the current draft.	2017/1/9 9:42

6759	John Coffey	225	1 27.9.1	190	7	T	Y	190.07 27.9.1	How do the spatial reuse modes help the goal of power saving, as is asserted here? Under legacy rules a STA simply evaluates the power of the incoming frame and if it exceeds the threshold, the STA stops there. The new rules involve various attempts to read further into the incoming frame to decide whether it's intra-BSS or inter-BSS, which has to consume more power, not less. It would be confusing and misleading to list power saving as an "objective" if no net power saving occurs.	Delete "and power saving".	2017/1/9 9:42

6760	John Coffey	225	1 27.9.1	190	11	T	Y	190.11 27.9.1	Use of undefined term: apparently when conditions are right for an "SR PPDU", an HE STA may go ahead and transmit an "SR PPDU". But what is an "SR PPDU"? The term appears nowhere in the draft except for this sentence.	Provide a definition for SR PPDU.	2017/1/9 9:42
6761	John Coffey	225	1 27.9.2.1	190	24	T	Y	190.24 27.9.2.1	"The received PPDU is an Inter-BSS PPDU" (as in 27.2.1). This excludes one of the main cases where spatial reuse might may some promise: an HE STA finishes transmitting and starts assessing the medium again, and finds that there are ongoing frames being transmitted. Perhaps the STA could conclude that these must be Inter-BSS (though that would require changes in 27.2.1, because it doesn't seem to be there now), but that would cause all Inter-BSS PPDUs to be subject to interference, and would vitiate the other conditions further below in this same section. However there is a way: there is already the concept of SR_Delay in the draft, and (assuming that this isn't shorthand for SRP_Delay, but instead a delay for all spatial reuse) the delay could be set to a uniform length that's long enough for reasonable PPDUs to finish. So: HE STA finishes its transmission, starts	Rewrite the spatial reuse modes to eliminate the required classifcation into Inter-BSS and Intra-BSS, and add a uniform delay before spatial reuse may take effect, this delay to exceed a reasonable fragment size for legacy devices.	2017/1/9 9:42
6762	John Coffey	225	1 27.9.2.1	190	36	T	Y	190.36 27.9.2.1	Almost the entire OBSS_PD mode / SRP mode lacks basic protections to prevent matters from going disastrously wrong, as is all too possible. Unlike virtually any other mode, 'bad' OBSS_PD decisions are not automatically self-righting (as too ambitious an MCS would be, for example) and do not have a natural limit to the damage that can be caused (as nnecessary use of RTS/CTS would be, for example). Worse, the effects of a 'bad' OBSS-PD decision will typically not be felt by the offending device, but instead by a victim device in a different BSS, with no messaging system provided to alert any devices in the system to the problem. This is likely to cause particularly severe problems for already deployed non-HE devices, which have been designed without taking into the account the possibility that 802.11 might later adopt such a scheme. However there is one small bright spot: the text	Modify so that the medium cannot be declared idle until at least enough time has passed that a minimum length fragment can be transmitted and acknowledged.	2017/1/9 9:42
6763	John Coffey	225	1 27.9.2.1	190	51	E	Y	190.51 27.9.2.1	Sentence lacks a verb: "SR Backoff procedure for SR delayed case". Is this a failed subheading?	Change to subheading or delete.	2017/1/9 9:42
6764	John Coffey	225	1 27.9.2.1	190	59	E	Y	190.59 27.9.2.1	Awkward phrasing / missing text: "and not update".	Change to "and has not updated".	2017/1/9 9:42
6765	John Coffey	225	1 27.9.2.1	190	60	T	Y	190.60 27.9.2.1	"the HE STA may resume its backoff procedure when the medium condition is IDLE". The timing involved is severely underdefined. In ordinary operation, a channel assessment is carried out at the beginning of a slot, and if the channel is idle, the backoff counter counts down before the end of the slot, thus preserving synchronization along slot boundaries. With the OBSS_PD rules, the HE STA must perform all sorts of assessments of the incoming PPDU, extending well past the initial slot boundary and possibly / probably not ending near a slot boundary. When it finally declares the medium is idle and resumes backoff countdown, does it do so immediately or in synchronization with the original slot boundaries or in synchronization with the slot boundaries of the OBSS PPDU? This is not specified in the draft.	Specify it.	2017/1/9 9:42

6766	John Coffey	225	1 27.9.2.1	190	60	T	Y	190.60 27.9.2.1	The issue of the timing of channel idle decisions psoses problems for fairness between HE devices. Compare two similarly situated HE STAs in the same BSS, STA A and STA B. Each sees an OBSS PPDU at essentialy the same power, but STA A makes the decision that the received frame is Inter-BSS marginally faster. Clearly STA A gains an advantage in medium access over STA B. By itself this might not necessarily be bad, if STA A does so by virtue of better processing. But as it is, it will be very difficult for an outsider to verify just how STA A has made its decision, since much depends in the received power levels at the STA's antenna connector, which will not be available to an outsider. Essentially STA A could deliver itself a meaningful and recurring advantage in channel access over STA B, perhaps by cutting a few non-observable corners. This is an undesirable state of affairs that	Specify a standardized delay (number of slots) for the decision to be made.			2017/1/9 9:42
6767	John Coffey	225	1 27.9.2.2	191	3	T	Y	191.03 27.9.2.2	With the definitions in the rest of the draft, the sentence "Adjusting the OBSS_PD level and transmit power can improve the system level performance and the utilization of the spectrum" is one-sided and incomplete. It would be at least equally true to say that adjusting the OBSS_PD level and transmit power can degrade system level performance and utilization of the spectrum, perhaps disastrously so. if the subject is to be raised at all, then basic respect for truth and objectivity should demand a balanced discussion with ample warning of the potential negative effects, not a biased piece of advertising fluff.	Delete the sentence.			2017/1/9 9:42
6768	John Coffey	225	1 27.9.2.2	191	24	T	Y	191.24 27.9.2.2	The adjustments in OBSS_PD shown in this diagram represent a great increase in the level of interference that will be seen by the intended receiver of the frame that is currently under way. *Every* device that is permitted to transmit under current rules will still be allowed to transmit under the rule in the diagram. In addition, many more devices will be allowed to transmit. Even worse, *every* new device that is allowed to transmit will be allowed to do so at a transmit power level that results in the maximum level of interference that would apply under the existing rules: essentially the rule requires the new, interfering transmitter to reduce its transmit power, but only by just enough to get the interference down to that existing maximum. The justifications that have been given for this radical departure from prior practice seem extraordinarily weak, and essentially seem to boil down	Remove the entire OBSS_PD mode and all references to it and all modes that enable it in whole or in part from the draft.			2017/1/9 9:42
6769	John Coffey	225	1 27.10.2	192	41	E	Y	192.41 27.10.2	Incorrect form of indefinite article: "an DL". If the term is to stay in the same form, this needs to be changed.	Change "an" to "a".			2017/1/9 9:42
6770	John Coffey	225	1 27.10.2	192	41	E	Y	192.41 27.10.2	Inconsistent terminology: in "DL HE MU PPDU", the STA type is in the middle, whereas in practically every oher instance the type is at the beginning.	Change "DL HE MU" to "HE DL MU".			2017/1/9 9:42
6771	John Coffey	225	1 27.10.3	193	22	T	Y	193.22 27.10.3	Use of undefined term: "Single MPDU". From the capitalization, it must be inferred that this is a defined term, but where is the definition? The draft also uses "single MPDU", and for good measure both "VHT Single MPDU" and "VHT single MPDU". The baseline	Clarify.			2017/1/9 9:42
6772	John Coffey	225	1 27.10.4	194	35	T	Y	194.35 27.10.4	Use of undefined term: HE ER SU PPDU.	Provide a definition.			2017/1/9 9:42

6773 John Coffey	225	1 27.10.4	195	38	E	Y	195.38 27.10.4	Inconsistent terminology: in "DL HE MU PPDU", the STA type is in the middle, whereas in practically every oher instance the type is at the beginning.	Change "DL HE MU" to "HE DL MU".	2017/1/9 9:42
6774 John Coffey	225	1 27.11.3	196	30	E	Y	196.30 27.11.3	List of two elements connected only by a comma.	Delete comma and add "or".	2017/1/9 9:42
6775 John Coffey	225	1 27.11.4	196	59	E	Y	196.59 27.11.4	"not a member of a transmitting STA's BSS": why "a"? Could this be anything other than *the* STA referenced in the previous sentence?	Change "a" to "the".	2017/1/9 9:42
6776 John Coffey	225	1 27.11.4	197	3	E	Y	197.03 27.11.4	"to the value of the value": is there some distinction intended from the simpler and more natural "to the value"?	Delete "of the value".	2017/1/9 9:42

6784 John Coffey	225	1 27.14.1	199	30	T	Y	199.30 27.14.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6785 John Coffey	225	1 27.14.1	199	36	T	Y	199.36 27.14.1	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6786 John Coffey	225	1 27.16.2	206	25	T	Y	206.25 27.16.2	"An HE AP may choose to change the BSS Color under certain conditions". That's not what was said back on page 196 (lines 43-44), where HE STAs had to use the same BSS Color for the lifetime of the BSS. The reader shouldn't have to flip backwards and forwards through the specification to see if apparently definitive requirements are countermanded by statements far away.	Reconcile the two statements at issue. For example, add some "Except when ..." qualifier to the earlier statement.	2017/1/9 9:42
6787 John Coffey	225	1 27.16.2	206	27	T	Y	206.27 27.16.2	"one other OBSS AP in the neighborhood that uses the same color as the BSS Color of its BSS". Sorry, this is quite muddled. Defined terms need to be capitalized; otherwise they retain their everyday meaning. So "color", lower case, is an actual color of the rainbow. The color of the AP depends on how it is painted. The BSS doesn't have a color. The draft uses colloquial shortcuts that aren't even short: why not simply say "one other OBSS AP in the neighborhood that uses that same BSS Color"?	Change to "one other OBSS AP in the neighborhood that uses the same BSS Color".	2017/1/9 9:42
6788 John Coffey	225	1 27.16.2	206	29	E	Y	206.29 27.16.2	"The algorithm to choose a new BSS Color is beyond the scope of this standard." Why "the" algorithm? Is there just one?	Change to "Methods and criteria for choosing a new BSS Color are beyond the scope of this standard".	2017/1/9 9:42
6789 John Coffey	225	1 27.16.2	206	51	T	Y	206.51 27.16.2	Unnecessary variant used for defined term: "BSS color". The term is "BSS Color".	Change to "BSS Color".	2017/1/9 9:42
6790 John Coffey	225	1 27.16.2	206	54	E	Y	206.54 27.16.2	Inconsistent usage: "A HE AP". Almost everywhere else in the draft we have "An HE".	Change "A" to "An".	2017/1/9 9:42

6791	John Coffey	225	1 27.16.2	206	59	E	Y	206.59 27.16.2	Inconsistent usage: "A HE AP". Almost everywhere else in the draft we have "An HE".	Change "A" to "An".	2017/1/9 9:42
6792	John Coffey	225	1 27.3.16.1	207	6	T	Y	207.06 27.3.16.1	Unclear and ambiguous description of normative behavior: "The QTP (quiet time period) defines a period for STA-to-STA operation during which only the HE STA which supports the STA-to-STA operation can transmit frames". Where in the draft is this "STA-to-STA operation" defined? If there are multiple HE (non-AP) STAs that support this STA-to-STA operation, may (or "can") all of them transmit frames during any QTP, or is it only the "requester" HE STA that may do so?	Clarify.	2017/1/9 9:42
6793	John Coffey	225	1 27.3.16.1	207	6	T	Y	207.06 27.3.16.1	Incorrect (or at least unclear) use of definite article: "the HE STA which". Is there only one such HE STA?	Clarify.	2017/1/9 9:42
6794	John Coffey	225	1 27.3.16.1	207	6	T	Y	207.06 27.3.16.1	Incorrect (or at least unclear) use of definite article: "the STA-to-STA operation". Is there only one such STA-to-STA operation?	Clarify.	2017/1/9 9:42
6795	John Coffey	225	1 27.3.16.1	207	6	T	Y	207.06 27.3.16.1	Contradictory statements about normative behavior: in the first sentence the quiet time period is described as a period "during which only [...] [one?] HE STA may transmit frames", but in the second and third sentences of the same paragraph we have statements that other HE STAs "should" remain quiet during these periods. So is it madatory or optional for other HE STAs to stay quiet?	At minimum, change "may" to "should" in the first sentence. Reword furtehr as appropriate to remove the awkwardness.	2017/1/9 9:42
6796	John Coffey	225	1 27.3.16.1	207	7	T	Y	207.07 27.3.16.1	Compare the statements "During the period an HE STA should not transmit frames unless it participates in the STA-to-STA operation" and "All HE STAs in the HE BSS not participating in the STA-to-STA operation should stay quiet during the period", which we have in consecutive sentences. What does the latter sentence add to the description of the recommended behavior for a non-participating HE STA? It seems to be a subset of the behavior described in the former sentence (since it repeats the recommended behavior but limits the recommendation to HE STAs in the (same?) HE BSS).	If the latter sentence adds anything, explain. If not, delete the sentence.	2017/1/9 9:42
6797	John Coffey	225	1 27.3.16.2	207	19	E	Y	207.19 27.3.16.2	Mismatched terms: "Quiet Time Period Operation (Figure 27-8 (Quieting time period operation)". Is is Quiet or Quieting?	Pick one term and stick to it.	2017/1/9 9:42
6798	John Coffey	225	1 27.3.16.2	207	52	T	Y	207.52 27.3.16.2	Ambiguous text: "if a Quiet Time Period Response frame is received with". Are we supposed to understand that the reception is by the "requester" HE STA? If so, why not say so?	Change "ir received with" to is received by the requester HE STA with".	2017/1/9 9:42
6799	John Coffey	225	1 27.3.16.2	207	52	E	Y	207.52 27.3.16.2	Awkward phrasing: "with the matching dialog token and response token".	Change to "with dialog toekn matching the response token" or some other less awkward wording.	2017/1/9 9:42
6800	John Coffey	225	1 27.3.16.2	207	52	E	Y	207.52 27.3.16.2	Run-on text with unclear intended parsing: "If [a frame] is received with the matching dialog token and response token with a status code set to a value of SUCCESS". Is it the response token or the frame that has the status code?	Clarify. Inserting a comma somewhere might suffice.	2017/1/9 9:42
6801	John Coffey	225	1 27.3.16.2	207	57	T	Y	207.57 27.3.16.2	Use of undefined term: "the Quite Time Period". Quite what?	Change "Quite" to "Quiet".	2017/1/9 9:42
6802	John Coffey	225	1 27.16.3.2	207	57	T	Y	207.57 27.16.3.2	Unclear and possibly garbled text: "the requested HE STA". What does this mean? Elsewhere in the same section we have "requester" HE STA so perhaps this is a misprint.	Change "requested" to "requester".	2017/1/9 9:42

6803 John Coffey	225	1 27.16.3.2	207	57	T	Y	207.57 27.16.3.2	Descriptive language used where it seems normative language must have been intended: the HE STA "can" transmit frames. The ability of the HE STA to transmit frames is not in question; presumably what is meant is that in the circumstances described, the HE STA is permitted to transmit frames.	Change "can" to "may".	2017/1/9 9:42
6804 John Coffey	225	1 27.16.3.2	207	57	T	Y	207.57 27.16.3.2	Unclear and ungrammatical text: "can transmit frames belongs to the requested type of STA-to-STA operation". What does this mean?	Clarify.	2017/1/9 9:42
6805 John Coffey	225	1 27.16.3.2	207	57	T	Y	207.57 27.16.3.2	Imprecise (possibly) normative text: "When a Quiet Time Period Setup frame is received, the requested(/r) HE STA can/may transmit". Isn't the whole point that that these "quiet times" repeat themselves periodidcally up to some limit, potentially at least? So whatever is being described here, it can't be the period immediately after reception of the setup frame.	Add appropriate text to clarify when the requester HE STA can or may transmit whatever it is supposed to be transmitting under this protocol.	2017/1/9 9:42
6806 John Coffey	225	1 27.16.3.2	207	58	T	Y	207.58 27.16.3.2	Normative text tied entirely to vendor specific elements: "the requested [requester?] HE STA can [may?] transmit frame belongs [?] to the requested type of STA-to-STA operation indicated by the vendor specific service identifier". Normally vendor specific behavior is outside the scope of the standard, but here we have an elaborate new protocol whose behavior is defined entirely in terms of vendor specific behavior. Are we allowed to mix normative text and vendor specific definitions in this way? And even if we are allowed to, should we? What is gained?	Change "frame" to "frames" and delete the text from "belongs to" to the end of the sentence.	2017/1/9 9:42
6807 John Coffey	225	1 27.16.3.2	207	59	T	Y	207.59 27.16.3.2	There's something odd about the entire discussion in subsection c. On the surface it seems to discuss the frames that may be sent in a QTP. But earlier, in 27.16.3.1, it is stated that non-participating HE STAs "should" not transmit during a quiet period. From this we can infer that remaining quiet during this "quiet period" is optional, and any and all HE STAs may transmit any frames they like during the same period. So what role does subsection c play? Where does the behavior it describes fall on the shall / should may spectrum?	Reword to clarify the role this subsection plays. Assuming that we keep the "should"s in 27.16.3.1, perhaps the best that can be done is to recast this subsection as a suggested example of what can be done. ("For example, an HE STA may ... .')	2017/1/9 9:42
6808 John Coffey	225	1 27.16.3.2	207	62	E	Y	207.62 27.16.3.2	Missing word: "inform the AP the type".	Change to "inform an AP of the type".	2017/1/9 9:42
6809 John Coffey	225	1 27.16.3.3	208	5	T	Y	208.05 27.16.3.3	Mandatory requirements embedded in optional mode: earlier it's stated that an AP "may" operate this way, but here we have a "shall". If this is just an illustrative example, it is confusing and inappropriate to have mandatory language included.	Reword to eliminate the "shall". If the idea is to describe some sort of conditionally mandatory behavior, then reword the introductory language to make it clear that this is an optional mode rather than simly an illustrative example.	2017/1/9 9:42
6810 John Coffey	225	1 27.16.3.3	208	11	T	Y	208.11 27.16.3.3	Mandatory requirements embedded in optional mode: earlier it's stated that an AP "may" operate this way, but here we have a "shall". If this is just an illustrative example, it is confusing and inappropriate to have mandatory language included.	Reword to eliminate the "shall". If the idea is to describe some sort of conditionally mandatory behavior, then reword the introductory language to make it clear that this is an optional mode rather than simly an illustrative example.	2017/1/9 9:42
6811 John Coffey	225	1 27.16.3.3	208	13	E	Y	208.13 27.16.3.3	Incorrect article: "the copy". Is there just one?	Change to "a copy".	2017/1/9 9:42
6812 John Coffey	225	1 27.16.3.3	208	23	E	Y	208.23 27.16.3.3	Missing article" "the Quiet Period Duration field of Quiet Period Setup frame".	Change to "the Quiet Period Duration field of a Quiet Period Setup frame".	2017/1/9 9:42
6813 John Coffey	225	1 27.16.3.3	208	23	T	Y	208.23 27.16.3.3	Incorrect use of definite article: "to the value no larger". Is there just one?	Change to "to a value no larger".	2017/1/9 9:42

6814 John Coffey	225	1 27.16.3.3	208	35	T	Y	208.35 27.16.3.3	During these "quiet periods", other HE STAs that follow the recomemnded procedure are held off the air. But there is no requirement that the requester HE STA actually has to transmit anything. Thus we have a procedure that permits STAs to reserve the medium without any requirement that it should actually be used, or any convenient method of terminating its use if the requester HE STA does not transmit (or is not allowed to transmit, under the CCA rules). This is the epitome of bad practice. The recommended practice should be modified so that other HE STAs are allowed to transmit once it becomes clear that this quiet period is not going to be used.	Modify the "should" statements in 27.16.3.1 to something appropriately shorter than the fll quiet period.		2017/1/9 9:42
6815 John Coffey	225	1 27.16.3.3	208	35	T	Y	208.35 27.16.3.3	In the illustrative example of behavior by the AP, we have the statement that the AP "shall" schedule the quiet period(s) according to the accepted request. The dividing line between mandatory and optional is very murky here since the example is introduced with a "may". But taking the "shall" at face value, we have the peculiar situation where a requester HE STA may request many repetitions of a quiet period, then not transmit during the first few quiet periods, and the AP would still be compelled to issue new QTP setups according to the original schedule. This is bad practice. Requests to hold the medium silent for transmissions that never arrive should not be honored.	Modify the language to make it clear (after clarifying the whole shall / should / may status of the whole mechanism) that an AP is under no obligation to issue QTP setup frames, regardless of any previously "accepted" request.		2017/1/9 9:42
6816 John Coffey	225	1 27.16.3.3	208	35	T	Y	208.35 27.16.3.3	The entire quiet time period mechanism is odd and unconvincing. Legacy devices will not understand, and will not remain quiet. Even for HE STAs, it is just a recommendation that the device "should" remain quiet, which is usually not worth anything. In a dense environment in which some devices follow the recommendation and others do not, the "quiet period" will actually be quite noisy. So what's the point? Apart from that the mechanism, even if it worked, would allow devices to make arbitrary reservations of the medium without a requirement for actually using it, and without a method of canceling unused quiet periods; even if this worked, it shouldn't be allowed.	Delete the "quiet time period" and all references to it in the draft.		2017/1/9 9:42
6817 John Coffey	225	1 28.1.1	209	18	E	Y	209.18 28.1.1	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".		2017/1/9 9:42

6818	John Coffey	225	1 28.1.4	213	51	T	Y	213.51 28.1.4	11ax suffers from a severe case of mode bloat. The amendment would be greatly improved by eliminating the great number of modes that have limited application and are of secondary importance to the main modes and project objectives. A goal of extended range appears absolutely nowhere in the PAR or CSD, yet it clutters up the amendment in many places. The HE_EXT_SU mode defined here has the feel of a slapdash add-on. Extending range in many ways works counter to the main goals of the 11ax amendment, since long-range (low-rate) modes will displace high-rate uses of the medium. If extended range is nevertheless deemed an important goal, let's do it properly by defining a new project that will consider all aspects of the problem, including the aspect of future extensibility. Shoehorning a minor mode into the 11ax amendment is the wrong way	Eliminate the HE_EXT_SU mode and all references to it in the draft.	2017/1/9 9:42
6819	John Coffey	225	1 28.1.4	213	53	T	Y	213.53 28.1.4	"Support for the HE extended range PPDU format is mandatory". When this topic was discussed and voted on, there were many questions on whether there was sufficient justification to make the mode mandatory. The questions were never answered satisfactorily, and as far as I recall no real attempt was made to provide justification. It seems the mode is designated mandatory because the proposers wished it so, and for no other substantive reason. This is a very unsatisfactory way of developing a standard. The mode seems of limited importance, and its stated benefits are entirely orthogonal to the stated goals of the project. If it is to remain in the draft at all, it should be optional only.	Change "mandatory" to "optional".	2017/1/9 9:42
6820	John Coffey	225	1 28.2.2	217	37	E	Y	217.37 28.2.2	Grammatical error: "for and HE MU PPDU".	Change to "for an HE MU PPDU".	2017/1/9 9:42
6821	John Coffey	225	1 28.2.2	217	41	E	Y	217.41 28.2.2	Missing article (inconsistent usage): "For HE trigger-based PPDU". By itself this might be acceptable in a table, were it not for contrary examples in the same entry.	Change to "For an HE trigger-based PPDU".	2017/1/9 9:42
6822	John Coffey	225	1 28.2.2	218	38	E	Y	218.38 28.2.2	Missing article (inconsistent usage): "In HE SU PPDU, ...". By itself this might be acceptable in a table, were it not for contrary examples in the same entry.	Change to "In an HE SU PPDU, ..."	2017/1/9 9:42
6823	John Coffey	225	1 28.2.2	220	14	E	Y	220.14 28.2.2	Independent clauses linked by a comma without a coordinating conjunction.	Change comma to semicolon.	2017/1/9 9:42
6824	John Coffey	225	1 28.2.2	224	7	E	Y	224.07 28.2.2	Why "and"? These frames occur one at a time.	Change "and" to "or".	2017/1/9 9:42
6825	John Coffey	225	1 28.3.3.9.1	229	50	E	Y	229.50 28.3.3.9.1	Wrong article: the PPDU format, but a PPDU.	Change "the" to "an".	2017/1/9 9:42
6826	John Coffey	225	1 28.3.3.6	238	7	E	Y	238.07 28.3.3.6	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42
6827	John Coffey	225	1 28.3.3.6	238	7	E	Y	238.07 28.3.3.6	"Only a non-AP HE STA can be a 20 MHz only STA": this is clumsily worded and confusing. Clearly 11a, 11g, and 11n STAs can (may?) be 20 MHz only STAs. It would be simpler and better to reword to exclude HE APs.	Change to "HE APs may not be 20 MHz only STAs".	2017/1/9 9:42
6828	John Coffey	225	1 28.3.3.6	238	10	E	Y	238.10 28.3.3.6	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42
6829	John Coffey	225	1 28.3.3.6	238	11	E	Y	238.11 28.3.3.6	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42
6830	John Coffey	225	1 28.3.3.6	238	13	E	Y	238.13 28.3.3.6	Inconsistent usage: here we have "non-AP HE STA", whereas almost everywhere else in the draft we have "HE non-AP STA".	Change to "HE non-AP STA".	2017/1/9 9:42

6831	John Coffey	225	1 28.3.3.8.3	239	32	E	Y	239.32 28.3.3.8.3	Inconsistent terminology: in "DL HE MU PPDU", the STA type is in the middle, whereas in practically every oher instance the type is at the beginning.	Change "DL HE MU" to "HE DL MU".	2017/1/9 9:42
6832	John Coffey	225	1 28.3.6.6	251	30	E	Y	251.30 28.3.6.6	Awkward usage: "For an X, Y, and Z". It would be more natural to write "For an X, Y, or Z", or alternatively "In X, Y, and Z PPDUs".	Change to either suggested format.	2017/1/9 9:42
6833	John Coffey	225	1 28.3.6.8	253	17	E	Y	253.17 28.3.6.8	Inconsistent (and awkward) usage: here we have "a HE trigger-based PPDU", whereas in virtually every other place in th draft, we have "an HE trigger-based PPDU".	Change to "an HE trigger-based PPDU".	2017/1/9 9:42
6834	John Coffey	225	1 28.3.6.10	253	51	E	Y	253.51 28.3.6.10	Awkward usage: "in an X, Y, and Z". It would be more natural to write "in X, Y, and Z PPDUs".	Change to "Construction of the Data field in HE SU PPDUs, HE extended range SU PPDUs, and HE trigger-based PPDUs".	2017/1/9 9:42
6835	John Coffey	225	1 28.3.6.10.1	253	57	E	Y	253.57 28.3.6.10.1	Awkward usage: "in an X, Y, and Z". It would be more natural to write "in X, Y, and Z PPDUs".	Change to "The construction of the Data field in HE SU PPDUs, HE extended range SU PPDUs, and HE trigger-based PPDUs".	2017/1/9 9:42
6836	John Coffey	225	1 28.3.6.10.2	254	39	E	Y	254.39 28.3.6.10.2	Awkward usage: "in an X, Y, and Z". It would be more natural to write "in X, Y, and Z PPDUs".	Change to "The construction of the Data field in HE SU PPDUs, HE extended range SU PPDUs, and HE trigger-based PPDUs".	2017/1/9 9:42
6837	John Coffey	225	1 28.3.7	256	22	T	Y	256.22 28.3.7	The draft adds two new optional 1024-QAM based MCSs (MCSs 10 and 11): options piled on top of options, as the 256-QAM based MCSs (MCSs 8 and 9) are also optional. The document that introduces them (15/1070r3, September 2015) is remarkably candid about the motivation. After wading through 8 pages listing 111 co-authors, we have ""average throughput enhancement of 4X' may not be so appealing to market even if it is very important technically". (!). But fear not, because "1024 QAM provides a good marketing point on 11ax". It also aims to "Keep superior to other standards in terms of modulation technology (LTE decided to use 256QAM)". These are deeply unworthy justifications for adding modes to the standard. We have been reminded repeatedly that the PAR and CSD act as a 'contract' between the Working Group and the IEEE-SA, and	Delete the 1024-QAM modes and all references and supporting modes in the draft.	2017/1/9 9:42
6838	John Coffey	225	1 28.3.7	256	30	T	Y	256.30 28.3.7	In a severely bloated amendment, we should look for ways to simplify the text and to focus on the central goals of the project. One way is to remove minor modes that are only tangentially related to the goals of the project. One of these is DCM, yet another low-rate range-extension mode in an amendment that has nothing to do with range extension. There is not one word about range extension in the PAR or CSD, yet range extension modes clutter up the draft. To the extent that low-rate modes displace use of higher ratre modes on the medium, they actually work counter to the goals of the amendment. It may very well be that range extension would make a worthy and interesting project in itself, with a carefully worked out PAR and CSD. DCM is an optional, low-rate mode that can't even be used in conjunction with other range extension modes (STBC). It's a marginal special case and the	Delete DCM and all references to it in the draft.	2017/1/9 9:42
6839	John Coffey	225	1 28.3.7	256	31	E	Y	256.31 28.3.7	Awkward usage: "in an X, Y, and Z". It would be more natural to write "for Xs, Ys, and Zs".	Change to "in HE SU PPDUs, HE trigger-based PPDUs, and HE extended range SU PPDUs".	2017/1/9 9:42

6840 John Coffey	225	1 28.3.7	256	31	E	Y	256.31 28.3.7	Inconsistent ordering of alternatives: here three possibilities are listed in the order HE SU PPDU, HE trigger-based PPDU, HE extended range SU PPDU. Elsewhere the order is different: for example there are instances where the second and third elements in the list are switched. It would be better to adopt a consistent orderng.	Change to the order HE SU PPDU, HE extended range SU PPDU, HE trigger-based PPDU.	2017/1/9 9:42
6841 John Coffey	225	1 28.3.9	264	47	E	Y	264.47 28.3.9	Inconsistent terminology: in "DL HE MU PPDU", the STA type is in the middle, whereas in practically every oher instance the type is at the beginning.	Change "DL HE MU" to "HE DL MU".	2017/1/9 9:42
6842 John Coffey	225	1 28.3.10.7.2	274	6	T	Y	274.06 28.3.10.7.2	Technical term used with incomplete or missing description: "SRP-based spatial reuse". The reference given is 27.9 but I don't find it there.	Either provide a definition for SRP-based spatial reuse or delete all mention of it from the draft.	2017/1/9 9:42
6843 John Coffey	225	1 28.3.10.7.2	274	6	T	Y	274.06 28.3.10.7.2	Apparently there are two spatial reuse modes, OBSS_PD and SRP-based. ("Apparently", because both are underdefined.) It is widely understood that having multiple different modes to accomplish the same objective is the kiss of death for all of them: cf. especially the 802.11n experience with beamforming. Having multiple modes works against the principles of standardization, reduces the chances of any one mode succeeding, and by tying up scarce Task Group resources delays the entire technology.	Either merge all spatial reuse functions into a single, unified, *standardized* mode, or delete them all from the draft.	2017/1/9 9:42
6844 John Coffey	225	1 28.3.10.7.2	274	6	T	Y	274.06 28.3.10.7.2	"Set to SR Disallowed to disallow SRP-based spatial reuse". Why restrict the disallowing only to SRP-based spatial reuse? The draft would be vastly improved if all spatial reuse can be disallowed, on a packet-by-packet basis. All types of spatial reuse, very much including OBSS_PD, have the potential to make matters worse at the victim transmitter, yet the current draft allows only the interferer to make the decision about whether to use one form of spatial reuse. (Incidentally, if we won't even insist on protection of our own transmissions, we have no standing whatsoever to object to LAA, LTE-U, WiLDEbeeste, and all the others from talking all over Wi-Fi. Honour code for one, honour code for all.) What is the downside and why is this straightforward step resisted? There may be a fear that devices "set and forget" the switchoff bit. But in fact vendors are intensely	Delete "SRP-based".	2017/1/9 9:42
6845 John Coffey	225	1 28.3.10.7.2	274	10	T	Y	274.10 28.3.10.7.2	"NOTE–This part needs further development." Well, yes! As an aside (though I think a relevant one) why does it need more development at this late stage? It must be connected with the complexity of the spatial reuse problem, which is on a vastly diffreent scale to the regular modes we consider. Adding a new 1024-QAM MCS or another power-save mode mostly affects individual links and so any problems are largely contained. Not so with spatial reuse, where everything affects everything else. A faulty spatial reuse mode or implementation could have disastrous consequences for other devices and BSSs, including the legacy installed base. We would be far better off to give this problem the respect it deserves by creating a new Task Group within 802.11 to consider it carefully, properly, and comprehensively. It can't be shoehorned into 802.11ax at this late stage. That's an aside because a	Delete spatial reuse, of whatever variety, and all references to it in the draft.	2017/1/9 9:42
6846 John Coffey	225	1 28.3.10.7.2	278	9	E	Y	278.09 28.3.10.7.2	Contraction used: "doesn't". Please don't.	Change to "does not".	2017/1/9 9:42

6900	John Coffey	225	1 1	1	1	G	Y	1.01 1		The purported goal of the ax project was to achieve a 4x improvement in system throughput in dense environments. It seems the current draft falls far short of this goal. Either there needs to be more persuasive justification, or the stated goals should be changed. N.B.: it is not remotely persuasive to cite numbers derived from extended range modes in such calculations. A mode that provides data connectivity where none would have existed under the baseline standard would provide an infinite "improvement" if we arllowed x/0 calculations, but this would be an abuse of language. No reasonable reader would interpret such a range extension as an "infinite" throughput improvement. If it had been considered important to extend range, it would have been very easy to say so. What is needed, therefore, is a showing that under a reasonable prior deployment	Provide detailed justification for the 4x improvement goal in scenarios where the 'before' deployment is credible: at a minimum, each pair of connected devices should be capable of supporting a reasonable throughput in the absence or silence of all others. In particular, do not use range extension modes in this calculation. If the current draft cannot credibly support anywhere near to a 4x improvement, as seems all too likely to be the case, then revise the PAR and CSD.		2017/1/9 9:42
6901	John Coffey	225	1 1	1	1	T	Y	1.01 1		The IEEE 802 Executive Committee has determined that the proceedings of Task Group ax were impacted by dominance by the 'DensiFi' group of companies. Since Draft 1.0 was largely developed and was completed and approved, while DensiFi was still in existence, the integrity of the draft as a whole must be considered severely compromised by the adjudged dominant behavior. While changes may now be made, the burden is on those who want to propose changes to get a 75% majority to do so. It would be better to require 75% to approve the various constituent elements of draft 1.0 affirmatively. This can be accomplished relatively easily by deleting the entire draft, and by considering motions to reapprove it feature by or section by section This might not take long if organized efficiently, and it would greatly add to the prospects for successful deployment of the	Delete the entire draft. (Reconsider the constituent elements feature by feature or section by section.)		2017/1/9 9:42
6902	Jonathan Segev	225	1 3	137	60	G	N	137.60 3		Table 10-19a TWT operation uses in alternating "first STA" "second STA" however 10.43.1 uses the terminology TWT Requesting STA and TWT Responding STA.	Replace first and second STA with TWT Requesting and TWT Responding STAs respectively.		2017/1/9 9:42

6914	Joseph Levy	225	1 3.2	6	65	T	Y	6.65 3.2		Define what a High Efficacy (HE) STA is, as this term is used throughout the amendment	Provide a definition		2017/1/9 9:42
6915	Joseph Levy	225	1 3.2	6	65	T	Y	6.65 3.2		Define what a High Efficacy (HE) non-AP STA is, as this term is used throughout the amendment	Provide a definition		2017/1/9 9:42

6916	Joseph Levy	225	1 3.2	6	65	T	Y	6.65 3.2	Define what a High Efficacy (HE) AP is, as this term is used throughout the amendment	Provide a definition	2017/1/9 9:42
6917	Joseph Levy	225	1 3.2	6	50	T	Y	6.50 3.2	The definition of high efficient dual beacon is a bit odd as it is not really a beacon but an operating mode that allow for the transmission of both a non-HE formatted beacon and an HE formatted beacon. Hence the definition should be for the mode.	rewrite the definition of the HE Dual Beacon to be for the HE Dual Beacon Mode.	2017/1/9 9:42
6918	Joseph Levy	225	1 3.2	6	50	T	Y	6.50 3.2	The term: high efficient dual beacon, HE dual beacon, or high efficient (HE) dual beacon does not appear in this amendment anywhere accept the in definitions clause. Why is this being defined, if it is not used?	Either add the term to some clauses in the amendment or delete the definition.	2017/1/9 9:42
6919	Joseph Levy	225	1 3.2	6	60	T	Y	6.60 3.2	Consider renaming the TWT scheduling STA to be a TWT scheduling AP or TWT scheduling HE AP. The text seems to indicate that all TWT scheduling STAs are HE APs - which is a very confusing statement. If TWT scheduling is only a function of a HE AP, then it should be clear that it is an AP and not just a STA.	Rename the "target wake time (TWT) scheduling STA" to be the "target wake time (TWT) scheduling AP. And correct the definition so that it is consistent.	2017/1/9 9:42
6920	Joseph Levy	225	1 3.4	6	6	T	Y	6.06 3.4	The use of DL for Downlink was used in the 802.11ah throughout the document, but was not included in the acronym list, nor is the concept of Downlink defined anywhere. So please confirm that the way DL is used in 802.11ah is constant with the way it is used in this amendment and the definition of downlink provided in 802.11-REVmc. If it is constant with the definition in 802.11-REVmc I suggest that the definition should contain the acronym as is usually done.	Update the base line defection of downlink to contain: downlink (DL).	2017/1/9 9:42
6921	Joseph Levy	225	1 3.2	6	55	T	Y	6.55 3.2	OFDMA - currently not defined in this amendment. It is not defined in base line amendment 802.11mcD8.0. It would be best to define OFDMA prior to defining non-OFDMA.	Define OFDMA	2017/1/9 9:42
6922	Joseph Levy	225	1 3.4	7	22	G	N	7.22 3.4	The base line specification uses HE to mean: Homogenous extended in HESSID. This is confusing, given the introduction of HE as High Efficacy.	Change the Abbreviation of HESSID to be H-ESSID Note this change also be made in all places HESSID is currently used in the base line specifications. There are 42 uses of HESSID in (mc) and 13 locations in ai which need to be changed.	2017/1/9 9:42
6923	Joseph Levy	225	1 3.2	6	55	T	Y	6.55 3.2	This amendment seems to introduce the 20 MHz only HE STA in 28.3.3.6, However the term is used in several other preceding subclause, therefore there should be a definition of the term.	Define 20 MHz only HE STA: e.g. "A 20 MHz only HE STA: is a HE STA that operates with 20 MHz channel width only, in frequency bands between 1 GHz and 6 GHz. A 20 MHz only HE STA operates in the primary 20 MHz channel as a mandatory mode."	2017/1/9 9:42
6924	Joseph Levy	225	1 4.3.14a	9	7	E	N	9.07 4.3.14a	Why would you insert the HE STA clause after 4.3.12? Shouldn't it be inserted 4.2.14 VHT STA?	Insert after subclause 4.3.14	2017/1/9 9:42
6925	Joseph Levy	225	1 4.3.141	9	10	G	Y	9.10 4.3.141	The 802.11ax amendment provides new capabilities/features that warrant a more explanative introduction then simply stating a list of the "new" phy/mac features and if the features are mandatory or optional. Therefore adding descriptive text as to what the new capabilities and features of a HE STA are and what the purpose and benefits of these capabilities and features are is warranted.	Provide a useful and clear introduction to the new capabilities provided by 802.11ax features, including: 1) the benefits of the of capability (e.g. provides for MU access to lower overhead and reduce congestion in 802.11 BSSs), 2) the features of 802.11ax that will enable this capability (e.g. OFDMA or MU-MIMO), and 3) for capabilities that have multiple features supporting them what the expectation/use for the features that support the capability.	2017/1/9 9:42

6926	Joseph Levy	225	1 4.3.14.a	9	32	G	Y	9.32 4.3.14.a	The 802.11ax amendment provides new capabilities/features that warrant a more explanative introduction then simply stating a list of the "new" phy/mac features and if the features are mandatory or optional. I don't believe that clause 4 is the place for stating if a feature is optional or mandatory.	Provide a introduction to the new PHY and MAC features without stating if they are Mandatory or Optional.	2017/1/9 9:42
6927	Joseph Levy	225	1 4.3.14a	9	18	T	Y	9.18 4.3.14a	Aren't all HE non-AP STAs VHT non-AP STAs? Why must a HE non-AP STA support all VHT operating bands be and VHT non-AP STA? Wouldn't an HE non-AP STA that only supports 20, 40 and 80 MHz bandwidth also be a VHT non-AP STA? Please correct or clarify the meaning of this phrase.	Change the text to read: "An HE non-AP STA is also a VHT non-AP STA"	2017/1/9 9:42
6928	Joseph Levy	225	1 4.3.14a	9	21	T	Y	9.21 4.3.14a	The phrase: "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" does not seem to make sense as it seems to require that an HE non-AP STA is only allowed to support 20 MHz channel bandwidth, while the phrase directly above states the multiple bandwidths are allowed.	Delegate the phrase: "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" or clarify what is intended by the phrase is to support	2017/1/9 9:42
6929	Joseph Levy	225	1 4.3.14a	9	21	T	Y	9.21 4.3.14a	If the intent of the phrase: "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" is to say that a mode of operation of all HE non-AP STAs is to be able to operate as a 20 MHz only HE STA, then the phase should state that,	Replace the phrase with: All HE non-AP STAs will support operation as 20 MHz only HE STAs.	2017/1/9 9:42
6930	Joseph Levy	225	1 4.3.14a	9	26	T	Y	9.26 4.3.14a	If the intent of the phrase: "An HE non-AP STA shall support operation in 20 MHz channel bandwidth only" is to say that a mode of operation of all HE non-AP STAs is to be able to operate as a 20 MHz only HE STA, then the phase should state that,	Replace the phrase with: All HE non-AP STAs will support operation as 20 MHz only HE STAs.	2017/1/9 9:42
6931	Joseph Levy	225	1 4.3.14a	9	33	G	Y	9.33 4.3.14a	While I understand that the introduction of OFDMA is a key PHY feature for HE STAs, I don't understand why stating the mandatory support of the various RUs is necessary in the General description.	Delete the Mandatory RUs supported from this subclause.	2017/1/9 9:42
6932	Joseph Levy	225	1 4.3.14a	9	43	G	Y	9.43 4.3.14a	Why is only DL MU-MIMO support for the mandatory case the only PHY feature listed. Why aren't the other non-mandatory DL MU-MIMO features listed?	Add Option Support for DL MU-MIMO modes that are not mandatory	2017/1/9 9:42
6933	Joseph Levy	225	1 4.3.14a	9	43	G	Y	9.43 4.3.14a	Option support fir 1024-QAM seems to be an adequate description of the feature, the RU restrictions do not seem necessary as a general description.	Delete the RU limits from the PHY feature	2017/1/9 9:42
6934	Joseph Levy	225	1 4.3.14a	9	48	G	N	9.48 4.3.14a	the description of the new MAC features do not clearly state why these features were introduce, the text simply implies it. It would be clearer to state why these features are being introduced and then provide some guidance on where in the specification the details of these features can be found.	Insert a paragraph introducing the need/purpose of the new MAC features.	2017/1/9 9:42
6935	Joseph Levy	225	1 8.3.5.2.2	15	21	T	Y	15.21 8.3.5.2.2	Why does the STA_INDEX need to be added? Since the STA_INDEX and the USER_INDEX seem to be basically provide the same function and both operate using the u value to provide an index for MU users. It would seem to be simpler to extend the USER_INDEX to provide the necessary function and behavior of the STA_INDEX for HE MU PPDUs. Also note that since the User_INDEX parameter is only present for a VHT MU PPDU, it would seem that a VHT STA would be very confused by presence of a STA_INDEX as it would occupy the same location in the PHY-DAT.request as the USER_INDEX would.	remove STA_INDEX and repurpose the USER_INDEX to provide the index function for HE MU PPDUs. Also rewrite the descriptive paragraphs for USER_INDEX and STA_INDEX so that it is clear what the behavior is of the USER_INDEX when used in a VHT MU PPDU and a HE MU PPDU.	2017/1/9 9:42

6936	Joseph Levy	225	1 8.3.5.3.2	15	48	T	Y	15.48 8.3.5.3.2	Why does the STA_INDEX need to be added? Since the STA_INDEX and the USER_INDEX seem to be basically provide the same function and both operate using the u value to provide an index for MU users. It would seem to be simpler to extend the USER_INDEX to provide the necessary function for HE trigger-based PPDUs.	Replace STA_INDEX with USER_INDEX.		2017/1/9 9:42
6937	Joseph Levy	225	1 8.3.5.3.2	15	56	T	Y	15.56 8.3.5.3.2	Reuse the USER_INDEX to provide the function of the STA_INDEX	Replace the sentence with: The USER_INDEX parameter is present for an HE trigger-based PPDU and indicates the index of the user in the RXVECTOR to which the accompanying DATA octet applies; otherwise, this parameter is not present.		2017/1/9 9:42
6938	Joseph Levy	225	1 8.3.5.12	16	20	G	N	16.20 8.3.5.12	The differences between the VHT and HE channel-list element behavior seems to be very minimal should this table call out different rules for VHT and HE? It seem very redundnat specification wise to duplicate large portions of the VHT PHY clause in the HE PHY clause. Wouldn't it be more efficient to make the small additions in the HE PHY clause and reference the VHT PHY clause.	Consider removing the duplicate specifications in the VHT and HE PHY clauses.		2017/1/9 9:42
6939	Joseph Levy	225	1 8.3.5.12.3	17	13	T	Y	17.13 8.3.5.12.3	In the base specification there is a Note that is part of the first paragraph which states: "NOTE--For the VHT PHY, the timing information is omitted here and is defined in 21.3.18.5 (CCA sensitivity)." If the intent was to remove the note it should be stated clearly that the note was removed. If the note is remaining, then it should be updated to include the timing information location for the HE PHY.	Either clarify that the Note is being removed or update the Note to include the HE PHY.		2017/1/9 9:42
6940	Joseph Levy	225	1 10.2.4.2	113	15	T	Y	113.15 10.2.4.2	Why is this in addition, this should just state that The HE AP, which is a QoS AP, may ...	Remove: "In addition, an" and replace it with "The". After HE AP insert: ", which is a QoS AP,"		2017/1/9 9:42
6941	Joseph Levy	225	1			G	Y		In the definition of HE AP include that all HE APs are QoS APs.	Include that all HE APs are QoS APs, Where appropriate.		2017/1/9 9:42
6942	Joseph Levy	225	1 5	10		G	N	10.00 5	I find it hard to believe that given the significant MAC features added in this amendment that there are no changes to clause 5. Are there additions to the Security services with the additional of A-PDU fragmentation? Are there additions needed to the MSDU ordering?	Insert required changes to clause 5		2017/1/9 9:42
6943	Joseph Levy	225	1 6.3.4.2.2	11	60	E	N	11.60 6.3.4.2.2	Inserting "HE Capabilities" between "AdvertisementProtocolInfo" and "VendorSpcificInfo" while correct for the mcV8.0 is not correct if one considers the other amendments. Therefore remove "AdvertixementProtocalInfo" from the list, so that the only instructions is to insert "HE Capabilities" before "vendorSpecificInfo".	Delete: "AdvertisementProtocolInfo,"		2017/1/9 9:42
6944	Joseph Levy	225	1 6.3.6.4.2	12	33	E	N	12.33 6.3.6.4.2	The entries in this table follow the order of the primitive parameter list above, therefore the new entry in the table should be located in the proper position based on the list. The instructions to the editor should say so.	Change the instruction to the editor to read: "Insert the following entry into the unnumbered table in this subclause, so that it is located proceeding the VendorSpecificInfo primitive:"		2017/1/9 9:42
6945	Joseph Levy	225	1 6.3.8.4.2	13	1	E	N	13.01 6.3.8.4.2	The entries in this table follow the order of the primitive parameter list above, therefore the new entry in the table should be located in the proper position based on the list. The instructions to the editor should say so. Change the instruction to the editor to read: "Insert the following entry into the unnumbered table in this subclause, so that it is located proceeding the VendorSpecificInfo primitive:"	2017/1/9 9:42
6950	Joseph Levy	225	1 9.3.1.9.1	34	23	T	Y	34.23 9.3.1.9.1	Changes made to the 3rd paragraph provide changes to the baseline text that while appearing to be a change do not change requirements. The baseline text should be modified in a minimal way.	Replace the first sentence with: "The RA field of the BlockAck frame that is not a Multi-STA BlockAck variant is the address of the recipient STA that requested the Block Ack.	2017/1/9 9:42
6951	Joseph Levy	225	1 9.3.1.9.1	34	23	T	Y	34.23 9.3.1.9.1	This is the frame format clause, therefore the use of the fields in the frame should not be described in this clause. The detailed use of a field in a MAC frame format should be described in the MAC clause. Therefore, remove or move to the MAC subclause the detailed requirements for the TA field in an HE-AP.	Remove or move the following text: "An HE AP that transmits a Multi-STA BlockAck frame with different values of the AID subfield in Per STA Info subfields sets the RA field to the broadcast address. An HE AP that transmits a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields sets the RA field to the address of the recipient STA that requested the Block Ack or to the broadcast address. An HE non-AP STA transmits a Multi-STA BlockAck frame with a single AID subfield or with the same values of the AID subfield in Per STA Info subfields and sets the RA field to the TA field of the soliciting frame or the address of the recipient STA whose data/management frames are acknowledged."	2017/1/9 9:42
6952	Joseph Levy	225	1 9.4.2.46	68	28	E	N	68.28 9.4.2.46	For the Multiple BSSID element shouldn't there be a restriction on including the HE Capabilities and the HE Operations elements in the Nontransmitted BSSID Profile subelement, as there is for the HT and VHT elements?	Add the restriction to including the HE Capabilities and the HE Operations elements in the Nontransmitted BSSID Profile subelement as was done for both the HE and VHT elements in 9.4.2.46.	2017/1/9 9:42
6953	Joseph Levy	225	1 10.43.1	139	57	E	N	139.57 10.43.1	The addition of command interpretations for the case where Wake TBTT Negotiation subfield=0 and Broadcast subfield=1 is not modified text as shown but is all new text. Please correct draft so this shows a new added text.	Mark the text as new text from line 57 on page 139 thru line 21 on page 140.	2017/1/9 9:42
6954	Joseph Levy	225	1 27.7.3.1	182	28	T	Y	182.28 27.7.3.1	Saying that: A TWT scheduling STA is an HE AP, is very confusing. An AP is an entity that contains one STA and provides access to the DS via the wireless medium for associated STAs. An AP comprises a STA and a distribution DSAF. So how can a STA be an HE AP.	Rewrite this section and all related sections containing the TWT scheduling STA so that it is clear that this type of STA can only exist in an HE AP or rename the TWT scheduling STA to be a TWT scheduling HE AP or a TWT scheduling AP.	2017/1/9 9:42
6955	Joseph Levy	225	1 9.3.3.1	52	13	E	N	52.13 9.3.3.1	The Beacon frame format is 9.3.3.3 in REVmcD8.0 (and in 802.11-2016) not 9.3.3.1 as shown	Correct the subclause number to 9.3.3.1	2017/1/9 9:42
6956	Joseph Levy	225	1 9.3.3.5	52	47	E	N	52.47 9.3.3.5	The subclause header is incorrect 9.3.3.5 is not Association Request frame format it is Disassociation frame format. Hence the subclause header is numbered wrong,	Correct the subclause number to 9.3.3.6	2017/1/9 9:42
6957	Joseph Levy	225	1 9.3.3.6	53	1	E	N	53.01 9.3.3.6	The subclause header is incorrect 9.3.3.6 is not the Association Response frame format it is Association Request frame format. Hence the subclause header is numbered wrong,	Correct the subclause number to 9.3.3.7	2017/1/9 9:42
6958	Joseph Levy	225	1 9.3.3.7	53	40	E	N	53.40 9.3.3.7	The subclause header is incorrect 9.3.3.7 is not the Reassociation Response frame format it is Association Response frame format. Hence the subclause header is numbered wrong,	Correct the subclause number to 9.3.3.8	2017/1/9 9:42

6960	Joseph Levy	225	1 9.4.1.62	56	1	T	Y	56.01 9.4.1.62	Should there be edits to the Operating Mode field Table 9-74 and 9-75 in 9.4.1.53. Don't the Channel Width, 160/80+80 BW, Rx NSS, and RX NSS type descriptions need to be provided for the HE STA reports? Don't the HE Capabilities of STA transmitting the Operating Mode Field for the Supported Channel Width Set and Extended NSS BW Support need to be defined for the Operating Mode field?	Add the necessary descriptions for HE Capabilities and Operating Modes.	2017/1/9 9:42
6961	Joseph Levy	225	1 10.5	122	32	T	Y	122.32 10.5	Static fragmentation is a new term introduced in this amendment. Hence the use of to define the "two" types on fragmentation now in the specification effectively breaks the existing specification, unless all mentions in the baseline specification of "fragmentation" are corrected to be "static fragmentation"	Delete the insertion "With static fragmentation"	2017/1/9 9:42
6962	Joseph Levy	225	1 10.5	122	35	T	Y	122.35 10.5	Static fragmentation is a new term introduced in this amendment. Hence the use of to define the "two" types on fragmentation now in the specification effectively breaks the existing specification, unless all mentions in the baseline specification of "fragmentation" are corrected to be "static fragmentation"	Delete the insertion "static"	2017/1/9 9:42
6963	Joseph Levy	225	1 10.5	122	39	T	Y	122.39 10.5	Delete the last sentence "Unless the conditions described in 27.3.2 (Support and requirements for dynamic fragmentation) are met, static fragmentation is used." and add a paragraph defining the new feature of dynamic fragmentation.	Delete: "Unless the conditions described in 27.3.2 (Support and requirements for dynamic fragmentation) are met, static fragmentation is used." Insert a new paragraph to describe the new feature. e.g. "In addition to supporting fragmentation HE STA may also support dynamic fragmentation as described in 27.3.2 ....."	2017/1/9 9:42
6964	Joseph Levy	225	1 10.5	122	46	T	Y	122.46 10.5	Do not change this paragraph as changing it breaks the specification for all non-HE STAs. Instead add an additional paragraph providing the fragmentation limitation for HE STAs.	Remove all changes to this paragraph. If necessary insert a new paragraph that provides the length limitations and behavior of fragmentation for HE STAs.	2017/1/9 9:42
6965	Joseph Levy	225	1 10.1	127	64	T	Y	127.64 10.1	Why is it a requirement that an HE STA not send a Control Wrapper frame to another ED STA? Since most HE STAs will also be HT and VHT STAs and can process a Control Wrapper frame, why the restriction?	Remove this requirement: "An HE STA shall not send a Control Wrapper frame to another HE STA."	2017/1/9 9:42
6966	Joseph Levy	225	1 10.12	128	6	T	Y	128.06 10.12	The ability to indicate support for reception of fragmented A-MSDUs in a feature introduced in this amendment. Hence placing the requirement in the general A-MSDU operation section as if it meaningful to all STAs breaks the specification. In addition the concept of building up an A-MSDU only to then break it into fragments in several MPDUs does not make sense to me. What is the benefit?	Delete the changes to this paragraph. If there are benefits of fracturing an A-MSDU then add a separate paragraph stating that it is possible for an HE-STA to fragment an A-MSDU.	2017/1/9 9:42
6967	Joseph Levy	225	1 10.13.1	128	21	T	Y	128.21 10.13.1	Why complicate the phasing of sentence, leave it in its simple form. The concept of changing base line text to include the HE corner case where a A-MPDU contains multiple TID fields seems to be unnecessary, wouldn't it be easier to simply add a sentence or paragraph to deal with then exception for the HE case? This would yield a different resolution to the one proposed.	Change the sentence to read: "When an A-MPDU contains multiple QoS Control fields, bit 4 of these QoS Control fields shall be identical and bits 8-15 of these QoS Control fields shall be identical for MPDUs with the same the TID subfield value."	2017/1/9 9:42

6968	Joseph Levy	225	1 10.13.2	128	36	T	Y	128.36 10.13.2	The inserted sentence makes no sense as it is written. The requirement should be based on the HE Capabilities element, which requires: "If the HE STA does not include VHT Capabilities element, the Maximum A-MPDU Length Exponent subfield in HE Capabilities element combined with the Maximum A-MPDU Length Exponent subfield in HT Capabilities element indicate the maximum length of A-MPDU that the STA can Receive where EOF padding is not included in this limit." Therefore correct the requirement. Since the requirement only relates to the HE STA, I think it needs to say so.	Replace the inserted sentence: "A STA indicates in the Maximum A-MPDU Length Exponent field in its HE Capabilities element the maximum length of the AMPDU pre-EOF padding that it can receive in an HE PPDU." With: "For an HE STA the maximum A-MPDU length the STA can receive pre-EOF padding is indicated in the VHT capabilities element, or if the VHT capabilities element is not included then the maximum A-MPDU length the STA can receive pre-EOF padding is indicated by combining the Maximum A-MPDU Length Exponent subfield in HE Capabilities element combined with the Maximum A-MPDU Length Exponent subfield in HT Capabilities element."		2017/1/9 9:42
6969	Joseph Levy	225	1 10.13.2	128	41	T	Y	128.41 10.13.2	Table 9-249 (Subfields of the VHT Capabilities Information field) may also apply to HE PPDUs	Add: "... and may apply to HE PPDUs"		2017/1/9 9:42
6970	Joseph Levy	225	1 10.13.2	128	39	T	Y	128.39 10.13.2	Table 9-163 (Subfields of the A-MPDU Parameters field) may also apply to HE PPDUs	Add: "... and may apply to HE PPDUs"		2017/1/9 9:42
6971	Joseph Levy	225	1 10.13.3	128	40	T	Y	128.40 10.13.3	Table 9-229 (HE Ca[abilities element) may also apply to HE PPDUs	Add: "... and may apply to HE PPDUs"		2017/1/9 9:42
6972	Joseph Levy	225	1 10.13.3	128	58	T	Y	128.58 10.13.3	The length of an A-MPDU pre-EOF padding that an HE STA shall be capable of receiving is indicated by the Maximum A-MPDU Length Exponent subfield in the VHT capabilities element or by combining the information in the Maximum A-MPDU Length Exponent subfields in the HE and HT capabilities elements. Not as stated by the HE capabilities element alone	Correct the requirement so that the capabilities of the HE STA is correctly described, as noted in the comment.		2017/1/9 9:42
6973	Joseph Levy	225	1 10.13.3	129	6	T	Y	129.06 10.13.3	The length of an A-MPDU pre-EOF padding that an HE STA shall be capable of receiving is indicated by the Maximum A-MPDU Length Exponent subfield in the VHT capabilities element or by combining the information in the Maximum A-MPDU Length Exponent subfields in the HE and HT capabilities elements. Not as stated by the HE capabilities element alone	Correct the requirement so that the capabilities of the HE STA is correctly described, as noted in the comment.		2017/1/9 9:42
6974	Joseph Levy	225	1 10.28.3	136	31	T	Y	136.31 10.28.3	Why is this requirement in a note. I do not see a requirement anywhere in the specification for the HE RD initiator, except in this section. Hence this should either be a normative statement or should not be in the amendment.	Remove the Note. Add a normative statement if required.		2017/1/9 9:42
6975	Joseph Levy	225	1 10.28.3	136	40	T	Y	136.40 10.28.3	Why is this behavior specific to an HE STA and why can an HE non-AP STA use RD in any TXOP?	Clarify this behavior		2017/1/9 9:42
6976	Joseph Levy	225	1 9.4.2.139	68	48	E	N	68.48 9.4.2.139	Why is there a non-HE in this paragraph that appears to be legacy text?	Indicate that the "non-HE" in this text is added text or explain why it is legacy text.		2017/1/9 9:42
6977	Joseph Levy	225	1 9.4.2.139	68	50	E	N	68.50 9.4.2.139	Why is there a non-HE in this paragraph that appears to be legacy text?	Indicate that the "non-HE" in this text is added text or explain why it is legacy text.		2017/1/9 9:42
6978	Joseph Levy	225	1 10.28.3	136	50	T	Y	136.50 10.28.3	The addition of Multi-STA BlockACK to the list of frames for behavior of a non-HE RD initiator, breaks the specification because a non-HE RE initiator does not know what a Multi-STA BlockACK is as this an HE concept	Delete "Multi-STA BlockAck"		2017/1/9 9:42
6979	Joseph Levy	225	1 10.28.3	136	50	T	Y	136.50 10.28.3	Insert a requirement that an HE RD initiator shall be able to transmit a +HTC or DMG frame with the RDG/More PPDU subfield set to 1 that requires a response of a Multi-STA BlockAck frame.	Insert a requirement for A HE RD initiator, as suggested in the comment.		2017/1/9 9:42
6980	Joseph Levy	225	1 10.28.4	137	10	T	Y	137.10 10.28.4	The use of the word "while" is not appropriate. While is usually used to connote that something only occurs during a specific time, i.e. while something else is happening. It is not used to indicate alternative behavior.	delete the word "while"		2017/1/9 9:42

6981	Joseph Levy	225	1 10.28.4	137	19	T	Y	137.19 10.28.4	The use of the word "while" is not appropriate. While is usually used to connote that something only occurs during a specific time, i.e. while something else is happening. It is not used to indicate alternative behavior.	delete the word "while"	2017/1/9 9:42
6982	Joseph Levy	225	1 11.23.1	143	64	T	Y	143.64 11.23.1	Is the HE Operation element the only required element that must be present in a TDLS setup Confirm frame for HE capable STAs. Aren't the VHT or HT Operation elements also required to establish a tunneled direct-link?	Correct the requirement for which elements shall be present in a TDLS setup Confirm frame when both STAs are HE capable.	2017/1/9 9:42
6983	Joseph Levy	225	1 27.3.1	152	41	T	Y	152.41 27.3.1	There is no need to call "legacy" fragmentation "static fragmentation", it is adequate to simply refer to it as fragmentation, with the references provided.	Delete the insertion "static"	2017/1/9 9:42
6984	Joseph Levy	225	1 27.3.1	152	41	T	Y	152.41 27.3.1	Aren't there more than on fragmentation procedure? Shouldn't this be fragmentation procedures?	Replace "procedure" with procedures"	2017/1/9 9:42
6985	Joseph Levy	225	1 27.3.1	152	42	E	N	152.42 27.3.1	The sentence describing the introduction of dynamic fragmentation is poorly worded. Please consider improving the wording. Not also that "can" is a non-normative verb and hence should not be used in a normative section. The normative verb is "may".	Replace "In addition, an HE STA can support the dynamic fragmentation procedure defined in this subclause." With: "An HE STA may also support the dynamic fragmentation procedures defined in this subclause." Also it would probably improve readability of the specification if this sentence started the next paragraph.	2017/1/9 9:42
6986	Joseph Levy	225	1 27.3.1	152	48	T	Y	152.48 27.3.1	Reading this paragraph one could interpret that dynamic fragmentation suspends all fragmentation rules in 10.2.7. I don't believe that this is the intent. Clarify that dynamic fragmentation allows for several of the fragmentation rules in 10.2.7 to be ignored, not all of them.	Clarify the paragraph so that it is clear that only some fragmentation rules in 10.2.7 do not apply to HE dynamic fragmentation.	2017/1/9 9:42
6987	Joseph Levy	225	1 27.3.1	152	51	T	Y	152.51 27.3.1	It is interesting that dynamic fragmentation provides further flexibility in aggregating the data to minimize padding - but there is no reference to dynamic fragmentation in 2.7.5 (MU operation). Either provide more information in this paragraph on how dynamic fragmentation makes MU operation more efficient, or provide some information in 2.7.5 on how dynamic fragmentation could be used to make MU operation more efficient.	Remove the reference to MU operation or provide some useful explanation as to how MU operation is improved by dynamic fragmentation.	2017/1/9 9:42
6988	Joseph Levy	225	1 27.3.2	152	58	T	Y	152.58 27.3.2	The rules defined in 10.2.7 do not list any the rules listed in this paragraph. Hence the list in this paragraph is not a list of rules defined in 10.2.7 and 10.5 which are not being followed as stated in the paragraph. These all seem to be new additional rules or behaviors.	Either provide a list of the rules from 10.2.7 and 10.5 that are now being excepted or rephrase the paragraph so that it is correct.	2017/1/9 9:42
6989	Joseph Levy	225	1 27.3.2	152	55	T	Y	152.55 27.3.2	The phrase "a dynamic fragment" does not make any sense as it is used. As the fragment, dynamic or not, is always contained in a MPDU. So a dynamic fragment can not be an MPDU as stated.	Correct the sentence to so that it is a meaningful statement. As it is I'm not sure what the intended meaning of the sentence is.	2017/1/9 9:42
6990	Joseph Levy	225	1 27.3.2	152	63	T	Y	152.63 27.3.2	The statement that reception dynamic fragments is not mandatory, does not belong here. The requirement to receive an MPDU containing a dynamic fragmented payload may be optional, but that should be made clear in the PICs not here in the specification. The specification should only say that a STA may receive an MPDU that contains dynamically fragmented MSDU/A-MPDU/MMPDU. The restriction, if any, is that an HE AP should only send a MPDU containing dynamically fragmented MSDU/A-MPDU/MMPDU to a HE STA that can receive it.	Remove or correct this bulleted so that it is providing some useful information.	2017/1/9 9:42

6991 Joseph Levy	225	1 27.3.2	153	1	T	Y	153.01 27.3.2	The bulleted item "Fragmentation of A-MSDUs is permitted when supported by the recipient" does not really provide a useful requirement. It should be more specific. First, I believe that this item is only discussing dynamic fragmentation hence it should state that. Second, why is the only restricted to A-MSDUs, is there something special about A-MSDUs, if so it should be clear what is special. Lastly, "when supported by the recipient" should be defined. e.g. What element is set in the HE non-AP STA so that the HE AP knows that it can or cannot receive a MPDU with a dynamically fragmented A-MSDU.	Clarify the bulleted item so that the issues raised in the comment are satisfied. It is not clear to me what the intent of the bulleted item is.	2017/1/9 9:42
6992 Joseph Levy	225	1 27.3.2	153	3	T	Y	153.03 27.3.2	Assuming that the rule in 10.5 which is excepted is "The length of each fragment shall be an even number of octets, except for the last fragment of an MSDU or MMPDU, which may be either an even or an odd number of octets." this bulleted item should simply contain this rule as one which is being excepted.	Replace this bullet with: "The length of each fragment shall be an even number of octets, except for the last fragment of an MSDU or MMPDU, which may be either an even or an odd number of octets." If more exceptions need to be made to the rules in 10.5 and 10.2.7 the rules to be excepted should be listed as separate bullet items.	2017/1/9 9:42
6993 Joseph Levy	225	1 27.3.2	153	8	T	Y	153.08 27.3.2	If A-MSDUs are allowed to be fragmented then the rule that an A-MSDU shall be carried, without fragmentation, with in a single QoS Data frame, must also be noted as an exception. But, why anyone would want to fragment an A-MSDU is beyond me. If one is bothering to assemble an A-MSDU in the first place to improve transmission efficiently, why would one then need to fracture the A-MSDU, why not simply not build the A-MSDU and send the MDSUs.	Either, maintain the requirement that an A-MSDU be carried without fragmentation, by removing the possibility of an A-MSDU being fragmented in this section or state that the rule that an A-MSDU can not be fragmented does not apply to dynamic fragmentation.	2017/1/9 9:42
6994 Joseph Levy	225	1 27.3	152		T	Y	152.00 27.3	Why is there no mention of the No-Fragmentation field in the ADDBA Extension element?	Define the impact/status of the No-Fragmentation field in the ADDBA Extension element?	2017/1/9 9:42
6995 Joseph Levy	225	1 28.3.17.6.3	349	1	T	Y	349.01 28.3.17.6.3	.... in the primary 20 MHz channel within a period of aCCATime after the signal arrives at the receiver's antenna(s); then the receiver shall not issue a PHY-CA.indication(BUSY,{secondary}), PHYCCA.indication(BUSY,{secondary40}), PHY-CCA.indication(BUSY,{secondary80}), or PHYCCA.indication(IDLE) primitive while the threshold continues to be exceeded.	Question: this seems to restrict reporting on any other available frequency resource when the primary is busy - I know it was decided to do this in n and ac , but I thought this restriction was being lifted in HE? If this restriction was removed please up date the text so that it is clear that reporting on non-primary channels is allowed even if the primary is busy.	2017/1/9 9:42
6996 Joseph Levy	225	1			E	N		Also note there seems to be a lot of duplication of the VHT phy in the HE phy section. Given that the phys are so similar, especially in regard to CCA behavior, wouldn't it be more efficient to simply call out the differences in this phy section, after all all HE STAs are VHT STAs. - 28.3.17.6.	Reduce the duplication by properly referencing the VHT PHY section.	2017/1/9 9:42

6997	Joseph Levy	225	1 9	19		G	Y	19.00 9	There seems to be quite a lot of behavior description in the Frame format clause: 9. This is not desirable and should be removed to the appropriate PHY or MAC clause where the behavior should be described. As per the latest 802.11 editorial style guide (11-09/1024r11): "3.3 Frame formats (Clause 8) Clause 8 is reserved for describing structure (apart from statements in 8.1). Statements that describe the actions of a STA in order to determine a value for a field and any other behavioral specification should not be present in Clause 8. This requires a bit of interpretation. For example: "the Length field is set to the logarithm of the number of octets in the remainder of the frame" is acceptable. The act of	Remove all behavior description in this clause and relocated it in the proper PHY or MAC clause.		2017/1/9 9:42
6998	Joseph Levy	225	1			G	Y		Unfortunately, even with the additional time allowed for the review of this amendment and a significant time commitment on my part, I did not have enough time to review and comment on all of the clauses that warranted comment. It seemed that every clause I looked at required correction and comment. Given state of this draft it was very difficult for me to review high level technical features and their interactions, which I believe is critical for a complete technical review of the amendment. I was forced to spend most of my time trying to figure out what the technical features were and how they should be correctly described/specified. The lack of clear feature descriptions in clause 4 further hampered my ability to review and understand the goals and purpose of the new HE features. It was very difficult to understand how the HE features should work with the existing features in the	Improve the descriptions in clause 4, so that there is a useful description as to what the new features are and how they work together and with legacy features to provide improved performance. In hindsight, given the current state of the amendment it would have made more sense to do a TG review prior to sending the amendment in its current form to the WG for letter ballot. In addition it would be helpful if all of the authors of this document were familiar with the 802.11 Editorial Style Guide or if is not possible for the authors to follow the Style Guide that the editor(s) provide more in depth editing prior to submitting this amendment to WG letter ballot again. I understand that many members wish to quickly complete this amendment, but in my view it would be a mistake to lower the quality of the specification simply to speed things along. I don't see how any voter who reviewed	2017/1/9 9:42
6999	Joseph Levy	225	1 27.5.2.3	167	59	T	Y	167.59 27.5.2.3	There is a TBD in the draft. All TBD should be removed from the draft prior to WG letter ballot. Please correct this issue.	Remove the TBD and provide what behavior is expected if the STA is not associated with the AP.	2017/1/9 9:42
7000	Joseph Levy	225	1 Annex B	407		G	Y	407.00 Annex B	Annex B needs significant work as it seems to have many errors in it.	Correct the PICS so that it is clear which features are optional and which are mandatory. Also, correct the dependence of the various features.	2017/1/9 9:42
7001	Joseph Levy	225	1 B.4.3	407	26	T	Y	407.26 B.4.3	The orthogonal frequency division multiplexing (OFDM) PHY is not mandatory for STAs that support the CFHT5G PHY nor the CFTVHT PHY. Therefore remove the dependence requirement.	Delete: "CFHT5G:M" and "CFTVHT:M"	2017/1/9 9:42
7002	Joseph Levy	225	1 B.4.3	407	28	T	Y	407.28 B.4.3	What is CFHEW? This does not seem to be defined any where. Therefore either replace it with CFHE which is what I believe was intended to represent High Efficiency WLAN operation.	Delete: "CFHEW" and replace it with "CFHE".	2017/1/9 9:42
7003	Joseph Levy	225	1	407		T	Y	407.00	Replace CFHEW by CFHE throughout the appendix B, this includes	Replace "CFHEW" by "CFHE"	2017/1/9 9:42
7004	Joseph Levy	225	1 B.4.3	407	47	T	Y	407.47 B.4.3	The use of O.6 is not being used correctly. O.6 means one of all the O.6 choices needs to be chosen. e.g. in the baseline specification CFHT:O.6 corresponds to CFHT2G4 and CFHT5. This means that for CFHT PHY at least one of these options must be supported: 2.4 GHz or 5 GHz. The reuse of O.6 in regard to the CFHEW2G4 option for CFHEW does not make any sense as it needs to be a new O.<index> to choose what optional bands are supported.	Replace "CFHEW:O.6" with "CFHE:O.8" or whatever the next available index is.	2017/1/9 9:42

7005 Joseph Levy	225	1 B.4.4	408	27	T	Y	408.27 B.4.4	The way fragmentation is shown in the table, breaks the current specification, by assigning a new term Static Fragmentation that was not previously defined. Hence all legacy requirements are now broken. To fix this remove the term static fragmentation and simply add Dynamic fragmentation.	Undo the deletions and leave PC6 as it was. Introduce PC45 Dynamic fragmentation and inside the same box provide PC45.1 Dynamic fragmentations level 0, PC45.2 Dynamic fragmentation level 1, PC45.3 Dynamic fragmentation level 2. With PC45.1 being mandatory for CFHE and the other PC45.x being optional for CFHE.		2017/1/9 9:42
7006 Jouni Malinen	225	1 B.4.27.2	414	23	T	N	414.23 B.4.27.2	HEWP4.* items in PICS have self-referential prefix in the Status column. That does not make much sense ("item is mandatory if the item is supported.."). When are these items supposed to be mandatory?	Fix the predicate in HEWP4.1 .. HEWP4.5 items Status column.		2017/1/9 9:42
7007 Jouni Malinen	225	1 4.3.14a	9	21	T	N	9.21 4.3.14a	Use of "shall" in Clause 4 (General description) seems to be inconsistent with existing Clause 4 text and also most of the new text added in P802.11ax/D1.0. Isn't this supposed to be descriptive clause where "STA shall support" would more likely be written "STA supports"? Furthermore, what exactly is "shall support operation in 20 MHz channel bandwidth only" supposed to say? That the STA is not allowed to use any other channel bandwidth than 20 MHz (e.g., neither 40 MHz nor 10 MHz or smaller)? That does not sound likely, but this could be interpreted as saying so.. Or is this saying that STA shall support operation at least in a 20 MHz channel? Or something else? It would be good to be more specific on what the exact mandatory behavior is for an HE non-AP STA.	At least replace "shall support" with "supports" (or something similar) on both lines and ideally, rewrite these to clarify the intent of this description of a mandatory functionality.		2017/1/9 9:42
7008 Jouni Malinen	225	1 9.3.3	51	13	E	N	51.13 9.3.3	This applies to both lines 20 (5 9.3.3 subclause numbers in P802.11ax/D1.0 do not match IEEE Std 802.11-2016.	Update 9.3.3 subclause numbers to match IEEE Std 802.11-2016.		2017/1/9 9:42
7009 Jouni Malinen	225	1 9.4.2.1	67	29	T	N	67.29 9.4.2.1	P802.11ax/D1.0 defines multiple new elements. Only half of those have been added into Table 9-77.	Add the following Element ID 255, Element ID Extension <ANA> elements into Table 9-77: BSS Color Change Announcement element, Quiet Time Period Setup element, Quiet Time Period Request element, Quiet Time Period Response element.		2017/1/9 9:42
7010 Jouni Malinen	225	1 9.4.2.220	93	46	T	N	93.46 9.4.2.220	Figure 9-589cu shows incorrect unit for the size of the subfields within the OCW Range field: they are bits, not octets, i.e., the total size of the OCW Range field is 8 bits = 1 octet; not 8 octets.	In Figure 9-589cu, replace "Octets" with "Bits".		2017/1/9 9:42
7011 Jouni Malinen	225	1 B.4.3	407	42	T	N	407.42 B.4.3	Many of the PICS items refer to CFHEW item in the Status column. However, CFHEW is not defined anywhere.. Maybe CFHE was a typo and supposed to be that missing CFHEW instead?	Replace "CFHE" with "CFHEW" in the Item column of B.4.3 table.		2017/1/9 9:42

7012 Jouni Malinen	225	1 B.4.27.2	414	19	T	N	414.19 B.4.27.2	Number of PICS items that are being referenced in a predicate are missing the asterisk in the Item column to indicate this.	Add asterisk into the Item column for the following PICS items: CFHEW2G4, CFHEW5G, CFHEW20, CFHEW80, HEWM6.1, HEWM6.2, HEWM6.4, HEWM6.5, HEWM6.7, HEWP2.1, HEWP3.1, HEWP3.2, HEWP3.3, HEWP3.4, HEWP3.5, HEWP6.1, HEWP6.2, HEWP6.3, HEWP6.4, HEWP6.5, HEWP6.6, HEWP6.7, HEWP12.1.1, HEWP12.1.2, HEWP12.1.4, HEWP12.1.5, HEWP12.1.7, HEWP12.1.8, HEWP12.1.10, HEWP12.1.11, HEWP12.1.13, HEWP12.1.14, HEWP12.1.16, HEWP12.1.17, HEWP12.1.19, EWP12.1.20, HEWP12.1.22, HEWP12.1.23, HEWP12.2.1, HEWP12.2.3, HEWP12.2.5, HEWP12.2.7, HEWP12.2.9, HEWP12.2.11, HEWP12.2.13, HEWP12.2.15.		2017/1/9 9:42
7013 Jouni Malinen	225	1 4.3.14a	9	24	T	N	9.24 4.3.14a	The way an HE STA is being conditionally described as a VHT/HT STA based on band and whether it is a non-AP STA seems to imply that an HE AP in 2.4 GHz band is not necessarily an HT AP. If that were the case, there would be need to describe some HT STA requirements for HE AP, e.g., as far as not allowing WEP or TKIP to be used as pairwise cipher. However, based on the PICS item CFHT change (add CFHEW:M to Status), it looks like an HE AP is actually mandated to be an HT AP in the 2.4 GHz band (similarly to how an HE AP in the 5 GHz band is also a VHT AP).	Add the following item into the "In the 2.4 GHz band" list: "An HE AP is also an HT AP".		2017/1/9 9:42
7014 Ju-Hyung Son	225	1 8.3.5.3.2	15	47	E	Y	15.47 8.3.5.3.2	PHY-DATA.request is not correct.	Change from "PHY-DATA.reqest" to "PHY-DATA.indication"		2017/1/9 9:42
7015 Ju-Hyung Son	225	1 9.2.4.6.4.7	28	1	T	Y	28.01 9.2.4.6.4.7	In Table 9-18d, need to specify the meaning of the bandwidth column (20MHz, 40MHz, 80MHz, 160MHz and 80+80MHz). How a non-AP STA choose each BW column when transmitting BQR in solicited and unsolicited mode respectively?	As per comment.		2017/1/9 9:42
7016 Ju-Hyung Son	225	1 9.2.4.6.4.7	28	27	T	Y	28.27 9.2.4.6.4.7	The currrent PHY-CCA.indication primitive only provides CCA results of primary, secondary, secondary40 within Primary 80MHz. In order to support individual 20MHz CCA results within secondary40, additional PHY-CCA.indication primitives should be defined.	Please specify the additional PHY-CCA.indication primitives indicating channel availability of each 20MHz channel in secondary40 for BQR.		2017/1/9 9:42
7017 Ju-Hyung Son	225	1 9.2.4.6.4.7	28	38	T	Y	28.38 9.2.4.6.4.7	The currrent PHY-CCA.indication primitive only provides CCA results of primary, secondary, secondary40, secondary80 within Primary 160MHz(80+80MHz). In order to support individual 20MHz CCA results within secondary40 and secondary80, additional PHY-CCA.indication primitives should be defined.	Please specify the additional PHY-CCA.indication primitives indicating channel availability of each 20MHz channel in secondary40 and secondary80 for BQR.		2017/1/9 9:42
7018 Ju-Hyung Son	225	1 9.2.4.6.4.7	28	1	T	Y	28.01 9.2.4.6.4.7	When a non-AP STA transmits BQR in HE SU PPDU, BQR would be useful only if the Available Channel Bitmap indicates larger BW than the BW of the transmitted HE SU PPDU. For example, if a non-AP STA trasmits BQR in 40MHz PPDU (40MHz is idle), BQR would be useful only if the Bitmap indicates 80MHz or 160MHz channel availability.	Please clarify the BW of Available Channel Bitmap setting in unsolicited BQR.		2017/1/9 9:42

7019	Ju-Hyung Son	225	1 9.2.4.6.4.7	28	1	T	Y	28.01 9.2.4.6.4.7	How a non-AP STA chooses the type of available CH bitmap in Table 9-18d when sending BQR in HE Trigger-based PPDU? Is it based on the BW of HE Trigger-based PPDU that contains BQR? Is it based on the allocated RU for each STA in HE Trigger-based PPDU?	Please clarify the BW of Available Channel Bitmap setting in solicited BQR.	2017/1/9 9:42
7020	Ju-Hyung Son	225	1 9.2.4.6.4.8	28	60	T	Y	28.60 9.2.4.6.4.8	RDP Trigger frame is not exist	Change from "RDP Trigger frame" to "RDP"	2017/1/9 9:42
7021	Ju-Hyung Son	225	1 10.9	127	22	T	Y	127.22 10.9	the text is not only for receive operating mode	Change from "receive operating mode" to "operating mode"	2017/1/9 9:42
7022	Ju-Hyung Son	225	1 27.2.1	150	13	T	Y	150.13 27.2.1	HE MU PPDU can be transmitted by a non-AP STA. An HE AP shall not enter intra-PPDU PS when a non-AP STA transmitts UL HE MU PPDU. Therefore, an HE AP shall only enter intra-PPDU PS when it receives DL HE MU PPDU.	Change from "HE MU PPDU" to "DL HE MU PPDU"	2017/1/9 9:42
7023	Ju-Hyung Son	225	1 27.8.1	188	44	T	Y	188.44 27.8.1	It is not clear whether AP can change its operation mode with the OMI indication. In cases where AP includes OMI in multiple MPDUs in DL HE MU PPDU format, and only subset of STAs acknowledges the MPDUs, what is the AP's behavior for changing OMI settings? In baseline spec, 11.42 Notification of operating mode changes, AP/non-AP STA's behavior for operation mode change is differently described. Therefore, OMI also should clarify AP's behaviour in clear manner.	Clarify the behavior of OMI A-Control for AP and non-AP STAs clearly.	2017/1/9 9:42
7024	Ju-Hyung Son	225	1 27.8.1	188	36	T	Y	188.36 27.8.1	Does including OMI A-Control in an MPDU require change to the Ack Policy of the MPDU to immediate ack?	Change from "solicits an immediate acknowledgement" to "solicits an acknowledgement"	2017/1/9 9:42
7025	Ju-Hyung Son	225	1 27.8.1	188	45	T	Y	188.45 27.8.1	ROM is requiring "an immediate acknowledgement" in Line 36 and TOM is requiring "an acknowledgement" in Line 45. Why they require different Ack Policy for an MPDU that contains each. Please clarify the difference or harmonize the wording.	As per comment.	2017/1/9 9:42
7026	Ju-Hyung Son	225	1 27.8.2	188	57	T	Y	188.57 27.8.2	From "the immediate acknowledgement", does OMI requires a certain Ack Policy for the MPDU that contains it? Otherwise, remove "immediate".	As per comment.	2017/1/9 9:42
7027	Ju-Hyung Son	225	1 27.8.2	188	61	T	Y	188.61 27.8.2	From "the immediate acknowledgement", does OMI requires a certain Ack Policy for the MPDU that contains it? Otherwise, remove "immediate".	As per comment.	2017/1/9 9:42
7028	Ju-Hyung Son	225	1 27.8.3	189	29	T	Y	189.29 27.8.3	Why only "The Channel Width" is indicated in "NOTE" while the similar statement for Tx NSS is not in the "NOTE"?	As per comment.	2017/1/9 9:42
7029	Ju-Hyung Son	225	1 27.8.3	189	26	T	Y	189.26 27.8.3	Even though a non-AP STA indicates its max number of NSS in OMI A-Control field, the STA should use the indicated number of NSS in the soliciting Trigger frame.	Change "will use in response" to "may use in respone".	2017/1/9 9:42
7030	Ju-Hyung Son	225	1 27.8.3	189	29	T	Y	189.29 27.8.3	Even though a non-AP STA indicates its max channel width in OMI A-Control field, the STA should use the indicated channel width in the soliciting Trigger frame.	Change "will use in response" to "may use in respone".	2017/1/9 9:42
7031	Ju-Hyung Son	225	1 27.8.2	189	8	T	Y	189.08 27.8.2	What is the meaning of "After transmitting the acknowledgement frame immeidate response immediate acknowledgement" ? If OMI does not mandate the Ack Policy of the MPDU to be carried, please remove "immediate" term.	Change from "After transmitting the acknowledgement frame immeidate response immediate acknowledgement" to "After transmitting the acknowledgement frame".	2017/1/9 9:42
7032	Ju-Hyung Son	225	1 9.4.2.218.3	84	28	T	Y	84.28 9.4.2.218.3	For the current HE-SIG-B design which is designed for DL MU signalling, it is inefficient to signal full-BW UL HE MU PPDU transmission. RU allocation field is not required in full-BW UL HE MU PPDU, since SIG-A's BW subfield signals the PPDU BW and the signaling of RU allocation is not needed.	Please clarify SIG-A/B signalling method for full bandwidth (20/40/80/160(80+80) MHz) UL HE MU PPDU transmission with the minimal overhead.	2017/1/9 9:42

7033 Ju-Hyung Son	225	1 9.4.2.218.3	84	28	T	Y	84.28 9.4.2.218.3	For the current HE-SIG-B design which is designed for DL MU signalling, it is inefficient to signal partial bandwidth transmission (left or right 106tone/20MHz) of UL HE MU PPDU transmission. For example, it requires signalling of RU allocation (106, -, 106) and two User specific information fields where one user information field would be useless.	Please clarify SIG-A/B method for partial bandwidth (left/right 106-tone RU within 20MHz) UL HE MU PPDU transmission with the minimal overhead.		2017/1/9 9:42
7034 Ju-Hyung Son	225	1 27.15.2	201	28	T	Y	201.28 27.15.2	An HE non-AP STA may transmit HE MU PPDU also. Please clarify the case in this section.	Insert the following sentence in Line 28. "An HE non-AP STA may transmit an HE MU PPDU to an HE AP if it has received from the HE AP an HE Capabilities element with the UL HE MU PPDU Payload Support field equal to 1; otherwise the STA shall not trasmit HE MU PPDU to the HE AP."		2017/1/9 9:42
7035 Ju-Hyung Son	225	1 27.15.2	201	36	T	Y	201.36 27.15.2	How an HE non-AP STA can transmit HE trigger-based PPDU to a peer STA without receiving the soliciting Trigger frame?	Please clarify the case where an HE non-AP STA can transmit HE Trigger-based PPDU to a peer STA without receiving the soliciting Trigger frame. Otherwise remove the sentence "An HE non-AP STA ~ to the peer STA."		2017/1/9 9:42
7036 Ju-Hyung Son	225	1 28.1.1	209	42	T	Y	209.42 28.1.1	Channel puncturing is not a defined terminology. Please use the term "preamble puncturing" instead.	Change from "supports channel puncturing" to "supports preamble puncturing"		2017/1/9 9:42
7037 Ju-Hyung Son	225	1 28.3.17.6.4	349	7	T	Y	349.07 28.3.17.6.4	The currrent PHY-CCA.indication primitive only provides CCA results of primary, secondary, secondary40, and secondary80. In order to support BW options of current preamble puncturing mode, additional PHY-CCA.indication primitives should be defined.	Please specify the additional PHY-CCA.indication primitives for preamble puncturing.		2017/1/9 9:42
7038 Ju-Hyung Son	225	1 9.7.3	109	3	T	Y	109.03 9.7.3	As 11ax allows Multi-TID A-MPDU aggregation, QoS Data of one TID with No Ack policy may be aggregated with QoS Data of other TID with Immediate Ack policy. Please add the contents in Table 9-425.	As per comment.		2017/1/9 9:42
7039 Ju-Hyung Son	225	1 9.7.3	111	3	T	Y	111.03 9.7.3	For example in MU Cascading case, TXOP holder may transmit Ack, HT-immediate BlockAck, M-BA in an A-MPDU of data enabled no immediate response context. Please add the contents in Table 9-426.	As per comment.		2017/1/9 9:42
7040 Ju-Hyung Son	225	1 10.22.2.8	132	53	T	Y	132.53 10.22.2.8	From the dynamic fragmentation capabilities in HE STA, 11ax needs to revise exception rules that allow a STA to exceed the TXOP limit. TXOP limit exception rules should be revised for HE STAs considering dynamic fragmentation capabilities.	As per comment.		2017/1/9 9:42
7041 Ju-Hyung Son	225	1 9.3.1.23	47	48	T	Y	47.48 9.3.1.23	When a Trigger frame includes User Info fields with the AID12 field set to 0, the Padding length should be enough to cover all possible STAs that can participate. Otherwise, it would restrict the number of STAs that can participate the UL OFDMA based Random Access due to the Padding length.	Please clarify the padding length when a Trigger frame includes random acces RU.		2017/1/9 9:42
7042 Ju-Hyung Son	225	1 27.16.2	206	39	T	Y	206.39 27.16.2	When Dual Beacon is used, two kinds of Beacon frames have TBTTs respectively. Please specify BSS color change sequence when Dual Beacon is used.	As per comment.		2017/1/9 9:42
7043 Ju-Hyung Son	225	1 27.5.2.6.2	173	1	T	Y	173.01 27.5.2.6.2	Please specify UL OFDMA-based random access when a BSS is operating in Multiple BSSID mode. An HE STA in Multiple BSSID mode would receive RAPS elements and Trigger frames from its multiple BSSs in Multiple BSSID set. Please clarify how to decrement/initialize its OBO in multiple BSSID mode.	As per comment.		2017/1/9 9:42

7044	Ju-Hyung Son	225	1 9.3.1.9.7	38	6	T	Y	38.06 9.3.1.9.7	An HE STA can construct a multi-TID A-MPDU containing multiple nonzero length MPDUs with the EOF subfield set to 1 or multiple nonzero length MPDUs with the EOF subfield set to 0. Utilizing the EOF field, a multi-STA BlockAck frame can be more efficient.	As per comment	2017/1/9 9:42
7045	JUNG HOON SUH	225	1 28.1.1	209	48	G	Y	209.48 28.1.1	We need a general statement in the introduction of 11ax PHY that we have a frame with a mixed symbol length in the preamble portion and in the data portion. This is a key feature of 11ax different from the Legacy.	Insert the following statement in Line 48. The HE PHY supports the mixed OFDM symbol length in a frame where the OFDM symbol length of 3.2 usec in the preamble field portion and the symbol length of 12.8 usec excluding the Guard Interval in the data field portion are mixed.	2017/1/9 9:42
7046	JUNG HOON SUH	225	1 28.3.3.3	236	3	T	Y	236.03 28.3.3.3	Explanation on why the null subcarriers are located in each band as in the Table 28-6.	Insert the following statement in Line 3. Those null subcarriers on the edge of the band may provide the protection of the RU adjacent to the edge tones from being distorted. The extra null subcarriers located between the edge tones and the RU adjacent to the edge tones provide the protection of the RU from the edge tone distortion.	2017/1/9 9:42
7047	JUNG HOON SUH	225	1 28.3.10.8	285	56	G	Y	285.56 28.3.10.8	Add a general statement on what HE-SIG-B is for. There is a general statement for HE-SIG-A, but for HE-SIG-B, a technical detail starts immediately at the beginning of the HE-SIG-B section.	Insert the following statement in Line 56. The HE-SIG-B field provides the OFDMA resource allocation information for the scheduled STAs to look up the corresponding resources in the data portion of the frame.	2017/1/9 9:42
7048	JUNG HOON SUH	225	1 28.3.10.9	300	35	G	Y	300.35 28.3.10.9	Description on a parameter of Eq. 28-34 is missing	Add the description on what Mr,u is.	2017/1/9 9:42
7049	Junichi Iwatani	225	1 3.4	7	15	E	N	7.15 3.4	Regarding "OMI Operation mode indication", according to 27.8, OMI stands for "Operating mode indication"	Change "Operation mode indication" to "Operating mode indication"	2017/1/9 9:42

For example, "A non-AP STA that is the recipient, within an HE MU PPDU, of a QoS Data frame or QoS Null frame with Ack Policy equal to MU Ack that solicits an immediate response"	2017/1/9 9:42
7063	Junichi Iwatani	225	1 10.3.2.10.3	120	5	T	N	120.05 10.3.2.10.3	There is no example and figure for MultiSTA BlockAck response in OFDMA HE MU PPDU. The rule is complicated as described in 27.4.4.5 (Page 162, Line 22). Therefore an example should be added to clarify the rules. Also a reference to 27.4.4.5 should be added since additional conditions are described in 27.4.4.5.	as in comment	2017/1/9 9:42
7064	Junichi Iwatani	225	1 10.3.5	121	61	E	N	121.61 10.3.5	There is no description for "insert" or "change" for the following paragraphs.	For example, "Change the subclause as follows" should be added.	2017/1/9 9:42
7065	Junichi Iwatani	225	1 10.12	128	8	E	N	128.08 10.12	"An A-MSDU may be fragmented and each fragment transmitted within a single QoS Data frame" The sentence seems grammatically incorrect and unclear. (Does this mean "An A-MSDU may be fragmented and each fragment may be transmitted within a single QoS Data frame"?)	Fix it	2017/1/9 9:42
7066	Junichi Iwatani	225	1 10.12	128	10	E	Y	128.10 10.12	"Fragmented A-MSDU Support" should be "A-MSDU Fragmentation Support" (see 9.4.2.218.2 HE MAC Capabilities Information field, Page 79, Line 46)	as in comment	2017/1/9 9:42
7067	Junichi Iwatani	225	1 10.28.4	137	11	E	N	137.11 10.28.4	"25.10.4" should be "27.10.4"╥╫╟(A-MPDU with multiple TID)	as in comment	2017/1/9 9:42
7068	Junichi Iwatani	225	1 10.43.1	137	47	E	N	137.47 10.43.1	"tha" should be "that"	as in comment	2017/1/9 9:42
7069	Junichi Iwatani	225	1 27	149	5	G	N	149.05 27	There are only 8 figures in Clause 27. More figures should be added to clarify complicated procedures (especially for Fragmentation, Block acknowledgement and MU operation).	as in comment	2017/1/9 9:42
7070	Junichi Iwatani	225	1 27.1	149	8	G	N	149.08 27.1	In "Introduction", general explanations for HE MAC should be added first as written in 28.1 (Introduction for HE PHY)	as in comment	2017/1/9 9:42
7071	Junichi Iwatani	225	1 27.2.1	149	25	T	N	149.25 27.2.1	"... the same as the BSS color announced by the AP to which the STA is associated ..." It seems that this description is only for non-AP STAs. However, this condition (BSS color identification) should be used for APs as well. (Also in other items of this subclause.)	Clarify the conditions for an AP.	2017/1/9 9:42
7072	Junichi Iwatani	225	1 27.2.2	151	60	E	N	151.60 27.2.2	The meaning of the sentence "For example, ..." is unclear.	Clarify	2017/1/9 9:42
7073	Junichi Iwatani	225	1 27.2.3	152	13	E	Y	152.13 27.2.3	There is no definition for "HEMUEDCATimer[AC]". It seems that this is "MU EDCA Timer" described in 9.4.2.221.	Add definitions or modify the name of the parameter.	2017/1/9 9:42
7074	Junichi Iwatani	225	1 27.3.3.4	154	39	E	Y	154.39 27.3.3.4	"L3 Frag BA Request frame" and "L3 Frag BA Response" are not defined in Clause 9. ("L3 FRAG ADDBA Request" and "L3 FRAG ADDBA Request" are defined)	Modify the name or add definitions.	2017/1/9 9:42
7075	Junichi Iwatani	225	1 27.3.4.2	155	56	T	N	155.56 27.3.4.2	"Upon reception of an MPDU or S-MPDU that carries one or more dynamic fragments ..." It is unclear when an MPDU or S-MPDU carries more than one dynamic fragments. If not necessary, "or more" should be deleted.	as in comment	2017/1/9 9:42
7076	Junichi Iwatani	225	1 27.3.4.4	156	62	E	N	156.62 27.3.4.4	"module" should be "modulo"	as in comment	2017/1/9 9:42
7077	Junichi Iwatani	225	1 27.4.1	158	19	E	N	158.19 27.4.1	"MU BAR" should be "MU-BAR"	as in comment	2017/1/9 9:42
7078	Junichi Iwatani	225	1 27.4.4.1	161	37	T	N	161.37 27.4.4.1	DL MU PPDU with MU-BAR should be explained in more detail somewhere in 27.4.4. Ack policy for PPDU with MU-BAR should be clarified.	as in comment	2017/1/9 9:42
7079	Junichi Iwatani	225	1 27.4.4.2	160	54	E	N	160.54 27.4.4.2	"10.3.2.11.2 (MU acknowledgement procedure for DL MU PPDU in SU format" should be "10.3.2.10.1 (Acknowledgement procedure for DL MU PPDU in SU format)"	as in comment	2017/1/9 9:42

7080	Junichi Iwatani	225	1 27.4.4.3	161	13	E	N	161.13 27.4.4.3	"10.3.2.11.3 (MU acknowledgement procedure for HE MU PPDU in MU format)" should be "10.3.2.10.2 (Acknowledgement procedure for DL MU PPDU in MU format)"	as in comment	2017/1/9 9:42

7229 Kazuyuki Sakoda	225	1 27.9	190	1	T	Y	190.01 27.9	Subclause 27.9 Spatial reuse operation requires more discussion and addition of appropriate mechanisms. The aim of 802.11ax is to get higher performance in dense environment. Obviously, OBSS management is a key element to meet the goal. We are adding more than billions of new pre-HE 802.11 devices to the market per year, and need more serious consideration how to cope with non-HE OBSS issues. Also, we see non 802.11 technology in 2.4 GHz, and will probably see non 802.11 technology in 5GHz bands at the time of HE STA launch. 802.11ax spatial reuse technology shall be able to handle non-HE and non-802.11 overlapping operations in efficient way, which are missing in the D1.0.	1. Classify spatial reuse technologies into the following manner: (a) spatial reuse among non-802.11 networks, (b) spatial reuse among non-HE OBSSs, (c) spatial reuse among HE OBSSs. 2. Define adaptive CCA-ED rules as a resolution to (a). Change primary channel ED threshold for CCA to be flexible, and change supplementary channel ED threshold (mid packet detect) for CCA to be flexible. 3. Define adaptive CCA-SD rules as a resolution to (b). Change preamble detection threshold for CCA to be flexible as the currently defined minimal sensitivity is too sensitive for dense environment. Suggested text in 11-16/310r1 should be a good starting point for the rule. 4. Refine color code based CCA rules as a resolution to (c).	2017/1/9 9:42
7230 Kazuyuki Sakoda	225	1 27.9	190	1	T	Y	190.01 27.9	Transmit power control (TPC) works well to reduce OBSS interference, i.e., minimize interfere from an HE STA to others. Subclause 27.9.2.2 (Adjustment of OBSS_PD and transmit power) describes how HE STA can increase OBSS_PD level by decreasing its TX power. It is a nice incentive for STA to decrease its TX power. OBSS_PD only works with HE STAs. However, it only works with legacy STAs with limited circumstances. This means STAs cannot truely enjoy effect of 802.11ax spatial reuse until legacy BSSs and STAs are wiped out from the market. There are very large number of legacy STA installed based, and we still see large number of legacy STA (even non-VHT STA) shipment to the market.	Add new subclause under 27.9 describing spatial reuse TPC rule following the spirit of linking CCA threshold (ED-based CCA and SD-based CCA) and transmission power, as spelled out for OBSS PD.	2017/1/9 9:42

7231	Kazuyuki Sakoda	225	1 28.3.18	350	1	T	Y	350.01 28.3.18	In subclause 28.3.14.2 (Power pre-correction), sentence reads "An AP indicates in the AP Tx Power subfield of the Common Info field in Trigger frame the combined transmit power of all the transmit antennas used to transmit the Trigger frame normalized to 20 MHz bandwidth." There should be accuracy requirements for the "the combined transmit power of all the transmit antennas". However, I could not find it.	Add a suclause under 28.3.18 describing transmit power accuracy requirement for AP.	2017/1/9 9:42
7232	Kazuyuki Sakoda	225	1 27.2.1	149	46	T	Y	149.46 27.2.1	Looking through subclause 27.2.2 (updating two NAVs), there is no need to distinguish inter-BSS frame, as both inter-BSS frame and frame that cannot be identified as intra-BSS or inter-BSS are reflected to basic NAV.	Remove inter-BSS frame recognition, and clean up the description.	2017/1/9 9:42
7233	Kazuyuki Sakoda	225	1 27.2.2	151	57	T	Y	151.57 27.2.2	In subclause 27.2.2 (Updating two NAVs), a sentence reads "Maintaining two NAV is beneficial in dense deployment scenarios where a STA requires protection from frames transmitted by STAs within its BSS, i.e., intra-BSS, and avoid interference from frames transmitted by STAs in neighboring BSS, i.e., inter-BSS". I could find how to set inter-BSS NAV in D1.0. However, I could not find how the inter-BSS NAV is used to control channel access.	Add a new subclause under 27.2 describing how these 2 NAVs are used to control channel access.	2017/1/9 9:42
7234	KE YAO	225	1 28.3.10.2.1	268	2	T	Y	268.02 28.3.10.2.1	When the TXVECTOR parameter BEAM_CHANGE is 0, the cyclic shift value for the L-STF, L-LTF,L-SIG, RL-SIG, and HE-SIG-A fields should be T_{CS,HE} as specified in 28.3.10.2.2.	Change "When the TXVECTOR parameter BEAM_CHANGE is 0, the cyclic shift value for the L-STF, L-LTF, L-SIG, RL-SIG, and HE-SIG-A fields is not specified"to "When the TXVECTOR parameter BEAM_CHANGE is 0, the cyclic shift value for the L-STF, L-LTF, L-SIG, RL-SIG, and HE-SIG-A fields is T_{CS_HE} as specified in 28.3.10.2.2"	2017/1/9 9:42

7386 Laurent Cariou	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	NDP feedback report procedure must be detailed	Provide a description of NDP feedback report procedure for the AP side and the STA side	2017/1/9 9:42
7387 Laurent Cariou	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	NDP feedback report are sent in response to a trigger frame. The specification must define a new trigger type soliciting NDP feedback report from multiple STAs.	Define a new trigger type soliciting NDP feedback report	2017/1/9 9:42
7388 Laurent Cariou	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	The procedure for NDP feedback report must define how the STA identifies that it can respond to the trigger frame soliciting the feedback report, and identifies the MAC and PHY parameters for the transmission of the feedback report.	Define the fields of the trigger type soliciting NDP feedback report and the associated STA procedure.	2017/1/9 9:42

7389	Laurent Cariou	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	NDP feedback report is a generic mechanism that can be used for multiple types of feedback. The specification must define a way to identify the type of feedbacks that are solicited by the NDP feedback report trigger frame.	Define the fields of the trigger type soliciting NDP feedback report and the associated STA procedure.	2017/1/9 9:42
7390	Laurent Cariou	225	1 28.3.4	240	57	T	Y	240.57 28.3.4	NDP feedback report is defined as a feedback sent in response to a trigger frame without data payload. The specification must define the HE PPDU type that will carry this NDP feedback report and how the users are multiplex.	Define the HE NDP feedback report PPDU	2017/1/9 9:42
7391	Laurent Cariou	225	1 9.3.1.9.1	34	23	T	Y	34.23 9.3.1.9.1	11ax defines some solutions to improve performance when experiencing coexistence issues with BT for example. (UL MU disable bit). In the same approach, a STA experiencing packet loss due to collisions for instance because of in-device coexistence issues should be able to inform the the originator that the packet losses are due to such collisions. Based on this, the originator can adapt betterly its rate selection, which we can show improves significantly the performance.	Use a reserved bit in the BA control to signal if the PPDU that elicited the BA transmission was received with collisions (for instance due to in-device coex) or not.	2017/1/9 9:42
7392	Laurent Cariou	225	1 9.2.4.1.8	19	35	T	Y	19.35 9.2.4.1.8	A STA sending a BA should be able to set the more data bit to 1 to indicate to the originator that it has buffered traffic and would like to access the medium to transmit it (ressource request)	Modify the procedure so that any STA sending a BA to set the more data bit to 1 to indicate an UL resource request	2017/1/9 9:42
7393	Laurent Cariou	225	1 27.4.1	157	21	T	Y	157.21 27.4.1	A STA sending any BA should be able to set the more data bit to 1 to indicate to the originator that it has buffered traffic and would like to access the medium to transmit it (ressource request)	Modify the procedure so that any STA sending a BA to set the more data bit to 1 to indicate an UL resource request	2017/1/9 9:42
7394	Laurent Cariou	225	1 27.5.2.2.3	167	25	T	Y	167.25 27.5.2.2.3	Recommandations on the AP parameters (EDCA parameters and TxOP duration) to access the channel to send a trigger frame should be defined in order to ensure fairness between OBSSs	Same as comment	2017/1/9 9:42
7395	Laurent Cariou	225	1 27.7.1	179	49	T	Y	179.49 27.7.1	TWT operation is complex and defines a very long list of possible implementations and modes of operation. As such, it will be very hard to get interoperability between devices and to rely on consistent and predictable behaviors. The spec should define a limited set of modes of operation that makes more sense for 11ax use cases and define associated expected behaviors. Examples can be: individual TWT for regular traffic (voice), opportunistic power save for congested environment and bursty traffic	Same as comment	2017/1/9 9:42
7396	Laurent Cariou	225	1 27.7.1	180	15	T	Y	180.15 27.7.1	TWT is efficient only in certain environment conditions and only for some traffic types. It is therefore very unlikely that forcing TWT will be beneficial to all STAs. The TWT required bit set to 1 should therefore be a recommendation rather than a requirement. This feature was agreed at a time where Broadcast TWT was not constraining on the STA side. Now that broadcast TWT has been modified, this makes the requirement on the STA side now more stringent and should be revised. Finally, opportunistic power save has also been defined for congested environments, opportunistic power save should be part of the choices that are required by the TWT required subfield, with individual and Broadcast TWT	Replace "A STA that supports TWT and is associated with an AP from which it receives an HE Operation element whose TWT Required subfield is 1 shall either..." by "A STA that supports TWT and is associated with an AP from which it receives an HE Operation element whose TWT Required subfield is 1 should either ..." and add "participate in opportunistic power save" in the choices after the word "either".	2017/1/9 9:42
7397	Laurent Cariou	225	1 27.7.3.1	182	34	T	Y	182.34 27.7.3.1	A STA should be a TWT scheduled STA only if it negotiated a Broadcast TWT with the AP. The rules apply only to those who negotiated.	Same as comment	2017/1/9 9:42

7398 Laurent Cariou	225	1 27.7.3.2	184	14	T	Y	184.14 27.7.3.2	In a trigger-enabled SP, it is not clear if all STAs have to be triggered or not. It seems not, so the behavior of the STA and APs are not clear.	Same as comment	2017/1/9 9:42
7399 Laurent Cariou	225	1 27.7.3.2	184	52	T	Y	184.52 27.7.3.2	Description of TWT Flow Identifier subfield equal to 3 is missing	Provide description for it	2017/1/9 9:42
7400 Laurent Cariou	225	1 27.7.1	179	49	T	Y	179.49 27.7.1	Broadcast TWT is currently also used just to indicate to any STAs the point in time at which some frames will be transmitted. This is the case for the transmission of trigger frames with OFDMA random access, for the transmission of TIM elements for opportunistic power save. This should be described	Provide description for it	2017/1/9 9:42
7401 Laurent Cariou	225	1 27.7.3.1	182	28	T	Y	182.28 27.7.3.1	Broadcast TWT is currently also used just to indicate to any STAs the point in time at which some frames will be transmitted. This is the case for the transmission of trigger frames with OFDMA random access, for the transmission of TIM elements for opportunistic power save. This should be described	Provide description for it	2017/1/9 9:42
7402 Laurent Cariou	225	1 27.7.3.1	182	28	T	Y	182.28 27.7.3.1	Broadcast TWT has 2 modes of operation, one which requires negotiation (ID non equal to 0) and one which does not require negotiation (ID equal 0). This should be described. Operation with ID=0 does not require the STA to be a scheduled STA, as it is open to all associated STAs.	Provide clarification for it in this section	2017/1/9 9:42
7403 Laurent Cariou	225	1 27.7.4	187	14	T	Y	187.14 27.7.4	The spec currently defines a mode of operation where any STAs (especially STAs using legacy power save mechanisms) can send TWT info frames when going in doze state to indicate the time when they will be back in their original state (awake state). If the peer STA sets Flexible TWT Schedule Support to 1, the time when they will be back can be any time. If the peer STA sets Flexible TWT Schedule Support to 0, the time when they will be back shall coincide with a specific TWT SP. For clarity, we should define a specific section for this mode of operation, as it can be used by STAs operating only with legacy power save modes and not operating with TWT.	Define a specific section and better describe the behavior associated to the use of TWT info frames for STAs without TWT agreements.	2017/1/9 9:42
7404 Laurent Cariou	225	1 27.8.1	188	22	T	Y	188.22 27.8.1	The spec says: "An HE STA can change its operating mode setting either using the procedure described in 11.42 (Notification of operating mode changes), or the procedure described in this subclause. " The 2 procedures should be harmonized so that they provide the same capabilities (same changes of mode of operation)	Modify the notification of operating mode changes using omn frames so that the transmit operating mode changes are also supported.	2017/1/9 9:42
7405 Laurent Cariou	225	1 27.9.2.2	191	3	T	Y	191.03 27.9.2.2	Current OBSS_PD mechanism only defines operation with default parameters. In managed environments, the spec should allow APs to configure more optimaly the parameters, having in mind that those parameters shall only be used by the STAs associated with the group of APs that apply those new parameters.	Add the mechanism to allow APs from an SR group to apply new OBSS_Pdmin and max parameters, and the procedure so that those parameters can only be used if the received OBSS packet is from an OBSS that belongs to the same SR group.	2017/1/9 9:42
7406 Laurent Cariou	225	1 27.9.2.2	192	15	T	Y	192.15 27.9.2.2	The current spec defines a rule that the TxPower constraints can not be increased until the SR STA accesses the channel and ends its TxOP, even if other OBSS_PPDUs are received. This should be clarified in better wording	Same as comment	2017/1/9 9:42

7407 Laurent Cariou	225	1			T	Y		eLWA is demanding of metrics in order for APs and STAs to measure or estimate the quality of an 11ax Wi-Fi link during its operation. Estimated throughput could be enhanced to account for 11ax changes or new metrics could be defined.	Define enhanced metrics	2017/1/9 9:42
7408 Lei Huang	225	1 9.4.2.218.2	79	38	T	Y	79.38 9.4.2.218.2	"random RUs" should be changed to "random access RUs" or "RUs for random access"	as per comment	2017/1/9 9:42
7409 Lei Huang	225	1 27.5.2.6.1	172	35	T	Y	172.35 27.5.2.6.1	There is currently no rule regarding how RUs are assigned for random access in a Trigger frame by an AP. Without such a rule, it is possible that no any RUs assigned for random access in a Trigger frame are available to 20MHz operating STAs. In order for 20MHz operating STA to always get an opportunity to reach AP via random access procedure, every Trigger frame for random access shall include at least one RU for random access which is available to 20MHz operating STAs.	Add the following statement at the end of the second paragraph of section 27.5.2.6.1: "Every Trigger frame for random access transmitted by the HE AP shall include at least one RU for random access which is available to 20MHz operating STAs. In other words, every Trigger frame for random access shall contain at least one RU for random access which is in the primary 20MHz channel and unrestricted to be used for 20MHz operating STAs."	2017/1/9 9:42
7410 Lei Huang	225	1 27.5.2.6.1	172	39	T	Y	172.39 27.5.2.6.1	Currently it is optional for AP to send RAPS element. If AP does not send RAPS element, an STA does not transmit any HE trigger-based PPDU using random access RUs. This would cause unnecesary transmission delay for STA.	1. Define a default value for OCWmin and OCWmax; 2. If an HE STA does not receive the RAPS element, the HE STA shall perform UL OFDMA-based random access procedure based on the default values of OCWmin and OCWmax.	2017/1/9 9:42
7411 Lei Huang	225	1 27.5.2.6.1	172	46	T	Y	172.46 27.5.2.6.1	"Beacon or Probe Response" shall be changed to "Beacon or Probe Response frame"	as per comment	2017/1/9 9:42

7442 Lei Huang	225	1 28.3.14.2	341	48	T	Y	341.48 28.3.14.2	Due to STA's minimum/maximum transmit power limit, the actual received signal power at AP for an HE trigger-based PPDU may be higher or lower than the target RSSI. For example, for one STA which is located very closed to AP, the received signal power at AP may be much higher than the target RSSI due to the STA's minimum transmit power limit. For one STA which is located far away from the AP, the received signal power at AP may be much lower than the target RSSI due to the STA's maximum transmit power limit. As a result, the received signal power at AP could differ significantly among STAs, which results in severe MUI (multi-user interference). This problem becomes even more severe in case of OFDMA based random access, since AP has no knowledge about which STA will be transmitting at a random access RU.	Insert the following statement after L48 of P341: "An STA should not transmit its HE trigger-based PPDU when the estimated received signal power at AP is much larger than the target RSSI."	2017/1/9 9:42

For a 40 MHz PPDU, the mapping of B19-B13 to RU allocation follows the RU index in Table 28-4 (Subcarrier indices for RUs in a 40 MHz HE PPDU) in an increasing order. For an 80 MHz, 160 MHz and 80+80 MHz PPDU, the mapping of B19-B13 to RU allocation follows the RU index in Table 28-5 (Subcarrier indices for RUs in an 80 MHz HE PPDU) in an increasing order."	2017/1/9 9:42
7491 Lei Huang	225	1 9.4.1.62	56	21	E	Y	56.21 9.4.1.62	"the HE MIMO Control Fields" should be changed to "the HE MIMO Control field"	As per comment	2017/1/9 9:42

7492 Lei Huang	225	1 9.4.1.62	56	12	T	Y	56.12 9.4.1.62	In HE MIMO Control field of HE Compressed Beamforming And CQI frame, Ng, Feedback Type and Codebook Information are separately encoded and 4-bit is required. However, in the HE NDP Annoucement frame, Ng, Feedback Type and Codebook Information are jointly encoded and only 3-bit is required. For consistency, it is better to use a unified method for encoding Ng, Feedback Type and Codebook information in both sounding related frames. In other words, in HE MIMO Control field, 3-bit joint encoding of Ng, Feedback Type and Codebook Information should be used, and thus there is one more reserved bit in HE MIMO Control field.	As per comment		2017/1/9 9:42
7493 Lei Huang	225	1 9.4.1.62	56	3	T	Y	56.03 9.4.1.62	The reference is incorrect.	Replacing "The HE MIMO Control field is included in every HE Compressed Beamforming frame (see 9.4.1.63 (HE Compressed Beamforming Report field))." by "The HE MIMO Control field is included in every HE Compressed Beamforming And CQI frame (see 9.6.28.2 HE Compressed Beamforming And CQI frame format).		2017/1/9 9:42

7517	Lei Huang	225	1 28.3.11.5.4	321	47	T	Y	321.47 28.3.11.5.4	"a_init" should be changed to "a"	as per comment	2017/1/9 9:42
7518	Lei Huang	225	1 28.3.15.3	344	22	T	Y	344.22 28.3.15.3	The reference for CQI-only feedback is incorrect.	change "9.4.1.64" to "9.4.1.65".	2017/1/9 9:42
7519	Lei Huang	225	1 28.3.12	337	27	T	Y	337.27 28.3.12	The third paragraph of clause 28.3.12 only involves packet extension for HE SU PPDU or HE extended range SU PPDU.	change "For an HE PPDU,..." to "For an HE SU PPDU or HE extended range SU PPDU,..."	2017/1/9 9:42
7520	Lei Huang	225	1 28.3.12	338	50	T	Y	338.50 28.3.12	The HE preamble is inclusive of RL-SIG and HE-SIG-A.	1. T_RL-SIG and T_HE-SIG-A should be removed from (28-114) as well as the equation of N_SYM following (28-114) 2. Update T_HE-PREAMBLE by including T_RL-SIG and T_HE-SIG-A	2017/1/9 9:42

7521	Lei Huang	225	1 28.3.12	339	3	T	Y	339.03 28.3.12	In 28.3.10.7.2, it has been mentioned that HE-SIG-A includes Pre-FEC Padding Factor subfield and PE Disambiguity subfield. In 9.3.1.23, it has also been mentioned that The Packet Extension subfield of the Common Info field indicates the packet extension duration of the trigger-based PPDU response. The first two bits indicate the pre-FEC padding factor and the third bit indicates the PE-Disambiguity. Therefore, the description in L3 to L17 of P339 including Table 28-38 is unnecessary.	1. remove Editor's Note in L1 of P339; 2. remove the description in L3 to L17 including Table 28-38.		2017/1/9 9:42
7522	Lei Huang	225	1 28.3.12	340	13	T	Y	340.13 28.3.12	For an HE extended range SU PPDU, the HE-SIG-A duration is represented by T_HE-SIG-A-R only	remove T_HE-SIG-A from T_HE-PREAMBLE for an HE extended range SU PPDU		2017/1/9 9:42
7523	Lei Huang	225	1 28.3.12	340	19	T	Y	340.19 28.3.12	HE-SIG-A field does not include the Packet Extension subfield	change "b_PE-Disambiguity is PE Disambiguity subfield in the Packet Extension subfield of the HE-SIG-A field" to "b_PE-Disambiguity is PE Disambiguity subfield of the HE-SIG-A field		2017/1/9 9:42
7524	Lei Huang	225	1 9.3.1.23	44	56	T	Y	44.56 9.3.1.23	Regarding packet extension, HE-SIG-A includes 2-bit pre-FEC padding factor subfield and 1-bit PE disambiguity subfield. However, the Trigger frame includes 3-bit packet extension subfield. For keeping consistency, it is better to split 3-bit packet extension subfield in the Trigger frame into a 2-bit pre-FEC padding factor subfield and 1-bit PE disambiguity subfield.	as per comment		2017/1/9 9:42
7525	Leonardo Lanante	225	1 9.4.2.220	93	37	T	N	93.37 9.4.2.220	The Value of OCW, OCWmin and OCWmax was directly based from CW, CWmax, and CWmin from EDCA. But due to the difference between OFDMA random access and DCF, the current equations for OCW, OCWmax and OCWmin are not optimal. Specifically, the current draft allows STAs to pick a zero OCW when the minimum OCW should be one to reflect the fact that it needs to wait for a TF to send a frame..	Redefine the equations for OCWmax, OCWmin and OCW . I have a prepared contribution for this.		2017/1/9 9:42
7526	Leonardo Lanante	225	1 9.3.1.9.7	37	51	T	N	37.51 9.3.1.9.7	AIDs for unassociated STAs are still undefined.	Allow the AP to provide AIDs for unassociated STAs and make them eligible for scheduled OFDMA transmission.		2017/1/9 9:42
7527	Li-Hsiang Sun	225	1 10.3.2.3.7	114	32	T	Y	114.32 10.3.2.3.7	HE PPDU with 'all 1' in TXOP_DURATION should still have EIFS protection if only preamble is decoded by 3rd party STA. Clause 27.11.5 specifies conditions that it can be set to 'all 1' so it is a valid parameter	changed 'if a valid TXOP_DURATION parameter' to 'if there is duration information for NAV setting indicated in the TXOP_DURATION parameter'		2017/1/9 9:42
7528	Li-Hsiang Sun	225	1 10.3.2.4	115	32	T	Y	115.32 10.3.2.4	The next paragraph in 802.11-2016 states "In non-DMG BSS NAVTimeout period is equal to (2 x aSIFSTime) + (CTS_Time) + aRxPHYStartDelay + (2 x aSlotTime). The "CTS_Time" shall be calculated using the length of the CTS frame and the data rate at which the RTS frame used for the most recent NAV update was received.". This paragraph should be updated for 11ax as CTS responding to MU-RTS are sent with a constant CTS_Time	Add the 802.11-2016 paragraph in comment, and add "In case of responding to MU-RTS, CTS_Time is calculated using 6Mbps data rate in non-HT format"		2017/1/9 9:42
7529	Li-Hsiang Sun	225	1 10.3.2.10.3	121	1	T	Y	121.01 10.3.2.10.3	10.7.6.1 in 802.11-2016 states "The following rules determine whether a Control frame is carried in a non-HT, HT or VHT PPDU: ... Otherwise, the Control frame shall be carried in a non-HT PPDU ..." However, the case of MBA in Fig. 10-12c transmitted in HT, VHT, or HE PPDU are not covered	Add 10.7.6.1 in 802.11-2016 to ax draft, and revise the condition to avoid contradiction with baseline text.		2017/1/9 9:42

7530	Li-Hsiang Sun	225	1 10.3.5	122	11	T	Y	122.11 10.3.5	How to set attribute to enable duration based RTS but also disable length-based RTS? Currently disableing length based RTS by setting dot11RTSThreshold to larger than maximum PSDU, also disables the duration-based RTS, based on this sentence	In p122.11 Removes "If dot11RTSThreshold is larger than the maximum PSDU length, all PSDUs shall be delivered without RTS/CTS exchange" Add in clause C.3 dot11RTSThreshold OBJECT-TYPE, but remove "Setting this attribute to be larger than the maximum PSDU size has the effect of turning off the RTS/CTS handshake for frames of Data or Management type transmitted by this STA"	2017/1/9 9:42
7531	Li-Hsiang Sun	225	1 10.9	127	18	E	Y	127.18 10.9	The paragraph misses some newly introduced control ID	add description for value of 6	2017/1/9 9:42

7533	Li-Hsiang Sun	225	1 10.28.4	137	10	T	Y	137.10 10.28.4	If the RD initiator sends a multi-TID AMPDU with RDG=1, how does the RD responder determine the primary AC? In 10.9, it says "The HT Control field of all MPDUs containing the HT Control field aggregated in the same A-MPDU shall be set to the same value.", so it is difficult to determine which AC granted the RDG	Clarify "the same AC" means the lowest AC in case of a multi-TID AMPDU from RD initiator	2017/1/9 9:42
7534	Li-Hsiang Sun	225	1 27.4.3	159	34	T	Y	159.34 27.4.3	If the negotiated buffer size is within [1, 64], not only it satisfies the 1st bullet, it also satisfies all following bullets, so it can use a length 256 bitmap	Change in p159.36 [1, 256] to [65, 256] Change in p159.43 [1,128] to [65, 128] Change in p159.45 [1.256] to [129,256]	2017/1/9 9:42
7535	Li-Hsiang Sun	225	1 27.3.4.2	155	56	T	Y	155.56 27.3.4.2	How does an MPDU or S-MPDU carry more than 1 dynamic fragments?	removes "or more"	2017/1/9 9:42
7536	Li-Hsiang Sun	225	1 9.4.2.218.2	79	42	T	Y	79.42 9.4.2.218.2	Maximum A-MPDU Length Exponent definition and encoding are missing	moves p80.26~39 to the table	2017/1/9 9:42
7537	Li-Hsiang Sun	225	1 9.7.1	106	32	T	Y	106.32 9.7.1	The EOF field description does not take into account of ack-enabled Multi-TID A-MPDU, in which EOF could be set to 1 but not for padding and not for S-MPDU as described in the table	add 'Set to 1 in the MPDU delimiter of a multi-TID A-MPDU as described in 27.0.4' before 'Set to 0 otherwise'	2017/1/9 9:42
7538	Li-Hsiang Sun	225	1 10.2.7 (not exist)	113	22	T	Y	113.22 10.2.7 (not exist)	10.2.7 of 802.11-2016 specifies that 'an MSDU is transmitted using an HT-immediate or HT-delayed block ack agreement or when the MSDU or MMPDU is carried in an A-MPDU that does not contain a VHT single MPDU, in which case the MSDU or MMPDU is transmitted without fragmentation.'. The block ack agreement used in 11ax is considered HT-immediate BA agreement. This clause in baseline contradicts with dynamic fragementation	add 10.2.7 of 802.11-2016 to the ax draft and revise the condition in comment to allow dynamic fragmentation	2017/1/9 9:42
7539	Li-Hsiang Sun	225	1 27.3.3.4	154	41	T	Y	154.41 27.3.3.4	The level 3 dynamic fragmentation currently has its own BA action frame for BA agreement negotiation, unlike level 1 and 2 that uses ADDBA extention of the existing BA action frame. It should be consolidated using the same mechanism as in level 1 and 2	Revise the description and ADDBA extension to include level-3 negotiation	2017/1/9 9:42
7540	Li-Hsiang Sun	225	1 27.3.4.3	156	6	T	Y	156.06 27.3.4.3	The description misses the case that the receiver responding to a ack-enabled multi-TID A-MPDU	In L6 and L42, add 'A Multi-STA Block Ack when the receiived fragment is contained in a multi-TID A-MPDU that solicits an immediate response'	2017/1/9 9:42
7541	Li-Hsiang Sun	225	1 27.3.4.3	156	10	T	Y	156.10 27.3.4.3	It is not clear why MBA is tied to responding to soliciting S-MPDU carried in trigger-based PPDU. It could be sent as in Figure 10-12b using ack frame. In addition, MBA could be sent in UL as an ack to a DL-Multi-TID A-MPDU	In L 10 and L 46, remove "that contains the acknowledgement for the soliciting S-MPDU carried in an HE trigger-based PPDU"	2017/1/9 9:42
7542	Li-Hsiang Sun	225	1 27.10.3	193	19	T	Y	193.19 27.10.3	The sentence 'The STA shall not add an A-MPDU subframe with EOF equal to 0 after any A-MPDU subframe with EOF set to 1' is not correct because ack-enabled multi-TID A-MPDU could have EOF set to 1, followed by A-MPDU subframes from another TID	change to "The STA shall not add an A-MPDU subframe with EOF equal to 0 after any A-MPDU subframe with EOF set to 1 and MPDU Length field >0'	2017/1/9 9:42

7543 Li-Hsiang Sun	225	1 27.10.4	194	24	E	Y	194.24 27.10.4	This requirement is a duplicate of the requirement described in P195.16	remove the paragraph	2017/1/9 9:42
7544 Li-Hsiang Sun	225	1 27.3.4.1	155	52	T	Y	155.52 27.3.4.1	The capability of rx fragmentation level is not necessarily the same as what level of fragmentation preferred to tx. There should be a requirement that in ADDBA response frame the value of HE Fragmentation Operation subfield should not be greater than the value of HE Fragmentation Operation subfield in the ADDBA Request frame	add 'The value of HE Fragmentation Operation subfield in ADDBA Response frame shall not be greater than the value of HE Fragmentation Operation subfield in the ADDBA Request frame	2017/1/9 9:42
7545 Li-Hsiang Sun	225	1 27.5.2.6.2	173	33	T	Y	173.33 27.5.2.6.2	Is a new attempt to use UL OFDMA random access after a successful UL OFDMA based random acces transmission, considered 'Initial HE triggered-based PPDU transmission' in L30? If yes, what happens if the OBO counter is not 0 when new attempt starts, should OBO counter still needs to be re-initialized as described in L 33?	describe whether a new attempt to use UL OFDMA should use the residual OBO counter values, or re-initialize it.	2017/1/9 9:42
7546 Li-Hsiang Sun	225	1 27.5.2.6.2	173	62	T	Y	173.62 27.5.2.6.2	It is not clear how STA without AID could participate the UL MU ack procedure in 10.3.2.10.3.	describe specifically how STA without AID acquires its ack following the procedure in 10.3.2.10.3, when there are multiple acks to multiple STA without AID	2017/1/9 9:42
7547 Lisa Ward	225	1 28.3.18.1	353	52	T	N	353.52 28.3.18.1	Not all 11ax signal analyzer solutions are capable of the current RBW (25 kHz) and VBW (kHz) settings and we'd like to recommend 30 khz RBW and 10 kHz VBW .. Since, the 11ax settings are based on scaling the settings of the legacy spectral mask, I tried to research the reasons behind the legacy 11a 100 KHz RBW and 30 KHz VBW settings in order to determine if there was some specific importance in those settings but was unable to find anything in the archived documents on the 802.11 website. Since I can find no specific reasons for the 100K and 30 KHz settings in legacy OFDM PHY, I can see no real value to setting the 11ax RBW and VBW requirements based on perfect scaling of them.	Change: Measurements shall be made using a 25 kHz resolution bandwidth and a 7.5 kHz video bandwidth. to: Measurements shall be made using a 30 kHz resolution bandwidth and a 10 kHz video bandwidth.	2017/1/9 9:42
7548 Lisa Ward	225	1 28.3.18.4.4	357	38	E	N	357.38 28.3.18.4.4	Consistent terminology? In table 28-11 for tone allocation related constants in OFDMA, it states that NST=NSD+NSP where NST is the total number of subcarriers per RU, NSD is the total number of complex data numbers per RU, and NSP is the number of pilot subcarriers. However, in equations 28-122 and 28-124 NST is defined as the total number of data tones of occupied RU. I wonder if for consistency/clarity, either the term NSD should be used OR change the NST definition in eq 28-122 and 28-124 to be defined as total number of subcarriers in occupied RU.	Change NST to NSD in equations 28-122 and 28-124 or change NST definitions in those equations to total number of subcarriers in used RU.	2017/1/9 9:42
7549 Lisa Ward	225	1 28.3.18.2	354	47	E	N	354.47 28.3.18.2	typo in subcarrier index in table 28-44, it says +3 to +3441 for the 80 MHz subcarrier indices. Suggest changing 3441 to 344	Change +3441 to +344	2017/1/9 9:42

7550	Lisa Ward	225	1 27.4.4.5	162	23	E	N	162.23 27.4.4.5	Missing word in following sentence or perhaps a type? & also a typo --too many '.' after 'context' : The AP may respond with group addressed Multi-STA BlockAck frame(s) in an HE MU PPDU if the receivers of group-addressed Multi-STA BlockAck frame announce the support the reception of MU Multi-STA BlockAck frame. The Ack Type field shall be set according to the acknowledgement context..	Change to "The AP may respond with group addressed Multi-STA BlockAck frame(s) in an HE MU PPDU if the receivers of group-addressed Multi-STA BlockAck frame announce they support the reception of MU Multi-STA BlockAck frame. The Ack Type field shall be set according to the acknowledgement context." OR "The AP may respond with group addressed Multi-STA BlockAck frame(s) in an HE MU PPDU if the receivers of group-addressed Multi-STA BlockAck frame announce the support of the reception of MU Multi-STA BlockAck frame. The Ack Type field shall be set according to the acknowledgement context."	2017/1/9 9:42

The normative text doesn't say for the following backoff after scheduled by Trigger MU EDCA timer is set to the value of MU EDCA Timer.	Clarify the text and harmonize the normative behavior with the text here.	2017/1/9 9:42
7563	Liwen Chu	225	1 9.4.2.224	96	53	T	Y	96.53 9.4.2.224	The start time of SP per PPDU TX time is not good because of the retransmission of the frame: the receiver can't discard the duplicated frame. It is simpler to replace the offset field with a start timer field.	As in comment	2017/1/9 9:42
7564	Liwen Chu	225	1 9.7.1	107	1	T	Y	107.01 9.7.1	Change "VHT PPDU" to "VHT and HE PPDU"	As in comment	2017/1/9 9:42
7565	Liwen Chu	225	1 9.7.1	107	13	T	Y	107.13 9.7.1	Change the note to "NOTE--The format of the MPDU Length field maintains a common encoding structure for both HE, VHT and HT PPDUs. For HT PPDUs, only the MPDU Length Low subfield is used, while for VHT and HE PPDUs, both subfields are used."	As in comment	2017/1/9 9:42

7566	Liwen Chu	225	1 9.7.1	110	53	T	Y	110.53 9.7.1	Change to "One or more Trigger frames where the Trigger Type field is Basic Trigger, MU-BAR,or BSRP." to "One or more Trigger frames where the Trigger Type field is Basic Trigger, MU-BAR, or BSRP, or BQRP." Change to "Basic Trigger frame or BSRP Trigger frame only when AP transmits the A-MPDU" to "Basic Trigger frame, or BSRP Trigger frame or BQRP Trigger frame only when AP transmits the A-MPDU"	As in comment	2017/1/9 9:42
7567	Liwen Chu	225	1 10.3.2.4	114	51	T	Y	114.51 10.3.2.4	"If the STA is an HE STA, the STA is a TXOP holder, and the frame is solicited by the STA, then the STA shall not update its NAV." If the STA is a TXOP holder, the STA will never update the NAV per the received PPDU from the TXOP resopnder. This is true for 11a/b/g/n/ac STA, and is also true for HE STA. The reason is that the received Duration will not be larger than the NAV timer value.	Remove the sentence	2017/1/9 9:42
7568	Liwen Chu	225	1 10.3.2.4	114	49	T	Y	114.49 10.3.2.4	"If the STA is an HE STA and the STA is solicited for an immediate response by the PPDU carrying the received frame, the STA shall not update its NAV." This is not needed since the solicited STA is the receiver of the soliciting frame which is similar to NDPA in 11ac.	Remove the sentence	2017/1/9 9:42
7569	Liwen Chu	225	1 10.3.2.8a.3	117	29	T	Y	117.29 10.3.2.8a.3	"The MU-RTS frame is sent by the AP with which the STA is associated and the value of the basic NAV is 0" carrier sensing bullet already cover the text after and. The text before and is not necessary since the MU-RTS is always from the associated STA.	Removing the bullet	2017/1/9 9:42
7570	Liwen Chu	225	1 9.2.4.6.4.7	27	63	T	Y	27.63 9.2.4.6.4.7	Change "assist HE DL HE MU transmission" to "assist HE DL and UL HE MU transmission"	As in comment	2017/1/9 9:42
7571	Liwen Chu	225	1 27.5.1.3	163	16	T	Y	163.16 27.5.1.3	The channel query can be used by both UL and DL MU. Move the subclause outside of DL MU subclause and change the title accordingly.	As in comment	2017/1/9 9:42
7572	Liwen Chu	225	1 27.5.1.3	163	46	T	Y	163.46 27.5.1.3	Add management frame after QoS Null, QoS Data frames	As in comment	2017/1/9 9:42
7573	Liwen Chu	225	1 9.4.2.218.3	86	11	T	Y	86.11 9.4.2.218.3	It is atrange that DL MU on partial BW is defined only for RX side but UL MU on partial BW is defined for both TX and RX sides.	Harmonize the definiition.	2017/1/9 9:42
7574	Liwen Chu	225	1 27.5.2.1	164	24	T	Y	164.24 27.5.2.1	Class A and B should also apply to UL MU also.	Change the text per the comment.	2017/1/9 9:42
7575	Liwen Chu	225	1 27.5.2.4	170	26	T	Y	170.26 27.5.2.4	Here the virtual carrier sensing is not needed if the responding are Ack/BA and the length is less than 418. However CS Required is set to 0 when the length is less than 418 and the responding from all STAs are Ack/BA.	harmonize them	2017/1/9 9:42
7576	Liwen Chu	225	1 27.16	204	56	T	Y	204.56 27.16	It seems a 20MHz HE STA doesn't need to implement VHT features. For sure HE devices in 2.4GHz band don't need to implement VHT features.	Change the text per the comment.	2017/1/9 9:42
7577	Liwen Chu	225	1 27.16	205	1	T	Y	205.01 27.16	The whole paragraph can't be true in 5GHz and 2.4GHz bands.	change the text.	2017/1/9 9:42
7578	Liwen Chu	225	1 27.16	205	18	T	Y	205.18 27.16	2.4GHz band is missing.	Change the text per the comment.	2017/1/9 9:42
7579	Liwen Chu	225	1 27.16	205	24	T	Y	205.24 27.16	"Channel Center Frequency Segment 2" is missing. Add it.	As in comment	2017/1/9 9:42
7580	Liwen Chu	225	1 27.16	205	37	T	Y	205.37 27.16	"Channel Center Frequency Segment 2" is missing. Add it.	As in comment	2017/1/9 9:42
7581	Liwen Chu	225	1 27.15.2	201	36	T	Y	201.36 27.15.2	change the paragraph to "An HE non-AP STA may transmit an HE MU PPDU to a peer STA if it has received from the peer STA an HE Capabilities element with the UL MU PPDU Support field equal to 1; otherwise the STA shall not transmit an HE MU PPDU to the peer STA"	As in comment	2017/1/9 9:42

7582	Liwen Chu	225	1 27.15.2	201	44	T	Y	201.44 27.15.2	Two issues here: 1), HE TRIG PPDU in STBC shouldn't use HE TRIG PPDU since HE TRIG PPDU is only from STA to AP. As a TXOP holder, AP can send wantever PPDU it wants to use. This also contradicts with the following bullet. So HE TRIG PPDU should be removed from the bullet. 2, HE MU PPDU should be added to the bullet.	As in comment	2017/1/9 9:42
7583	Liwen Chu	225	1 27.15.2	201	53	T	Y	201.53 27.15.2	This bullet should be removed since there is no support of transmiting FTM in various HE PPDU formats.	As in comment	2017/1/9 9:42
7584	Liwen Chu	225	1 27.15.3	202	21	T	Y	202.21 27.15.3	"and BW shall be 20 MHz" should be removed from the bullet since responding BW rules already cover this.	As in comment	2017/1/9 9:42
7585	Liwen Chu	225	1 27.15.3	202	30	T	Y	202.30 27.15.3	Change "When the Supported HE-MCS and NSS set of the receiving STA or STAs is not known, the transmitting STA shall transmit using a <HE-MCS, NSS> tuple in the basic HE-MCS and NSS set." to "When the Supported HE-MCS and NSS set of the receiving STA or STAs is not known, the transmitting STA shall transmit using a <HE-MCS, NSS> tuple in the basic HE-MCS and NSS set if basic HE MCS and NSS set is not idle, otherwise the transmitting STA shall transmit using a <HE-MCS, NSS> tuple in the mandatory HE-MCS and NSS set"	As in comment	2017/1/9 9:42
7586	Liwen Chu	225	1 27.15.3	202	33	T	Y	202.33 27.15.3	The text is ambiguous since the protection levels are different per the environment.	Delete the last sentence and add the related text to protection subclause if necessaey.	2017/1/9 9:42
7587	Liwen Chu	225	1 27.15.4.1	203	9	T	Y	203.09 27.15.4.1	There is no such thing of Supported HE-MCS and NSS Set field.	Use the correct name.	2017/1/9 9:42
7588	Liwen Chu	225	1 27.15.4.1	203	14	T	Y	203.14 27.15.4.1	There is no such thing of Rx HE-MCS Map subfield	Use the correct name.	2017/1/9 9:42
7589	Liwen Chu	225	1 27.15.4.2	203	35	T	Y	203.35 27.15.4.2	There is no such thing of Supported HE-MCS and NSS Set field.	Use the correct name.	2017/1/9 9:42
7590	Liwen Chu	225	1 27.15.4.2	203	40	T	Y	203.40 27.15.4.2	There is no such thing of Tx HE-MCS Map subfield	Use the correct name.	2017/1/9 9:42
7591	Liwen Chu	225	1 27.15.4.2	203	54	T	Y	203.54 27.15.4.2	Change "should" to "shall"	As in comment	2017/1/9 9:42
7592	Liwen Chu	225	1 27.15.4.2	203	61	T	Y	203.61 27.15.4.2	Change "should" to "shall"	As in comment	2017/1/9 9:42
7593	Liwen Chu	225	1 27.14.3.1	200	39	T	Y	200.39 27.14.3.1	The following behavior should be added: the AP shall send DL PPDU to STA or trigger UL transmission from STA if the STA has its bit in TIM element being set to 1.	As in comment	2017/1/9 9:42
7594	Liwen Chu	225	1 27.14.3.1	200	62	T	Y	200.62 27.14.3.1	The bahavior is too restrict. When the AP has only DL PPDUs to be transmitted to a STA in TWT broadcast SP and all the buffered frames are discarded, the AP doesn't need to set the bit for the STA in TIM element to 1 in the following TWT SP.	As in comment	2017/1/9 9:42
7595	Liwen Chu	225	1 27.14.3.1	200	45	T	Y	200.45 27.14.3.1	What is the type of the TWT SP?	Clarify it.	2017/1/9 9:42
7596	Liwen Chu	225	1 27.14.3.1	200	49	T	Y	200.49 27.14.3.1	Change "At the beginning of these periodic TWT SPs," to "At the beginning of these periodic TWT SPs with the TWT flow identifier field set to 3,"	As in comment	2017/1/9 9:42
7597	Liwen Chu	225	1 27.14.3.1	200	60	T	Y	200.60 27.14.3.1	What is the type of the TWT SP?	Clarify it.	2017/1/9 9:42
7598	Liwen Chu	225	1 9.4.2.200	73	4	T	Y	73.04 9.4.2.200	Add Ack/BA as the responding frame from scheduled STA. It makes no sense to only do sounding without data frame transmission.	As in comment	2017/1/9 9:42
7599	Liwen Chu	225	1 9.4.2.200	73	30	T	Y	73.30 9.4.2.200	Add Ack/BA as the responding frame from scheduled STA. It makes no sense to only do sounding without data frame transmission.	As in comment	2017/1/9 9:42
7600	Liwen Chu	225	1 9.4.2.200	72	53	T	Y	72.53 9.4.2.200	Add the following restriction "The AP doesn't transmit a TIM frame or a FILS discovery frame including a TIM element at the beginning of the TWT SP."	As in comment	2017/1/9 9:42

7601	Liwen Chu	225	1 27.14.2	200	28	T	Y	200.28 27.14.2	Clarify the following behavior: In a TWT SP whose Broadcast subfield is 1 and TWT Flow Identifier subfield is 2, can a Trigger frame with no contention RU be transmitted? If the answer is yes, can Trigger frame that has no allocated contention RU follow Trigger frame which has Cascade Indication field set to 0 and has conttention RU?	Clarify it.	2017/1/9 9:42
7602	Liwen Chu	225	1 27.14.1	199	11	T	Y	199.11 27.14.1	Add the following intra-PPDU power save rules: if a PPDU is from OBSS, the STA can desicard the frame until the end of the PPDU.	As in comment	2017/1/9 9:42
7603	Liwen Chu	225	1 27.12	198	50	T	Y	198.50 27.12	There is no such thing as dot11PPEThresholdsMappingTable.	Clarify it.	2017/1/9 9:42
7604	Liwen Chu	225	1 27.11.4	197	25	T	Y	197.25 27.11.4	Add the following text: "an non-AP STA should use A1, A2, A3 fields for SR decision"	As in comment	2017/1/9 9:42
7605	Liwen Chu	225	1 27.10.4	193	44	T	Y	193.44 27.10.4	Change the text to "An HE transmitter shall not aggregate MPDU that asks for Ack in a multiple-TID A-MPDU to the HE recipient unless the HE transmitter received the recipient's HE Capabilities element with Ack Enabled Multi-TID A-MPDU Support subfield being set to 1"	As in comment	2017/1/9 9:42
7606	Liwen Chu	225	1 27.10.4	194	19	T	Y	194.19 27.10.4	It is not clear whether Action frame accounts for a TID.	Clarify it.	2017/1/9 9:42
7607	Liwen Chu	225	1 27.10.4	194	40	T	Y	194.40 27.10.4	"When any of the buffers is empty" is not right since this means when the buffer of one TID related to the primary AC is empty.	Change to "when the buffers of all TIDs related to the primay AC are empty."	2017/1/9 9:42
7608	Liwen Chu	225	1 27.10.4	194	51	T	Y	194.51 27.10.4	The paragraph at L51 is similar to the paragraph at L24. One of them should be removed.	As in comment	2017/1/9 9:42
7609	Liwen Chu	225	1 27.10.4	195	15	T	Y	195.15 27.10.4	The paragraph at P195 L15 is similar to the paragraph at P194 L24. One of them should be removed.	As in comment	2017/1/9 9:42
7610	Liwen Chu	225	1 27.9.2.1	190	51	T	Y	190.51 27.9.2.1	This is not a sentence.	Delete it.	2017/1/9 9:42
7611	Liwen Chu	225	1 27.9.2.1	190	53	T	Y	190.53 27.9.2.1	Change "SR delay entry" to SR_Delay	As in comment	2017/1/9 9:42
7612	Liwen Chu	225	1 27.9.2.2	192	22	T	Y	192.22 27.9.2.2	The sentence is wrong. Here is an example, suppose the STA which sets OBSS PD level to -76 dbm, it receives the signal strength of inter-BSS PPDU is -72dbm, and the STA set NAV and assumes medium busy. Per "The minimum OBSS_PDlevel used by the STA shall be above the received signal strength of the inter-BSS PPDU, which means that the maximum TXPWRmax shall be calculated with OBSS_PDlevel equal to the received signal strength of the inter-BSS PPDU, with Equation (27-1).", the OBSS PD level is changed to -72dbm and TX Power is changed to TX Power Ref- (-72+82).	Update the sentence or deletre it.	2017/1/9 9:42
7613	Liwen Chu	225	1 27.8.1	188	29	T	Y	188.29 27.8.1	Why management frmae is not mentioned here?	Add management frame.	2017/1/9 9:42
7614	Liwen Chu	225	1 27.8.2	189	8	T	Y	189.08 27.8.2	The meaning of the following sentence is not clear "After transmitting the acknowledgement frame immediate response immediate acknowledgement for the frame containing the OMI A-Control field, the OMI responder may transmit subsequent SU PPDUs or MU PPDUs that are addressed to the OMI initiator."	Clarify it.	2017/1/9 9:42
7615	Liwen Chu	225	1 27.8.1	188	48	T	Y	188.48 27.8.1	The following behavior should be added: a ROM intiator shall not transmit ROMI to a STA that doesn't support the receiption of A-Control with ROMI.	As in comment	2017/1/9 9:42
7616	Liwen Chu	225	1 27.8.3	189	18	T	Y	189.18 27.8.3	Before sending TOMI, the initiator should make sure that the responder can receive OMI Control. Arguablly in this case the reponder can always receive the OMI Control since the responder is always AP. But the sentence is not clear that the responder is always an AP.	Change the sentence to "An OMI initiator that is a non-AP STA may indicate changes in its transmit parameters by sending a frame that contains the OMI A-Control field to the OMI responder which is an AP."	2017/1/9 9:42

7617	Liwen Chu	225	1 27.8	188	17	T	Y	188.17 27.8	NSS behavior is not harmonized with HE Capabilities element.	Change the nomative behavior to make them consistent.	2017/1/9 9:42
7618	Liwen Chu	225	1 27.7.1	179	54	T	Y	179.54 27.7.1	Add the following sentence: "An HE STA can negotiate broasdcast TWT values, as defined in 10.43 (Target wake time (TWT)), subject to the additional rules and restrictions that are defined in 27.7.3 (broadcastTWT agreements)."	As in comment	2017/1/9 9:42
7619	Liwen Chu	225	1 27.7.1	179	66	T	Y	179.66 27.7.1	Change the text to "STAs need not be made aware of the TWT values of other STAs or that a TWT service period (SP) can be used to exchange frames with other STAs."	As in comment	2017/1/9 9:42
7620	Liwen Chu	225	1 27.7.2	180	31	T	Y	180.31 27.7.2	Change "If the TWT responding STA is an AP then it may set the Responder PM Mode subfield to 1 only if all non-AP STAs, which are associated to it, indicate support of TWT in the role of a TWT requester" to "If the TWT responding STA is an AP then it may set the Responder PM Mode subfield to 1 only if all non-AP STAs, which are associated to it, indicate support of TWT in the role of a TWT requester and the AP announces the TWT Required subfield to 1 in its HE Operation element"	As in comment	2017/1/9 9:42
7621	Liwen Chu	225	1 27.7.2	180	48	T	Y	180.48 27.7.2	20MHz operation can be indicated by OMI, operation mode management frame. It is not necessary to add another method.	Change "May set the TWT Channel subfield in the TWT element it transmits to a value that corresponds to the primary channel of the BSS to indicate a 20 MHz operation; otherwise it shall set it to 0" to "Shall set the TWT Channel subfield in the TWT element it transmits to 0"	2017/1/9 9:42
7622	Liwen Chu	225	1 27.7.2	181	4	T	Y	181.04 27.7.2	This is not necessary for the following reasons: 1, TWT Information can do this. 2, TWT Information provide accurate behavior, something can be done something can't be done. 3, with unsolicited TWT response, anything can be done which is bad.	Remove "An HE AP may send an unsolicited TWT response frame with the Trigger subfield equal to 1 to an HE non-AP STA that has set the TWT Requester Support subfield to 1 in the HE Capabilities elements that it transmits to the AP."	2017/1/9 9:42
7623	Liwen Chu	225	1 27.7.2	181	13	T	Y	181.13 27.7.2	"(for both implicit TWT and trigger-enabled TWT)" should be "(for both non trigger-enabled TWT and trigger-emabled TWT)"	As in comment	2017/1/9 9:42
7624	Liwen Chu	225	1 27.7.2	181	19	T	Y	181.19 27.7.2	With these rules, a trigger-enabled TWT allows DL MU with Trigger/A-Control trigger + UL MU acknowledgement only frame exchange. But DL MU +BA/Ack+BAR+BA frame exchange is disallowed.	Allow DL MU +BA/Ack+BAR+BA frame exchange in Trigger-enabled TWT. The simple way is to define trigger-enabled TWT as the STA's transmission is always triggered/solicited by AP's transmission.	2017/1/9 9:42
7625	Liwen Chu	225	1 27.7.2	181	22	T	Y	181.22 27.7.2	"The TWT responding STA that intends to transmit additional Trigger frames during a trigger-enabled TWT SP shall set the Cascade Indication field of the Trigger frame to 1 to indicate that it will transmit another Trigger frame within the same TWT SP. The TWT responding STA shall set the Cascade Indication field to 0 when the Trigger frame is the last Trigger frame of the TWT SP or when the Trigger frame is sent outside of a TWT SP." The sentences are not in line with the behavior of STA's definiiton about the last Trigger frame to a STA.	Harmonize them.	2017/1/9 9:42
7626	Liwen Chu	225	1 27.7.2	182	6	T	Y	182.06 27.7.2	The behavior of a STA which is scheduled by Trigger with Cascade Indicate being 0 is not defined.	Add the following text:"The finishing of frame exchange solicted by a Trigger frame with the Cascade Indication field equal to 0 that is intended to the STA and does not allocate any random RU during an unannounced TWT"	2017/1/9 9:42

7627	Liwen Chu	225	1 27.7.3.1	182	28	T	Y	182.28 27.7.3.1	Change to "A TWT scheduling STA is an HE AP with dot11TWTOptionActivated equal to true that includes Broadcast TWT Support being set to 1 in HE Capabilities element and optionally a broadcast TWT element in the Beacon frame, and follows the rules described in 27.7.3.2 (Rules for TWT scheduling STA).". The reason for this is that since STA and AP can negotiate broadcast TWT. At the begining of BSS operation, the AP may not include broadcast TWT in Beacon.	As in comment	2017/1/9 9:42
7628	Liwen Chu	225	1 27.7.3.1	182	39	T	Y	182.39 27.7.3.1	A STA can both have individual TWT and broadcast TWT. So the following bullet should be deleted: "Has not negotiated any implicit TWT agreement with the HE AP as described in 27.7.2 (Individual TWT agreements)."	As in comment	2017/1/9 9:42
7629	Liwen Chu	225	1 27.7.3.2	184	11	T	Y	184.11 27.7.3.2	"Alternate TWT when the periodic TWT is being modified" This should be removed since TWT Information provide better solution.	As in comment	2017/1/9 9:42
7630	Liwen Chu	225	1 27.7.3.2	184	14	T	Y	184.14 27.7.3.2	Change "it shall set the Trigger field to 0 to indicate an implicit TWT." to "it shall set the Trigger field to 0 to indicate an non Trigger-enabled TWT."	As in comment	2017/1/9 9:42
7631	Liwen Chu	225	1 27.7.3.2	184	42	T	Y	184.42 27.7.3.2	It should be TWT scheduled STA here. For TWT scheduling STA, there is no restriction about the types of frames to be transmitted.	As in comment	2017/1/9 9:42
7632	Liwen Chu	225	1 27.7.3.2	184	42	T	Y	184.42 27.7.3.2	For Flow ID 3, whether random RU can be allocated in UL MU is missing. Add it.	As in comment	2017/1/9 9:42
7633	Liwen Chu	225	1 27.7.3.3	185	38	T	Y	185.38 27.7.3.3	Whether a scheduled STA can do transmission is decided by the MU EDCA parameters. No additional rules are needed.	Change the text per the comment.	2017/1/9 9:42
7634	Liwen Chu	225	1 27.7.3.3	185	42	T	Y	185.42 27.7.3.3	"A TWT scheduled STA that is in PS mode may go to doze state after receiving the Beacon frame and shall be in the awake state at a broadcast TWT start time during which the STA intends to exchange frames with the TWT scheduling STA." This is not harmonized with AP's trigger rules: in a btoadcast TWT SP, AP should schedule the STAs that negotiate the TWT SP with it.	Harmonize them.	2017/1/9 9:42
7635	Liwen Chu	225	1 27.7.3.4	185	42	T	Y	185.42 27.7.3.4	The behavior of the scheduling AP is not complete. Add the following rule: an AP shall not incude Per STA Info of a STA in a TWT SP which is announced in a Beacon whose TBTT is not the STA's wake TBTT.	As in comment	2017/1/9 9:42
7636	Liwen Chu	225	1 27.7.4	187	12	T	Y	187.12 27.7.4	This should not be mandatory at the receiving side.	Change the reception of it to be optional	2017/1/9 9:42
7637	Liwen Chu	225	1 27.6.2	176	26	T	Y	176.26 27.6.2	"otherwise it shall be set to the MAC address of the STA whose AID is included in the STA Info field" This is not true. Otherwise HE sounding can't be used in IBSS, MBSS.	modify it to allow HE sounding in IBSS, MBSS.	2017/1/9 9:42
7638	Liwen Chu	225	1 27.6.2	177	19	T	Y	177.19 27.6.2	Replace YY-1 with realreference.	As in comment	2017/1/9 9:42
7639	Liwen Chu	225	1 27.6.2	177	30	T	Y	177.30 27.6.2	CCFS 2 is not in VHT Operation Information field which needs to be used to decide maxmum 26-tone RU. Include CCFS 2.	As in comment	2017/1/9 9:42
7640	Liwen Chu	225	1 27.6.2	178	22	T	Y	178.22 27.6.2	Change "shall compute the HE compressed beamforming feedback after receiving the HE NDP" to "shall compute the HE compressed beamforming feedback per NDPA's requirement (Feedback Type + Ng + codebook size) after receiving the HE NDP"	As in comment	2017/1/9 9:42

7641	Liwen Chu	225	1 27.6	176	1	T	Y	176.01 27.6	Sounding feedback segmentation rules are missing from the draft. Add them.	As in comment	2017/1/9 9:42
7642	Liwen Chu	225	1 27.5.1.1	162	52	T	Y	162.52 27.5.1.1	A-MPDU in HE DL MU PPDU doesn't use the rules in 27.10.3. Padding rules for A-MPDU in VHT PPDU is used.	As in comment	2017/1/9 9:42
7643	Liwen Chu	225	1 27.5.1.1	162	56	T	Y	162.56 27.5.1.1	Paragraph at L56 is duplicated with the paragraph at L44.	Remove the paragraph at L44	2017/1/9 9:42
7644	Liwen Chu	225	1 27.5.2.2.1	165	21	T	Y	165.21 27.5.2.2.1	This requirement must be true to the last Trigger frame in A-MPDU. Change the text accordingly.	As in comment	2017/1/9 9:42
7645	Liwen Chu	225	1 27.5.2.2.2	166	56	T	Y	166.56 27.5.2.2.2	This paragraph is duplicated with the rules in multi-TID A-MPDU subclause. Delete it.	As in comment	2017/1/9 9:42
7646	Liwen Chu	225	1 27.5.2.2.2	167	6	T	Y	167.06 27.5.2.2.2	It shouldn't be any value from 0 to 7. The value should be less than the STA's maximal TC levels being announced.	As in comment	2017/1/9 9:42
7647	Liwen Chu	225	1 27.5.1	162	36	T	Y	162.36 27.5.1	The rules about when the DL MU frame exchange is successful is missing from the draft.	Add the related rules.	2017/1/9 9:42
7648	Liwen Chu	225	1 27.5.2.3	167	54	T	Y	167.54 27.5.2.3	Add random OFDMA here	As in comment	2017/1/9 9:42

7690	MARC EMMELMANN	225	1 0	0	0	G	Y	0.00 0	The current amendment to the standard has been produced by a process which was subject to dominance. Technical content contained in the draft has been produced by an interest group external to IEEE 802.11. Produced technical content has been voted into the draft under a process which was subject to "dominance" as concluded by the IEEE 802.11 / EC investigation. Technical content requires a 75% approval to be included in the draft. Several votes conducted to include technical submissions in the draft were conducted while the process was dominated by members of the external interest group. Even though companies having had participated in the interest group have declared that they would no longer participate in the interest group, the established state is that the technical content of the	Apply the special measures to all subsequent votes on the TGax amendment; especially the working group voter pool and any subsequent voter pools should be subject to special measures.	2017/1/9 9:42
7691	Mark Hamilton	225	1 1	1	1	E	Y	1.01 1	11ah D10.0 includes the following editorial instruction: Change "[a] VHT Single MPDU" to "[an] S-MPDU" throughout the baseline draft. This needs to be applied to the baseline quoted text in 11ax.	Change "[a] VHT Single MPDU" to "[an] S-MPDU" throughout the draft	2017/1/9 9:42
7692	Mark Hamilton	225	1 3.2	3	35	E	N	3.35 3.2	For native speakers, the phrase is "a high" (not "an high").	Change "an high" to "a high". Also at P6L42.	2017/1/9 9:42
7693	Mark Hamilton	225	1 3.2	6	53	T	Y	6.53 3.2	The phrases "HE PPDU", "HE BSS", "HE MU/SU PPDU" and "HE-MCS" are used in the text, similarly to the equivalent VHT/HT phrases. These terms should be well-defined.	Define "HE PPDU", similar to HT PPDU and VHT PPDU. Same for "BSS", "MU PPDU", "SU PPDU", "extended range SU PPDU", "trigger-based PPDU", and "MCS".	2017/1/9 9:42
7694	Mark Hamilton	225	1 3.2	6	58	T	Y	6.58 3.2	Define OFDMA (we only have "non-OFDMA")	Add a defintion for OFDMA: Orthogonal Frequency Division Multiple Access (OFDMA): An OFDM-based multiple access scheme where different subsets of subcarriers are allocated to different users of the channel, allowing simultaneous data transmission to or from several users of the channel.	2017/1/9 9:42
7695	Mark Hamilton	225	1 3.2	6	58	T	Y	6.58 3.2	Add a definition of RU	Add a defintition of RU: Resource Unit (RU): A group of subcarriers used within OFDMA to allocate subchannels to users of the channel.	2017/1/9 9:42
7696	Mark Hamilton	225	1 4.3	9	7	E	Y	9.07 4.3	Clause 4 introduction for HE makes more sense after VHT (4.3.14). Maybe that is what's meant?	Change "4.3.12" to "4.3.14"	2017/1/9 9:42
7697	Mark Hamilton	225	1 4.3.14a	9	20	T	Y	9.20 4.3.14a	Combination of "shall support operation ... only" is confusing. It shall only support such operation?	Reword to clarify the relation of "shall support" and "only". Suggest something like "shall support operation in a mode with only 20 MHz channel bandwidth". (If this use of "mode" isn't yet another problem.)	2017/1/9 9:42
7698	Mark Hamilton	225	1 4.3.14a	9	12	T	Y	9.12 4.3.14a	Why say HE works between 1 GHz and 6 GHz, and then only describe 5 GHz and 2.4 GHz operation, and relation to VHT and HT? If HE only works in those bands, just say so.	Change "frequency bands between 1 GHz and 6 GHz" to "the 2.4 GHz and 5 GHz frequency bands".	2017/1/9 9:42
7699	Mark Hamilton	225	1 4.3.14a	9	18	T	Y	9.18 4.3.14a	A VHT STA only optionally supports 160 MHz or 80+80 MHz. Likewise for HE. So, an HE non-AP STA that does not support 160 MHz or does not support 80+80 MHz, is not "also a VHT non-AP STA"?	Reword to relfect intent. Since the requiremnent for bandwidth operation seem to be the same for HE and VHT, perhaps just leave this list of operating modes as "when not operating in 20 MHz-only bandwidth"	2017/1/9 9:42
7700	Mark Hamilton	225	1 4.3.14a	9	24	T	Y	9.24 4.3.14a	An HE AP in 2.4 GHz should also be an HT AP	Add "An HE AP is also an HT AP"	2017/1/9 9:42
7701	Mark Hamilton	225	1 4.3.14a	9	29	T	Y	9.29 4.3.14a	These features are not present in an HT AP, either.	Delete "non-AP". Same thing on P9L48.	2017/1/9 9:42
7702	Mark Hamilton	225	1 4.3.14a	9	52	T	Y	9.52 4.3.14a	What is "dynamic fragmentation level 0"? (The PICS has no reference for it, either)	Clarify what is meant by "dynamic fragmentation level 0", probably in 27.3.2, and put in the reference in the PICS	2017/1/9 9:42
7703	Mark Hamilton	225	1 4.3.14a	9	65	T	Y	9.65 4.3.14a	This statement is not intended to be normative, but a declaration that the normative capability is specified later in the text	Change "may" to "can"	2017/1/9 9:42

7704	Mark Hamilton	225	1 6.3.3.3.2	11	26	T	Y	11.26 6.3.3.3.2	HE Capabilities and HE Operation values are only present if they were present in a matching Probe Reponse or Beacon for the this BSSDesciptor.	Add, in the Description column, similar language to that in 802.11-2016 for HT Capabilities and VHT Capabilities, to both the HE Capabilities and HE Operation rows.	2017/1/9 9:42
7705	Mark Hamilton	225	1 6.3.4.2.4	12	14	T	Y	12.14 6.3.4.2.4	MLME-JOIN needs to check for unsupported HE-MCS in the Basic HE-MCS and NSS Set.	Add a change to 6.3.4.2.4, to add a paragraph after the similar VHT paragraph: "If the MLME of an HE STA receives an MLME-JOIN.request primitive with a SelectedBSS parameter containing a Basic HE-MCS And NSS Set field in the HE Operation parameter that contains any unsupported <HE-MCS, NSS> tuple, the MLME response in the resulting MLME-JOIN.confirm primitive shall contain a ResultCode parameter that is not set to the value SUCCESS." Same thing in 6.3.11.2.4.	2017/1/9 9:42
7706	Mark Hamilton	225	1 6.3.27	13	58	T	Y	13.58 6.3.27	MLME-DLS.confirm needs HE Capabilities, like MLME-DLS.indication.	Add HE Capabilities parameter and row to MLME-DLS.confirm, similar to the baseline for HT/VHT Capabilities for this primitive.	2017/1/9 9:42
7707	Mark Hamilton	225	1 8.3.5.2.2	15	34	T	Y	15.34 8.3.5.2.2	How is STA_INDEX different from USER_INDEX?	Remove the new parameter. Merge the reference to Table 28-1 into the existing text for USER_INDEX on condition of an HE MU PPDU.	2017/1/9 9:42
7708	Mark Hamilton	225	1 9.2.4.1.8	19	40	T	Y	19.40 9.2.4.1.8	Bad use of "can". This does not appear to be a declarative statement that this is defined elsewhere, but rather a future potential statement.	Change "can" to "might". Same thing at P19L49.	2017/1/9 9:42
7709	Mark Hamilton	225	1 9.2.4.5.4	20	44	T	Y	20.44 9.2.4.5.4	Ambiguous addition. Also, unnecessary behavioral text.	Presumably, the two paragraphs before the insertion are for the cases when the frame is not carried in a DL HE MU PPDU. So, add "For a frame not carried in a DL HE MU PPDU, and ..." to the beginning of both paragraphs. Reword the added text, following the colon, to "An immediate response in an HE Trigger-based PPDU is expected." Delete the following sentence completely, as this is behavior described in clause 10.	2017/1/9 9:42
7710	Mark Hamilton	225	1 9.2.4.5.6	21	2	T	Y	21.02 9.2.4.5.6	Addition causes ambiguity. A sentence is added that starts "A non-AP HE STA uses ...". Is this intended to be in addition to how other STAs use it, or an exclusive (exhaustive) list of the STAs that use it? (There is no other text saying how other STAs use it, hence the confusion caused.)	Add text describing which other STAs (HE APs, non-HE STAs, etc.?) use this subfield, and what they are indicating, if it is different from what a non-AP HE STA is indicating.	2017/1/9 9:42
7711	Mark Hamilton	225	1 9.2.4.5.6	21	6	T	Y	21.06 9.2.4.5.6	Poor change of "might" to "can". "Can" is discouraged, because it causes potential confusion. Generally, agreed (per Style Guide) that 'can' is used when there is a normative statement giving the option, that is made elsewhere, and the text with 'can' is referencing that statement. That is not the case here. 'Might' is the better choice, as this is a possible future action that a device could take, without any normative text for the stuation.	Revert the change from 'might' to 'can', so the baseline text ('might') remains unchanged.	2017/1/9 9:42
7712	Mark Hamilton	225	1 9.2.4.5.6	21	13	T	Y	21.13 9.2.4.5.6	Why overload the meaning of this subfield, for HE versus non-HE transmitters? This reaults in receivers that are compatible with both HE and pre-HE peers to process the field values differently depending on the source's capabilities (which are potentially non-obvious from the frame itself.)	Remove the HE versus non-HE distinction.	2017/1/9 9:42
7713	Mark Hamilton	225	1 9.2.4.6.4.1	22	60	T	Y	22.60 9.2.4.6.4.1	Unnecessary constraint. If a Control subfield with Control ID equal to 0 (UL MU response scheduling) is present, then the entire Aggregated Control field is filled, so "first" is meaningless.	Delete the sentence "The Control subfield with Control ID subfield equal to 0, if present, is fhte first subfield of the sequence.	2017/1/9 9:42
7714	Mark Hamilton	225	1 9.2.4.6.4.1	22	60	T	Y	22.60 9.2.4.6.4.1	There is no clear constraint that all the Control subfields must have total length of 26 bits or less.	Add a sentence, "The total length of all Control subfields contained in the Aggregate Control subfield must be 26 bits or less."	2017/1/9 9:42

7715 Mark Hamilton	225	1 9.2.4.6.2	24	24	T	Y	24.24 9.2.4.6.2	Can refers to normative permission, not appropriate in this note	Change "can not satisfy" to "is unable to satisfy"	2017/1/9 9:42
7716 Mark Hamilton	225	1 9.2.4.6.4.3	24	54	T	Y	24.54 9.2.4.6.4.3	Can refers to normative permission, not appropriate here	Change "can receive" to "is capable of receiving"	2017/1/9 9:42
7717 Mark Hamilton	225	1 9.2.4.6.4.3	25	1	T	Y	25.01 9.2.4.6.4.3	Can refers to normative permission, not appropriate here	Change "can transmit to "is capable of transmitting	2017/1/9 9:42
7718 Mark Hamilton	225	1 9.2.4.6.4.4	25	28	E	Y	25.28 9.2.4.6.4.4	For everyone's sanity, but a hyphen in all occurances of "HE MCS"	Replace "HE MCS" with "HE-MCS" throughout	2017/1/9 9:42
7719 Mark Hamilton	225	1 9.2.4.6.4.5	27	9	T	Y	27.09 9.2.4.6.4.5	This is a normative permission. In clause 9, state it declaratively.	Change "can remain" to "optionally remains"	2017/1/9 9:42
7720 Mark Hamilton	225	1 9.2.4.6.4.7	28	53	T	Y	28.53 9.2.4.6.4.7	Use of "may" in a NOTE	Change "may" to "might"	2017/1/9 9:42
7721 Mark Hamilton	225	1 9.2.4.7.1	29	57	T	Y	29.57 9.2.4.7.1	Also reference HE Capabilities Information field, which has further MPDU length info (Length Exponent)	Add Table 9-262z to the "see also" in the HE PPDU column	2017/1/9 9:42
7722 Mark Hamilton	225	1 9.2.4.7.1	30	25	E	Y	30.25 9.2.4.7.1	Reference should be to HE PHY characteristics table	Change reference from Table 21-29 to Table 28-46, in HE PPDU column	2017/1/9 9:42
7723 Mark Hamilton	225	1 9.2.5.2	30	65	E	N	30.65 9.2.5.2	Add to the editing instructions to renumber after the insertion	Add "... and renumber appropriately" to the editing instructions.	2017/1/9 9:42
7724 Mark Hamilton	225	1 9.2.5.2	31	33	T	Y	31.33 9.2.5.2	Requirement is too vague. How many "multiple BlockAck frames, Ack frames" should be accounted for?	Specify the requirement in sufficient detail to be implementable/testable.	2017/1/9 9:42
7725 Mark Hamilton	225	1 9.3.1.8.2	33	54	E	Y	33.54 9.3.1.8.2	Modification to obsolete text. Subclause 9.3.1.8.2 is marked as obsolete in 802.11-2016.	Remove this change.	2017/1/9 9:42
7726 Mark Hamilton	225	1 9.3.1.9.1	34	23	T	Y	34.23 9.3.1.9.1	The implication of adding "or the address of the recipient STA..." is that this is not always the transmitter of the soliciting frame. If that is the case (there is a different possibility for transmitter and recipient), that case needs to be clarified. Also, "the recipient STA whose data/management frames are acknowledged" is confusing.	Delete after the "or", or clarify when this other alternative is supposed to be used. Reword the end of the sentence to clarify the STA being referenced. (STAs don't "own" frames, so "whose" is confusing. Perhaps it is the STA that transmitted the frames being acknowledged?) Same thing at P34L33 (for the HE non-AP STA).	2017/1/9 9:42
7727 Mark Hamilton	225	1 9.3.1.9.1	34	25	E	N	34.25 9.3.1.9.1	Suggest a new paragraph for the Multi-STA Block Ack case	Start a new paragraph at the first occurance of "An HE AP that transmits"	2017/1/9 9:42
7728 Mark Hamilton	225	1 9.3.1.9.1	34	27	T	Y	34.27 9.3.1.9.1	AID is not a subfield of the Multi-STA BlockAck frame, Per STA Info is the subfield.	Change "AID" to "Per STA Info". ("An HE AP that transmits a Multi-STA BlockAck frame with a single _Per STA Info_ subfield set the RA field ...") Same thing in the next setence, for the HE non-AP STA.	2017/1/9 9:42
7729 Mark Hamilton	225	1 9.3.1.9.1	34	28	E	Y	34.28 9.3.1.9.1	Clarification	Add "all", to clarify that "the same value of the AID subfield in all Per STA Info subfields" is required. (Also, make "values" singular.) Same thing for the non-AP stentence, following.	2017/1/9 9:42
7730 Mark Hamilton	225	1 9.3.1.9.1	34	30	E	N	34.30 9.3.1.9.1	Clarification and simplification.	Change sentence to "Since an HE non-AP STA always transmits ..., it sets the RA field to the TA field ..."	2017/1/9 9:42
7731 Mark Hamilton	225	1 9.3.1.9.1	35	50	T	Y	35.50 9.3.1.9.1	The baseline text that talks about the "GCR field" in subclause 9.3.1.9.1 (802.11-2016 P678L3) will need to be updated, since the subfield has been removed.	TGak has not made its modifications to this text either. Appropriate, and building/matching changes will need to be worked out.	2017/1/9 9:42
7732 Mark Hamilton	225	1 9.3.1.9.3	36	36	T	Y	36.36 9.3.1.9.3	Ambigous use of "can only". Use declarative verbs in clause 9.	Reword this NOTE: "A Compressed ... is not sent to an ... whose ... is not 3." Same thing at P39L30.	2017/1/9 9:42
7733 Mark Hamilton	225	1 9.3.1.9.7	37	23	T	Y	37.23 9.3.1.9.7	There appears to be no such terms as "multi-STA multi-TID" or "multi-STA single TID"	Delete "multi-TID, and multi-STA single TID"	2017/1/9 9:42
7734 Mark Hamilton	225	1 9.3.1.9.7	37	46	T	Y	37.46 9.3.1.9.7	Per STA Info is a poor choice of name, since this subfield can be repeated more than once for a given STA.	Change 'Per STA Info' subfield name to 'Per AID TID Info' subfield. Change the first subfield within this subfield from 'Per AID TID Info' to 'AID TID Info', since there is only one of these per 'Per AID TID Info', and it provides the AID and TID information for that 'Per AID TID' pair.	2017/1/9 9:42
7735 Mark Hamilton	225	1 9.3.1.9.7	37	59	T	Y	37.59 9.3.1.9.7	AIDs are 14 bits. The AID subfield here is a truncated AID.	Change "the AID" to "the 11 least significant bits of the AID"	2017/1/9 9:42
7736 Mark Hamilton	225	1 9.3.1.9.7	38	4	T	Y	38.04 9.3.1.9.7	This is a normative statement, and shouldn't be a NOTE.	Change text to normal (normative) text instead of a NOTE.	2017/1/9 9:42

7737	Mark Hamilton	225	1 9.3.1.9.7	38	15	T	Y	38.15 9.3.1.9.7	Circular definition of BASSC subfield format. The sentence says, "When B0 of the Fragment Number subfield of the Block Ack Starting Sequence Control subfield is 0, the Block Ack Starting Sequence Control subfield is as defined in Figure 9-28." But, without knowing the format of hte BASSC subfield (if it is defined per Figure 9-28 or not), the receiver can't find B0 of the Fragment Number subfield.	Add a paragraph, before the sentence at P39L1: "The Block Ack Starting Sequence Control subfield format, if present, is as defined in Figure 9-28. " Change the start of the paragraph at P38L36, to: "When B0 of the Fragment Number subfield of the Block Ack Starting Sequence Control subfield is 0, the Block Ack Bitmap subfield of the BA Information field conatins an 8-octet, 16-octet, 32-octet or 4-octet bitmap subfield depending on B2-B1 of the Fragment Number subfield ..."	2017/1/9 9:42
7738	Mark Hamilton	225	1 9.3.1.20	40	22	T	Y	40.22 9.3.1.20	If the previously reserved bits in the Sounding Dialog Token field are to be used to distinguish between a VHT NDP Announcement and an HE NDP Announcement, that should be stated explicitly, with appropriate changes to Figure 9-50 and related text.	Add text, a generic VHT/HE NDP Announcement frame format (with "variable" sized STA Info field), and an updated Figure 9-50, indicating a new use for B1 of the Sounding Dialog Token field, as the VHT/HE identifier, that distinguishes these two formats of the STA Info field. Delete the paragraph at P40L22, instead putting this concept earlier in the subclause (near Figure 9-50). Move the baseline text and Figure 9-49 to follow this new text, explicitly for the VHT/HE field set to 0 case. Replace the first sentence at P40L6 with something like "When the VHT/HE field is set to 1, the VHT/HE NDP Announcement frame format is shown in Figure 9-51a."	2017/1/9 9:42
7739	Mark Hamilton	225	1 9.3.1.20	40	39	T	Y	40.39 9.3.1.20	No description of the AID11 subfield.	Insert paragraph: "The AID11 subfield contains the least significant 11 bits of the AID of the STA expected to process this STA Info subfield. The AID11 subfield is equal to zero if the STA is an AP, mesh STA, or a member of an IBSS."	2017/1/9 9:42
7740	Mark Hamilton	225	1 9.3.1.20	41	8	T	Y	41.08 9.3.1.20	Use of "+" for natural language "and" is a poor choice. It can be confused with addition. Also, which bits in the column relate to which subfield is unclear	Change the column heading to "Feedback Type And Ng, and Codebook Size subfield values". Either split the column into two, to indicate which bits are which subfield, or provide a bit mapping hint similar to "B25, B26, B28".	2017/1/9 9:42
7741	Mark Hamilton	225	1 9.3.1.20	41	28	T	Y	41.28 9.3.1.20	How does the Disambiguation subfield prevent this? There is no explanation anywhere I can find.	Add a description (here, or perhaps better in clause 10 or 27) of how this mechanism works.	2017/1/9 9:42
7742	Mark Hamilton	225	1 9.3.1.23	42	26	T	Y	42.26 9.3.1.23	"can" is not appropriate for a normative permission. Use declarative verbs in clause 9.	Change "can include an optional ... and optional ..." to "optionally includes a ... and ..."	2017/1/9 9:42
7743	Mark Hamilton	225	1 9.3.1.23	43	2	T	Y	43.02 9.3.1.23	Use 'shall' for normative requirements.	Change "are required to" to "shall"	2017/1/9 9:42
7744	Mark Hamilton	225	1 9.3.1.23	43	5	T	Y	43.05 9.3.1.23	Use normative verbs to state requirements (or non-requirements)	Change "are not required to consider" to "may ignore"	2017/1/9 9:42
7745	Mark Hamilton	225	1 9.3.1.23	45	36	T	Y	45.36 9.3.1.23	This sentence is confusing. Also, there is no need to say that all User Info fields come before the Padding, that is part of the format per Figure 9-52c.	Reword: "All User Info fields with AID12 not equal to zero appear before any User Info fields with AID12 equal to zero."	2017/1/9 9:42
7746	Mark Hamilton	225	1 9.3.1.23	47	44	T	Y	47.44 9.3.1.23	The Padding field appears to always be "present", just potentially zero length, per Equation 9-ax1. But this text assumes it is non-zero length, but not always present.	Align the text and the Equation. Suggest to remove the "0" case from the Equation, as that allows the text to talk about the special AID without a lot of wording to special-case the zero length padding case.	2017/1/9 9:42
7747	Mark Hamilton	225	1 9.3.1.23	47	46	T	Y	47.46 9.3.1.23	"STAID" here is probably referring to the AID12 subfield of the User Info field. That should be more clear. Also, the Padding field doesn't have any such subfields, so it needs to be explained that this parsed is as if there were a User Info field starting here, so the parser knows it has hit the Padding. Also, per Equation 9-ax1 and 9-ax2, the Padding field is always 2 or 4 octets.	Change "STAID[11:0]" to "AID12". Reword this and the preceeding sentences as, "The Padding field of the Trigger frame, if present, is 2 or 4 octets. The Padding field starts with 0xFFF in the first 12 bits, thus corresponding to a User Info field with the special value of 0xFFF in the AID12 field, and the rest of the bits of the Padding field are all set to one."	2017/1/9 9:42
7748	Mark Hamilton	225	1 9.3.1.23	47	56	T	Y	47.56 9.3.1.23	Math equation is a little messed up.	Add a multiplication glyph between N_DBPS and m_PAD.	2017/1/9 9:42

7749	Mark Hamilton	225	1 9.3.1.23	48	4	T	Y	48.04 9.3.1.23	Math equation is a little messed up. What is "SHORT"?	Replace the comma with a multiplication glyph between N_DBPS and m_PAD. Delete "SHORT" (or explain what it means).	2017/1/9 9:42
7750	Mark Hamilton	225	1 9.3.1.23.1	48	60	T	Y	48.60 9.3.1.23.1	Can refers to normative permission, not appropriate here	Change "can be aggregated by a STA" to "the STA supports aggregating"	2017/1/9 9:42
7751	Mark Hamilton	225	1 9.3.1.23.1	48	64	T	Y	48.64 9.3.1.23.1	This is a normative statement, and shouldn't be a NOTE.	Change text to normal (normative) text instead of a NOTE.	2017/1/9 9:42
7752	Mark Hamilton	225	1 9.3.1.23.4	50	28	E	Y	50.28 9.3.1.23.4	Starting at P50L28 through P51L16 (with exception of the two NOTES about the Trigger Dependent fields) is duplicative of text in 9.3.1.23, for all Trigger frames.	Delete the text from P50L28 to P51L16, except for the two NOTES about Trigger Dependent fields. (These should be NOTEs, as covered by a separate comment.)	2017/1/9 9:42
7753	Mark Hamilton	225	1 9.3.1.23.4	50	43	T	Y	50.43 9.3.1.23.4	The NOTES in 9.3.1.23.4 about the Trigger Dependent fields (both are not present) is normative text, and should not be NOTEs.	Change the text at P50L43 and P51L15 to normal (normative) text instead of NOTEs.	2017/1/9 9:42
7754	Mark Hamilton	225	1 9.3.3.6	53	20	T	Y	53.20 9.3.3.6	Association Request doesn't have a TWT element, according to 9.3.3.5.	Either remove this condition from Association Response, or add TWT element to Assocation Request. Same thing for Reassociation Request/Response.	2017/1/9 9:42
7755	Mark Hamilton	225	1 9.4.1.11	55	54	E	Y	55.54 9.4.1.11	Reference error - Quiet Time Period Action frame is in subclause 9.6.29.	Change clause reference for Quiet Time Period Action frame to 9.6.29.	2017/1/9 9:42
7756	Mark Hamilton	225	1 9.4.1.63	58	25	T	Y	58.25 9.4.1.63	This looks like a definitive, normative requirement.	Change "may take" to "takes"	2017/1/9 9:42

7771	Mark Hamilton	225	1 9.4.2.218.3	85	6	T	Y	85.06 9.4.2.218.3	Can refers to normative permission, not appropriate here	Change "can receive" to "is capable of receiving", in both the Definition and Encoding cells.	2017/1/9 9:42
7772	Mark Hamilton	225	1 9.4.2.218.3	85	13	T	Y	85.13 9.4.2.218.3	Can refers to normative permission, not appropriate here	Chane "can be sent to the STA" to "the STA is capable of receiving"	2017/1/9 9:42
7773	Mark Hamilton	225	1 9.4.2.218.3	85	15	T	Y	85.15 9.4.2.218.3	Can refers to normative permission, not appropriate here	Change "can receive" to "is capable of receiving"	2017/1/9 9:42
7774	Mark Hamilton	225	1 9.4.2.219	91	64	T	Y	91.64 9.4.2.219	Use 'shall' for normative requirements.	Change "must" to "shall"	2017/1/9 9:42
7775	Mark Hamilton	225	1 9.4.2.219	92	2	T	Y	92.02 9.4.2.219	Redundant text, with behavioral statements, that should not be in clause 9.	Delete this description of behavior (that is already in 11.49.1), and replace with "See 11.49.1."	2017/1/9 9:42
7776	Mark Hamilton	225	1 9.4.2.222	95	43	T	Y	95.43 9.4.2.222	This is a normative permission. In clause 9, state it declaratively.	Change "can be included" to "is optionally included"	2017/1/9 9:42
7777	Mark Hamilton	225	1 9.4.2.223	96	22	T	Y	96.22 9.4.2.223	What does "the HE STA support it can transmit frames" mean?	Clarify. Same thing in 9.4.2.224 and 9.4.2.225.	2017/1/9 9:42

7778	Mark Hamilton	225	1 9.7.3	110	58	E	Y	110.58 9.7.3	Reword to clarify declarative intent of this NOTE.	Reword NOTE 2 to: "It is optional for an AP including a Trigger frame and Block frame to include QoS Data in that A-MPDU." Same thing at P111L32.	2017/1/9 9:42
7779	Mark Hamilton	225	1 10.3.1	113	51	T	Y	113.51 10.3.1	Use proper normative verbs	Change "This mechanism requires STAs to" to When this mechanism is enabled, STAs shall"	2017/1/9 9:42
7780	Mark Hamilton	225	1 10.3.2.10.1	119	7	E	Y	119.07 10.3.2.10.1	Text does not match baseline	Change "Single MPDU" to "VHT single MPDU". (Note capitalization.) (Or, "S-MPDU", per instructions in 11ah.)	2017/1/9 9:42
7781	Mark Hamilton	225	1 10.3.5	122	13	T	Y	122.13 10.3.5	Is this "non-requirement" stated somewhere?	Add to the NOTE a reference to where this is stated normatively.	2017/1/9 9:42
7782	Mark Hamilton	225	1 10.5	122	40	T	Y	122.40 10.5	Use proper normative verbs	Change "is" to "shall be"	2017/1/9 9:42
7783	Mark Hamilton	225	1 10.7	122	52	T	Y	122.52 10.7	Rate selection rules are needed for new HE-MCS options.	New rules, or clarity about applicability of existing rules, is needed for all transmissions that can use the new HE-MCS rates, throughout subclause 10.7.	2017/1/9 9:42
7784	Mark Hamilton	225	1 10.7.6.5.2	123	38	T	Y	123.38 10.7.6.5.2	Why is this only for APs?	Change "An AP that transmits" to "A STA that transmits"	2017/1/9 9:42
7785	Mark Hamilton	225	1 10.7.6.5.2	123	33	T	Y	123.33 10.7.6.5.2	How does this relate to the rest of the (baseline) text? If Multi-STA is unique (and it might be, because there isn't a single "previous frame"), then clarify in the existing text that it applies to BlockAck excpet Multi-STA BlockAck.	Clarify throughout 10.7.6.5 baseline text, where the rules are different for HE, or for new frame types introduced in 11ax (like Multi-STA BlockAck). Especially consider 10.7.6.5.1's limitations on the scope of the new 10.7.6.5.2 text in 11ax draft.	2017/1/9 9:42
7786	Mark Hamilton	225	1 10.24.10.3	134	40	T	Y	134.40 10.24.10.3	There is no "User Identifier" subfield in an MU-BAR frame.	Change "User Identifier" to "AID12". Change "set to the AID" to "set to the least significant 12 bits of the AID".	2017/1/9 9:42
7787	Mark Hamilton	225	1 10.24.10.3	135	53	T	Y	135.53 10.24.10.3	AID12 fields hold only a truncation of AIDs	Change "AID12 fields set to AIDs" to "AID12 fields set to the 12 least significant bits of AIDs"	2017/1/9 9:42
7788	Mark Hamilton	225	1 11.3.5.3	143	49	T	Y	143.49 11.3.5.3	Need to add basic HE-MCS to the association rules in 11.3.5.3	Add a bullet after bullet (h), "The SME shall refuse an association request from an HE STA that does not support all of the <HE-MCS, NSS> tuples indicated by the Basic HE-MCS And NSS Set field of the HE Operation parameter in the MLME-START.request primitive." Same thing in 11.3.5.5. Similarly in 11.4.2.	2017/1/9 9:42
7789	Mark Hamilton	225	1 11.49.1	144	39	T	Y	144.39 11.49.1	To make the AID12 field (in Trigger frames, etc) unique, and the values 0 and 0xFFF in the least significant 12 bits of AID have special meaning, there are more AID assignment rules.	Change title of subclause to "AID assignment rules". Add paragraph that states that the assigned AID may not have 0 or 0xFFF in the least significant 12 bits. Add a paragraph that says the AID must be unique in the least significant 11 bits (to make Tigger and HE ND Announcement work). Or, just say AIDs must be allocated between 1 and 2045 (2046 is also a special value for an unallocated/unused RU). This needs to have an exception for MultiBSSID also, though.	2017/1/9 9:42
7790	Mark Hamilton	225	1 17.3.9.10	145	63	T	Y	145.63 17.3.9.10	Confusing sentence. Doesn't seem necessary.	Delete the sentence "This requirement does not include round trip delay."	2017/1/9 9:42
7791	Mark Hamilton	225	1 17.3.9.10	145	64	T	Y	145.64 17.3.9.10	This sentence should be a NOTE, as it is not adding normative requirements	Change the sentence starting "This requirement is the same ..." to be a NOTE.	2017/1/9 9:42
7792	Mark Hamilton	225	1 27.1	149	10	T	Y	149.10 27.1	What does "are banned" mean?	Replace with "An HE STA shall not support HCCA or TSPECs."	2017/1/9 9:42
7793	Mark Hamilton	225	1 27.1	149	10	T	Y	149.10 27.1	Backward compatibility problems around TSPEC. Since an HE STA is also a VHT STA (per 4.3.14a), to disallow any use of TSPEC by an HE STA means that any peer pre-HE (VHT or older STA) that sends a TSPEC in to the HE STA will get indeterminate and incompatible results.	Clarify the expected behavior for an HE STA when in peer communication with a pre-HE STA, when TSPEC use is attempted.	2017/1/9 9:42
7794	Mark Hamilton	225	1 27.2.2	150	27	T	Y	150.27 27.2.2	Use proper normative verbs	Change this paragraph to, "An HE STA maintaining two NAVs shall fulfil the requirements in 10.3.2.1 (CS mechanism). For such a STA, when both the NAV timers are 0, the virtual CS indication shall be idle; if one or both of the NAV timers is nonzero, the virtual CS indication shall be busy."	2017/1/9 9:42

7795	Mark Hamilton	225	1 27.2.3	152	11	T	Y	152.11 27.2.3	Trigger frame User Info fields only have AID12, not full AIDs.	Change "with the AID of the STA" to "with AID12 matching the least significant 12 bits of the AID of the STA"	2017/1/9 9:42
7796	Mark Hamilton	225	1 27.3.1	152	41	T	Y	152.41 27.3.1	Use proper normative verbs	Change these sentences to, "An HE STA shall support the ... In addition, an HE STA may support the ..."	2017/1/9 9:42
7797	Mark Hamilton	225	1 27.3.1	152	45	T	Y	152.45 27.3.1	U	Change "can" to "may". Same thing at P157L21, and P158L1.	2017/1/9 9:42
7798	Mark Hamilton	225	1 27.3.2	153	3	T	Y	153.03 27.3.2	Use proper normative verbs	Change "The length of each framgement is not required to be equal" to "The length of each fragment may differ"	2017/1/9 9:42
7799	Mark Hamilton	225	1 27.4.1	157	33	T	Y	157.33 27.4.1	This sentence could use some re-wording clarification. However, the concept is already stated in 10.7.6.5.2, anyway - except that sentence says "An AP that ..." which seems overly limiting.	At P123L38 change "An AP that transmits" to "A STA that transmits"	2017/1/9 9:42
7800	Mark Hamilton	225	1 27.4.1	157	36	T	Y	157.36 27.4.1	This sentence implies that any STA that gets an HE trigger-based PPDU can always send a Multi-STA Block Ack. But, the sentence at P157L49 implies that only some HE STAs will support Multi-STA BlockAck. These are inconsistent. Is there anything preventing an AP from sening a Multi-STA BlockAck to a STA that doesn't support it? Also, PICS is blank for this, so unclear if support is Mandatory or not.	If Multi-STA support is optional, where is it indicated (only "All ACK Support" and "Group Addressed Multi-STA Block-Ack In DL MU Support" is currently in the HE Capabilities)? Text needs to be added to clarify that it is optional. The PICS entry is blank, and should indicate Optional.	2017/1/9 9:42
7801	Mark Hamilton	225	1 27.4.3	159	29	T	Y	159.29 27.4.3	Clarify that these bitmap lengths are in bits.	Add "in bits" after "The Block Ack Subfield length" at the start of this sentence.	2017/1/9 9:42
7802	Mark Hamilton	225	1 27.4.3	159	53	T	Y	159.53 27.4.3	Why is there a special case for support of a 32-bit BlockAck Bitmap in a Multi-STA BlockAck?	Delete this paragraph. Also delete this item from the HE Capabilities element in subclause 9.4.218.2.	2017/1/9 9:42
7803	Mark Hamilton	225	1 27.4.3	160	3	T	Y	160.03 27.4.3	Use proper normative verbs	Change "can be used by" to "is supported by"	2017/1/9 9:42
7804	Mark Hamilton	225	1 27.4.3	160	21	T	Y	160.21 27.4.3	Unclear reference, using "it", and vague requirements using "are" (and "may be"?).	Reword this paragraph, to be clear about actors, and use 'shall' as appropriate.	2017/1/9 9:42
7805	Mark Hamilton	225	1 27.4.4.1	160	31	T	Y	160.31 27.4.4.1	Use proper normative verbs	Change "can" to "shall"	2017/1/9 9:42
7806	Mark Hamilton	225	1 27.4.4.4	161	42	E	Y	161.42 27.4.4.4	In this context, the phrase 'sngle MPDU" is just a general use of the English word "single", not a technical term	Change "Single MPDU" to "single MPDU"	2017/1/9 9:42
7807	Mark Hamilton	225	1 27.5.1.3	163	19	T	Y	163.19 27.5.1.3	Use proper normative verbs	Change "delivers" to "shall deliver"	2017/1/9 9:42
7808	Mark Hamilton	225	1 27.5.1.3	163	21	T	Y	163.21 27.5.1.3	Use proper normative verbs	Change "can" to "may". Same thing at P163L35, P164L47, P167L2, P171L12, P171L52, P174L36.	2017/1/9 9:42
7809	Mark Hamilton	225	1 27.5.2.2.1	164	46	T	Y	164.46 27.5.2.2.1	AID12 only has the least significant 12 bits of the AID	Change "AID of the STA" to "12 least significant bits of the AID of the STA"	2017/1/9 9:42
7810	Mark Hamilton	225	1 27.5.2.21	165	24	E	Y	165.24 27.5.2.21	Wording fix	Change "and" to "to" to match the "from".	2017/1/9 9:42
7811	Mark Hamilton	225	1 27.5.2.2.1	165	26	E	Y	165.26 27.5.2.2.1	The subfield name is missing "Duration". Called "field" on line 27.	Add "Duration" at the end of the subfield name on lines 26 and 27. Change "field" to "subfield" on line 27.	2017/1/9 9:42
7812	Mark Hamilton	225	1 27.5.2.2.1	165	26	T	Y	165.26 27.5.2.2.1	This sentence is inconsistent with the next paragraph, and the previous sentence. The only rule we need, is for the AP to protect each non-AP STA's requested time. No need for a maximumizing function.	Delete this sentence.	2017/1/9 9:42
7813	Mark Hamilton	225	1 27.5.2.2.1	165	35	E	Y	165.35 27.5.2.2.1	NOTE 1 is not relevant here. Plus, this concept is clearly stated in 9.3.1.23, and duplication leads to trouble.	Delete NOTE 1	2017/1/9 9:42
7814	Mark Hamilton	225	1 27.5.2.3	167	57	T	Y	167.57 27.5.2.3	AID12 is equal to the least significant 12 bits of the AID	Change "AID12 subfield is equal to the AID" to "AID12 subfield is equal to the 12 least significant bits of the AID"	2017/1/9 9:42
7815	Mark Hamilton	225	1 27.5.2.3	169	30	T	Y	169.30 27.5.2.3	Use proper normative verbs	Change "is not required" to "is optional".	2017/1/9 9:42
7816	Mark Hamilton	225	1 27.5.2.3	169	57	T	Y	169.57 27.5.2.3	Clarify 'required'.	Change "required type" to "type requested by the Trigger frame". Same thing at P170L2.	2017/1/9 9:42
7817	Mark Hamilton	225	1 27.5.2.5	171	56	T	Y	171.56 27.5.2.5	AID12 is equal to the least significant 12 bits of the AID	Change "the STA's AID" to "the 12 least significant bits of the STA's AID". Same thing at P181L43, P184L1. Similarly "recipient's AID" to "12 least significant bits of the reipcient's AID" at P181L44.	2017/1/9 9:42
7818	Mark Hamilton	225	1 27.6.2	176	27	T	Y	176.27 27.6.2	AID in HE NDP Announcement is only the lower 11 bits of the AID	Change "the STA whose AID is" to "the STA whose least significant 11 bits of AID are"	2017/1/9 9:42

7819	Mark Hamilton	225	1 27.6.2	177	55	T	Y	177.55 27.6.2	AID in HE NDP Announcement is only the lower 11 bits of the AID	Change "the HE beamformee's AID" to "the least significant 11 bits of the HE beamformee's AID". Same thing at P178L21, P178L25.	2017/1/9 9:42
7820	Mark Hamilton	225	1 27.7.2	181	2	T	Y	181.02 27.7.2	Use proper normative verbs	Change "shall not be required to" to "may optionally"	2017/1/9 9:42
7821	Mark Hamilton	225	1 27.7.2	181	28	T	Y	181.28 27.7.2	Use proper normative verbs	Change "is not required to" to might optionally". Same thing at P184L25.	2017/1/9 9:42
7822	Mark Hamilton	225	1 27.7.3.3	186	8	T	Y	186.08 27.7.3.3	AID12 is equal to the least significant 12 bits of the AID	Change "AID" to "12 least significant bits of the AID". Same thing at P186L22, P189L51, P189L55.	2017/1/9 9:42
7823	Mark Hamilton	225	1 27.9.2.1	190	24	T	Y	190.24 27.9.2.1	Inconsistency in basic NAV operation. At P150L36, P151L1 and P151L28, a frame (matching the other criteria) that is "cannot be identified as intra-BSS or inter-BSS" will update the basic NAV. But at P190L24, does not include the "cannot be determined" case.	Add "or cannot be identified as intra-BSS or inter-BSS" to the first bullet.	2017/1/9 9:42
7824	Mark Hamilton	225	1 28.1.1	211	64	T	Y	211.64 28.1.1	It says, "... except if the non-AP STA is 20 MHz-only capable", which is not a well-defined term. Per the PICS (and the top of page 210), all HE non-AP STAs are 20 MHz-only "capable" (it is 'M'). I think in this clause it means doing 20 MHz-only operation. (Or, is that called "20 MHz operation", or a "20 MHz operating STA" - see 28.3.3.5?)	Change "20 MHz-only capable" to "a 20 MHz-only STA", at P212L1, and throughout page 212. Clarify (due to the statement at P210L1 that all HE non-AP STAs are inclusive of 20 MHz-only STAs), that the bullets at P212L1, P212L13 and P212L25 when they say "are not applicable/supported" don't mean that all HE non-AP STAs don't apply/suport these.	2017/1/9 9:42
7825	Mark Hamilton	225	1 28.2.2	223	40	E	Y	223.40 28.2.2	Improper use of 'might'. By convention, the statements in the TXVECTOR/RXVECTOR tables are declarative, and reference normative statements elsewhere. Modify to not use 'might', and keep the reference.	Change "might be" to "are"	2017/1/9 9:42
7826	Mark Hamilton	225	1 28.3.3.1	228	16	E	Y	228.16 28.3.3.1	Incorrect cross-reference	Reference should be to Figure 28-1, not Table 28-15.	2017/1/9 9:42
7827	Mark Hamilton	225	1 28.3.3.6	238	3	T	Y	238.03 28.3.3.6	The term "20-MHz only" (and variants) is very confusing. The lack of clear terminology and normative statements in this subclause (and 28.3.3.5) isn't helping.	Rewrite this subclause, using clearly normative words ('shall', etc.) and clarify if this is a capability, a mode of operation, or a limitation of the implementation, and if it is static for the instantiation of the STA. (I think it is static)	2017/1/9 9:42
7828	Mark Hamilton	225	1 28.3.10.7.1	272	57	E	Y	272.57 28.3.10.7.1	Don't make this look like a specification requirement, it is a necessity.	Change "required" to "necessary"	2017/1/9 9:42
7829	Mark Hamilton	225	1 28.3.10.7.2	273	11	T	Y	273.11 28.3.10.7.2	Why list the bits explicitly, and also the "Number of bits" column?	Delete the Number of bits column from Table 28-16. Same thing for Tables 28-17, 28-18, 28-22, and 28-23.	2017/1/9 9:42
7830	Mark Hamilton	225	1 28.3.14.1	340	51	E	Y	340.51 28.3.14.1	Don't make this look like a specification requirement, it is a necessity.	Change "it requires" to "it is necessary to have", and change "by" to "completed by" on the next line.	2017/1/9 9:42
7831	Mark Hamilton	225	1 28.3.14.1	340	55	E	Y	340.55 28.3.14.1	Don't make this look like a specification requirement, it is a necessity.	Change "required" to "necessary"	2017/1/9 9:42
7832	Mark Hamilton	225	1 28.3.14.3	342	59	T	Y	342.59 28.3.14.3	Confusing sentence. Doesn't seem necessary.	Delete the sentence "This requirement does not include round trip delay."	2017/1/9 9:42
7833	Mark Hamilton	225	1 28.3.17.3	346	63	T	Y	346.63 28.3.17.3	Use proper normative verbs	Change sentence to, "If the regulatory domain permits a 160 MHz band plan, then the STA shall be measured for adjacent channel rejection for 160 MHz operation, otherwise such measurement is optional." Similarly for nonadjacent channel, at P347L47.	2017/1/9 9:42
7834	Mark Hamilton	225	1 28.3.17.6.2	348	3	T	Y	348.03 28.3.17.6.2	Sentence is out of place ("also", in addition to what?), and redundant with the following text.	Delete the first setence of 28.3.17.6.2.	2017/1/9 9:42
7835	Mark Hamilton	225	1 28.3.18.1	350	17	T	Y	350.17 28.3.18.1	Is this "non-requirement" stated somewhere?	Add to the NOTE a reference to where this is stated normatively.	2017/1/9 9:42
7836	Mark Hamilton	225	1 28.3.18.2	355	1	T	Y	355.01 28.3.18.2	Use proper normative verbs	Change "requirements apply" to "requirements shall apply". Same thing at P355L44.	2017/1/9 9:42
7837	Mark Hamilton	225	1 B.4.3	407	60	E	Y	407.60 B.4.3	What is "CFIndSTA"? Probably meant "CFIndepSTA".	Change all "CFIndSTA" to "CFIndepSTA" in the PICS	2017/1/9 9:42
7838	Mark RISON	225	1 9.4.2.1	67	19	E	Y	67.19 9.4.2.1	"9.4.2.214" is a stale xref	Change to "9.4.2.219"	2017/1/9 9:42
7839	Mark RISON	225	1			G	Y		Many cross-references are not logically cross-references, and many of those are stale	Make all subclause/figure/table cross-references actual logical cross-references (i.e. clickable)	2017/1/9 9:42

7840	Mark RISON	225	1 27.6.2	176	14	T	Y	176.14 27.6.2	There should be a mechanism to allow an HE BFer to poll for missed segments. It is not clear whether a BRP frame can be used in the SU case, and the BRP variant Trigger frame cannot be used in the MU case as it is preceded by an NDP that will take precedence	Allow Beamforming Report Poll frames to be used to solicit SU retransmission of missed segments (cf. 10.34.5.3). Define a new Trigger frame variant to solicit MU retransmission of missed segments (without a preceding NDP+NDPA). Delete the Feedback Segment Retransmission Bitmap from the Trigger Dependent User Info field of the Beamforming Report Poll variant Trigger frame (leaving it blank); this is the field needed for the new Trigger frame variant to solicit retransmission of missing segments	2017/1/9 9:42
7841	Mark RISON	225	1 27.2.1	149	51	T	Y	149.51 27.2.1	A frame without BSS_COLOR that is part of a Multiple BSSID Set but is not the BSSID of the AP to which the STA is associated will be identified as both infra-BSS (line 27) and inter-BSS (line 51). This does not appear to be the intention (line 58), and is not resolved by giving priority to MAC address decisions (page 150 line 15).	Either: i) Expand the precedence rule on (page 150 line 15) so that the intra-BSS designation takes priority over the inter-BSS designation, -or- ii) Gate the inter-BSS BSSID check (page 149 line 51) on the AP not being a member of a Multiple BSSID Set.	2017/1/9 9:42
7842	Mark RISON	225	1 27.2.2	150	57	E	Y	150.57 27.2.2	"The STA is not solicited an immediate response" is non-grammatical and does not make sense.	Change the bullet to "An immediate response is not solicited from the STA by the PPDU carrying the frame".	2017/1/9 9:42
7843	Mark RISON	225	1 27.2.2	151	5	E	Y	151.05 27.2.2	"The STA is not solicited an immediate response" is non-grammatical and does not make sense.	Change the bullet to "An immediate response is not solicited from the STA by the PPDU carrying the frame".	2017/1/9 9:42
7844	Mark RISON	225	1 27.2.2	151	50	T	Y	151.50 27.2.2	Reference is made to additional conditions that may set or reset the NAV in 10.4.3.3, but it is not explicit whether this applies to the intra-BSS NAV, the basic NAV, or both.	Specify that: i) The NAV updated from the CDPMaxDuration or CFPDurRemaining value is selected based on the intra-BSS or inter-BSS designation of the received Beacon or Probe Response frame. Ii) The NAV is reset in response to CF-End or CF-End +CF-Ack frames as specified in 10.22.2.9.	2017/1/9 9:42
7845	Mark RISON	225	1 27.5.2.3	167	59	T	Y	167.59 27.5.2.3	The behaviour if the STA is not associated with the AP is "TBD".	Delete the final sentence of the first bullet; if the STA is not associated with the AP then it should not send an HE trigger-based PPDU and hence is handled by the final bullet (line 64).	2017/1/9 9:42
7846	Mark RISON	225	1 26.1.1	209	50	E	Y	209.50 26.1.1	LTF should be HE-LTF	Change "LTF" to "HE-LTF"	2017/1/9 9:42
7847	Mark RISON	225	1 26.1.1	210	11	E	Y	210.11 26.1.1	Binary Convolutional Coding should be Binary Convolutional Code	Change "coding" to "code"	2017/1/9 9:42

7993	Massinissa Lalam	225	1 9.4.2.218.4	87	56	T	Y	87.56	9.4.2.218.4	How can a STA know the size of the "Tx Rx HE MCS Support field" since Tx BW Bitmap and Rx BW Bitmap may not be present as they are "beyond Highest MCS Supported filed" in case all of their bits are equal to zero? Indeed, the sentence "If all of the bits of the Tx BW Bitmap subfield and all of the bits of the Rx BW Bitmap subfield are zero, then none of the subfields of the Tx Rx HE MCS Support field beyond Highest MCS Supported need to be present." implies that the Tx Rx HE MCS Support field can have a size as low as 6 bits. In my opinion the "Tx BW Bitmap" and "Rx BW bitmap" should always be present to maintain a minimum of a 2 bytes field (coherent with Figure 9-589c)), extended by one byte each time a bit is at 1 Tx BW Bitmap and Rx BW Bitmap. Therefore, the begining of the next subfield 'PPE Thresholds (optional)" can also be uniquely defined.	Please consider revision. For instance, replacing the whole paragraph with "If all of the bits of the Tx BW Bitmap subfield and all of the bits of the Rx BW Bitmap subfield are zero, then none of the subfields of the Tx Rx HE MCS Support field beyond Rx BW Bitmap are present."	2017/1/9 9:42

7994	Massinissa Lalam	225	1 9.4.2.218.5	88	64	T	Y	88.64 9.4.2.218.5	What does "RU allocation index 0" means? Please give a definition of "RU allocation index".	As in comment.	2017/1/9 9:42
7995	Massinissa Lalam	225	1 9.4.2.219	92	7	T	Y	92.07 9.4.2.219	The whole paragraph about the "nontransmitted BSSID", "Nontransmitted BSSID", "transmitted BSSID" and "Transmitted BSSID" is really confusing. Please consider revision since one can not easily make the distinction all the terms use (some times with capital letter, some without).	As in comment.	2017/1/9 9:42
7996	Massinissa Lalam	225	1 9.4.2.219	92	19	T	Y	92.19 9.4.2.219	It is not clear if the BSS Color Disabled set to 1 is a recommendation or an action that non-AP STAs associated to the AP shall perform (i.e. disabling BSS colos)	Replace "The BSS Color Disabled subfield indicates whether the transmitting AP recommends the ..." with "The BSS Color Disabled subfield indicates whether the transmitting AP commands the ..." if the intent is to have a mandatory behavior. Otherwise, replace in the next sentence "An HE AP sets the BSS Color Disabled subfield to 1 if the HE AP decides to disable ..." with "An HE AP sets the BSS Color Disabled subfield to 1 if the HE AP recommends to disable ...".	2017/1/9 9:42
7997	Massinissa Lalam	225	1 9.4.2.219	92	36	T	Y	92.36 9.4.2.219	It seems to me that the Dual Beacon subfield does not "indicate" the TBTT offset of the Beacon frame in HE extended range SU PPDU format. This offset is fixed and defined in subclause 11.1.3.10.	Delete the sentence "The Dual Beacon subfield also indicates the TBTT offset of Beacon frame in HE extended range SU PPDU in 11.1.3.10 (Beacon generation in an HE BSS)." Add the sentence "The TBTT offset of Beacon frame in HE extended range SU PPDU is defined in 11.1.3.10 (Beacon generation in an HE BSS)." after "The subfield is set to 1 if the HE AP transmits beacons in an HE extended range SU PPDU and a non-HE PPDU.".	2017/1/9 9:42
7998	Massinissa Lalam	225	1 9.4.2.219	93	10	T	Y	93.10 9.4.2.219	Is VHT Operation Information field necessary for HE AP operating in the 5 GHz band? Since an HE STA is also a VHT STA in the 5 GHz band, does it make sense to repeat these 3 bytes? Especially since it is more than likely that a VHT Operation Element will also be present in a 5 GHz AP for backward compatibility reason. The only interest seems to be in the 2,4 GHz band where VHT is not defined.	Consider deleting "VHT Operation Information" from the "HE Operation" element if the "VHT Operation" is also present in the frame carrying the "HE Operation" element. The sentence "The VHT Operation Information field is present in the HE Operation element only if no VHT Operation element is present in the same management frame carrying the HE Operation element." should be placed before "The structure of the VHT Operation Information field is defined in Figure 9-564 (VHT Operation Information field) and its subfields are defined in Table 9-252 (VHT Operation Information subfields)". Figure 9-589cq should also be changed with the size of VHT Operation Information being 0 or 3 octets instead of 3.	2017/1/9 9:42
7999	Massinissa Lalam	225	1 9.4.2.220	93	26	E	Y	93.26 9.4.2.220	Replace "Lenght" with "Length" in Figure 9-589ct	As in comment.	2017/1/9 9:42
8000	Massinissa Lalam	225	1 3.2	3	47	E	N	3.47 3.2	I think that in the sentence "Clause 21 (Very High Throughput (VHT) PHY specification(11ac))", the "(11ac)" part should be deleted. However, I admit that this is more a comment for a possible rev md than 11ax, unless we want to align also the sentence "Clause 28 (High Efficiency (HE) PHY specification)", by adding "Clause 28 (High Efficiency (HE) PHY specification(11ax))", But I do not favor this option. My preference would be to take the opportunity to delete this extra text if possible.	If within the scope/perimeter of the 11ax WG, please replace "Clause 21 (Very High Throughput (VHT) PHY specification(11ac))" with "Clause 21 (Very High Throughput (VHT) PHY specification".	2017/1/9 9:42

8017	Massinissa Lalam	225	1 9.3.1.9.3	36	13	E	Y	36.13 9.3.1.9.3	Please precise where the Fragment Number subfield comes from. For instance, replace "The Fragment Number subfield is set as defined in Table 9-24a" with "The Fragment Number subfield of the Block Ack Starting Sequence Control subfield is set as defined in Table 9-24a".	As in comment.		2017/1/9 9:42
8018	Massinissa Lalam	225	1 9.3.1.9.7	38	13	E	Y	38.13 9.3.1.9.7	"Ack Type subfield" is used through all the subclause. Please stay consistent and replace "The Ack Type field is not set to 1 when responding to a BlockAckReq frame or an MU-BAR frame." with "The Ack Type subfield is not set to 1 when responding to a BlockAckReq frame or an MU-BAR frame."	As in comment.		2017/1/9 9:42
8019	Massinissa Lalam	225	1 9.3.1.23	42	7	E	Y	42.07 9.3.1.23	In Figure 9-52d, add a space between "GI" and "And" in the "GIAnd LTF Type" subfield (B20-B21).	As in comment.		2017/1/9 9:42
8020	Massinissa Lalam	225	1 9.1.3.23	41	34	E	Y	41.34 9.1.3.23	In this subclause, we have for the subfields description of the Common Info field for instance: "The CS Required subfield is ...", "The BW subfield indicates ...", and "The GI And LTF Type subfield of the Common Info field indicates ...", "The MU-MIMO LTF Mode subfield of the Common Info field". Either add "of the Common Info field" each time a subfield description of the Common Info field is missing it (e.g. Cascade Indication, CS Required, BW, Spatial Reuse, Doppler, HE-SIG-A Reserved) or delete it each time it appears in a subfield description of the Common Info field to stay consistent. I do prefer the first option though (more precise).	As in comment.		2017/1/9 9:42
8021	Massinissa Lalam	225	1 9.1.3.23	44	50	E	Y	44.50 9.1.3.23	In table 9-25e, correct the description when AP Tx Power subfield value is between 0 and 60. Replace "Values 0 to 61 maps to -20 dBm to 40 dBm" with "Values 0 to 60 maps to -20 dBm to 40 dBm".	As in comment.		2017/1/9 9:42

8022	Massinissa Lalam	225	1 9.1.3.23	45	11	T	Y	45.11 9.1.3.23	The "high doppler mode of transmission" is not clearly defined in the draft. What is the criteria to consider it "high" or not? What are the consequences for the STA? Also through all the document the "Doppler procedure" is also mentionned in relation with this Doppler bit, but no clear link is established between this procedure and this mode of transmission. Please clarify.	Please, add clarifications on what the "high doppler mode transmission" is and what are the consequences of it for a STA.		2017/1/9 9:42
8023	Massinissa Lalam	225	1 9.1.3.23	47	46	G	N	47.46 9.1.3.23	So the special STAID[11:0] is in fact AID12 with the value 0xFFF? I think that it should be more clearly stated that the padding is in fact a special User Info Field with AID12 subfiled being equal to 0xFFF, the rest being filed with ones. At least, one could replace "starts with special STAID[11:0] as" with "starts with special AID12 subfield as".	As in comment.		2017/1/9 9:42
8024	Massinissa Lalam	225	1 9.2.4.6.4.1	24	34	E	Y	24.34 9.2.4.6.4.1	Please consider replacing "Operation Mode" with "Operating Mode Indication (OMI)" in Table 9-18a (and subsequent clause 9.2.4.6.4.3) to make the link with the "OMI A-Control Support" field the HE MAC capabilities Table 9-262z more obvious for the reader (like it is done for BSR and BQR).	As in comment.		2017/1/9 9:42
8025	Massinissa Lalam	225	1 9.3.1.23.3	49	62	E	Y	49.62 9.3.1.23.3	For consistency with previous trigger frame variants description, the first sentence should be "If the Trigger frame is a MU-BAR variant, the Trigger Dependent Common Info field is not present and the Trigger Dependent User Info field is defined in Figure 9-52i (Trigger Dependent User Info field for the MU-BAR variant).".	As in comment.		2017/1/9 9:42
8026	Massinissa Lalam	225	1 9.3.1.23.4	50	22	E	Y	50.22 9.3.1.23.4	For consistency with previous trigger frame variants description, the first sentence should be "If the Trigger frame is a MU-RTS variant, the Trigger Dependent Common Info field is not present and the Trigger Dependent User Info field is not present". The two NOTEs (pg50,ln43 and pg51,ln15) can be deleted.	As in comment.		2017/1/9 9:42
8027	Massinissa Lalam	225	1 9.3.1.23.4	50	22	E	Y	50.22 9.3.1.23.4	In general, the presentation of this subclause should be aligned with the previous trigger frame variant presentations. If specific values are set for given subfields (Common or User) then it is worth mentioning them, but lines 22, 31, 46 are useless in my opinion (or by default covered by the parent subclause 9.3.1.23).	As in comment.		2017/1/9 9:42
8028	Massinissa Lalam	225	1 9.3.1.23.5	51	17	E	Y	51.17 9.3.1.23.5	Replace the subclause title "BSRP variant" with "Buffer Status Report Poll variant" to stay consitent with the BQRP subclause title and the Table 9-25a.	As in comment.		2017/1/9 9:42
8029	Massinissa Lalam	225	1 9.3.1.23.5	51	20	E	Y	51.20 9.3.1.23.5	For consistency with previous trigger frame variants description, this whole subclause should read "If the Trigger frame is a Buffer Status Report Poll (BSRP) variant, the Trigger Dependent Common Info field is not present and the Trigger Dependent User Info field is not present.".	As in comment.		2017/1/9 9:42
8030	Massinissa Lalam	225	1 9.3.1.23.6	51	33	E	Y	51.33 9.3.1.23.6	For consistency with previous trigger frame variants description, the first sentence should be "If the Trigger frame is a GCR MU-BAR variant, the Trigger Dependent Common Info field is defined in Figure 9-52j (Trigger Dependent Common Info field for the GCR MU-BAR variant) and the Trigger Dependent User Info field is not present.".	As in comment.		2017/1/9 9:42

8031	Massinissa Lalam	225	1 9.3.1.23.7	51	60	E	Y	51.60 9.3.1.23.7	For consistency with previous trigger frame variants description, the first three sentences of this subclause could be replaced with "If the Trigger frame is a Bandwidth Query Report Poll (BQRP) variant, the Trigger Dependent Common Info field is not present and the Trigger Dependent User Info field is not present.".	As in comment.	2017/1/9 9:42
8032	Massinissa Lalam	225	1 9.3.1.23.7	52	5	E	Y	52.05 9.3.1.23.7	Replace "The CS Required subfield is set to 1." with "The CS Required subfield of the Common Info field is set to 1."	As in comment.	2017/1/9 9:42
8033	Massinissa Lalam	225	1 3.4	7		E	Y	7.00 3.4	Please consider adding the RAPS (Random Access Parameter Set) acronym to the subclause 3.4	As in comment.	2017/1/9 9:42
8034	Massinissa Lalam	225	1 9.3.3.11	55	24	E	N	55.24 9.3.3.11	In Table 9-34, check the horizontal line width between row 95 and 96, It should be thinner.	As in comment.	2017/1/9 9:42
8035	Massinissa Lalam	225	1 9.4.1.62	56	9	E	N	56.09 9.4.1.62	In Figure 9-121a, consider spliting the row (B0-B39) in two rows (e.g. B0-B11, and B12-B39) to avoid overlapping and stick within the page margins.	As in comment.	2017/1/9 9:42
8036	Massinissa Lalam	225	1 9.4.1.62	57	21	T	Y	57.21 9.4.1.62	In Table 9-76a, the Remaining Feedback Segments description is not clear. In particular the way the split is done between 1 and 6 and 1 and 7 for the remaining feedback segments of a segmented reports. It is clear that for the last feedback segment (or unsegmented feedback) this subfield will have the value 0. However, for the first feedback fragment in case of segmented feedback, the only possible value to be set is 7 since this precision ("Set to a value between 1 and 6 for a feedback segment that is neither the first nor the last of a segmented report.") forbids other values. Please clarify the description as it is confusing right now.	As in comment.	2017/1/9 9:42
8037	Massinissa Lalam	225	1 9.4.1.62	57	51	T	Y	57.51 9.4.1.62	What does the sentence "In an HE Compressed Beamforming frame not carrying all or part of an HE Compressed Beamforming report" means? In such case, what information does the HE Compressed Beamforming report carry? Please clarify the use case when this can happen or reference it to a correct subclause in the Draft if this 0 information feedback transmission use case is already covered.	As in comment.	2017/1/9 9:42
8038	Massinissa Lalam	225	1 9.4.2.218.2	77	22	E	Y	77.22 9.4.2.218.2	In Table 9-262z describing the HE MAC capabilities, some times "HE STA", " is used, some times only "STA". Since this table only addresses HE-capable device, I don't think that it is necessary to add "HE". Anyway please uniform the table by consistently using either {"HE STA", "HE non-AP STA", "HE AP"} or {"STA", "non-AP STA", "AP}.	As in comment.	2017/1/9 9:42

8039	Massinissa Lalam	225	1 9.4.2.218.2	78	78	E	N	78.78 9.4.2.218.2	In Table 9-262z, use a consistent definition for the support of a specific Control ID subfield value in an HE variant HT Control field. For instance the definition associated to the support of Control ID = 0 (UL MU response scheduling,pg78,ln43), Control ID = 2 (HE Link adaptation, pg78,ln27) and Control ID = 3 (Buffer Status Report,pg78,ln49) do not follow the same format. I would prefer to stick with something equivalent to the first definition format provided for HE link adaptation support, i.e., "Indicates whether the STA supports <Control ID Meaning from Table 9-18a> using the HE variant HT Control field". This gives - For HE Link Adaptation Capable pg78,ln27: "Indicates whether the STA supports HE link adaptation using the HE variant HT Control field." - For UL MU Response Scheduling Support,pg78,ln43: "Indicates whether the non-AP	As in comment.			2017/1/9 9:42

8082	Massinissa Lalam	225	1 B	407		E	Y	407.00 B	In Annex B "HEW" is still used, while it has been decided at the begining of TGax to go with "HE" instead. Please replace "High Efficiency WLAN (HEW) operation" with "High Efficiency (HE) operation" for consistency with the other clauses. Also replaced any "HEW" found in this annex with "HE".	As in comment.		2017/1/9 9:42
8083	Matthew Fischer	225	1 9.4.2.218.2	76	31	T	Y	76.31 9.4.2.218.2	TWT support bits exist in both HE CAP IE and Ext CAP IE - the bits only need to appear in one location	Eliminate the TWT support bits from the HE CAP IE while keeping those in the EXT CAP IE. Adjust references appropriately.		2017/1/9 9:42
8084	Matthew Fischer	225	1 10.43.1	139	9	T	Y	139.09 10.43.1	It feels like the TWT request command could appear in the initiating box as well for this row	Change "Demand TWT" to "Request or Demand TWT"		2017/1/9 9:42

8085	Matthew Fischer	225	1 27.8.3	189	39	T	Y	189.39 27.8.3	Language is not quite correct	Change "all variants" to "any variant"	2017/1/9 9:42
8086	Matthew Fischer	225	1 27.7.3.3	185	42	T	Y	185.42 27.7.3.3	The language here is a bit unclear - in particular, pay attention to the "shall" clause and the associated modifier "which the STA intends": A TWT scheduled STA that is in PS mode may go to doze state after receiving the Beacon frame and shall be in the awake state at a broadcast TWT start time during which the STA intends to exchange frames with the TWT scheduling STA. - the problem here is that the AP cannot predict whether a STA is going to be awake or not, because the AP does not know of the STA's intentions. So this is not helpful language. Either change the shall to a should, or remove the qualifier and require the STA to be awake for all TWT SP associated with a Broadcast TWT that it has joined.	Remove the qualifier or modify it so that the STA is required to be awake for all TWT SP associated with a Broadcast TWT that it has joined. If a STA has not joined the Broadcast TWT with this TWTID, then it does not have to be awake. Also, there will remain the option for a STA to be able to sleep through some BTWT SPs because it can always signal suspend and resume with the TWT Info frames.	2017/1/9 9:42
8087	Matthew Fischer	225	1 27.9	190	1	T	Y	190.01 27.9	SRP is incomplete - need a control on the ACK response to an SR transmission - if the DATA frame was transmitted under SRP conditions, then the ACK should also obey the SRP conditions - but the ACK transmitter needs to know if the DATA frame was transmitted under SRP conditions because for a non-SRP generated DATA frame, the ACK has no conditions, and we do not want to impose new conditions on ACKing that were not in the baseline, except for the new case of a DATA frame sent under SRP conditions	Add a way for an SR transmitter using SRP to indicate to the recipient that its ACK must be conditionalized on SRP conditions - use A-control to tell the recipient that the DATA frame was transmitted under SRP conditions	2017/1/9 9:42
8088	Matthew Fischer	225	1 27.9	190	1	T	Y	190.01 27.9	SRP is incomplete - backoff after meeting SRP conditions is not described - this is needed to avoid multiple STAs accepting an SRP condition and then all transmitting at the same time and creating a collision	Describe the backoff mechanism when SRP condition is met	2017/1/9 9:42
8089	Matthew Fischer	225	1 27.7.3.3	185	57	T	Y	185.57 27.7.3.3	In a couple of places, the wrong term is used - where "responding STA" is mentioned	At L58, change "responding STA" to "scheduled STA" and at L62, change "responding STA" to "scheduling STA" - also the sentence on L62 that begins with "reception of a frame" is a separate paragraph, but it should probably be item 3) in the list of items just above itself	2017/1/9 9:42
8090	Matthew Fischer	225	1 27.7.3.3	185	45	T	Y	185.45 27.7.3.3	If a STA is awake for more than one TWT SP, because either at the start or in the middle of an initial TWT SP, an overlap occurs, then the STA should be required to be awake until all TWT SP in which it participates have terminated. Note the complication here of identifying the particular TWT SP to which a terminanation notice belongs - i.e. if a scheduled STA receives an EOSP, is that valid or all TWT SP in which it participates, or is it only valid for one of them and if so, which one of them?	As one option, add a new paragraph to follow the paragraph that begins at P185L42 and its associated bullet items as follows: A scheduled STA that participates in more than one Broadcast TWT SP shall remain in the wake state during any time that is part of any of the TWT SP in which it participates unless a termination has occured for each of the TWT SPs that is currently active. Or maybe: A scheduled STA that participates in more than one Broadcast TWT SP may switch to doze state only when a termination event has occured for all currently acitve TWT SPs in which it participates.	2017/1/9 9:42
8091	Matthew Fischer	225	1 27.9.2.1	190	39	T	Y	190.39 27.9.2.1	What about the ACK that is transmitted in response to the SR PPDU? Does it have to obey any OBSS_PD transmit power rules?	Add a restriction on the tx power of the response transmitter, such that the tx power has to be limited to whatever tx power is "in force" where "in force" means that if a STA has discarded an OBSS PPDU using OBSS_PD and is counting backoff before transmitting an SR PPDU, then that tx power is "in force" for the duration of the OBSS PPDU that was discarded and if a reception occurs before the backoff countdown expires, then the response to that reception is restricted in its transmit power.	2017/1/9 9:42

8092	Matthew Fischer	225	1 27.9.1	190	3	T	Y	190.03 27.9.1	What about the response transmission to a PPDU that was transmitted due to a spatial reuse opportunity? That response transmission should be restricted, such that it too, must ensure that it will not interfere with an ongoing exchange, using whatever SR technique is avilable at the response transmitter STA, with a preference for SRP if enabled and a fallback to OBSS_PD if SRP is not enabled. Since a normal response is allowed to ignore all CCA indications, the responder needs to be able to tell the difference between a normal eliciting PPDU/MPDU and one an eliciting PPDU that was transmitted using SR of some sort.	Provide an indication within MPDUs of whether the MPDU was transmitted during an SR opportunity or not, and add a restriction on the response transmission to that SR PPDU transmission such that the response must examine the medium condition before responding and obey transmit power restrictions that might be in force due to ongoing SR conditions, e.g. OBSS_PD based transmit power restriction. Expect a submission that details such changes.	2017/1/9 9:42
8093	Matthew Fischer	225	1 28.3.10.7.2	273	29	T	Y	273.29 28.3.10.7.2	The UL/DL bit is set according to the UPLINK_FLAG parameter of the TXVECTOR - shouldn't the language in this subclause mention the TXVECTOR UPLINK_FLAG parameter? I think that this comment applies to a lot of the TXVECTOR values. I have not yet checked the RXVECTOR, but there probably needs to be something done there as well. A quick check of previous amendment PHY subclauses shows that no one has really done it this way, but it does feel like this suggested coupling of the TXVECTOR values and the SIG field values is the way that things should have been done all along.	Reword all of the TX and RX SIG field descriptions so that they are related directly to TXVECTOR and RXVECTOR items, where appropriate.	2017/1/9 9:42
8094	Matthew Fischer	225	1 27.9	190	1	T	Y	190.01 27.9	The MAC operation of the SRP mechanism is not described.	Provide a description of the MAC protocol for the SRP spatial reuse parameter. Expect a submission detailing a set of proposed changes.	2017/1/9 9:42
8095	Matthew Fischer	225	1 10.3.2.8a.2	117	5	T	Y	117.05 10.3.2.8a.2	There might be more than one recipient of an MU-RTS.	Change "sent by the receipient of the MU-RTS frame" to "sent by any recipient of the MU-RTS frame"	2017/1/9 9:42
8096	Matthew Fischer	225	1 10.3.2.8a.2	117	10	T	Y	117.10 10.3.2.8a.2	Why is the MU-RTS not allowed to be sent in an HE PPDU? There is no sense to having such a restriction.	Remove the cited line which disallows MU-RTS from being sent using an HE PPDU format.	2017/1/9 9:42
8097	Matthew Fischer	225	1 27.7.2	180	26	T	Y	180.26 27.7.2	The TWT negotiation process can be improved. Specifically, if a timeslot bitmap were added to the process then a STA could more concisely indicate its preferred TWT SP times and it could observe the allocated TWT SP times of OBSS neighbors and request time slots that avoid those times.	Add a time slot bitmap to allow simpler negotation of TWT SP times and to allow a simple method of determining when OBSS interference is more likely. Expect a submission detailing some changes.	2017/1/9 9:42
8098	Matthew Fischer	225	1 27	149	5	T	Y	149.05 27	Add a mechanism to set the transmit power per direction per link in order to achieve an increase in performance due to improved receiver design since the original EVM specification was written.	Add a mechanism to set the transmit power per direction per link in order to achieve an increase in performance due to improved receiver design since the original EVM specification was written. Expect a submission detailing some changes.	2017/1/9 9:42
8099	Matthew Fischer	225	1 10.7.6	123	29	T	Y	123.29 10.7.6	Due to power differences and other considerations, a situation can arise when the transmitter of a response frame using the standard required response MCS value is employing an MCS that will not work for the link because of the asymmetry, e.g. tx power asymmetry. Allow a STA to dictate the response PPDU MCS to avoid this problem.	Allow the transmitter of a response eliciting MPDU to include an indication of an appropriate MCS for the response MPDU. Expect a submission detailing some changes.	2017/1/9 9:42

8100	Matthew Fischer	225	1 9.4.1.62	56	10	T	Y	56.10 9.4.1.62	Transmit beamformer is sometimes inclined to modify a steering vector that is fed back by the beamformee, and that is often ok, but sometimes, the beamfomee needs to ensure that the beamformer does not alter the vector - so add a Vector Sanctity indication in the HE MIMO control field and describe its use, i.e. somewhere within 27.6 where TXBF for HE specifics appear	Add a bit "Vector Sanctity" to the HE MIMO Control field and a support bit to indicate support for the bit, and add a description of the use of the bit in 10.32 - also consider expanding its use backwards to VHT - expect a submission with detailed changes	2017/1/9 9:42
8101	Matthew Fischer	225	1 27.9.2	190	14	T	Y	190.14 27.9.2	OBSS_PD effect on secondary channel level sensing has not been described - if the OBSS PD level changes, do the secondary channel thresholds also need to change?	Address the issue of non-primary sensing levels if the OBSS_PD level changes - if there is no relationship with non-primary sensing levels, at least add a note indicating this so that it is explicitly stated somewhere.	2017/1/9 9:42
8102	Matthew Fischer	225	1 27.9.2.1	190	36	T	Y	190.36 27.9.2.1	The sentence here really does not provide any interesting functionality. At the end of the PPDU, the PHY is in a reset state anyway and the medium condition reverts to idle unless ED is active, which really does not matter in this case.	Provide additional text to justify the inclusion of this normative behavioral statement or delete it.	2017/1/9 9:42
8103	Matthew Fischer	225	1 27.9.2	190	14	T	Y	190.14 27.9.2	There is no definitive statement regarding the priority of the SRP condition vs the OBSS_PD condition	Add a normative behavioral statement that indicates that if a STA has enabled SRP and and SRP condition is in effect, then this overrides OBSS_PD conditions.	2017/1/9 9:42
8104	Matthew Fischer	225	1 27.9.2.2	191	3	T	Y	191.03 27.9.2.2	If the OBSS_PD is at a certain level and an OBSS PPDU is discarded based on that level, then is there any requirement of the STA that discarded that PPDU to hold its transmit power at or below the value associated with the OBSS_PD level that it used to discard the PPDU, for the duration of the discarded PPDU?	Add text to clarify any rules regarding holding TX power at a certain level for a duration related to the duration of a discarded PPDU.	2017/1/9 9:42
8105	Matthew Fischer	225	1 27.11.6	198	34	T	Y	198.34 27.11.6	What is the meaning of SR_RESTRICTED? The few references to this value do not make any sense. If the intent was to limit the SR transmission to the duration of the PPDU on top of which the SR transmission occurs, then there should be a general rule.	Remove SR_RESTRICTED and add text that says: SRP transmissions are always restricted to the duration of the discarded/ignored PPDU and OBSS_PD SR transmissions are not restricted in any way.	2017/1/9 9:42
8106	Matthew Fischer	225	1 9.4.2.218.5	90	25	T	Y	90.25 9.4.2.218.5	A minor error in the rules written in the table for PPET8 and PPET16	In table 9-262ad - PPET8 and PPET16 encoding, change "x greater than equal to PPET16" to "x greater than or equal to PPET16"	2017/1/9 9:42
8107	Matthew Fischer	225	1 9.4.2.218.5	90	7	T	Y	90.07 9.4.2.218.5	The text describing a relationship between PPET8 and PPET16 is not quite correct.	Change "The value for each PPET8 for NSSn for RUm is always less than the value of PPET16 for NSSn for RUm." to "The value for each PPET8 for NSSn for RUm is always less than the value of PPET16 for NSSn for Rum, except when PPET8 = 7."	2017/1/9 9:42
8108	Matthew Fischer	225	1 27.7.3.1	182	27	T	Y	182.27 27.7.3.1	Broadcast TWT - a non-AP STA that is participating in Broadcast TWT will wake for TWT SPs and then check trigger frames to see if the STA is identified in a trigger. If there is more than one trigger for an SP, the STA will wake for multiple triggers and by the end of the SP, it is possible that the STA has not been identified and therefore, has wasted power checking each trigger. It would be more efficient for power consumption if the STA had a clue as to whether any trigger in the SP was going to identify it.	Add a TIM of some sort to be associated with each Broadcast TWT so that a participating STA can wake at the beacon and read the TWT-TIM to see if it should be waking for any of the triggers associated with this broadcast TWT within this beacon interval. The TIM could also be included at the start of each TWT SP, say, within a beacon-like frame, e.g. measurement pilot frame or something else.	2017/1/9 9:42

8109	Matthew Fischer	225	1 27.7.4	188	11	T	Y	188.11 27.7.4	TWT Information frame use is supposed to allow changes to Broadcast TWT operation, e.g. suspend, resume, skip, but the TWT Info field TWT ID is 3 bits and the TWT IE Broadcast TWT ID field is 8 bits - is there a 3 bit limit on the ID values for broadcast TWT? Even if there were such a limit, the TWT info frame does not distinguish between Broadcast and Individual TWT ID values - one might decide to use the RA of the TWT info frame to identify when the TWT ID is referring to BCAST TWT vs Individual TWT - but none of this is spelled out in the draft.	Either make some explicit rules about the RA and TWT ID field values and a limit on Broadcast TWT ID values in the TWT IE, or add a few bits to the TWT Info field definition to allow differentiation of Broadcast vs Individual TWT in that field	2017/1/9 9:42
8110	Matthew Fischer	225	1 27.5.2.3	169	17	T	Y	169.17 27.5.2.3	There is no language describing what a recipient is required to do or not do when it sees the value SR_DISALLOWED in a received PPDU and of intra or inter-BSS, etc. Such language is required, plus it is unclear whether the value applies to OBSS_PD SR or SRP SR or both. There is no language to differentiate the SR field in the MAC trigger frame common info field vs the PHY SIGA SR field.	Provide language to indicate what a recipient does when SR_DISALLOWED is received in a PPDU - does it apply to OBSS_PD or SRP or both? What about Intra vs Inter-BSS?	2017/1/9 9:42
8111	Matthew Fischer	225	1 27.9.2	190	17	T	Y	190.17 27.9.2	The utility of OBSS PD seems most beneficial to scenarios where the intra-BSS SINRs are generally higher than inter-BSS SINRs. Identifying when a STA is operating within such a scenario would greatly improve the performance of OBSS PD. Add a mechanism to allow a STA to identify when OBSS PD would provide benefit, such as providing a list of OBSSs that meet the condition of inter-BSS SINR << intra-BSS SINR	Define the concept of a spatial reuse group that identifies OBSSs that meet the condition inter-BSS SINR << intra-BSS SINR and provide a means for disseminating this information. Expect a submission	2017/1/9 9:42
8112	Matthew Fischer	225	1 9.3.1.23	44	60	T	Y	44.60 9.3.1.23	The description of the Spatial Reuse field is poorly written. For example, the description does not indicate which portions of a 40, 80 or 160 MHz channel are affected by which pieces of the SR field; The description is unclear about which fields are identical to which fields in the case of 40 and 80 MHz; There is no information about which BW is the BW of reference for the words "For 20 MHz one SR field" etc.; The current descripton talks about "SR field 1", "SR field 2" but nowhere is there a picture or even a sentence defining what these are.	Clarify the problems highlighted in the comment.	2017/1/9 9:42
8113	Matthew Fischer	225	1 9.3.1.9.7	38	35	T	Y	38.35 9.3.1.9.7	There is no explicit language anywhere stating what the allowed responses to UL OFDMA VHT Single are - I assume, without any explicit language, that both ACK and MBA are allowed	Clarify - even if the comment is correct, at least add a note pointing this out to avoid the possibility that an AP responds with ACK and a non-AP STA refuses it.	2017/1/9 9:42
8114	Matthew Fischer	225	1 9.3.1.23	41	36	T	Y	41.36 9.3.1.23	Discontiguous resource allocations are possible, but it is not clear how this is done - does an AP deliver in a trigger, multiple UL user info fields for a single AID to deliver multiple discontiguous RU s to that STA? Or does it have new encodings that indicate discontiguous tones? And if multiple RUs are possible, can they be contiguous and how does that differ from a single one that spans the same tones as more than one combined? And when a STA has discontiguous RU allocations, does it treat them as a single allocation for the purpose of interleaving, for example?	Provide clear instructions as to AP and STA behavior when invoking the multiple RU allocation option.	2017/1/9 9:42
8115	Matthew Fischer	225	1 28.3.10.8.5	295	6	T	Y	295.06 28.3.10.8.5	SIG B does not currently specify a means for indicating multiple RU allocations to a single STA.	Specify a means for indicating multiple RU allocations to a single STA within the SIGB, for example, by allowing the AID of a single STA to appear multiple times within the SIGB fields.	2017/1/9 9:42

8116 Matthew Fischer	225	1 28.3.3.2	229	1	T	Y	229.01 28.3.3.2	Add a PHY mode to support the transmission and reception of a preamble punctured non-HT DUP	As stated in the comment	2017/1/9 9:42
8117 Matthew Fischer	225	1 9.3.1.23	46	10	T	Y	46.10 9.3.1.23	non-HT format response to a trigger frame (e.g. CTS in response to MU-RTS) currently uses RU allocation information from the trigger that is aligned with HE tone mapping, but the CTS in non-HT format does not use HE tone mapping. Add some language in the draft that instructs the MU-RTS transmitter as to what tones to specify in order to generate the correct CTS response on the correct tone plan, and also language for the trigger recipient to ensure that the correct transmission is elicited.	As stated in the comment	2017/1/9 9:42
8118 Matthew Fischer	225	1 28.3.10.7.2	274	6	T	Y	274.06 28.3.10.7.2	The Spatial Reuse field says that there are values SR_DISALLOWED and SR_DELAY and 14 other values and points to 27.9.2.1 General (within OBSS_PD Spatial Reuse) and to what should be 27.11.6 Setting TXVECTOR parameters for an HE PPDU SPATIAL_REUSE - but the table 28-19 Spatial Reuse subfield encoding indicates only SR_DISALLOW, 14 numerical values and one reserved value. The table and the text in the various subclauses need to be reconciled.	As stated in the comment	2017/1/9 9:42
8119 Matthew Fischer	225	1 9.4.2.218.2	76	47	T	Y	76.47 9.4.2.218.2	B24 Group Addressed Multi-STA BlockAck In DL MU Support is indicated as being 4 bits in width, but it is probably only 1 bit in width	Change width of 4 bits to width of 1 bits in the diagram for the MAC Capabilities field for B24	2017/1/9 9:42
8120 Matthew Fischer	225	1 9.4.2.218.2	78	13	T	Y	78.13 9.4.2.218.2	Multi-TID aggregation support - this bit is not well described - is this the number of TIDs that the STA supports on the receive side? If so, state it explicilty.	Indicate that the level of Multi-TID support signaled is on the receive side.	2017/1/9 9:42
8121 Matthew Fischer	225	1 9.4.2.218.2	83	34	T	Y	83.34 9.4.2.218.2	Within more than one row in the "encoding" column of the table for MAC Capabilities, there are multiple statements of "if supported" and the implied reference of the implied "what" is the information in the second column, but the second column in many instances describes multiple different features that are optionally supported, so confusion is quite possible as to which bit indicates what - sure, the bit numbers appear in both columns to allow some sort of association, but really, this is pretty lazy wording. You only have to write the information out once and then it is done for all future revisions. Just write out what must be supported for each of these bits explicitly in the third column.	As stated in the comment	2017/1/9 9:42
8122 Matthew Fischer	225	1 27.4.3	159	45	T	Y	159.45 27.4.3	Size of the MBA response bitmap can be chosen by the MBA transmitter without constraint, so the STA that elicits the MBA cannot predict the duration of MBA - this is probably only a problem for SU PPDU eliciting frame because the MU PPDU includes a trigger for response which includes a duration value - maybe also for MU eliciting frame if for example, the MU PPDU has only one response required - e.g. the MU PPDU is to two STA and one STA has noACK MPDUs.	Need to define a way to constrain the MBA response (e.g. the bitmap length in particular) so that DUR times are predictable. Maybe simply include a restriction that the resopnse shall not exceed the DUR field value of the eliciting PPDU. See also 27.4.4.2 DL MU PPDU soliciting an SU PPDU response which probably needs some new language.	2017/1/9 9:42

8123	Matthew Fischer	225	1 9.4.2.200	70	3	T	Y	70.03 9.4.2.200	The following text was not updated when the table of TWT commands and responses was updated for broadcast TWT negotiation: "The Wake TBTT Negotiation subfield is set to 0 in TWT elements transmitted by a responding STA and by a scheduling STA." Missing definition for requesting and responding STA cases.	Delete the cited line and change "The Wake TBTT Negotiation subfield indicates that the scheduled STA transmitting the TWT element is indicating a value for the next wake TBTT for a broadcast TWT" to "The Wake TBTT Negotiation subfield indicates that a scheduled STA transmitting the TWT element is indicating a requested value for the next wake TBTT for a broadcast TWT and a scheduling STA transmitting the element is indicating the next wake TBTT for the broadcast TWT. The Wake TBTT Negotiation subfield is set to 0 by TWT Requesting and TWT Responding STAs."		2017/1/9 9:42
8124	Matthew Fischer	225	1 9.4.2.200	69	36	T	Y	69.36 9.4.2.200	figure 9-589av was not correctly updated to reflect changes made during CR that created D1.0 - Broadcast TWT changes allow a value of 2 octets for the Target Wake Time field, and this is not reflected in the TWT element diagram (9-589av) octet count label for the field	Change the number of octets in the figure for the Target Wake Time field to be 8 or 2 or 0.		2017/1/9 9:42
8125	Matthew Fischer	225	1 27.7.3.4	186	44	T	Y	186.44 27.7.3.4	Description is missing for value of Target Wake Time field	Add another bullet item as follows: "The value requested for the next wake TBTT in the Target Wake Time field" Also change the text on P69		2017/1/9 9:42
8126	Matthew Fischer	225	1 27.7.3.4	186	54	T	Y	186.54 27.7.3.4	Is it really the wake TBTT or is it the next broadcast TWT SP start time?	Clarify, possibly changing the text as suggested by the comment.		2017/1/9 9:42
8127	Matthew Fischer	225	1 9.4.2.200	70	34	T	Y	70.34 9.4.2.200	The table entry for the first row for column wake tbtt negotiation is NA, but at P139 the text says that this box should not have NA value - also see P186L40 which does not mention REQUEST	Make a decision - either do or do not allow request command by scheduled STA for Broadcast TWT - fix the different references so that they do not conflict.		2017/1/9 9:42
8128	Matthew Fischer	225	1 9.4.2.200	69	59	T	Y	69.59 9.4.2.200	Can a non-AP STA send more than one broadcast TWT parameter set in a TWT IE, for example, if it wants to join more than one broadcast TWT?	Clarify and add explicit language with the answer		2017/1/9 9:42
8129	Matthew Fischer	225	1 10.43.1	137	56	T	Y	137.56 10.43.1	Table 10-19a does not include any case where the scheduled STA includes Broadcast=1, so is it disallowed, and if so, shouldn't there be an explicit statement somewhere, instead of this implicit one	Clarify and add explicit language with the answer		2017/1/9 9:42
8130	Matthew Fischer	225	1 27.7.3.2	184	54	T	Y	184.54 27.7.3.2	The exact meanings of some of the fields in the TWT element are not well described when comparing the cases of Broadcast TWT negotiation vs Broadcast TWT SP announcement.	Clarify the difference between a TWT element that is part of a broadcast TWT negotiation vs a Broadcast TWT announcement, probably need to emphasize the difference in the RA of the MPDU that contains the element plus point out the difference in the meaning of the TWT Wake Interval field for the two cases. (i.e. the TWT Wake Interval is used during negotiation to identify non-AP STA wake times and it is used during Broadcast TWT announcements to indicate the separation between successive Broadcast TWT SP start times.		2017/1/9 9:42
8131	Matthew Fischer	225	1 9.4.2.200	70	34	T	Y	70.34 9.4.2.200	Too many of the entries for column "Description when transmitted by a TWT scheduling STA, Wake TBTT Negotiation subfield = 1" have "NA" - according to Table 10-19a–TWT setup exchange command interpretation, there should be more entries with something other than NA here.	Reconcile the table in 9.4.2.200 TWT element with Table 10-19a–TWT setup exchange command interpretation - noting that Table 10-19a is the more correct one.		2017/1/9 9:42

8134	Matthew Fischer	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	There are two differing descriptions of the meaning of the value 0 for BSS color - merge them or delete one or somehow reconcile them.	There are two differing descriptions of the meaning of the value 0 for BSS color - merge them or delete one or somehow reconcile them.		2017/1/9 9:42

8135	Matthew Fischer	225	1 27.10.4	193	58	T	Y	193.58 27.10.4	How does the recipient know whether the received PPDU was a multi-TID AMPDU or a single TID AMPDU? If some of the delimiters are bad, the recipient could mistake a multi-TID AMPDU for a single AMPDU.	Make the response always the same - i.e. it is always an MBA, even if the recipient thinks it was a single TID AMPDU.	2017/1/9 9:42
8136	Matthew Fischer	225	1 27.10.4	193	50	T	Y	193.50 27.10.4	The use of the word "solicits" here is interesting, because a few lines later, it says that the response shall be MBA, so is it really soliciting an immediate ACK, or is it soliciting an MBA? Does it depend on what the contents of the AMPDU were? i.e. single VHT vs Multi-TID, etc?	Make the language consistent.	2017/1/9 9:42
8137	Matthew Fischer	225	1 9.4.2.27	68	23	T	Y	68.23 9.4.2.27	There are good reasons to allow unsolicited TXBF FB.	Add a capability bit that indicates that an AP supports the receipt of unsolicited FB.	2017/1/9 9:42
8138	Matthew Fischer	225	1 9.7	105	50	T	Y	105.50 9.7	Is there a rule that says that the presence or absence of optional MAC header fields must be consistent within a TID within an AMPDU? How about across TIDs?	Clarify.	2017/1/9 9:42
8139	Matthew Fischer	225	1 10.3.2.4	114	48	T	Y	114.48 10.3.2.4	Referring to: If the STA is not an HE STA and the received frame's RA is equal to the STA's own MAC address, the STA shall not update its NAV. If the STA is an HE STA and the STA is solicited for an immediate response by the PPDU carrying the received frame, the STA shall not update its NAV. If the STA is an HE STA, the STA is a TXOP holder, and the frame is solicited by the STA, then the STA shall not update its NAV. Further, when the received frame is a DMG CTS frame and its TA is equal to the STA's own MAC address, the STA shall not update its NAV. For all other received frames the STA shall update its NAV when the received Duration is greater than the STA's current NAV value. Consider the case: The receiving STA is an HE	Not certain	2017/1/9 9:42
8140	Matthew Fischer	225	1 27.5.2.2.1	164	47	T	Y	164.47 27.5.2.2.1	Random Access UL OFDMA for unassociated STAs is mentioned here, but how does such a STA recognize the DL OFDMA response? Such a STA needs some sort of AID value to identify its DL RU allocation - the text refers me to 27.5.2.6 but there is nothing here mentioning what to do for unassociated STA, while over in 27.5.2.3, there is a TBD in a sentence that refers to unassociated STA	Define the rules for unassociated STA operation within UL OFDMA Random Access	2017/1/9 9:42
8141	Matthew Fischer	225	1 27.5.2.6.2	173	1	T	Y	173.01 27.5.2.6.2	A more efficient random access FB mechanism should be defined.	Change to a feedback mechanism that uses an HTF like sequence with small tone allocations mapped to AID values to allow at least binary feedback indication or even multiple bit FB indication (e.g. I have UL data, I request DL data, etc.)	2017/1/9 9:42
8142	Matthew Fischer	225	1 27.5.2.6.2	173	1	T	Y	173.01 27.5.2.6.2	The name here and in many places in the document is just "random access" while in other places it is UL OFDMA random access - the second form is clear and unambiguous, but the first form can be confused with normal EDCA random access or DCF random access and should not be used to avoid such confusion.	Define a new name for the UL OFDMA random access process and use it consistently, an acronym is good because it shortens the language and makes for a very convenient name. How about HORA = HE OFDMA Random Access	2017/1/9 9:42

8143	Matthew Fischer	225	1 27.7.3.1	182	39	T	Y	182.39 27.7.3.1	Currently, a STA that signs up for individual TWT is no longer considered a participant in any broadcast TWT. Think about the possibility of changing this now that a STA can perform an explicit sign up for Broadcast TWT. I.e. before the ability to sign up for BTWT existed, a STA that signed up for iTWT was assumed to no longer participate in bTWT, but if a STA can sign up for bTWT, then there is no reason to not allow it to do so.	Modify the cited sentence to state that a STA that has at least one active iTWT is automatically excluded from all bTWT except for those bTWT for which the STA explicitly signs up to participate. Also note that if the STA reverts to no iTWT any longer, then it is again automatically assumed to participate in all broadcast TWT - or maybe, if it has signed up for at least one bTWT, then it forsakes all others not explicitly signed up for which it is	2017/1/9 9:42
8144	Matthew Fischer	225	1 9.42.200	59	36	T	Y	59.36 9.42.200	The TWT Channel should be 0 or 1 because for bTWT, the TWT channel is not present	Change the TWT Channel octet count in figure 9-589av TWT element format to read "0 or 1" instead of "1"	2017/1/9 9:42
8145	Matthew Fischer	225	1 27.7.3.4	187	8	T	Y	187.08 27.7.3.4	The teardown process is a bit difficult for bTWT - theTWT teardown action frame contains a flow identifier field which is currently defined as having only 3 bits, but bTWT can have an ID of up to 8 bits in the TWT IE	Either limit the bTWT ID field to 7 bits and in the flow id field of the twt teardown action frame use one bit of the flow field as a broadcast identifier OR do not use the teardown procedure for bTWT teardown, but instead, use command reject in either direction	2017/1/9 9:42
8146	Michael Montemurro	225	1 10.3.2.4	114	65	T	Y	114.65 10.3.2.4	What does "is not all 1s" mean? I assume you mean all bits in the field are "not all set to 1".	Reword the condition to be more precise. For instance, you could say if all bits included in the field are not set to 1.	2017/1/9 9:42
8147	Michael Montemurro	225	1 10.9	127	19	T	Y	127.19 10.9	What does it mean to "expects an HE trigger-based"	Re-word the condition to be more precise.	2017/1/9 9:42
8148	Michael Montemurro	225	1 27.2.2	151	10	T	Y	151.10 27.2.2	What does "is not all 1s" mean? I assume you mean all bits in the field are "not all set to 1".	Reword the condition to be more precise. For instance, you could say if all bits included in the field are not set to 1. Same issue with 151.26 (and potentially other areas).	2017/1/9 9:42
8149	Michael Montemurro	225	1 27.3.3.1	153	13	T	Y	153.13 27.3.3.1	Could there be a brief description on the differences between Level 1,2, and 3, dynamic fragmentation in the "General " clause?	Give the reader some additional information that describies why there are three levels of fragmenation and what distiguishes each level.	2017/1/9 9:42
8150	Michael Montemurro	225	1 27.4.1	158	10	T	Y	158.10 27.4.1	"If an HE AP does not receive an HE Capabilities element with the Rx Control Frame To MultiBSS set to 1 from a STA," doesn't make sense.	Change "To MultieBSS" to "To MultiBSS bit" at cited location and 158.17.	2017/1/9 9:42

8160	Ming Gan	225	1 27.3.3.4	154	60	T	Y	154.60 27.3.3.4	Level 3 supports to fragment MMPDU, however, there is not description for MMPDU. Actually, it appeared in draft D0.3~D0.5	add the following description at the end of this sentence: and up to one dynamic fragment of an MMPDUin an A-MPDU	2017/1/9 9:42
8161	Ming Gan	225	1 28.3.5	247	44	T	Y	247.44 28.3.5	There is transmission block diagram for HE downlink MU-MIMO, however, it lacks of transmission block diagram for HE uplink MU-MIMO	It is not clear to transmit Uplink MU-MIMO. Add a transmission block diagram	2017/1/9 9:42

8162	Ming Gan	225	1 9.2.4.6.4.6	29	19	T	Y	29.19 9.2.4.6.4.6		See 26.3.13.2 (Power pre-correction), the reference is wrong	change 26.3.13.2 to 28.3.14.2	2017/1/9 9:42
8163	Ming Gan	225	1 27.10.4	194	45	T	Y	194.45 27.10.4		Only AC of higher priority compared with primary AC is allowed to be aggregated in Multi-TID A-MPDU, however, when the queue of this kind of AC is empty, low priority AC can not help to further improve performance.	Add one rule to allow low priority AC to be aggregated in Multi-TID A-MPDU. Suggestion: when the the queue of AC of higher priority with repsect to primary AC is empty, AC of lower priority with repsect to primary AC can be aggregated in one Multi-TID A-MPDU.	2017/1/9 9:42
8164	Ming Gan	225	1 10.43.1	137	47	E	Y	137.47 10.43.1		Demand TWT indicates tha the transmitting STA will accept only the indicated TWT parameters for a TWT agreeement. One typo on "tha"	correct it to "that"	2017/1/9 9:42
8165	Ming Gan	225	1 9.4.2	67	1	T	Y	67.01 9.4.2		BSS load element provides the channel utilization such that the unassociated STA can choose the proper AP┤+ε and extended BSS load element further provides the the spatial stream underutilization given the busy channel such that unassociated STA with MU-MIMO capability can choose the proper AP. Now 11ax introduce a OFDMA, there is the probability of frequence underutilization given the busy channel.	Define a HE BSS load element considering frequency utilization such to help unassociated STA to choose a best AP	2017/1/9 9:42
8166	Ming Gan	225	1 9.3.123.3	50	17	T	Y	50.17 9.3.123.3		MU-BAR frame is not only used for single TID per STA, but also for multiple TIDs per STA. Howerver, it is uesd for multiple TIDs per STA, there are a lot of redudancy, such as "Per TID info" of 2 bytes in BAR info field. Each TID require one "Per TID info" subfield . Instead, using TID bitmap of 1 byte per STA, not "Per TID info" subfield Per TID Per STA, can save lots of byes. We also see an example of GCR MU-BAR frame, it is separated from MU-BAR frame to save the overhead.	Define a new variant for Multi-TID MU-BAR frame like GCR MU-BAR frame. Using TID bitmap of 1 byte in Multi-TID MU-BAR frame to short the whole frame.	2017/1/9 9:42
8167	Ming Gan	225	1 27.5.1.3	163	23	T	Y	163.23 27.5.1.3		"explicitly deliver BQRs in any frame sent to the AP", what is "any frame". It is not clear. Actually it requires this frame contains A-control field.	change "any frame" to "any frame which contains A-Control field"	2017/1/9 9:42
8168	Ming Gan	225	1 27.5.1.3	163	21	T	Y	163.21 27.5.1.3		"implicititly" and "explicitly" seem redudant. Non-AP STA always carries available channle bitmap in the A-Control field in these two modes	delete "implicititly" and "explicitly"	2017/1/9 9:42
8169	Ming Gan	225	1 28.3.10.8.3	289	36	T	Y	289.36 28.3.10.8.3		The big Gamma_M(k) in the equation 28-20 is the phase rotation value, but it does not specify the value for the pilot subcarriers although phase rotation is not done on the pilot subcarriers.	as the proposed in the comment	2017/1/9 9:42
8170	Noel Stott	225	1 4.3.14a	9	21	G	N	9.21 4.3.14a		The term "only" implies that the HE non-AP STA can only support 20MHz operation. It would be nice if the HE non-AP STA could support operation in more than 20MHz channel bandwidths.	"An HE non-AP STA shall support operation in 20 MHz channel bandwidth."	2017/1/9 9:42
8171	Osama Aboulmagd	225	1 3.4	7	1	G	Y	7.01 3.4		The abberviation list seems to be incomplete	add missing abbreviations, e.g. MU-BAR, A-BQR, BQRP, etc. Additionaly S-MPDU is not defined. I think it is the VHT Single PPDU. As much as I can search it is not defined in 802.11-2016. Need to be added in this draft.	2017/1/9 9:42
8172	Osama Aboulmagd	225	1 17.5.2.3	167	59	G	Y	167.59 17.5.2.3		There is one occurance of "TBD" on page 167	TBD has to be either deleted or resolvced	2017/1/9 9:42
8173	Osama Aboulmagd	225	1 4.3.14a	9	19	T	Y	9.19 4.3.14a		Support of 160 and 80+80 MHz is not required for the an HE non-AP STA to be a VHT STA since they are optional features.	delete 160 MHz and 80+80 MHz. Add a line to include the optional support for 160 and 80+80 MHz.	2017/1/9 9:42
8174	Osama Aboulmagd	225	1 9.2.4.5.4	20	43	T	Y	20.43 9.2.4.5.4	8590	The new HE rule added to Table 9-9, how would a receipient return a multi-STA BA in response to a DL HE MU PPDU? Additionally it is not clear what type of the trigger frame is used to return the response. There is MU ACK trigger frame type.	clarify	2017/1/9 9:42

8175	Osama Aboulmagd	225	1 9.2.4.6.1	21	62	T	Y	21.62 9.2.4.6.1	The rule at the end of page 21, "The VHT subfield is set to 1 and the HE subfield is set to 0 to indicate VHT variant...". Actually a VHT device wouldn't care what the value of the so called "HE subfield" is since it is a reserved bit. Therefore it seems to me that any VHT device will always interpret the HT control field as a VHT variant as long as VHT field is set to 1.	need to define precisely the behaviour of a VHT device in this case, espcially when bit 0 and bit 1 are set to 1 and 1. Does this rle requires changing VHT devices already deployed?	2017/1/9 9:42
8176	Osama Aboulmagd	225	1 9.2.4.6.4	22		T	Y	22.00 9.2.4.6.4	A-Control needs to be defined	as in comment	2017/1/9 9:42
8177	Osama Aboulmagd	225	1 9.2.4.6.4.2	23	51	T	Y	23.51 9.2.4.6.4.2	It is not clear what variant of the trigger frame carries an immediate ack? Is it the baic trigger variant?	indicate the variant trigger frame explicitly	2017/1/9 9:42
8178	Osama Aboulmagd	225	1 9.2.4.6.4.3	24	59	T	Y	24.59 9.2.4.6.4.3	does the channel width field in the Operating Mode indicates an operating channel at less or equal the indicated BW? E.g. when the Channel Width is set to 1, does it indicate less or equal 40 MHz	CLARIFY	2017/1/9 9:42
8179	Osama Aboulmagd	225	1 9.2.4.6.4.5	26	22	T	Y	26.22 9.2.4.6.4.5	BSR is really very confusing. The UP bits are mapped to AC. The same TID field is used to either indicate the UP or the TSID. I can understand the ACI Bitmap. Hoever the delta TID are very confusing. What function does this field provide? UP doesn't have TID associated with it.	clarify the use of TID	2017/1/9 9:42
8180	Osama Aboulmagd	225	1 9.2.4.6.4.5	25	31	T	Y	25.31 9.2.4.6.4.5	BSR operation is redundant and is covered by biggybacking the buffer size using the Queue Size field of the QoS Control field	Given the efficiency of using piggybacing to communicate buffer status and the apparent complexity of the BSR operation as defined in this clause, the proposal is to delete this part.	2017/1/9 9:42
8181	Osama Aboulmagd	225	1 9.2.4.6.4.5	26	50	T	Y	26.50 9.2.4.6.4.5	SF needs to be included in the abbreviation clause, if it is not already there	as in comment	2017/1/9 9:42

8192	Osama Aboulmagd	225	1 9.3.1.23.5	51	22	T	Y	51.22	9.3.1.23.5		How the Common Info field and the User Info field are relevant to Buffer Status Report Poll. I'd have expceted some parameters relevant to the BSR, e.g. AC, TID, etc.	clarify	2017/1/9 9:42
8193	Osama Aboulmagd	225	1 9.3.1.23.5	51	33	T	Y	51.33	9.3.1.23.5		what does "Trigger Dependnet " mean?	explain	2017/1/9 9:42
8194	Osama Aboulmagd	225	1 9.3.3.1	52	38	T	Y	52.38	9.3.3.1		RAPS needs to be added to the abbreviations Clause	as in comment	2017/1/9 9:42
8195	Osama Aboulmagd	225	1 9.4.2.200	69	22	E	Y	69.22	9.4.2.200		there may be a numbering issue. 9.4.2.200 in 11ah is assigned to TSF Timer Accuracy element. May need to change the numbering for TWT element	as in comment.	2017/1/9 9:42
8196	Osama Aboulmagd	225	1 9.4.2.200	69	30	T	Y	69.30	9.4.2.200		Comparing the IE in Figure 9-589av to the one in 11ah draft, it seems that this TWT element is a new element by adding Broadcast TWT ID. The question is; is this a new IE? If not then I don't understand what format is now used for ah	clarify	2017/1/9 9:42
8197	Osama Aboulmagd	225	1 9.4.2.200	69	30	T	Y	69.30	9.4.2.200		There are sub-fields in the TWT IE having variable length. When repeating for each TWT parameter, how the information can be decoded given the variabe length of some of the sub-fields?	Clarify	2017/1/9 9:42
8198	Osama Aboulmagd	225	1 9.4.2.200	70	50	T	Y	70.50	9.4.2.200	8591	The terms Scheduling STA and Scheduled STA need to be defined	as in comment	2017/1/9 9:42
8199	Osama Aboulmagd	225	1 9.4.2.200	72	36	T	Y	72.36	9.4.2.200		The term broadcast TWT SP needs to be defined	as in comment	2017/1/9 9:42
8200	Osama Aboulmagd	225	1 9.4.2.200	72	47	T	Y	72.47	9.4.2.200		Table 9-262k1 seems to be totally arbitrary and is not based on any rationale. Perhaps some explanation is in order.	either provide a rationale for the different restrictions or simply delete the table. My preference is to delete the table.	2017/1/9 9:42
8201	Osama Aboulmagd	225	1 9.4.2.221	94	1	T	Y	94.01	9.4.2.221		what MU EDCA parameter set is used for. It seems tat the only new parameter is the MUEDCA Timer. The rest of the parameters are the same as in EDCA Parameter set.	Needs clarification to see how useful this nes IE is	2017/1/9 9:42
8202	Osama Aboulmagd	225	1 9.4.2.223	95	55	E	Y	95.55	9.4.2.223		STA-2-STA	change "2" to "to"	2017/1/9 9:42
8203	Osama Aboulmagd	225	1 9.4.2.223	95	54	T	Y	95.54	9.4.2.223		What does "improve probability" mean? Improve with respect to what?	explain or delete	2017/1/9 9:42
8204	Osama Aboulmagd	225	1 9.4.2.223	96	23	T	Y	96.23	9.4.2.223		what role does "Vendor Specific Service Identifier" do?	clarify	2017/1/9 9:42
8205	Osama Aboulmagd	225	1 9.4.2.224	96	31	T	Y	96.31	9.4.2.224		why there is a need to define a "periodic sequence" of quiet elements?	clarify	2017/1/9 9:42
8206	Osama Aboulmagd	225	1 9.4.2.223	95	48	T	Y	95.48	9.4.2.223		Is there a field in the HE Capability element to indicate support for this feature? If not then I believe it needs to be added.	as in comment	2017/1/9 9:42
8207	Osama Aboulmagd	225	1 10.2	113	4	T	Y	113.04	10.2		The 802.11ax amendment introduces MU transmissions which is not supported by any of the control functions in Figure 10-1 of the 802.11-2016. There is a need to introduce a ne MU access function and add to the Figure.	as in comment.	2017/1/9 9:42
8208	Osama Aboulmagd	225	1 10.3.1	113	50	T	Y	113.50	10.3.1		what is "duration-based" RTS? It needs to be defined	as in comment	2017/1/9 9:42
8209	Osama Aboulmagd	225	1 10.3.2.4a	115	47	T	Y	115.47	10.3.2.4a		the paragraph of clause 10.3.2.4a is very vague. What does manaing RTS usage mean? What does length-based mean? The whole paragraph needs to be rewritten explaining those words like duration-based, etc.	as in comment	2017/1/9 9:42
8210	Osama Aboulmagd	225	1 10.49.1	144	30	T	Y	144.30	10.49.1		Why is the need for an AID assign rule? AID is assigned by the AP and is implementation issue. There is no need for a rule that probably no one will use it. Does the new rule improves any performance?	delete the sub-clause	2017/1/9 9:42
8211	Osama Aboulmagd	225	1 27.2.2	150	34	T	Y	150.34	27.2.2	8592	My ubderstading is the single NAV currently supported by 802.11 devices is updated baed on the Duration value in the MAC header of all received frame (Inter or Intra BSS). The so called "Basic NAV" is only updated based on Inter-BSS frames received.	it is better to find another name other than Baisc NAV. Mayve Iter-BSS NAV.	2017/1/9 9:42
8212	Osama Aboulmagd	225	1 27.2.3	152	14	T	Y	152.14	27.2.3		MU-EDCA needs to be defined	as in comment	2017/1/9 9:42

8213	Osama Aboulmagd	225	1 27.2.3	152	13	T	Y	152.13 27.2.3		The parameter HEMUEDCATimer[AC] seems to appear for the first time in the draft on page 152. No proper definition was given and its role in channel acces wasn't explained.	Introduce definition and describe its use including how to set its value	2017/1/9 9:42
8214	Osama Aboulmagd	225	1 27.2.3	152	8	T	Y	152.08 27.2.3		Clause 27.2.3 doesn specify clearly when an EDCA for UL MU Capable STAs is obtained. It focuses on the different parameter settings.	explain which counters are involved in obtaining the TXOP. Does HEMUEDCATimer[AC] only used to contrl the values of Cwmin, Cwmax, etc as implied in the last paragarph of this clause. Need to be clear	2017/1/9 9:42
8215	Osama Aboulmagd	225	1 27.4.1	157	28	T	Y	157.28 27.4.1		It is not clear to me under what conditions a non-AP STA sends a Multi-STA BlockAck frame. My undertanding is Multi-STA BlockAck is to acknowlege trigger-based PPDU transmitted by multiple non-AP STAs. I aslo understand that a non-AP STA will never send a trigger frame.	specify those conditions where a non-AP STA will send a Multi-STA BA	2017/1/9 9:42
8216	Osama Aboulmagd	225	1 27.5.1.3	163	27	T	Y	163.27 27.5.1.3	8593	what does "channel availability" mean?	clarify	2017/1/9 9:42
8217	Osama Aboulmagd	225	1 27.5.1.3	163	20	T	Y	163.20 27.5.1.3		what does "efficient way" mean? How the word "efficient" is defined?	delete the fisrt sentence or qualify the word "efficient"	2017/1/9 9:42
8218	Osama Aboulmagd	225	1 27.5.2.5	171	12	T	Y	171.12 27.5.2.5		Once again, What is "efficient way"?	clarify	2017/1/9 9:42
8219	Osama Aboulmagd	225	1 27.5.2.5	171	30	T	Y	171.30 27.5.2.5		Clause 27.5.2.5 desctibes two methods to achieve the same function. Since the use of Queue Size in QoS Control frame is mandatory while the use of the BSR A-Control is optional, the suggestion is to remove the optional one.	as in comment	2017/1/9 9:42
8220	Osama Aboulmagd	225	1 27.5.2.6	172	28	T	Y	172.28 27.5.2.6		If a STA doesn't support UL OFDMA RA, then I am assuming it associates with the AP by acquiring the medium and sends an association request maybe using a SU PPDU. Is that correct?	If correct, then I just adding some language to that effect after the first paragraph of the clause	2017/1/9 9:42
8221	Osama Aboulmagd	225	1 27.5.2.6	173	17	T	Y	173.17 27.5.2.6		In Figure 27-1, what does M-BA mean?	I think it mean Multi-STA BlockAck. If correct please make the changes.	2017/1/9 9:42
8222	Osama Aboulmagd	225	1 27.6.2	177	44	T	Y	177.44 27.6.2		Figure 27-3 and 27-4 need to be updated.	as in comment	2017/1/9 9:42
8223	Osama Aboulmagd	225	1 27.7	181	44	T	Y	181.44 27.7		Is TWT really required? If I remember correctly the issue that was discussed related to scheduled trigger frames for which the AP can easily sets its schedule and announce to STAs. Why is the need to include a heavy protocol to achieve such a simple function?	delete TWT operation and its related items from the draft	2017/1/9 9:42
8224	Osama Aboulmagd	225	1 27.7.2	180	23	T	Y	180.23 27.7.2		Let's consider a scenario where all STAs have individual TWT agreements with the AP. Would the AP group STAs to start a TWT SP and MU transmissions? I think some explanation is needed to be added for the AP behaviour.	as in comment	2017/1/9 9:42
8225	Osama Aboulmagd	225	1 27.7.3.1	183	7	T	Y	183.07 27.7.3.1		Figure 27-5 is supposed to describe the broadcast TWT operation. However I cannot see the word broadcast any where in the Figure. What exactly "broadcast: mean relative to the Figure. Is this a case of choosing a bad name for a bad protocol?	Clarify why the name "broadcast" was assigned to this procedure	2017/1/9 9:42
8226	Osama Aboulmagd	225	1 27.7.3.1	183	7	T	Y	183.07 27.7.3.1		From Figure 27-5, it is clear that there is significant overhead associated with Broadcast TWT. Only one MU PPDU was sent after the transmission of many overhead frames. The Figure speaks for itself. Adding TWT with its heavy protocol machinery is a source of significant overhead for a sunction that can be achieved in a simple way	Quantify the overhead involved in this figure. Better yet, just delete TWT and all its related items from the draft. Actually the whole first paragraph is speculative and maybe it is better to delete it.	2017/1/9 9:42
8227	Osama Aboulmagd	225	1 27.7.3.1	183	31	T	Y	183.31 27.7.3.1	8594	I thnik it would be much easire by explicitly specify the MMPDU that contains the TWT element, whether it is the TWT Req or the TWT Resp.	as in comment	2017/1/9 9:42

8239	Osama Aboulmagd	225	1 27.9.2.2	192	16	T	Y	192.16 27.9.2.2	It is not clear what is the condition for the STA to consider an inter-BSS PPDU as not having been received	introduce the condition	2017/1/9 9:42
8240	Osama Aboulmagd	225	1 27.11.4	196	54	T	Y	196.54 27.11.4	the rule starting at line 54 doesn't seem be precise. Ignoring the HE PPDU is only for Inter-BSS PPDU, not for all the BSS color values	clarify	2017/1/9 9:42
8241	Osama Aboulmagd	225	1 27.14.1	199	14	T	Y	199.14 27.14.1	Intra PPDU power save needs to be defined	as in comment	2017/1/9 9:42
8242	Osama Aboulmagd	225	1 27.14.1	199	19	T	Y	199.19 27.14.1	shouldn't there be a condition where the STA goes to the doze state if the BSS-color is not the same as the AP color to which the STA is associated? Does the STA stays awake all the time for receiving an inetr-BSS PPDU	as in comment	2017/1/9 9:42
8243	Osama Aboulmagd	225	1 27.16.3	207	9	T	Y	207.09 27.16.3	It is not clear does this scheme quiet all the STAs in the BSS except two STAs doing sta-to-sta, or it keeps a set of STA not quiet. If a set of STA are not quiet, how this will help STA-to-STA communication.	clarify	2017/1/9 9:42
8244	Osama Aboulmagd	225	1 27.16.3	207	1	T	Y	207.01 27.16.3	What is the impact of Quieting all (or most of the STAs) on the BSS throughput. Has there been any study to quantify the impact?	discuss the impact on BSS throughput	2017/1/9 9:42
8245	Osama Aboulmagd	225	1 27.16.3	207	1	T	Y	207.01 27.16.3	There are many references in this clause that this feature is intended for STA-to-STA operation. However this operation is not defined together with the STA-to-STA signaling and communication	Define the missing operations	2017/1/9 9:42
8246	Pascal VIGER	225	1 9.2.4.5.7	21	25	T	Y	21.25 9.2.4.5.7	9.2.4.5.7 TXOP Duration Requested subfield The "TXOP Duration Requested" is used by a STA to indicate its need for its next EDCA TXOP. Such duration information is not relevant for UL MU operation (meaningless). An HE STA shall not use "TXOP Duration" format but only using the "queue size" format.	Add following sentence at the end of chapter 9.2.4.5.7: "An HE STA does not use the "TXOP Duration Requested" subfield format. For HE buffer status feedback operation for UL MU, it should either or both use the "queue size" format in QoS Control field (see 9.2.4.5.6) or the BSR format in A-Control subfield of the HE variant HT Control field (see 9.2.4.6.4.5). "	2017/1/9 9:42
8247	Pascal VIGER	225	1 9.2.4.6.4.1	23	37	E	Y	23.37 9.2.4.6.4.1	Table 9-18a–Control ID subfield values. The table misses the description of content for RDP (control ID value 6), with forward indication to the appropriate section.	as per comment, add sentence: "See 9.2.4.6.4.8 (Reverse direction protocol (RDP))"	2017/1/9 9:42
8248	Pascal VIGER	225	1 9.2.4.6.4.3	24	62	T	Y	24.62 9.2.4.6.4.3	The UL MU Disable subfield indicates whether UL MU operation is suspended or resumed by the non-AP STA. There is no information indicating the reason of such a suspending, and no procedure to enter or exit this suspending phase.	A procedure shall be defined. Otherwise, STAs may decide by themselves the usage of not of UL MU scheme, which may downgrade the efficiency of UL MU mode.	2017/1/9 9:42

8249	Pascal VIGER	225	1 9.2.4.6.4.5	25		T	Y	25.00 9.2.4.6.4.5	9.2.4.6.4.5 Buffer Status Report (BSR) The report contains buffer status information used for UL MU operation. But the AP should only receive amount of data directed to it.	As already stated in 9.2.4.5 QoS Control Field for the legacy format of buffer status, add following sentence after 1st paragraph of 9.2.4.6.4.5 BSR: "For reporting its buffer status information, a non-AP HE STA considers the amount of buffered traffic intended for the HE AP."		2017/1/9 9:42
8250	Pascal VIGER	225	1 9.2.4.6.4.7	28	10	T	Y	28.10 9.2.4.6.4.7	HE STA may report the channel availability information in the BQR A-Control subfield of frames it transmits if the AP. Is it possible to inform of the un-availability of the primary 20MHz channel ? In other words, is first row named '20 MHz' effective ?	need clarification		2017/1/9 9:42
8251	Pascal VIGER	225	1 9.2.5.2	31	1	T	Y	31.01 9.2.5.2	How to specify the Duration/ID for BQR Trigger Frame ? Only Basic, MU-RTS and MU-BAR TF are considered in this section.	Clarify the estimated duration for BQR, and especially when it is followed by multiple frames.		2017/1/9 9:42
8252	Pascal VIGER	225	1 9.3.1.23.4	50	51	T	Y	50.51 9.3.1.23.4	Selection of MU-RTS stations: The 802.11ac reservation scheme is conserved (20Mhz, 40Mhz, 80Mhz and so on) even if it is limited. It is better if the AP selects those stations answering a CTS in given channels. As example, two stations reserve a given band, each one in a respective 20 MHz channel: STA A is selected for primary 20MHz, but STA B is selected for the second 20MHz channel. This lets more chance to cover the full band, and avoids collision riskt for simultaneous CTS (synchronization requirement as defined in 17.3.9.10, Pre-correction accuracy requirements).	Modify the description of RU Allocation subfield in the User Info field (line 51 page 50), to support allocation of a given 20MHz RU to specific stations.		2017/1/9 9:42
8253	Pascal VIGER	225	1 9.3.1.23.1	48	23	T	Y	48.23 9.3.1.23.1	The MU-RTS can be used as a protection for UL transmission triggered by a Basic trigger frame. Using such successive TF frames is not efficient. It is more efficient if the basic trigger can also trigger CTS frames, before the UL transmissions occur. Thus overhead is reduced.	The "Trigger Dependent Common Info field" may be used to indicate the STA in charge of emitting HE-Triggered CTS frames. A specific structure composed of AID12 and RU Allocation subfields may be used. This replaces the requirement of using a dedicated MU-RTS trigger frame. The CTS frames will be emitted a SIFS after the Basic Trigger frame having such Trigger Dependent Common Info field. The UL triggered PPDUs are sent by STA a SIFS after CTS frames.		2017/1/9 9:42
8254	Pascal VIGER	225	1 9.3.1.23.7	51		T	Y	51.00 9.3.1.23.7	9.3.1.23.7 Bandwidth Query Report Poll variant As the Common Info field of the BQRP variant Trigger frame is defined in Figure 9-52d, there is missing the usage of such common info fields : are they all used or required ?	As done for MU-RTS, clarify which fields are reserved.		2017/1/9 9:42
8255	Pascal VIGER	225	1 27.5.1.3	163	17	T	Y	163.17 27.5.1.3	Buffer Query Report following MU-RTS procedure may be inefficient. As MU-RTS scheme relies on 802.11ac (contiguous band) and BQR supports punctured band among a whole similar BW, there is chance that HE STAs indicate in their BQR some 20 MHz channels that are not protected by MU-RTS/CTS. The usage of not protected channels may be problematic for legacy devices.	The MU-RTS variant may be enhanced to support emission of CTS frames along a punctured bandwidth. A HE STA already has the possibility to sense various 20MHz channels, determine those free, and emit on a specific (sub-)channel (according BQR capability). During its MU-RTS/CTS scheme, the HE AP may inform HE STAs which are BQR-capable (through a single bit in MU-RTS TF) that it is ready to receive CTS on non-contiguous channels		2017/1/9 9:42

8256	Pascal VIGER	225	1 10.3.2.8a.3	117	44	T	Y	117.44 10.3.2.8a.3	The MU-RTS acts as a protection mechanism for 20Mh, 40Mhz or 80Mhz primary band (see 9.3.1.23.4 MU-RTS variant). In section 10.3.2.8a.3 CTS response to MU-RTS, it is indicated that "If any 20 MHz channel indicated in the RU Allocation subfield of the User Info field is busy, the CTS frame response shall not be transmitted." Does this suppose that HE STA can transmit CTS frames in punctured/non-contiguous 20Mhz channels ?	- If yes, there is no more requirement to limit RU allocation to indicate only whether the CTS frame is transmitted on the primary 20 MHz channel, primary 40 MHz channel, primary 80 MHz channel, 160 MHz channel, or 80+80 MHz channel. Possibility should be offered to AP for allocating a given 20MHz RU (anywhere is its position among the BW) for a given STA for sending the CTS. - If no, please make the 2 texts aligned	2017/1/9 9:42
8257	Pascal VIGER	225	1 10.3.2.8a.3	117	22	T	Y	117.22 10.3.2.8a.3	"CTS response to MU-RTS" uses a different sensing period (ED-based CCA during the SIFS after receiving an MU-RTS frame) that "CTS after a RTS" (- 10.3.2.7 : CCA on all secondary channels has been idle for a PIFS prior to the start of the RTS frame). Is it normal ? what is the reason for ? Note: According to 10.22.2.5, HT/VHT/HE STAs use same CCA rules for determining channel width on secondary channels (e.g. PIFS interval for 5GHz)	as per comment	2017/1/9 9:42
8258	Pascal VIGER	225	1 9.4.2.218.3	86	30	T	Y	86.30 9.4.2.218.3	Class A STAs are high capability devices and class B STAs are low capability devices. There is missing a link to a detailed definition of such classes.	as per comment	2017/1/9 9:42
8259	Pascal VIGER	225	1 9.4.2.219	91	39	T	Y	91.39 9.4.2.219	In HE Operation element section, there are 2 different descriptions of BSS Color field. Clarification is needed.	as per comment	2017/1/9 9:42
8260	Pascal VIGER	225	1 9.4.2.219	91	50	E	Y	91.50 9.4.2.219	In description of PE Duration subfield, the term PE duration is used but has never been introduced earlier.	replace "PE duration" by "Packet Extension duration". Maybe also useful to introduce PE acronym in chapter 3.4 (Abbreviations and acronyms).	2017/1/9 9:42
8261	Pascal VIGER	225	1 9.4.2.219	92	15	T	Y	92.15 9.4.2.219	An AP corresponding to neither a nontransmitted BSSID nor a transmitted BSSID sets both MaxBSSID Indicator and Tx BSSID Indicator to 0. Does this AP correspond to a AP with no support of multi-BSS feature, or is there any other case ? It would be nice to clarify this point in the text.	as per comment	2017/1/9 9:42
8262	Pascal VIGER	225	1 9.4.2.221	94	4	T	Y	94.04 9.4.2.221	The MU EDCA Parameter Set element is used for proper operation of the QoS facility during the CP. The sentence is unclear, and particularly the CP term is not defined. If CP refers to contention period, is it useful to be used as this kind of period is the only allowed type (as according to 27.1, the use of HCCA is banned at HE STAs and thus there is no more CFP period).	Please clarify the sentence.	2017/1/9 9:42
8263	Pascal VIGER	225	1 9.4.2.221	94	52	T	Y	94.52 9.4.2.221	For value 0 of the AIFSN field, the sentence is unclear : "the AIFS is equal to the value of the MU EDCA Timer, i.e. EDCA is disabled for the duration specified by the MUEDCATimer for the corresponding AC". This lets think that the EDCA medium access will be enabled once the AIFS will expire. BUT this will not be possible, as AIFS timer is large (8*1024-1_{S}) and re-scheduled at each start of EDCA contention phase (see 10.3.2.3.6 AIFS).	Please clarify the sentence, in order to clearly know under which conditions the EDCA medium access will be re-enabled.	2017/1/9 9:42
8264	Pascal VIGER	225	1 27.2.3	152	19	T	Y	152.19 27.2.3	HEMUEDCATimer[AC] shall uniformly count down to 0. Is this countdown continuously performed along time, or is the countdown suspended in between each medium access (that means only counting down during contention procedure periods) ?	Please clarify when countdown is executed.	2017/1/9 9:42

8265	Pascal VIGER	225	1 9.4.2.221	94	62	T	Y	94.62 9.4.2.221	MU EDCA Timer field indicates a duration expressed in time unit (TU) (a TU equals to 1024 ++s). No exemplary value is provided for MU EDCA Timer field. By the way, is value 0 allowed (and so what is the consequence)?	According to 10.22.2.4 (Obtaining an EDCA TXOP), the value of AIFSN[AC] shall be greater than or equal to 2 for non-AP STAs. That results in having a AIFS timer value never null. Thus, the MU EDCA Parameter Set must provide a correct value, preventing the null case.	2017/1/9 9:42
8266	Pascal VIGER	225	1 10.22.2.2	130	1	T	Y	130.01 10.22.2.2	In 10.22.2.2, EDCA backoff procedure is resumed for contradictory reasons described in the two first paragraphs: When an HE STA successfully receives and does not receive the corresponding acknowledgement frame. A clarification (even text simplification) is needed.	as per comment	2017/1/9 9:42
8267	Pascal VIGER	225	1 11.49.1	144	34	T	Y	144.34 11.49.1	The formula for assigning AID is unclear. Is the formula limited to bits 5 to 8, what is the relation with definition of AID in chapter 9.4.1.8 AID field of Revmc ?	as per comment	2017/1/9 9:42
8268	Pascal VIGER	225	1 27.2.2	151	50	T	Y	151.50 27.2.2	Is it useful to mention "10.4.3.3 (NAV operation during the CFP)" for an HE STA ? As according to 27.1, the use of HCCA is banned at HE STAs, is there still exist a CFP period?	as per comment	2017/1/9 9:42
8269	Pascal VIGER	225	1 10.3.2.4	115	12	T	Y	115.12 10.3.2.4	Is it useful to mention "10.4.3.3 (NAV operation during the CFP)" for an HE STA ? As according to 27.1, the use of HCCA is banned at HE STAs, is there still exist a CFP period?	as per comment	2017/1/9 9:42
8270	Pascal VIGER	225	1 27.5.1.2	163	13	T	Y	163.13 27.5.1.2	Following sentence is unclear : "An MPDU sent in a broadcast RU of an HE MU PPDU shall not include information intended for a STA that is identified as the recipient of another RU in the same HE MU PPDU." This lets think a broadcast RU is not destined to any station. Isn't it a unicast RU instead ?	as per comment	2017/1/9 9:42
8271	Pascal VIGER	225	1 27.5.2.1	163	58	T	Y	163.58 27.5.2.1	There is a mix of STA, HE STA, non-AP STA terms used in this section in a confusing manner. As example, page 164 line 14, "A STA shall not transmit a Trigger frame..." whereas only a AP HE STA is able to do this.	as per comment	2017/1/9 9:42
8272	Pascal VIGER	225	1 27.5.2.1	164	24	T	Y	164.24 27.5.2.1	class A or class B devices are said to be defined in 28.3.14 (Transmit requirements for an HE trigger-based PPDU), whereas this seems not the case.	as per comment	2017/1/9 9:42
8273	Pascal VIGER	225	1 27.5.2.2.1	164	63	T	Y	164.63 27.5.2.2.1	The purpose of following sentence is unclear: "More than one Trigger frame may be aggregated in an A-MPDU. If more than one Trigger frame is aggregated in an A-MPDU, all of them shall have the same content." What is the aim of such duplication, to replace padding ?	as per comment	2017/1/9 9:42
8274	Pascal VIGER	225	1 27.5.2.2.2	166	51	T	Y	166.51 27.5.2.2.2	The paragraph 10 of section 27.5.2.2.2 is unclear. 1. "If an AP includes one or more Trigger Frames or HE variant HT Control fields with an UL MU Response Scheduling A-Control subfield, then they shall collectively elicit HE trigger-based PPDU responses..." - What does "AP includes" mean ? - what "they" refers to ? 2. "...such that at least one RU is allocated for each 20 MHz channel occupied by the eliciting PPDU. " In case of the one RU is of random access type, then there is chance to have no body emiting in that RU.	1. as per comment, re-word the sentence. 2. modify the sentence accordingly: ". . Such that at least one scheduled RU is allocated..." In a optimized manner to avoid any empty 20MHz channel, add a complement sentence at the end of the paragraph : "In order to limit the effect of unusued random RUs over a given 20MHz channel, an AP may substantially uniformly distribute scheduled RUs and random RUs over the set of 20 MHz channels used by the eliciting PPDU."	2017/1/9 9:42

8275 Pascal VIGER	225	1 27.5.2.2.3	167	38	T	Y	167.38 27.5.2.2.3	It is stated that "An AP may send the Trigger frame using any access category and follows the rules defined in 10.22.2". This is not applicable at all because AP does not know which AC to use. For Data or Ack frames, the AC is determined by examining the TID field of MSDU packet (TID is linked to UPs of MSDU from higher layer as refer to 5.1.1.3). For a Management frame, the AC is AC_VO. What is the procedure for a Trigger Frame, as it is a control frame (which by essence has no TID) ?	Procedure can envisage a mapping between the priority of the TF and the Access Categories AC0 - AC3 to insert the trigger frame. As example, by following sentence: " the trigger frame may be conveyed in the AC that corresponds to the type of uplink traffic that the HE STAs are requested to send in response to the trigger frame. If different ACs are requested to STAs, the HE AP may select an Access Category for the trigger frame corresponding to the AC with the highest priority among the requested Access Categories." Additionally, upon emergency for sending a Trigger Frame (BSR reports inform of an important amount of pending data), then " The AP may select one AC queue with the highest priority as the one that has the lowest backoff value, i.e. the next AC queue from which data will be sent on the medium. "		2017/1/9 9:42
8276 Pascal VIGER	225	1 27.5.2.3	167	58	T	Y	167.58 27.5.2.3	The 3rd paragraph describes the conditions for a HE STA to transmit a HE trigger-based PPDU. If the STA is not associated with the AP, procedure is TBD.	The TBD should be replaced by the random access procedure (as described in page 164 line 46). The case of AID=0 should also be considered with same behavior.		2017/1/9 9:42
8277 Pascal VIGER	225	1 27.5.2.3	170	1	T	Y	170.01 27.5.2.3	In case of Basic Trigger frame, STA behavior for selecting content for HE trigger-based PPDU is unclear, for the case that "the STA does not have a frame of the required type". What is such required type ? Does the required type refer to an AC type? In case of scheduled RU, it seems detrimental not to transmit any data PPDU (anyway the 'type' is) !	- Clarify the 'type' meaning. - Instead not transmitting or transmitting Qos Null frames, consider transmitting any other pending MPDU(s) (as per rules of 27.10.4) for the only case where a scheduled RU is allocated, in order to enhance medium usage.		2017/1/9 9:42
8278 Pascal VIGER	225	1 27.5.2.6.2	173	36	T	Y	173.36 27.5.2.6.2	The case of having an assigned RU with AID of the STA is not considered, in the case a STA has already started a random access procedure in the past (previous TF) and its OBO is pending (non null). Even it is specified that this scheduled STA will transmit other its scheduled RU, it is not specified that OBO procedure is not effective for this TF.	Add following sentence after 3rd paragraph: "An HE STA shall not decrement its OBO counter if it has found a RU assigned to it with its STA's AID."		2017/1/9 9:42
8279 Pascal VIGER	225	1 27.5.2.2.1	164	46	T	Y	164.46 27.5.2.2.1	A value of 0 in AID12 indicates that nonassociated STAs can transmit using the random access procedure. Section 27.5.2.6 (UL OFDMA-based random access) describes that STA shall use the RAPS element sent by AP. How nonassociated STA can manage several APs ?	Specify if a limit of number of APs shall be set for nonassociated STA (even the limit is only one AP).		2017/1/9 9:42
8280 Pascal VIGER	225	1 27.5.2.2.1	164	46	T	Y	164.46 27.5.2.2.1	A value of 0 in AID12 indicates that nonassociated STAs can transmit using the random access procedure. When support of multiple BSSID is activated, the case of several BSSs shall be managed with regards to the RAPS profile usage.	as per comment, a procedure is required for RAPS management in case of multiple-BSSID.		2017/1/9 9:42
8281 Pascal VIGER	225	1 27.5.2.6.3	174	20	T	Y	174.20 27.5.2.6.3	For retransmission procedure for random access, what is the effect if pending data was sent through EDCA during the while. Does OBO is erased or is let as-is to continue OBO procedure for any other remaining data ? What are the effects onto OCW ?	please clarify any effect in the case.when HE PPDU, which was initially trigger-based, was sent in EDCA.		2017/1/9 9:42
8282 Pascal VIGER	225	1 27.5.2.6.1	172	45	T	Y	172.45 27.5.2.6.1	HE STA shall use the most recently RAPS element, but this element should be received from the intended AP !	Modify the sentence of 4th patagraph:"An HE STA shall use the OCWmin and OCWmax values indicated in the RAPS element within Beacon or Probe Response frames most recently received by the AP emitting the Trigger Frame, regardless of the access category...".		2017/1/9 9:42

8283 Pascal VIGER	225	1 27.5.2.7	174	23	T	Y	174.23 27.5.2.7	NDP feedback report procedure is not detailled.What is a short feedback ? Are there several types of feedback ?	as per comment	2017/1/9 9:42
8284 Pascal VIGER	225	1 27.5.2.7	174	23	T	Y	174.23 27.5.2.7	NDP feedback report procedure is optional for non-AP STA. Does this mean it is mandatory for AP STA?	as per comment. Please confirm the mandatory or optional status.	2017/1/9 9:42
8285 Pascal VIGER	225	1 27.7.2	181	12	T	Y	181.12 27.7.2	The term "A TWT requesting STA should not initiate transmission of frames " is not so clear. I suppose "initiate transmission" means "accessing the medium by the STA itself in order to transmit". In case "initiate transmission" would just mean "transmit", it is no sense for the end of the sentence: "A TWT requesting STA ...should not " <transmit> "frames to the TWT responding STA within trigger-enabled TWT SPs for that TWT agreement."	Please modify the sentence, by replacing "should not initiate transmission of frames" by "should not initiate a medium access to transmit frames".	2017/1/9 9:42
8286 Pascal VIGER	225	1 27.7.3.3	185	40	T	Y	185.40 27.7.3.3	Second paragraph of 27.7.3.3: "A TWT scheduled STA should not initiate transmission of frames to the TWT scheduling STA outside of broadcast TWT SPs and within trigger-enabled TWT SPs." This sentence should be completed to which action the TWT scheduled STA should do.	I propose to clearly indicate after the sentence: "However, the TWT scheduled STA should wait for trigger frames sent by the TWT scheduling STA".	2017/1/9 9:42
8287 Pascal VIGER	225	1 27.7.3.3	184	17	T	Y	184.17 27.7.3.3	The TWT scheduling STA shall schedule for transmission a Trigger frame addressed to one or more TWT scheduled STAs during a trigger-enabled TWT SP. Due to density and other (legacy) STAs contending on the medium, there is good chance that the TWT SP start time is delayed. TWT STAs may miss the TWT SP for any of 2 reasons: - the TWT-TF is collided (worse case) - the TWT-TF is too much postponed : thus some TWT STAs will fallback from MU-EDCA to EDCA mode, or will transition to doze state	The Trigger Frames having a targeted wake time schedule (trigger-enabled SPs) shall be prioritized for being transmitted by HE AP. This will ensure the timing contract with TWT scheduled stations is respected for trigger-enabled TWT agreement, which is beneficial for medium usage efficiency.	2017/1/9 9:42
8288 Pascal VIGER	225	1 27.14.2	200	23	T	Y	200.23 27.14.2	Power save with UL OFDMA may make the STA waking up at the same time. They "may enter the doze state until the start of that TWT SP". If the TF is collided or delayed due to contention, STA s may miss the TWT SP (can not use TWT SP).	The Trigger Frames having a targeted wake time schedule (trigger-enabled SPs) shall be prioritized for being transmitted by HE AP. This will ensure the timing contract with TWT scheduled stations is respected for trigger-enabled TWT agreement, which is beneficial for medium usage efficiency.	2017/1/9 9:42
8289 Pascal VIGER	225	1 27.16.3.1	207	4	T	Y	207.04 27.16.3.1	There is a mis-configuration for EDCA contention between Quiet time period mode and MU EDCA Parameter mode: when a STA has both traffic to deliver STA2STA (during QTP period) and MU UL to AP (outside QTP period), what EDCA configuration to use ?	The MU EDCA mode is not able to support STA2STA communication. Instead of applying a penalty of EDCA parameters, it would be better efficient to let backoff counters count down as usual with no penalty, and to condition the transmission of data (when one EDCA backoff is down to zero) according QTP on/off mode. - In case of QTP period is off, then the MU EDCA mode may prevent any EDCA access. Thus the backoff down to zero is simply re-drawn. - In case of QTP period is on when a backoff counter reaches zero, if the data stored in the associated traffic queue include data to be addressed to another STA different from the access point (i.e. it is STA2STA data), then this data is transmitted. next the backoff counter is redrawn.	2017/1/9 9:42

8290	Pascal VIGER	225	1 9.4.2.221	94	62	T	Y	94.62 9.4.2.221	MU EDCA Parameters Set is not compatible with STA2STA (or also called P2P) traffics, like DLS or TDLS protocols. The penalty scheme as envisaged by MU EDCA Parameter Set penalizes the uplink traffic to the AP, but also blocks any legacy EDCA access for P2P communications.	The MU EDCA Parameter Set has to be modified (and as a result will be simplified) to support P2P traffics. The MU EDCA Timer is the only parameter kept, and indicates the duration of time during which the restricted UL MU mode is used. Principle consists in to let EDCA backoff counters count down as usual (that is to say with no penalty as currently envisaged by former MU EDCA Parameters set), and to condition the transmission of data (when one EDCA backoff is down to zero) according to the MU EDCA Timer activity and the data to be sent. - if MU EDCA Timer is not active (or timeout), then the transmission is allowed on the given queue - if MU EDCA Timer is not active, then only transmission of P2P data inside the expired queue is allowed. Next the backoff counter is redrawn as usual.		2017/1/9 9:42
8291	Pascal VIGER	225	1 9.4.2.221	94	62	T	Y	94.62 9.4.2.221	The specification of MU EDCA parameter Set prevent any EDCA backoff counter (e.g. by MU EDCA Timer, i.e. EDCA is disabled for the duration specified by the MUEDCATimer). Thus, this mechanism makes the EDCA backoff counters no longer mirror which AC queue should have the highest priority of transmission in the meaning of conventional EDCA (e.g. with oldest data stored in it). For instance, when the STA receives a trigger frame with a scheduled RU dedicated to it, the STA having its backoff counters frozen, cannot anymore use them to handle its QoS and send the data with the highest priority (not only regarding its Access Category, but also regarding the respective ages of the data in the AC[] queues). Therefore, MU EDCA Parameter Set has broken the classical QoS handling.	The MU EDCA Parameter Set can be modified to keep the EDCA penalty and allow keeping the backoff count down. Among the set of parameters used in 9.4.2.221, the MU EDCA Timer is the only parameter kept, and indicates the duration of time during which the restricted UL MU mode is used. Principle consists in to let EDCA backoff counters count down as usual (that is to say with no penalty as currently envisaged by former MU EDCA Parameters set), and to condition the transmission of data (when one EDCA backoff is down to zero) according to the MU EDCA Timer activity and the data to be sent. - if MU EDCA Timer is not active (or timeout), then the EDCA transmission is allowed on the given queue - if MU EDCA Timer is not active, then transmission through EDCA is dis-allowed. Next the backoff counter is		2017/1/9 9:42
8292	Pascal VIGER	225	1 27.5.2.2.2	165	46	T	Y	165.46 27.5.2.2.2	In case of multiple BSS, the TA field of TF shall be set to the MAC address of the transmitted BSSID. In order to distinguish (because it seems the case is not supported yet) between TF addressed to STAs of the single 'transmitted BSSID', and TF addressed to STAs of the overall multiple BSS set, the Individual/Group bit shall be used (forced to 1).	as per comment		2017/1/9 9:42
8293	Patrice Nezou	225	1 10.28.4	137	10	T	Y	137.10 10.28.4	A HE RD responder may transmit A-MPDU with MPDUs from multiple TIDs that are from the same AC or higher AC. What is the consequence for the backoff values of the transmitted Acs ? What about QoS ?	I propose to reset current backoff values of transmitting ACs.		2017/1/9 9:42
8294	Patrice Nezou	225	1 27.5.1.2	163	13	T	Y	163.13 27.5.1.2	"An MPDU sent in a broadcast RU of an HE MU PPDU shall not include information intended for a STA that is identified as the recipient of another RU in the same HE MU PPDU." Does it mean that broadcasted RU can not be mixed with any other types of RU ?	as per comment		2017/1/9 9:42
8295	Patrice Nezou	225	1 27.2.3	152	10	T	Y	152.10 27.2.3	When a STA is in MU EDCA mode, how the QoS data are selected from the ACs ?	Proposal: "The HE trigger-based PPDU is built based on the current backoff values of ACs. The backoff values must be updated after the transmission".		2017/1/9 9:42
8296	Patrice Nezou	225	1 27.2.3	152	29	T	Y	152.29 27.2.3	When a STA switches from MU EDCA to EDCA, how the backoff are restored ?	Proposal: "The backoff values must be resetted and CW is set to CWmin when switching from MU EDCA to EDCA."		2017/1/9 9:42

8297	Patrice Nezou	225	1 27.2.3	152	10	T	Y	152.10 27.2.3	A STA, exchanging QoS data frame with another in DLS mode and setting in MU EDCA mode, cannot transmit any QoS data frame related to the DLS transmission because the scheduled RU allocated by the AP are dedicated to transmit QoS data frame to the AP.	Disable MU transmission mode when direct link transmissions are initiated by sending a frame containing an OMI A-Control field, and reset EDCA parameters.	2017/1/9 9:42
8298	Patrice Nezou	225	1 27.5.2.2.2	166	49	T	Y	166.49 27.5.2.2.2	A 20MHz channel must not remain empty. The draft specifies:" at least one RU is allocated for each 20MHz channel ..." To be sure that RU is really used by a STA. It would be better that at least one RU is a scheduled RU.	Revise the text with the following words : " ... at least non random access RU is allocated ... "	2017/1/9 9:42
8299	Patrice Nezou	225	1 27.5.2.3	167	59	T	Y	167.59 27.5.2.3	If the STA is not associated with the AP, TBD	Remove TBD	2017/1/9 9:42
8300	Patrice Nezou	225	1 27.5.2.6.1	172	49	T	Y	172.49 27.5.2.6.1	An AP only "may" include RAPS element evenif UL OFDMA-based random access is unable. How can the STA set OCWmin and OCWmax itself if no RAPS is sent by the AP ?	A non-AP STA must define default values for OCWmin and OCWmax	2017/1/9 9:42
8301	Patrice Nezou	225	1 27.5.2.6.2	173	48	T	Y	173.48 27.5.2.6.2	"If the selected RU is considered busy as a result of either physical or virtual carrier sensing, then the HE STA shall not transmit its HE trigger-based PPDU in the randomly selected RU and it randomly selects any one of the RUs that are assigned to AID value 0 in the subsequent Trigger frame." Why keeping OBO equal to 0 ? For the next subsequent Trigger frame, perhaps no more data will be ready to send.	Proposal: "... the HE STA shall not transmit its HE trigger-based PPDU in the randomly selected RU and the HE STA shall reinitialize its OBO counter to a new random value in the range of 0 and OCWmin"	2017/1/9 9:42
8302	Patrice Nezou	225	1 9.7.3	108	10	T	Y	108.10 9.7.3	"The TIDs present in a data enabled A-MPDU context are also constrained by the channel access rules (for a TXOP holder; see 10.22.2 (HCF contention based channel access (EDCA)) and 10.22.3 (HCF controlled channel access (HCCA))) and the RD response rules (for an RD responder, see 10.28.4 (Rules for RD responder)). This is not shown in these tables." The rules to choose TIDs in a data enabled A-MPDU is not described for TXOP responder. It is described only for a TXOP holder and a RD responder. For a MU UL TX, the STA are TXOP responder and we are not in a RD transmission.	Proposal: "The TIDs present in a data enabled A-MPDU context are also constrained by the channel access rules (for a TXOP holder and a TXOP responder; see 10.22.2 (HCF contention based channel access (EDCA)) and 10.22.3 (HCF controlled channel access (HCCA))) and the RD response rules (for an RD responder, see 10.28.4 (Rules for RD responder)). This is not shown in these tables."	2017/1/9 9:42
8303	Patrice Nezou	225	1 27.5.2.2.3	167	38	T	Y	167.38 27.5.2.2.3	"An AP may send the Trigger frame using any access category and follows the rules defined in 10.22.2 (HCF contention based channel access (EDCA)) for obtaining and sharing the TXOP." How is the position of the Trigger frame in the selected queue ? If too many frame are waiting to be transmitted, the transmission information (for instance RU information) can be obsolete.	Proposal:" An AP may send the Trigger frame using any access category and follows the rules defined in 10.22.2 (HCF contention based channel access (EDCA)) for obtaining and sharing the TXOP. The Trigger frame is located in the head of the FIFO related to the selected access category"	2017/1/9 9:42
8304	Patrice Nezou	225	1 27.5.2.7	174	24	T	Y	174.24 27.5.2.7	"The NDP feedback report is a mechanism for an HE AP to collect short feedbacks from a very high number of HE STAs, in an efficient manner. The feedbacks (e.g. resource requests) are sent without data payloads in response to a Trigger frame. The feedbacks are not for channel sounding. This mechanism is optional for non-AP STA." No type of Trigger frame is defined for NDP feedback report generation.	Precise the NDP feedback procedure	2017/1/9 9:42

8305	Patrice Nezou	225	1 27.5.2.6.3	174	15	T	Y	174.15 27.5.2.6.3	"If the HE trigger-based PPDU is not successfully transmitted in the randomly selected RU, the STA shall update its OCW to 2xOCW + 1 for every retransmission, until the OCW reaches the value of OCWmax." What does it happen if the data to be retransmitted is finally sent through EDCA mode ? What is the behavior related to OCW and OBO values ?	Proposal: A retransmission procedure has to be initiated in the STA and the data to be retransmitted must be flagged. If the flagged data packet is transmitted before the end of the retransmisison procedure, the current OBO and OCW are resetted and reinitialized.	2017/1/9 9:42

8332	Peter Ecclesine	225	1 28.1.1	209	10	T	Y	209.10 28.1.1	Somewhere it should be mentioned that adaptivity at other than these specified CCA thresholds might be required by regulation, and that adaptivity is not specified here. Sharing the 5 GHz band in Europe under EN 301 893 is an example. The 2.4 is getting new rules too.	Insert "Regulatory requirements that do not affect interoperability are not addressed in this standard. Implementers are referred to the regulatory sources in Annex D for further information. Operation in countries within defined regulatory domains may be subject to additional or alternative national regulations."	2017/1/9 9:42
8333	Peter Ecclesine	225	1 27.1	149	10	T	Y	149.10 27.1	The MAC clause should have a regulatory requirements paragraph just after the introduction, as channel access might have regulatory constraints, e.g., EN 301 893 in Europe.	Insert "Regulatory requirements that do not affect interoperability are not addressed in this standard. Implementers are referred to the regulatory sources in Annex D for further information. Operation in countries within defined regulatory domains may be subject to additional or alternative national regulations."	2017/1/9 9:42
8334	Peter Khoury	225	1 9.2.4.6.4.7	28		T	Y	28.00 9.2.4.6.4.7	There should be some objective measure of whether a channel is available or not in the Bandwidth Query Report.	State either that the channel power should be less than -72dBm or make a reference to a preexisting level specified in the baseline.	2017/1/9 9:42
8335	Peter Khoury	225	1 9.3.1.23	47	44	T	Y	47.44 9.3.1.23	An FCS could be placed as part of the padding to enable a client device to abort construction of the UL triggered frame early and thus save power.	Add a clause stating that if the number of octets of padding is greater than 4 that the first 4 octets of padding shall consist of an FCS for the previous octets.	2017/1/9 9:42
8336	Peter Khoury	225	1 9.3.1.23	47	34	T	Y	47.34 9.3.1.23	The expected step size of 1dB is not present in Table 2-25g. The implied step size in the first row of the table is 8/9 of a dB.	Change -20dBm to -10dBm	2017/1/9 9:42
8337	Peter Khoury	225	1 27.5.2.2.1	164		E	Y	164.00 27.5.2.2.1	The sentence "An AP may transmit a PPDU that elicits an HE trigger-based PPDU from one or more STAs by including in the PPDU:" should specify whether the following paragraphs are "either or" or "and both"	An AP may transmit a PPDU that elicits an HE trigger-based PPDU from one or more STAs by including in the PPDU either: -One or more Trigger ... or -An UL MU Response ...	2017/1/9 9:42
8338	Peter Khoury	225	1 27.5.2.2.1	164	63	T	Y	164.63 27.5.2.2.1	The sentence "More than one Trigger frame may be aggregated in an A-MPDU. If more than one Trigger frame is aggregated in an A-MPDU, all of them shall have the same content." Is the situation in which more than one trigger frame is aggregated is a DL MU PPDU with multiple Trigger Frames transmitted to different users in different RUs? If this is the case then this sentence is overly restrictive as information about other users is being unicasted to a single user.	Clarify the language on situations in which trigger frames may be aggregated. If the situation described in the comment is valid allow trigger frames to different users in an A-MPDU to differ from each other.	2017/1/9 9:42
8339	Peter Khoury	225	1 9.3.1.23	46	62	T	Y	46.62 9.3.1.23	The trigger frame specifies the MCS for all users on the subsequent UL MU OFDMA frame. This seems overly restrictive especially when the non-AP STA has just received the trigger frame from which is has immediate knowledge of the channel. Its even more restrictive for the random access RUs in which case a client may be forced to use an MCS much lower than necessary and waste bandwidth or may be precluded from using an RU that was specified for an MCS that was too high for the current link budget.	Include an option for an Uplink OFDMA format similar to the downlink MU PPDU format that includes MCS but not RU. This new frame type would be specified in section 28.3.4 and would be a frame similar to the HE MU PPDU with another OFDMA signalling symbol in which uplink RU MCS could be specified by the transmitting stations.	2017/1/9 9:42

8340	Peter Loc	225	1 9.2.5.7	32	26	T	Y	32.26 9.2.5.7	The paragraph implies that the STAs receiving the MU-RTS measure the time in microseconds between the end of the MU-RTS and the end of the PPDU carrying the CTS frame. The measured times may differ from STA to STA due to the accuracy of the measurements. For legacy devices, the accuracy is not a factor, but for HE devices due to the stringent requirement on packet alignment at the AP, minor differences in the timing may adversely affect the alignment of the packets arriving at the AP.	Modify the paragraph starting from line 26 to the following: "In a CTS frame that is transmitted in response to an MU-RTS frame, the Duration/ID field is set to the value obtained from the Duration/ID field of the MU-RTS frame that elicited the CTS frame adjusted by subtraction of aSIFSTime and the number of microseconds required to transmit the CTS frame at a data rate determined by the rules in 9.7."	2017/1/9 9:42
8341	Peter Loc	225	1 4.3.14a	9	51	T	Y	9.51 4.3.14a	There are other Trigger Frame variants that HE-STAs are required to support, such as MU-RTS, MU-BAR and BSRQ	Change the feature statement on line 51 of this subclause to "Mandatory support for basic, MU-RTS, MU-BAR and BSRQ trigger frames."	2017/1/9 9:42

8343	Peter Loc	225	1 9.3.1.23	47	5	E	N	47.05 9.3.1.23	Editorial change: "DCM is not be used"	DCM is not to be used	2017/1/9 9:42
8344	Peter Loc	225	1 9.3.1.23	42	26	T	N	42.26 9.3.1.23	The Trigger Dependent User Info field is not explicitly defined	Change "The Trigger frame can include an optional Trigger Dependent Common Info field and optional Trigger Dependent User Info field" to "The Trigger frame can optionally include a Trigger Dependent Common Info field and a Trigger Dependent User Info field. The Trigger Dependent Common Info field is a component of the Common Info Field. The Trigger dependent user info field is a component of the User info field."	2017/1/9 9:42
8345	Peter Loc	225	1 27.5.2.5	171	14	T	Y	171.14 27.5.2.5	To ensure that BSR feedback frames are aligned at the AP, STAs should use explicit BSR feedbacks in response to a BSRP variant Trigger Frame, eliminating any padding related issues from the transmitting STAs	Change the first paragraph of this sub clause to the following: The non-AP STA can either implicitly deliver BSRs in the QoS Control field or BSR A-Control field of any frame transmitted to the AP (unsolicited BSR) or shall explicitly deliver BSRs in any frame sent to the AP in response to a BSRP variant Trigger frame (solicited BSR).	2017/1/9 9:42
8346	Peter Loc	225	1 9.4.2.218.3	81	9	T	N	81.09 9.4.2.218.3	Dual band support field is not used in this draft and should be replaced by a more useful capability indication. Support for 5GHz and/or 2.4 GHz can be inferred from the Channel Width Set field	Make this "Dual Band Support" field a reserved field for future assignment.	2017/1/9 9:42
8347	Peter Loc	225	1 9.4.2.218.3	82	45	T	Y	82.45 9.4.2.218.3	Support of preamble puncturing in all secondary 20/40MHz channels should be mandatory to reduce complexity on the AP scheduling and to improve network efficiency	Remove or change the Preamble Puncturing Rx field to "reserved"	2017/1/9 9:42
8348	Peter Loc	225	1 9.4.2.218.3	87	59	T	Y	87.59 9.4.2.218.3	Due to the lack of a length indication, the decoder does not know if Tx Rx HE MCS Support field does not contain the Tx and Rx bitmaps. It would be more deterministic if both Tx BW Bitmap subfield or the Rx BW Bitmap fields are always present in the Tx Rx HE MCS support field.	Replace the paragraph starting on line 56 with the following: "The Tx BW Bitmap and the Rx BW Bitmap are always present, even if one or both of these subfields has the value of all zeros.	2017/1/9 9:42
8349	Peter Loc	225	1 10.3.2.4a	115	38	T	N	115.38 10.3.2.4a	HE Duration-based RTS threshold is not defined	The HE duration threshold may be defined by adding dot11HEDurationRTSThreshold. A question still remains: how does an HE STA enable the use of HE duration threshold? To simplify the 11ax standard, suggest to remove this HE Duration threshold.	2017/1/9 9:42
8350	Peter Loc	225	1 10.3.5	113	45	T	Y	113.45 10.3.5	The procedure to disable HE duration-based RTS is not described.	Unless the procedure is clearly defined, the draft should follow the existing RTS/CTS procedure. Remove the paragraph starting from lines 45 to line 48	2017/1/9 9:42
8351	Peter Loc	225	1 10.3.1	113	50	T	Y	113.50 10.3.1	The procedure to enable HE duration-based RTS is not described.	Unless the procedure is clearly defined, the draft should follow the existing RTS/CTS procedure. Remove the paragraph starting from lines 50 to line 54	2017/1/9 9:42
8352	Peter Loc	225	1 10.3.2.4	114	63	E	N	114.63 10.3.2.4	Typo	Change to "all of the following"	2017/1/9 9:42

8353	Peter Loc	225	1 10.3.2.4	114	48	T	Y	114.48 10.3.2.4	Redundant instruction for non-HE STAs because this has been addressed in the current IEEE802.11 standard.	Remove "If the STA is not an HE STA and When the received frame's RA is equal to the STA's own MAC address, the STA shall not update its NAV"	2017/1/9 9:42
8354	Peter Loc	225	1	150	29	T	Y	150.29	The statement "For an HE STA maintaining two NAVs, ..." implies that there are HE STAs may only support one NAV. Since supporting 2 NAVs is a requirement for HE-STAs, this statement should be rephrase.	Change "For an HE STA maintaining two NAVs, ..." to "For HE STAs,...."	2017/1/9 9:42
8355	Peter Loc	225	1 9.4.2.219	92	43	T	Y	92.43 9.4.2.219	It's not stated clearly that the HE-STAs joining the HE-BSS are required to support the HE-MCS indicated in the Basic HE-MCS and NSS Set for both Rx and Tx. For UL OFDMA and UL MU MIMO, it should be a requirement that HE STAs support the HE-MCS as indicated in the basic HE-MCS and NSS Set for receiving and transmitting.	Modify the statement on lines 43-44: The Basic HE MCS And NSS Set field indicates the HE-MCSs for each number of spatial streams in HE PPDUs that are supported by all HE STAs in the BSS (including IBSS and MBSS) in both Tx and Rx	2017/1/9 9:42
8356	Peter Loc	225	1 27.16.2	206	35	T	Y	206.35 27.16.2	The transition period after the AP transmits an announcement frame for BSS color change until the new BSS color takes effect could be very long, especially for STAs that are in sleep mode and STAs that are in the process of joining the existing BSS. Need to devise a scheme to minimize the potential problems that may arise during the long transitional time to handle newly associated STAs that are just associated with the AP using the existing BSS color.	What suggested here is just a temporary solution. A more detailed procedure should be developed to alleviate the problems mentioned. Modify the paragraph on line 43-45 as follows: "During the time leading up to the BSS Color change TBTT, an HE AP shall continue to advertise the existing BSS Color via the BSS Color subfield in HE Operation element with an indication that this BSS color is to be changed at the BSS color TBTT"	2017/1/9 9:42
8357	Peter Loc	225	1 28.1.1	209	51	T	N	209.51 28.1.1	HE PHY does not support only data field OFDM symbol of 12.8 us. It also supports data symbol of 4 us.	Change "The HE PHY supports a single Data field OFDM symbol duration of 12.8 ++s (excluding guard interval)." to "In addition to supporting the legacy OFDM data symbols of 3.2 us, HE-PHY also supports OFDM data symbol of 12.8 us (excluding guard interval).	2017/1/9 9:42
8358	Peter Loc	225	1 27.2.1	149	43	T	Y	149.43 27.2.1	The STA that receives a control frame without the TA for the first time does not know if the RA matches the saved TXOP holder address for the BSS to which it is associated. In fact, most STAs do not have the knowledge of whether the RA in the received frame is in the same BSS or not.	Modify the paragraph on lines 43-44 to the following: "The frame is a control frame that does not have a TA field and the RA matches the BSSID for the BSS to which it is associated".	2017/1/9 9:42
8359	Peter Loc	225	1 28.1.1	210	1	T	N	210.01 28.1.1	The statement "A non-AP STA is inclusive of a 20 MHz-only non-AP STA." is redundant. As already stated in 28.1.1, an HE STA is required to comply to clause 19 stated on lines 14-17 or clause 19 stated on lines 18-19.	Remove this line.	2017/1/9 9:42
8360	Peter Loc	225	1 28.3.3.6	238	7	G	Y	238.07 28.3.3.6	The statement "Only a non-AP HE STA can be a 20 MHz-only STA." is redundant. This draft standard is for HE devices, there is no need to add this trivial statement.	Remove "Only a non-AP HE STA can be a 20 MHz-only STA."	2017/1/9 9:42
8361	Peter Loc	225	1 28.1.1	211	59	G	N	211.59 28.1.1	"Maximum" and "at least" are contradictory.	Same paragraph but the word maximum is removed. (Responding with the requested beamforming feedback in an HE sounding procedure with the number of space-time streams in the HE NDP that the non-AP STA can respond to being at least 4)	2017/1/9 9:42

8364	Po-Kai Huang	225	1 4.3.13a	9	43	T	N	9.43 4.3.13a	The condition "Optional support for 1024-QAM on 242-, 484- and 996-tone Rus" seems to be covered by the condition "Optional support for HE-MCSs 10 and 11". The reason is that HE-MCSs 10 and 11 is basically 1024-QAM modulation based on the table in 28.5.	Replace the two sentences with "Optional support for 1024-QAM"	2017/1/9 9:42
8365	Po-Kai Huang	225	1 4.3.13a	9	60	E	N	9.60 4.3.13a	A term MU OFDMA is used in this section. Technically, OFDMA already signals a multi-user version of OFDM. Adding additional "MU" seems not to add further information	Delete "MU" in MU OFDMA.	2017/1/9 9:42

8366	Po-Kai Huang	225	1 6.3.27	13	56	T	N	13.56 6.3.27	It seems that HE Capabilities is also required in MLME-DLS.confirm because HT and VHT Capabilities are also included in MLME-DLS.confirm	Add HE Capabilities in MLME-DLS.confirm	2017/1/9 9:42
8367	Po-Kai Huang	225	1 9.2.4.1.8	19	40	T	N	19.40 9.2.4.1.8	There are two issues for the sentence "An HE AP indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Info field of frames it transmits." First, in 9.4.1.17, there are description saying that More Data Ack subfield is reserved for AP. Hence, the description in 9.4.1.17 contradicts with the description in 9.2.4.1.8. Second, the sentence seems to contradict with the meaning of More Data Ack subfield becuase in 9.4.1.17, it mentions that setting the More Data Ack subfield to 1 indicates that a STA can process Ack frames with the More Data bit in the Frame Control field equal to 1 and remain in the awake state.	Delete the sentence "An HE AP indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Info field of frames it transmits."	2017/1/9 9:42
8368	Po-Kai Huang	225	1 9.2.4.1.8	19	47	T	N	19.47 9.2.4.1.8	For the sentence "An HE TDLS peer STA indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Capability element it transmits," it seems that the sentence contradicts with the meaning of More Data Ack subfield becuase in 9.4.1.17, it mentions that setting the More Data Ack subfield to 1 indicates that a STA can process Ack frames with the More Data bit in the Frame Control field equal to 1 and remain in the awake state.	Delete the sentence "An HE TDLS peer STA indicates that it can set the More Data subfield to 1 by setting the More Data Ack subfield to 1 in the QoS Capability element it transmits."	2017/1/9 9:42
8369	Po-Kai Huang	225	1 9.2.4.6.4.4	25	16	T	N	25.16 9.2.4.6.4.4	There are 9 reserved bits for HE link adaptation. It is unclear why we need so many reserved bits. The issue of many reserved bits is that it will prevent aggregation of multiple control information and increase unnecessary overhead.	Reduce the number of reserved bits for HE link adaptation.	2017/1/9 9:42
8370	Po-Kai Huang	225	1 Contents	9	59	E	N	9.59 Contents	There are list for 9.2.4.6.4.7Bandwidth Query Report (BQR) and 9.2.4.6.4.8Reverse direction protocol (RDP), but there are no list for other types of A-control information	List all the types of A-control information.	2017/1/9 9:42
8371	Po-Kai Huang	225	1 9.2.4.6.4.6	27	19	E	N	27.19 9.2.4.6.4.6	The reference to Power pre-correction is wrong	Correct the reference to section of power pre-correction.	2017/1/9 9:42
8372	Po-Kai Huang	225	1 9.2.4.6.4.7	27	47	E	N	27.47 9.2.4.6.4.7	It seems that there are duplicate "HE" in description "HE DL HE MU transmission"	Simply use "HE DL MU transmission."	2017/1/9 9:42
8373	Po-Kai Huang	225	1 9.2.4.6.4.7	27	63	E	N	27.63 9.2.4.6.4.7	It seems that the descriptio "Bandwidth Query Report used for bandwidth query report operation to assist DL HE MU transmission (see 25.5.1.3. (Bandwidth query report operation)." is already covered by the description "Bandwidth Query Report used for Bandwidth Query report operation to assist HE DL HE MU transmission (see 27.5.1.3 (HE bandwidth query report operation for DL MU))"	Delete "Bandwidth Query Report used for bandwidth query report operation to assist DL HE MU transmission (see 25.5.1.3. (Bandwidth query report operation)."	2017/1/9 9:42
8374	Po-Kai Huang	225	1 9.2.4.6.4.7	28	6	T	N	28.06 9.2.4.6.4.7	It is not clear what does the first row of Table 9-18d represent. The bandwidth shall be the operating bandwidth of the STA.	Add "based on the operating bandwidth of the STA" at the end of "The Available Channel Bitmap subfield encoding is defined in Table 9-18d (Available Channel Bitmap subfield encoding)."	2017/1/9 9:42
8375	Po-Kai Huang	225	1 9.2.4.6.4.8	28	60	T	N	28.60 9.2.4.6.4.8	RDP Trigger frame is not defined anywhere in the spec. The term Trigger frame may also be misleading because the response from RDP responder is not carried in HE TB PPDU.	Simply use "for the RDP" and delete "Trigger frame."	2017/1/9 9:42
8376	Po-Kai Huang	225	1 9.3.1.23	41	47	E	N	41.47 9.3.1.23	There is a redundant parenthesis in RA field	Remoe the parenthesis in RA field.	2017/1/9 9:42

8378	Po-Kai Huang	225	1 9.3.1.23	44	49	E	N	44.49 9.3.1.23	In table 9-25e, it should be "Values 0 to 60".	Change "Values 0 to 61" to "Values 0 to 60".	2017/1/9 9:42

8379 Po-Kai Huang	225	1 9.3.1.23.1	48	41	T	N	48.41 9.3.1.23.1	There is no Table 8-159 in REVmc_D8.0	Correct the reference to minimum MPDU start spacing.	2017/1/9 9:42
8380 Po-Kai Huang	225	1 9.3.1.23.3	50	1	T	N	50.01 9.3.1.23.3	Currently, MU-BAR is the only variant of Trigger frames with variable length of User Info field due to variable length of BAR information. We see two issues for the current design with variable length of User Info field. First, STA needs to parse every BAR control to figure out the length even if STA does not support certain types of BAR request (ex multi-TID BAR variant). Second, In the future, if additional BAR variant is added, then legacy HE STA may not be able to parse the MU-BAR with the new BAR variant. This introduces backward compatibility issue.	Two options to address the issue. Option 1: Add a length field in Trigger dependent User Info field of MU-BAR to indicate the length of BAR control and BAR Info. Option 2: Add length field in Trigger dependent Common Info field of MU-BAR to indicate the length of the User Info field. Each User info field is padded to the indicated length if required.	2017/1/9 9:42
8381 Po-Kai Huang	225	1 9.4.2.218.3	81	8	T	N	81.08 9.4.2.218.3	Currently STBC capability if enabled would need to be supported over all BWs. STBC processing for 160MHz channels results in extra Si cost and value of using STBC in 160MHz is low and negligible. There should be a capability bit for Tx/Rx STBC with 160 MHz, so this cost is not needed for every STA supporting STBC.	Change "STBC Tx and Rx" to "STBC Tx and Rx for PPDU with bandwidth smaller than or equal to 80MHz." Add a new field with two bits at the end for "STBC Tx and Rx for PPDU with bandwidth equal to 160 MHz"	2017/1/9 9:42
8382 Po-Kai Huang	225	1 27.4.4.2	160	54	E	N	160.54 27.4.4.2	There is no section 10.3.2.11.2 in Draft 1.0	Fix the reference to MU Acknowledgement procedure	2017/1/9 9:42
