Subject: Measurements on Heads

Good morning Shefali,

I know it has been a while since we have last spoken. I hope that you've been well. If you remember from last time we spoke, the hair instrumental team (similar to Germain Puccetti's skin team) was looking to develop a system for measurements on heads. We had discussed with you several of the parameters that we could be interested in. Up until now, we have recieved further support from upper management in France regarding this project and are looking to move forward with the work.

We've looked through the information/presentation that you have provided us, and it's encouraging for me to hear from Germain about the positive experiences he's been having with BTBP. I know that the work that you've done with hair is limited compared to the extensive work on skin, however Germain is very confident in BTBP's ability. I was just wondering if there has been any more development that's been done regarding measurements with hair.

If you are still interested in the project, can we discuss some future actions and move towards a formal proposal for some work regarding developing a system to perform measurements on heads? Because of the time difference, I know it's still early morning there. So, please let me know when works for you.

Best regards,

Daniel Kung
