What a history, he wrote a legendary moment in 5 minutes and then,,,,,,,,, "IM DONE!". Y'all are legend

4 Reply

@hassanhashemi6478 6 years ago (edited)

Any software engineer would have his/her mind blown when somebody dose all of that stuff as simple as that for the first:
1. generate an LXCContainer
2. allocate new file system ("ALLOCATE NEW FREAKING FILE SYSTEM")...

S @ShadowSliph 5 years ago

I wonder, if they had had any idea of how Docker would reshape the landscape of the internet, would they have let him talk a little longer?

Letting him finish that sentence would mean death to others I suppose. :/ I hate these time constrains. I hope you folks put up a bit in-depth demo of this interesting tool!

The most important thing to happen in computers since computers. Totally eclipses python. The utter bewilderment in the room is palpable.

What a shame that he was not allowed to speak more than couple of minutes.... He was doing such a historical presentation...

Now I am wondering what the other guys would have spoken about if he got such less time.....

@kosyrevserge798 12 years ago

How does this compare to OpenVZ?

After all, isn't LXC mostly built by its authors?

1 Reply

@ineyaa 12 years ago

We had cgroups and namespaces in kernel for years. It wasn't scripted, but people could use C just fine. Suddenly it's popular and everyone is making tools around it, docker, libvirt-lxc,... and they all label it as something new.

Also, the shots of the near-totally slothic audience, all larduous and laying back 45 degrees in their too-small chairs, too-tight shirts ... ugh. What has computer "geek" become?
