Micron Announces Massive Chips Investment, Onshoring Production

The White House

June 12, 2025

Today, the Trump Administration announced a \$200 billion investment by Micron Technology, the sole U.S.-based manufacturer of advanced memory chips – only the latest large-scale investment secured since President Donald J. Trump took office. The investment includes construction of a second chip fabrication facility in Boise, Idaho, and modernizing its Manassas, Virginia, facility — onshoring production of its advanced DRAM technology from Taiwan for the first time and creating 90,000 direct and indirect jobs.

It's all part of President Trump's commitment to revitalizing American manufacturing and establishing the country as the global leader in technology — particularly in artificial intelligence.

Since President Trump took office, leading technology companies have pledged trillions of dollars in U.S.-based manufacturing and production, including Project Stargate, Apple, NVIDIA, IBM, TSMC, and others.

It's another big win for American workers, national security, and leadership in the world — and the best is yet to come.
