STATUTES

35 U.S.C. §102(g).....	17
------------------------	----

I. INTRODUCTION

Apple Inc. (“Petitioner”) respectfully requests *inter partes* review (“IPR”) of claims 1-23 (“Challenged Claims”) of U.S. Patent No. 10,810,579 (“’579 Patent”). Apple’s request is based on compelling obviousness combinations, set forth in detail in the Petition (Paper 1) and summarized as appropriate below.

The ’579 Patent is one of six patents in the same family of payment processing patents. All six are asserted by CardWare against Apple in litigation and challenged by Apple in IPRs.¹ There is ample reason to doubt the validity of these patents and to doubt that the initial review conducted by the examiner considered the most relevant references. In the relevant timeframe, there were two undisputed leaders in the payment processing space: MasterCard and Visa. Both were prolific patent filers, and they were major contributors to the leading global payment standard, EMV (named after EuroPay, MasterCard, and Visa). EX1003, ¶¶45-47. But not one MasterCard or Visa reference can be found cited in the prosecution history or on the face of the ’579 Patent. Every one of Apple’s IPRs challenging this family of patents relies on between 1 and 5 references assigned to Visa or MasterCard. Had the

¹ IPR2025-01145 (Challenging claims 1-17 of US10,339,520); IPR2025-01146 (Challenging claims 18-24 of US10,339,520); IPR2025-01147 (Challenging all claims of US10,628,820); IPR2025-01148 (Challenging all claims of US10,810,579); IPR2025-01149 (Challenging claims 1-18 of US11,176,538); IPR2025-01150 (Challenging all claims of US11,176,538); IPR2025-01151 (Challenging all claims of US11,328,286); IPR2025-01152 (Challenging all claims of US11,620,634).

Examiner considered the pertinent art filed by the leading companies in the payment processing space, these patents never would have issued.

No settled expectations favor CardWare here either. The '579 Patent issued on October 20, 2020, and was the subject of an *instituted* IPR filed by Samsung in 2023, putting the validity of the '579 Patent greatly in doubt. EX1087. On October 10, 2023, *after* the IPR was instituted, CardWare sent Apple a letter identifying the '820 Patent and suggesting a license was required. Samsung's IPR was terminated a few months later due to settlement.² Therefore, there is no settled expectation that the 5-year-old '579 Patent is valid. *Google LLC v. Withrow Networks Inc.*, IPR2025-00775, Paper 10 (Director Rev. Aug. 14, 2025) (a patent issued in 2020 "has not been in force for a significant period of time").

Further, all six patents CardWare asserts against Apple issued years *after* CardWare's alleged 2017 meeting with Apple and after CardWare significantly altered the scope of its patent portfolio, as discussed in detail below. This history further undermines any settled expectations claim.

CardWare's remaining arguments are easily disposed of. The average time to trial in the Western District of Texas and Judge Albright's recent trial statistics support a trial date months *after* a final written decision would issue in this case,

² Notably, Samsung's '579 Petition relied on two MasterCard references (US Patent Application Nos. 2012/0310760 A1 and 2013/0232083 A1).

favoring institution. CardWare’s own exhibits demonstrate that there are no remaining claim-construction disputes that would create any differences between how the claims will be interpreted in this proceeding and the district court. Finally, Apple’s *Sotera-Plus* Stipulation curtails which prior-art invalidity defenses Apple is permitted to raise in district court, limiting Apple to invalidity questions that this Board is statutorily prohibited from addressing, and ensuring that this IPR is a true alternative for those invalidity questions that can be properly raised in an IPR.

Therefore, the “efficiency and integrity of the [patent] system are best served by” instituting review of the ’579 Patent. *Apple Inc. v. Fintiv Inc.*, IPR2020-00019, Paper 11 (PTAB Mar. 20, 2020). The Board’s interest in reviewing the Patent Office’s error in failing to analyze any MasterCard or Visa references, the age of the patents, and the lack of settled expectations all weigh strongly against discretionary denial. Accordingly, Apple respectfully requests that the Director deny Patent Owner’s request for discretionary denial.

II. THE ’579 PATENT

A. CardWare’s Provisional Application

On March 15, 2013—the very last day before the provisions of the America Invents Act (“AIA”) took effect—Mr. David Wyatt filed provisional patent No. 61/794,891. EX1062. Mr. Wyatt’s 16-paragraph provisional application described a purported invention relating to “credit cards and, more specifically, to more secure,

smarter credit cards.” *Id.* at [0001]. The specification primarily described magnetic stripe emulation technology, including an inductor assembly for generating a magnetic field of alternating polarity, and rate detection assemblies that detect how quickly the user swipes their credit card to ensure that the microprocessor produces data at an appropriate rate. *Id.* at [0011]-[0012], claim 1. The specification further mentioned use of “dynamically created credit card numbers.” *Id.* at [0014]-[0015].

B. The First Issued Patent in the Family

On May 5, 2015, the first patent in the family issued—U.S. Patent No. 9,022,286 (the ’2,286 Patent). EX1063. The claims in the ’2,286 Patent were again directed to magnetic stripe emulation technology:

- “a magnetic card reader detection unit....an inductor assembly...for generating a magnetic field of alternating polarity...” (claim 1)
- “an inductor assembly....a motion rate detection array...initiate a transaction by detecting proximity of the motion rate detection array...” (claim 15)

This patent is not asserted against Apple. CardWare continued to file and receive issued patents, but no patents issued to CardWare prior to 2019 have been asserted against Apple (or anyone else) in litigation.

C. CardWare’s Patent Portfolio Shifts

CardWare alleges it met with Apple in 2017. Paper 7 at 15. At that point, ApplePay, launched in collaboration with MasterCard, had been available for three

years. EX1064. After 2017, CardWare's patents began going in a new direction. On December 11, 2018, during prosecution of U.S. Patent No. 10,339,520, CardWare amended claims directed to a "credit card device" to instead refer to an "electronic device" (EX1065, 109-121) and on July 15, 2019, during prosecution of U.S. Patent No. 10,628,820, CardWare added a mobile phone and smartwatch to the specification. EX1066, 174-175, 205-209, 262-268, Figs 8-12. The mobile phone CardWare chose conspicuously resembles an Apple iPhone, including

a circular button labeled "Touch ID button," an iPhone feature released in 2013 EX1067. CardWare chose to use a strawberry and a banana as the exemplary "logos." The new images also refer to a "MASTERCARTE" payment card, with a logo of three overlapping circles.

CardWare also sought a different claim scope after 2017, as evidenced by the fact that CardWare has not asserted any of its pre-2019 patents against Apple (or anyone else) in litigation. After 2017, CardWare began including claim limitations that were not supported by its earliest patent filings, as the Board preliminarily found

in previously instituted PGRs.³ While Apple did not need to challenge the priority date of CardWare's patents in these IPRs (because the claims are invalid regardless), CardWare's shifting claim scope undermines any allegation of settled expectations for the six patents at issue in these IPRs.

Despite the new claim scope, CardWare's post-2017 patents underwent limited scrutiny at the Patent Office. Of the six challenged patents, five issued without any prior art rejections and most faced only double patenting rejections or restriction requirements. No MasterCard or Visa references were considered by the examiner during prosecution of the '579 Patent, nor are any found on the face of the '579 Patent. Only four claims of the '579 Patent faced an initial prior art rejection, which the applicant responded to by rewriting a dependent claim in independent format. 19 patent claims issued without any prior art rejection. EX1002, 98-102.

The first (and only) time MasterCard or Visa references appear in the prosecution history for *any* of these patents was during prosecution of the final patent, U.S. Patent No. 11,620,634, and they were not found by the examiner. While

³ EX1069, PGR2023-00013 (Paper 14 at 9-12); EX1068, PGR2023-00012 (Paper 14 at 10-13) (preliminarily finding insufficient support for at least claim 5 of U.S. Patent No. 11,328,286 in CardWare's March 15, 2013, provisional application). Claim limitations such as "static device account number", "device specific" account number" "touch ID button", "biometric sensor", "status" and "receiving a request" also began to appear in CardWare's patent applications (see e.g., EX1065, 109-121) (prosecution of the '520 Patent) though those terms are nowhere to be found in its provisional application, or early patents.

the '634 Patent application was pending, CardWare sued Samsung on five other patents in this patent family. Samsung served invalidity contentions on November 7, 2022. EX1070. The '634 Patent received a notice of allowance on November 16, 2022, before CardWare informed the examiner of Samsung's invalidity contentions. EX1071, 452. CardWare filed a Request for Continued Examination with new Information Disclosure Statements (IDS) on January 12, 2023. EX1071, 1429. The IDS included approximately 275 prior art references, including over 190 non-patent literature references and over 80 patents or patent publications. Buried among the 275+ documents was a single patent assigned to MasterCard, a single patent assigned to Visa, and a handful of 2-4-page news articles relating to MasterCard and Visa payment systems. The examiner did not initial next to any references on the IDS. The '634 Patent summarily issued with no further rejections.

D. Description of the '579 Patent

The '579 Patent includes three independent claims. Two of the independent claims are directed "method of performing a transaction" (EX1001, claims 1, 15) comprising, *inter alia*, a "priming operation of the electronic device" "receiving a request for a transaction" via an NFC interface, displaying certain iconography on a screen, generating and transmitting limited-use payment information, and displaying certain information on a display. The third independent claim is directed to an electronic device and includes similar claim limitations. EX1001, claim 19.

III. COMPELLING REASONS TO GRANT INSTITUTION

A. Institution of Apple's Petition for *Inter Partes* Review is An Appropriate Use of Board Resources

1. *The Patent Office Erred in a Way Material to Patentability When it Allowed the '579 Patent*

“[I]t is an appropriate use of Office resources to review” where “Petitioner appears to show a material error by the Office.” *Anthony Inc. v. Controltec, LLC*, IPR2025-00559, Paper 9 (Director Rev. July 16, 2025). The Examiner materially erred by failing to issue *any* prior art rejections during examination of the '579 Patent and by failing to consider MasterCard and Visa's patent filings in particular. No MasterCard or Visa references appear on the face of the '579 Patent, and no MasterCard or Visa references were cited by the Examiner during prosecution of the '579 Patent, even though MasterCard and Visa were the undisputed leaders in the patent processing space and prolific patent filers. *See* EX1003, ¶¶47, 49, 57-59.

MasterCard made mobile contactless payments possible many years before CardWare's first provisional patent filing. *See* EX1003, ¶¶60-65. Further, MasterCard's patent filings on mobile payment technologies and limited-use payment systems were extensive. The Collinge reference relied on in this Petition alone claims priority to over 430 pages of provisional applications filed by MasterCard from April 2, 2012 – February 7, 2013, including a hundred-page technical product specification for the Remote-SE Mobile *PayPass* product.

EX1005, 1006, 1007, 1008. This stands in stark contrast to the 16-*paragraph* provisional CardWare filed on the March 15, 2013. EX1062.

It wasn't until nearly two years *after* issuance of the '579 Patent that the examiner chose, for the first time, to search for prior art references assigned to MasterCard and Visa. He did so during prosecution of the '286 Patent (after he had already issued a notice of allowance and the applicant filed an RCE). EX1072, 145, 177, 529. A recreation of that search shows that result 14 in that search led to the prior art reference "Collinge," which is the primary reference in all prior art combinations presented in this Petition. EX1073. Therefore, the Examiner materially erred by failing to search for prior art from MasterCard and Visa and failing to issue any prior art rejections during prosecution of the '579 Patent.

2. *The Board is Better Suited to Address the Large Number of Patents and the Complexities of the Technology At Issue.*

The IPRs filed by Apple collectively cover six patents and 196 claims. Of those, 174 are currently asserted against Apple in litigation.⁴ The claims vary in scope and many claims require an understanding of the technical details of how payment systems are set up (including the respective roles of banks, issuers, payment processing authorities, etc.), and how cryptography is used in payment systems.

⁴ Claims 10-20, 22, 23 of the '520 Patent; claims 1, 2, 4, and 10-20 of the '820 Patent; claims 1-23 of the '579 Patent; claims 1-30 of the '538 Patent; claims 1-27 of the '286 Patent, and claims 1-13, 15-53, 55-70, and 72 of the '634 Patent. EX1075.

The claims of the six challenged patents require a diverse range of **hardware**, (such as NFC readers, biometric sensors, motion rate detection array, inductor coils, optical sensor array, accelerometers, touch sensor arrays, etc.), **applications** (NFC transactions, online transactions, ATM transactions, cryptocurrency transactions, etc.) **secret information (or keys) shared** or not shared between a variety of entities in the transaction, and **user interface features** (requiring various transaction-related images to be displayed (or absent)). The “Board is better suited to review a large number of patents involving diverse subject matter” and technical claim limitations, and for this additional reason, referral to the Board is appropriate. *Tesla, Inc. v. Intellectual Ventures II LLC*, IPR2025-00217, Paper 9 (PTAB June 13, 2025).

3. Apple has Shown the Challenged Claims are Likely Invalid

Apple’s IPR petition demonstrates that the MasterCard references Collinge and Phillips teach every limitation of at least independent claims 1 and 19 of the ’579 Patent other than details of how a payment card may be shown on a display (e.g., displaying “a last 4-digit partial number of a card issuer supplied account number”) and that a request for payment is received via NFC. *See* Petition, 39-40 (claim 1(d)); 32-33 (claim 1(c)). Both of these limitations were well-known features of payment systems at the time, and it would have been obvious to a POSITA to make these minor modifications to the MasterCard art cited in the Petition. *Id.* Accordingly, had the examiner considered the relevant art from MasterCard, one of

the two leading companies in the payment space at the time, Apple has shown that at least independent claims 1 and 19 of the '579 Patent would never have issued.

Likewise, Apple's IPR petition demonstrates that the MasterCard reference Collinge and the Visa reference Aabye teach every limitation at least independent claim 15, other than receiving a request for payment via NFC (claim 15(a)). The remaining claims of the '579 Patent likewise should never have issued, as Apple's obviousness combinations demonstrate. Notably, the Petition relies on three further MasterCard references (US2010/0125508 to Smith, US2010/0125509 to Kranzley, and US2009/0307132 to Phillips) in those combinations. Further analysis of why the Challenged Claims are invalid can be found in the Petition.

B. PO's Remaining Arguments Do Not Justify Discretionary Denial

1. The '579 Patent Issued in 2020 and No Settled Expectations Favor Discretionary Denial

The '579 Patent only recently issued, on October 20, 2020. The Director's decisions confirm that Patent Owner therefore has not developed strong settled expectations in the '579 Patent. In fact, the timeline here does not support settled expectations for *any* of the six patents which are the subject of Apple's IPRs. The events after issuance of the '579, in particular, undermine any settled expectations claim for the '579 Patent.

Events Pre-Dating the '579 Patent Do Not Support CardWare's Narrative

CardWare's brief relies heavily on events that pre-date not only the issuance

of the '579 Patent, but the issuance of *any* patent asserted against Apple:

2013: CardWare files a 19-paragraph provisional patent application. The specification is primarily focused on a credit card with a dynamic magnetic strip.

2015: CardWare's first patent issues. The patent claims are directed to a magnetic stripe emulation technology. EX1063 (claim 1, "a magnetic card reader detection unit....an inductor assembly...for generating a magnetic field of alternating polarity..."). Apple is not accused of infringing this patent, (or any other patents that issued before 2019).

2017: CardWare alleges it met with Apple.

2019: The first of the patents asserted against Apple issues. *See* EX1065 (U.S. Patent No. 10,339,520 issued July 2, 2019).

Events After '579 Issuance Demonstrate a Lack of Settled Expectations

None of these events create settled expectations for the '286 Patent—a patent that had not issued, and is of a different scope from CardWare's pre-2017 patents, as evidenced by CardWare's choice not to assert any pre-2017 patents against Apple. To the contrary, the events that do relate to the '286 Patent support an expectation that the '286 Patent is likely unpatentable.

2020: The '579 Patent issues on October 20, 2020. EX1001.

2022: The '579 Patent is found *likely unpatentable* in an IPR institution decision, which settles in 2023. EX1087.

2022: Apple receives a subpoena from Samsung, identifying the '579 Patent and exploring Apple products as likely *prior art* to the '579 Patent. EX2011.

2023: CardWare sends a letter to Apple identifying the '579 Patent, a patent already found likely unpatentable. EX2013.

2024: CardWare sues Apple for patent infringement.

The History of Apple Pay Further Undermines a Settled Expectations Claim

CardWare accuses Apple Pay and/or Apple Wallet-enabled computing devices of patent infringement. EX2007, ¶¶32-33. Apple Pay was announced on September 9, 2014, and it was made available on October 20, 2014. EX1064. At the time, CardWare had no issued patents. The CardWare patents now asserted against Apple issued in 2019-2023, *five to nine years* after the public release of Apple Pay.

CardWare's first allegation that Apple needed a license to the CardWare patents at issue in the underlying litigation came in 2023, *nine years* after the release of Apple Pay. By CardWare's own allegations, it did not have any patents applicable to Apple Pay in 2017 when it met with Apple.

Further, CardWare's articulation of what, exactly, it claims to have invented has continually evolved. Its provisional application listed the field of invention as "credit cards and, more specifically, to more secure, smarter credit cards" and the 19-paragraph specification focused primarily on inductor assemblies generating a programmed magnetic field and similar hardware. EX1062, [0001].

Over time, CardWare has stretched the scope of its claims to (and beyond) the limit of its original disclosures, in its quest to obtain claims broad enough to cover the phone-based mobile payment technologies of Apple and others that were already on the market. The Board has already noted that claims of the '286 Patent, for example, do not have support in CardWare's earliest provisional application. *See* FN 2, *supra*. This too weighs against CardWare having "settled expectations" that would weigh against institution here. *See* S. REP. 110-259, at 21 ("The Committee is aware, however, that patents may be asserted as covering uses and products that were not originally envisioned, or that an alleged infringer may well not have imagined possible, simply from the reading of the patent claims. With calculated infringement at one end of the spectrum, and devious claiming at the other end, the possibilities for mischief and disagreement are considerable.")

2. *PO Failed to Identify Any Claim-Construction Issues*

Before PO filed its discretionary denial brief, Judge Albright issued a claim-construction order declining to find any claim terms indefinite. The Order is attached to PO's brief as Exhibit 2023. Accordingly, PO has not identified any inconsistency with how the claims will be interpreted in this IPR and how they will be interpreted in the district court, and no claim-construction issues weigh against institution.

3. *Judge Albright's Median Time to Trial is 34 Months, Consistent with District-Wide Statistics.*

The underlying litigation is pending before Judge Albright in the Western

District of Texas. The USPTO’s March 24, 2025 Memorandum states that “in applying *Fintiv*, the Board may consider any evidence that the parties make of record that bears on the proximity of the district court’s trial date[.]” The current median time from filing to trial in patent cases before Judge Albright is ~34 months, consistent with the district-wide time to trial statistics.⁵ Applying that time period to the parallel litigation, the final written decision in this proceeding is due **8 months prior** to when the parallel litigation will go to trial.

On May 20, 2025, Judge Albright entered a scheduling order setting trial for July 28, 2026. EX2003. However, Judge Albright’s busy docket is regularly the cause of trial re-scheduling. *See e.g., AlmondNet, Inc. et al. v. Amazon.com Inc. et al.*, 6:21-cv-00898, Dkt. 235 (delaying trial from February 5, 2024 to June 10, 2024—docket entry stating “trial date of 2/5 cannot be maintained due to the Court’s schedule”); Dkt. 238 (Order) (EX1076); *IOEngine, LLC v. Roku Inc.*, 6:21-cv-01296 Dkt. 309 (Judge Albright explaining that due to trial date conflicts, “it makes more sense” to move the October 16, 2023 trial setting to the spring of 2024 because of the Court’s trial schedule) (EX1077). In fact, in this case, Judge Albright has two patent trials scheduled the week of July 28, 2026. *See Polaris Innovations Limited v. Qualcomm Incorporated et al.*, 7:24-cv-00296-ADA, Dkt. 31. EX1078

⁵ CardWare’s WDTX statistics should be disregarded because they are not current. EX2025 (29 month time to trial from **2008-2025**). *Compare* EX1082 (34 month average from January 2024-2025).

(scheduling order); EX1079 (complaint). The *Polaris* case was filed on November 19, 2024, a full year before CardWare filed its suit against Apple. Therefore, it is likely that the *Polaris* case will receive priority, which would force the CardWare trial to move.

CardWare argues the trial date will not be moved except in extreme situations. But a review of all recent patent trials before Judge Albright (going back to January 2024) shows that trial dates are regularly moved. Of the 17 jury trials that took place in Judge Albright's court since January 2024, cases, none went to trial on the originally scheduled trial date. EX1080.

This is borne out by the most recent statistics for WDTX, which show the median time to trial for Judge Albright's cases was 34 months, just above the median time to trial in WDTX civil cases: 32.8 months. EX1080, 1081.⁶ Thus, based on Judge Albright's and WDTX's median time to trial, trial in the parallel proceeding here is projected to take place around August 2027—eight months after a FWD.

This evidence shows there is “a high likelihood” the final written decision will issue months before trial. Thus, *Fintiv* Factor 2 weighs against discretionary denial.

4. *Apple's Sotera+ Stipulation Mitigates Any Remaining Overlap Concerns Between this IPR and the Litigation.*

⁶ Patent Owner's time to trial statistics go back to the very beginning of Judge Albright's time on the bench, and are therefore less useful in evaluating what is likely to happen *in this case* based on the *current* state of Judge Albright's docket.

To mitigate the possibility of overlap with the parallel litigation, Apple filed a broadened *Sotera+* stipulation. If the PTAB institutes this proceeding, Apple's stipulation precludes it from pursuing in the parallel litigation:

(i) the specific grounds raised in [petition], (ii) any other grounds that could have reasonably been raised before the PTAB in that instituted proceeding (i.e., any ground that could have reasonably been raised under §§ 102 or 103 on the basis of prior art patents or printed publications), (iii) any ground based on a combination of system prior art and the references asserted as part of a ground raised in [petition], as reflected in the table summarizing the Statutory Grounds for Challenges on page 5 of the Petition, or (iv) any ground based on a system which corresponds to a patent or printed publication asserted as part of a ground raised in [petition].

Thus, Apple's stipulation negates concerns that any issue before the Board in this proceeding will be relitigated in the parallel proceeding. *Fintiv* Factor 4, therefore, weighs strongly against discretionary denial. *See, e.g., Tesla, Inc. v. Intellectual Ventures II LLC*, IPR2025-00217 Paper 9 at 2 (PTAB June 13, 2025) (finding that Tesla's broad *Sotera+* stipulation "counsel[s] against discretionary denial").

Apple's *Sotera+* stipulation allows Apple to rely on its own ***products and systems*** in the litigation to demonstrate that Apple invented the claimed subject matter first under 35 U.S.C. §102(g) and Apple can use its own patents or patent publications as evidence of Apple's prior invention. In the IPRs, Apple does not and cannot raise a §102(g) defense, rely on its own system art, or allege that a claimed invention was "known or used by others, on sale, or in public use." *Ingenico Inc. v. IOENGINE, LLC*, 136 F.4th 1354, 1367 (Fed. Cir. 2025). Therefore, there will be

no overlap between the issues raised here and in the district court, and the IPRs will serve as a “true alternative” to the district court proceeding.

PO nonetheless argues Apple’s broadened *Sotera*+ stipulation is “ineffective.” Not so. PO’s objection amounts to a complaint that the IPRs (and related stipulations) cannot also resolve a host of validity questions that Apple is not allowed to raise here, including §101, §112, and Apple’s §102(g) defense. PO further complains that Apple’s stipulation does not limit what other defendants in other cases do. In CardWare’s view, a stipulation is only effective if the patent’s validity cannot be challenged again by anyone for any reason in any forum. That is not the standard. *See e.g.*, March 24, 2025 Memorandum (discussing *Sotera* stipulations where the Petition stipulates not to pursue “any ground raised or that could have been reasonably raised *in the IPR/PGR*” as “highly relevant”) (emphasis added). Apple’s stipulation prevents the same invalidity questions from being considered in two forums and weighs strongly against discretionary denial here.

5. *Apple’s IPRs were filed months before discovery opened in the district court litigation (Fintiv Factor 3)*

Apple’s IPR Petition challenging the ’579 Patent was filed on June 20, 2025, more than 5 months before Apple’s 1-year bar date. Discovery in the underlying district court case did not open until July 29, 2025. *Markman* briefing was not complete until July 17, 2025, and the district court did not hold its *Markman* hearing until August 28, 2025. EX2003, EX2004. As of the filing of this brief, no fact

depositions have been scheduled or taken. The Board's decision on whether to institute is expected on approximately January 10, 2026, which is before the close of fact discovery, currently scheduled for February 24, 2026.

The district court's investment in the underlying litigation to-date consists of one hearing, and one opinion on claim construction. The investment of the Court and the Parties to the litigation in the following phases of litigation are significantly greater, as expert discovery opens, dispositive briefing is filed, and the parties begin to prepare for trial. If Apple's IPRs are instituted, Apple plans to request a stay of the litigation. This allows for CardWare or the Court to optionally avoid the investment in parallel proceedings if either so chooses.⁷

6. *CardWare's Commercialization Claims Are Overstated*

As further evidence that there are no settled expectations here, there is reason to doubt the extent of CardWare's "commercialization" efforts. CardWare includes two sentences in its discretionary denial brief alleging that it has "devoted significant resources to develop and commercialize secure systems for electronic payments...over the last decade-plus." Paper 7, 19. In support, CardWare cites three paragraphs of its complaint against Apple. EX2007, ¶¶14-17. Paragraph 15 of the Complaint states that CardWare's innovations include its "SmartTokenization™

⁷ Judge Albright has historically granted joint or unopposed motions to stay the litigation pending resolution of instituted IPR proceedings. EX1083.

technology.” CardWare filed an “Intent to Use” trademark application on February 28, 2024, for this mark, and stated it does not currently use the mark. EX1084.

Further, CardWare’s current “Card+” app has no payment features. EX1085. Instead, it allows users to check links and text for “Phishing.” *Id.* An informational “Product Gallery” page purportedly describes CardWare’s payment platform but provides no link for a user to sign-up or even contact CardWare for more information. *Id.* The app does not allow any users to make mobile payments or otherwise practice any of the patent claims at issue. In addition, the app has less than 5 total downloads, though the latest version has been available for over two months. EX1086. This further suggests limited commercialization.

IV. CONCLUSION

For the foregoing reasons, Petitioner respectfully requests *inter partes* review of the Challenged Claims.

Respectfully submitted,

ERISE IP, P.A.

CERTIFICATE OF SERVICE ON PATENT OWNER
UNDER 37 C.F.R. § 42.105(a)

Pursuant to 37 C.F.R. §§ 42.6(e) and 42.105(b), the undersigned certifies that on October 10, 2025, a complete and entire copy of this *Opposition to Patent Owner's Request for Discretionary Denial* and exhibits were served via electronic filing with the Board and via Electronic Mail on the following practitioners of record for Patent Owner:

Matthew G. Berkowitz (mberkowitz@reichmanjorgensen.com)
Patrick R. Colsher (pcolsher@reichmanjorgensen.com)
Khue V. Hoang (khoang@reichmanjorgensen.com)
Yue (Joy) Wang (ywang@reichmanjorgensen.com)
Timothy A. Trost (ttrost@reichmanjorgensen.com)
RJ_CardWare_AppleIPR@reichmanjorgensen.com
