LENOVO AND WILUS AGREE WI-FI LICENSE DEAL

Thu, 10 Apr 2025 / *admin* /

SEOUL, APRIL 10, 2025 -- We are delighted to announce that Lenovo has taken a license to Wi-Fi standard essential patents (SEPs) held by Wilus. This agreement was reached on an amicable basis and represents a significant validation of the Wilus Wi-Fi portfolio from a global technology powerhouse.

Wilus has made over 700 technical contributions to standards bodies, including foundational innovations related to Wi-Fi technology. The company makes its Wi-Fi 6 related SEPs available to license on FRAND (fair, reasonable, and non-discriminatory) terms on a bilateral basis and through the Sisvel Wi-Fi 6 patent pool.

“This deal is a testament to the hard work and inventiveness of our engineers over the past 13 years,” says Dr. Jin Sam Kwak, founder and CEO of Wilus. “We appreciate the constructive and business-focused approach Lenovo took throughout the negotiation process. With growing momentum behind our licensing efforts, we remain committed to ensuring that all Wi-Fi implementers can access our innovations on FRAND terms.”

About Wilus Inc.

Wilus Inc. is a South Korea-based R&D company dedicated to developing next generation standards in the fields of wireless communications and multimedia technology. Since its founding in 2012, Wilus has consistently contributed cutting-edge innovations that enhance wireless connectivity and enable immersive multimedia experiences. Driven by the belief that the best way to predict the future is to invent it, Wilus actively participates in the development of key global standards, including 3GPP, IEEE 802.11, and MPEG.
