Supporting Common Interactive Television Functionality
Through Presentation Engine Syntax

BACKGROUND OF THE INVENTION

Field of the Invention

The invention relates generally to interactive television systems and more particularly to a system and method for creating and controlling interactive television content.

Description of Related Art

Interactive television systems provide a means to deliver interactive content as well as ordinary television audio and video to a large number of subscribers. Programs broadcast by these systems may incorporate television audio and video, still images, text, interactive graphics and applications, and many other components. They may also provide a number of services, such as commerce via the television, electronic program guides (EPGs), video-on-demand, and other interactive applications to viewers. The interactive content of the interactive television signal may therefore include application code, data associated with the audio and video, control signals, raw data and many other types of information. This information can be combined into a single signal or several signals for transmission to a receiver connected to the viewer's television or the provider can include only a subset of the information.

The interactive functionality of the television is generally controlled by an integrated receiver/decoder (IRD) or similar mechanism, frequently incorporated into a set-top box, connected to the television. The IRD receives the signal provided by a broadcast service provider or system operator and separates the interactive portion from the audio-video portion. The IRD uses the interactive information to, for example, execute an application while the audio-video information is transmitted to the television. The IRD may combine the audio-video information with interactive graphics or audio

generated by the interactive application prior to transmitting the information to the television.

Interactive content such as application code or information relating to television programs may be broadcast in a cyclical or repeating format. The pieces of information which are broadcast in this manner form what may be referred to as a "carousel." A carousel may include multiple modules of data, including a directory module which indicates the particular modules which correspond to a given application. Frequently, a single carousel is transported as a contiguous data stream. However, it is also possible to multiplex two or more carousels in a single data stream. As an alternative to using a carousel format, some systems may utilize a return path to request and/or receive interactive content.

Broadcast systems may transmit information in a carousel format in order to allow receivers in the system to selectively obtain particular pieces of information in the carousel without requiring a return path from the receivers to the server. If a particular receiver needs a particular piece of information, it can simply wait until the next time that piece of information is broadcast, and then extract the information from the broadcast data stream. By employing carousels to broadcast information, the system may eliminate the need to connect each of the receivers with a server and further eliminate the need for the server to process individual requests for information.

The pieces of information, or data objects, in a carousel may be intended to be combined in a single object data stream to form a program. This program may also contain streaming data such as audio or video. For example, an interactive television game show may combine television audio and video with interactive content such as application code which allows users to answer questions. Another example would be a news program which combines audio and video with application code that inserts current stock prices in a banner at the bottom of the screen. Typically, each program is associated with a corresponding channel and, when a channel containing a particular

program is selected by the interactive television receiver, the data which is being broadcast on that channel is downloaded and the program is started.

As television receivers become more sophisticated, and include the ability to access a wider range of data and resources, efforts have been made to develop mechanisms to handle these additional resources. For example, the DVB MHP 1.1 specification and DAVIC 1.4.1 Part 9 specification define a URL scheme to access broadcast services. Since DAVIC broadcast networks carry Service Information (SI) that contains globally unique parameters for locating the services in a broadcast network, their URL scheme is able to address services in a physical network independent manner.

Unfortunately, such schemes may not work on ATSC networks or other networks that define different or even proprietary signaling formats. Therefore, a new more flexible scheme is desired.

SUMMARY OF THE INVENTION

A method and mechanism are described which enable content authors to use directives, such as HTML, scripting languages, or other languages, with television extensions to create and/or control interactive television content. The method and mechanism may be utilized with digitally recorded programs as well as with live broadcasts.

In one embodiment, a device in an interactive television system is configured to receive one or more directives provided by a content author which describe or otherwise indicate an audio and/or video presentation. Included among these directives are one or more directives which indicate that a particular subset of resources required for the presentation are deemed prerequisites. In response to detecting these directives, the providing of the presentation is withheld until the prerequisite resources are obtained.

In one embodiment, the directives are received by a centrally located proxy server which may be configured to receive, transcode and convey transcoded web based content to client devices. Upon detecting directives which indicate prerequisite resources for a presentation, the proxy server separately conveys to the client devices signals, or some other indication, that these resources are prerequisites. In response, the client device receiving the conveyed signals may take actions to prefetch these resources.

BRIEF DESCRIPTION OF THE DRAWINGS

Fig. 1 is a diagram of one embodiment of a broadcast television system.

Fig. 2 is a diagram of one embodiment of a headend.

Fig. 3 is a block diagram of one embodiment of a client device.

Fig. 4 is a diagram of one embodiment of a television system.

Fig. 5 illustrates one embodiment of a method utilizing prerequisite directives.

DETAILED DESCRIPTION

0. System Overview

Referring to Fig. 1, one embodiment of a television system 100 is shown. In the embodiment shown, receiving devices 30 are coupled to several sources of programming and/or interactive content. Each of receiving devices 30 may comprise any suitable device, such as a set-top box (STB), a television (TV), a video cassette recorder (VCR), a digital video recorder (DVR), a personal digital assistant (PDA), a personal computer (PC), a video game console, or a mobile/cell phone.

Included in the embodiment of Fig. 1 is a broadcast station 16 coupled to receiver(s) 30 via a transmission medium 17 and back channel 26. In addition, receiver(s) 30 are coupled to a source 18 and source 19 via a network 20. Further, broadcast station 16 is coupled to a remote source 13, and Internet 60. In the embodiment shown, broadcast station 16 includes sources 14 and 15 and transmitter 22. Transmission medium 17 may comprise a satellite based system 23, a cable based system 24, a terrestrial or multiple multi-point distribution service (MMDS) based system 25, a combination of these systems, or some other suitable system of transmission.

In the embodiment of Fig. 1, broadcast station 16 may include a variety of sources of content 14, 15, and 60 to be utilized and conveyed by transmitter 22. Content sources 14 and 15 may include databases, application servers, other audio/video sources, or other data sources. In one embodiment, content may be created at a source 14 which may include an authoring station configured to create such content. An authoring station may include a computer workstation configured with software which aids in the development of interactive content. An authoring station may be part of broadcast station 16 in which case the conveyance of the created content may be through a local computing network, or similar configuration. Alternatively, an authoring station may be remotely located 13 from broadcast station 16. In an embodiment where authoring station is not directly

coupled to broadcast station 16, the content created by a source 13 may be conveyed to broadcast station 16 via Internet, broadcast, cable, etc. In some cases, content created by at a remote location 13 may first be transferred to a storage medium, such as a CD-RW, DVD, or flash memory device, and transported to broadcast station 16 via more conventional means where it may be stored in a database or other storage device.

Subsequent to its creation, content from sources 13, 14, 15 and 60 may be delivered to receiver(s) 30 through a broadcast transmission network. This network consists essentially of broadcast station 16 which assembles the content from sources 13, 14, 15 and 60 and processes the content as appropriate (e.g., digitizes, compresses, packetizes), and a transmission network 17 which receives the content 40 from broadcast station 16 and conveys it 42 to receiving device(s) 30. In one embodiment, broadcast station 16 includes software and/or hardware which is configured to process the content conveyed by sources 13, 14, 15 and 60 as described above. A second delivery mechanism may include a direct point-to-point connection 138 between receiver(s) 30 and source 18 which may be some type of server. This connection 138 may be made via an ordinary telephone line, cable, wireless, or otherwise. A third delivery mechanism may also be a point-to-point connection 136, but transmission of the content from a source 19 to receiver(s) 30 is made via one or more shared networks (e.g., over the Internet).

Fig. 1 also illustrates broadcast station 16 may be optionally coupled to source 18 and/or source 19. Such a coupling may enable broadcast station 16 to work cooperatively with source 18 or source 19 in conveying content to receiver(s) 30. Also illustrated in Fig. 1 is a back channel (or return path) 26 by which receiver(s) 30 may convey to and/or receive data from broadcast station 16. Back channel 26 may comprise a telephone line, cable, wireless, or other connection.

One delivery mechanism, the direct point-to-point connection to a source of content, may comprise communication via an ordinary telephone line. This type of connection is typically initiated by the receiver(s) 30 to convey information to, or retrieve information from, a data server. Another delivery mechanism, the point-to-point

connection through one or more networks, may comprise a typical connection between nodes on the Internet. Because data may be routed through many different shared networks in this case, it may be read, stored and written many times as it is transmitted from source 19 to receiver(s) 30. The third delivery mechanism may include a satellite, cable or terrestrial broadcast network 17. Information may be transmitted from and to receiver(s) 30 both in real time or store and forward.

In one embodiment, broadcast station 16 further includes a proxy server 21 which is configured to transcode received content to a format compatible with one or more of client devices 30. For example, proxy 21 may receive web based content including directives written in HTML, JavaScript™ (JavaScript is a trademark of Sun Microsystems, Inc), CSS, or other languages, and transcode the received content to a format compatible with clients 30. In alternative embodiment, clients may be configured to directly process such directives. In such a case, proxy 21 may be configured to perform certain types of preprocessing of the content prior to conveyance to the clients.

Turning now to Fig. 2, an overview of one embodiment of a broadcast station (head-end) 16 is shown. The broadcast station 16 of Fig. 2 includes an application server 250 and a database 230 which may contain previously created interactive content. Also shown in Fig. 2 is a source 13 of content (e.g., the Internet) which is external to broadcast station 16 and coupled to broadcast station 16. Database 230, server 250, Internet 60, and source 13 are coupled to a content processing mechanism 200 which is configured to process the content received and convey the processed content to a multiplexor 220. In the exemplary embodiment of Fig. 2, proxy server 21 includes server 250 and processing mechanism 200.

In one embodiment, content processing mechanism 200 comprises a computer coupled to receive and convey content from source 13, database 230, or server 250. Processing mechanism 200 is configured to convey the processed content to multiplexor 220. Multiplexor 220 is also coupled to receive audio/video signals 240. Multiplexor 220 multiplexes the received signals and conveys the multiplexed signal to network

communications operator 17 where it is subsequently conveyed to a receiving device. As noted above, proxy 21 may be configured to process received content prior to conveying the content to client devices. For example, proxy 21 may be configured to receive requests from clients for web based content, obtain the requested content, and transcode the received content to an alternate format prior to conveyance to the requesting client. Finally, in addition to the above, broadcast station 16 includes a return data processor 210 coupled to back channel 26. In one embodiment, return data processor 210 may comprise a modem which receives data for further processing within broadcast station 16.

While the above description describes a source of interactive content as being at a broadcast station 16, in an alternative embodiment database 230 and content processing mechanism 200 may reside at the location of a network communications operator 17. An example of such an alternative embodiment may be a cable station which inserts interactive content into a broadcast signal prior to transmission. Numerous such alternatives are possible and are contemplated.

Turning now to Fig. 3, one embodiment of a receiving/initiating device 1012, hereinafter referred to as a “client” is shown. While Fig. 3 illustrates the client 1012 in the form of a set top box 1012, client 1012 may comprise other devices as well. Generally speaking, client 1012 is configured to receive a first signal 1070, such as a broadcast signal, and convey a second signal 1080, such as to a display or recording device. While in the embodiment shown, client 1012 is shown coupled to an external mass storage device 1018, such storage may be internal to the client 1012 itself. Client 1012 includes a control unit 1030, front end 1026, return channel 1038, transport stage 1028, and AV stage 1034. Also represented in Fig. 3 is a memory 1080 which includes OS and/or middleware 1044, message processing engine 1036, and applications 1042. Also shown is an I/O interface 1040 and conditional access (CA) module(s) 1032. I/O interface 1040 may be configured to detect user interaction via a remote control, keyboard, or other device. Control unit 1030 may comprise a microprocessor, memory (e.g., RAM), and other components which are necessary to perform ordinary general purpose computing.

In one embodiment, applications 1042, OS/middleware 1044, CA module(s) 1032, and message processing engine 1036 comprise code which may be stored in a memory device of set-top box 1012. Additionally, CA module(s) 1032 may comprise system software configured to control access to particular programs or services which are accessible by set-top box 1012. While message processing engine 1036 is shown as program code which may be stored in memory 1090 and executed by control unit 1030, it is understood that other embodiments are possible and are contemplated. For example, message processing engine 1036 may comprise circuitry or a combination of hardware and software. For example, message processing engine 1036 may comprise a processing device executing program instructions. Further, message processing engine 1036 may be configured as an external device which may be coupled to a receiving unit. For example, such an external device may comprise an expansion module which is configured to add message processing functionality to a preexisting device.

Generally speaking, client 1012 is operable to receive and decompress signals which may include digital data. The decompressed signals may be converted into analog signals such as PAL, SECAM, or NTSC format signals for television display, or may be in digital format for use by a digital television display. As shown in Fig. 3, client 1012 includes front end circuitry 1026 operable to receive audio, video, and other data from a received signal 1070. The received signal 1070 is fed into the client 1012 at the front end 1026, which may comprise an analog to digital (A/D) converter and tuner/demodulators (not shown). Front end 1026 may select and pass a particular frequency, demodulate it, and convert analog signals to a digital format. While analog data may be converted to digital data, as noted above a received signal may comprise digital data which may require no such conversion. The digitized output may then be conveyed to a transport stage 1028 which further processes the data, conveying a portion of the data to an audio-visual (AV) stage 1034 for display and another portion to control processor 1030. In addition, CA module 1032 may receive data from transport stage 1028 and may conditionally convey a descrambled or other signal to AV stage 1034. Signaling and

control information may also be included in the broadcast along with the audio-video data and may be manipulated by software within the client 1012.

Audio-video signals and program control signals received by the client 1012 may include television programs, metadata, and menu selections accessible by a viewer through a user interface, as well as applications that may be executed. A viewer may control the client 1012 in a variety of ways, including through an infrared remote control unit, a control panel on the client, or a device that is used to choose from a menu displayed on the television screen. Selections and entries made by the viewer may be intended for one or more of several applications that are executing on the client. As mentioned above, broadcast signals 1070 are received via front end 1026 and are filtered by transport stage 1028. Unicast or multicast signals may generally be received via return channel 1038. Applications 1042 which execute on the client 1012 may arrive there in a variety of ways. For example, applications may be received via a broadcast signal 1070, via the return channel resource interface 1038, or via storage device 1018. Applications received via storage device 1018 may have been shipped originally with the client 1012 or may have been downloaded previously from another source and stored on storage 1018.

In one embodiment, client 1012 may be configured as a digital set top box for use with a satellite receiver or satellite integrated decoder/receiver that is capable of decoding MPEG video, audio, and data. For example, client 1012 may be configured to receive digital video channels that support broadband communications using Quadrature Amplitude Modulation (QAM), Quadrature Phase Shift Keying (QPSK), Coded Orthogonal Frequency Division Multiplexing (COFDM), or 8-vestigial side band (VSB), and to control channels for two-way signaling and messaging. The digital channels may carry compressed and encoded multiprogram MPEG (Motion Picture Expert Group) transport streams. Transport stage 1028 extracts the desired program from the transport stream and separates the audio, video, and data components, which are routed to devices that process the streams, such as one or more audio decoders, one or more video

decoders, and optionally to RAM (or other form of memory) or a hard drive. It is to be understood that the client 1012 and storage device 1018 (as well as any data and signals from the broadcast service provider) may be configured to accommodate analog, digital, or both analog and digital data. For storage of received analog data, conversion to digital format may be performed.

Storage device 1018 is optionally coupled to the client 1012 and may be configured to store video, audio, executable code, metadata, and other data. Storage device 1018 may be internal to client 1012 or connected externally (e.g., through an IEEE 1394-1995 connection) with either a permanent connection or a removable connection. Further, storage device 1018 may comprise any suitable type of storage, such as a hard disk drive, a recordable DVD drive, magnetic tape, optical disk, magneto-optical disk, flash memory, or solid state memory. In addition, more than one storage device such as device 1018 may be attached to the client 1012. The client 1012 and/or storage device 1018 may further be incorporated into a television set. Executable data, such as program instructions, which is stored within storage device 1018 may be retrieved and executed. In one embodiment, retrieved data may be executed or otherwise utilized in synchronization with other applications or received signals, for example corresponding to a game show, commercial, or Internet based on-line game. Alternatively, retrieved data may be executed or utilized independently, such as for video-on-demand, banking, e-mail, a web browser, or an electronic program guide (EPG).

It is to be understood that the client 1012 and system 100 described herein are intended to be exemplary only. Broadcast network system 100 and client 1012 may be different than described herein without departing from the scope of the invention. Further, various components depicted in the client 1012 of Fig. 3 may be combined, such as the placement of the integration of storage device 1018 within client 1012. Numerous alternatives are possible and are contemplated.

1. APPLICATION MODEL AND LIFE CYCLE

Generally speaking, an interactive television application may start in either a maximized state or a minimized state, depending upon how it is authored. Signaling in the directory may indicate to the system whether the application is starting in the minimized state or the maximized state. From a system's perspective, the difference between the minimized state and the maximized state is that applications which are in the minimized state may not receive a notification when a viewer presses keys. Alternatively, when in a maximized state, applications may present a filter to the system that tells the system to notify them when keys designated in the filter are pressed. While not necessarily required, an application executing in a minimized state typically reduces its usage of resources. For example, it may present an icon on the screen rather than extended graphics.

In addition to the above, an application running in either a minimized state or a maximized state may be suspended. Upon suspension, an application is not generally notified, but rather no cpu time is allocated to the application. At the termination of the suspension, an application returns to the state it was in prior to suspension. In either case, the system may invoke a function in the application to notify that application that it had been suspended so that it may take any actions necessary to ensure internal consistency.

Applications may terminate normally or may be asked by the system to terminate, for example, if a new application appears in the broadcast stream. Because an application may be in a state where termination would be disruptive to the viewer, the application may deny a request to terminate immediately. For example, a viewer may be in the middle of an online transaction to purchase an advertised product. When an application does terminate, the system is notified so that it can determine, typically working together with the network-provided control task, which application to execute next.

Transitions between states may be responses to a variety of stimuli including broadcast signaling, viewer button presses, and decisions made by the system or the

applications themselves. As noted above, the initial state of an application may be determined by broadcast signaling. A button press may be used to cause an application to move from the minimized state to the maximized state. The application itself may decide when to transition to the terminated state and when to transition to the minimized state. The system may suspend an application in order to execute another application. Further, broadcast signaling can cause the system to request that an application exit.

While the life cycle defined above may represent a default life cycle, modifications to the life cycle may be provided by calls in a network provider control task. For example, one need not even load an application until the viewer responds with an appropriate button selection in response to the presentation of an icon. Further, the above life cycle may generally correspond to a model in which only a single application is executable at a time. However, in order to support multiple applications concurrently, the application model and life cycle definition may be more complex. For example, priorities may be signaled so that the implementation may determine which applications may execute in the event that the hardware is not capable of supporting all of the signaled applications simultaneously.

Applications developed for use in interactive television systems may generally include programming code similar to that of programming languages such as C, C++, etc. However, with the proliferation of the World Wide Web (Web), and the desire to take advantage of Web and Web like resources in interactive television systems, the use of other languages such as HTML and the JavascriptTM (JS) language may be useful. However, while the use of HTML applications may be desired, the life cycle of HTML applications in an interactive television environment may be complicated by several factors.

First, HTML/JS content may be more dynamic than persistent. For example, in a current interactive television environment, an application may be configured to only execute code or use data that is packaged within the carousel in the same directory as the first program module. Hence, for security reasons the directory contents may clearly

define the application boundary and the permissions signaled within the directory may be applied to the entire contents of the directory. However, HTML/JS content may refer to other content (e.g., via a link) that is to be acquired from some location other than the carousel and the content that is referred to may replace the initial content. It is not clear that it is safe in this case to apply the same security permissions to such replacing content. Therefore, due to this dynamic nature, it is more difficult to define an “application boundary.”

Second, even when a product does not support multiple concurrent applications and restricts the application to only that content carried within the same directory in the carousel, there may be life cycle issues that affect the way that a content author designs the HTML/JS content. For example, if it is determined that the broadcaster can signal that an application may quit, it may be useful to invoke a handler written by the content author to respond to such an event. Similarly, there may be other states which might best be handled by an application-specific handler. For example, if the viewer is in the middle of a transaction involving an application, that application may wish to delay its termination until the transaction completes. Therefore, an application may be notified by the system when a broadcaster signals a new application available in the broadcast. In one embodiment, the application may be notified via an event, such as the `O_exit` event identified below. An application that determines that it does not want to exit immediately may extend its life by calling a defined event function such `preventDefault()`.

```
O_exit
  Bubbles      : yes      -- (see DOM event model)
  Cancelable   : yes
  context info: the reason for exiting.
```

2. TUNING AND STREAM SELECTION

In one embodiment, two different ways for broadcast signal tuning and stream selection are provided. The first uses a markup language, such as HTML, and assumes that the content author has sufficient a priori knowledge as described below. The second uses a scripting language such as Javascript, does not assume the same a priori knowledge, and is generic enough to be applicable to stream selection from a local hard drive or VOD. Both make use of a new URL defined here known as the “broadcast:” URL. First, the URL which is used in both methods is described.

URL which can be used for tuning and stream selection

In some broadcast environments, such as MPEG based environment, it may be possible to associate a globally (or at least network) unique identifier with a broadcast stream. Use of such a unique identifier within a URL scheme may allow the unique identification of resources within that stream. A syntax of a broadcast Url scheme is provided below. Generally speaking, this scheme may provide a general mechanism for identifying broadcast resources in a manner that is network independent and platform independent. This scheme may work with digitally recorded programs as well as with live broadcasts.

The following is a formal syntax, in BNF like grammar, for a “broadcast:” URL. In the following, note that rules are separated from definitions by an equal “=”, “|” is used to designate alternatives, literals are quoted with “”, parentheses “(” and “)” are used to group elements, optional elements are enclosed in “[” and “]” brackets, and elements may be preceded with <n>* to designate n or more repetitions of the following element where n defaults to 0.

broadcast_url	= broadcast_scheme “.” [broadcast_hier_part]
broadcast_scheme	= “broadcast”
broadcast_hier_part	= broadcast_net_path broadcast_abs_path
broadcast_net_path	= “//” service_address [component_list] [broadcast_abs_path]

<code>service_address</code>	= <code>channel_name</code> "current"
<code>channel_name</code>	= *(domainlabel ".") toplabel
<code>domainlabel</code>	= alphanum alphanum *(alphanum "-") alphanum
<code>toplabel</code>	= alpha alpha *(alphanum "-") alphanum
<code>alphanum</code>	(may be as defined in RFC 2396)
<code>alpha</code>	(may be as defined in RFC 2396)
<code>component_list</code>	= ";;" component *(";;" component)
<code>component</code>	= stream_selector
<code>stream_selector</code>	= stream_type "=" stream_id
<code>stream_type</code>	= "video" "audio" "data" "subtitle" "teletext"
<code>stream_id</code>	= 1*alphanum "default" "current" "none"
<code>broadcast_abs_path</code>	= "/" path_segments
<code>path_segments</code>	(may be as defined in RFC 2396)

Given the above definition, one example of a summary of usage may be represented:

broadcast: { / / <service_address> { ; <component_list> } }

Where *service_address* is defined as follows:

service_address ::= *channel_name* | current

where:

channel_name specifies a DNS-style name that uniquely identifies the channel.

current specifies the service currently selected.

The *component_list* is a comma-separated list identifying specific components in the stream and may be defined as follows:

```

component_list ::= component * ( “,” component )
component      ::= stream_type “=” ( track_tag | “default” ) |
stream_type     ::= “video” | “audio” | ...
    
```

A *track_tag* may be defined as an ASCII string of arbitrary length, typically between 1 and 4 bytes. A *track_tag* of “0” is equivalent to the default component of the specified stream type. For example, the URL “broadcast://tfl.fr; video=0, audio=eng” identifies the default video stream and the English audio stream on the channel named “tfl.fr”.

A/V MIME Types Associated With The Broadcast: Url

While the following discussion primarily describes the semantics associated with video and audio stream types, other stream types are permitted within the URL and are discussed in the section entitled “Obtaining Applications and Data” below. In either case, in one embodiment, , the following events may be dispatched during a service selection.

Stream Selection Events

- Click** The selection occurred as a result of a click event. Default action is to request the specified service. Note that this event is generally a user-input event.
- Load** If the request succeeds, a load event will be dispatched. Normally such an event is dispatched after the URL is finished loading, but indefinite video and audio streams would never finish loading. Hence, it is appropriate to dispense this event once processing of the requested audio and video

streams has been successfully initiated through all of the hardware involved in the processing pipe.

Error If the request is denied or otherwise invalid an error event is dispatched.

Abort If the user aborts the request before the load event is dispatched, an abort event is dispatched.

Unload If the request replaces an existing target an unload event is dispatched.

When no component list is specified, the MIME type corresponding to the broadcast: URL may be application/mpeg.service and this type may correspond to a service as defined an MPEG standard. Hence, such a MIME type would contain not only video, audio, and subtitles, but also the data that is multiplexed on the same service with them, e.g., html and/or other applications.

When a video component is specified, the MIME type corresponding to the broadcast: URL is video/mpeg. Similarly, when an audio component is specified, the MIME type corresponding to the broadcast: URL is audio/mpeg.

As shown in the examples below, it is possible to refer to multiple elementary streams in a single URL. If the streams referred to include only a single video stream and a single audio stream which is synchronized with that video stream, then the resulting streams will be considered to be of type video/mpeg; otherwise, the type of the multiple streams will be type application/mpeg.service.

Examples

This section explains the meaning of several example URLs, which, in some cases, if used as in the complete example shown in the next section, could result in tuning and/or stream selection.

`broadcast :`

Identifies the currently tuned service_address and component_list for the *primary pipe* (see *JS Tuning and Stream Selection below*). This usage is similar to “tv:” in the DASE specification and “dvb://current.av” in the MHP specification. So, for example, this may be used within an HTML element to re-size and re-locate the currently playing video.

`broadcast : //cnn.com`

Identifies the CNN TV channel and all of its component streams. This form of the URL can be used to request that the TV tuner switch channels. This URL in a service selection context causes the automatic selection of the default streams. That is, when used in a service selection context, the user-agent will (if the application is appropriately authorized) tune to the new channel and automatically select the default video stream, select the default audio stream (based on the preferred language), select the default sub-titles and teletext if identified in the user’s current preferences, and select the default data carousel.

`broadcast : //cnn.com;audio=eng`

Identifies the CNN TV channel and explicitly selects only the English audio stream. Documents use this form of the URL to explicitly reference a specific elementary stream.

`broadcast : //current;audio=eng,video=current`

Selects the English audio stream on the current service. This URL allows the author to switch the current audio stream without explicitly knowing the current service address, and without changing the currently selected video stream.

2.1 HTML Tuning and Stream Selection

When the content author has knowledge of the DNS name that corresponds to a given channel, they may use HTML to cause tuning to that channel. For example, the following HTML allows the HTML document to present a link, “my_link”, which requests the tuner to select a new service.

```
<A ID="my_link" HREF="broadcast://cnn.com">Click Me</A>
```

If the request is authorized and resolves to a valid channel_name, then the HTML document will be unloaded and replaced with a TV media handler playing the default video and audio streams associated with the cnn.com service.

In one embodiment, HTML applications may permit the use of URLs that reference MPEG video or audio streams or MPEG-2 services as illustrated in the following HTML elements and CSS attributes. If use of the URLs result in component selection from the currently tuned service, only the Load, Error, or Abort events could occur.

Attribute	HTML element		
	video/mpeg	audio/mpeg	application/mpeg.service
background-image	yes		yes
background-video	yes		yes

a.href	yes	yes	yes
img.src	yes	yes	yes
input.src	yes	yes	yes
object.data	yes	yes	yes

In Addition, URLs may cause service selection when referenced via the location object in a scripting document object model as described below or when used as a parameter in a “goto” dialog.

2.2 JavaScript Tuning and Stream Selection

A second way to enable signal tuning and stream selection utilizes a scripting language such as JavaScript to allow the content developer to explicitly control virtual pipes that exist between sources of audio and video (e.g., tuner, local hard drive) and their destinations (e.g., screen, local hard drive). This section describes how a JavaScript programmer can exert fine-grained control over not only which streams are chosen for display, but also which streams may be recorded onto a hard drive and the speed and direction with which recorded streams are displayed.

An abstraction, known as a pipe, may be used used to embody the association between the source of a stream (e.g., a tuner or a file containing a recording on a hard drive) and the ultimate destination (e.g., the display or a file on the hard drive), including, for example, any resources that are required between the source and destination (e.g., Conditional Access hardware, I/O buffers).

When receiver software boots up, a set (or array) of pipes may be defined. In one embodiment, this array of pipes represents all of the possible connections between stream sources and destinations that may be represented on a particular hardware platform. Other embodiments may represent fewer than all possible connections. Because these are abstractions, it is possible to have a defined pipe without having all of the hardware which is required by the pipe currently allocated to that particular pipe. A defined pipe where less than all of the hardware has been allocated to it is said to be in an “unrealized” state. A pipe is “realized” when all required hardware has been allocated to that pipe.

The programmer may use the defined pipes array to:

- select a pipe
- set the source of a pipe
- set the destination of a pipe if it is a file
- control the speed of a pipe, if the source is thus controllable, and also be able to set the location when such is possible
- select the components of a stream that will be sent to the destination
- add or remove event listeners
- and request that a new pipe be started for recording purposes.

In addition, the programmer may determine which pipe is being used for a given image by using the *id* which is associated with that image. For example, if there is an HTML snippet included that states

```

```

then, the JS programmer may refer to *foo.pipe* and invoke any of the methods which are described below and may read/write the values in the attributes as permitted by the definition below.

The Pipes Collection And The Tvpipe Object

Object Model Reference:

```
[window].navigator.tv.pipes[i]
[window].navigator.tv.pipes.primary
```

The pipes array above is a collection of TvPipe objects as described below. The primary object is a reference to a pipe object that can be settable or gettable in javascript. The TvPipe object has the following properties, methods, and collections.

The TVPipe Object

Properties:

name	String that identifies this pipe in the pipes[] array. (Read-only)
src	URL corresponding to the current channel (read/write) -- may correspond to either a file: or broadcast: url
realized	“true” “false” (read-only)
status	“connected” “connecting” “disconnected” “disconnecting” -- (read-only)
destination	only if pipe is currently being used for recording (read/write) -- url corresponding to file:
type	“record” “display” (read-only)

position unsigned int (read-write)
 -- # of ms into the event

speed int (read-write)
 -- 100 is normal speed
 -- 0 is still
 -- 500 is 5 times normal speed
 -- -100 is normal speed, backwards
 -- -500 is 5 times normal speed, backwards
 -- 50 is half speed, forwards, etc.

event_info name-value pairs about the current event (read-only)

Collections:

Components[] array of component objects (see **TvComponent** below)
 indicating those which are currently selected

Methods:

record(uri) Starts the recording to the file named in the uri if sufficient
 resources exist.

addEventListener()

removeEventListener()

dispatchEvent()

The TvComponent object

A TvComponent object represents a data stream which may be carrying video, audio, interactive data, subtitles, or other content types.

Object Model Reference:

[window].navigator.tv.pipes[i].components[i]

Properties:

name	String that represents the name (i.e., the value of the track_tag) of the component (read-only)
selected	“true” “false” (read/write) -- boolean indicating that this component has been selected
type	“audio” “video” “data” “subtitles” “teletext” ... (read-only)

3. CONTROLLING THE DISPLAY AND PLAYING OF VIDEO, GRAPHICS, AND AUDIO IN HTML/JS

This section describes how graphics may be positioned and sized on top of video, how the video itself can be positioned and sized, and how the audio can be controlled. Transparency between the graphics plane and the video plane, palette-based color, and the MPEG I-Frame are discussed here as well.

In one embodiment, a receiver may be configured to support multiple graphics and video layers. In such an embodiment, there may be a bottommost layer that is used to display video and an interactive layer (OSD) on top of that which is used to display

text and graphics. Rendering of video, both stills (e.g., I-frames) and in-motion video, may be supported by a hardware MPEG decoder.

In addition to the above, an extension may support a layer on top of the OSD layer called the subtitle layer. A further extension may be used to support a multi-plane graphics layer. In one embodiment, this layer may lie logically between the bottommost layer and the interactive layer. This multi-plane graphics layer may be used to display still pictures such as JPEG, MPEG, or other images. Included below is a discussion of support for images in the multi-plane graphics layer.

3.1 Color and transparency

Various models exist for specifying how color information is represented. For example, a “color space” is a model for representing color in terms of intensity values. Examples of color spaces include RGB which is commonly used for computer displays, CMYK which is used for color printers, and YUV which is traditionally used for television.

The number of bits used to define a pixel's color may be referred to as its bit-depth. True color, sometimes referred to as 24-bit color, is the specification of the color of a pixel on a display screen using a 24-bit value. By using 24-bits to specify color, up to 16,777,216 colors are possible. Display systems vary in their ability to support color. For example, some color display systems offer a 32-bit color mode. In a 32-bit color display system, the extra byte, called the alpha channel, may be used for control and special effects information.

Because lower end set-top boxes may not have sufficient memory to support true color, palette-based models may be used. With a palette based model, the color of a pixel is represented by an index into a color palette. In such a model, content authors may define their own color palettes containing colors of their own choosing. The actual colors

in a palette are typically represented as 48-bit numbers with the first three of those numbers representing the actual color and the fourth of the numbers representing the amount of transparency in the color.

In a system where there is sufficient memory to support true color, multiple applications can share the screen with little or no problem because the fixed color palette is large enough to accommodate the multiple different hues required by each application. However, in a system where the number of colors supportable is limited, if multiple applications sharing the screen declare their own color palette, the viewer experience can be disturbing.

Often devices where graphics overlay video (such as less expensive set-top boxes) have palettes with limited built-in transparency models. Two common models where transparency is limited include the following:

- a. Only a single non-opaque element in the palette is supported. For example, that element could be completely transparent, or it could be pink that is 50% transparent, etc. In either case all other elements must be opaque.
- b. A single element in the palette that can be an semi-transparent or completely transparent is supported. All other elements in the palette can be either completely opaque or have a particular, fixed amount of transparency. For example, a palette that can hold n colors could contain a single color that is 30% transparent, m ($m > 1$) colors that are 50% transparent – in this case the remaining $n-(m+1)$ colors must be either 50% transparent or completely opaque. In other words, there cannot be 3 non-opaque colors in a palette all having a different level of transparency.

In order to maximize the availability of the transparency values for the author's use, a system may be defined that allows an author to specify a region, including both its location and dimensions, which they want to contain overlay graphics. Were the author

not able to specify this region, they would have to “waste” (the) one transparent color by painting the area outside of the graphics region with the (sometimes only) transparent color available in the palette. (This also reduces the amount of space required to store the On-screen display graphics.) Subsequently, the an application may be configured to dynamically change its region (even when that application is transcoded prior to broadcasting).

Fixed-Variable Palette

In one embodiment, a combination fixed-variable palette may be used where the variable components are specified by the application. The first m of n colors may be chosen to be fixed with the 0th color being fully transparent. For example, in a 256 color palette where there are 8 bits available for color, the first 188 colors may be as specified in an existing or proposed standard, such as the DVB MHP color palette. The remaining 68 colors may be taken from colors specified by the color palette accompanying the image. In one embodiment, these 68 colors may be selected from the first 68 colors specified in the image palette. Therefore, an application content designer should ensure that the most important colors are placed first in the palette.

If it is necessary to support multiple applications, each of which brings its own color palette, then the system may choose to place into the palette a mixture of the first colors in each of the application/image specific palettes. Similarly, any time it is expected that multiple images will be sharing the screen, the author of those applications may get best results by using only the fixed colors in one of the images or the same palette for both of the images.

Transparency between the graphics and video plane may be important in interactive television, as the viewer often wants to be able to see the video that is running under the interactive text or images. In one embodiment, the Porter-Duff SRC composition rules may be used for composing graphics with each other. Generally, the

underlying video is opaque, hence the video shows through the graphics when they are transparent. The Porter-Duff SRC rule is relatively easy to compute because the transparency of one object over the top of another chooses the alpha (transparency) value of the object on top as the transparency of the composed objects. While in some cases this result may appear somewhat un-natural looking, graphic artists are accustomed to planning their layout with this rule in mind.

Because it may be computationally complex to compute the resulting alpha value, set-top boxes may be permitted to approximate the SRC-Over rule using the SRC rule (unless the object on top is completely transparent, in which case, the pixel values for the transparent object should not be applied). In one embodiment, HTML applications may specify a particular default composition rule, such as SRC-Over. However, in those cases in which a set-top box does not have sufficient computational power to compute the SRC-Over composition, an approximation of the SRC-Over rule may be used (e.g., using the Porter-Duff SRC rule.)

3.1.1 The clut property

The palette format discussed below allows images whose colors are specified using an index into a palette to also specify per-pixel transparency values through the use of an alpha channel. However, for other images, backgrounds, etc., another method may be required for specifying the transparency. Therefore, new properties which allow the specification of these alpha values is described in the subsection below entitled “Alpha Properties.”

An application author may specify that a particular palette (often referred to as a color lookup table or “clut” for short) may be useful in rendering objects in the body of an HTML page. This palette could be used in one of several ways. For example, in a vertical network the author may specify both a palette and the colors of objects using only that palette because they know that all receivers have similar color capabilities.

Alternatively, when the author expects that their application may be used in a network that includes receivers of varying capabilities, this palette may serve as a hint as to the best colors to use. In either case the author may specify a color palette by using the ‘clut’ property documented below.

‘clut’

Value	: <url> none
Initial	: selected default
Applies to	: body
Inherited	: yes
Percentage Values	: N/A
Media type	: tv

The <url> value above may be used to identify the location of the actual palette. If no <url> value is specified, or there is no ‘clut’ property in the style sheet or inline, a default palette may be used.

In the table which follows, one embodiment of a palette format is presented. In one embodiment, the MIME type associated with a url that contains a palette in the format defined by the table below may be “application/clut,” with an extension of “.clt”. In addition, user agents and HTML applications may accept cluts in the format used by “png” images. The types of these cluts may be the same as entire png images.

Usage example (using inline style):

<BODY style="http://cnn.com/demoClut.clt">

Format of palettes of type application/clut:

	No. of bits	Identifier	Notes
PaletteResource() {			
color_model	8	uimsbf	The value of 1 for the color model may be used to indicate RGB, whereas the value 2 is used to indicate YUV.
nb_colors	16	uimsbf	The value in nb_colors is the number of colors in the palette.
first_color	8	uimsbf	The purpose of the first_color value is to allow multiple resources, each specifying their own palette, to share the color space.
for (i=0; i<n; i++) {			The first, second, and third amounts (amt_first, etc.) refer to the amount of RGB or YUV, depending upon the value of color_model. The value in alpha (amt_transparency) represents transparency with 0 being transparent and 255 being opaque.
amt_first	8	uimsbf	
amt_second	8	uimsbf	
amt_third	8	uimsbf	
amt_transparency	8	uimsbf	
}			

}			
---	--	--	--

3.1.2 Alpha Properties

Use of an application-specific palette allows an author to specify the alpha channel corresponding to a particular index. Below is one embodiment illustrating how alpha properties may be specified.

‘alpha’

Value	:	<hexadecimal-integer> <percentage> <normalized-number>
Initial	:	#FF
Applies to	:	All elements
Inherited	:	yes
Percentage Values	:	percent opacity
Media type	:	tv

Usage example:

```
<EM color=#008080 style="alpha:#C0">
```

In one embodiment, the value #FF is fully opaque and the value #00 is fully transparent. The normalized-number may range between 0.0 (fully transparent) and 1.0 (fully opaque). Similarly, 0% may indicate full transparency and 100% fully opaque. These same terms may be used with similar meanings in the additional properties illustrated below.

'background-alpha'

Value: <hexadecimal-integer> | <percentage> |
<normalized-number>

Initial: #FF
Applies to: All elements
Inherited: no
Percentage Values: percent opacity
Media type: tv

Usage example:

<BODY style="background: black; background-alpha:#00">

'border-alpha'

Value: <hexadecimal-integer> | <percentage> |
<normalized-number>

Initial: #FF
Applies to: All elements
Inherited: no
Percentage Values: percent opacity
Media type: tv

'border-top-alpha'

Value: <hexadecimal-integer> | <percentage> |
<normalized-number>

Initial: #FF
 Applies to: All elements
 Inherited: no
 Percentage Values: percent opacity
 Media type: tv

‘border-bottom-alpha’

Value: <hexadecimal-integer> | <percentage> |
 <normalized-number>

Initial: #FF
 Applies to: All elements
 Inherited: no
 Percentage Values: percent opacity
 Media type: tv

‘border-left-alpha’

Value: <hexadecimal-integer> | <percentage> |
 <normalized-number>

Initial: #FF
 Applies to: All elements
 Inherited: no
 Percentage Values: percent opacity
 Media type: tv

‘border-right-alpha’

Value: <hexadecimal-integer> | <percentage> |
<normalized-number>

Initial: #FF
Applies to: All elements
Inherited: no
Percentage Values: percent opacity
Media type: tv

‘outline-alpha’

Value: <hexadecimal-integer> | <percentage> |
<normalized-number>

Initial: #FF
Applies to: All elements
Inherited: no
Percentage Values: percent opacity
Media type: tv

3.2 Positioning of Graphics on top of Video

An HTML developer may use Cascading Style Sheets (CSS) to specify relative or absolute positioning of graphics on top of video. Additionally, CSS may be used to specify other characteristics as well, such as a border, associated with the visual appearance of a graphic or text block.

In one embodiment, the size of the OSD may be defined as the size of the block (div) whose name has been defined to be "osd." If there are no such blocks, the size may be the size of the first division in a top level window. Where a set-top box cannot create an OSD of exactly that size, the closest available size to the specified size may be used. The examples below illustrate how graphics may be positioned relative to background video. The resulting display for each of the examples is the same, given the assumptions stated below in the descriptions.

In this first example, the background is set to a broadcast video via a url by using a background-image attribute. In this case it is assumed that the application has been granted the tuning privilege and therefore the tuner is tuned to the station carrying the Family-Videos network and the default video and audio is displayed.

First Example of Positioning images on top of video

```
<html>
<head>
<title>example</title>
</head>
<body style="background-image: url(broadcast://family-videos.com)>
<div style="position: absolute; left: 200px; top: 80px; color=gray; border: thin
solid red">
<div style="position: absolute; left: 10px; top: 10px; font-size=18pt;
    line-height=120%; color=yellow; border: thin solid yellow;
    background-alpha: #01; compose-rule: src">
<p>Nicolas a 18 mois
</div>

</div>
```

```
</body>
</html>
```

In the second example, it is assumed that the television has already been tuned to the Family-Videos network.

Second Example of Positioning images on top of video

```
<html>
<head>
<title>example</title>
</head>
<body style="background-image: url(broadcast://current); ">
<div style="position: absolute; left: 200px; top: 80px; color=gray; border: thin
solid red">
<div style="position: absolute; left: 10px; top: 10px; font-size=18pt; line-
height=120%; color=yellow; border: thin solid yellow;
background-alpha: #01; compose-rule: src">
<p>Nicolas a 18 mois
</div>

</div>
</body>
</html>
```

In the third example, it is once again assumed that the television has already been tuned to the Family-Videos network and a transparent color for the background is explicitly selected (though this would be the default anyway).

Third Example of Positioning images on top of video

```

<html>
<head>
<title>example</title>
</head>
<body style=" background-color: transparent">
<div style="position: absolute; left: 200px; top: 80px; color=gray; border: thin
    solid red">
<div style="position: absolute; left: 10px; top: 10px; font-size=18pt;
    line-height=120%; color=yellow; border: thin solid yellow;
    background-alpha: #01; compose-rule: src">
<p>Nicolas a 18 mois
</div>

</div>
</body>
</html>

```

The fourth example shows that the background need not be specified at all, assuming again that the television has already been tuned to the Family-Videos network.

Fourth Example of Positioning images on top of video

```

<html>
<head>
<title>example</title>
</head>
<div style="position: absolute; left: 200px; top: 80px; color=gray; border: thin
    solid red">

```

```

<div style="position: absolute; left: 10px; top: 10px; font-size=18pt;
        line-height=120%; color=yellow; border: thin solid yellow;
        background-alpha: #01; compose-rule: src">
<p>Nicolas a 18 mois
</div>

</div>
</body>
</html>

```

Some set-top boxes may lack the resources to to simultaneously play video and display a full OSD at the same time. Therefore, to account for this possibility, an HTML application on one of these boxes may not attempt to interpret any content on those boxes unless a META element, as shown below, is used to indicate that the content was designed specifically for these boxes.

Header meta-data:

```
<META name="tv-use" content="full-screen">
```

3.3 When To Render Graphics

When rendering graphics as they are downloaded, it sometimes makes sense to delay displaying to the viewer until at least a subset of the resources, which have been deemed as essential by the content creator, have been downloaded. In one embodiment, a content creator may label the essential subset of resources by identifying them using a directive such as a “prerequisite” meta-data header. For example, the following indicates that no rendering for the page may occur prior to acquiring “background.mpg”

<META name="prerequisite" content="http://www.cnn.com/background.mpg">

In addition to indicating that certain resources may be required prior to rendering, a content author may further control the rendering through the use of a render-policy and/or render-timeout properties as described below.

render-policy: progressive | layoutComplete | loadComplete

Applies to: Body

Initial: progressive

Inherited: no

Percentage: N/A

The progressive rendering policy indicates that displaying can start as soon as the essential resources (those marked as prerequisites in meta-data headers) have been acquired. With this policy, as resources are acquired, they are incorporated into the rendered and displayed graphics.

The layoutComplete rendering policy indicates that the rendered image may not be displayed until the software has acquired sufficient information to determine the complete on-screen layout and has acquired those resources labeled as prerequisites. This policy prevents objects from appearing to move around as the rendered graphics incrementally appear onscreen.

The loadComplete rendering policy indicates that the graphics may not be displayed until all resources that will be used for rendering the display have been downloaded. The only difference between the loadComplete rendering policy and labeling all resources as prerequisites, is that in the first case the OnLoad event will have been delivered to the appropriate handler, if any, prior to rendering, and hence may affect the rendered view.

In certain circumstances the specified rendering policy may not be possible, i.e., if a prerequisite resource has been removed from the carousel and acquisition via a modem has been denied by the viewer. In one embodiment, if no timeout for this loading has been specified, then the timeout may default to an indicated value (15s) as shown in the render-timeout property below. If a timeout occurs, and at least all of the prerequisite resources have been acquired, what is available for the new page may be displayed, independent of the specified rendering policy. If some of the prerequisite resources have not been acquired, then it may be preferable, if possible, for the display to show the previous page, if any. If this is not possible, then either an error message may appear or the box may render and display those resources which it has been able to acquire.

render-timeout	none <time>
Initial	15s

In any case, while the box is acquiring the resources for the new page, it may be preferable to continue to display the old page, and, if possible, allow the viewer to interact with the old page.

Scene transitions

In one embodiment, all user agents may be required to comply with the following two requirements:

- if the element which contains the video neither moves nor changes size during a transition from one page to another, there will be no video glitch; and
- if the size or location of an element containing video does change during a transition from one page to another, the changes in video and graphics will be closely synchronized with one another.

3.4 Video positioning and resizing

In addition to considering video as being a virtual underlying plane, the content author may place video boxes within html content by using “broadcast:” as the “src”, or as the source of “data” of an HTML element, for which location and/or size are specified. In particular, the location can be specified through the use of CSS.

The examples below demonstrate how a “broadcast:” url may be used in an IMG or OBJECT element to request a particular scaling size.

```
<IMG height=300 width=400 style="position:absolute; left:200px; top:80px"
      src="broadcast://current ">
```

```
<OBJECT height=300 width=400 data="broadcast://current
"></OBJECT>
```

Both of the examples above request that the currently tuned channel (identified by the url, “broadcast:”) be scaled to the size of 300 by 400. The first example also demonstrates how CSS properties can be used to position the resulting video box. Although the actual size and position of the video may be partly determined by the capabilities of both the set-top box and the drivers supplied for given hardware, applications should attempt to position and scale the video as specified by the content author.

3.5 Support for MPEG stills

HTML applications may also support the displaying of still images, such as MPEG I-Frames, in either the video plane or in the multi-plane graphics layer. Because set-top boxes frequently have special purpose hardware for efficient rendering of MPEG, MPEG images are particularly appropriate for the television environment. MPEG I-frames may be recognized by the MIME type of image/mpeg and will have an extension of mpg.

The following example demonstrates the use of an MPEG I-Frame.

```
<html>
<head>
<title>example</title>
</head>
  <body style="background-image:url(http://pepsi.com/pepsi-
    ad.mpg)" >
</body>
</html>
```

3.6 Control of Audio

This section deals with playing of audio from memory and controlling the audio stream after it has been selected. The CSS aural properties can be used to control the audio stream and audio being played from memory. Aural style sheets allow content developers to control the volume, allow the presentation of audio icons (cues), and even allow the developer to control spatial properties and mixing. These style sheets may further support the volume properties, the pause properties, and the mixing properties. HTML itself provides a way to specify an audio element using the <object> tag. There are currently a few events defined on this element: onlayoutcomplete, onmouseenter, onmouseleave, onreadystatechange.

Although CSS provides a way to support volume control, a Javascript object may be used to implement ‘mute.’ The reason for this requirement is that the object needs to remember the previous volume setting, so that when the sound is turned back on, it will immediately be set back to the volume to which it was set prior to muting.

4. OBTAINING NON-AV RESOURCES

Applications and data may be obtained from sources including broadcast or point-to-point (e.g., over a return channel via modem). In one embodiment, HTML applications may provide access to broadcast resources via the broadcast: URL protocol, as well as those that are carried within a broadcast http: protocol (bhttp). Access via the broadcast: protocol is as described above. For the bhttp protocol, whose client-side behavior is as described below, the client side treats the broadcast stream as a cache.

4.1 Access to Broadcast Resources

4.1.1 Access via the broadcast: URL Protocol

The HTML/JS content developer may access non-AV broadcast resources using the broadcast: protocol in a way that is similar to the way they use the broadcast: protocol to access AV resources.

An Informal Description of the Scheme for non-AV resources

The description here differs from that provided in the previous section in that path_segments have been added to allow specification of particular data streams.

`broadcast : { / / <service_address> { ; <component_list> } } { / <path_segments> }`

A *service_address* is defined as follows:

service_address ::= *channel_name* | *current*

where:

channel_name specifies a DNS-style name that uniquely identifies the channel,
and
current specifies the service currently selected.

As stated in the previous section, the *component_list* is a comma-separated list selecting specific components in the stream. The *component_list* is defined as follows:

component_list ::= *component* *(“,” *component*)
component ::= *stream_type* “=” (*track_tag* | “default” | “current” | “none”)
stream_type ::= “video” | “audio” | “data” | “subtitle” | “teletext”

The presence of *path_segments* in a URL indicates that it references a specific module in the data carousel associated with the *service_address*. For example, the URL “broadcast://tf1.fr/background.png” refers to the background.png module on the default data carousel.

Examples

broadcast:/background.png

Load the module background.png from the default data carousel on the current service.

broadcast://current;data=htp0/

Note: The default module may be selected by checking the specified directory for the following modules. The first module name that exists is automatically loaded.

BHTTP
Index.http
Index.htm

A simpler URL of the form “broadcast:” informs the browser to automatically execute the default module in the default carousel of the currently selected service.

4.1.2 Access Via the Http: URL Scheme and the broadcast carousel

In one embodiment, HTML pages may use “http:” URLs to load resources from the carousel. In particular, the HTTP cache may be enhanced to automatically cache HTTP entities from the data carousel. Therefore, the http: URL handler will be able to load HTTP entities directly from the HTTP cache without opening an HTTP connection to the origin server. Hence, HTML pages that use an “http:” URL to reference HTTP entities may not notice any difference between resources retrieved from the broadcast and those retrieved using the client/server HTTP URL protocol.

One embodiment of such a model is illustrated in Fig. 4. In the example of Fig. 4, the Head End 402 is acting as a proxy, is responsible for fetching data from the Origin Server 410 which has been requested by the carousel manager 420 (through as many hops as needed), and for placing the proper cache headers according to HTTP syntax and semantics (based upon expires header). The set-top-box 404 may then populate its cache from the carousel. The Expires entity-header field may give the date/time after which the response is considered stale.

In response to detecting an http url, the client-side may first check its local cache. If the requested data is not found in the cache, the client may check the current carousel if any, possibly retrieving data from the carousel. Alternatively, it may send an HTTP request for the specified URL.

In order to allow proper cache behavior, the carousel may provide expiration dates and other cache control information in HTTP headers. For example, such information may include:

1. Cache-Control (HTTP 1.1) header information that specifies the maximum amount of time that a particular page may be considered to be fresh.
2. In a response to either the head-end or the client, the origin server may add the following headers in order to allow efficient and accurate caching:
 - expires, indicating the data/time after which the page may be considered stale;
 - last-modified, indicating the last time the data was modified at the origin server;
 - and
 - ETag (HTTP 1.1) data, for use with conditional requests, that provides a value indicative of the current page (e.g., some generation number or checksum).
3. Conditional get requests that require the set-top-box to verify either the last-modified value or the ETag value will result in an appropriate request to the origin server, which may return the Not Modified status code if the data is still valid. However, the set-top box may be configured to “believe” the expiration time provided in a header. Note that the server-side may modify the actual expiration time from the value to which it was set by the Origin Server.

It is noted that since network congestion can delay a response, revalidation of data which becomes obsolete during transit could result in an infinite loop. Consequently,

HTTP 1.1 specifies that a response may not be revalidated in order to avoid infinite loops. This rule may be followed whether the data comes from the carousel or directly from the origin server.

4.1.3 Relative URLs

The use of relative URLs, which specify neither “http:” nor “broadcast:”, may work with either protocol. In one embodiment, relative URLs may be automatically translated to one containing the same prefix that was used to obtain the page which contained the reference. Therefore, if a page was obtained using the “broadcast:” URL, then all relative references within that page may also be obtained using the “broadcast:” URL. Because it is possible that initial pages of an application may be downloaded via “broadcast:”, it is possible to author applications which never explicitly specify either “broadcast:” or “http:” yet will perform correctly.

4.2 Modem Control

In Europe, and elsewhere, local communications are still expensive and it might be necessary to warn the user and perhaps display the communication price. While it may be up to the system to actually open and close connections, it may be useful for the application to notify the system when it is finished with a system. Also, in many networks, it is common for different applications to require connections to different phone numbers, rather than to a single phone number associated with a particular Internet Service Provider (ISP). In such systems it is common for the different numbers to be associated with a single modem bank with the different numbers being used for accounting and other information. Hence, the HTML/JS application needs to notify the system when it finishes using a connection and needs to be able to request a connection,

providing appropriate parameters. Therefore, various embodiments may support the following methods on the navigator.modem object.

`navigator.modem.disconnect()`

-- indicates to the system that the application has finished using the connection. There may be no events associated with completion.

If an application invokes the following method:

`navigator.modem.connect(string parameter, int ms_timeout),`

the string parameter could contain, for example, a phone number to which the system may connect. The ms_timeout parameter may be used to indicate how long (e.g., in milliseconds) the system may try to connect. The 'modem' object may be configured to provide the connection status as a read-only property.

The system may automatically generate connection events when something happens on the modem. Examples of such connection events include: success, failure, and disconnect_occurred.

4.3 Caching Hints – Pre-Requisite, Link, and Prefetch

There are at least two important clues that may be present within an HTML application to aid the HTML/JS client-side application in determining which resources have higher caching priority. The two clues are represented by the pre-requisite meta data in the header and the link style which is used to indicate which pages, though not needed immediately, may soon be requested by the application.

Pre-Requisite Meta header

As explained above and illustrated below, all resources which are labeled as a pre-requisite must generally be available prior to rendering the corresponding page for presentation.

```
<META name="prerequisite" content="http://www.cnn.com/background.mpg">
```

Consequently, pre-requisite resources may be identified and given a higher priority for caching.

Using the Link data for pre-fetching

In addition to the above, a link element, which may appear in the <head> portion of a page, indicates resources that may be desired by the viewer of the current page. Therefore, resources listed in this element are also good candidates for pre-fetching into the cache.

However, certain caveats must be observed. For example, if a CSS document is listed in the link element, it is possible that it may be applied to the current document rather than to a document which would be cached for later use. In order to avoid such a possibility, a new value, prefetch, is introduced for the rel attribute. If a resource is indicated in a link statement in the head, and it is identified as having a prefetch relationship, then the set-top box may determine that it is a good candidate for caching.

```
<link rel="prefetch">
```

4.4 An Event that indicates that a URL was updated

One of the advantages of interactive television is that the viewer's presentation can be updated in real-time. For example, if there is a new goal scored on a soccer game,

the viewer may want to receive an update even though they are watching a movie. Such an update can be broadcast by changing the content corresponding to a URL. This section describes how applications can be notified when the content corresponding to a URL changes, using a URLEvent.

The target of a URLEvent generated by the user agent is determined by the user agent according to the following rules:

1. If the URL whose status has changed is identified as the attribute's value of the corresponding node type as listed in the table below, then the URLEvent is delivered by the user agent to the corresponding node.
2. If the URL whose status has changed is the url for the page itself, then the URLEvent will be delivered to the body.

Attribute	Corresponding Node
background	Body
src	Image
data	Object
href	Link
src	Input
src	Frame
src	IFrame

Attributes

url of type DOMString, readonly

Identifies the URL from which the event was generated.

Methods

initUrIEvent

The initUrIEvent method is used to initialize the value of a UrIEvent created through the DocumentEvent interface.

Parameters

typeArg of type DOMString

Specifies the event type.

canBubbleArg of type boolean

Specifies whether or not the event can bubble.

cancelableArg of type boolean

Specifies whether or not the event's default action can be prevented.

urlArg of type DOMString

Specifies the Event's url.

The different types of UrIEvents that can occur are:

URLInserted

The URLInserted event occurs when a URL is added to the carousel.

Bubbles: Yes, Cancelable: No, Context Info: url

URLUpdated

The URLUpdated event occurs when a new version of an URL is created on the carousel.

Bubbles: Yes, Cancelable: Yes, Context Info: url

URLRemoved

The URLRemoved event occurs when a URL is removed from the data carousel.

Bubbles: Yes, Cancelable: No, Context Info: url

The default action in the case of URLUpdated (which can be cancelled by calling preventDefault()) is to reload the content of the associated url). There is no default action for URLInserted or URLRemoved.

Also, note, that it is guaranteed that the events will be delivered in a top-down order; hence, if the body changes, then the event representing the update of the url associated with the body will be delivered prior to delivering any events concerning urls referred to by the body.

Note that the above event can be signaled in the carousel by carrying a delta directory that indicates differences between the last directory and the current directory. That way, an implementation need not download the entire content before it knows whether the app is going to use it or not – it need only find out that there's a new version available.

The Cache Object

Introduction to dynamic cache hints

Since typically the amount of information that can be presented on a television screen is substantially less than contained in a page that is typically viewed on a PC, an author creating content for television will most often spread the same amount of information over multiple pages. Hence, the viewer will typically “scroll” between pages, and their navigation through a page can be a good indicator of which resources will be needed next. An author making use of such information by conveying hints based upon this navigation to the user agent can enable much better performance on lower end clients.

A Host Cache Interface

The cache interface supports two methods, prefetch and remove. The prefetch method specifies both the URL associated with the resource to be prefetched as well as a priority indicating how likely it is that the viewer will need that resource.

The cache priority value is a non-negative integer. The author can use a cache priority value of 0 to indicate that the referenced content is useful, but that the author may be unsure of its likelihood of use in comparison with other items that they are requesting to be cached. The author can use a cache priority value of 1 to indicate the belief that caching the specified resource is very important. A very large value for the priority indicates that a resource will likely not be used (hence informing the user agent that it may reclaim the memory currently used to hold the URL's associated resource in cases where it is needed).

The `remove` method may be used to remove a cached copy of the resource associated with the URL argument. Since it is to be removed from the cache, and not just invalidated, the system will not waste resources re-validating the entry. Note that invoking the `remove` method is different from assigning a very large integer as the cache priority value in that assigning such a large integer value only makes the space used to store that resource more available for garbage collecting and/or to hold high priority resources.

```
Interface cache {
    void prefetch(in DOMString URL, in short priority);
    void remove (in DOMString URL);
};
```

Binding of the Cache Interface to Script

The Cache Object, which implements the cache interface above, is accessible as a property of the Navigator (`Navigator::cache`).

Object **cache**

The **cache object** has the following methods:

prefetch(URLArg, priorityArg) - This method does not return a value.

The URLArg is of type **String**.

The priorityArg is of type **Number**.

Remove(URLArg) - This method does not return a value.

The URLArg is of type **String**.

The farPrefetch Method

Sometimes the size of the resources needed for a given application is very large, and, in this case, it is often true that many of the resources, e.g., fonts, are actually sharable with other applications on different services. When such is the case, the shared resources are often bundled together and transmitted on a single service. Hence, there is a need for an application to be able to obtain resources from another service, which will usually require temporarily changing the tuner to a different frequency and/or at least choosing a different service that is carried on that frequency, caching the resources from that other service, and tuning back to the original service. Another example use case for this scenario is the case where a viewer wants to download mail or chat information or a game, then interact with the downloaded data while watching video that is broadcast on a different service from the downloaded data.

In one embodiment, the following JS method is provided to permit an application to tune to a different service and download information from that service, then automatically come back to the original service:

```
void navigator.cache.farPrefetch(carouselUrl, ArrayOfUrlsToLoad,
functionToCallWhenDone)
```

Where the carouselURL is identified via the tvx: protocol.

The following actions may occur asynchronously when this function is called. First, the permission of the application is checked to ensure that it is allowed to change

the service. If this request is permitted, the specified service is tuned, all urls requested are cached, then the tuner/demuxer re-selects the previous service, and the `functionToCallWhenDone` is invoked. This call may be guaranteed not to cause a kill event to be generated for the application that requested the `farPrefetch`.

Event defining result of `farPrefetch` Method

The following event may be delivered to the cache object after the `farPrefetch` completes. The `detail` value indicates whether all requested resources were obtained or not. That is, in one embodiment, if less than all of the requested resources are obtained, then the `farPrefetch` may be considered to have failed. The content author should note that they are responsible for requesting all required resources when a `farPrefetch` is used.

detail read-only property is a **Number**.

The **detail** property has the value: 1 for success,
NaN failure.

The **CacheEvent** object has the following method:

initCacheEvent(typeArg, canBubbleArg, cancelableArg, detailArg)

This method is used to initialize the value of a **CacheEvent** created through the **DocumentEvent** interface. This method may only be called before the **CacheEvent** has been dispatched.

The different types of cache events that can be dispatched to **navigator.cache** are:

FarPrefetchStatus - This event notifies that a farPrefetch() request has completed.

Bubbles	:	No
Cancelable	:	No
Context Info	:	detail

The Interaction Channel

HTML/JS applications may use the modem(s) attached to and/or present within a set-top box to interface with the interaction channel. Two types of modems are considered, an always-on modem (e.g., cable DOCSIS) and a use-time-only modem (e.g., POTS), either or both of which may be accessible from a given set-top box.

Two different uses of interaction channel have proven useful in interactive television. One use, which is also commonly found in PC applications, is the use of modems to send and/or receive a substantial amount of data. Since a substantial amount of data will be exchanged, the overhead of establishing a connection such as that associated with PPP is insignificant. A different use, however, has proven to be a source of major revenue generation for pay television operators: the capability to call a premium phone number, optionally exchange a few bytes, and hang up. The amount of time required to establish a PPP link in this second type of usage is therefore excessive, and, hence, undesirable.

In addition to the issue of use as described above, also important is the degree of control that an application may exercise over a modem connection. In one embodiment, if an application has not explicitly opened a link, the application may automatically open a link (e.g., using a network-dependent connection string), or use an existing open link, when access to content corresponding to an "http:" url is required by the application.

In order to permit developers to exercise control over high level protocols, such as PPP, the **links** structure described below may be provided. Further, to allow applications direct access to raw data where high level protocols cause too much overhead, and to allow those applications to dial premium phone numbers through dialup modems, the **modem** structure described below may be provided.

The Links Structure

The links structure defined below may be used to (1) explicitly control when connections are opened and closed, and (2) specify connection attributes. It also provides methods that allow an application to determine attributes of the link.

A user application may be configured to always select a *best* link (often designated by the network) and specify that as the default link ([window].navigator.tv.links.default below). In such a case, the author need not always search for a link with particular attributes. However, should an application author determine that they seek a particular type of link, they may directly access the links array ([window].navigator.tv.links[i] below).

Object Model Reference:

[window].navigator.tv.links[i]
[window].navigator.tv.links.default

The links array is a collection of objects of type TVLink as defined below. Also, the links.default is of type TVLink.

The type property allows the content author to determine the type of link. While the first three types are named according to the standardized protocol that they support,

the fourth type refers to a particular product that supports a more lightweight protocol in lower end boxes.

The status property allows an application to determine the current status of the link and the always_on property allows the application to determine whether the link is persistent. If the link is connected and not always on, the application can determine the amount of time that the link has been connected by using the time property.

It is typical in pay television networks for the networks themselves to require the connection attributes to be specified in a network-formatted way. That is, one network may require the application to specify the entire phone number, while another network will only permit an application to specify an index into an array of network-supplied phone numbers, and still a third network may not allow specification of the phone number at all, but only of the username and password. Therefore, the format of the connection string attribute associated with the connect request is network-dependent.

The **TVLink** object is defined as follows.

Properties:

type	"PPP" "DVB-RC" "DOCSIS" "OTV_Gateway" (read-only)
status	"connected" "connecting" "disconnected" "disconnecting"
(read-only)	
always_on	"True" "False"
time	int -- # seconds connected (0 if not in "connected" state)
name	String a unique property associated with this link.

Methods:

open(attributes, timeout) --

This method returns a Number: 1 for OK, -1 if the link that was specified does not exist, -2 if the link is already open, and -4 if permission to open this existing link is denied.

Note that although this call may fail immediately, the actual connection is asynchronous with the requester being notified via a LinkUp event when the connection has been successfully made. (or by a LinkDown event should the request fail)

The attributes parameter is String that contains the connection attributes as determined by the content author in consultation with the network (must at least know network-specified format)

The timeout parameter is Number that contains time-out (in seconds).

close()

This method returns a Number: 1 for OK, NaN for failure
This method may also be asynchronous.

addEventListener(type, listener, useCapture)

removeEventListener(type, listener, useCapture)

dispatchEvent(evt)

-- These methods are the basic methods of the DOM level 2 **EventTarget** interface.

Events:

The **LinkUp** and **LinkDown** events are of type **LinkEvent**. The **LinkEvent** object has all of the properties of the **Event** interface plus the following additional property:

detail read-only property is a **Number**.

Where the **detail** property has the value:

- 1 for normal disconnect,
- 2 for line was dropped (by other side),
- 3 time-out occurred,
- NaN other failure

The **LinkEvent** object has the following method:

initLinkEvent(typeArg, canBubbleArg, cancelableArg, detailArg)

This method is used to initialize the value of a LinkEvent created through The DocumentEvent interface. This method may only be called before the LinkEvent has been dispatched.

The different types of link events that can be dispatched to **navigator.modem** are:

LinkUp

This event notifies that a basic modem connection has been established.

- Bubbles : No
- Cancelable : No
- Context Info : none

LinkDown

This event notifies that the modem has been disconnected.

- Bubbles: No
- Cancelable: No
- Context Info: detail

The Modem Structure

The modem structure defined below is used for access to raw data. For example, this structure is useful when an application simply wants to dial a premium phone number, make a connection, and hang up. It can also be used when only a few bytes of information need to be exchanged, and, in such a situation, the higher level protocols required by the links structure above carry too much overhead for such a use.

Object Model Reference:

[window].navigator.modem

The **modem** object has the following methods:

connect(tel, timeout)

This method returns a **Number**: 1 for OK, -1 for parameter error, -7 modem is use, NaN other failure.

The **tel** parameter is type **String** that contains telephone number.

The **timeout** parameter is **Number** that contains time-out (in seconds).

disconnect()

This method returns a **Number**: 1 for OK, NaN for failure

sendData(data, timeout)

This method returns a **Number**: 1 for OK, -1 for parameter error, -2 not connected, NaN other failure.

The **data** parameter is type **String** that contains a sequence of byte values 0-255.

The **timeout** parameter is **Number** that contains time-out (in seconds).

receiveData()

This method returns a **String** that contains the available data (empty string if no data available).

addEventListener(type, listener, useCapture)

removeEventListener(type, listener, useCapture)

dispatchEvent(evt)

These methods are the basic methods of the DOM level 2 **EventTarget** interface.

The **ModemEvent** object has all the properties of the **Event** interface plus the following additional properties:

detail read-only property is a **Number**.

The **detail** property has the value:

- >0 for the number of bytes sent,
- 2 for line was dropped (by other side),
- 3 time-out occurred,
- NaN other failure.

The **ModemEvent** object has the following method:

initModemEvent(typeArg, canBubbleArg, cancelableArg, detailArg)

This method is used to initialize the value of a **ModemEvent** created through the

DocumentEvent interface. This method may only be called before the ModemEvent has been dispatched.

The different types of modem events that can be dispatched to **navigator.modem** are:

ModemConnect

This event notifies that a basic modem connection has been established.

- Bubbles: No
- Cancelable: No
- Context Info: none

ModemDisconnect

This event notifies that the modem has been disconnected.

- Bubbles: No
- Cancelable: No
- Context Info: detail

The **detail** property has the value:

- 1 for normal disconnect,
- 2 for line was dropped (by other side),
- 3 time-out occurred,
- NaN other failure (e.g., authentication error).

ModemReceiveData

- Context Info: detail

The **detail** property contains the number of data bytes available to receive.

ModemSentData

This event notifies that a basic modem connection sent some data.

- Bubbles: No

- Cancelable: No
- Context Info: detail

5. USER INTERACTION

5.1 Navigation

Focus & focus highlight

CSS2 provides a number of ways to control how to highlight focused elements. For example, CSS2 provides three pseudo-classes related to focus navigation: “:hover”, “:active”, and “:focus”. In addition to these pseudo-classes, the html ‘tabindex’ attribute for input and anchor elements may also be utilized to support navigation. The purpose of this attribute is to allow the viewer to “tab” around the rendered page prior to selecting an element. The value assigned to the tabindex attribute determines the order in which the elements are visited upon tabbing.

Certain interactive television standards provide “nav-*x*” properties to support navigation using the arrow keys (DOM_VK_UP, DOM_VK_DOWN, DOM_VK_LEFT, and DOM_VK_RIGHT). In particular, both DVB MHP and Association of Radio Industries and Businesses (ARIB) define similar, though not identical, “nav-index”, “nav-right”, “nav-left”, “nav-up” and “nav-down” properties. In both of those specifications, the “nav-index” property is used to associate unique integer values with particular elements as follows.

`‘nav-index’`

Value:	<code><integer> none</code>
Initial:	<code>none</code>
Applies to:	<code>All elements that can get focus</code>
Inherited:	<code>no</code>

Percentage Values: N/A

Media type: tv

Because elements with associated “nav-index” properties have associated unique integer values, the content author may then use the set of properties to control navigation between elements.

- nav-up
- nav-down
- nav-left, and
- nav-right

There are several differences between DVB-MHP’s definition of these properties and the definition provided by ARIB. DVB-MHP permits the use of this property to control navigation between frames by allowing the content author to specify a frame along with an element index to which to transition when the viewer presses the corresponding arrow key. It seems appropriate in high-end receivers to permit navigation between frames using this property, although it is not expected to be an issue in low to mid-size receivers.

Another difference between DVB-MHP’s definition of these properties and the definition assigned by ARIB is the behavior specified to occur when the content author does not provide one or more of these properties for various elements. ARIB indicates that if a particular property is not specified for an element, then pressing an arrow key when focused on that element results in no movement of focus. The result of applying this rule to elements for which none of these properties, except the nav-index, have been specified is that one can never navigate out of those elements, if indeed one can navigate to those elements. Additionally, if no nav-index property has been specified for an element, then it is not possible to navigate to that element. DVB-MHP specifies a

different default behavior wherein if one of the properties is not specified, then navigation via the arrow keys defaults to the pre-defined user agent behavior.

In one embodiment, if navigational direction is not explicitly controlled, the middleware (similar to the user agent) uses its default behavior for navigation. When the default behavior is not the behavior desired by the content author for a particular move, they may add directives for explicit control to override the undesirable behavior. In this manner, content authors are not required to explicitly re-define all of the behavior that they already find acceptable/desirable. Therefore the default behavior is more closely aligned with the behavior of DVB-MHP. The difference is to allow explicit specification of both “none” and “default” user agent behavior.

‘nav-up’

Value:	<integer> none default
Initial:	default
Applies to:	All elements that can get focus
Inherited:	no
Percentage Values:	N/A
Media type:	tv

‘nav-left’

Value:	<integer> none default
Initial:	default
Applies to:	All elements that can get focus
Inherited:	no
Percentage Values:	N/A
Media type:	tv

‘nav-down’

Value:	<integer> none default
--------	----------------------------

Initial:	default
Applies to:	All elements that can get focus
Inherited:	no
Percentage Values:	N/A
Media type:	tv

‘nav-right’

Value:	<integer> none default
Initial:	default
Applies to:	All elements that can get focus
Inherited:	no
Percentage Values:	N/A
Media type:	tv

Usage example:

```
<FORM action="http://somesite.com/prog/adduser" method="post">
<P>
First name: <INPUT style="nav-index:100; nav-up:105; nav-down:101" type="text"
name="firstname"><BR>
Last name: <INPUT style="nav-index:101; nav-up:100; nav-down:102" type="text"
name="lastname"><BR>
email: <INPUT style="nav-index:102; nav-down:103; nav-up:101" type="text"
name="email"><BR>
<INPUT style="nav-index:103; nav-down:104; nav-up:102" type="radio"
name="gender" value="Male"> Male<BR>
<INPUT style="nav-index:104; nav-down:105; nav-up:103" type="radio"
name="gender" value="Female"> Female<BR>
<INPUT style="nav-index:105; nav-up:104; nav-down:100" type="submit"
value="Send"> <INPUT type="reset">
</P>
```

</FORM>

A content developer requiring additional control over navigation may specify key event handlers using Javascript.

5.2 Virtual Keyboard control

The following CSS property may be used for controlling the automated appearance of a keyboard. This property may be specified on a per-element basis for text, password, and text area elements. Hence, if an application is aware that a particular form element is a zip code for example, and hence entering numbers via the remote control is easier, that may be specified.

“virtual-keyboard”

Value:	disable enable auto
Initial:	enable
Applies to:	all input elements
	Inherited: no
Percentage Values:	N/A
Media type:	tv

The value “disable” means that the virtual keyboard is not available when the viewer wants to enter data into the area, i.e., they may enter numbers via the remote control instead. The value “auto” means that when the element to which the property applies receives focus, the virtual keyboard will automatically be presented to the viewer. The value “enable” means that the virtual keyboard will automatically be presented to the viewer when the viewer selects the element to which the property applies. If the viewer’s user preferences have indicated that there is an alternate preferred non-virtual

keyboard available, then the virtual keyboard may not be displayed even if the value has been set to enable or auto.

An example demonstrating how application writers could prevent the virtual keyboard from appearing for a password type element is:

```
Input [typ=passwd] {virtual-keyboard:disable}
```

Similarly, if the user preference indicates that the remote control may be used as a numeric speller, as with a cell phone, then no virtual keyboard will automatically appear. Alternatively, the network operator may specify a system preference if it knows that all viewers will have access to a physical keyboard or a cell phone.

5.3 Key Input

Applications may specify sets of keys for which they request notification by the system when they are in a maximized state. Generally, though not necessarily, they may not receive notification when they are in a minimized state. Notification of certain of the sets of keys will be provided to applications solely on the basis that they requested them.

However, for other keys, the network-supplied task may be queried as to whether or not the application may be presented with the keys that it has requested. Hence, it is possible that applications may not be notified of all key presses to which they have subscribed. HTML applications may specify which keys they wish to receive notification by stipulating sets of *key groups* shown in the key-list property below. If the system grants the key group request, then notification of the key press is given only to the requesting application and will not be delivered to other (native) applications in the system.

For example, an application may know that a viewer may only be entering digits between 1 and 8, yet wants to be forgiving enough so that if the viewer may enter a 0 or a 9, the channel will not change. In this case, the application can request notification of all of the numeric keys, ignoring anything except the digits between 1 and 8. It is possible that in some networks there will be a pre-defined set of keys that all pages which do not specify otherwise, will receive.

5.4 Key-list property

HTML type applications may add a CSS property called Key-list that indicates for which key presses an application may be notified. This property may apply to the body element. A content provider wishing more control can use the appropriate javascript to implement more fine-grained control, making use of the on-focus event. All pages using the same style sheet will share the same definition of keys, in which the application is interested. This is a comma-separated list of key-groups (such as navigation, selection, information, numeric, color, alpha, etc). Note that included included below is the reserved_set in the initial value for key-list even though these keys are typically not explicitly so marked on a typical remote control. Therefore, even though they're in the initial set, there may be no way for a viewer to use these keys. An application writer is therefore advised to exercise care when requesting that the viewer press these keys (e.g., have a fallback available in the event that these keys are not available to a particular viewer.)

“key-list”

Value	:	<key-group> + none
Initial	:	scroll_set, navigation_set, selection_set, numeric_set, punctuation_set, alpha_upper_set, alpha_lower_set, reserved_set
Applies to	:	body element

Inherited : no
 Percentage Values : N/A
 Media type : tv

Where key groups may be:

KEY GROUP	KEYS
user_information_set	HELP, INFO
scroll_set	HOME, PAGE_UP, PAGE_DOWN, END
navigation_set	LEFT_ARROW, RIGHT_ARROW, DOWN_ARROW, UP_ARROW
selection_set	CANCEL, ENTER, UNDO
vcr_control_set	STOP, PLAY, PAUSE, RECORD and SINGLE_STEP_FORWARD, SINGLE_STEP_REVERSE, FAST_FORWARD, FAST_REVERSE
edition_set	CUT, COPY, PASTE
teletext_set	MIXING, MAGNIFY, CONTENT, REVEAL
color_set	RED, GREEN, BLUE, YELLOW
numeric_set	0 to 9
Punctuation_set	all non-alphanumeric codes in (0x20 to 0x7f)
alpha_upper_set	all alphabetic codes in (0x41 to 0x5a)
alpha_lower_set	all alphabetic codes in (0x61 to 0x7a)
network_set	all codes in (0x0080 to 0x8f)
manufacturer_set	all codes in (0x0090 to 0x97)
Extended_set	all ISO-LATIN codes in (0x00a0 to 0xff)
sound_set	VOLUME_DOWN, VOLUME_UP, MUTE_AUDIO
station_set	CHANNEL_UP, CHANNEL_DOWN, PREVIOUS_CHANNEL, RADIO_TOGGLE, TV_TOGGLE
reserved_set	TAB, BACKSPACE, RETURN

Usage example:

```
<BODY style="key-list: selection_set, navigation_set">
```

5.5 Key codes

There are generally two major groups of key events.

The first contains the `textEvent` event. The `textEvent` event indicates that text information has been entered, either in the form of printable characters or non-printable text information such as modifier keys. These `textEvent` events are sometimes, but not necessarily, accompanied by the events of a second major groups of key events - `keydown` and `keyup`.

TextEvent

This event indicates that text information has been entered. The text information entered can originate from a variety of sources. It could, for example, be a character resulting from a keypress. It could also be a string resulting from an input method.

The `keydown` and `keyup` events comprise the second group of key events. These events are fired to indicate the physical motion of the keys on the character generation device. Depending on the input system being used, `textEvent` events may or may not be generated for each pair of `keydown` and `keyup` events.

keydown

The `keydown` event occurs when a key is pressed down.

keyup

The `keyup` event occurs when a key is released.

All these events may share the following attributes:

TextEvent, keydown, keyup:

bubbles: yes

cancelable: yes

context info: 0

context outputString: output generated by the key event or null.

context keyVal: Unicode character generated by the key event, or 0.

context virtkeyVal:

virtual key code generated by the key event if the key event has not a Unicode value, or DOM_VK_UNDEFINED. Here is the list of virtual key codes:

```
const unsigned long DOM_VK_UNDEFINED = 0x0;
const unsigned long DOM_VK_RIGHT_ALT = 0x01;
const unsigned long DOM_VK_LEFT_ALT = 0x02;
const unsigned long DOM_VK_LEFT_CONTROL = 0x03;
const unsigned long DOM_VK_RIGHT_CONTROL = 0x04;
const unsigned long DOM_VK_LEFT_SHIFT = 0x05;
const unsigned long DOM_VK_RIGHT_SHIFT = 0x06;
const unsigned long DOM_VK_LEFT_META = 0x07;
const unsigned long DOM_VK_RIGHT_META = 0x08;
const unsigned long DOM_VK_CAPS_LOCK = 0x09;
const unsigned long DOM_VK_DELETE = 0x0A;
const unsigned long DOM_VK_END = 0x0B;
const unsigned long DOM_VK_ENTER = 0x0C;
const unsigned long DOM_VK_ESCAPE = 0x0D;
const unsigned long DOM_VK_HOME = 0x0E;
const unsigned long DOM_VK_INSERT = 0x0F;
const unsigned long DOM_VK_NUM_LOCK = 0x10;
const unsigned long DOM_VK_PAUSE = 0x11;
const unsigned long DOM_VK_PRINTSCREEN = 0x12;
const unsigned long DOM_VK_SCROLL_LOCK = 0x13;
const unsigned long DOM_VK_LEFT = 0x14;
const unsigned long DOM_VK_RIGHT = 0x15;
const unsigned long DOM_VK_UP = 0x16;
const unsigned long DOM_VK_DOWN = 0x17;
const unsigned long DOM_VK_PAGE_DOWN = 0x18;
const unsigned long DOM_VK_PAGE_UP = 0x19;
const unsigned long DOM_VK_F1 = 0x1A;
const unsigned long DOM_VK_F2 = 0x1B;
const unsigned long DOM_VK_F3 = 0x1C;
const unsigned long DOM_VK_F4 = 0x1D;
```

```

const unsigned long DOM_VK_F5 = 0x1E;
const unsigned long DOM_VK_F6 = 0x1F;
const unsigned long DOM_VK_F7 = 0x20;
const unsigned long DOM_VK_F8 = 0x21;
const unsigned long DOM_VK_F9 = 0x22;
const unsigned long DOM_VK_F10 = 0x23;
const unsigned long DOM_VK_F11 = 0x24;
const unsigned long DOM_VK_F12 = 0x25;
const unsigned long DOM_VK_F13 = 0x26;
const unsigned long DOM_VK_F14 = 0x27;
const unsigned long DOM_VK_F15 = 0x28;
const unsigned long DOM_VK_F16 = 0x29;
const unsigned long DOM_VK_F17 = 0x2A;
const unsigned long DOM_VK_F18 = 0x2B;
const unsigned long DOM_VK_F19 = 0x2C;
const unsigned long DOM_VK_F20 = 0x2D;
const unsigned long DOM_VK_F21 = 0x2E;
const unsigned long DOM_VK_F22 = 0x2F;
const unsigned long DOM_VK_F23 = 0x30;
const unsigned long DOM_VK_F24 = 0x31;

const unsigned long DOM_VK_RC_POWER = 0x32;
const unsigned long DOM_VK_RC_TV = 0x33;
const unsigned long DOM_VK_RC_SET_UP = 0x34;
const unsigned long DOM_VK_RC_INFO = 0x35;
const unsigned long DOM_VK_RC_RADIO = 0x36;
const unsigned long DOM_VK_RC_NAV = 0x37;
const unsigned long DOM_VK_RC_PIP = 0x38;
const unsigned long DOM_VK_RC_MENU = 0x39;
const unsigned long DOM_VK_RC_TEXT = 0x3A;
const unsigned long DOM_VK_RC_HELP = 0x3B;
const unsigned long DOM_VK_RC_SELECT = 0x3C;
const unsigned long DOM_VK_RC_EXIT = 0x3D;
const unsigned long DOM_VK_RC_GUIDE = 0x3E;
const unsigned long DOM_VK_RC_RED = 0x3F;
const unsigned long DOM_VK_RC_GREEN = 0x40;
const unsigned long DOM_VK_RC_YELLOW = 0x41;
const unsigned long DOM_VK_RC_BLUE = 0x42;
const unsigned long DOM_VK_RC_CHANNEL_UP = 0x43;
const unsigned long DOM_VK_RC_CHANNEL_DOWN = 0x44;
const unsigned long DOM_VK_RC_VOLUME_UP = 0x45;
const unsigned long DOM_VK_RC_VOLUME_DOWN = 0x46;

```

```

const unsigned long DOM_VK_RC_MUTE = 0x47;
const unsigned long DOM_VK_RC_INFO = 0x48;
const unsigned long DOM_VK_RC_CANCEL = 0x49;
const unsigned long DOM_VK_RC_UNDO = 0x4A;
const unsigned long DOM_VK_RC_STOP = 0x4B;
const unsigned long DOM_VK_RC_PAUSE = 0x4C;
const unsigned long DOM_VK_RC_RESUME = 0x4D;
const unsigned long DOM_VK_RC_SINGLE_STEP_FORWARD = 0x4E;
const unsigned long DOM_VK_RC_SINGLE_STEP_REVERSE = 0x4F;
const unsigned long DOM_VK_RC_FAST_FORWARD = 0x50;
const unsigned long DOM_VK_RC_FAST_REVERSE = 0x51;
const unsigned long DOM_VK_RC_CUT = 0x52;
const unsigned long DOM_VK_RC_COPY = 0x53;
const unsigned long DOM_VK_RC_PASTE = 0x54;
const unsigned long DOM_VK_RC_MIXING = 0x55;
const unsigned long DOM_VK_RC_MAGNIFY = 0x56;
const unsigned long DOM_VK_RC_CONTENT = 0x57;
const unsigned long DOM_VK_RC_REVEAL = 0x58;
const unsigned long DOM_VK_RC_VCR = 0x59;
const unsigned long DOM_VK_RC_SATELLITE_DEL = 0x5A;
const unsigned long DOM_VK_RC_CABLE_DEL = 0x5B;
const unsigned long DOM_VK_RC_TERR_DEL = 0x5C;
const unsigned long DOM_VK_RC_DISPLAY_CLOCK = 0x5D;
const unsigned long DOM_VK_RC_SET_CLOCK = 0x5E;
const unsigned long DOM_VK_RC_COLOR_UP = 0x5F;
const unsigned long DOM_VK_RC_COLOR_DOWN = 0x60;
const unsigned long DOM_VK_RC_BRIGHT_UP = 0x61;
const unsigned long DOM_VK_RC_BRIGHT_DOWN = 0x62;
const unsigned long DOM_VK_RC_CONTRAST_UP = 0x63;
const unsigned long DOM_VK_RC_CONTRAST_DOWN = 0x64;
const unsigned long DOM_VK_RC_PREVIOUS_CHANNEL = 0x65;
const unsigned long DOM_VK_RC_PREFERENCES = 0x66;
const unsigned long DOM_VK_RC_PARENTAL_CONTROL = 0x67;
const unsigned long DOM_VK_RC_BOX_OFFICE = 0x68;
const unsigned long DOM_VK_RC_PURCHASE = 0x69;
const unsigned long DOM_VK_RC_PPV_SERVICES = 0x6A;
const unsigned long DOM_VK_RC_GO_ONLINE = 0x6B;
const unsigned long DOM_VK_RC_EXIT_APP = 0x6C;
const unsigned long DOM_VK_RC_SHOW_INTERACTIVE = 0x6D;
const unsigned long DOM_VK_RC_RECORD = 0x6E;

```

context inputGenerated:

false if the key event does not generate any visible output, such as the use of a function key or the combination of certain modifier keys used in conjunction with another key, true if the key event normally causes visible output. The value of inputGenerated does not guarantee the creation of a character, as the event may be canceled.

Context numPad:

If the number pad was used to generate the key event the value is true, otherwise the value is false.

While the codes above, and this data structure, are similar to those defined in DOM-Level 3 Key code definitions. Codes have been added for the remote control. These new codes have been named DOM_VK_RC_... (RC for remote control). In one embodiment, the keys on a keyboard which are labeled like these would generate these keys. Also, DOM_VK_HOME has been declared above in lieu of an RC_RIGHT, LEFT, RC_HOME, etc. Other keys are possible and are contemplated.

Key event methods

checkModifier

The CheckModifier method returns true or false, depending on whether a single modifier key is associated with a KeyEvent. The list of keys below represents the allowable modifier parameters for this method.

DOM_VK_LEFT_ALT
DOM_VK_RIGHT_ALT
DOM_VK_LEFT_CONTROL
DOM_VK_RIGHT_CONTROL
DOM_VK_LEFT_SHIFT
DOM_VK_RIGHT_SHIFT
DOM_VK_META

Parameters

`modifier` of type `unsigned long` The modifier which the user wishes to query.

Return Value

`Boolean` The status of the modifier represented as a boolean.

No Exceptions

5.6 Event handlers

In addition to the Document Object Model (DOM) Level 2 listeners, Key events may be directed to legacy key handlers: `onKeyDown`, `onKeyPress`, `onKeyUp`, plus `onFocus`, `onBlur`, `onChange` and `onClick`, `onSubmit`.

6. SECURITY

Two types of security which may be required in a receiver include:

- (1) protection for html resources, including both document resources as well as cookies; and
- (2) protected access to receiver resources such as the tuner or modem.

Policies that govern the application of the various security mechanisms may be set by the network and/or by the receiver manufacturer and viewers themselves.

6.1 Protection For Html Resources

Same Origin Mechanism

The same origin policy may be defined in order to restrict one resource's capability to access other resources in such a way as to leave the viewer vulnerable. In particular, when one resource attempts to access one of the object properties shown in the table below, a same origin check is needed.

In one embodiment, the first step of a same origin check is to determine whether the object being referenced was created by the same context as the currently running script. If so, the access is permitted. Otherwise, additional information may be examined to determine whether the url of the accessing document has the same origin as the object being accessed. If the origin is the same, then the access may be permitted; otherwise, the access may be denied.

Two documents may be said to have the same origin if the following elements of the "protocol://host" (where host includes the optional port) are identical:

- the protocol,
- the host, and
- the port.

If any of these values differ, then the access may be denied. It may be assumed that any data that is acquired via the broadcast: is acquired on the same port.

Object	Property	Access Type	Checked
window	All except location (see below), frames, parent, and top	Read	yes

	All except location (see below)	Write	yes
(window.)location	All	Read	yes
	href	Write	yes
	protocol	Write	yes
	toString	(method)	yes

Mechanism and rules for changing the origin

It is often the case that a single organization may provide multiple servers, but may wish to allow certain documents provided from particular ones of these servers to access certain other documents provided from different ones of these servers. One mechanism to allow such sharing includes permitting a document to change its (document.)domain property. However, such changes may be restricted. For example, in one embodiment it may only change its domain to a proper suffix of its current domain. That is, www.xyz.com may be changed to xyz.com, but not to abc.com. Additionally, at least one period may be required to remain in the new name, so, for example, xyz.com could not be shortened at all. Consequently, if the origins of two different resources were originally www.xyz.com and intranet.xyz.com, both would have to change their domain in order for access to be allowed.

There may be a problem with the mechanism for changing the origin which relates to internationalization. The fact that this mechanism could be easily abused on servers outside the U.S. could open up the resource to all kinds of security attacks. Another potential problem is the granularity of this rule. Two resources from the same domain may not be able to provide mutual access only to one another without permitting

other resources in that domain the same access. This problem may be exacerbated by the mechanism that allows resources to change their domain.

One technique that would permit finer granularity of sharing uses a mechanism called a credential. In one embodiment, a credential is a signed *statement* from one party granting access to one (or more) of its resources to another party. The *statement* is a formatted chunk of data identifying the grantor, the grantee, the resource to which access is being granted, the permitted actions on that resource (i.e., read, write, or another property), and optionally a date until which that access is being permitted. The credential may be accompanied by a certificate chain, the leaf certificate in the chain identifying the grantor and providing their public key and the root certificate of the chain being identical to one of the root certificates in the receiver.

6.2 Protecting access to receiver resources

Networks often prefer to control access to certain hardware and software receiver resources. Those resources that may be granted to HTML applications which are acquired via the broadcast are enumerated below. The authorization process for granting these privileges to broadcast applications is described in later.

While applications which are obtained directly from the web may be prohibited from executing privileged operations, a special application, configured by or for the network operator known as the UI may access all of the privileged core operations.

In addition to the above, the network may be allowed to specify that certain of the operations below might be allowed to all apps, no matter where they're obtained from. Also, a network may be allowed to furnish domain-name/set-of-privileges pairs.

Privileged core operations

The following is a list of operations that may be permitted only when permission to access them is signaled as explained in the next section.

- Download modules from the broadcast
- Download modules from any source
- Switch tracks
- Switch programs (services)
- Connect to a remote server (via a phone or cable modem)
- Make any arbitrary connection
- Allow some modules not to be signed (the directory and initial modules must always be signed)
- Allow the application to become resident in the receiver
- Create or modify the service list
- Use the service list
- Request the viewer sign the data that they are providing for transmission
- Request the viewer approve access to restricted files and/or phone numbers
- Change some default settings (exactly which settings can be modified depends upon the other privileges granted to the application)
- Inform the system that it need not clean (non osd) memory after execution
- Inform the system that it need not clean the osd memory after execution
- Change the EIT cache window
- Release cache reserved for EIT
- Arbitrate between conflicting event broker requests

Allocating Receiver Privileges

In one embodiment, a directory module includes a corresponding per-application set of privileges that are requested. This directory module must contain a request for this set of privileges along with the producer's certificate and must be signed with the producer's private key. The producer's certificate is signed using the network's private

key. The producer's certificate states the maximum privileges that may be granted to any application under that producer. Hence, an application will only be granted a privilege if it is in its per-application set of privileges and it is among the set of maximum privileges that may be granted to any application associated with that producer. In addition to the signature, security is enhanced by requiring the signed directory to contain an accurate hash value corresponding to at least the initial code segment, and optionally to other code and data segments used by the application.

As stated above, all receiver privileges listed above may be granted to the special process known as UI. Additionally, privileges for applications received over the broadcast may be allocated in the same manner as they are allocated for core broadcast applications. Finally, applications received via the return channel may not be granted any receiver privileges. The set of privileges granted to a broadcast application or the UI application are known as its maximum set. Unless the application indicates otherwise using the methods described in the next section, its maximum set of privileges is equal to its current working set of privileges. Applications can set their current working set to a subset of their associated maximum set of privileges using the methods described below.

Least privileged mode

Using the methods described in this section, an application can execute in least-privileged mode. This is actually a much more secure mode which ensures that prior to using a privilege, an application specifically states that it is going to use that privilege. One advantage of this mode is that a content author cannot accidentally use a privilege that a network too freely grants. Using this mode, therefore, an application does not obtain more privileges than the network or receiver allows (known as the maximum set), but rather carefully manipulates a working set of privileges that are always a strict subset of that maximum set.

In order to support this mode, two new objects are required in the DOM: (1) the security object and (2) the privilegeManager object. The security object (of class "Security") is accessed through the "security" property of the global object (i.e., the window object). The security object's purpose currently is to contain a property, "privilegeManager", that allows access to the privilegeManager object (class "PrivilegeManager").

The privilegeManager object has four methods: enablePrivilege, disablePrivilege, revertPrivilege, and removePrivilege. These methods allow a script to manipulate privileges.

enablePrivilege Enables a privilege for the duration of the current function.

disablePrivilege Disables a privilege for the duration of the current function.

revertPrivilege Allows a script to revert a privilege to the state that it was in before the current function was called.

removePrivilege Allows a script to remove a privilege from its maximum set. (It is also removed from the working set if enabled.)

Each of these functions returns either true or false depending on whether the operation was successful. Note: when a function returns, any privileges enabled by that function may be automatically reverted to the state they were in at the point when the function was called. When a script attempts to perform a privileged operation without the necessary privilege enabled, an appropriate *TBD* exception will be thrown. If the exception is not caught, an error dialog box may be displayed before aborting the script.

Additional HTML-specific privileges

There are a set of privileges which are HTML-specific and mostly may be restricted to a subset of the broadcast html applications. A set of flags may be reserved to be used for additional restricted operations. In one embodiment, HTML applications may use one of these flags to indicate whether an application will be granted all of the following privileges. (That is, if the flag is set, the broadcast HTML application will be granted all of the privileges below and if it is not set, that application will be granted none of the privileges below.)

- Script can override the same origin policy, and read properties in another frame that was loaded from a different domain
- Script can override the same origin policy, and change properties in another frame that was loaded from a different domain.
- Script can query user preferences from the HTML Application only uim object.
- Script can create, change, and save user preferences from the HTML application only uim object.
- Script may submit a form to a mailto: URL
- Script may manipulate cookies when and if a more extensive cookie management system is added
- Script is granted the union of the runtime code extension privileges defined in both ATSC DASE 1 and DVB MHP 1.1.

Whether these privileges are granted to a broadcast application or not may be determined using the same mechanism as described in the section entitled “Allocating Receiver Privileges”. As above, these privileges may always be granted to the special UI application and/or never granted to applications that are not broadcast.

7. TOWARD A DECLARATIVE APPROACH TO AUTHORIZING FOR SHOWSTOPPERS AND PREFETCH PRIORITIES

Early programming languages were generally very *procedural* requiring a programmer to tell the computer *how* to carry out the program in detail. As the examples show, the trend has been towards languages where you specify *what* to do, but not how. Such languages may be said to be more *declarative*. Generally speaking, a declarative language is one in which you specify what you want, and not how to get it. Such languages may be particularly useful in providing higher level interfaces to underlying complex systems. For example, HTML may allow you to specify what is to appear on a page, but not how it is to be laid out. Another example is SQL where you specify what you want out of a database query, but do not give code for the looping and testing needed to produce it. It is noted that the discussion herein is not strictly limited to declarative languages per se. Rather, HTML, JavaScript, CSS, and other such languages and constructs are contemplated. In one embodiment, languages and constructs which are commonly used in creating and manipulating Web content are contemplated. In any such case, the declarations or other statements used in the creation and/or manipulation of resources and content in this document may be generally referred to as “directives”.

Background

This section (1) describes the showstopper and prefetch requirements; (2) identifies how such information may be carried in both DASE and DVB-MHP; and (3) proposes ways in which authors may indicate both showstopper and prefetch resources within their XHTML documents.

Although details of a transcoding implementation are not described, those skilled in the art may ascertain that the initial values assigned for showstopper and prefetch resources may be automatically translated to existing DASE/DVB-MHP facilities for transport.

Showstopper and prefetch requirements

The content creator often wishes to use multiple resources in constructing a scene or presentation and may consider the acquisition of a subset of these resources to be essential before displaying to the viewer. That is, they may prefer that the old scene should continue to be displayed until at least the essential resources have been received and decoded. These essential resources may be referred to as showstoppers because creators do not want anything displayed until at least these essential resources are available. Further, if these resources never become available, the content creator may prefer that nothing be displayed. In addition, marking these resources as essential may enable the broadcast stream to be more easily packaged together to enhance performance.

In general, performance may be enhanced by intelligent pre-fetching of resources. In particular, remarkable performance improvements may be possible when the pre-fetching priorities can be dynamically modified depending upon viewer interaction. Therefore, it is desirable to allow content authors to stipulate both essential resources as well as (dynamically modifiable) prefetch prioritization.

Fig. 5 illustrates one embodiment of a method for prefetching prerequisite resources. In the example shown, a centrally located proxy performs preprocessing or transcoding of content which is requested by a client or otherwise destined for a client. When the proxy receives content including presentation directives (block 502), the proxy may scan the content for directives which indicate certain content is deemed a prerequisite for the presentation. If no such directives are detected (decision block 504), then the directives (or signals and/or data corresponding to the presentation directives) are conveyed to the client (block 16) and the presentation may be initiated (block 518).

On the other hand, if such prerequisites directives are detected by the proxy, the proxy may immediately convey an indication to the client (block 506) that these identified resources are considered prerequisites. Upon receiving this indication, the client may then determine whether or not is currently has the identified prerequisite

resources (decision block 508). If the client does not have these resources, the client may then take any actions necessary to prefetch the prerequisite resources (block 510). Subsequently, or concurrently, the proxy may convey the remaining presentation content or directives to the client (block 512). Once the client has obtained the prerequisite resources (decision block 514), presentation of the content corresponding to the prerequisite resources is permitted.

It is to be understood that numerous alternatives are possible. For example, in an alternative embodiment, there is not proxy as described. Rather, the client is configured to process resources and content directly. In such an embodiment, the client may be configured to first scan received content for prerequisite directives. Alternatively, the prerequisite directives may be processed as received. Other embodiments are possible and are contemplated.

Support within DASE and DVB MHP

Currently neither DASE's DAE nor MHP's DVB-HTML provides a facility that allows content authors to identify showstoppers or prefetch prioritization. However, they do provide facilities which may be utilized for transporting such information.

Support within DASE

There is explicit support for identifying the initial static priority of resources within an application in DASE's root entity DTD. This support is in the form of the definition of a priority value for a cache item that is associated with a preload attribute. It perhaps in DASE Level 2, to enhance the root entity DTD so that it includes support for showstopper identification; that is, one possible embodiment would be to add an attribute called showstopper.

Prior to such addition, of course, DDE-2 could recommend the use of x-dde2-showstopper as a non-standardized attribute value. Elements identifying the showstoppers and initial pre-fetch priorities could be automatically formulated from the HTML enhancements proposed in the following section and, therefore, would be available to the receiver as soon as the application enters the initialized state. It would not be necessary to modify the prefetch priorities in the root element in response to user interaction, so this very minor enhancement, along with the authoring proposal below, would suffice for fully supporting prefetch and showstopper requirements in the DASE DAE.

Support within DVB-MHP

DVB-MHP provides an optional descriptor, known as the pre-fetch descriptor, within the AIT. As with the DASE root element preload attribute, this descriptor could be automatically generated from the HTML enhancements proposed below. The showstopper resources could be accommodated one of several ways; either by adding a new AIT descriptor for showstopper resources or, alternatively, by setting the priority of showstopper resources to the highest possible value (100).

PROPOSAL FOR AUTHORIZING

Showstoppers

Content authors may desire that there exist a way to identify those resources such that if they are not obtained by a receiver, displaying should be delayed.

Minimal proposal

It is proposed that DDE may define a profile for DDE specific META name/value pairs. Among those pairs would be the *name* "prerequisite," with the *value* being the

target URI of the essential resource. An example of this name/value pair would be the one below which indicates that “background.mpg” is an essential resource that needs to be acquired and processed by the receiver prior to displaying the application’s initial content.

<META name=”prerequisite” content=”http://www.cnn.com/background.mpg”>

Prefetch prioritization

As mentioned earlier, content authors may wish to provide a hint concerning both broadcast parameters as well as caching behavior by indicating that it may be desirable to initially prefetch certain resources, independent of whether those resources are considered as essential or prerequisite resources as defined above. It is not necessary that the author-supplied initial prefetch prioritization be identical to the prioritization that is eventually carried in the corresponding signaling file (i.e., the DASE root element or the MHP prefetch descriptor). However, content developers are typically not very good at choosing from among too many different priorities. (Absolute numerical priorities, such as a value between 1 and 100 are often better chosen by more complicated metrics that account for the size of the resource, expected size of cache, rate of transmission of the broadcast stream, etc.)

Therefore, as proposed herein, the content author may be permitted to identify whether or not it is desirable for a receiver to prefetch a particular resource. For example, the content author may identify resources to be prefetched using the `link` element in the `<head>` of the initial document and by defining a new value “prefetch” for the `rel` attribute of this element. Since there may be several resources that the author would recommend for prefetching, they may indicate a prefetch priority as well. For example, they may order these multiple resources so that the first ones have higher priority than latter ones.

As the DOM allows dynamic modification of the list of `link` resources at runtime, e.g., based upon user interaction, modified `link` resources may serve as a hint to the receiver concerning dynamically changing priorities. However, it may also be useful to permit the content author to not only dynamically control prefetch priorities, but also to indicate that the use of a resource is imminent so that the terminal may wish to “precreate” the resource (e.g., allocate resources such as memory, and decode) instead of simply prefetching that resource. In order to permit the content author to accomplish this, a *cache* object may be used that implements both a `prefetch()` as well as a `precreate()` method.

8. EXTENDED UNIFORM RESOURCE IDENTIFIERS FOR TELEVISION BROADCASTS

The use of W3C standards for authoring interactive television content that is to be carried with digital television signals has begun to increase significantly. RFC 2838 (Uniform Resource Identifiers for Television Broadcasts) addressed the need to reference television broadcast streams as a whole; this section extends the description contained therein to include the ability to reference particular substreams and non-video resources that may also be carried in the broadcast stream. In addition to being useful directly within existing client set-top box or television implementations, the scheme described herein may be mapped to proposed transport-specific television schemes, e.g., *dvb*, *ocap*, and *arib*. The purpose of such mapping is to allow a content developer to author their content using the URI described herein, while permitting automatic (or manual) transcoding to one or more of the other proposed schemes.

Extended Television Uniform Resource Identifier (URI)

The basic structure of the extended television URI is:

tvx:<service-address>[<track-list>][<abs-path>]

where

<service-address> is a description of the data source, which may correspond to the DNS-style identifiers defined for “tv:” in RFC 2838. The optional

<track-list> can specify audio, video, subtitle, teletext, or data substreams within the stream emanating from the service-address. The

<abs-path> can be used to identify individual resources within a substream, or, since its syntax is quite flexible, can be further defined by various of the transport-specific URIs.

Current channel

The current channel can be specified as

tvx://current

This URI refers to whichever television broadcast is currently being accessed by the referring object. This definition differs from the “tv:” definition, as it is specific to the referring object. This difference is necessary because set-top boxes containing multiple tuners, decoders, etc. are becoming more commonplace.

This “current” broadcast may contain multiple audios (e.g., different languages), multiple videos (e.g., different camera angles), and different types of data. However, this URI refers to only those sub-streams that are being used by the destination associated with the referring object. For example, if there are both English and German sub-titles available, but the display associated with the object referencing this URI is only showing

the German sub-titles (i.e., is not showing the English sub-titles), then the English sub-titles would not be part of tvx://current.

Syntax (BNF) for Extended Television URIs

The following is an example of a formal specification for the extended television URIs:

```

tvx_uri          = "tvx:" [tvx_hier_part]
tvx_hier_part    = tvx_net_path | tvx_abs_path
tvx_net_path     = "//" service_addr [comp_list] [tvx_abs_path]
service_addr     = broadcast | "current"
comp_list        = ";" component *(", " component )
component        = stream_selector
stream_selector  = stream_type "=" stream_id
stream_type      = "video" | "audio" | "data" | "subtitle" |
"teletext"
stream_id        = 1*alphanum | "default" | "current" | "none"
tvx_abs_path     = "/" path_segments

```

where:

```

broadcast      may be as defined in RFC2838)
path_segments  may be as defined in RFC 2396
alphanum       may be as defined in RFC 2396

```

Semantics for Extended Television URIs

This section defines the meaning of the various forms of the extended television URIs.

Service Address Alone

which is shot from behind a baseball catcher along with the English audio. It is expected that the content author may have appropriate tools by which they can either set a “track tag” (e.g., catcher, eng) to correspond to a particular substream, or that a set of track tags may be determined by a standard or by a video producer, for example.

In one embodiment, there are two special keywords that may be used as track tags which are defined in this document: “current” and “default.” The “current” track tag indicates the substream that is currently being displayed. For example, if the viewer is currently watching a movie and is listening to the French audio, their audio may be changed to English without affecting the video through the use of the following URI: “tvx://current;video=current;audio=eng” (providing that the track tag “eng” had been associated with the audio).

The “default” keyword may be used to refer to the default as defined by the viewer, author, receiver, content author or some combination, as per a particular specification and/or instantiation. That is, in some vertical networks, the network operator may have the authority to set a default preference and in other networks, it may be up to the viewer.

Path Segments

Path segments may be used to identify a resource within a particular component. For example, “tvx://bcd.com;data=novice/game/chess/move3” may refer to the resource game/chess/move3 which is carried in the data substream with the track tag of novice.

Additional meanings may be assigned to the path segments when the various transport-specific television URIs are mapped to this URI. However, until they are so defined, path segments shall only be meaningful when the component type is data.

Various embodiments may further include receiving, sending or storing instructions and/or data implemented in accordance with the foregoing description upon a carrier medium. Generally speaking, a carrier medium may include transmission media or signals used in broadcast systems and otherwise such as electrical, electromagnetic, or digital signals, conveyed via a communication medium such as network and/or a wireless link. For example, a network operator may convey signals which describe program instructions via a broadcast system. A carrier medium may also include storage media or memory media such as magnetic or optical media, e.g., disk or CD-ROM, volatile or non-volatile media such as RAM (e.g. SDRAM, RDRAM, SRAM, etc.), ROM, etc.

It is to be understood that the above embodiments are intended to be exemplary only. Numerous alternative configurations are possible and are contemplated.

WHAT IS CLAIMED IS:

1. A method comprising:
receiving one or more directives, wherein said directives are indicative of an
audio, video and/or graphic presentation requiring a set of resources;
determining from said directives that acquisition of a subset of said resources are
a prerequisite to the presenting of said presentation; and
prohibiting the presenting of said presentation until said subset of resources are
acquired.
2. The method of claim 1, wherein said subset of resources are indicated using
directives selected from the group consisting of: a markup language, a scripting language,
and a style sheet.
3. The method of claim 2, wherein said directives are received by a proxy server in
an interactive television system.
4. The method of claim 3, wherein said determining is performed by said proxy
server, and wherein said method further comprises said proxy server conveying signals
which correspond to said subset of resources to a remote client device.
5. The method of claim 4, further comprising said client device acquiring said subset
of resources in response to detecting said signals.
6. The method of claim 5, wherein said subset comprises streaming audio and/or
video, and wherein acquisition of the streaming audio and/or video comprises configuring
hardware resources within said client device.
7. The method of claim 5, wherein acquisition of the subset of resources comprises
the client device initiating requests for remotely located resources to be conveyed to said
client device.

8. The method of claim 1, further comprising enhancing a root entity in DTD to add a showstopper attribute indicative of prerequisite resources.
9. The method of claim 1, further comprising using a label within a Declarative Data Essence standard as an attribute to indicate a prerequisite resource.
10. The method of claim 1, further comprising enhancing DVB-MHP by adding a showstopper AIT descriptor indicative of prerequisite resources.
11. The method of claim 1, further comprising defining a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.
12. The method of claim 1, wherein said prohibiting is in further response to detecting a corresponding time for expiration has not yet expired, and wherein said method further comprises allowing the presenting of said presentation in response to detecting said time for expiration has expired.
13. An interactive television system comprising:
 - a remote proxy server configured to:
 - receive one or more directives, wherein said directives are indicative of an audio, video and/or graphic presentation requiring a set of resources;
 - determine from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation;
 - convey first signals which identify said subset of resources to a remote client device; and
 - convey second signals which correspond to said directives.
 - a client device configured to:

receive said first signals;
receive said second signals; and
prohibit the presenting of said presentation until said subset of resources
are acquired, in response to detecting said first signals.

14. The system of claim 13, wherein said subset of resources are indicated using directives selected from the group consisting of: a markup language, a scripting language, and a style sheet.

15. The system of claim 14, wherein acquiring said subset of resources comprises said client device configuring hardware resources within said client device.

16. The system of claim 14, wherein acquiring said subset of resources comprises initiating requests for remotely located resources to be conveyed to said client device.

17. The system of claim 13, further comprising enhancing a root entity in DTD by adding a showstopper attribute indicative of prerequisite resources.

18. The system of claim 13, wherein said directives include the use of a showstopper attribute indicative of prerequisite resources.

19. The system of claim 13, wherein said server is configured to detect a DVB-MHP showstopper AIT descriptor indicative of prerequisite resources.

20. The system of claim 13, wherein said directives define a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.

21. The system of claim 13, wherein said device is configured to prohibit said presenting in further response to detecting a corresponding time for expiration has not yet expired, and wherein said device is further configured to allow the presenting of said presentation in response to detecting said time for expiration has expired.

22. A client device in an interactive television system, said device comprising:

a receiver configured to receive signals corresponding to directives which are indicative of an audio, video and/or graphic presentation requiring a set of resources; and

a processing unit coupled to said receiver, wherein said processing unit is configured to:
determine from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation;
and
prohibit the presenting of said presentation until said subset of resources are acquired.
23. A carrier medium comprising program instructions executable to:
receive directives which are indicative of an audio, video and/or graphic presentation requiring a set of resources;
determine from said directives that a subset of said resources are a prerequisite to the presenting of said presentation; and
prohibit the presenting of said presentation until said subset of resources are acquired.

ABSTRACT OF THE DISCLOSURE

A method and mechanism for enabling the creation and/or control of interactive television content using declarative-like directives such as HTML, scripting languages, or other languages. A centrally located proxy server is configured to receive, transcode and convey transcoded web based content to client devices. Upon detecting directives which indicate particular resources required for a presentation are prerequisites, the proxy server conveys signals to a client device that these particular resources are prerequisites. In response to receiving the conveyed signals, the client device may take actions to prefetch these resources. The client device is further configured to prohibit initiation of the presentation until the prerequisite resources are acquired.

ASSIGNMENT

FOR GOOD AND VALUABLE CONSIDERATION, the receipt, sufficiency and adequacy of which are hereby acknowledged, the undersigned, does hereby:

SELL, ASSIGN AND TRANSFER to OpenTV, Inc. (the "Assignee"), a corporation having its principal place of business at 401 East Middlefield Road, Mountain View, California 94043-4005, the entire right, title and interest for the United States and all foreign countries, in and to any and all improvements which are disclosed in the application for United States Letters Patent, which has been executed by the undersigned concurrently herewith, and is entitled "**SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX**," the specification of which was filed on **April 19, 2002**, receiving the Serial No. **60/373,883**, such application and all divisional, continuing, substitute, renewal, reissue and all other applications for patent which have been or shall be filed in the United States and all foreign countries on any of such improvements; all original and reissued patents which have been or shall be issued in the United States and all foreign countries on such improvements; and specifically including the right to file foreign applications under the provisions of any convention or treaty and claim priority based on such application in the United States;

AUTHORIZE AND REQUEST the issuing authority to issue any and all United States and foreign patents granted on such improvements to the Assignee;

WARRANT AND COVENANT that no assignment, grant, mortgage, license or other agreement affecting the rights and property herein conveyed has been or will be made to others by the undersigned, and that the full right to convey the same as herein expressed is possessed by the undersigned;

COVENANT that, when requested and at the expense of the Assignee, to carry out in good faith the intent and purpose of this assignment, the undersigned will execute all divisional, continuing, substitute, renewal, reissue, and all other patent applications on any and all such improvements; execute all rightful oaths, declarations, assignments, powers of attorney and other papers; communicate to the Assignee all facts known to the undersigned relating to such improvements and the history thereof; and generally do everything possible which the Assignee shall consider desirable for securing, maintaining and enforcing proper patent protection for such improvements and for vesting title to such improvements in the Assignee;

PATENT
OPTV-187/PRV/US

COVENANT AND AGREE that the above is and will be binding on the heirs, assigns, representatives and successors of the undersigned and extend to the successors, assigns and nominees of the Assignee.

## NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

*Filing Date Granted***Items Required To Avoid Abandonment:**

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is missing.  
*A properly signed oath or declaration in compliance with 37 CFR 1.63, identifying the application by the above Application Number and Filing Date, is required.*
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.

**SUMMARY OF FEES DUE:**

Total additional fee(s) required for this application is **\$130** for a Large Entity

- **\$130** Late oath or declaration Surcharge.

*A copy of this notice **MUST** be returned with the reply.*

PART 3 - OFFICE COPY

- c. ☐ after the mailing date of a final Office Action or a Notice of Allowance and prior to payment of the issue fee, and thus: the certification of paragraph 2 below is provided and a fee of \$180.00 is enclosed.
2. It is hereby certified:
- ☐ that each item of information contained in this Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the Statement, or
- ☐ that no item of information contained in the Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application or, to the knowledge of the person signing the certification after making reasonable inquiry, was known to any individual designated in § 1.56 (c) more than three months prior to the filing of the Statement.
3. ☐ Consideration of the following additional information (including any co-pending or abandoned U.S. applications, prior uses and/or sales, etc.) is requested:
4. For each non-English language reference listed on the attached Form PTO-1449:
- ☐ reference is made to an English language translation submitted herewith, and/or
- ☐ reference is made to a foreign patent office search report (in the English language) submitted herewith, and/or
- ☐ reference is made to an English language translation of a foreign patent office search report submitted herewith, and/or
- ☐ reference is made to the concise explanation contained in the specification of the present application at page(s) \_\_\_\_\_, and/or
- ☐ reference is made to the concise explanation set forth below:
5. ☐ Applicant also offers the following comments for the Examiner's consideration:
6. ☒ Also enclosed is a copy of a foreign search report citing these references.
7. ☐ The listed documents were brought to the attention of the Applicant(s) after payment of the issue fee in the captioned case. The documents were cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this Information Disclosure Statement. Applicant(s) request this Information Disclosure Statement and attached Form PTO-1449 be placed in the file of the captioned application.
8. ☐ Applicant(s) requests that the Information Disclosure Statement and attached Form PTO-1449 and references, which are being filed before the grant of the

patent and pursuant to 37 C.F.R. § 1.97(i), be placed in the file of the captioned application.

If any required fees are missing, the Commissioner is authorized to charge said fees to Meyertons, Hood, Kivlin, Kowert & Goetzel, P.C. Deposit Account No. 501505/5266-06201/RDR.

(57) Abstract: A text based script file describing enhancements is parsed to produce platform dependent enhancement files that may be employed to produce enhancements on a set topbox, enhanced television, or computer display. A script file may be of XML format and a parser may be an XSL translator. A parser may import HTML and Javascript from other applications. A parser may support a media player for emulation to view video and enhancements. Trigger data for rendering enhancements may be formatted into a javascript array. Trigger events may be employed to replace graphic pointers or text values. Multiple parsers, each supporting a specific platform, allow a single script file to be employed across multiple platforms. New platforms or versions of platforms are supported through new or updated parsers.

## SYSTEM AND METHOD FOR TELEVISION ENHANCEMENT

Cross Reference to Related Applications

5

This application is based upon and claims priority of United States provisional application number 60/227,063 entitled "A DATA DRIVEN SYSTEM AND METHOD FOR DISTRIBUTION OF INTERACTIVE CONTENT TO MULTIPLE TARGETTED PRESENTATION PLATFORMS", filed August 21, 2000 by Steve O. Markel, the entire disclosure of which is herein specifically incorporated by reference for all that it discloses and teaches.

Backgrounda. Field

The present disclosure relates to interactive and enhanced television and, more particularly, to a method and system that produces enhanced content that may be employed across a plurality of platforms without re-editing. In greater detail this disclosure discusses systems and methods for distribution of interactive content to multiple targeted presentation platforms.

20

b. Description of the Background

A television program may be accompanied by additional information employed to enhance the program or to provide viewer interaction. Enhancements have historically included closed captioning and multilingual support. Advances in networking, computer systems, and video production have increased the number and types of enhancements that may be provided with a program or advertisement. Enhancements may include stock updates, news stories, Internet links, weather forecasts, bulletins, statistics, trivia, and other information. For example, a football game may include icons allowing viewing of team players, statistics, trivia and other information such as upcoming games. Further, the advent of set-top-boxes, as may be used in cable and satellite television systems, allows enhancement information to be presented in new ways, such as screen overlays and in windows, for example.

Enhanced television content may employ a combination of HTML (hypertext markup language), JavaScript, Java and other formats common to Internet page display. An enhanced display may comprise text, icons, graphics and images placed at locations on or in proximity to the television image. To produce an enhanced display, an author  
5 must create a file identifying each displayed element (such as text, icons, graphics and images), the location where each element is displayed and the time at which the element may be displayed. Due to numerous differences between presentation platforms, such as set top boxes, satellite receivers, computers, or interactive televisions, for example, content providers have historically been required to select a specific platform in the  
10 development of an enhancement application. In order to provide support for each additional platform, the interactive content provider must introduce potentially significant modifications to the existing application, resulting in the ongoing maintenance of multiple code bases, and adding to the time and cost required producing enhanced page layouts for multiple platforms.

15 Additionally, previous methods employed to enter parameters required to generate and position the elements comprising the layout of enhanced pages have involved significant manually entry. Manual editing of an enhancement file may also introduced unintended changes such that enhancements are not uniform across platforms. Therefore a new method of creating enhanced content that allows utilization across multiple  
20 platforms and provides an accurate preview of enhancements is needed.

### **Summary of the Invention**

The present invention overcomes the disadvantages and limitations of the prior art by  
25 providing a system and method that parses a text based script enhancement file to provide emulation of enhancements and to provide output of platform specific enhancement files. The enhancement file, which may employ an XML format, contains a description of enhancements including element position, attributes, triggering and linkage. Linkage associates a file with an element such that a user may select a linked object to access  
30 websites, launch other applications, or to perform other tasks. Parsing the enhancement file produces an output file targeted to a specific platform. The platform may comprise a

set top box, interactive television or computer display. A file parsed for computer display may be employed for emulation and preview of enhancements and may contain functions for control of a browser media player.

The invention therefore may comprise a method for creating a television presentation enhancement comprising accessing a platform independent enhancement file containing elements and attributes of the elements, applying a first parsing script to the enhancement file to produce a first output file that may be viewed using a web browser and media player, and applying a second parsing script to the enhancement file to produce a second output file that may be viewed with a set top box.

An enhancement file of XML format may be parsed using XSL (Extensible Stylesheet Language) scripts. In the present invention, an XML file with tags for administrative information, layout information, and trigger information is employed. The XML file may be parsed to produce an output file containing HTML and JavaScript code wherein the version of HTML and Javascript reflect the level of support provided by the target platform. Further, the output file may be formatted for a mode of enhancement transport. In a first mode of transport, enhancements and triggers are supplied in conjunction with a video program. In a second transport mode, triggers and a locator, such as a URL, are provided in conjunction with a video program and the platform employs the locator to access enhancement information.

The invention may further comprise a system for developing television enhancements comprising a computer, a database, a web browser, and a parser operable to parse a platform independent enhancement file contained in the database and to produce an output that may be viewed employing the browser.

Advantageously, the invention provides viewing and emulation of enhancement files employing a personal computer or similar equipment. This allows a team of developers and reviewers to be physically separated, and allows enhancement customers (such as advertisers) to preview material by simply accessing a website.

### Description of the Figures

In the figures,

Figure 1 depicts html and image support for a group of commercially available set  
5 top box products.

Figure 2 depicts the software environment of the present invention.

Figure 3 is an overview flowchart of parsing an XML file to emulate and preview  
enhancements.

Figure 4 depicts a first flowchart of part of a parsing process.

10 Figure 5 depicts a second flowchart of a parsing process.

Figure 6 depicts a third flowchart of a parsing process.

Figure 7 depicts a computer display of an enhancement.

### Detailed Description of the Invention

15

Enhanced television content is typically presented using a combination of HTML, JavaScript, Java and other web technologies. The level of support for these technologies varies by the targeted presentation platform, including the combination of client hardware, operating system, web browser and add-on software. A presentation platform  
20 comprises a set top box, interactive television, computer, or other system operable to receive television signals and to process HTML and other code and to produce a display comprising a television image and enhancements. Capabilities vary depending the specific platform. Certain functions may or may not exist, or may be optimized on a given platform through the use of custom features. Variants include screen size and  
25 resolution, acceptable color combinations, graphics support, and version of HTML or JavaScript, for example. Providing concurrent support for the Internet or wireless handheld devices introduces additional requirements and dependencies. The present invention overcomes the difficulties of supporting multiple platforms, each having a specific set of capabilities, by employing a platform independent text based script file that  
30 completely defines the enhancement assets, their location and other attributes, as well as the triggering information. The text based script file is then translated by parsing software to produce platform dependent files comprising HTML and JavaScript code tailored to

the specific platform. The present invention also allows translation targeting a web browser and a media player, providing emulation and preview of authored enhancements.

Figure 1 depicts HTML and image support for a group of commercially available set top box products. Set top box models 100 provide HTML support 102 and image support 104. HTML support 102 lists support for html 1.0, 2.0, and 3.2 versions. A limitation of HTML is that some versions lack downward compatibility. For example, HTML versions 4 and higher do not support all the tags of HTML 3.2. Figure 1 serves to illustrate that an HTML based author for creating enhanced content would not be able to support a wide range of target platforms. The present invention overcomes the disadvantages of HTML based authoring by employing an authoring tool that generates an XML file that may be parsed using XSL scripts for each platform type to produce HTML code and JavaScript suitable for each platform.

Figure 2 depicts the environment of the present invention. Environment 200 comprises database 208 containing user and project administration information 202, page layout information 204 and trigger creation information 206. XML file 210 is created using information from database 208. Import XSL's 212 may be employed to translate HTML and JavaScript into XML file 210. Emulator XSL 214 provides translation of XML file 210 into HTML and JavaScript, plus provides media player controls for emulation and preview. STB Agnostic Sniffer XSL 216 includes platform query routines to determine the type of platform requesting enhancement information. WebTV™ XSL 218 provides translation compatible with WebTV platforms. AOLTV™ XSL 220 provides translation compatible with AOLTV platforms. Triggers XSL 222 provides triggers that may be transmitted with a television presentation that may be used to synchronize display of enhancements. Enhancement information may be transmitted with the television presentation, or may be accessed by the platform in response to the trigger information. Translated files may be stored in server 224.

Figure 3 is an overview flowchart of parsing an XML file to emulate and preview enhancements. Process steps shown in figure 3 are described in greater detail in following figures. Parsing process 300 starts with step 302 where comments are inserted that indicate the project name, page names, date, time, and other information. This information will form in part, the header of the resultant HTML/JavaScript file produced

by the parsing process. At step 304, a list of elements comprising an enhancement is scanned and checked for a JavaScript tag. If a JavaScript tag is found, the JavaScript is placed into the output file. At step 306, trigger tags are extracted, trigger data is sorted and a JavaScript trigger array is created that comprises time, element, and new element value. This array is referenced during emulation. At step 308, the list of elements is scanned and a function to change the text value is generated for elements with a text area tag. This function allows text in a text area to be changed, such as response to a trigger event. At step 310, the list of elements is scanned and a function to change the source value is applied to graphics elements. At step 312, code that references the trigger array and individual function is inserted. At step 314, code is inserted that is executed when the browser window is opened. At step 316, the list of elements is scanned and if an imported HTML tag element is found, the value is extracted and placed in the output file. At step 318, code supporting a media player including stop, go, pause, and timer is written to the output file. At step 320, a media player object is placed in the output file if a 'TV' object is present in the XML source file. Graphics elements are placed in the output file with 'img' tags and text elements are placed in the output file with text tags. A web browser may access the output file created by the above parsing process and the enhancement may be displayed. If the enhancements are related to a television image, the media player module allows viewing in conjunction with display of a video image. The module allows the media player to present a video sequence, along with enhancements. The media player may be paused, stopped, started, or the user may go to a specific frame or display time. The following figures provide a more detailed description of the steps employed in parsing an XML source file.

Figure 4 depicts a first flowchart of part of a parsing process. Process 400 starts at step 402 where a looped process for each page of the XML file begins. Page loop 404 provides a return path for the process when an additional page or pages remain. At step 406, <HTML> and <HEAD> open tags are written. At step 408 a <TITLE> tag is written with the page name. At step 410, ownership and contact comment information may be written. At step 412, a project name comment may be written. At step 414, a page name comment may be written. At step 416, an author comment may be written. At step 418, a comment indicating the date the XML file was authored may be written. At step 420, a

notes comment may be written. At step 422 a JavaScript tagging process begins. At step 424, an element is accessed from the XML file and is checked to determine if the element is of import type. If the element is not of import type, processing returns to step 422 where another element is accessed. If all elements have been accessed, processing  
5 continues at step 434. If the result of step 424 is that the accessed element is of import type, step 426 writes a language specification indicating that the script language is JavaScript. At step 428, the contents within the 'js' tag of the XML file are written. At step 430, a "</script>" closing tag is written. At step 432, processing continues to step 422 to access additional elements. If all elements have been accessed, processing  
10 continues at step 434. At step 434 JavaScript variable statements for trigger emulation are written. At step 436, an opening tag for an array of triggers is written. At step 438 a processing loop is started. Step 438 accesses trigger information, ordered by time, each time the loop is executed. At step 440, the trigger time, multiplied by 1000, is written. At step 442, the element name affected by the trigger is written. At step 444, parameters  
15 associated with each trigger are written. Step 446 checks if additional trigger information may be accessed for the current page. If additional information may be accessed, processing continues at step 438. When all trigger information has been accessed, processing continues at step 448 where a value indicating the end of the trigger array is written. Step 450 leads to the steps shown in figure 5.

20 Figure 5 depicts a second flowchart of a parsing process. Step 502 is a continuation from the steps shown in figure 4. At step 504, a processing loop accesses each element of the current page. Step 506 checks if the element is a text element. If the element is a text element, step 508 writes a function for changing the text value within the text area. Processing then continues with step 514. If step 506 determines that the  
25 element is not a text element, step 510 checks if the element is a graphics element. If the element is a graphics element, step 528 writes a function for changing the source value within an image field. Processing then continues with step 503. If step 510 determines that the element is not a graphic element, processing continues at step 514. At step 514, processing continues at step 504 if additional elements remain. If all elements have been  
30 accessed, processing continues at step 516. Step 516 writes a script closing tag. Step 518 then writes a script language tag indicating that the script language is JavaScript. Step

522 writes setup variables for a media player. Step 524 then converts numeric seconds to an ASCII string. Step 526 writes a function to handle start, stop and pause controls for the media player. Step 528 writes a function for time display. Time display may be used to indicate the time of a video sequence being shown by the media player. At step 530, event code for selection of the media player 'go' button is written. At step 532, event code the selection of the media player 'stop' button is written. At step 534, event code for selection of the media player 'preview' button is written. At step 536, event code is written that is executed when the emulation window is opened. At step 538 a closing script tag is written. At step 540, a closing head tag is written. Step 542 writes a 'body' tag with an event handler for window loading. Step 544 leads to the steps shown in figure 6.

Figure 6 depicts a third flowchart of a parsing process. Step 602 is a continuation from the steps shown in figure 5. At step 604, a processing loop accesses each element within each page. Step 606 checks if the element is of import type. If the element is not of import type, processing continues at step 604 where the next element is accessed. If all elements have been accessed, processing continues at step 616. If step 606 determines that the element is of import type, step 608 writes a division tag (<div>) and writes body code comprising element name, absolute position, top left position and z index. The z index value may be employed to control the order in which elements are rendered, causing one element to appear on top of another element. Step 610 writes the contents of the 'htmlBody' tag. Step 612 then writes an end <div> tag. At step 614, if all elements have not been accessed, processing continues at step 604. If all elements have been accessed, processing continues at step 616. Step 616 writes a division tag for media player positioning buttons. Step 618 writes <table> code with positioning buttons. Step 620 writes an end <div> tag, demarking the division started at step 616. At step 622, a processing loop accesses each element within each page. Step 624 checks if the element type is graphic. If the element is a graphic element, step 626 writes a division tag for html body code comprising element name, absolute position, top left position and z index. Step 628 checks if a URL (Universal Resource Locator) exists for the element. If a URL exists, step 630 writes a URL html tag. Step 632 then writes an 'img' tag with element name, border=0, and source. Source is the address of where the graphic element is stored. Processing then continues at step 644. If step 628 determines that a URL does not exist

for the element, step 632 writes an 'img' tag with element name, border=0, and source. Processing then continues at step 644. If step 624 determines that the element is not a graphics element, processing continues at step 634. Step 634 checks if the element is of type 'tv'. If the element is of type 'tv', step 636 writes a division tag for html body code comprising element name, absolute positioning, top left position, and z index. Step 638  
5 writes code to embed a media player. Processing then continues at step 644. If step 634 determines that the element is not a 'tv' type element, processing continues to step 640 where a check is performed if the element is a text area element. If the element is a text area element, step 642 writes a division tag for html body code comprising element name,  
10 absolute positioning, top left position, z index, font, color, and point size. Processing then continues at step 644. If step 640 determines that the element is not a text area element, processing continues at step 644. At step 644 processing loops back to step 622 if elements remain that have not been accessed. Otherwise, processing continues at step 646. If pages remain that have not been accessed, processing continues to step 648 where  
15 the process loops back to step 404 of figure 4 to access the next page. If all pages have been accessed, step 650 writes closing <body><html> tags and the process ends at step 652.

Figure 7 depicts a computer display of an enhancement. A text based script file, employing an XML format, describing the elements employed to create the enhancement  
20 depicted in figure 7 is listed in Appendix A. Appendix B lists an HTML file with JavaScript that has been produced from the code of Appendix A through the process described in figures 3 to 6. Appendix B includes section identifiers that relate the code sections to steps shown in figure 3.

In operation, a user logs into an editing system, creates a project, and then lays out  
25 enhanced content pages and creates triggers for those pages. A database stores project information that comprises pages and triggers and may include project name, author date and other information. Information in the database is employed to create a text based script file that describes each element, its attributes, its layout and triggering of the element. In one embodiment of the present invention, an XML file is employed. This file  
30 is output platform independent and completely defines the assets, their location and other attributes, as well as the triggering information necessary for the enhanced content

project. The XML file is then processed using one or more XSL rule based parsers that "translate" the XML file into another format, such as HTML 4.0 and Javascript 1.2, for example. As depicted in figure 2, XSL parsers are employed for emulation and for creating platform specific output files. Parsing of the enhancement file for a particular platform may include translation of color values. Some platforms do not display pure colors and as such a lookup table or translation algorithm may be employed to check a color value and to alter the color value. The process shown in figures 3 to 6 produces an HTML and Javascript output that may be run on an industry standard web browser and media player such as Microsoft Internet Explorer and Windows Media Player, both from Microsoft Corporation. Additional information regarding XSL may be obtained from the following books:

Title: Professional XSL

Authors: Kurt Cagle et al.

Publisher: Wrox Press Inc;

ISBN: 1861003579

Title: XSL Companion, The

Author: Neil Bradley

Publisher: Addison-Wesley Pub Co;

ISBN: 0201674874

The foregoing description provides a system and method that translates a platform independent enhancement file into platform dependent files without needing to change the authored enhancements, saving time and money and providing a uniformity of enhancement across multiple platforms. The steps shown in the figures need not be performed in the exact order shown. An XML file format has been employed in the described embodiment. Other formats, both public and proprietary, may be employed to describe enhancements and attributes of the elements comprising enhancements. Enhancement output files allow enhancement of a television broadcast that may employ various methods of delivering enhancement data. A first method transfers enhancement

data as part of the broadcast. A second method transfers a trigger and locator with the broadcast, and the set top box, or other platform, employs the locator to access enhancement information. The second method of transfer may further comprise receiving information identifying the type of platform requesting enhancement data (when the platform accesses the locator), and providing enhancement information suited to the requesting platform. A new or modified parser may be employed to support new platforms, or new versions of platforms. The new or modified parser then may be applied to a plurality of source enhancement files that need not be modified. In this manner, the present invention provides costs savings in supporting new platforms or new versions of platforms.

The foregoing description of the invention has been presented for purposes of illustration and description. It is not intended to be exhaustive or to limit the invention to the precise form disclosed, and other modifications and variations may be possible in light in the above teachings. The embodiment was chosen and described in order to best explain the principles of the invention and its practical application to thereby enable others skilled in the art to best utilize the invention in various embodiments and various modifications as are suited to the particular use contemplated. It is intended that the appended claims be construed to include other alternative embodiments of the invention except insofar as limited by the prior art.

**Claims**

What is claimed is:

1. A method of television enhancement produced by the steps of:  
using a platform independent television enhancement file comprising elements and attributes of said elements; and  
parsing said television enhancement file to produce an output file that may be viewed with a specific platform.
2. The method of claim 1 wherein said platform independent television is contained in a database and in said using step, the term using means accessing, said method further comprising the step of saving said output file.
3. The method of claim 1 wherein said method for creating said television enhancement is a presentation, said term using means accessing, said parsing step comprising:  
applying a first parsing script to said enhancement file to produce a first output file that may be viewed using a web browser and media player; and  
applying a second parsing script to said enhancement file to produce a second output file that may be viewed with a set top box.
4. The method of claim 1 wherein in the step of using, the term using means editing such that said editing specifies said elements and attributes, said method being for creating a television enhancement presentation, said parsing step comprising:

applying a first parsing script to said enhancement file to produce a first output file that may be viewed using a web browser and media player; and

applying a second parsing script to said enhancement file to produce a second output file that may be viewed with a set top box.

5. The method of claim 3 wherein said enhancement file further comprises:  
XML compliant tags for elements, triggers, and administrative information comprising enhancement file name and enhancement file creation date.
6. The method of claim 3 wherein said television enhancement file is a text file.
7. The method of claim 3 further comprising:  
displaying said first output file in a browser window.
8. The method of claim 3 wherein said step of applying a second parsing script further comprises:  
specifying an HTML version for said second output file.
9. The method of claim 3 wherein a link is associated with at least one of said elements.
10. The method of claim 3 wherein said attributes of said elements further comprises:  
a z order value for at least one of said elements.

11. The method of claim 3 wherein said first parsing script is an XSL transformation file.
12. The method of claim 3 wherein said second parsing script is an XSL transformation file.
13. The method of claim 3 further comprising:  
storing said second output file.
14. The method of claim 3 wherein said second parsing script imports HTML code into said second output file.
15. The method of claim 3 wherein accessing said enhancement file further comprises:  
accessing a database.
16. The method of claim 3 wherein said second parsing script is operable to translate a color value.
17. The method of claim 1 or 2 wherein said enhancement file is XML compliant.
18. The method of claim 17 wherein said step of parsing further comprises:  
applying an XSL transformation to said enhancement file.
19. The method of claim 17 wherein said step of parsing further comprises:  
translating a color value associated with one of said elements.

20. A system for developing television enhancements comprising:
- a computer;
  - a database;
  - a web browser; and
  - a parser operable to parse a platform independent television enhancement file contained in said database and to produce an output file that may be viewed employing said browser.
21. The system of claim 20 further comprising:
- a parser component operable to enable display of a media player if said television enhancement file contains an element representative of a television image.
22. The system of claim 20 wherein said parser is operable to create an output file for a specific platform.
23. The system of claim 20 wherein said parser is operable to translate a color value associated with an element contained in said television enhancement file.
24. A parser for producing a platform specific television enhancement file comprising:
- a function to access a platform independent television enhancement file comprising project information, a description of an element, the position of said element, and a time at which said element may be rendered.
  - a function to create an HTML header containing said project information;

(54) Title: SYSTEM AND METHOD FOR TELEVISION ENHANCEMENT

(57) Abstract: A text based script file describing enhancements is parsed to produce platform dependent enhancement files that may be employed to produce enhancements on a set topbox, enhanced television, or computer display. A script file may be of XML format and a parser may be an XSL translator. A parser may import HTML and Javascript from other applications. A parser may support a media player for emulation to view video and enhancements. Trigger data for rendering enhancements may be formatted into a javascript array. Trigger events may be employed to replace graphic pointers or text values. Multiple parsers, each supporting a specific platform, allow a single script file to be employed across multiple platforms. New platforms or versions of platforms are supported through new or updated parsers.

## AMENDED CLAIMS

[received by the International Bureau on 12 April 2002 (12.04.2002);  
new claims 25-27 added, remaining claims unchanged (2 pages)]

20. A system for developing television enhancements comprising:
- a computer;
  - a database;
  - a web browser; and
  - a parser operable to parse a platform independent television enhancement file contained in said database and to produce an output file that may be viewed employing said browser.
21. The system of claim 20 further comprising:
- a parser component operable to enable display of a media player if said television enhancement file contains an element representative of a television image.
22. The system of claim 20 wherein said parser is operable to create an output file for a specific platform.
23. The system of claim 20 wherein said parser is operable to translate a color value associated with an element contained in said television enhancement file.
24. A parser for producing a platform specific television enhancement file comprising:
- a function to access a platform independent television enhancement file comprising project information, a description of an element, the position of said element, and a time at which said element may be rendered.
  - a function to create an HTML header containing said project information;

a function to place said position of said element between division tags in an HTML output file if said element is either a text element or a graphic element;

a function to insert javascript code associated with said element if said element is an imported element;

a function to embed a media player in an HTML file if said element is a representative of a television;

a function to update an address at which said element may be accessed; and

a function to create and store triggers in a javascript array.

25. The parser of claim 24 wherein said parser is XSL compliant.

26. The parser of claim 24 further comprising:

a function that imports HTML code.

27. The parser of claim 24 further comprising:

a function to translate a color value.

(54) Abstract Title

DAVIC system supporting a JAVA-based client device

(57) A DAVIC system comprises two types of client devices, one type 220 operating based on Java and the other type 210 operating based on MHEG-5, and a server 200 capable of serving both types of client devices, for providing a client device with an application upon request from the client device.

The server 200 identifies the type of client device by using an extension included in the request generated from the client device.

## DAVIC SYSTEM SUPPORTING A JAVA-BASED CLIENT DEVICE

The present invention relates to a DAVIC system; and,  
5 more particularly, to a DAVIC system capable of supporting a  
Java-based client device.

DAVIC (Digital Audio Visual Council) sets industry  
10 standards for interactive digital audio-visual information and  
multimedia communications. A DAVIC system may be defined as  
an integrated system of hardware and software in conformity  
with the DAVIC specifications.

As an example of the DAVIC system, a VOD (Video On  
15 Demand) system is a combination of devices such as a server,  
client equipment and a network for providing a client with an  
audio-video program, e.g., a movie, on demand. To meet the  
demand, the VOD system provides end-user inter-activities  
(such as select video, play, pause and stop) and employs  
20 familiar graphical user interfaces.

The DAVIC system is basically comprised of a server, a  
plurality of client equipment connected via a network  
therebetween. The server stores various applications to  
provide corresponding applications to each client equipment  
25 on demand. The network delivers bi-directional control  
signals as well as data for the applications, wherein the

applications refer to collections of software for use in displaying service formats to facilitate the use of a DAVIC service, for example, a menu, a program list, a movie program, etc.

5           The server may be made up of computers such as workstations, backed up by multiple disks or large memories to store the applications, e.g., digital moving pictures. Conventionally, the data on the digital moving pictures is compressed prior to being stored in the disks or the memories  
10           in conformity with the MPEG-1 and MPEG-2 (Moving Picture Expert Group-1 and -2) standards.

          The client equipment includes a display device and a console, one of the so-called set-top boxes, for use in demanding a specific application and controlling progress of  
15           the video. The console is equipped with such keys as numerics 0-9, play, pause, fast forward/reverse and certain service-specific keys.

          The network, for delivering the applications and control signals between the server and the client equipment, may be  
20           configured with any one of a CATV (Community Antenna Television) network, a conventional telephone network, an ATM (Asynchronous Transfer Mode) network and the like.

          With respect to the user interface, the DAVIC system adopts a MHEG-5 (Multimedia and Hypermedia information coding  
25           Expert Group-5) specification. The MHEG-5 specification is a standard provided by the ISO (International Standardization

Organization), defined over a final-form representation for exchanging the applications, which allows a versatility thereto so that it may run on many different kinds of client/server environments.

5           A conventional DAVIC system adopting the MHEG-5 specification is described in Fig. 1. A server 100 includes a server control manager 102, a server communication manager 106 and a MHEG-5 application file manager 104. In the client equipment 110, a client control manager 112, a client communication manager 114 and an MHEG-5 engine 116 are  
10 installed.

          If an application is requested from the client equipment 110, the MHEG-5 application file manager 104 in the server 100 conducts a search of the requested application in response to  
15 the request from the client equipment 110. After the search, the client control manager 112 downloads the requested application to the client equipment 110 via the client communication manager 114. The client equipment 110 processes the downloaded application by using the MHEG-5 engine 116 and  
20 finally displays the requested application.

          In the conventional DAVIC system, the MHEG-5 engine 116 employed in the client equipment 110 has been implemented by using software. Therefore, a large volume of memory resources is required to install the MHEG-5 engine 116 implemented with  
25 software. The cost of the memory resources exacts more manufacturing cost of the client equipment 110. Therefore,

there has existed a need to reduce the volume of the memory resources taken up by the MHEG-5 engine 116.

Further, the MHEG-5 specification has an inherent limitation in providing a variety of features, especially with  
5 respect to the expression of the applications. In this connection, a Java software is more versatile than the MHEG-5 specification for the expression of applications.

In addition, if the DAVIC system intends to provide services for a Java-based client equipment as well as a MHEG-  
10 5-based client equipment, a method for an efficient identification of the type of the client equipment will be required.

15 It is, therefore, a primary object of the present invention to provide a DAVIC system capable of accommodating a Java-based client equipment which requires less memory therein than the conventional counterpart.

It is another object of the present invention to provide  
20 a method for simply identifying the type of the client equipment.

In accordance with one aspect of the present invention, there is provided a DAVIC system comprising: a plurality of client devices, the client devices including two types  
25 thereof, one type operating based on a Java and the other type operating based on a MHEG-5 specification; and a server,

capable of serving both types of the client devices, for providing an application upon request from the client device.

In accordance with another aspect of the present invention, there is provided a DAVIC system wherein the server  
5 identifies the type of the client device by using an extension included in the request information generated from the client device.

10 The above and other objects and features of the present invention will become apparent from the following description of preferred embodiments given with reference to the accompanying drawings, in which:

Fig. 1 describes a conventional DAVIC system operating  
15 based on a MHEG-5 specification;

Fig. 2 presents a DAVIC system in accordance with the present invention;

Fig. 3 illustrates a process performed in a server control manager; and

20 Fig. 4 depicts exemplary formats of application files stored in a server.

A DAVIC system in accordance with the present invention  
25 is shown in Fig. 2.

The inventive DAVIC system is comprised of a server 200,

two types of client devices 210, 220 and a network 230.

The server 200 includes a server control manager 202 for controlling the entire functions thereof, a server communication manager 208 for interfacing the server 200 with  
5 the network 230, a MHEG-5 application file manager 204 for storing applications in the form of a MHEG-5 file and a converter 206 for converting MHEG-5 applications into Java applications.

A MHEG-5 client device 210 is essentially same as the one  
10 described in the prior art.

The Java client device 220 includes a Java client control manager 222 for controlling the entire functions thereof, a Java client communication manager 224 for interfacing the Java client device 220 with the network 230 and a Java virtual  
15 machine 226 for displaying the applications received from the server.

Herein, Java or a Java software, developed by Sun Microsystems, is a collection of codes and tools that can be used to create applications software, such as a spreadsheet,  
20 a game or a World Wide Web site. It has powerful advantages over conventional languages or software. For example, a Java technology eliminates many of the problems associated with installing and running applications, and, therefore, eliminates a need to manage memories associated therewith.  
25 Java is also a platform-independent software, which frees a user to pick up any hardware and operating system best suited

to one's needs.

The operation of the inventive DAVIC system will now be described. For the purpose of illustration, it is assumed that the server 200 serves the Java client device 220 except  
5 otherwise specified.

A client inputs a request information requesting a video on demand service at the client device 220. The Java client control manager 222 informs the Java client communication manager 224 of the request information. The Java client  
10 communication manager 224 sends the request information to the server 200 via the network 230.

The request information is received at the server communication manager 208 and delivered to the server control manager 202. The server control manager 202 executes an  
15 identification process upon the client's request based on the delivered request information as described in Fig. 3.

Fig. 3 illustrates the identification process performed in the server control manager 202.

At step 300, the server control manager 202 retrieves an  
20 application file corresponding to the request information from the MHEG-5 application file manager 204 upon receiving the request information from the server communication manager 208. At step 302, the server control manager 202 accesses an extension included in the request information in order to  
25 identify whether the client device which issued the request information is based on the MHEG-5 specification or the Java.

In Fig. 4, there are illustrated formats of the application files stored in the MHEG-5 application file manager 204 of the server 200, formats of the application files requested from the Java client device 220 and from the MHEG-5 client device 210, respectively. To each of the application files requested from the Java client device 220 and the MHEG-5 client device 210, there is attached an extension of "java" and "mheg5", respectively, as shown in Fig. 4. With these extensions, the server control manager 202 can identify the nature of the client devices, i.e., whether it is the Java-based or the MHEG-5-based. The extension will be "mheg5" if the client device is operating based on the MHEG-5 specification, while, the extension will be "java" if the client device is operating based on the Java.

15. Using the extensions in identifying the nature of the client device eliminates any modification to the existing protocol between the server and the client device in the DAVIC system. In other words, if the identification is not performed by using the extensions, there may need a protocol or a procedure in addition to the existing protocol of DAVIC system so as to identify the nature of client devices.

In the above, the order of the step 300 and step 302 may be reversed or these steps may be executed in parallel since they are performed independently.

25 If the extension in the request information turns out to be the MHEG-5 at step 302, the server control manager 202

orders the server communication manager 208 to transfer the retrieved application file to the client device at step 304. If otherwise, i.e., the extension in the request information turns out to be the Java, the converter 206 converts the  
5 retrieved application file which is based on the MHEG-5 into the one based on the Java at step 306. The server control manager 202 then orders the server communication manager 208 to transfer the converted application file to the client device at step 308. By using this identification process, the  
10 client device 220, operating based on the Java, can be provided with an application file in conformity with the type thereof.

The converted application file is downloaded to the client communication manager 224 via the network 230. The  
15 Java virtual machine 226 manipulates the downloaded application file, and, then, displays the manipulated result.

As described above, the inventive DAVIC system is capable of providing a video on demand service not only to the MHEG-5-based client device 210 but also to the Java-based client  
20 device 220 just by employing the converter 206 therein without having to modify the existing MHEG-5 application file manager 204.

Accommodating the Java-based client device 220 in the DAVIC system has a number of advantages such as: first, a  
25 manufacturer can produce an inexpensive client device since the Java virtual machine involves less memory than MHEG-5

engine; second, the processing speed of the Java-based client device 220 can be improved since the Java virtual machine 226 can alternatively be implemented with only hardware, contrary to the MHEG-5 engine 216 which is not implemented with hardware; and, third, the server can provide a client with more variety of features of applications such as a 3-dimensional graphic display and an animation since the Java is more versatile than the MHEG-5 in displaying various features.

Further, if the conventional DAVIC system intends to accommodate the Java-based client device 220 in addition to the MHEG-5-based client device 210, existing DAVIC specifications should be modified for a new feature. In other words, a protocol or a procedure should be incorporated in the server 200 in order to identify the type of the client device to be served. Adopting the inventive method, however, i.e., identifying the type of the client device by using the extension of the application files requested from the client device, eliminates the need to modify or add the new feature. Therefore, the inventive DAVIC system can serve the Java-based client device 220 as well as the MHEG-5 based client device 210 by simply adding only the converter 206 thereto.

While the present invention has been described with respect to the preferred embodiments, other modifications and variations may be made without departing from the scope of the present invention as set forth in the following claims.

Claims:

1. A DAVIC system comprising:

a plurality of client devices, the client devices  
5 including two types thereof, one type operating based on a  
Java and the other type operating based on a MHEG-5; and  
a server, capable of serving both types of the client  
devices, for providing a client device with an application  
upon request from the client device.

10

2. The DAVIC system of claim 1, wherein the DAVIC system  
further comprises a communication network between the server  
and the client devices for transferring signals including the  
request and the application.

15

3. The DAVIC system of claim 2, wherein each of the MHEG-5-  
based client devices includes:

a MHEG-5 client control manager for controlling the  
entire functions of the MHEG-5-based client device;

20

a MHEG-5 client communication manager for interfacing the  
MHEG-5-based client device with the communication network; and  
a MHEG-5 engine for displaying the application.

4. The DAVIC system of claim 3, wherein each of the Java-  
25 based client devices includes:

a Java client control manager for controlling the entire

functions of the Java-based client device;

a Java client communication manager for interfacing the Java-based client device with the communication network; and  
a Java virtual machine for displaying the application.

5

5. The DAVIC system of claim 4, wherein the server includes:  
a server control manager for controlling the entire functions thereof;

a server communication manager for interfacing the server with the communication network;

10

a MHEG-5 application file manager for storing MHEG-5-based applications; and

a converter for converting the MHEG-5-based applications into Java-based applications.

15

6. The DAVIC system of claim 5, wherein the applications stored in the MHEG-5 application file manager are in the format of a file with an extension of ".mheg5".

7. The DAVIC system of claim 6, wherein the request from the MHEG-5-based client devices has the format of a file with an extension of ".mheg5".

20

8. The DAVIC system of claim 7, wherein the request from the Java-based client devices has the format of a file with an extension of ".java".

25

9. The DAVIC system of claim 8, wherein the server performs an identification procedure in which the server control manager identifies the type of the client device by using the extension included in the request.

5

10. The DAVIC system of claim 9, wherein the server control manager controls the server communication manager to send the application corresponding to the request to the client device which has issued the request if the client device is determined to be of a MHEG-5 type.

10

11. The DAVIC system of claim 10, wherein the server control manager controls the converter therein to convert the application corresponding to the request into a converted Java-based application, and, then, controls the server communication manager to send the converted Java-based application to the client device which has issued the request if the client device is determined to be of a Java type.

15

12. The DAVIC system of claim 11, wherein the DAVIC system is a video on demand system.

20

13. The DAVIC system of claim 11, wherein the communication network is a CATV network.

25

14. The DAVIC system of claim 13, wherein the communication

network is a conventional telephone network.

15. The DAVIC system of claim 14, wherein the communication network is a ATM (Asynchronous Transfer Mode) network.

5

16. An apparatus constructed and arranged substantially as hereinbefore described with reference to or as shown in figures 2 to 4 of accompanying drawings.

(54) **Hypertext markup language protocol for television display and control**

(57) Textual and graphical displays are provided on a television screen using a hypertext markup language (HTML). On-screen display devices allow a user to invoke hyperlinks to different pages of HTML-coded data in addition to function calls for controlling television and non-television appliance functions. A method provides HTML-coded display data which is processed to provide a signal suitable for reproduction on a television. The display data may provide information on a featured movie (325) or other presentation of an associated video programming service signal such as a network television broadcast (315). Function calls (232, 510, 530, 550) allow the control of various television functions and programming options, such as the pur-

chase of pay-per-view programming (330), or television display options such as aspect ratio (512, 514), channel, brightness (518), picture-in-picture, or split-screen. Non-television appliances which may be controlled with function calls include audio equipment which is associated with the programming service (e.g., surround sound (552), filtering (554, 556)) in addition to, for instance, a home heating and air conditioning system (536, 538) or other household appliances (532, 534). The invention allows a designer to adapt the vast HTML resources of the Internet for use in the television environment for entertainment, educational or informational purposes.

## Description

### BACKGROUND OF THE INVENTION

5 The present invention relates to an apparatus and method for providing textual and graphical displays using hyper-text markup language (HTML) in a television decoder. Additionally, HTML is adapted for use in controlling various tele-vision functions.

10 Hypertext Markup Language (HTML) is a system for marking documents to indicate how the document should be displayed, and how various documents should be linked together. HTML has been used extensively to provide docu-ments on the computer communications network known as the Internet. The Internet includes a vast collection of inter-connected documents which are stored in computers all over the world in a system known as the World Wide Web (i.e., the Web). The documents are organized into web spaces, where a web space includes a home page and links to other documents which may be in the local web space or in an external web space. Such links are known as hyperlinks. Doc-uments may include moving images, text, graphical displays, and sound.

15 HTML is a form of Standard Generalized Markup Language (SGML), defined by the International Standards Organ-ization (ISO), reference number ISO 8879:1986. HTML specifies the grammar and syntax of markup tags which are inserted into a data file to define how the data will be presented when read by a computer program known as a browser. The data file, which is typically stored on a Web server, includes one or more Web pages which are visited by users who have computers which may run different browsers. When a page is visited, typically via a telephone connection, 20 HTML data is downloaded to a user's computer. The computer's browser processes the data to format a layout for the page so the page can be viewed by the user on a computer screen.

An SGML document includes three parts. The first part describes the character set, or codes, which are used in the language. The second part defines the document type, and which markup tags are recognized. The third part is known as the document instance and contains the actual text and markup tags. The three parts may be stored in different files. 25 Furthermore, HTML browsers assume that files of different pages contain a common character set and document type, so only the text and markup tags will change for different pages.

The base character set for HTML is Latin-1 (ISO 8859/1), which is an eight-bit alphabet with characters for most American and European languages. The 128-character standard ASCII (ISO 646) is a seven-bit subset of Latin-1. For simplicity and compatibility with different browsers, many Web pages include only an ASCII character set. Furthermore, 30 non-ASCII characters may be defined using sequences of ASCII characters. For example, the character "è" is defined as "&egrave".

HTML characters are enclosed in angled brackets to distinguish them from the page text. The characters may appear alone, or may appear at the start and end of a field of the page text. For example, (P) indicates the start of a new paragraph, while (I)Welcome to my home page(I) indicates the phrase "Welcome to my home page" should be itali-cized. Generally, HTML tags provide text formatting, hypertext links to other pages, and links to sound and picture ele-ments. HTML tags also define input fields for interactive Web pages.

The following list identifies some of the more common HTML codes and functions:

| HTML Code            | Description                                                                           |
|----------------------|---------------------------------------------------------------------------------------|
| 5    <A>             | anchor code - defines a section of text as a hyperlink or target of another hyperlink |
| <blockquote>         | quoted text                                                                           |
| <BODY>               | main portion of page                                                                  |
| <B>                  | bold face                                                                             |
| 10    <!--comment--> | author comment - does not appear on page                                              |
| <EM>                 | emphasized text, usually italicized                                                   |
| <HEAD>               | header or title                                                                       |
| <HR>                 | horizontal rule                                                                       |
| 15    <HTML>         | denotes an HTML document                                                              |
| <I>                  | italicize                                                                             |
| <BR>                 | line break                                                                            |
| 20    <LI>           | list item                                                                             |
| <UL>                 | unordered list                                                                        |
| <OL>                 | ordered list                                                                          |
| 25    <P>            | start a new paragraph                                                                 |
| <STRONG>             | strongly emphasize text, usually bold face                                            |
| <TITLE>              | title of document                                                                     |
| <TT>                 | typewriter text                                                                       |
| 30    <U>            | underline                                                                             |

Moreover, there are currently three standardized levels of HTML. Level 1 defines a baseline level with which all Web browsers must be compatible. Level 2 includes the elements of level 1 in addition to tags for defining user input fields. Level 3 adds markup tags for various features such as tables, figures and mathematical equations. The levels are fully backwards compatible.

Hypertext is so-named because it allows a user to access different pages in different orders using hyperlinks, rather than in a predetermined, linear manner. Moreover, a particular hypertext application known as hypermedia includes elements other than text, such as images, video, and audio. HTML can specify links to multimedia objects. Links in an HTML hypertext page usually appear as highlighted text which is known as the anchor of the link. Moreover, an image, such as an icon, can be an anchor, which is activated, for example, by the user clicking on the icon using a mouse or other pointing device. Furthermore, images known as image maps can include a number of regions which are themselves individual anchors.

An HTML application is made available to users on the Web by storing the HTML file in a directory that is accessible to a server. Such a server is typically a Web server which conforms to a web browser-supported protocol known as Hypertext Transfer Protocol (HTTP). Servers that conform to other protocols such as the File Transfer Protocol (FTP) or GOPHER may also be used but do not support interactive HTML files.

HTTP defines a set of rules that servers and browsers follow when communicating with each other. Typically, the process begins when a user clicks on an icon in an HTML page which is the anchor of a hyperlink, or the user types in a Uniform Resource Locator (URL), described below. A connection is then made to the server at the address and port number specified by the URL. Next, the browser sends a request to retrieve an object from the server, or to post data to an object on the server. The server sends a response to the browser including a status code and the response data. The connection between the browser and server is then closed.

FTP is a file transfer protocol supported by Transmission Control Protocol/Internet Protocol (TCP/IP) protocol stacks. In particular, FTP is session oriented while HTTP is not. Consequently, unlike HTTP, with FTP, the server is required to maintain a list of active clients.

GOPHER is an indexing system that enables a user to access various Internet resources through a menu-driven system.

Other protocols include TELNET, NEWS, or MAILTO. A TELNET program allows a user to connect to another computer and use it as if the user were sitting at the keyboard of the computer. NEWS indicates that a link to a USENET newsgroup should be made, for example, to access a specific news article. MAILTO indicates an Internet Mail Protocol. If a user targets a mail type URL, the browser will open a window to allow the user to create a mail message to be delivered to the indicated e-mail address. The above protocols are standardized by the Internet Engineering Task Force (IETF) and are supported by most web browsers.

The URL is a unique address which identifies virtually all files and resources on the Internet. A URL has the form:

method://server:port/path/file#anchor.

The "method" of accessing the resource is the web browser-supported protocol, and may include, for example, HTTP, FTP, GOPHER, TELNET, NEWS, or MAILTO. The "server:port" indicates the name of the server which is providing the resource, and is alternatively known as the Internet domain name. For example, many companies will use their company name as part of the server field. The port designation is the port number on the server, but is usually not used since a default port is assumed. The "path" indicates the directory path to the resource. The file indicates the file name of the resource. The "anchor" indicates the named element in the HTML document. Not all fields are required.

For example, consider the following URL:

http://www.company.com/news/june.html.

The access method is HTTP, the server is www.company.com, there is no port specified, the path is news, the file is june.html, and there is no anchor. Examples of FTP, GOPHER, TELNET, NEWS, and MAILTO URLs are, respectively:

ftp://ftp.uu.net/doc/literary/obi/World.Factobook;  
gopher://gopher.micro.umn.edu/  
telnet://compuserve.com/  
news:alt.cows.moo; and  
mailto:president@whitehouse.gov.

Moreover, interactive Web applications use a client-server standard known as the Common Gateway Interface (CGI). A CGI program generates HTML in real-time to produce a dynamically generated Web page. CGI programs, or scripts, perform various Web functions. For example, a CGI program known as Imagemap processes imagemap for servers. Moreover, HTML forms often require CGI scripts to process user-entered information. CGI scripts act as an interface between Web servers and other computer applications, including database managers and order processing systems.

In view of the rapidly increasing use of Web pages and other resources which are created using HTML, it would be advantageous to provide a scheme for adapting such resources for use by consumers and others via television or other broadcast or prerecorded media. In particular, it would be desirable to provide graphical and textual displays for use with a television for educational and entertainment purposes. Such displays should be compatible to the extent possible with existing transmission and receiving equipment including set-top decoders and the like, and should further be compatible with current communication protocols such as those for transmission of digital television signals via satellite and/or cable plants.

Furthermore, the system should provide the capability to control various television functions such as channel selection, volume, and language preference, in addition to interactive operations such as the purchase of near-video-on-demand programming or other home shopping products or services, as well as non-television appliance functions such as for associated audio equipment, or, lastly, for a home heating and air conditioning system, security system or the like. The present invention provides a system having the above and other advantages.

## SUMMARY OF THE INVENTION

In accordance with the present invention, an apparatus and method are presented for providing textual and graphical displays using hypertext markup language (HTML) for use with a television decoder. Additionally, the invention allows the control of various television functions, such as channel selection, volume, or language preference, in addition to non-television functions, such as programming of an automated home heating system or the like. With the invention, the vast HTML resources of the Internet may be adapted for use in the television environment for entertainment, educational or informational purposes.

A method for providing display data for use with a television includes the step of providing a data signal which includes display data which is coded according to a hypertext markup language. The display data signal is processed

to provide a signal suitable for reproduction on a television or similar video display appliance. In particular, the display data may allow a user to invoke hyperlinks to view different parts of the display data, such as different display data pages. The display data may also be used to allow a user to invoke function calls which control a function which may or may not be related to the television or an associated programming service signal.

Moreover, the display data may provide information regarding an associated video programming service signal, such as a network television broadcast signal. The display data may provide information on a featured movie or other special presentation, or may provide a programming guide with program scheduling information. The display data may include a viewer input field which allows viewing of the associated video programming service signal on a fee basis. For example, when an interactive capability is provided between a television decoder and a cable system headend or other programming service provider station, a user may enter a password which authorizes the purchase of pay-per-view programming.

Furthermore, the display data signal and associated video programming service signal may be processed for display on the television in an overlay (e.g., combined) manner. For example, the display data may be provided in a border region, while the video programming service signal is provided in an inset region, or vice-versa. Alternatively, a split-screen, picture-in-picture, or other configuration may be provided.

The display data may allow a user to invoke hyperlinks and function calls to view display data and/or the associated video programming service signal. For example, the display data may be used to provide a screen with buttons or graphical or textual devices which may be selected by a user through a remote control. When a particular button is selected, a corresponding hyperlink and/or function call may then cause the display of a screen including additional display data (e.g. an additional HTML page) and/or a particular video programming service channel, and may further control a particular television function, such as volume, muting, or the like, or a non-television function, as mentioned.

A corresponding apparatus is also presented.

Additionally, a receiver is presented for providing display data for use with a television. The receiver may be a television decoder (e.g., set-top box) which has an input for receiving a data signal comprising the display data which is coded according to a hypertext markup language. Furthermore, a display data processor is included for processing the display data signal to provide a signal suitable for reproduction on the television.

The receiver also has an input for receiving a video programming service signal, and a video processor for processing the video programming service signal. This processor may perform video decompression processing. The display data provides information regarding the video programming service signal.

A user command processor in the receiver is operatively associated with the display data processor for receiving user commands for allowing selective viewing of the display data. The user commands may be provided, for example, by an infrared remote control transmitter, or a mouse or other pointing device. Moreover, the user command processor may work in conjunction with the video processor for receiving user commands for allowing selective viewing of the video programming service signal. That is, commands entered by a user may be received by the user command processor and sent to the video processor to provide the appropriate action. In this way, the user can select the programming service and display data he wishes to view, and optionally a particular viewing format such as, for example, aspect ratio (e.g., movie box format), color settings, brightness, contrast, or other display options.

The display data may include URLs which represent function calls which are implemented in accordance with the user command processor for allowing selective control of functions of the television or a non-television related device. For example, a display data screen may include a button which initiates a function call for changing the volume of the television or selecting a language preference of an available soundtrack or closed captioned signal. Another button may initiate a function call for setting an automated heating and air conditioning system in a household, for instance. Moreover, the relationship between the syntax of the function calls and the resulting functions may be determined according to a uniform resource locator syntax disclosed herein.

## BRIEF DESCRIPTION OF THE DRAWINGS

FIGURE 3 is an illustration of a screen with HTML/HTVP display data in accordance with the present invention.

FIGURE 4 is an illustration of a screen with HTML/HTVP display data combined with a video programming service signal in accordance with the present invention.

FIGURE 5 is an illustration of a screen with HTML/HTVP display data for selecting television and non-television appliance function calls in accordance with the present invention.

## DETAILED DESCRIPTION OF THE INVENTION

A method and apparatus are presented for providing textual and graphical displays using hypertext markup lan-

guage (HTML) for use with a television decoder. Additionally, HTML is adapted for use in controlling various television and other functions in a hypertext markup language protocol defined herein as "HTVP" HTVP may be considered to be a type of HTML which is used in implementing the functions in accordance with the present invention.

The HTVP concept, which is a framework upon which future protocols can be developed and defined, builds upon the methods used by HTML pages for URL syntax. As mentioned, a URL, or Uniform Resource Locator, typically defines three things: a communication protocol, a logical access path to be used by that protocol, and the name of an object. Example object types include bitmap images, other HTML pages, and files of virtually any type or format.

The HTVP URL type represents a new function associated with URLs within the HTML syntax. The general form of an HTVP URL in accordance with the present invention is defined as:

`htvp://function_domain/receiver_function?function_parameters.`

The "function\_domain" field identifies the family of receiver functions of which the identified function is a part. A standard or default function\_domain can be defined as "std." The std function may define a group, or family, of common functions which can be made available as an open standard for use by the public at large. Furthermore, a proprietary function\_domain may also be defined which is recognized only by a receiver of a particular company. For example, a function\_domain of "company" may be used. A receiver that does not recognize functions in a certain domain will ignore the URL in which they are referenced.

The "receiver\_function" field identifies a specific receiver function or application program interface (API). For example, when the receiver is a television decoder (e.g., set-top box), functions may include "channel\_up," "select\_virtual\_channel," "buy\_program," "buy\_package," "link\_to\_page," "VIEW," "select\_language," "mute\_audio" and so forth. These receiver\_function fields instruct the decoder to adjust the television display and/or sound as indicated.

The "function\_parameters" field provides an optional list of parameters to be passed to the receiver to execute functions therein. These parameters may be used to select sub-functions, or provide fixed parametric values. For example, when the receiver\_function field is "select\_virtual\_channel," a required parameter would be the channel number for which the programming should be displayed. In this case, a URL that would acquire virtual channel 444, for example, would have the syntax:

`htvp://std/select_virtual_channel?channel=444.`

Thus, the function\_parameters field is "channel=444".

Furthermore, the function\_parameters field may include more than one parameter, where each parameter is of the form:

parameter\_ID=parameter\_value, and a division between parameters is indicated by an ampersand (&). For example, a URL identifying an HTVP receiver\_function called "function\_1" that has three parameters, "parm1," "parm2" and "parm3", with respective values "value1," "value2," and "value3", has the syntax:

`htvp://std/function_1?parm1=value1&parm2=value2 &parm3=value3.`

For example, function\_1 may allow a user to purchase various products or services via an interactive cable television network, where parm1, parm2 and parm3 indicate the purchase number, and value1, value2 and value3 indicate the selected items.

Moreover, the function\_parameters field may be incorporated into a URL for an HTML page following the filename field. Provision may be made for interactivity such that a user can interact with a processor which operates using commands similar to a Web browser. That is, the user can enter or select a function\_parameters field using an input device such as a mouse, other pointing device, infrared transmitter, or keyboard. The processor receives the function\_parameters field entered, appends the field to a URL, and transmits a request back to a server.

For example, a user may wish to retrieve stock quote information using the television. In this case, assume the relevant Web site is "www.stocks.com," the relevant server file is "quotes," and the user-entered function\_parameters field will be the symbol for a particular stock (e.g., GM) which is recognized by the Web site, e.g., "tick=GM," where parameter\_ID=tick, and parameter\_value=GM. In this case, the processor transmits the following URL to the Web site server:

`http://www.stocks.com/quotes?tick=GM.`

Here, the "?" is specified by the definition of the HTML FORM command as the separator between the name of the program on the server that executes the database search ("quotes" in this case) and the parameters passed into it (e.g.,

tick=GM). The syntax used to delimit the parameters and their values is defined in the same manner as the POST method within the HTML FORM type.

Generally, the hypertext markup element FORM is used to define an area of a page which contains objects for input from the viewer. The objects may be input fields and other interactive objects, such as pop-up menus, check boxes and buttons. There can be any number of forms on a page, each of which begins and ends, respectively, with the tags (FORM) and /FORM). The beginning FORM tag takes an ACTION attribute that specifies the action to take with the user-entered information. The ACTION attribute takes a URL as its value which can be either the URL of a CGI script or a MAILTO URL. For example, when the input field "tick=GM" is received, the action is to send a form HTML page which provides the requested information, including the stock price. The POST markup element indicates that the FORM content is in a standard configuration.

FIGURE 1 is a block diagram of a television transmission system in accordance with the present invention. The system includes a transmitter side, shown generally at 100, and a receiving side, shown generally at 150. The transmitting side 100 includes a programming services function 105, which comprises video and audio programming services from network television stations and the like. The programming services audio/video data, which may be carried as digital data, is multiplexed with HTML/HTVP data from an HTML/HTVP data function 110. The HTML/HTVP data may be related to some or all of the programming services and include, for example, display screens which allow a user to purchase programming or other products or services, or provide information on the available programming services, such as movie reviews, programming guides, and so forth. Moreover, the HTML/HTVP data may provide unrelated information such as stock quotes, weather information, airline travel schedules, or virtually any resource which is constructed with HTML. Moreover, HTML/HTVP data may include information for controlling various television functions.

The programming services data and the HTML/HTVP data are provided to a multiplexer 115, which outputs a corresponding combined signal to a transmitting antenna 120. The transmitting antenna transmits a signal to a receiving antenna 155 via a satellite 125. The signal may be carried as a packetized digital transport stream which conforms to, for example, the Moving Pictures Experts Group-2 (MPEG-2) standard.

The transport stream is provided to a cable system headend 160, where the data may be processed for distribution to cable system customers. For example, various decryption/encryption and scrambling/descrambling operations may take place. Additionally, insertion of local commercials and programming may occur. Moreover, at the cable system headend 160, it is possible to provide HTML/HTVP data in addition to, or in lieu of, the data provided by function 110 using means not shown. For example, HTML/HTVP data from local businesses and broadcasters may be provided. Moreover, the transport stream may be broadcast directly to the user via a direct broadcast satellite system, microwave broadcast system, or the like.

The cable system headend 160 distributes the transport stream to subscribers via representative hubs 165 and 170, and spokes as shown. At a subscriber's home 180, a decoder receives the transport stream, decodes it, and provides an audio and video signal for reproduction on a television 188 or similar video display appliance.

FIGURE 2 is a block diagram of a television receiver in accordance with the present invention. The decoder, shown generally at 180, corresponds to the decoder of FIGURE 1. The decoder 180 receives the transport stream from the cable headend, or alternatively, directly from a satellite in a direct broadcast satellite communication scheme. The transport stream is demultiplexed at demultiplexer 205 to recover the HTML/HTVP data and programming service audio/video data as shown. The programming service data is parsed at parser 220 and provided to a memory manager 225. The memory manager, which may include a central processing unit, controls the decoding of the audio and video data by interacting with a video decompression processor 240, an audio decompression processor 245 and a memory 235.

The memory 235, which may comprise a dynamic random access memory (DRAM), is used to temporarily store the video pictures prior to decoding and presentation of the video on the television screen. The video decompression processor 240 provides a variety of processing functions, such as error detection and correction, motion vector decoding, inverse quantization, inverse discrete cosine transformation, Huffman decoding and prediction calculations, for instance. After being processed by the decompression processor 240, the video pictures are output to a combiner 250. Alternatively, the decoded data may be temporarily stored in the memory 235.

The audio decompression processor 245 processes audio data using, for instance, inverse quantization, Huffman decoding, and spectral shaping algorithms.

The memory manager 225 receives commands from a user command processor 230, which, in turn, receives a user command via terminal 232. The user command may be input, for example, by a mouse or other pointing device, a keyboard, or an infrared remote control or the like. The user command processor 230 can provide a user request signal via the cable plant or a telephone line to the cable headend to achieve an interactive capability, and can further provide a control signal to the combiner 250. Additionally, means (not shown) may be used for maintaining a record of user commands which is periodically transmitted to the cable headend or other broadcast station such as in a store-and-forward routine. The memory manager 225 also receives commands from an HTVP processor 215.

The HTML/HTVP processor 215, which communicates with a memory 210, receives the HTML/HTVP data from the

demultiplexer 205. The processor 215 may include a central processing unit which implements an HTML-based code which is analogous to a Web browser. The HTML/HTVP processor also receives commands from the user command processor 230. HTML/HTVP display data provided by the processor 215 is then provided to the combiner 250, where it may optionally be combined with the video data from processor 240 to produce a graphical display on a television screen wherein the display data overlays the programming service data, or vice-versa. The memory 210 may include service map data which allows an HTML/HTVP page displayed on the television screen to link to other HTML/HTVP pages. Moreover, note that the HTML/HTVP code may be downloaded to the decoder 180 via the transport stream or a telephone line (not shown), and/or installed locally, e.g., via a smart card.

FIGURE 3 is an illustration of a screen with HTML/HTVP display data in accordance with the present invention. The screen, shown generally at 300, comprises an HTML/HTVP page which was provided using the HTML/HTVP display data from processor 215 in FIGURE 2. The screen 300 can include a variety of textual and graphical displays in addition to providing an interactive capability. For example, the screen 300 includes buttons 305, 310, 315, 320, 335, 340 and 345, which define hyperlinks to other HTML/HTVP pages or function calls. The buttons may be selected by the user via a pointing device, infrared remote control, or the like. The buttons may include text and/or graphics, such as icons, which inform and entertain the user.

Button 305 informs the user that by pressing the "←" key on the keypad of a remote control, for instance, a previous HTVP display page may be selected for viewing. Referring again to FIGURE 2, when the user command processor 230 receives the user's command, it passes it to the HTVP processor 215 to cause the processor to provide the appropriate display data to the television. Moreover, the user command processor 230 may provide a signal to the memory manager 225 to provide audio and or video of the programming service in conjunction with, or in lieu of, the HTVP data.

Button 310 informs the user that by pressing the "→" key, a next page may be selected for viewing. Button 315 informs the user that by pressing the "\*" key, a page which includes a programming guide may be selected for viewing. Button 320 informs the user that by pressing the "?" key, a page with helpful information may be selected for viewing. Button 335 informs the viewer that by pressing the "1" key, a page with a movie review may be viewed. Button 340 informs the viewer that by pressing the "2" key, a page with information on the movie's leading actress may be viewed. Button 345 informs the viewer that by pressing the "3" key, a page with information on tomorrow's featured movie may be viewed.

Additionally, the screen 300 includes a region 325 which does not initiate a hyperlink but provides relevant text and/or images, such as the title of a featured movie. Field 330 is an HTVP input field which provides interactive capability. Interactive cable television systems are becoming increasingly common. Such systems allow a subscriber to transmit signals from their homes to the cable system headend for ordering pay-per-view movies, sports and other programming services, including near-video-on-demand (NVOD), to purchase goods or services through a home shopping channel, or to participate in surveys, contests and the like. Alternatively, if the cable plant does not provide such an interactive capability, the television decoder may be coupled to a telephone line for automatically dialing a computer which maintains billing and authorization records, e.g., in a store-and-forward routine. In either case, an addressable decoder is required.

In particular, input field 330 allows a user to enter a password, for example, using the keypad on a handheld remote control, to authorize the purchase of a pay-per-view program. Referring again to FIGURE 2, when the user command processor receives the password, it will transmit it to the cable headend or other location for authorization. When the request is authorized, the corresponding programming service and/or HTML/HTVP data will be transmitted to the decoder 180 in the manner discussed.

FIGURE 4 is an illustration of a screen with HTVP display screen combined with a video programming service signal in accordance with the present invention. The screen, shown generally at 400, includes a combination, or overlay, of HTML/HTVP display data, and a programming service video. Techniques for providing multiple images in a television display (e.g., picture-in-picture) are well known in the art. Any such well known technique may be used to provide the combined display of FIGURE 4.

In the example shown, the screen 400 includes a sub-region, or inset, 410 in which a video programming service is displayed. Elements 305, 310, 315, 320 325 and 330 are the same as discussed in connection with FIGURE 3. This screen configuration allows the user to view the programming service video, which may be the current channel the user had been viewing, while also viewing the HTML/HTVP display data in the surrounding region 420 to learn about other available programming options. Alternatively, the sub-region 410 may provide a free, introductory preview of a pay-per-view program, while the HTML/HTVP display in the surrounding region 420 provides information on ordering the entire program.

Moreover, the screen 400 may provide a HTML/HTVP display which is updated real-time with information that is unrelated to the video image present in sub-region 410. For example, HTML/HTVP data may provide stock prices or weather information, while the sub-region 410 allows the user to independently view any available programming service. In a further alternatively, the HTML/HTVP display may be provided in the sub-region 410 as an overlay to the programming service video which is present in the surrounding region 420. Other variations and combinations are

possible, including split-screen and picture-in-picture.

Furthermore, the user may provide a command for switching or otherwise modifying the relative positions of the HTML/HTVP display and the programming service video. The user command processor 230 of FIGURE 2 will be responsive to the user's command in sending a control signal to the HTML/HTVP processor 215, memory manager 225, and/or the combiner 250 for controlling the output signal to the television.

The HTVP concept can be extended to various applications. For example, it can provide a text service, which is a virtual channel that provides the user with a number of inter-linked text/graphics screens. As with teletext (e.g., closed captioning), the source data for each screen is broadcast in a carousel, or cyclic, manner such that data for a complete page is transmitted in one or more segments over a number of successive transmission cycles. The decoder must wait until the desired page is transmitted in full. When the full page is captured, it is stored in memory, such as a random access memory (RAM) (e.g., memory 210), for subsequent processing and display.

In one application, HTVP can provide a report back feature. In this case, a standard application program interface (API) can be used. An API is a set of predetermined functions for building an application. For example, an API can be used that defines a particular design, color, or pattern. Moreover, an API can be used to build an HTML page which include a button that, when selected, causes a parameter string to be processed by a store-and-forward routine in the decoder. For example, an API could include a telephone number to call and a message to deliver. An option could allow either immediate reporting or store and forward operation.

Another option could require correct entry of a password to enable the function. Though not part of the parameter list, the data report can include the unit address for informing the upstream equipment of the source of the request or report. Thus, for example, a decoder could automatically report diagnostic information to a cable system headend when the decoder is not operating properly.

Various other functions can be supported by the HTVP concept. In the following list, the first column lists a proposed HTVP syntax, while the second column explains the associated function. The implementation of a function using the suggested syntax in accordance with the present invention is referred to as a "function call." The HTVP commands can be linked to appropriate buttons or other graphical displays on a television screen interface to facilitate selection.

| Syntax                                             | Function                                                                                                                                                       |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| htvp://std/channel_down                            | Tunes to the next lower channel number                                                                                                                         |
| htvp://std/channel_up                              | Tunes to the next higher channel number                                                                                                                        |
| htvp://std/getchannel_number                       | Returns an ASCII text string representing the channel number                                                                                                   |
| htvp://std/getchannel_name                         | Returns an ASCII text string representing the channel name                                                                                                     |
| htvp://std/mute                                    | Enables audio muting                                                                                                                                           |
| htvp://std/unmute                                  | Disables audio muting                                                                                                                                          |
| htvp://std/volume_down                             | Lowers the audio volume by one level                                                                                                                           |
| htvp://std/volume_up                               | Raises the audio volume by one level                                                                                                                           |
| htvp://std/program_name                            | Returns the program name                                                                                                                                       |
| htvp://std/purchase?item=xxx                       | Records a purchase of an item specified with an item identifier. Can be used for impulse pay per view or items unrelated to the current material being viewed. |
| htvp://std/skip_back                               | Changes channel to a theater of an NVOD program that is earlier than the current channel.                                                                      |
| htvp://std/set_language?lang =xxx:[audio[subtitle] | Set the language preference                                                                                                                                    |
| htvp://std/ir_blast?string=x xx                    | Transmit the quoted string (xxx) using an infrared blaster                                                                                                     |

In the table above, an "infrared blaster" refers to a secondary infrared transmitting device which transmits an infrared signal in response to an infrared or other command received by a user. For example, a user may transmit an infrared command from a hand held transmitter to a set-top decoder to view a particular television channel. The decoder will execute the a function call which switches the television to the appropriate channel, and also transmit an infrared signal for example, to a VCR to cause the VCR to begin recording, or to an audio component to cause the component to operate in a particular mode (e.g., surround sound).

Moreover, the HTML/HTVP concept may be extended to allow the viewer to control household appliances other than a television when the appliances are linked to the decoder. For example, an HTVP page may provide hyperlinks, input fields, and function calls which allow the viewer to program a household security system, heating and cooling system, fire alarm system, or the like for convenience or energy conservation purposes.

For example, FIGURE 5 is an illustration of a screen with HTML/HTVP display data for selecting function calls in accordance with the present invention. Both television and non-television function calls are provided. The screen, shown generally at 500, includes a "TV Control" field 510, a "Home Systems" field 530, and an "Audio Center" field 550. The TV Control field 510 allows a user to control various television related functions. In the illustration shown, the aspect ratio may be controlled by a user-selectable button 512 for a standard (std) aspect ratio, and a button 514 for a "movie" aspect ratio. The tint level of the video image is represented by a bar 516, and the brightness is represented by a bar 518.

For example, when the aspect ratio is changed, a user command is provided to the user command processor 230 which then instructs the memory manager 225 and video decompression processor 240 to provide the video signal with the appropriate aspect ratio. This is an example of a television-related function call since a television function is being controlled via the use of a HTML/HTVP display screen.

In the Home Systems field 530, a security system such as a user's home security system includes an "on" button 532 and an "off" button 534. A heating system may be controlled using a "set" button 536 or an "auto" button 538. The set button 536 allows the user to select customized settings, while the auto button 538 may provide a default profile. In either case, the user provides a command to the user command processor 230 which then provides an appropriate signal to the security or heating system. Referring to FIGURE 2, the decoder 180 can be provided with interface means (not shown) for providing an appropriate control signal to the non-television system which is to be controlled via the screen 500. This is an example of a non-television related function call since a non-television function and/or appliance is being controlled via the use of a HTML/HTVP display screen.

A non-television function or appliance is defined herein to refer to any device, apparatus or system other than a television, and includes, for example, a heating or air conditioning system, a security system, an air filtering system, or household appliances such as a water heater, clothes washing machine, or dishwasher. Additionally, the term encompasses electronic equipment such as audio amplifiers, filters, and recording devices such as those which use digital audio tapes, magnetic and optical cassette tapes, and recordable compact discs, to reproduce, record or otherwise process the audio portion of a programming service signal. The term further encompasses analogous electronic equipment for recording or otherwise processing the video portion of a programming service signal outside of the television, including those which use digital video discs and laser discs. Additionally, a decoder such as the decoder 180 of FIGURE 2 may be considered to be a non-television appliance.

In the Audio Center field 550, a surround sound level is represented by a bar 552, and a special effects switch can be controlled by an "on" button 554 and an "off" button 556. In this case, the user provides a command to the user command processor 230 which then provides an appropriate signal to the audio equipment. This is another example of a non-television related function call.

In the examples of FIGURE 5, various other display options are possible according to the information to be conveyed and the desired screen appearance. Moreover, the selection of a particular button or other interface device, such as the set button 536 in the Home Systems field 530 may select a hyperlink to another display data screen with additional function call options. For example, after selecting the set button 536, a screen may be displayed which allows the user to set the desired temperature at different times of the day, different days of the week, and/or at different regions of the home or business which is being heated.

Moreover, the decoder 180 may be provided with timing means (not shown) for maintaining the selected schedule. Thus, a heating system which is not programmable or otherwise automated can be controlled in an automated manner via a television screen using HTML/HTVP data. Other appliances, for example, such as a dishwasher, hot water heater, or coffee maker, may also be controlled in this manner. In any case, the HTML/HTVP data provides the user with a display which presents the available programming options, and responds to the user commands by implementing function calls that send the appropriate command signal to the television or non-television related appliance.

In view of the above, it should be appreciated that the present invention provides an apparatus and method for providing textual and graphical displays using hypertext markup language (HTML) for use with a television decoder. Additionally, HTML is adapted for use in controlling various television and non-television related functions with a syntax referred to as HTVP. Accordingly, the invention provides entertainment, educational, and informational displays for television viewers. Moreover, the invention allows a viewer to execute hyperlinks and function calls for viewing additional HTML/HTVP pages and/or programming service video, or for activating various television, non-television, or decoder functions. Moreover, the invention is compatible with virtually any type of programming service, including television, information services such as stock prices and weather data, and audio/video programming implemented in software including games and other programming.

Although the invention has been described in connection with various specific embodiments, those skilled in the art

will appreciate that numerous adaptations and modifications may be made thereto without departing from the spirit and scope of the invention as set forth in the claims.

# Claims

5

1. A method for providing display data for use with a television, comprising the steps of:

providing a data signal comprising said display data which is coded according to a hypertext markup language;  
recovering said data signal from said data stream; and  
10 processing said data signal to provide a signal suitable for reproduction on the television;  
wherein said display data allows a user to invoke function calls for controlling selected functions of at least one of a television and a non-television appliance.

2. The method of claim 1, wherein:

15

said display data allows a user to invoke hyperlinks for viewing selected portions of said display data.

3. The method of one of the preceding claims, wherein:

20 said display data allows a user to invoke function calls for viewing selected portions of an associated video programming service signal.

4. The method of one of the preceding claims, wherein:

25

said display data provides information regarding an associated video programming service signal.

5. The method of one of the preceding claims, wherein:

30 said display data provides a viewer input field for allowing viewing of an associated video programming service signal on a fee basis.

6. The method of one of the preceding claims, comprising the further step of:

35 processing said data signal and said associated video programming service signal for display on the television in an overlay manner.

7. The method of one of the preceding claims, wherein:

40 said data signal and an associated video programming service signal are carried in a digital transport data stream.

8. An apparatus for providing display data for use with a television, comprising:

45 means for providing a data signal comprising said display data which is coded according to a hypertext markup language;  
means for recovering said data signal from said data stream;  
a processor for processing said data signal to provide a signal suitable for reproduction on the television; and  
means responsive to said display data for allowing a user to invoke function calls for controlling selected functions of at least one of a television and a non-television appliance.

50

9. The apparatus of claim 8, wherein:

said display data allows a user to invoke hyperlinks for viewing selected portions of said display data.

- 55 10. The apparatus of one of claims 8-9, wherein:

said display data allows a user to invoke function calls for viewing selected portions of an associated video programming service signal.

11. The apparatus of one of claims 8-10, wherein:

said display data provides information regarding an associated video programming service signal.

5 12. The apparatus of one of claims 8-11, wherein:

said display data provides a viewer input field for allowing viewing of an associated video programming service signal on a fee basis.

10 13. The apparatus of one of claims 8-12, further comprising:

a combiner for combining said data signal and an associated video programming service signal for display on the television in an overlay manner.

15 14. The apparatus of one of claims 8-13, wherein:

said data signal and an associated video programming service signal are carried in a digital transport data stream.

20 15. A receiver for providing display data for use with a television, comprising:

an input for receiving a data signal comprising said display data which is coded according to a hypertext markup language;  
a display data processor for processing said data signal to provide a signal suitable for reproduction on the television; and  
25 a user command processor operatively associated with said display data processor for receiving user commands and invoking corresponding function calls for controlling selected functions of at least one of a television and a non-television appliance.

30 16. The receiver of claim 15, further comprising:

an input for receiving a video programming service signal; and  
a video processor for processing said video programming service signal; wherein:  
said display data signal provides information regarding said video programming service signal.

35 17. The receiver of claim 16, wherein:

said video processor is responsive to said user command processor for invoking said function calls.

40 18. The receiver of one of claims 15-17, wherein:

said display data processor is responsive to said user command processor for allowing a user to invoke hyperlinks for viewing selected portions of said display data.

45 19. The receiver of one of claims 15-18, wherein said display data provides a viewer input field for allowing viewing of an associated video programming service signal on a fee basis.

20. The receiver of one of claims 15-19, wherein:

50 a relationship between said function calls and said selected functions is determined according to a uniform resource locator syntax.

(54) **Hypertext markup language protocol for television display and control**

(57) Textual and graphical displays are provided on a television screen using a hypertext markup language (HTML). On-screen display devices allow a user to invoke hyperlinks to different pages of HTML-coded data in addition to function calls for controlling television and non-television appliance functions. A method provides HTML-coded display data which is processed to provide a signal suitable for reproduction on a television. The display data may provide information on a featured movie (325) or other presentation of an associated video programming service signal such as a network television broadcast (315). Function calls (232, 510, 530, 550) allow the control of various television functions and programming options, such as the pur-

chase of pay-per-view programming (330), or television display options such as aspect ratio (512, 514), channel, brightness (518), picture-in-picture, or split-screen. Non-television appliances which may be controlled with function calls include audio equipment which is associated with the programming service (e.g., surround sound (552), filtering (554, 556)) in addition to, for instance, a home heating and air conditioning system (536, 538) or other household appliances (532, 534). The invention allows a designer to adapt the vast HTML resources of the Internet for use in the television environment for entertainment, educational or informational purposes.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 97 11 7900

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.

#6

**DECLARATION**

As a below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled "**SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX**," the specification of which:

- ☐ is attached hereto.  
☒ was filed on April 21, 2003 as Application Serial No. 10/419,621.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the Patent and Trademark Office all information known to me to be material to patentability of the subject matter claimed in this application, as "materiality" is defined in 37 C.F.R. § 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate listed below, or under § 365(a) of any PCT international application listed below designating least one country other than the United States of America, and have identified below any foreign application for patent or inventor's certificate, or of any PCT international application, having a filing date before that of the application on which priority is claimed.

**DECLARATION**

As a below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled "**SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX**," the specification of which:

- ☐ is attached hereto.  
☒ was filed on April 21, 2003 as Application Serial No. 10/419,621.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the Patent and Trademark Office all information known to me to be material to patentability of the subject matter claimed in this application, as "materiality" is defined in 37 C.F.R. § 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate listed below, or under § 365(a) of any PCT international application listed below designating least one country other than the United States of America, and have identified below any foreign application for patent or inventor's certificate, or of any PCT international application, having a filing date before that of the application on which priority is claimed.

**OFFICE OF PETITIONS**

I, the undersigned, declare that I am the (an) owner of the above-identified application or, if the owner is a corporation, partnership or other association, I am authorized to make this appointment on behalf of the owner thereof.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made herein on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. § 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Full Name of Declarant: OpenTV, Inc.  
(If owner is corporation, partnership or association)

Title of Declarant: Thomas L. Ewing  
Vice President and Chief Intellectual Property Officer

Address of Declarant: 275 Sacramento Street, San Francisco, CA 94111  
(Include number, street name, city, state and zip code)

Signature of Owner:  Date: Sept. 18, 2003

A fee authorization form for the fee set forth in 37 CFR § 1.17(h) is enclosed herewith.

Respectfully submitted,

Rory D. Rankin  
Reg. No. 47,884  
Attorney for Applicants

Meyertons, Hood, Kivlin, Kowert & Goetzel, P.C.  
P.O. Box 398  
Austin, Texas 78767-0398  
Ph: (512) 853-8850

Date: Sep. 18, 2003

5. On August 18, 2003, I delivered a copy of the above-referenced patent application and a Declaration form to Mr. Dongmin Su's present address. Delivery of the application papers was accepted on August 19, 2003, as evidenced by the attached Federal Express delivery receipt and corresponding cover letter, which accompanied the application papers.

6. On August 21, 2003, I placed a telephone call to Mr. Su at his home phone number 408-246-7572. A woman, who identified herself as Mr. Su's wife, answered the phone and indicated Mr. Su was unavailable. However, she did indicate that they had received the application papers which we delivered to Mr. Su and that Mr. Su was aware of the papers. I then asked her to have Mr. Su contact me with any questions or concerns he may have with regard to signing the documents he received. Mr. Su did not return the signed papers and did not contact me.

7. Mr. Su has refused to sign an Inventor's Declaration and Assignment papers in the past. On June 23, 2003, Christine M. Manchester who is currently employed with OpenTV, Inc, conveyed application papers including Declaration and Assignment forms to Mr. Su's current address. Delivery of the application papers was accepted on June 24, 2003, as evidenced by the attached Federal Express delivery receipt and corresponding cover letter, which accompanied the application papers. Mr. Su did not sign and return the delivered forms. Subsequently, on August 5, 2003, Christine M. Manchester again conveyed application papers including Declaration and Assignment forms to Mr. Su's current address. Delivery of the application papers was accepted on August 6, 2003, as evidenced by the attached Federal Express delivery receipt and corresponding cover letter, which accompanied the application papers. Mr. Su did not sign and return the delivered forms.

8. I hereby declare that all statements made herein of my own knowledge are true and that all statements made herein on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. § 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

  
Rory D. Rankin

Dear Danny:

We have received the Declaration and Assignment documents for your signature from our outside counsel in the above-referenced matter. Please sign and date the documents where indicated and return them to me as soon as possible, but no later than July 11, 2003, so that they can be filed with the United States Patent and Trademark Office.

Should you have any questions, please do not hesitate to contact me.

Very truly yours,

A handwritten signature in cursive script, appearing to read "Christine M. Manchester".

Entitled : **"Supporting Common Interactive Television Functionality Through  
Presentation Engine Syntax";**  
Inventor: *Delpuch, et al.*;  
(OpenTV Ref. No.: OPTV-187/ORG/US; Our Ref. No.: 5266-06201)

---

Dear Mr. Su:

Please find enclosed the above-referenced patent application, which was filed with the U.S. Patent and Trademark Office on April 21, 2003. Also enclosed are a Declaration and an Assignment form. Please complete all relevant information, sign and date these forms at the spaces provided, and return the signed forms including the enclosed application to me for filing with the U.S. Patent and Trademark Office.

We have been informed that you are no longer employed by OpenTV, Inc. Consequently, I expect that you may have some questions regarding this application and the enclosed documents. Please give me a call as I would be happy to discuss this with you and to answer any questions you may have. You can reach me at (512) 853-8866.

Very truly yours,

**OFFICE OF PETITIONS**  
DECISION REFUSING  
STATUS UNDER  
37 CFR 1.47(a)

This is a decision on the petition under 37 CFR 1.47(a), filed September 22, 2003.

The petition is **DISMISSED**.

Any request for reconsideration of this decision must be submitted within TWO (2) MONTHS from the mail date of this decision. Extensions of time under 37 CFR 1.136(a) are permitted. Any response should be entitled "Request for Reconsideration of Petition Under 37 CFR 1.47(a)" and may include an oath or declaration executed by the inventor. **Failure to respond will result in abandonment of the application.**

A grantable petition under 37 CFR 1.47(a) requires

- (1) proof that the non-signing inventor cannot be found or reached after diligent effort or that the inventor refuses to sign after having been presented with the application papers (specification, claims, and drawings),
- (2) a proper oath or Declaration executed by the available joint inventor(s),
- (3) the fee of \$130 as specified in 37 CFR § 1.17(h), and
- (4) the last known address of the omitted inventor(s).

In addition to the above requirements, the signing inventors must sign the declaration on behalf of the non-signing inventor. See MPEP 409.03(a).

The instant petition fails to satisfy item (2) above.

The declaration fails to list the citizenship of the non-signing inventor. The declaration fails to list the mailing or residential address for the non-signing inventor.

A proper declaration should be submitted with any request for reconsideration.

Further correspondence with respect to this matter should be addressed as follows:

By mail: Mail Stop Petition  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Telephone inquiries should be directed to Petitions Attorney Steven Brantley at (703) 306-5683.

OFFICE OF PETITIONS

DECLARATION

As a below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled "SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX," the specification of which:

- ☐ is attached hereto.  
☒ was filed on April 21, 2003 as Application Serial No. 10/419,621.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the Patent and Trademark Office all information known to me to be material to patentability of the subject matter claimed in this application, as "materiality" is defined in 37 C.F.R. § 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate listed below, or under § 365(a) of any PCT international application listed below designating least one country other than the United States of America, and have identified below any foreign application for patent or inventor's certificate, or of any PCT international application, having a filing date before that of the application on which priority is claimed.

OFFICE OF PETITIONS

**DECLARATION**

As a below named inventor, I hereby declare that:

My residence, post office address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled "SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX," the specification of which:

- ☐ is attached hereto.  
☒ was filed on April 21, 2003 as Application Serial No. 10/419,621.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the Patent and Trademark Office all information known to me to be material to patentability of the subject matter claimed in this application, as "materiality" is defined in 37 C.F.R. § 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate listed below, or under § 365(a) of any PCT international application listed below designating least one country other than the United States of America, and have identified below any foreign application for patent or inventor's certificate, or of any PCT international application, having a filing date before that of the application on which priority is claimed.

Applicant requests consideration of ☒ the references listed on the attached Form PTO-1449 and/or ☐ the additional information identified below in paragraph 3.

- ☒ A copy of each required reference listed on the Form PTO-1449 is enclosed.
- ☐ The references listed on the Form PTO-1449 were previously cited in application serial no. \_\_\_\_\_ to which the captioned application is seeking priority under 35 U.S.C. §120; therefore, a copy of each reference is not enclosed.
- ☐ The present application is a U.S. national patent application filed after June 30, 2003, or an international application that entered the national stage under 35 USC § 371 after June 30, 2003. Therefore, copies of the cited U.S. patents and/or U.S. patent application publications are not enclosed.

1. This Information Disclosure Statement is submitted:

- a. ☐ within 3 months of the filing date of a national application other than a continued prosecution application under § 1.53(d);
- ☐ within 3 months of the date of entry of the national stage as set forth in § 1.491 in an International application;
- ☒ before the mailing date of a first Office Action on the merits; or
- ☐ before the mailing of a first Office Action after the filing of a request for continued examination under § 1.114.

- b. ☐ after the events of above paragraph 1a and prior to the mailing date of a final Office Action or Notice of Allowance, and thus: ☐ the certification of paragraph 2 below is provided, or ☐ a fee of \$180.00 is enclosed.
- c. ☐ after the mailing date of a final Office Action or a Notice of Allowance and prior to payment of the issue fee, and thus: the certification of paragraph 2 below is provided and a fee of \$180.00 is enclosed.
2. It is hereby certified:
- ☐ that each item of information contained in this Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the Statement, or
- ☐ that no item of information contained in the Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application or, to the knowledge of the person signing the certification after making reasonable inquiry, was known to any individual designated in § 1.56 (c) more than three months prior to the filing of the Statement.
3. ☐ Consideration of the following additional information (including any co-pending or abandoned U.S. applications, prior uses and/or sales, etc.) is requested:
4. For each non-English language reference listed on the attached Form PTO-1449:
- ☐ reference is made to an English language translation submitted herewith, and/or
- ☐ reference is made to a foreign patent office search report (in the English language) submitted herewith, and/or
- ☐ reference is made to an English language translation of a foreign patent office search report submitted herewith, and/or
- ☐ reference is made to the concise explanation contained in the specification of the present application at page(s) \_\_\_\_\_, and/or
- ☐ reference is made to the concise explanation set forth below:
5. ☐ Applicant also offers the following comments for the Examiner's consideration:
6. ☐ Also enclosed is a copy of a foreign search report citing these references.
7. ☐ The listed documents were brought to the attention of the Applicant(s) after payment of the issue fee in the captioned case. The documents were cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this Information Disclosure Statement. Applicant(s) request this Information Disclosure Statement and attached Form PTO-1449 be placed in the file of the captioned application.

8. ☐ Applicant(s) requests that the Information Disclosure Statement and attached Form PTO-1449 and references, which are being filed before the grant of the patent and pursuant to 37 C.F.R. § 1.97(i), be placed in the file of the captioned application.

If any required fees are missing, the Commissioner is authorized to charge said fees to Meyertons, Hood, Kivlin, Kowert & Goetzel, P.C. Deposit Account No. 501505/5266-06201/RDR.

This is a decision on the renewed petition under 37 CFR 1.47(a), filed November 13, 2003.

The petition is **granted**.

Petitioner has shown that the non-signing inventor has refused to join in the filing of the above-identified application after having been presented with the application papers or cannot be located.

The above-identified application and papers have been reviewed and found in compliance with 37 CFR 1.47(a). This application is hereby accorded Rule 1.47(a) status.

As provided in Rule 1.47(c), this Office will forward notice of this application's filing to the non-signing inventor at the address given in the petition. Notice of the filing of this application will also be published in the Official Gazette.

After this decision is mailed, the above-identified application will be returned to the Office of Initial Patent Examination for further processing.

Telephone inquiries should be directed to Petitions Attorney Steven Brantley at (703) 306-5683.

Letter

Dear Mr. Su:

You are named as a joint inventor in the above identified United States patent application, filed under the provisions of 35 U.S.C. 116 (United States Code), and 37 CFR 1.47(a), Rules of Practice in Patent Cases. Should a patent be granted on the application you will be designated therein as a joint inventor.

As a named inventor you are entitled to inspect any paper in the file wrapper of the application, order copies of all or any part thereof (at a prepaid cost per 37 CFR 1.19) or make your position of record in the application. Alternatively, you may arrange to do any of the preceding through a registered patent attorney or agent presenting written authorization from you. If you care to join the application, counsel of record (see below) would presumably assist you. Joining in the application would entail the filing of an appropriate oath or declaration by you pursuant to 37 CFR 1.63.

Requests for information regarding your application should be directed to the File Information Unit at (703)308-2733. Information regarding how to pay for and order a copy of the application, or a specific paper in the application, should be directed to Certification Division at (703)308-9726 or 1(800)972-6382 (outside the Washington D.C. area).

Telephone inquiries regarding this communication should be directed to Petitions Attorney Steven Brantley at (703) 306-5683.

Sir:

Technology Center 2600

The official Filing Receipt mailed April 8, 2004, lists two of the Applicant's residences incorrectly. The correct residences should be Alain Delpuch, Les Essarts Le Roi, FRANCE and Kevin Hausman, Naperville, IL. I have provided a copy of the Filing Receipt with the change noted thereon. Applicants respectfully request that this change be made and a corrected Filing Receipt be reissued in the above-identified application.

Respectfully submitted,

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Filing Receipt Corrections, facsimile number 703-746-9195. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

---

**LICENSE FOR FOREIGN FILING UNDER  
Title 35, United States Code, Section 184  
Title 37, Code of Federal Regulations, 5.11 & 5.15**

**GRANTED**

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

**NOT GRANTED**

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

Electronic Patent Application Submission  
USPTO Use Only

#14  
W. Lauer  
7/14/04

EFS ID: 63466  
Application ID: 10419621  
Title of Invention: Supporting Common Interactive  
Television Functionality Through  
Presentation Engine Syntax  
First Named Inventor: Alain Delpuch  
Domestic/Foreign Application: Domestic Application  
Filing Date: 2003-04-21  
Effective Receipt Date: 2004-06-28  
Submission Type: Information Disclosure  
Statement  
Filing Type:  
Confirmation number: 2305  
Attorney Docket Number: 5266-06201

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

1) ☐ Responsive to communication(s) filed on \_\_\_\_.

2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

4) ☒ Claim(s) 1-23 is/are pending in the application.

4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.

5) ☐ Claim(s) \_\_\_\_ is/are allowed.

6) ☒ Claim(s) 1-23 is/are rejected.

7) ☐ Claim(s) \_\_\_\_ is/are objected to.

8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

9) ☐ The specification is objected to by the Examiner.

10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) ☐ All    b) ☐ Some \* c) ☐ None of:

1. ☐ Certified copies of the priority documents have been received.

2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.

3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Claim Rejections - 35 USC 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

*A person shall be entitled to a patent unless --  
(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.*

2. Claims 1-7, 11-16, and 20-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Ben-Shaul et al. (U.S. Patent Pub No. 2002/0010798 A1/or “Ben” for short).

Regarding claim 1, Ben discloses “a method comprising: receiving one or more directives, wherein said directives are indicative of an audio, video and/or graphic presentation requiring a set of resources; determining from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation; and prohibiting the presenting of said presentation until said subset of resources are acquired”, i.e., Ben discloses a content and application delivery system that a user or a web client (as illustrated in Figs. 6-7) can receive one or more directives which indicative of audio, video and/or graphics presentation—content delivery from web servers to the user via a TV browser for local news and local sports and etc. (page 3/section 0027, page 5/sect. 0051, page 22/sect. 0221 & 023 1, and page 24/sect. 0256 & 0263), the system has directive director 122 (Fig. 12, and page 35/section 0431 & 0432) has a control over the content delivery to the user based on service profile and other directives that can

either authorize or disable the service/ content delivery for presentation at the user's location if subset of resources are not acquired, for instance, the user is not subscribed so that some of required directives for billing is not acquired, the service is unauthorized or disabled (page 27/from section 0314 to section 0324).

As for claim 2, Ben discloses "wherein said subset of resources are indicated using directives selected from the group consisting of: a markup language, a scripting language, and a style sheet" (page 14/sections 0195, 0196, 0197 for all of these features for CDSL, XML, and XML style sheet language).

As for claim 3, Ben discloses "wherein said directives are received by a proxy server in an interactive television system" (page 37/section 0477 to section 0480 as the content marker as interactive tool to use in GUI editor and TV system –page 24/sect. 0256; and edge server 48 acts as a proxy server).

As for claim 4, Ben also discloses "wherein said determining is performed by said proxy server, and wherein said method further comprises said proxy server conveying signals which correspond to said subset of resources to a remote client device", i.e., the edge server directs the right subset of resources to the remote client device (page 24/section 0260 to page 25/section 0268 for redirecting contents and resources to the client).

As for claim 5, Ben discloses further "comprising said client device acquiring said subset of resources in response to detecting said signals", i.e., the client can obtain a subset of resources with the use of directive editor 122 for filtering and detecting the appropriate content from the edge server (page 35/section 0431 to page 36/section 0435).

As for claim 6, Ben further shows “wherein said subset comprises streaming audio and/or video, and wherein acquisition of the streaming audio and/or video comprises configuring hardware resources within said client device” (page 2/section 0019 & page 35/section 0425 for streaming media audio and video; and page 22/section 0230 & 0231 and page 26/section 0309-0312 for hardware configuration as configuration on targeting based on profiles, caching, mirroring, priorities of communication and processing, streaming media support etc. within the client device for receiving the content from different resources).

As for claim 7, Ben discloses “wherein acquisition of the subset of resources comprises the client device initiating requests for remotely located resources to be conveyed to said client device” (as shown in Figs. 3-4, the client device at 14 is remotely located from resource local ISP or server 10; and the client can initiate the requests, page 37/section 0486 to page 38/section 0490 as the client requests for a personal “client view”).

As for claim 11, Ben discloses further “comprising defining a META name/value pair, wherein said name is indicative that said-corresponding-value is a prerequisite resource” (page 14/section 0192 for a meta value CDML code identified by two entities).

As for claim 12, Ben shows “wherein said prohibiting is in further response to detecting a corresponding time for expiration has not yet expired, and wherein said method further comprises allowing the presenting of said presentation in response to detecting said time for expiration has expired” (page 27/sections 0323 & 0324 as the system can limit or prohibit the service or presentation to the client at a certain time period or per-service basis).

Regarding claims 13-16 and 20-21, these claims for “an interactive television system comprising: a remote proxy server configured to: receive one or more directives, wherein said directives are indicative of an audio, video and/or graphic presentation requiring a set of resources; determining from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation; convey first signals which identify said subset of resources to a remote client device; and convey second signals which correspond to said directives; a client device configured to: receive said first signals; receive said second signals; and prohibit the presenting of said presentation until said subset of resources are acquired, in response to detecting said first signals” with same limitations as cited earlier are rejected for the reasons given in the scope of claims 1-7, and 11-12 as already discussed in details above.

Regarding claims 22 and 23, these claims for “a client device in an interactive television system, said device comprising: a receiver configured to receive signals corresponding to directives which are indicative of an audio, video and/or graphic presentation acquiring a set of resources; and a processing-unit-coupled to said receiver, wherein said processing unit is configured to: determine from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation; and prohibit the presenting of said presentation until said subset of resources are acquired” and “a carrier medium comprising program instructions executable to: receive directives which are indicative of an audio, video and/or graphic presentation requiring a set of resources; determine from said directives that a subset of said resources are a prerequisite to the presenting of said presentation; and prohibit the presenting of said presentation until said subset of resources are acquired” with same limitations

as cited earlier are rejected for the reasons given in the scope of claims 1-7 as already discussed in details above.

***Claim Rejections - 35 USC 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

*(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.*

4. Claims 8-10 and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ben (U.S. Patent Pub No. US 2002/0010798 A1).

Regarding claims 8-10, Ben does not further mention “comprising enhancing a root entity in DTD to add a showstopper attribute indicative of prerequisite resources”; “comprising using a label within a Declarative Data Essence standard as an attribute to indicate a prerequisite resource”; and “comprising enhancing DVB-MHP by adding a showstopper AIT descriptor indicative of prerequisite resources”; however, the Examiner takes an official notice that these features are known in the art since these features are parts of the standard attributes for use within the HTML, and other scripting languages, i.e., DTD or Document Type Definition associated for use in Extensible Markup Language (XML). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Ben’s system with some known features as “DTD, Declarative Data Essence and enhancing DVB-

MHP by adding a showstopper AIT descriptor” in order to add or indicate a prerequisite resource(s) for identifying different resources in delivering contents to the client devices.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bradley et al (US Pub 2002/0194219 A1) and Lamkin et al (US Pub 2002/0088011 A1) disclose systems related to content deliveries and content attributes.

6. **Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks

Washington, D.C. 20231

**or faxed to:** \_\_\_\_\_

**(703) 872-9306, (for Technology Center 2600 only)**

*Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).*

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krista Kieu-Oanh Bui whose telephone number is (703) 305-0095. The examiner can normally be reached on Monday-Friday from 9:00 AM to 6:30 PM, with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Grant, can be reached on (703) 305-4755.

**RESPONSE TO OFFICE ACTION OF**  
**OCTOBER 15, 2004**

Commissioner for Patents  
Mail Stop Amendment  
P.O. Box 1450  
Alexandria, VA 22313-1450

Dear Sir:

This paper is submitted in response to the Office Action of October 15, 2004, to further highlight why the application is in condition for allowance.

Please amend the case as listed below.

**IN THE CLAIMS**

Please amend claims 1-4, 13-14, and 21-22 as indicated below.

1. (Currently Amended) A method comprising:  
receiving one or more directives, wherein said directives are indicative of an  
audio, video and/or graphic presentation which requires ~~requiring~~ a set of  
resources;  
determining whether said one or more directives includes a prerequisite directive  
which indicates that acquisition of a subset of said set of resources is a  
prerequisite for initiating the presentation;  
~~determining from said directives that acquisition of a subset of said resources are~~  
~~a prerequisite to the presenting of said presentation; and~~  
initiating said presentation, in response to determining the one or more directives  
do not include said prerequisite directive; and  
prohibiting ~~the presenting initiation~~ initiation of said presentation until said subset of  
resources are acquired, in response to determining the one or more  
directives include said prerequisite directive.
2. (Currently Amended) The method of claim 1, wherein said ~~subset of resources are~~  
~~indicated using~~ prerequisite directive comprises one or more directives selected  
from the group consisting of: a markup language, a scripting language, and a style  
sheet.
3. (Currently Amended) The method of claim 2, wherein said one or more directives  
are received by a proxy server in an interactive television system.
4. (Currently Amended) The method of claim 3, wherein said determining is  
performed by said proxy server, and wherein said method further comprises said  
proxy server conveying signals ~~which correspond to~~ indicative of said subset of  
resources to a remote client device.

5. (Original) The method of claim 4, further comprising said client device acquiring said subset of resources in response to detecting said signals.
6. (Original) The method of claim 5, wherein said subset comprises streaming audio and/or video, and wherein acquisition of the streaming audio and/or video comprises configuring hardware resources within said client device.
7. (Original) The method of claim 5, wherein acquisition of the subset of resources comprises the client device initiating requests for remotely located resources to be conveyed to said client device.
8. (Original) The method of claim 1, further comprising enhancing a root entity in DTD to add a showstopper attribute indicative of prerequisite resources.
9. (Original) The method of claim 1, further comprising using a label within a Declarative Data Essence standard as an attribute to indicate a prerequisite resource.
10. (Original) The method of claim 1, further comprising enhancing DVB-MHP by adding a showstopper AIT descriptor indicative of prerequisite resources.
11. (Original) The method of claim 1, further comprising defining a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.
12. (Original) The method of claim 1, wherein said prohibiting is in further response to detecting a corresponding time for expiration has not yet expired, and wherein said method further comprises allowing the presenting of said presentation in response to detecting said time for expiration has expired.

13. (Currently Amended) An interactive television system comprising:

a remote proxy server configured to:

receive one or more directives, wherein said directives are indicative of an audio, video and/or graphic presentation which requires ~~requiring~~ a set of resources;

determine whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for initiating the presentation;

~~determine from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation;~~

convey first signals which identify said subset of resources to a remote client device, in response to determining the one or more directives include said prerequisite directive; and

convey second signals which correspond to said one or more directives.

a client device configured to:

receive said first signals;

receive said second signals; and

prohibit ~~the presenting~~ initiation of said presentation until said subset of resources are acquired, in response to detecting said first signals.

14. (Currently Amended) The system of claim 13, wherein said ~~subset of resources are indicated using~~ prerequisite directive comprises one or more directives selected from the group consisting of: a markup language, a scripting language, and a style sheet.

15. (Original) The system of claim 14, wherein acquiring said subset of resources comprises said client device configuring hardware resources within said client device.

16. (Original) The system of claim 14, wherein acquiring said subset of resources comprises initiating requests for remotely located resources to be conveyed to said client device.
17. (Original) The system of claim 13, further comprising enhancing a root entity in DTD by adding a showstopper attribute indicative of prerequisite resources.
18. (Original) The system of claim 13, wherein said directives include the use of a showstopper attribute indicative of prerequisite resources.
19. (Original) The system of claim 13, wherein said server is configured to detect a DVB-MHP showstopper AIT descriptor indicative of prerequisite resources.
20. (Original) The system of claim 13, wherein said directives define a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.
21. (Currently Amended) The system of claim 13, wherein said device is configured to prohibit said ~~presenting~~ initiation in further response to detecting a corresponding time for expiration has not yet expired, and wherein said device is further configured to allow the presenting of said presentation in response to detecting said time for expiration has expired.
22. (Currently Amended) A client device in an interactive television system, said device comprising:
  - a receiver configured to receive signals corresponding to directives which are indicative of an audio, video and/or graphic presentation requiring a set of resources; and
  - a processing unit coupled to said receiver, wherein said processing unit is configured to:

determine whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for initiating the presentation;  
~~determine from said directives that acquisition of a subset of said resources are a prerequisite to the presenting of said presentation;~~  
and  
initiate said presentation, in response to determining the one or more directives do not include said prerequisite directive; and  
prohibit ~~the presenting~~ initiation of said presentation until said subset of resources are acquired, in response to determining the one or more directives include said prerequisite directive.

23. (Currently Amended) A carrier medium comprising program instructions executable to:  
receive directives which are indicative of an audio, video and/or graphic presentation requiring which requires a set of resources;  
determine whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for the presentation;  
~~determine from said directives that a subset of said resources are a prerequisite to the presenting of said presentation;~~ and  
initiate said presentation, in response to determining the one or more directives do not include said prerequisite directive; and  
prohibit the presenting of said presentation until said subset of resources are acquired, in response to determining the one or more directives include said prerequisite directive.

## **REMARKS**

Claims 1-23 were pending prior to the current amendment. Claims 1-4, 13-14, and 21-22 have been amended to further clarify the nature of the claimed invention. Accordingly, claims 1-23 remain pending.

In the present Office Action, claims 1-7, 11-16, and 20-23 stand rejected under 35 U.S.C. § 102(e) as being anticipated by U.S. Patent Publication No. 2002/0010798 A1 (hereinafter “Ben”). In addition, claims 8-10 and 17-19 stand rejected under 35 U.S.C. § 103(a) as being unpatentable over Ben. Applicant respectfully traverses the above rejections and requests reconsideration in view of the following discussion.

In order for there to be anticipation, each and every element of the claimed invention must be present in a single prior reference. However, Applicant submits that each of the pending claims recite elements which are not taught, suggested, or implied by Ben. In the present case, each of independent claims 1, 13, 22, and 23 stand rejected as being anticipated by Ben. For example, paragraph 2 of the Office Action suggests Ben discloses all of the features of claim 1. However, Applicant submits Ben does not disclose all of the features of claim 1. For example, claim 1, as amended, recites a method which includes:

“receiving one or more directives, wherein said directives are indicative of an audio, video and/or graphic presentation which requires a set of resources;  
determining whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for initiating the presentation;  
initiating said presentation, in response to determining the one or more directives do not include said prerequisite directive; and  
prohibiting initiation of said presentation until said subset of resources are acquired, in response to determining the one or more directives include said prerequisite directive.” (emphasis added).

Applicant submits at least the above highlighted features are neither taught nor suggested by Ben. With respect to claim 1, a number of portions of Ben are cited as disclosing the above features. For example, paragraphs 27, 51, 221, 231, 256, and 263 of Ben are cited. However, these portions of Ben merely describe the delivery of content to end customers and describe the ability to create server profiles. In addition, paragraphs 431 and 432 of Ben (reproduced below) are cited as being related to directives.

“Referring now to FIG. 12, the operation of the directives editor 122 of the front edge tool is now disclosed in further detail. The directives editor 122 is a graphical editor for generating service profiles. It is an important aspect of the invention that the directives editor 122 enables content providers to define advanced services on the edges of the internet. That is, providers can control what content is viewable by different users at different regions, and how content is delivered to different users/regions in terms of latency, reliability and overall quality of delivery.

As seen in FIG. 17 the directives editor 122 reads and writes data from a database 180, using the facilities of the database manager 182. The database manager 182 preferably uses the SQL protocol for sending and retrieving data from the database 180. It should be noted that the database manager 182 is the only element of the system having a direct connection to the database 180. An XML manager 184 is responsible for generating XML files based on the database 180 for use by the edge server 48 and the edge servers 120 (FIG. 6). Another important component is the import-export facility 186 that can export profiles from the database 180 to XML files, and can import profiles from XML files to the database 180.” (Ben, paras. 431-432).

However, as can be seen from the above, the directives editor of Ben is a tool for generating service profiles and is not directly related to Applicant’s claimed directives which are indicative of “an audio, video and/or graphic presentation which requires a set of resources.”

Finally, paragraphs 314-324 of Ben are cited as disclosing the recited features regarding “prohibiting initiation of said presentation until said subset of resources are acquired.” More particularly, the examiner states that Ben discloses a service may be either authorized or denied depending upon whether required billing directives are

acquired. Applicant first notes that Ben nowhere discloses or makes any reference to billing directives. The only reference to billing in Ben is in paragraph 329 wherein it merely states that “[a]n interface to external billing software is provided, in order to provide billing services.” However, even if Ben did disclose such a billing directive, such a directive would merely serve to allow or deny access to a presentation and would not be equivalent to the features recited in claim 1. In any event, Applicant submits that Ben nowhere includes any disclosure related to the recited “determining”, “prerequisite directive”, or “subset of said resources”. Further, Ben nowhere discloses initiating or prohibiting as recited. Therefore, claim 1 is patentably distinguished from the cited art. As each of independent claims 13, 22, and 23 include similar features, each of these claims are similarly distinguished. In addition, as Ben does not disclose or suggest a prerequisite directive, the features of claims 2 and 14 which are directed to a prerequisite directive are not disclosed by Ben.

In addition to the above, the additional features of claim 6 are neither taught nor suggested by the cited art. Claim 6 recites “said subset comprises streaming audio and/or video, and wherein acquisition of the streaming audio and/or video comprises configuring hardware resources within said client device.” As claim 6 depends upon the prior claims, “said subset” is a direct reference to the subset recited in claim 1. As already discussed, the recited prerequisite directive indicates acquisition of this subset (which comprises streaming audio and/or video) is a prerequisite for initiating the presentation. In the discussion of claim 1, the office action made the suggestion that a “billing directive” represented the resources which have not been acquired. Applicant has already discussed the absence of disclosure of such a billing directive in Ben. However, Applicant further notes that Ben nowhere teaches or suggests the subset of resources comprise streaming audio and/or video as recited in the claims.

With respect to dependent claims 11 and 20, the present office action suggests that Ben discloses “defining a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.” In particular, reference is made to paragraph 192 of Ben wherein it states:

“The special content delivery markup language, CDML, is provided in preferred embodiments of the invention in order to assure highly controlled content delivery characteristics. CDML enables content providers to define precisely, and in as much detail as desired, how content is delivered to its destinations. It also enables the content provider to supply descriptive and classification information about its content so that local delivery directives, as seen at the edge, can identify the content to be delivered. As described above, CDML code is generated by graphical editors, and is interpreted by two entities. Referring again to FIG. 6, the source interpreter 52 at the origin controls how CDML meta-information is disseminated to the edges of the internet, and the target interpreter 56 implements the semantics of the CDML code at the edges. In addition, the source interpreter 52 and the target interpreter 56 cooperate to carry out distributed policies that require both interpreters, such as mirroring content from the origin server to some of the edges as well as pack and unpack operations.”

However, the above excerpt from Ben makes no reference to “defining a META name/value pair, wherein said name is indicative that said corresponding value is a prerequisite resource.” Rather, passing reference is made to “meta-information” which is in no way equivalent to the recited features of claims 11 and 20.

In view of the above, Applicant submits each of the pending claims are patentably distinguishable from the cited art and all claims are believed in condition for allowance.

**CONCLUSION**

Applicant submits the application is in condition for allowance, and an early notice to that effect is requested.

If any extensions of time (under 37 C.F.R. § 1.136) are necessary to prevent the above referenced application(s) from becoming abandoned, Applicant(s) hereby petition for such extensions. If any fees are due, the Commissioner is authorized to charge said fees to Meyertons, Hood, Kivlin, Kowert, & Goetzel, P.C. Deposit Account No. 501505/5266-06201/RDR.

Respectfully submitted,

---

BUI, KIEU OANH T

ART UNIT

PAPER NUMBER

2611

DATE MAILED: 06/29/2005

| APPLICATION NO. | FILING DATE | FIRST NAMED INVENTOR | ATTORNEY DOCKET NO. | CONFIRMATION NO. |
|-----------------|-------------|----------------------|---------------------|------------------|
| 10/419,621      | 04/21/2003  | Alain Delpuch        | 5266-06201          | 2305             |

TITLE OF INVENTION: SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX

| APPLN. TYPE    | SMALL ENTITY | ISSUE FEE | PUBLICATION FEE | TOTAL FEE(S) DUE | DATE DUE   |
|----------------|--------------|-----------|-----------------|------------------|------------|
| nonprovisional | NO           | \$1400    | \$300           | \$1700           | 09/29/2005 |

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE REFLECTS A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE APPLIED IN THIS APPLICATION. THE PTOL-85B (OR AN EQUIVALENT) MUST BE RETURNED WITHIN THIS PERIOD EVEN IF NO FEE IS DUE OR THE APPLICATION WILL BE REGARDED AS ABANDONED.

### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL should be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). Even if the fee(s) have already been paid, Part B - Fee(s) Transmittal should be completed and returned. If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

# PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE  
**Commissioner for Patents**  
**P.O. Box 1450**  
**Alexandria, Virginia 22313-1450**  
**or Fax (703) 746-4000**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

44015 7590 06/29/2005

OPTV/MEYERTONS  
THE CHASE BUILDING  
700 LAVACA, SUITE 800  
AUSTIN, TX 78701

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

## Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (703) 746-4000, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).  
☐ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.  
☐ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list  
(1) the names of up to 3 registered patent attorneys or agents OR, alternatively,  
(2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.  
1 \_\_\_\_\_  
2 \_\_\_\_\_  
3 \_\_\_\_\_

## 3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE

(B) RESIDENCE: (CITY and STATE OR COUNTRY)

Please check the appropriate assignee category or categories (will not be printed on the patent): ☐ Individual ☐ Corporation or other private group entity ☐ Government

## 4a. The following fee(s) are enclosed:

- ☐ Issue Fee  
☐ Publication Fee (No small entity discount permitted)  
☐ Advance Order - # of Copies \_\_\_\_\_

## 4b. Payment of Fee(s):

- ☐ A check in the amount of the fee(s) is enclosed.  
☐ Payment by credit card. Form PTO-2038 is attached.  
☐ The Director is hereby authorized by charge the required fee(s), or credit any overpayment, to Deposit Account Number \_\_\_\_\_ (enclose an extra copy of this form).

## 5. Change in Entity Status (from status indicated above)

- ☐ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. ☐ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.  
NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature \_\_\_\_\_ Date \_\_\_\_\_

Typed or printed name \_\_\_\_\_ Registration No. \_\_\_\_\_

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DATE MAILED: 06/29/2005

## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 149 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 149 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571) 272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--**

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to Amendment filed on 01/21/2005.
2. ☒ The allowed claim(s) is/are 1-23.
3. ☒ The drawings filed on 21 April 2003 are accepted by the Examiner.
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) ☐ All    b) ☐ Some\*    c) ☐ None    of the:
    1. ☐ Certified copies of the priority documents have been received.
    2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).
  - \* Certified copies not received: \_\_\_\_\_.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.  
**THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.**

5. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
6. ☐ CORRECTED DRAWINGS ( as "replacement sheets") must be submitted.
  - (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review ( PTO-948) attached
    - 1) ☐ hereto or 2) ☐ to Paper No./Mail Date \_\_\_\_\_.
  - (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date \_\_\_\_\_.

**Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).**

7. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-23 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 13, 22 and 23, the closest prior art issued to Ben fails to teach or suggest all of the steps of "determining whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for initiating the presentation; initiating said presentation. in response to determining the one or more directives do not include said prerequisite directive; and prohibiting initiation of said presentation until said subset of resources are acquired. in response to determining the one or more directives include said prerequisite directive" as amended in claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. **Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks

Washington, D.C. 20231

**or faxed to:**

(703) 872-9306, (for Technology Center 2600 only)

Art Unit: 2611

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kieu-Oanh Bui whose telephone number is (571) 272-7291. The examiner can normally be reached on Monday-Friday from 9:00 AM to 6:30 PM, with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Grant, can be reached on (571) 272-7294.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

|                                                | 10/419,621       | DELPUCH ET AL. |  |
|                                                | Examiner         | Art Unit       |  |
|                                                | KIEU-OANH T. BUI | 2611           |  |

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--**  
 All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to Amendment filed on 1/21/2005.
2. ☒ The allowed claim(s) is/are 1-23.
3. ☐ The drawings filed on \_\_\_\_\_ are accepted by the Examiner.
4. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 

a) ☐ All   b) ☐ Some\*   c) ☐ None   of the:
 
  1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

\* Certified copies not received: \_\_\_\_\_.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.  
**THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.**

5. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
6. ☐ CORRECTED DRAWINGS ( as "replacement sheets") must be submitted.
 

(a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review ( PTO-948) attached
 

1) ☐ hereto or 2) ☐ to Paper No./Mail Date \_\_\_\_\_.

 (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date \_\_\_\_\_.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
7. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

**CHRIS GRANT**  
 PRIMARY EXAMINER

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Rory Rankin on 7/7/2005.

**The application has been amended as follows:**

**In the claims:**

In claim 23, lines 1-2, "A carrier medium comprising program instructions executable to"

has been changed to

--A computer readable medium comprising program instructions executable by a computer to --

Claim 23 was amended to be in compliance with 35 USC 101.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kieu-Oanh T. Bui whose telephone number is (571) 272 7291. The examiner can normally be reached on Monday-Friday 9:00am - 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Grant can be reached on (571) 272 7294. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

CHRIS GRANT  
PRIMARY EXAMINER

**PRIMARY EXAMINER**

Examiner Note: You must sign this form unless it is an Attachment to a signed Office action.

\_\_\_\_\_  
Examiner's signature, if required

## Summary of Record of Interview Requirements

### Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

### Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

### 37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,  
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

### Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

## PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: MailMail Stop ISSUE FEE  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, Virginia 22313-1450  
or Fax (703) 746-4000

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through-5 should be completed where appropriate. Further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

- ☐ Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
- ☐ "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list

- (1) the names of up to 3 registered patent attorneys or agents OR, alternatively,
- (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

Meyertons Hood Kivlin

1. Kowert & Goetzel, P.C.2. Rory D. Rankin

3. \_\_\_\_\_

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE

(B) RESIDENCE: (CITY and STATE OR COUNTRY)

OpenTV, Inc.

San Francisco, CA

Please check the appropriate assignee category or categories (will not be printed on the patent): ☐ Individual ☒ Corporation or other private group entity ☐ Government

4a. The following fee(s) are enclosed:

- ☒ Issue Fee
- ☒ Publication Fee (No small entity discount permitted)
- ☐ Advance Order - # of Copies \_\_\_\_\_

4b. Payment of Fee(s):

- ☐ A check in the amount of the fee(s) is enclosed.
- ☐ Payment by credit card. Form PTO-2038 is attached.
- ☒ The Director is hereby authorized by charge the required fee(s), or credit any overpayment, to Deposit Account Number 501505/5266-06201 (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

- ☐ a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.
- ☐ b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above. NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-23 are allowed.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 13, 22 and 23, the closest prior art issued to Ben fails to teach or suggest all of the steps of "determining whether said one or more directives includes a prerequisite directive which indicates that acquisition of a subset of said set of resources is a prerequisite for initiating the presentation; initiating said presentation. in response to determining the one or more directives do not include said prerequisite directive; and prohibiting initiation of said presentation until said subset of resources are acquired. in response to determining the one or more directives include said prerequisite directive" as amended in claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. **Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks

Washington, D.C. 20231

**or faxed to:**

(703) 872-9306, (for Technology Center 2600 only)

Art Unit: 2611

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kieu-Oanh Bui whose telephone number is (571) 272-7291. The examiner can normally be reached on Monday-Friday from 9:00 AM to 6:30 PM, with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Grant, can be reached on (571) 272-7294.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Dear Madam:

Pursuant to your request, a copy of claim 13 is provided below. Correction of a  
typographical error is also indicated. Authorization to make the noted correction is  
provided.

13. (Currently Amended) An interactive television system comprising:

a remote proxy server configured to:

receive one or more directives, wherein said directives are indicative of an  
audio, video and/or graphic presentation which requires a set of  
resources;

1 / 2

Application Serial No. 10/419,621 - Filed April 21, 2003

determine whether said one or more directives includes a prerequisite  
directive which indicates that acquisition of a subset of said set of  
resources is a prerequisite for initiating the presentation;  
convey first signals which identify said subset of resources to a remote  
client device, in response to determining the one or more directives  
include said prerequisite directive; and  
convey second signals which correspond to said one or more  
directives[[]];  
a client device configured to:  
receive said first signals;  
receive said second signals; and  
prohibit initiation of said presentation until said subset of resources are  
acquired, in response to detecting said first signals.

Please contact me at (512) 853-8866 should any issues remain.

Respectfully submitted,

  
\_\_\_\_\_

MAY 22 2012

MODIFIED PTO/SB/96 (11-08)

Approved for use through 11/30/2011. OMB 0651-0035

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

**POWER OF ATTORNEY TO PROSECUTE APPLICATIONS BEFORE THE USPTO**

I hereby revoke all previous powers of attorney given in the application identified in the attached statement under 37 CFR 3.73(b).

I hereby appoint:

☒ Practitioners associated with the Customer Number:

44367

OR

☐ Practitioner(s) named below (if more than ten patent practitioners are to be named, then a customer number must be used).

**STATEMENT UNDER 37 C.F.R. 3.73(b)**

Applicant/Patent Owner: Alain Delpuch et al. -Attorney Docket No. 2050.216US1  
 Application No./Patent No.: 10/419,621 -Filed/Issue Date: April 21, 2003  
 Titled: SUPPORTING COMMON INTERACTIVE TELEVISION FUNCTIONALITY THROUGH PRESENTATION ENGINE SYNTAX

OpenTV, Inc. -a Corporation  
 (Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

States that it is:

1. ☒ the assignee of the entire right, title, and interest in;
2. ☐ an assignee of less than the entire right, title, and interest in  
 (The extent (by percentage) of its ownership interest is \_\_\_\_\_ %); or
3. ☐ the assignee of an undivided interest in the entirety of (a complete assignment from one of the joint inventors was made)

the patent application/patent identified above, by virtue of either:

- A. ☒ An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel 014519, Frame 0695 - 0703, or for which a copy therefore is attached.

OR

- B. ☐ A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: \_\_\_\_\_ To: \_\_\_\_\_  
 The document was recorded in the United States Patent and Trademark Office at Reel \_\_\_\_\_, Frame \_\_\_\_\_, or for which a copy thereof is attached.
2. From: \_\_\_\_\_ To: \_\_\_\_\_  
 The document was recorded in the United States Patent and Trademark Office at Reel \_\_\_\_\_, Frame \_\_\_\_\_, or for which a copy thereof is attached.
3. From: \_\_\_\_\_ To: \_\_\_\_\_  
 The document was recorded in the United States Patent and Trademark Office at Reel \_\_\_\_\_, Frame \_\_\_\_\_, or for which a copy thereof is attached.

- ☐ Additional documents in the chain of title are listed on a supplemental sheet(s).

- ☐ As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.  
 [NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

ZECHER, *Administrative Patent Judge*.

JUDGMENT

Granting Joint Motion to Terminate Proceeding and  
Granting Request to Treat Agreements as Business Confidential Information  
*37 C.F.R. §§ 42.72 and 42.74*

## I. INTRODUCTION

On August 4, 2016, the parties filed a Joint Motion to Terminate Proceeding (Paper 7, “Mot.”), and a joint request to treat the settlement agreements as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) (Paper 8). A conference call was held on August 9, 2016, and we issued an Order on August 10, 2016 (Paper 11) instructing the parties that they reduce to writing any agreement or understanding between them in contemplation of termination. We observed that none of the agreements filed by the parties on August 4, 2016, i.e., Exhibits 1011, 2001, 2002, 2003, and 2004, reflects any understanding between the Petitioner and the Patent Owner. Paper 11, 2. We also observed that Exhibits 2001 and 2002 appear to be incomplete. *Id.* at 2–3.

On August 19, 2016, the parties filed Exhibit 2005, which is a writing reflecting an understanding between the Petitioner and Patent Owner in contemplation of termination of proceeding, and a joint request to treat this exhibit as confidential business information under 37 C.F.R. § 42.74(c) (Paper 13). Also on August 17, 2016, the parties filed replacement copies of Exhibits 2001 and 2002. Further on August 17, 2016, Patent Owner filed an updated Mandatory Notice to identify its parent entities and to list additional real parties in interest. Paper 12.

## II. DISCUSSION

The parties represent in the Joint Motion to Terminate Proceeding that the filed agreements “end all patent disputes between the parties, including this proceeding.” Mot. 6. The parties also indicate that all related district

court cases involving U.S. Patent No. 7,055,169 B2 have either been dismissed or are subject to pending joint motions to terminate. *Id.* at 3–6.

This proceeding is still in a preliminary stage. Patent Owner has yet to file a Preliminary Response and we have yet to decide whether to institute a trial. Under the circumstances presented here, we determine that it is appropriate to terminate this proceeding with respect to both Petitioner and Patent Owner without rendering any further decisions. *See* 37 C.F.R. § 42.72.

### III. ORDER

In consideration of the foregoing, it is hereby  
ORDERED that the parties’ Joint Motion to Terminate Proceeding, both as to Petitioner and Patent Owner, is *granted*;

FURTHER ORDERED that the parties’ joint request (Paper 8) to treat Exhibits 1011, 2001, 2002, 2003, and 2004 as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) is *granted*;

FURTHER ORDERED that the parties’ joint request (Paper 13) to treat Exhibit 2005 as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) is *granted*;

FURTHER ORDERED that the parties’ request to accept the filing of Exhibits 1011 and 2002 under the access category of “available only to Board” in the Board’s electronic filing system is *granted*;<sup>1</sup> and

FURTHER ORDERED that this proceeding is terminated with respect to both Petitioner and Patent Owner.

JUDGMENT

Granting Joint Motion to Terminate Proceeding and  
Granting Request to Treat Agreements as Business Confidential Information  
*37 C.F.R. §§ 42.72 and 42.74*

## I. INTRODUCTION

On August 4, 2016, the parties filed a Joint Motion to Terminate Proceeding (Paper 8, “Mot.”), and a joint request to treat the settlement agreements as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) (Paper 9). A conference call was held on August 9, 2016, and we issued an Order on August 10, 2016 (Paper 11) instructing the parties that they reduce to writing any agreement or understanding between them in contemplation of termination. We observed that none of the agreements filed by the parties on August 4, 2016, i.e., Exhibits 1117, 2001, 2002, 2003, and 2004, reflects any understanding between the Petitioner and the Patent Owner. Paper 11, 2. We also observed that Exhibits 2001 and 2002 appear to be incomplete. *Id.* at 2–3.

On August 19, 2016, the parties filed Exhibit 2005, which is a writing reflecting an understanding between the Petitioner and Patent Owner in contemplation of termination of proceeding, and a joint request to treat this exhibit as confidential business information under 37 C.F.R. § 42.74(c) (Paper 13). Also on August 17, 2016, the parties filed replacement copies of Exhibits 2001 and 2002. Further on August 17, 2016, Patent Owner filed an updated Mandatory Notice to identify its parent entities and to list additional real parties in interest. Paper 12.

## II. DISCUSSION

The parties represent in the Joint Motion to Terminate Proceeding that the filed agreements “end all patent disputes between the parties, including this proceeding.” Mot. 6. The parties also indicate that all related district

court cases involving U.S. Patent No. 7,055,169 B2 have either been dismissed or are subject to pending joint motions to terminate. *Id.* at 3–6.

This proceeding is still in a preliminary stage. Patent Owner has yet to file a Preliminary Response and we have yet to decide whether to institute a trial. Under the circumstances presented here, we determine that it is appropriate to terminate this proceeding with respect to both Petitioner and Patent Owner without rendering any further decisions. *See* 37 C.F.R. § 42.72.

### III. ORDER

In consideration of the foregoing, it is hereby

ORDERED that the parties' Joint Motion to Terminate Proceeding, both as to Petitioner and Patent Owner, is *granted*;

FURTHER ORDERED that the parties' joint request (Paper 9) to treat Exhibits 1117, 2001, 2002, 2003, and 2004 as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) is *granted*;

FURTHER ORDERED that the parties' joint request (Paper 13) to treat Exhibit 2005 as business confidential information under 35 U.S.C. § 317(b) and 37 C.F.R. § 42.74(c) is *granted*;

FURTHER ORDERED that the parties' request to accept the filing of Exhibits 1117 and 2002 under the access category of “available only to Board” in the Board’s electronic filing system is *granted*;<sup>1</sup> and

FURTHER ORDERED that this proceeding is terminated with respect to both Petitioner and Patent Owner.
