PetroHab™, LLC is managed by seasoned professionals who are experienced in the manufacturing, leasing and maintenance of Pressurized Hot-Work Enclosures. With a honed skill set brought about by varied prior business ventures and legal representation in the Oil & Gas industry, the Principals and supporting staff at PetroHab™ are uniquely suited to provide customers with focused strengths related to Petrohab's varied product offerings.

PetroHab™, LLC, headquartered in Houston, Texas, manufactures, leases, and maintains modular Hot-Work Safety Enclosures ("HSE").

In its pursuit of excellence and innovation, PetroHab™ has developed three distinct HSE products that cater to varying onshore and offshore applications. These products include the PetroHabitat™, which is a pressurized HSE that is particularly suited for use in classified hazardous areas; the PetroBox™, which is an open-top HSE that is well suited for refinery and industrial plant applications; and the PetroSpyder™, which is designed to contain Hot-Work while sheltering personnel from environmental conditions.

Although each of PetroHab's products are designed for specific applications, they share the following similarities:

PetroHab's patent pending Quadra-Lock® technology interlocks the panels.
The panels are modular and interchangeable.
The material from which the panels are made is certified to ANSI/FM 4950.

Since sparks and molten materials can be scattered more than 35 feet during Hot-Work related activities such as welding, cutting, grinding, chipping, and brazing, it comes as no surprise that Hot-Work is a leading cause of industrial fires that result in damages in excess of \$1,000,000 per incident. As such, Safety Professionals are consistently challenged to ensure the health and safety of both the personnel conducting Hot-Work related activities and those in their proximity.

Driven by an unwavering commitment to safety, quality, and service, PetroHab strives to consistently exceed its customers' HSE needs and is proud of the fact that its entire product line is "Made in the U.S.A."
