About Leisheng | COMPANY INTRODUCTION

Beijing Opto-Electronics Technology Co., Ltd. (BOET) is a high-tech enterprise, who is engaged in the R&D, production, sales and service of photoelectric functional materials & optoelectronic components and custom crystal growth equipment (single crystal furnace). With 50 years of R&D history and experience about laser crystal, BOET has established a complete scientific research and production management system, confidential system as well as quality management system.

BOET established the largest scale production line for inductive heating growth of YAG series crystals in China, and passed the GB/T19001-2016/ISO9001:2015 international quality management system certification. The typical products include YAG series laser crystals, bonding laser crystals, passive Q-switch and non-linear optical crystals, optical elements and custom crystal growth equipments, etc.

Relying on quality and service as well as paying special attention to expanding products and industrial chain, BOET aims to develop to be the world-class enterprise specializing in the R&D and production of photoelectric functional materials to meet diverse demands from users.
