Enabling customer choice with Red Hat on OCI

Oracle's partnership with Red Hat gives you options for running your enterprise workloads. Oracle and Red Hat are jointly enabling and supporting a growing selection of Red Hat products on Oracle Cloud Infrastructure (OCI). Our goal is to give customers choices when migrating applications to the cloud.

Red Hat on OCI use cases

Red Hat Enterprise Linux on OCI Compute

90 percent of the Fortune 500 rely on Red Hat or Oracle solutions. Many of these companies use Red Hat Enterprise Linux (RHEL) as their operating system. Organizations can standardize their cloud operations with RHEL on OCI, giving them a common platform that extends from on-premises to OCI's distributed cloud.

OCI offers high performing, mission-critical cloud services. Customers can migrate existing workloads already running on RHEL to RHEL on OCI.

Customers with current RHEL support contracts can migrate their licenses to OCI and continue to receive support from Red Hat.

Red Hat OpenShift on OCI flexible virtual machines

Validated configurations of OCI flexible virtual machines can run customer-managed Red Hat OpenShift Container Platform. Customers can install and manage the full OpenShift Container Platform on flexible compute, sized to the workload in 1-core increments. This enables existing OpenShift workloads to run on OCI's distributed cloud.

Oracle provides Container Storage Interface (CSI) and Container Storage Module (CSM) operators to enable Red Hat OpenShift to add OCI Compute and Storage resources dynamically.

Red Hat Enterprise Linux on OCI flexible virtual machines

Certified configurations of OCI flexible virtual machines can run RHEL. Flexible virtual machines can be sized to the workload in 1-core increments to match performance and budgetary needs.

Red Hat Enterprise Linux on OCI bare metal instances

For organizations that need dedicated performance, a low-latency interconnect, and access to GPUs, certified configurations of OCI bare metal instances can run RHEL and provide isolation and control with dedicated physical servers. They support applications that require high core counts, large amounts of memory, and high bandwidth connectivity.

Create custom Red Hat Enterprise Linux images for OCI

Customers today use Red Hat Enterprise Linux image builder to customize RHEL installation images to meet their corporate and security policies.

The command line, local utility now supports and can build images that are supported on OCI. This enables customers to continue meeting their corporate and security needs when deploying to OCI.

Try 20+ Always Free cloud services, with a 30-day trial for even more

Oracle offers a Free Tier with no time limits on more than 20 services such as Autonomous Database, Arm Compute, and Storage, as well as US\$300 in free credits to try additional cloud services. Get the details and sign up for your free account today.

Try OCI free

What's included with Oracle Cloud Free Tier?

- 2 Autonomous Databases, 20 GB each
- AMD and Arm Compute VMs
- 200 GB total block storage
- 10 GB object storage
- 10 TB outbound data transfer per month
- 10+ more Always Free services
- US\$300 in free credits for 30 days for even more
