U.S. PATENT NO. 10,443,163

PATENT OWNER'S PRELIMINARY RESPONSE

TABLE OF CONTENTS

PATENT OWNER’S EXHIBIT LIST	vi
CLAIM LISTING	ix
I. INTRODUCTION	1
II. SUMMARY OF THE ’163 PATENT	3
A. Knit Upper Having a Knitted Element With a Unitary One-Piece Construction	4
B. Wingtip and Broguing	5
C. Knitted Element with Different Areas Having Different Knit Structures, Including Jersey and Pointelle Stitch Knit	8
III. PROSECUTION HISTORY	9
A. ’163 Patent	9
B. ’511 Patent	10
IV. BACKGROUND OF THE ART	11
V. ASSERTED REFERENCES	12
A. Dua’256 (EX1004)	12
B. Dua’762 (EX1005)	12
C. Dua’288 (EX1006)	12
D. Flusser (EX1007)	13
E. Litke (EX1008)	13
VI. CLAIM CONSTRUCTION	13
VII. PETITIONERS’ PATENTABLE WEIGHT ARGUMENT SHOULD NOT BE CREDITED	14
A. Petitioners’ “Patentable Weight” Argument is Rooted in Section 101.	15
B. Petitioners’ “Patentable Weight” Argument Violates Canons of Claim Construction and is Not Supported by Case Law	17
C. The “Wingtip,” “Broguing,” and “Knit Structure” Limitations Provide Structure and Function and Are Entitled to Patentable Weight	22
VIII. NO REVIEW SHOULD BE INSTITUTED	27

A.	Grounds 1-2: Dua’256, Alone or in Combination With Either Dua’762 and/or Dua’288, Does Not Render Obvious the Challenged Claims..	28
1.	Dua’256, Alone or in Combination With Either Dua’762 and/or Dua’288, Does Not Disclose, Teach or Suggest All Claim Limitations.	28
2.	The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Dua’762 Or Dua’288 to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.....	48
B.	Grounds 3-4: Dua’256 in View of Flusser or Dua’256 in View of Dua’762/Dua’288 and Flusser Do Not Render Obvious The Challenged Claims.....	53
1.	The Combination of Dua’256 and Flusser, Alone or in Further Combination with Dua’762 and/or Dua’288, Does Not Disclose All Claim Limitations.	53
2.	The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Flusser to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.	55
C.	Grounds 5-6: Dua’256 in View of Litke, or Dua’256 in View of Dua’762/Dua’288 and Litke Do Not Render Obvious The Challenged Claims.....	58
1.	The Combination of Dua’256 and Litke, Alone or in Further Combination with Dua’762 and/or Dua’288 Does Not Disclose All Claim Limitations.	59
2.	The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Litke to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.	61
VI.	CONCLUSION	63

CLAIM LISTING

The challenged claims in this proceeding are claims 1–28 of U.S. Patent No. 10,443,163 (“the ’163 Patent”), reproduced below:

Claim 1	
[1.pre]	A shoe comprising:
[1.a]	a knit upper;
[1.b]	a sole secured to the upper;
[1.c.i]	the knit upper having a knitted element, the knitted element being formed of a unitary one-piece construction during a knitting process on a knitting machine,
[1.c.ii]	the knitted element comprising a knitted upper heel region, a knitted upper lateral midfoot region, a knitted upper medial midfoot region, a knitted upper metatarsal region, a knitted upper lateral ball region, a knitted upper medial ball region, and a knitted upper toe region,
[1.c.iii]	the knitted upper metatarsal region including a knitted upper lateral metatarsal region and a knitted upper medial metatarsal region, the upper having a knitted upper lateral side region and a knitted upper medial side region, the upper lateral side region including the upper lateral midfoot region, the upper lateral metatarsal region and the upper lateral ball region, the upper medial side region including the upper medial midfoot region, the upper medial metatarsal region and the upper medial ball region,
[1.c.iv]	the upper toe region being seamlessly knitted with the upper medial and lateral ball regions during the knitting process, the upper medial and lateral ball regions being seamlessly knitted with the knitted upper metatarsal region during the knitting process, the knitted []upper metatarsal region being seamlessly knitted with the upper lateral and medial midfoot regions during the knitting process,
[1.c.v]	the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions;
[1.c.vi]	the knitted element comprising a first area of a first type of knit structure and a second area of a second type of knit structure, the second type of knit structure being different from the first type of knit structure, the first area having a rear boundary, the second area having a forward boundary, the rear boundary of the first area and the forward boundary of the

	second area being coincident and coextensive with each other and defining a boundary line between the first and second areas,
[1.c.vii]	the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line.
Claim 2	
2	A shoe as set forth in claim 1 wherein the upper further comprises a throat, and wherein the apex points toward the throat.
Claim 3	
3	A shoe as set forth in claim 1 wherein the first type of knit structure is more tightly knit than the second type of knit structure.
Claim 4	
4	A shoe as set forth in claim 1 wherein the first type of knit structure is a jersey stitch knit and the second type of knit structure is a pointelle stitch knit.
Claim 5	
5	A shoe as set forth in claim 1 wherein the knitted element comprises covered spandex yarn and hot melt yarn, the hot melt yarn being knitted with the covered spandex yarn during the knitting process.
Claim 6	
6	A shoe as set forth in claim 5 wherein the hot melt yarns constitute at least 15% by mass of the knitted element.
Claim 7	
7	A shoe as set forth in claim 6 wherein the covered spandex yarn constitute at least 50% by mass of the knitted element.
Claim 8	
8	A shoe as set forth in claim 7 wherein the covered spandex yarn comprises polyester covered spandex yarn.
Claim 9	

9	A shoe as set forth in claim 8 wherein the knitted element further comprises stretch yarn, the stretch yarn constituting at least 5% by mass of the knitted element.
Claim 10	
10	A shoe as set forth in claim 5 wherein the covered spandex yarn has a linear density of between about 120 denier and about 180 denier, and wherein the hot melt yarn has a linear density of between about 80 denier and about 120 denier.
Claim 11	
11	A shoe as set forth in claim 1 wherein the knitted element comprises polyester yarn and hot melt yarn, the hot melt yarn being knitted with the polyester yarn during the knitting process.
Claim 12	
12	A shoe as set forth in claim 1 wherein the knitted element comprises hot melt yarn, the hot melt yarn constituting at least 15% by mass of the knitted element.
Claim 13	
[13.pre]	A shoe comprising:
[13.a]	a knit upper;
[13.b]	a sole secured to the upper;
[13.c.i]	the knit upper having a knitted element, the knitted element being formed of a unitary one-piece construction during a knitting process on a knitting machine,
[13.c.ii]	the knitted element comprising a knitted upper metatarsal region, a knitted upper lateral ball region, a knitted upper medial ball region, and a knitted upper toe region,
[13.c.iii]	the knitted upper metatarsal region including a knitted upper lateral metatarsal region and a knitted upper medial metatarsal region, the upper having a knitted upper lateral side region and a knitted upper medial side region, the upper lateral side region including the upper lateral metatarsal region and the upper lateral ball region, the upper medial side region including the upper medial metatarsal region and the upper medial ball region,
[13.c.iv]	the upper toe region being seamlessly knitted with the upper medial and lateral ball regions during the knitting process, the upper medial and lateral ball regions being seamlessly knitted with the knitted upper metatarsal region during the knitting process,

[13.c.v]	the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions;
[13.c.vi]	the knitted element comprising a first area of a first type of knit structure and a second area of a second type of knit structure, the second type of knit structure being different from the first type of knit structure, the first area having a rear boundary, the second area having a forward boundary, the rear boundary of the first area and the forward boundary of the second area being coincident and coextensive with each other and defining a boundary line between the first and second areas,
[13.c.vii]	the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line.
Claim 14	
14	A shoe as set forth in claim 13 wherein the wingtip pattern comprises a medial line of broguing and a lateral line of broguing, the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions collectively being knitted with the medial and lateral lines of broguing, the medial line of broguing comprising a wing-shaped curved line of holes having a medial side broguing portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central broguing portion extending rearward from the upper toe region, the lateral line of broguing comprising a wing-shaped curved line of holes having a lateral side broguing portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central broguing portion extending rearward from the upper toe region, the rearwardly extending central broguing portion of the medial line of broguing converging toward the rearwardly extending central broguing portion of the lateral line of broguing.
Claim 15	

15	A shoe as set forth in claim 14 wherein the central broguing portions of the medial and lateral lines of broguing meet at a rearwardly pointing apex.
Claim 16	
16	A shoe as set forth in claim 13 wherein the first type of knit structure is a jersey stitch knit and the second type of knit structure is a pointelle stitch knit.
Claim 17	
17	A shoe as set forth in claim 13 wherein the first type of knit structure is more tightly knit than the second type of knit structure.
Claim 18	
[18.pre]	A method of manufacturing an upper for an article of footwear, the method comprising:
[18.a.i]	knitting with a knitting machine to form a knitted element of the upper such that the knitted element is of a unitary one-piece construction comprising
[18.a.ii]	a knitted upper heel region, a knitted upper lateral midfoot region, a knitted upper medial midfoot region, a knitted upper metatarsal region, a knitted upper lateral ball region, a knitted upper medial ball region, and a knitted upper toe region,
[18.a.iii]	the knitted upper metatarsal region including a knitted upper lateral metatarsal region and a knitted upper medial metatarsal region, the upper having a knitted upper lateral side region and a knitted upper medial side region, the upper lateral side region including the upper lateral midfoot region, the upper lateral metatarsal region and the upper lateral ball region, the upper medial side region including the upper medial midfoot region, the upper medial metatarsal region and the upper medial ball region,
[18.a.iv]	the upper toe region being seamlessly knitted with the upper medial and lateral ball regions during the knitting process, the upper medial and lateral ball regions being seamlessly knitted with the knitted upper metatarsal region during the knitting process, the knitted upper metatarsal region being seamlessly knitted with the upper lateral and medial midfoot regions during the knitting process,
[18.a.v]	the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions
[18.a.vi]	the knitted element comprising a first area of a first type of knit structure and a second area of a second type of knit structure, the second type of

	knit structure being different from the first type of knit structure, the first area having a rear boundary, the second area having a forward boundary, the rear boundary of the first area and the forward boundary of the second area being coincident and coextensive with each other and defining a boundary line between the first and second areas,
[18.a.vii]	the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line;
[18.b]	the upper toe region being seamlessly knitted with the upper medial and lateral ball regions during the knitting step; the upper medial and lateral ball regions being seamlessly knitted with the knitted upper metatarsal region during the knitting step; the knitted upper metatarsal region being seamlessly knitted with the upper lateral and medial midfoot regions during the knitting step;
[18.c]	the first and second areas and the wingtip pattern being seamlessly knitted during the knitting step.
Claim 19	
19	A method as set forth in claim 18 wherein the knitted element includes a line of broguing adjacent the boundary line, the knitted element being knitted with the line of broguing during the knitting step.
Claim 20	
20	A method as set forth in claim 18 wherein the knitted element includes a medial line of broguing and a lateral line of broguing, the medial line of broguing being adjacent the medial boundary line, the lateral line of broguing being adjacent the lateral boundary line, the medial line of broguing comprising a curved line of holes, the lateral line of broguing comprising a curved line of holes, the knitted element being knitted with the medial and lateral lines of broguing during the knitting step.
Claim 21	

[21.pre]	A method of manufacturing an article of footwear having a knitted upper and a sole, the method comprising:
[21.a.i]	knitting with a knitting machine to form a knitted element of the upper such that the knitted element is of a unitary one-piece construction comprising
[21.a.ii]	a knitted upper heel region, a knitted upper lateral midfoot region, a knitted upper medial midfoot region, a knitted upper metatarsal region, a knitted upper lateral ball region, a knitted upper medial ball region, and a knitted upper toe region,
[21.a.iii]	the knitted upper metatarsal region including an upper lateral metatarsal region and an upper medial metatarsal region, the knitted element having an upper lateral side region and an upper medial side region, the upper lateral side region including the upper lateral midfoot region, the upper lateral metatarsal region and the upper lateral ball region, the upper medial side region including the upper medial midfoot region, the upper medial metatarsal region and the upper medial ball region,
[21.a.iv]	the knitted element comprising a first area of a jersey stitch knit and a second area of a pointelle stitch knit, the first area being at least in the upper toe region, the second area being at least in the upper lateral and medial metatarsal regions, the first area having a rear boundary, the second area having a forward boundary, the rear boundary of the first area and the forward boundary of the second area being coincident and coextensive with each other and defining a boundary line between the first and second areas;
[21.a.v]	attaching the sole to the upper;
[21.b]	the upper toe region being seamlessly knitted with the upper medial and lateral ball regions during the knitting step; the upper medial and lateral ball regions being seamlessly knitted with the knitted upper metatarsal region during the knitting step; the knitted upper metatarsal region being seamlessly knitted with the upper lateral and medial midfoot regions during the knitting step;
[21.c]	the first and second areas being knitted during the knitting step.
Claim 22	
22	A method as set forth in claim 21 wherein the knitted element includes a line of broguing adjacent the boundary line, the knitted element being knitted with the line of broguing during the knitting step.
Claim 23	
23	A method as set forth in claim 21 wherein the boundary line comprises a medial boundary line and a lateral boundary line, and wherein the

	knitted element includes a medial line of broguing and a lateral line of broguing, the medial line of broguing being adjacent the medial boundary line, the lateral line of broguing being adjacent the lateral boundary line, the medial line of broguing comprising a curved line of holes, the lateral line of broguing comprising a curved line of holes.
Claim 24	
24	A method as set forth in claim 23 wherein the knitted element is knitted with the medial and lateral lines of broguing during the knitting step.
Claim 25	
25	A method as set forth in claim 24 wherein the upper is knitted during the knitting step with at least first and second yarns, the first yarn being of a hot melt yarn, the second yarn being of a yarn other than a hot melt yarn.
Claim 26	
[26.pre]	A method as set forth in claim 25 further comprising:
[26.a]	placing the upper around a last;
[26.b]	applying heat to the upper while the upper is around the last to cause the hot melt yarn to affix to the second yarn.
Claim 27	
27	A method as set forth in claim 21 wherein the knitted element further includes a knitted lateral eyestay area and a knitted medial eyestay area, the knitted upper lateral midfoot region including a knitted lateral midfoot area, the knitted upper medial midfoot region including a knitted medial midfoot area, and wherein broguing holes forming lines of broguing are between the lateral midfoot area and the lateral eyestay area and between the medial midfoot area and the medial eyestay area, wherein the knitted element is knitted with the broguing holes during the knitting step.
Claim 28	
28	A method as set forth in claim 21 wherein the knitted upper lateral midfoot region includes a knitted lateral midfoot area and the knitted upper medial midfoot region includes a knitted medial midfoot area, and wherein broguing holes forming lines of broguing are between the lateral midfoot area and the second area and between the medial midfoot area and the second area, wherein the knitted element is knitted with the broguing holes during the knitting step.

I. INTRODUCTION

Patent Owner Cole Haan LLC (“Patent Owner”) submits this preliminary response to the Petition filed by Petitioners Top Glory Trading Group Inc. and DP Dream Pairs, Inc. (“Petitioners”) requesting *inter partes* review (“IPR”) of claims 1-28 (the “Challenged Claims”) of U.S. Pat. No. 10,443,163 (the “’163 Patent”).

Institution should be denied because the Petition fails to demonstrate a reasonable likelihood that the Challenged Claims of the ’163 Patent are unpatentable. Contrary to Petitioners’ arguments: (1) all the claim limitations of the ’163 Patent are entitled to patentable weight; and (2) when given proper weight, the Petition’s asserted references and arguments—which are cumulative of the art and arguments cited during prosecution of the ’163 Patent and its parent, U.S. Patent No. 10,327,511 (the “’511 Patent”)¹—fail to render the claims obvious.

¹ As explained in Patent Owner’s Request for Discretionary Denial (Paper 10), Petitioners’ invalidity grounds are substantively identical to the art and arguments Patent Owner overcame during prosecution of the ’511 Patent, of which the ’163 Patent is a continuation. In fact, Petitioners’ grounds are so similar that Patent Owner overcame the same and similar art authored by the same inventor as Petitioners’ primary reference here, Dua. EX1012, 108; Paper 10, 8-11.

First, the so-called “ornamental” limitations are anything but—these limitations provide structure and function to the claimed shoe, and as such, are entitled to patentable weight. Even if this was a proper forum in which to challenge patentable weight (and it is not), Petitioners’ own asserted references acknowledge the structural and functional roles of these limitations. *See, e.g.*, EX1004, [0035] (“[A] flat knitting process may be utilized to substantially form upper 30 to have various *properties and structural features* that are advantageous to footwear.”)²; EX1003, ¶114 (Petitioners’ expert citing EX1004, [0035]); EX1007, 10 (“Shoes are perhaps the most functional item in a man’s wardrobe.”).

Next, all invalidity grounds advanced in the Petition are based only on obviousness, rooted in impermissible hindsight. The combinations of asserted references leave missing critical limitations claimed in the ’163 Patent, and Petitioners fail to show that a person of ordinary skill in the art (“POSITA”) would have been motivated to supply those missing limitations. Specifically, Petitioners’ asserted references fail to disclose or render obvious at least one limitation from each independent claim of the ’163 Patent, including one or more of: [1.c.v], [1.c.vii], [13.c.v], [13.c.vii], [18.a.v], [18.a.vii], [18.c], and [21.a.iv].

² Emphasis added throughout unless indicated otherwise.

With respect to these limitations, Petitioners' arguments rely on the knowledge of a POSITA rather than the references' express disclosures. And the POSITA's supposed knowledge is supplied solely by conclusory, *ipse dixit* expert argument that attempts to gap-fill between the references' disclosures and the claimed limitations, contrary to 37 C.F.R. § 42.104(b)(4). None of Petitioners' asserted references disclose or suggest a knitted element having the claimed wingtip, broguing, and/or stitch knit limitations required by the Challenged Claims. And, despite offering numerous unfounded arguments as to why a POSITA would have found it obvious to modify Petitioners' base reference to include the missing limitations, neither Petitioners nor their expert sufficiently explain *how or why* a POSITA would have made Petitioner's proposed modifications or had a reasonable expectation of success in making them.

Petitioners do not carry their burden to demonstrate with reasonable likelihood that any of the Challenged Claims are unpatentable. Accordingly, the Petition should be denied, and this proceeding should be terminated.

II. SUMMARY OF THE '163 PATENT

The '163 Patent is directed to a shoe comprising a knit upper and a sole secured to the upper, the knit upper having a knitted element, and the knitted element being formed of a unitary one-piece construction. EX1001, Claim 1. The knitted element of the knit upper includes multiple regions, including lateral and medial

midfoot regions, lateral and medial metatarsal regions, lateral and medial ball regions, and the toe region. *Id.*, 2:27-34. Each of these regions is seamlessly knitted with its abutting region as part of the unitary one-piece construction knitting process. *Id.*, 6:10-19.

A. Knit Upper Having a Knitted Element With a Unitary One-Piece Construction

One aspect of the invention taught by the '163 Patent is a knit upper having “[a] knitted element [being] formed of a unitary one-piece construction during a knitting process on a knitting machine.” EX1001, 1:27-46; *id.*, 5:64-66. The '163 Patent teaches that multiple areas of varying knit structures can be knitted into the knitted element of the upper during the unitary one-piece construction process. *Id.*, 4:63-66. Each region of the knit upper’s knitted element, including “the upper lateral and medial heel regions,” “the upper lateral and medial midfoot regions,” “the upper lateral and medial metatarsal regions,” “the upper lateral and medial ball regions,” and “the upper lateral and medial toe regions,” may correspond to a different knit stitch type; although, the '163 Patent explains that the various knit structures can span across multiple areas of the knitted element. *See generally id.*, 4:21-31. Certain knit structures, such as a jersey stitch knit “may be more tightly knit than” others, such as a pointelle stitch knit. *Id.*, 5:29-32. Altogether, these knit regions “are knitted as a...unitary one-piece construction...formed together via the knitting process, as opposed to being formed separately and then sewn or bonded together.” *Id.*, 6:5-10.

A related, unconventional aspect of the knitted element claimed in the '163 Patent is the seamless joinder of various regions. *Id.*, 6:5-21. “By being knitted as a...unitary one-piece construction, it is to be understood that these various regions of the knitted element are formed together via the knitting process, as opposed to the regions being formed separately and then sewn or bonded together.” *Id.*, 6:5-10. Knitting each of the knitted element’s regions “seamlessly” and “during the knitting step” provides a shoe having a knit upper with a one-piece knitted element having multiple features but without the drawbacks of additional seams or sewing.

B. Wingtip and Broguing

The '163 Patent further discloses knitting at least one wingtip pattern into the knitted element of the knit upper. According to the '163 Patent, “[t]he knitted element includes a first wingtip pattern...and a second wingtip pattern.” *Id.*, 4:21-23. “Each of the first and second wingtip patterns...comprises portions of at least the upper toe region[,] the upper lateral and medial ball regions[,] and the upper lateral and medial metatarsal regions[.]” *Id.*, 4:23-27. These regions, “collectively are knitted with the first and second wingtip patterns...during the knitting process.” *Id.*, 4:27-31.

As shown above in the annotated Figure 5 of the '163 Patent, the first wingtip pattern 36 (**orange** line) “comprises a line of broguing...comprising a lateral line of broguing...and a medial line of broguing” (**orange** dots), *id.*, 4:32-34:

Both the lateral and medial lines of broguing “comprise[] a wing-shaped curved line of holes.” *Id.*, 4:38-39, 4:46-47. “The lateral line

of broguing...comprises a lateral side broguing portion...extending forward from at least the upper lateral metatarsal region...to the upper toe region[,] and a central broguing portion...extending rearward from the upper toe region.” *Id.*, 4:39-43. “The medial line of broguing...comprises a medial side broguing portion...extending forward from at least the upper medial metatarsal region...to the upper toe region[,] and a central broguing portion...extending rearward from the upper toe region.” *Id.*, 4:47-52. The central broguing portions ultimately converge rearwardly toward each other and meet to constitute a rearwardly pointing apex. *Id.*, 4:55-57.

Unlike more traditional broguing, which required the “removal of material such as by cutting or punching,” “the holes...of the lateral and medial lines of broguing” described embodiments of the ’163 Patent are included “in the [unitary one-piece construction of the] knitting element.” *Id.*, 4:59-62; 6:25-28. In this way, the ’163 Patent departs from the traditional use of broguing in leather to allow for the use of knit uppers having a unitary knitted element while still offering the breathability and permeability benefits provided by early brogues. *Cf.* EX1047, 20.

The second wingtip pattern 38 comprises a boundary line 60 (blue). EX1001, 5:6-7. Like the first wingtip pattern, the second wingtip pattern 38 “comprises portions of at least the upper toe region 32, the upper lateral and medial ball regions 30a, 30b, and the upper lateral and medial metatarsal regions 28a, 28b” and

these regions “collectively are knitted with the first and second wingtip patterns.” *Id.*, 4:23-31.

C. Knitted Element with Different Areas Having Different Knit Structures, Including Jersey and Pointelle Stitch Knit

Another aspect of the '163 Patent is its integration of multiple areas having different knit structures into the upper's knitted element. *See generally* EX1001, 2:10-42. As shown above in annotated Figure 5 from the '163 Patent, “the rear boundary 56 of the first area 52 [green] and the forward boundary 58 of the second area 54 [red] is coincident and coextensive with each other and define [the] boundary line 60 [blue] between the first and second areas 52, 54.” *Id.*, 5:3-6. “[T]he lateral and medial lines of broguing 40a, 40b are adjacent the boundary line 60.” *Id.*, 5:9-10. “The boundary line 60 has a lateral boundary line 60a and a medial boundary line 60b,” each “compris[ing] a wing-shaped curved line having a...side portion [62a, 62b] extending forward from at least the upper...metatarsal region [28a, 28b] to the upper toe region 32, and a central portion [64a, 64b] extending rearward from the upper toe region 32.” *Id.*, 5:14-24. “The central portions 64a, 64b of the lateral and medial boundary lines 60a, 60b converge rearwardly toward each other, and meet to constitute a rearwardly pointing apex 66.” *Id.*, 5:24-27.

In one embodiment, the '163 Patent describes a “first area of a jersey stitch knit” structure on the knitted element in the upper toe region that is joined seamlessly with a “second area of a pointelle stitch knit” in the upper lateral and medial

metatarsal regions. *Id.*, 3:12-19. Relatedly, the '163 Patent explains that the “first type of knit structure (that is, the knit structure of the first area) may be more tightly knit than the second type of knit structure (that is, the knit structure of the second area).” *Id.*, 5:29-32.

III. PROSECUTION HISTORY

A. '163 Patent

Application No.16/409,970 (“’970 Application”), which issued as the '163 Patent, was filed on May 13, 2019, with four independent claims (Claims 1, 13, 18, and 21) and twenty-four dependent claims. EX1002, 36-45; EX1001, Cover. The '970 Application was filed as a continuation application of Application No. 15/205,672, which issued as U.S. Patent No. 10,327,511 (“’511 Patent”). EX1002, 6; EX1001, Cover.

During prosecution of the '163 Patent, Patent Owner submitted, and Examiner considered, certain printed publications including U.S. Patent No. 7,347,011 (“Dua’011,” EX2026), U.S. Patent No. 6,910,288 (“Dua’288,” EX1006), and U.S. Patent No. 2,312,078 (“Crannell,” EX2027). *Id.*, 13-14, 78-79. A non-statutory double patenting rejection in view of the application leading to the '511 Patent was issued on July 11, 2019. *See id.*, 70-75. In response, Patent Owner filed, and the USPTO approved, a terminal disclaimer on August 9, 2019. *Id.*, 96, 100. A notice of allowance was issued on August 26, 2019. *Id.*, 103.

B. '511 Patent

During the prosecution of the '511 Patent, the Examiner rejected the independent claims as obvious over Dua'011 in view of Crannell. EX1012, 108, 112. The Examiner asserted that Dua'011 could be modified with Crannell to achieve the “aesthetic appeal” of the claimed “wingtip” and “broguing” features. *Id.*, 109.

In a response filed April 3, 2019, Patent Owner argued Dua'011 fails to disclose a wingtip pattern seamlessly knit with and into the upper's knitted element. More particularly, Patent Owner explained that the “knitted design patterns disclosed in Dua['011]...do not extend into *both* the toe region *and* the metatarsal region. The individual patterns of Dua['011] are isolated and separated without extending into multiple regions.” *Id.*, 134. Patent Owner further explained that Crannell failed to remedy Dua'011's shortcomings because “Crannell does not disclose shoe regions and lines of broguing seamlessly constructed.” *Id.*, 135. At most, Patent Owner explained, “a modification of Dua['011] based on Crannell would result in a shoe in which the broguing is not seamless with the rest of the upper but is rather added in post processing steps.” *Id.*

Patent Owner further rebutted Examiner's motivation to combine rationale, explaining that “aesthetic appeal” alone was insufficient to establish a *prima facie* case of obviousness. *Id.*, 138 (citing M.P.E.P. § 2144.04). Patent Owner explained that the claimed knitting with “wingtip” and “broguing” “inherently has mechanical

function as it is incorporated in and forms a portion of the upper.” *Id.* Moreover, aesthetic appeal cannot be a result-effective variable that justifies a modification because the aesthetic appeal is subjective in nature. *Id.*, 139.

The Examiner accepted Patent Owner’s arguments, and a notice of allowance was issued on April 23, 2019. *Id.*, 148-152.

IV. BACKGROUND OF THE ART

“Wingtip” and “brogue” leather shoes have been around for ages. The term “brogue” is generally understood to be derived from the Gaelic *bróg*, “which meant to push an awl through, as was done in the stitching of leather.” EX1047, 20. Broguing on leather shoes traditionally served the function “to let water drain out of these early Scottish shoes, which were often worn while fording a stream or crossing marshy land.” *Id.*

Wingtip shoes styled in conjunction with “broguing” were historically known as “full brogue[s],” and were viewed as a rugged shoe that similarly functioned to let water drain out of shoes crossing marshy land. EX1007, 13; *Cf.* EX1047, 19, 20. In twentieth century, the brogue wingtip shoe became less associated with crossing marshy land and more associated with business fashion; although, the functional permeability remained for punched brogues. *See, e.g.*, EX1007, 13. As a result, the wingtip shoe was associated with leather shoes. *E.g., id.*, 10-14; EX1008, 6:16-17 (“the upper can be provided by the choice of leather”); EX1047, 14.

V. ASSERTED REFERENCES

A. Dua'256 (EX1004)

U.S. Patent Application Publication No. 2010/0154256 (“Dua’256”) describes a shoe having an “upper that includes a knitted component and a sole structure secured to the upper.” EX1004, Abstract. Dua’256 teaches that the knitted upper may “incorporate[] various knit types that impart different properties to separate areas of the upper,” including “apertures 41” in the “forefoot region 11, whereas many other areas of upper 30 have a more continuous or less-apertured configuration.” *Id.*, [0022].

B. Dua'762 (EX1005)

U.S. Patent No 6,931,762 (“Dua’762”) teaches a shoe with a knitted upper with “a plurality of sections formed of different yarns and knits to provide the sections with different physical properties,” where the different sections are joined by a tuck stitch. EX1005, Abstract.

C. Dua'288 (EX1006)

U.S. Patent No. 6,910,288 (“Dua’288”) describes a knitted upper for a shoe including “fusible filaments or fibers” where the filaments can be heated to form fused areas, and that the fused areas may impart desirable properties like “greater stretch resistance, stability, support,” and durability. EX1006, Abstract.

D. Flusser (EX1007)

Alan Flusser's *Clothes and the Man* ("Flusser") discloses "approximately seven" leather or suede shoe styles "that tradition and good taste dictate as appropriate for business wear," including a "wing-tip shoe." EX1007, 13-15. Flusser describes production of "fine-quality wing-tips" and "brogues" as including a "narrow strip of leather stitched to the shoe upper." *Id.*, 11.

E. Litke (EX1008)

U.S. Patent No. 7,949,570 ("Litke") describes a two-step construction process using "different machines operated in a series" for customizing a shoe upper. EX1008, 6:16-32, 8:2-5. Litke teaches "apply[ing] or form[ing]" a "pattern on the upper" that may include, among others, "stitching [and] holes, ... or no pattern could be specified so that the leather is smooth." *Id.*, 6:16-25.

VI. CLAIM CONSTRUCTION

For purposes of determining whether to institute based on the Petition only, Patent Owner does not construe any claim terms of the '163 Patent, and each term is given its plain and ordinary meaning.³

³ Patent Owner reserves its rights to propose new or additional constructions in litigation involving the '163 Patent or later in this proceeding should IPR be instituted.

The parties have exchanged preliminary claim constructions for several terms in the parallel district court proceeding, including the terms “wingtip pattern” “wing-shape curved line,” “line of broguing,” “broguing portion,” and “pointelle stitch knit.” EX2034; EX2035. For the reasons provided below, the asserted references do not disclose or render obvious the identified limitations containing these terms under the plain and ordinary meaning or either sides’ preliminary construction, especially because the below arguments do not depend on a particular construction of any terms. Notably, however, the Petition fails to address or apply Petitioners’ own constructions for the “wingtip pattern,” “wing-shape curved line,” “line of broguing” and “broguing portion” or provide any explanation for why inconsistent claim construction positions were advanced; Petitioners’ failure to address these inconsistencies is grounds for denial of institution. *See Tesla Inc. v. Intellectual Ventures II LLC*, IPR2025-00340, Paper 18 at 2-4 (P.T.A.B. Nov. 5, 2025) (vacating institution decision where petitioner did not sufficiently explain inconsistent claim construction positions).

VII. PETITIONERS’ PATENTABLE WEIGHT ARGUMENT SHOULD NOT BE CREDITED

Petitioners assert that certain claim limitations purportedly reciting “ornamental/aesthetic features” are not entitled to patentable weight. Pet., 14-16. These arguments are incorrect and should not be credited for two reasons. First, Petitioners have admitted in the district court that their arguments regarding these

limitations are based on patent eligibility under 35 U.S.C. § 101—not §§ 102 or 103—and as such, these arguments are not appropriate for an IPR. Second, the prosecution history and Petitioners’ asserted references make clear that these features are not merely ornamental but, rather, provide significant function and structure. As such, they are entitled to patentable weight, even under Petitioners’ own cited (and flawed) cases.

A. Petitioners’ “Patentable Weight” Argument is Rooted in Section 101.

Petitioners advance the same “patentable weight” argument based on the similar case law in both the Petition and the parallel district court proceeding. *Compare* EX2017, 1, 10, 11, 13-14 (citing *In re Seid*, 161 F.2d 229, 231 (C.C.P.A. 1947); *Crocs, Inc. v. Polliwalks, Inc.*, IPR2014-00423, Paper 8 at 10-11 (P.T.A.B. Aug. 20, 2014)) *with* Pet., 14-16 (relying upon the same cases); *see also* Paper 10, 7, 8, 12, 14, 15. More specifically, Petitioners assert that certain limitations (*i.e.*, the “wingtip,” “broguing,” and “knit structure” limitations) that distinguish Petitioners’ asserted references (§VIII) are “purely ornamental/aesthetic features” and therefore are not entitled to patentable weight. Pet., 14-16.

Notably absent from the Petition, however, are Petitioners’ *repeated* assertions in the parallel litigation that this argument “*is grounded in § 101*,” which is outside the statutorily-limited scope of IPR proceedings:

- “In utility patents, claim limitations reciting purely ornamental/aesthetic features are not entitled to patentable weight because those limitation are patent ineligible under 35 U.S.C. § 101.” EX2017, 10;
- The “doctrine of assigning no patentable weight to unpatentable ornamental limitations *is grounded in § 101*.” EX2024, 1;
- “Ornamental features are protectable only in *design* patents. *That principle is grounded in § 101*. The claimed ornamental features here are *patent ineligible and not entitled to patentable weight*.” *Id.*, 3;
- “And *Marco Guldenaar* is relevant because shows [*sic*] that claims limitations directed to *patent-ineligible subject matter*, like the ornamental features here, are not afforded patentable weight.” *Id.*, 9 citing *In re Marco Guldenaar Holding B.V.*, 911 F.3d 1157, 1161-62 (Fed. Cir. 2018)).⁴

Petitioners’ omission of any reference to Section 101 and “patent-eligibility” in the Petition highlights their gamesmanship in seeking a second bite at the apple in this forum. *See* Paper 10, 15. It is well-established that IPR proceedings are expressly reserved for validity challenges arising under Sections 102 or 103. *See* 35 U.S.C. § 311(b). Indeed, the Board has found that it “may not institute a trial in an *inter partes* review to determine whether the claims are directed to ineligible subject matter under § 101.” *Volvo Penta of the Americas, LLC v. Brunswick Corp.*, IPR2022-01424, Paper 12 at 19 n.13 (P.T.A.B. Feb. 16, 2023). As such, the Director is without statutory authority to determine whether the so-called “purely ornamental/aesthetic” limitations are entitled to patentable weight. Thus, institution

⁴ Evidently recognizing that *In re Marco Guldenaar* is relevant only to a Section 101 analysis, Petitioners have omitted that case from their Petition.

should be denied on this basis or, at a minimum, Petitioners’ “patentable weight” arguments should be disregarded by giving each and every limitation in the ’163 Patent’s claims patentable weight.

B. Petitioners’ “Patentable Weight” Argument Violates Canons of Claim Construction and is Not Supported by Case Law.

Petitioners incorrectly couch their “patentable weight” argument as an issue of claim construction. *See* Pet., 14-16. As discussed above, it is not. Moreover, a proposed construction that entirely disregards these terms would violate widely-accepted claim construction principles and is not supported by Petitioners’ cited cases.

Terms of a patent must be construed in IPR proceedings in accordance with the “ordinary and customary meaning of such claims as understood by one of ordinary skill in the art and the prosecution history” of the patent. 37 C.F.R. § 42.100(b); *see also Phillips v. AWH Corp.*, 415 F.3d 1303, 1313 (Fed. Cir. 2005). “It is highly disfavored to construe terms in a way that renders them void, meaningless, or superfluous.” *Intel Corp. v. Qualcomm Inc.*, 21 F.4th 801, 810 (Fed. Cir. 2021) (internal quotations omitted).

Here, Petitioners’ proposed “no patentable weight” construction is “highly disfavored” because it would require disregarding “at least *the entirety of* limitations or additional limitations (for dependent claims) recited in” [1.c.v], [1.c.vi], [1.c.vii], [2], [3], [4], [13.c.v], [13.c.vi], [13.c.vii], [14], [15], [16], [17], [18.a.v.], [18.a.vi],

[18.c.vii], [19], [20], [21.a.iv], [22], [23], [24], [27], and [28]. Pet., 15;⁵ *Intel Corp.*, 21 F.4th at 810. Indeed, this exclusionary approach is precisely what the Board of Patent Office Appeals cautioned against in *Ex Parte Hilton*, 148 U.S.P.Q. 356, 1966 WL 6407 (Bd. App. Jan. 18, 1965). In *Hilton*, the Board explicitly rejected the Examiner’s patentable weight argument, finding the allegedly “ornamental” features of the claimed invention (i.e., the shape of a “fried potato chip”) distinguished it from the cited prior art (which taught a french fry), because the shape “result[ed] in a different product which is distinct from the reference product.” *Id.* at *1-2. The same is true here; the file history of the ’511 Patent confirms the Patent Owner was the “first to recognize the desirability” of knitting a “wingtip” pattern and “broguing” into a knitted element having a unitary one-piece construction for a shoe upper, and these limitations render the shoe claimed in the ’163 Patent “a different product” separate and distinct from the prior art shoes including uppers that have been stitched, punched, and/or cut to form a “wingtip” pattern and “broguing.” *See* EX1012, 133-142 (analogizing the patented upper to *Ex Parte Hilton*).

Neither of the cases Petitioners rely on to support their “patentable weight” argument justifies departing from well-settled claim construction principles for the “highly disfavored” approach Petitioners advance. Pet. at 14-16 (citing *Seid*, 161

⁵ Emphasis contained within the Petition is omitted unless indicated otherwise.

F.2d at 231; *Crocs*, IPR2014-00423, Paper 8 at 10-11). Instead, these cases suggest just the opposite—the limitations challenged by Petitioners *are* entitled to patentable weight.

Petitioners’ principal authority (which they also raised in the district court (*see* EX2017, 1)) is *In re Seid*, a 1947 decision by the C.C.P.A with questionable applicability post-enactment of the 1952 [Patent] Act (*see* EX2023, 15) and post-issuance of the Supreme Court’s obviousness standard in *KSR Int’l Co. v. Teleflex Inc.*, 550 U.S. 398, 418 (2007). *Seid* is also distinguishable on the facts. The claims appealed⁶ in *Seid* related to “a display made up of an ordinary bottle of the type in which beer or soft drinks are commonly sold, together with a hollow member which represents a human figure from the waist up.” *Seid*, 161 F.2d at 230. The issue presented was whether such claims were obvious in view of a combination of references. *Id.* at 231. The Board of Patent Appeals held, and the C.C.P.A. affirmed, that “[t]he particular shape and arrangement of the upper part of the body in appellant’s figure, including the arrangement of the arms” “relate to ornamentation

⁶ Notably, *Seid* involved an appeal of a rejection raised during prosecution based on the non-statutory “invention” requirement that was subsequently overturned with the 1952 Act. Moreover, there was not presumption of validity like with the ’163 Patent at issue here. 35 U.S.C. § 282 (“A patent shall be presumed valid”).

only and *have no mechanical function whatsoever.*” *Id.*. Therefore, the C.C.P.A. concluded that, because “the appealed claims are not directed to a design but are structural claims,” such purely ornamental limitations “cannot...properly be relied on” for purposes of establishing non-obviousness. *Id.*

In other words, *Seid*—to the extent it even applies to current § 103— supports the proposition that ornamental changes, without any mechanical or structural function, cannot serve as a basis for establishing non-obviousness, not the proposition that Petitioners now advance—namely, that purely ornamental changes can be disregarded entirely. Indeed, even in *Seid*, the prior art was found to disclose all limitations of the appealed claims, including the purported ornamental limitations. *Id.*. Moreover, as noted above, the Supreme Court’s 2007 *KSR* decision changed the obviousness standard, and the applicability of *Seid*’s rationale has not been substantively addressed or examined by the Federal Circuit under *KSR*.⁷ Regardless, the claim limitations at issue here are readily distinguishable from those in *Seid* because the “wingtip,” “broguing,” and “knit structure” limitations each have

⁷ *Seid* is cited in only one Federal Circuit case for a different proposition. See *PlaSmart, Inc. v. Kappos*, 482 F. App’x 568, 573 (Fed. Cir. 2012) (citing *Seid* concerning the interpretation of prior art).

structural and mechanical function and thus are not “purely ornamental” as Petitioners assert. §VII.C.

*Crocs*⁸ also does not stand for the proposition that Petitioners seek to impart to it—that purportedly “ornamental” limitations can be entirely excluded from an invalidity analysis. Rather, the Board in the *Crocs* case acknowledged that the parties proposed interpretations for the term “three dimensional animal or character figure,” but declined to credit either party’s proposed construction, finding instead that the features “have no mechanical function whatsoever.” *Crocs*, IPR2014-00423, Paper 8 at 10-11 (quoting *Seid*, 161 F.3d at 231). Here, as explained below, the relevant limitations each have structural and functional benefits for the shoe. Moreover, in that case, the parties disputed whether the claimed “three dimensional animal shape or character figure” invoked the “printed matter doctrine,”⁹ which Petitioners do not

⁸ The portion of *Crocs* that Petitioners rely upon is dicta; the Board’s decision to not construe the term “three dimensional animal or character figure” was not necessary to its decision to institute. *See Crocs*, IPR2014-00423, Paper 8 at 10-11.

⁹ Under the printed matter doctrine, a claim limitation is not entitled to patentable weight **only if** the limitation “claims the content of information” that is “not functionally or structurally related to the associated physical structure.” M.P.E.P. § 2111.05 (quoting *In re DiStefano*, 808 F.3d 845, 848 (Fed. Cir. 2015)).

allege is present here. *Id.* Nor could they, because the '163 Patent does not claim any “content of information.” As explained herein, *Crocs* also is inapposite to this case where the claim limitations provide structure and function.

Finally, Petitioners cite M.P.E.P. § 2144.04 (Pet., 15), which cites *Seid* as an example of legal precedent as a source of a rationale supporting obviousness, to support their patentable weight argument. This authority is unavailing, too, as M.P.E.P. § 2144.04 states that, “[i]f the applicant has demonstrated ***the criticality of a specific limitation***, it would not be appropriate to rely solely on case law as the rationale to support an obviousness rejection.” M.P.E.P. § 2144.04. Petitioners’ assertion of obviousness based solely on case law (*i.e.*, *Seid* and *Crocs*) contradicts the M.P.E.P.’s guidance. Indeed, Patent Owner cited this same M.P.E.P. provision during prosecution of the parent '511 Patent, and demonstrated the criticality of the challenged limitations (*i.e.*, the mechanical function) and the Examiner withdrew the obviousness rejection in response. *See* §VII.C; Paper 10, 7-12. Petitioners do nothing to address that criticality, and in fact, their own expert agrees that the challenged limitations import structure and function. §VII.C.

C. The “Wingtip,” “Broguing,” and “Knit Structure” Limitations Provide Structure and Function and Are Entitled to Patentable Weight.

Even if Petitioners’ arguments regarding the eligibility of these limitations were properly considered in this IPR proceeding (they are not) and did not violate

basic tenets of claim construction (they do), Petitioners’ patentable weight argument should still be disregarded as it is plainly incorrect: each of the limitations that Petitioners argue are “ornamental” or “aesthetic” provide structure and function to the claimed shoe. Notably, Petitioners do not argue in the district court that the terms “jersey stitch knit” and “pointelle stitch knit” are not entitled to patentable weight. *Compare* Pet., 15-16 with EX2035. As such, Petitioners’ argument regarding the patentable weight of the “knit structure” limitations should be disregarded in this proceeding. *See Tesla*, IPR2025-00340, Paper 18 at 2-4.

Petitioners’ arguments hinge on an assumption that the purpose of a claim limitation is mutually exclusive: it is either structural/functional or ornamental, but not both. That assumption is baseless; a claim can describe something that makes up part of a design but also serves a functional and/or structural purpose. *See, e.g.*, M.P.E.P. § 1502.01 (“Both design and utility patents may be obtained on an article if invention resides both in its utility and ornamental appearance”); *Sport Dimension, Inc. v. Coleman Co., Inc.*, 820 F.3d 1316, 1320 (Fed. Cir. 2016) (“[A] design may contain both functional and ornamental elements”). Indeed, a patent owner may have both design patents and utility patents covering the same product; the utility patents cover “the way an article is used and works,” and a design patent protects “the way an article looks.” M.P.E.P. § 1502.01.

In any event, the “wingtip,” “broguing,” “and “knit structure” limitations provide several structural and functional benefits for the knitted shoe: each allows breathability and permeability while maintaining the requisite structure in the shoe, including allowing for certain portions to be more reinforced or have more stretch as necessary.¹⁰ As discussed below, §IV, the wingtip and broguing have long been recognized as providing breathability. Patent Owner similarly recognizes that its Stitchlite shoes that practice the ’163 Patent include “zonally designed dynamic stitching and static tight gauge-stitching to create a customized, *foot-hugging fit* while open, pointelle-style stitching details improve the *breathability and moisture control*.” See EX2033; EX2009, ¶3.

Both the prosecution history of the ’163 and the ’511 Patents and Petitioners’ asserted references further demonstrate the structure and function of the challenged claim limitations. First, Petitioners fail to acknowledge that the PTO has already found that these claim limitations provide structure and function during prosecution

¹⁰ Additionally, the specific claimed locations of these features on the shoe further contribute to these structural and functional benefits. For example, the broguing and wingtip in the medial and lateral midfoot region as opposed to the heel region provides breathability and permeability in those regions while allowing the heel region to remain sufficiently stiff to maintain a more rigid structure.

of the '511 Patent. Specifically, in arguing against the Examiner's rejection of the independent claims, Patent Owner explained that "aesthetic design change" was not a proper rationale to modify Dua'011 to arrive at the claim limitations, such as the "wingtip," "broguing," "knit structure" limitations, because the claims were distinguishable from cases where "matters relating to ornamentation...have no mechanical function." EX1012, 138; *see also* Paper 10, 7-12. Patent Owner explained that the "claimed knit pattern," including the "wingtip" and "broguing," "inherently has mechanical function as it is incorporated in and forms a portion of the upper." EX1012, 138. The Examiner allowed the '511 Patent's claims in response, acknowledging that these limitations provide mechanical function. *Id.*, 152-157.

Second, Petitioners' primary reference, Dua'256, admits that features like apertures and different knit structures, which the Petition reads on the claimed "wingtip," "broguing," and "knit structures" (*see* Pet. at 26-33), provide structure and function to a shoe upper. Specifically, Dua'256 states the "flat knitting process may be utilized to substantially form upper 30 to have various ***properties and structural features*** that are advantageous to footwear 10." EX1004, [0035]. Dua'256 further recognizes that an "apertured configuration," which the Petition reads on the claimed wingtip pattern including lateral and medial lines of broguing (Pet. at 26-28, 34), serves both functional and structural purposes: "[i]n addition to

imparting greater *permeability*, which allows air to circulate within upper 30, apertures 41 may *increase both the flexibility and stretch* of upper 30.” EX1004, [0022]. As another example, Dua’256 explains that properties of the shoe “may be varied through selecting particular knit types for a particular area of knitted component,” which the Petition reads on the claimed knit structures, including the pointelle and jersey stitch knit (Pet. at 26-28, 29-31); such properties including “permeability to liquids, the directions in which knitted component 40 stretches or resists stretch, the stiffness of knitted component 40, and the compressibility of knitted component 40.” EX1004, [0022]. Dua’256 notes that “the density of the knit within knitted component 40,” which the Petition reads on the claimed knit structures, (Pet. at 29-31), “may vary among separate areas of upper 30 to, for example, make less-permeable or stiffer portions.” *Id.*

These disclosures demonstrate that elements of a shoe, like knit structure, wingtip pattern and broguing, allow the designer to change the properties “depending upon the particular knit type that is selected for the areas” (*see id.*), providing structural and functional benefits. Petitioners’ expert Dr. Adanur even admits that jersey “stretch[es] equally in both the lengthwise and crosswise directions” and pointelle is “more breathable” than other knit structures. EX1003, ¶61.

As such, these limitations are entitled to patentable weight and must be clearly disclosed or suggested by the prior art to render the '163 Patent's claim unpatentable. However, as explained below, they are not.

VIII. NO REVIEW SHOULD BE INSTITUTED

As explained in detail below, the Petition fails to establish a reasonable likelihood that the Challenged Claims are unpatentable. The Petition proposes 10 separate grounds, with Grounds 1 through 6 relating to independent claims 1, 13, 18, and 21. Grounds 1-6 are addressed directly herein. As Grounds 7 to 10 relate only to dependent claims and rely on the same base references on Grounds 1 to 6, Patent Owner does not separately address them herein. However, these Grounds fail for the same reasons as Grounds 1 to 6. Patent Owner reserves the right to further address these Grounds later in this proceeding should IPR be instituted.

The asserted references in Grounds 1-6, either individually or collectively, do not disclose, teach, suggest or otherwise motivate all limitations of the Challenged Claims, and thus, IPR based on obviousness cannot be instituted. *See CustomPlay, LLC v. ClearPlay, Inc.*, IPR2013-00484, Paper 29 at 12-13 (P.T.A.B. Nov. 5, 2014). Similarly, institution should be denied where, as here, a Petition fails to demonstrate a motivation to combine the asserted references with a reasonable expectation of success and simply relies upon conclusory expert testimony to backfill the motivation. *See Microsoft Corp. v. Bradium Techs. LLC*, IPR2015-01435, Paper 15

at 22 (P.T.A.B. Dec. 23, 2015) (citing *KSR*, 550 U.S. at 421) (denying institution where expert testimony “is conclusory and provides insufficient explanation” for motivation to combine, as “[t]he lack of adequate reasoning...indicates that [petitioner’s expert] relies on impermissible hindsight.”); 37 C.F.R. § 42.104(b)(4); July 31, 2025 Memorandum (“[E]nforcement of Rule 104(b)(4) means that...expert testimony...may not be used to supply a missing claim limitation.”).

A. Grounds 1-2: Dua’256, Alone or in Combination With Either Dua’762 and/or Dua’288, Does Not Render Obvious the Challenged Claims.

Dua’256, alone or in combination with Dua’762 and/or Dua’288, does not render obvious the Challenged Claims at least because those references fail to disclose, teach, suggest or otherwise suggest several claim limitations within the independent claims. Moreover, the Petition fails to establish a motivation to combine these references with a reasonable expectation of success.

1. Dua’256, Alone or in Combination With Either Dua’762 and/or Dua’288, Does Not Disclose, Teach or Suggest All Claim Limitations.

a. *Claim 18*¹¹

- (1) [18.a.v]: “the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial

¹¹ Grounds 1-2 of the Petition analyze claims 18-20 first and subsequently argue that the remaining challenged claims are invalid for the same reasons. Pet., 21, 36.

ball regions, and the upper lateral and medial metatarsal regions.”

The Petition admits that limitation [18.a.v] is not disclosed in any of the Dua references and relies only on obviousness. *See* Pet., 26. However, the Petition fails to show that Dua’256, alone or in combination with Dua’762 or Dua’288, teaches, suggests or otherwise motivates limitation [18.a.v]. Instead, Petitioners’ obviousness arguments are based on their expert’s impermissible hindsight.

Dua’256 does not disclose or even reference any pattern whatsoever. Rather, Petitioners rely on Dua’762’s reference to “complex patterns” and Dua’256’s generic disclosure of “various knit types” as supposedly motivating the inclusion of the claimed wingtip pattern in Dua’256’s upper. *See* Pet., 27-28. Specifically, Petitioners misleadingly suggest that Dua’762’s “complex patterns” are formed by Dua’256’s “various knit types to impart different properties in separate areas of upper 30.” Pet., 27 (citing Dua’762 and “Dua” (i.e., Dua’256) within a single sentence). But that is not so. Dua’762’s reference to “complex patterns” relates to an X-MACHINE[®] industrial knitting machine that “has been used to produce argyle-style *socks* where multiple colored yarns form argyle and other *complex patterns*.” EX1005, 7:63-8:5; *see also* Pet., 27 (citing EX1005, 7:63-8:5); EX1003, ¶130 (citing EX1005, 7:63-8:5). Petitioners do nothing to connect the dots between the disparate disclosures of Dua’762’s complex patterns formed by multiple colored yarns in socks to Dua’256’s “various knit types” used in shoe uppers.

Relying on their faulty characterization of the collective “Dua’s” disclosure of “complex patterns,” Petitioners argue that a “POSITA would have found it obvious to try a wingtip pattern as one of Dua’s ‘complex patterns’ for a ‘dress shoe’ knitted into the upper.” *Id.* But because none of Dua’256, Dua’762, and Dua’288¹² disclose a wingtip pattern at all—much less a wingtip pattern being portions of at least the claimed regions (i.e., upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions)—Petitioners resort to their expert’s testimony. Pet., 27-28 (citing EX1003, ¶131-132). For his part, Dr. Adanur merely recites Petitioners arguments *verbatim* and includes an annotated graphic featuring Dua’256’s Figure 6 superimposed with a colored “wingtip pattern” pulled from thin air:

¹² Petitioners and Dr. Adanur make no use of Dua’288 with respect to this claim limitation, and, in any event, Dua’288 similarly fails to specify what “complex” patterns could (or would) be knitted into the upper.

EX1003, ¶132.

Dr. Adanur’s testimony is flawed for several reasons. First, he relies on the same faulty premise that Dua’256 and Dua’762 disclose “complex patterns” in knitted uppers. Like the Petition, Dr. Adanur fails to identify anything within Dua’256 or Dua’762 that would motivate a POSITA to include a pattern within Dua’256’s upper, much less a specific wingtip pattern. Dr. Adanur’s *ipse dixit* “analysis” should be afforded little weight as he does not provide any “factual analysis or cit[e] any supporting objective proof.” *Initiative for Medicines, Access & Knowledge v. Gilead Pharmasset LLC*, IPR2018-00390, Paper 7 at 14-15 (P.T.A.B. July 29, 2018) (denying institution where expert opinion “merely repeats

verbatim the conclusory statements set forth in the Petition, without providing any factual analysis or citing any supporting objective proof.”).

Second, Dr. Adanur disregards Dua’256’s disclosure that “apertures 41,” which he suggests would be “reshape[d] and extend[ed]” to form the wingtip pattern (EX1003, ¶132), only “extend through the upper 30 in forefoot region 11”—a single region—“whereas many other areas of upper 30 have *a more continuous or less apertured* configuration.” EX1004, [0022]. Despite Petitioners’ assertion that their fictitious “patterns can be portions of ‘many regions of the upper,’” Dua’256 does not actually teach or suggest using different knit structures that stretch across in the claimed areas or any area outside the disclosed apertures in the forefoot region. In fact, the only time Dua’256 teaches or otherwise suggests non-uniform knit structures with any specificity is through its discussion of tubes and an overlapping collar, and neither Dua’256’s tubes nor its collar extend beyond an isolated region in the upper. *Id.*, [0037], FIG. 7C. That is, a tube beginning in Dua’256’s lateral metatarsal region will remain in the lateral metatarsal region. Similarly, Dua’256’s collar is restricted to the hindfoot region of the foot, near the “ankle opening.” *Id.*, [0029]. Indeed, Petitioners acknowledge that Dua’256’s tubes “extend[] longitudinally ‘through each region 11-13’” rather than across all three regions. Pet., 27.

Third, as discussed in greater detail below, Dr. Adanur ignores the structural and functional changes to Dua’256’s upper that would result from the inclusion of the claimed wingtip in Dua’256’s upper. Indeed, the “tubes,” “collar,” and “toe” central to the upper shown in Figure 6 of Dua’256 intersect with Dr. Adanur’s “wingtip” shading, suggesting at a minimum, that further adjustment to Dua’256’s upper would be necessary to achieve the claimed upper of the ’163 Patent. But neither Dr. Adanur nor Petitioners explain any such adjustments or why there would have been a reasonable expectation of success. Indeed, Dr. Adanur’s conclusory assertion that a POSITA would “have had a reasonable expectation of success [in] applying the wingtip pattern” across the claimed regions in Dua’256’s upper once again rests faulty premise that Dua’256 discloses “a seamlessly knit, *patterned* upper for ‘dress shoes.’” See EX1003, ¶131. As discussed above, no such patterns are disclosed in Dua’256.

Finally, Dr. Adanur’s testimony that “[t]here were a finite number of standard, well-known *dress shoe* styles” at the time of the invention, such that a POSITA “would have found it obvious to try those well-known wingtip dress shoe pattern as Dua’s pattern,” is textbook hindsight. EX1003, ¶130 (citing EX1007 (Flusser) and EX1008 (Litke)); Pet., 27 (citing EX1003, ¶¶131-132). Dr. Adanur selectively relies on Flusser and Litke for establishing a “finite number” of dress shoe styles, which relate to leather dress shoes made by different construction methods than Dua’256’s

knit uppers, as discussed below. §§VIII.B.2, C.2. There is no evidence to support the conclusion that there were a finite number of patterns that could be applied to a knit upper. Indeed, accepting Petitioners' unsupported assertion that "patterns may be formed by areas having varied knit structure or density" as true (*see* Pet., 18), there could be hundreds, if not thousands, of possible patterns. *See* EX1003, ¶¶53-58 (identifying at least 6 different knit structures: jersey, pointelle, jacquard, lace, intarsia, rib).

That Dr. Adanur and Petitioners fail to show the asserted Dua references disclose a pattern (much less the claimed wingtip pattern) spanning the claimed regions of the upper's knitted element confirms that Dr. Adanur and Petitioners use improper hindsight. As explained above, the "apertures" of Dua'256 identified by Dr. Adanur *are specific to one region of the upper only*. Indeed, Patent Owner made a similar argument distinguishing another Dua reference during prosecution. *See* EX1002, 134 (explaining during prosecution of the '511 Patent that "[t]he patterns of Dua['011] are isolated and segmented rather than the lines of broguing...which extend from the lateral metatarsal region into the toe region and into the medial metatarsal region."). Thus, Petitioners clearly looked to the inventor's own disclosure in the '163 Patent—a knitted element being formed of a unitary one-piece construction during a knitting process with a wingtip pattern extending from the lateral and medial metatarsal region into the lateral and medial ball and upper toe—

to lead to their conclusion on obviousness, which is improper hindsight. *Otsuka Pharm. Co. v. Sandoz, Inc.*, 678 F.3d 1280, 1296 (Fed. Cir. 2012).

Therefore, Dua’256, alone or in combination with Dua’762 or Dua’288, does not teach, suggest or otherwise motivate limitation [18.a.v], and fails to render obvious claim 18.

- (2) [18.a.vii]: “the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line”

The Petition admits that limitation [18.a.vii] is not disclosed in any of the Dua references and relies only on obviousness. *See* Pet., 31. Petitioners make the same arguments for limitation [18.a.vii] as for limitation [18.a.v]. *See id.* at 31-33; *see also* EX1003, ¶141. However, for the same reasons as for limitation [18.a.v], the Petition fails to show that Dua’256, alone or in combination with Dua’762 or Dua’288, teaches, suggests or otherwise motivates limitation [18.a.vii]. §VIII.A.1.a.(1). As

discussed above, Petitioners and their expert fail to provide a sufficient rationale that would have led a POSITA to change Dua'256's purported boundary line from this:

to this:

Compare EX1003, p.74 *with id.*, p.75. Petitioners and Dr. Adanur’s selection of a wingtip pattern for Dua’256’s upper rests purely on hindsight without providing any support that there would have been a reasonable expectation of success in modifying Dua’256’s upper as proposed, particularly in view of Dua’256 tubes within the claimed regions.

- (3) [18.c] “the first and second areas and the wingtip pattern being seamlessly knitted during the knitting step”

Relying on limitations [18.a.v] and [18.a.vii], Petitioners assert that “it would have been obvious to try a wingtip pattern.” Pet., 34. However, for the reasons explained above with respect to limitations [18.a.v] and [18.a.vii], Petitioners fail to show that “the wingtip pattern” is rendered obvious by Dua’256, alone or in combination with Dua’762 or Dua’288. §§VIII.A.1.a.(1),(2). Indeed, neither Petitioners nor their expert establish that there would have been a reasonable expectation of success in seamlessly knitting a wingtip pattern within the claimed regions of Dua’256’s upper, particularly in view of the tubes within those regions. *See* Pet., 33-34; EX1003, ¶149. Dr. Adanur relies on a reference related to “plain, rib, and purl” knit structures without make any connection to the claimed wingtip pattern. EX003, ¶149 (citing EX1024).

Therefore, Dua’256, alone or in combination with Dua’762 or Dua’288, does not teach, suggest or otherwise motivate limitations [18.c], and fails to render obvious claim 18.

b. Claim 21

Petitioners argue that “Independent claims 1, 13, and 21 and their dependent claims recite limitations similar to or the same as claims 18-20.” Pet., 36. However, independent claim 21 is distinct from these claims, and is not obvious for the reasons described herein.

- (1) [21.a.iv]: “the knitted element comprising a first area of a jersey stitch knit and a second area of a pointelle stitch knit, the first area being at least in the upper toe region, the second area being at least in the upper lateral and medial metatarsal regions, the first area having a rear boundary, the second area having a forward boundary, the rear boundary of the first area and the forward boundary of the second area being coincident and coextensive with each other and defining a boundary line between the first and second areas.”

Petitioners contend this limitation is disclosed or “at minimum” obvious over Dua’256. Pet., 38. However, Petitioners fail to show that Dua’256 (or any of the asserted Dua references) disclose, teach, or suggest “a first area of a jersey stitch knit...at least in the upper toe region” and “a second area of a pointelle stitch knit...at least in the upper lateral and medial metatarsal regions.” As with the wingtip pattern, Petitioners again rely on Dua’256’s generic disclosures of “various knit types” and

“knit density” and their expert’s gap-filling. *See* Pet., 38-40. Once again, Petitioners’ arguments fall short.

Regarding “a second area of a pointelle stitch knit...in the upper lateral and medial metatarsal regions,” Petitioners assert that Dua’256’s “apertured configuration” meets the “pointelle stitch knit” element of limitation [21.a.iv]. *Id.*, 39.¹³ Petitioners then assert that “it would have been obvious to try a wingtip pattern” which “*reshapes and extends the pattern* shown in Figure 6, *such that* the boundary line between the first and second areas—and therefore *the second area itself, extends into, and is in, the upper later and medial metatarsal regions*. *Id.*, 40. Thus, like in limitation [18.a.v], Petitioners arrive at such a “reshape[d] and extende[d]” configuration through their expert’s unsupported modification of Dua’256’s upper to include a “wingtip pattern.” As discussed for limitation [18.a.v], Petitioners fail to establish that it would have been obvious to include a wingtip pattern in Dua’256’s upper, §VIII.A.1.a.(1), and for these same reasons, Petitioners fail to establish that it would have been obvious to extend Dua’256’s apertures (i.e., the alleged second

¹³ While Patent Owner has proposed a preliminary construction of “pointelle stitch knit” to mean “[a] stitch knit characterized by knitted openings forming a breathable structure,” Patent Owner’s arguments as to the lack of disclosure of limitation [21.a.iv] applies regardless of how “pointelle stitch knit” is construed.

area of a pointelle stitch knit) into the upper lateral and medial metatarsal regions as required by limitation [21.a.iv].¹⁴

Regarding the “jersey stitch knit” in “the upper toe region,” Petitioners assert that “Dua[’256] discloses that portions of the upper include, e.g., a “jersey knit” (’762, 4:17-38), a ‘more continuous or less-apertured configuration,’ and/or a more-apertured region” and further argue that “Dua further discloses that the first area is in the toe region,” citing back to the Petition’s analysis of limitation [18.a.vi] that include the following figure:

¹⁴ Although claim 21 does not require a “wingtip pattern” or “broguing,” Petitioners rely on the proposed modification to include a wingtip pattern within Dua’256’s upper to arrive at “a second area of a pointelle stitch knit...in the upper lateral and medial metatarsal regions” as recited in claim 21. Thus, the arguments in this section likewise apply to claim 21.

Pet., 31, 39-40. In doing so, Petitioners imply that Dua’256 uses the quoted term “jersey knit,” but it does not. Rather, the quoted term “jersey knit” comes from Dua’762’s cited disclosure of a “jersey knit” structure that “contracts to recover the unstretched shape and *comfortably conform to the shape of the ankle*” as part of “[a]nkle section 31” (yellow below), EX1005, 4:17-38; Pet., 39 (citing EX1005, 4:17-38):

EX1005, Fig. 1 (excerpted and annotated).

Dua’762’s disclosure of a jersey stitch knit in the *ankle* section is irrelevant to whether it would have been obvious to use jersey knit stitch in the claimed upper toe region. It would have been readily apparent to a POSITA from the disclosures of Dua’256 and Dua’762 that the structures required in the toe region and the ankle region are different to serve different purposes.

For example, Dua’762 does not teach or suggest using jersey knit in the toe and heel regions, but instead “includes a toe support 24” and “a heel support 25” (**green** below) within “[s]ole structure 20 provides *a durable, ground-contacting surface* and attenuates ground reaction forces and absorbs energy as footwear 10 contacts the ground,” EX1005, 3:13-16, 3:33-34.

EX1005, Fig. 1 (excerpted and annotated).

Similarly, the dense areas 48 (**green**) in Figure 7D of Dua'256 on which Petitioners rely are in the toe and heel regions:

Figure 7D

EX1004, Fig. 7D (annotated). Dua'256 discloses that “[o]ne of dense areas 48 is in heel region 13 and *may impart greater stiffness* in order to effectively provide a heel counter to footwear 10” and that “[a]nother of dense areas 48 is in forefoot region 11 and *may impart greater wear-resistance to the forefoot area.*” *Id.*, [0044]. In contrast, the ankle region of Dua'256 is “a padded collar 45” “formed by two overlapping and at least partially coextensive layers of knitted material (i.e., a tubular structure) and a plurality of floating yarns [] extending between the layers” that, like Dua'762's ankle section 31, “imparts a compressible aspect to collar 45, thereby *enhancing the comfort of footwear 10 in the area of ankle opening 31.*” *Id.*, [0029]-[0031].

Based on these disclosures, a POSITA would not have been motivated to use the jersey knit stitch from Dua'762's ankle region in the toe region of Dua'256's

upper. Neither Petitioners nor Dr. Adanur offer any explanation for why a POSITA would have been motivated to use the jersey stitch knit of Dua’762’s “ankle section” in the upper toe region of Dua’256. Accordingly, Petitioners do not establish a motivation to modify Dua’256 in view of Dua’762 to include a first area having a jersey stitch knit in the upper toe region of Dua’256.

At bottom, Petitioners’ analysis on limitation [21.a.iv] is a classic hindsight attempt to map the prior art onto the claimed invention. *See Cheese Sys., Inc. v. Tetra Pak Cheese & Powder Sys., Inc.*, 725 F.3d 1341, 1352 (Fed. Cir. 2013) (“Obviousness cannot be based on the hindsight combination of components selectively culled from the prior art to fit the parameters of the patented invention.”); *see also Metalcraft of Mayville, Inc. v. The Toro Co.*, 848 F.3d 1358, 1367 (Fed. Cir. 2017) (“[W]e also recognize that we cannot allow hindsight bias to be the thread that stitches together prior art patches into something that is the claimed invention.”). Petitioners rely on Dua’256’s generic “apertured configuration” and “various knit types” for **both** the specific “jersey stitch knit” and “pointelle stitch knit” elements—demonstrating that: (1) neither the jersey stitch knit nor the pointelle stitch knit is disclosed in Dua’256, much less in the claimed areas of the shoe, and (2) only hindsight compels a finding that this limitation would have been obvious. Although Petitioners recognize certain functional purposes of the claimed knits purportedly known to a POSITA, *see* Pet., 39-40, Petitioners do not offer an

adequate rationale as to why a POSITA would have been motivated by Dua’256’s generic “knit types” disclosures and Dua’762’s unrelated “jersey knit” disclosures to modify Dua’256’s upper to include the specific jersey stitch knit in the particular upper toe region and the specific pointelle stitch knit in the particular metatarsal region, as claimed, particularly in view of Dua’256’s teaching that apertures (i.e., pointelle according to Petitioners) should only be located in the “forefoot region.” EX1004, [0022]; *see In re Kahn*, 441 F.3d 977, 988 (Fed. Cir. 2006) (“[R]ejections on obviousness grounds cannot be sustained by mere conclusory statements; instead, there must be some articulated reasoning with some rational underpinning to support the legal conclusion of obviousness.”).

Therefore, Dua’256, alone or in combination with Dua’762 or Dua’288, does not teach, suggest or otherwise motivate limitations [21.a.iv], and fails to render obvious claim 18.

c. Claim 1

- (1) [1.c.v.]: “the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions;”

Petitioners assert that limitation [1.c.v] is met for the same reasons as limitation [18.a.v]. Pet., 37. However, for the same reasons as for limitation [18.a.v],

Petitioners fail to show that limitation [1.c.v] is disclosed or rendered obvious by Dua’256, alone or in combination with Dua’762 or Dua’288. §VIII.A.1a.(1).

- (2) [1.c.vii]: “the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line.”

Petitioners assert that limitation [1.c.vii] is met for the same reasons as limitation [18.a.vii]. Pet., 37. However, for the same reasons as for limitation [18.a.vii], Petitioners fail to show that limitation [1.c.vii] is disclosed or rendered obvious by Dua’256, alone or in combination with Dua’762 or Dua’288. §VIII.A.1a.(3).

d. Claim 13

- (1) [13.c.v]: “the knitted element including a wingtip pattern, the wingtip pattern being portions of at least the upper toe region, the upper lateral and medial

ball regions, and the upper lateral and medial metatarsal regions;”

Petitioners assert that limitation [13.c.v] is met for the same reasons as limitation [18.a.v]. Pet., 37. However, for the same reasons as for limitation [18.a.v], Petitioners fail to show that limitation [13.c.v] is disclosed or rendered obvious by Dua’256, alone or in combination with Dua’762 or Dua’288. §VIII.A.1a.(1).

- (2) [13.c.vii]: “the wingtip pattern comprising the boundary line, the boundary line having a medial boundary line and a lateral boundary line, the medial boundary line comprising a wing-shaped curved line having a medial side portion extending forward from at least the upper medial metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the lateral boundary line comprising a wing-shaped curved line having a lateral side portion extending forward from at least the upper lateral metatarsal region to the upper toe region and a central portion extending rearward from the upper toe region, the rearwardly extending central portion of the medial boundary line converging toward the rearwardly extending central portion of the lateral boundary line”

Petitioners assert that limitation [13.c.vii] is met for the same reasons as limitation [18.a.vii]. Pet., 37. However, for the same reasons as for limitation [18.a.vii], Petitioners fail to show that limitation [13.c.vii] is disclosed or rendered obvious by Dua’256, alone or in combination with Dua’762 or Dua’288. §VIII.A.1a.(3).

e. Remaining Challenged Claims

Petitioners fail to show that Dua’256 alone or in combination with Dua’762, or Dua’288 renders obvious dependent claims 2-12, 14-17, 19-20 and 22-28 for at least the same reasons as with independent claims 1, 13, 18 and 21 from which these dependent claims depend. Patent Owner reserves the right to address additional limitations of the dependent claims should IPR be instituted.

2. The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Dua’762 Or Dua’288 to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.

For a patent claim comprising several elements, obviousness cannot be shown “merely by demonstrating that each of its elements was, independently known in the prior art.” *KSR.*, 550 U.S. at 418. Rather, at the time of the invention, there must have been an “apparent reason to combine the known elements in the fashion claimed by the patent at issue.” *Id.* Of course, such a reason cannot be provided by the very patent whose claims are being challenged at obvious. *Id.* at 421; *see also Cheese Sys.*, 725 F.3d at 1352; *Metalcraft*, 848 F.3d at 1367.

Petitioners allege a POSITA would have been motivated to combine Dua’762’s purported teaching of “textile elements and uppers” with “[Dua’256]’s textile element/upper,” including, for example, “[Dua]’762’s teaching of “varying yarn types and knit structures used in each section, and disposed in ‘complex patterns.’” Pet., 19-20. However, the only purported motivation to combine Dua’762

with Dua’256 described in the Petition are that: (1) Dua’256 incorporates Dua’762 by reference, and (2) the combination would purportedly “advantageously prevent ‘the ends of yarns’ from being ‘exposed, thereby decreasing the possibility of unraveling between sections’ and ‘material waste is reduced.’” *Id.*

Both alleged motivations to combine are insufficient to result in the claimed invention. Dua’256 purports to incorporate Dua’762 for its “examples of knitted components for footwear uppers that have areas with different knit types to impart different properties” (EX1004, [0022]). Dua’256 does not reference Dua’762 for its alleged teaching of any “complex pattern,” much less the claimed wingtip patterns. Similarly, the purported advantage of including Dua’762’s “varied yarn types and knit structures are [that] ‘seamlessly join[ed]’” has nothing to do with a pattern, much less the specific claimed wingtip patterns that Petitioners assert to be motivated by Dua’762. Indeed, Petitioners provide no reasoning why a POSITA would have been motivated to select a wingtip pattern with jersey and pointelle stitch knit areas (as argued by Petitioners) at all, especially where these patterns had traditionally been used only in formal leather shoes. *See* EX1007, 13-15.

Finally, despite acknowledging the requirement that there must be a “reasonable expectation of success” in the proposed combination, Petitioners do nothing more than conclude, without support, that the combination “would predictably work and provide the expected results.” Pet., 20 (citing EX1003, ¶108).

Indeed, the Petition cites only Dr. Adanur's declaration that merely repeats Petitioners' arguments without providing any additional reasoning or analysis. *Id.* (citing EX1003, ¶108). Neither Petitioners nor their expert show or otherwise explain how such wingtip pattern could be integrated into the claimed regions of the upper's knitted element at all, much less along with the tubes contained within those regions without impacting the underlying structure necessary to support the tubes and their performance. This is insufficient to establish a reasonable expectation of success. *Cf. Xerox Corp. v. Bytemark*, IPR2022-00624, Paper 9 (P.T.A.B. Aug. 24, 2022) (precedential) (denying institution where expert merely restates conclusory positions advanced in petition); *Initiative for Medicines*, IPR2018-00390, Paper 7 at 14-15; *ActiveVideo Networks, Inc. v. Verizon Comm'cns, Inc.*, 694 F.3d 1312, 1328 (Fed. Cir. 2012) (rejecting invalidity defense where accused infringer's expert testimony was "generic and bears no relation to any specific combination of prior art elements" and "fails to explain why a [POSITA] would have combined the elements from specific references *in the way the claimed invention does*") (emphasis in original); *In re Kahn*, 441 F.3d at 988.

A POSITA would not have had a reasonable expectation of success in combining Figure 6 of Dua'256 with a "wingtip" pattern as asserted by Petitioners because the specific structural qualities provided by the "tubes" of Dua'256 would be undermined by the proposed combination. Specifically, the embodiment of

Dua’256’s Figure 6, cited repeatedly in the Petition, contains “tubes 42” which are “hollow structures formed by two overlapping and at least partially coextensive layers of knitted material.” Pet., 21; *see also* EX1004, [0024]. As Dua’256 explains, these tubes in the lateral and medial metatarsal regions of the upper’s knitted element work in conjunction with the strands 43 serve an integral purpose—to “resist[] stretch in [the] lacing system.” EX1004, [0032]. A POSITA would not have been motivated to combine Figure 6 of Dua’256, including the tubes in the lateral or medial metatarsal regions, specifically used to “resist stretch[ing],” because the “wingtip” pattern in claims 1, 13, and 18—which Petitioners’ assert would be created by “reshap[ing] and “extend[ing]” Dua’256’s apertures in the upper toe region—must extend into “portions of at least the upper toe region, the upper lateral and medial ball regions, and the upper lateral and medial metatarsal regions,” which would be incompatible with the tubes in those regions.¹⁵

The tubes, which are made of “*two overlapping* and at least partially coextensive *layers of knitted material*,” would overlap with the wingtip pattern, requiring removal of the double-layered knitted material to “reshape and extend” the apertures, so the tubes would not have adequate support from the upper to resist

¹⁵ Likewise, the boundary line of claim 21 must extend through the upper toe region and the upper lateral and medial metatarsal regions. VIII.A.1.b.(1).

stretching. EX1004, [0024]. Indeed, Petitioners’ annotated figures conveniently fail to depict the fact that inclusion of a wingtip pattern would require removal of knitted material, and simply draw solid colored areas on top of Dua’256’s upper:

Pet., 28. A POSITA also would not have been motivated to modify Dua’256 to remove the tubes to incorporate a “wingtip” pattern because, without the tubes, the lacing system would be susceptible to stretching, negating this fundamental purpose.

Because Petitioners’ fail to establish that the combination of Dua’256, alone or in further combination with Dua’762 and Dua’288, discloses or renders obvious all limitations of claims 1-28, Petitioners fail to establish a reasonable likelihood of unpatentability for Grounds 1-2.

B. Grounds 3-4: Dua’256 in View of Flusser or Dua’256 in View of Dua’762/Dua’288 and Flusser Do Not Render Obvious The Challenged Claims.

Tacitly admitting the failure of Dua’256, alone or in combination with Dua’762 and Dua’288, to disclose or render obvious limitations [18.a.v]-[18.a.vii], Petitioners argue that further combination with Flusser discloses and/or renders obvious these limitations. But Flusser fails to disclose several of the limitations missing from the asserted Dua references. Furthermore, the Petition fails to establish a motivation to modify Dua’256’s knit upper in view of Flusser to arrive at the missing limitations with a reasonable expectation of success.

1. The Combination of Dua’256 and Flusser, Alone or in Further Combination with Dua’762 and/or Dua’288, Does Not Disclose All Claim Limitations.

a. Claim 18

As explained above, the asserted Dua references do not disclose or render obvious: (1) a knitted element including a wingtip pattern being portion of claimed regions (limitation [18.a.v]), and (2) that the wingtip pattern comprises a medial and lateral boundary line between first and second areas having two different knit structures (limitation [18.a.vii]). Although Flusser discloses a wingtip pattern, Flusser does not disclose at least the limitation requiring the “first and second areas and the wingtip pattern being seamlessly knitted during the knitting step (limitation [18.c]). That’s because Flusser is directed to a traditional *leather* (i.e., not knitted) wingtip shoe where the wingtip pattern is applied *in post-processing*. §V.D.

Specifically, Flusser discloses a leather “wing-tip shoe” as one of seven traditional leather or suede shoe styles and describes production of “fine-quality wing-tips” as including a “narrow strip of leather stitched to the shoe upper.” EX1007, 11. Flusser further discloses forming broguing in the traditional manner, i.e. by using “punchings” or removal of material. *Id.*, 13; *cf.* EX1047, 20. Because Flusser is directed only to **leather** uppers, Flusser does not disclose that the claimed regions are **seamlessly knitted** with the wingtip pattern as claimed.

b. Claim 21

Petitioners do not provide any analysis for their contention that the Dua’256/Flusser combination renders obvious claim 21. Instead, Petitioners merely refer back to Grounds 1 and 2. Pet., 61 (“See §§IX.A.6.a-j (explaining the overlap between these limitations/claims and [18pre-18.c][20] and how they are met); Pet., 53 (omitting claim 21 when stating: “To the extent further disclosure is required for the claimed ‘wingtip pattern’ (claims 1-20) and/or ‘broguing’ (claims 14-15, 19-20, 22-28), those features are disclosed by Flusser and those teachings would have been obvious to apply to Dua”); EX1003, ¶¶244-247 (referring back to Grounds 1-2). Because Grounds 1-2 do not rely on Flusser, it appears that Petitioners are not relying on Flusser for any limitations in independent claim 21, and that Grounds 3 and 4 are duplicative of Grounds 1 and 2 for independent claim 21. As such, Grounds 3 and 4 fail for the same reasons as Grounds 1 and 2. §§VIII.A.1.b.

c. Claims 1 and 13

Petitioners do not provide any analysis for their contention that the Dua’256/Flusser combination renders obvious claims 1 and 13. Instead, Petitioners merely refer back to Grounds 1 and 2. Pet., 61 (“See §§IX.A.6.a-j (explaining the overlap between these limitations/claims and [18pre-18.c]-[20] and how they are met); EX1003, ¶¶244-247 (referring back to Grounds 1-2). Because Grounds 1-2 do not rely on Flusser, it appears that Petitioners are not actually relying on Flusser for any limitations in independent claims 1 or 13, and that Grounds 3 and 4 are duplicative of Grounds 1 and 2 for independent claims 1 and 13. As such, Grounds 3 and 4 fail for the same reasons as Grounds 1 and 2. §§VIII.A.1.a.

d. Remaining Challenged Claims

Petitioners fail to show that Dua’256 with Flusser, or Dua’256 with Flusser and Dua’762/Dua’288 renders obvious dependent claims 2-12, 14-17, 19-20 and 22-28 for at least the same reasons as with independent claims 1, 13, 18 and 21 from which these dependent claims depend. Patent Owner reserves the right to address additional limitations of the dependent claims should IPR be instituted.

2. The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Flusser to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.

Despite Flusser’s lack of disclosure that the wingtip pattern is “seamlessly knitted during the knitting step,” and Flusser’s teachings to the contrary that such wingtip pattern is applied in a separate post-processing step, §VIII.B.1, Petitioners

nevertheless argue that “it would have been obvious to try [Flusser’s] well-known wingtip dress shoe pattern as Dua’s seamlessly knit pattern on the upper,” Pet., 55. This argument again rests on Petitioners’ faulty premises that: (1) Dua’256, alone or in combination with Dua’762, discloses “a seamlessly knit, ***patterened*** upper” that would have motivated the inclusion of a wingtip pattern, *id.*, 55, and (2) “there were a finite number of standard, well-known dress shoe styles” that would have motivated applying a wingtip pattern to a knitted upper, when hundreds or more such patterns are possible, *id.* §VIII.A.1.a.(1).

Furthermore, as discussed above (§VIII.A.2), Petitioners and their expert fail to establish a reasonable expectation of success in modifying Dua’256’s knitted upper to include Flusser’s wingtip pattern in the claimed regions of the upper’s knitted element given the presence of Dua’256’s tubes within those regions. Dua’256’s tubes are a purportedly novel aspect. *See, e.g.*, EX1004, Abstract, [0004], Cls. 1-17. Yet, Petitioners and their expert completely ignore them. Instead, Petitioners and Dr. Adanur repeat the same conclusion as for Grounds 1-2, without any explanation, that a POSITA “would have had a reasonable expectation of success applying Flusser’s teachings to Dua’s knit upper.” *See* Pet., 56; EX1003, ¶¶231-232.

Neither Petitioners nor their expert explain how such wingtip pattern could be integrated into the claimed regions of the upper’s knitted element at all, much less

along with the tubes contained within those regions without impacting the underlying structure necessary to support the tubes. §V. Moreover, given the clear differences in the methods of manufacture disclosed in Dua’256 (knitting apertures in the toe region) and Flusser (applying or creating the wingtip pattern post-processing), there is simply no reason that can be gleaned from the asserted references that the claimed wingtip pattern could be knitted into Dua’256’s upper “predictably” and with “expected results” as Petitioners claim, without support. Pet., 56; EX1003, ¶232. Petitioners’ arguments rest purely on their expert’s conclusory testimony and should not be accepted. *See Roxane Labs., Inc. v. Novartis AG*, IPR2016-01461, Paper 9 at 10 (P.T.A.B. Feb. 13, 2017) (“Where, as here, the conclusory testimony is the sole basis for establishing that a claim limitation is taught or suggested by the prior art, we find it insufficient to establish a reasonable likelihood of prevailing regarding that claim.”).

Indeed, Petitioners’ same argument was advanced by the Examiner during prosecution of the ’511 Patent and overcome by Patent Owner. *Compare* Pet. 54-56 *with* EX1012, 135; *see also* §III. Like Petitioners here, the Examiner conceded that a similar Dua reference, Dua’011, did not disclose a wingtip pattern but nonetheless argued that incorporating a “wingtip” from Crannell would have been obvious. EX1012, 109. Yet, as Patent Owner explained, “Crannell does not disclose a knit upper but rather only discloses *a leather upper treated by heat compression and*

perforation.” *Id.*, 135. Patent Owner further explained that Crannell “does not disclose a *knitted* line of broguing extending through multiple shoe regions.” *Id.* Thus, Patent Owner explained that a POSITA “would also not modify Dua[’011] to have the claimed lines of broguing extending in multiple shoe regions” because “the broguing of Crannell is formed in post processing steps including heat embossing and perforating done on separate machines.” *Id.* The same arguments apply for Petitioners’ combination of Dua’256 with Flusser.

Because Petitioners fail to establish that the combination of Dua’256 and Flusser, alone or in further combination with Dua’762 and Dua’288, discloses or renders obvious all limitations of claims 1-28, Petitioners fail to establish a reasonable likelihood of unpatentability for Grounds 3-4.

C. Grounds 5-6: Dua’256 in View of Litke, or Dua’256 in View of Dua’762/Dua’288 and Litke Do Not Render Obvious The Challenged Claims.

As another attempt to gap-fill the missing limitations [18.a.v] and [18.a.vii] from Dua’256, alone or in combination with Dua’762 and Dua’288, Petitioners argue that further combination with Litke discloses and/or renders obvious those limitations. But Litke fails to disclose several of the limitations missing from the asserted Dua references. Furthermore, the Petition fails to establish a motivation to modify Dua’256’s knit upper in view of Litke to arrive at the missing limitations with a reasonable expectation of success.

1. The Combination of Dua’256 and Litke, Alone or in Further Combination with Dua’762 and/or Dua’288 Does Not Disclose All Claim Limitations.

a. Claim 18

As explained above, the asserted Dua references do not disclose or render obvious: (1) a knitted element including a wingtip pattern (limitation [18.a.v]), and (2) a wingtip pattern comprising a medial and lateral boundary line between first and second areas having two different knit structures (limitation [18.a.vii]). Although a single figure within Litke appears to depict a wingtip pattern, Litke does not disclose at least the limitations of independent claim 18 requiring the “***first and second areas*** and ***the wingtip pattern*** being ***seamlessly knitted*** during the knitting step” (limitation [18.c]). That’s because Litke merely discloses applying or forming patterns on pre-existing uppers through cutting. §V.E.

Specifically, Litke discloses that a “pattern,” like 15*i* in Figure 3, can be “***applied or formed on*** to the materials” of the upper. EX1008, 6:16-22. Litke’s manufacturing process includes “selecting the appropriate material and ***cutting patterns*** for the shoe corresponding to the upper type chosen by the user.” *Id.*, 8:14-19; *see also id.*, 8:29-30 (disclosing “physically cut[ting] the upper material”). This is not the same as the upper ***being seamlessly knitted*** with the wingtip pattern and the first and second areas as required by independent claim 18, and Petitioners do not assert otherwise. *See, e.g.,* Pet., 70-72.

b. Claim 21

Petitioners do not provide any analysis for their contention that the Dua’256/Litke combination renders obvious claim 21. Instead, Petitioners merely refer back to Grounds 1 and 2. Pet., 76 (“See §§IX.A.6.a-j (explaining the overlap between these limitations/claims and [18pre-18.c]-[20] and how they are met); *id.*, 68 (omitting claim 21 when stating: “To the extent that further disclosure is required for the claimed ‘wingtip pattern’ (claims 1-20) and/or ‘broguing’ (claims 14-15, 19-20, 22-28), those features are also disclosed by Litke, and it would have been obvious to apply its teachings to Dua as an alternative to Flusser.”); EX1003, ¶¶278-279, 284 (referring back to Grounds 1-2). Because Grounds 1-2 do not rely on Litke, it appears that Petitioners are not actually relying on Litke for any limitations in independent claim 21, and that Grounds 5 and 6 are duplicative of Grounds 1 and 2 for independent claim 21. As such, Grounds 5 and 6 fail for the same reasons as Grounds 1 and 2. §§VIII.A.1.b.

c. Claims 1 and 13

Petitioners do not provide any analysis for their contention that the Dua’256/Litke combination renders obvious claims 1 and 13. Instead, Petitioners merely refer back to Grounds 1 and 2. Pet., 76 (“See §§IX.A.6.a-j (explaining the overlap between these limitations/claims and [18pre-18.c][20] and how they are met); EX1003, ¶¶278-279, 284 (referring back to Grounds 1-2). Because Grounds

1-2 do not rely on Litke, it appears that Petitioners are not actually relying on Litke for any limitations in independent claims 1 or 13, and that Grounds 5 and 6 are duplicative of Grounds 1 and 2 for independent claims 1 and 13. As such, Grounds 5 and 6 fail for the same reasons as Grounds 1 and 2. §§VIII.A.1.a.

d. Remaining Challenged Claims

Petitioners fail to show that Dua’256 with Litke, or Dua’256 with Litke and Dua’762/Dua’288 renders obvious dependent claims 2-12, 14-17, 19-20 and 22-28 for at least the same reasons as with independent claims 1, 13, 18 and 21 from which these dependent claims depend. Patent Owner reserves the right to address additional limitations of the dependent claims should IPR be instituted.

2. The Petition Fails to Establish a Motivation to Modify Dua’256 in View of Litke to Arrive at the Missing Claim Limitations With a Reasonable Expectation of Success.

Despite Litke’s lack of disclosure that a wingtip pattern is knitted at all, much less “seamlessly knitted during the knitting step,” and Litke’s teachings to the contrary that any wingtip pattern is applied in a separate post-processing step, §VIII.C.1, Petitioners nevertheless argue that a “POSITA would have been motivated to apply Litke’s wingtip pattern 15i (Fig. 3) and lines of broguing/holes teachings to Dua’s seamlessly knitted, patterned upper,” Pet., 69-70. As with Petitioners’ other grounds, this argument again rests on Petitioners’ same faulty premises about Dua’256’s purported “seamlessly knitted, patterned upper” and

“complex patterns” and “the well-known wing-tip shoe pattern.” *Id.*; §VIII.A.1.a.(1), VIII.B.1.a.

Furthermore, as discussed above (§VIII.A.2), Petitioners and their expert fail to establish a reasonable expectation of success in modifying Dua’256 knitted upper to include Litke’s wingtip pattern in the claimed regions of the upper’s knitted element given the presence of Dua’256’s tubes within those regions. Indeed, Petitioners’ motivation to apply Litke’s teaching to Dua’256 merely concludes, like with Flusser, that the combination “would achieve the ‘desired properties’ of a well-known design” and “would predictably work and provide the expected results.” Pet., 70. Petitioners’ expert merely repeats the same conclusions verbatim without any discussion of why that would be so with a reasonable expectation of success. EX1003, ¶¶263-265. Again, Petitioners’ arguments rest purely on their expert’s conclusory testimony and should not be accepted. *See Roxane Labs*, IPR2016-01461, Paper 9 at 10.

Like the combination of Dua’256 and Flusser, the combination of Dua’256 and Litke is similar to the combination of Dua’011 and Crannell that was overcome by Patent Owner during prosecution. §VIII.B.2. Patent Owner’s same arguments made during prosecution similarly apply to Litke, because Litke’s “pattern on the upper” is “applied or formed on the materials” of the upper *after* the upper is made, like in Crannell. *See* EX1008, 6:16-25; *see also id.*, 8:2-5 (“The manufacturing

facilities, which operate to create the customized shoes, generally comprise *different machines operated in a series for making shoes.*”), 8:20-30 (disclosing “physically *cut[ting]* the upper material” for the custom shoe). Indeed, seeing this post-manufacturing customization as “an advantage,” Litke touts its ability to “punch patterns [such as custom indicia or logos] into the outer layer material.” EX1008, 6:55-57.

Because Petitioners’ fail to establish that the combination of Dua’256 and Litke, alone or in further combination with Dua’762 and Dua’288, discloses or renders obvious all limitations of claims 1-28, Petitioners fail to establish a reasonable likelihood of unpatentability for Grounds 5-6.

VI. CONCLUSION

For at least the foregoing reasons, Patent Owner respectfully requests that institution of IPR be denied.
