I just got my first saddle tuesday, and ive been in it 3 times now. Just got done climbing and sitting in it and noticed my bridge looked to be torn. I dont think its torn i think its were the tag end of the splice is showing through. Is this ok or

something i need to be worried about??

Same thing happened with mine. Just take a close look. You can even bunch up the bridge to create more of a hollow tube and you'll be able to tell. You could probably even bury the splice a bit better once you move things around a little.

Just curious, did you contact TETHRD, what did they say?
Got one on the way.

Yeah mine is the same way. It's the end of the bury. I made mine , don't know why it works it's way out. It must be the contracting and loosening of the outer sheath.
