INTRODUCTION

The Director should deny institution. A trial in the United States District Court for the Eastern District of Texas will decide validity of U.S. Patent No. 8,391,020 (“the ’020 patent”) a few short months after the Board’s final written decision deadline. Institution would require the Board, the district court, and the parties to invest significant resources in parallel validity proceedings. But the parties’ settled expectations should be dispositive: the challenged claims have been in force for more than 12 years. Pursuant to Deputy Director Stewart’s March 26, 2025 Memorandum “Interim Processes for PTAB Workload Management” (“Process Memorandum”), Patent Owner 138 East LCD Advancements Limited requests that the Director exercise discretion and deny Petitioner BOE Technology Group Co., Ltd.’s request for *inter partes* review of the ’020 patent.

BACKGROUND

Patent Owner and its exclusive licensee, Longitude Licensing Limited, filed complaints asserting the ’020 patent—and U.S. Patent Nos. 7,636,146 (“the ’146 patent”) and 8,319,512 (“the ’512 patent”) (collectively, the “Longitude Patents”)—on April 8, 2025, in *Longitude Licensing Limited et al. v. BOE Technology Group Co., Ltd. et al.*, Case No. 2:25-cv-00358 (E.D. Tex.), and on April 25, 2025, in *Longitude Licensing Limited et al. v. BOE Technology Group Co., Ltd. et al.*, Case No. 2:25-cv-00440 (E.D. Tex.). *See* Exs. 2001, 2002. The district court consolidated

those cases. *See* Ex. 2003. Those cases are pending before United States District Judge Rodney Gilstrap. *See id.* The district court will hold a scheduling conference on November 24, 2025. Ex. 2004. Invalidity contentions are due January 5, 2026. *See id.* The district court is likely to set a trial date in April 2027.¹

The Longitude Patents relate to similar subject matter—inventions that improve consumer-facing benefits of LCD panels and/or modules, and/or monitors and TVs that incorporate these LCD panels and/or modules, including improvements in image quality and brightness, and manufacturing yields and costs. *See* Exs. 2001, 2002 at 8-9. In response to the complaints, Petitioner asserted counterclaims of invalidity against each Longitude Patent. *See* Exs. 2005 at 7-10, 2006 at 7-10. Five months after Patent Owner filed its complaints, on September 5, 2025, Petitioner filed its Petition challenging the '020 patent.

¹ Median time-to-trial statistics for the Eastern District of Texas predict trial within 24.8 months of filing suit. *See Table C-5—U.S. District Courts—Civil Statistical Tables for the Federal Judiciary*, USCOURTS.GOV (June 30, 2025), <https://www.uscourts.gov/data-news/data-tables/2025/06/30/statistical-tables-federal-judiciary/c-5>.

ARGUMENT

Considering all relevant factors, exercising discretionary denial will serve the interests of efficiency and integrity of the system. Institution of *inter partes* review is a matter of discretion. *Cuozzo Speed Techs. v. Lee*, 579 U.S. 261, 273 (2016) (citing 35 U.S.C. § 314); *Mylan Labs. Ltd. v. Janssen Pharmaceutica, N.V.*, 989 F.3d 1375, 1382 (Fed. Cir. 2021) (“[N]o petitioner has a right to such institution.”). Where institution does not align with the AIA’s objective “to provide an effective and efficient alternative to district court litigation,” it should be denied. *Gen. Plastic Indus. Co. v. Canon Kabushiki Kaisha*, IPR2016-01357, Paper 19 at 16-17 (PTAB Sept. 6, 2017) (precedential). The Board and the Director routinely deny institution where IPR would be inefficient in view of parallel litigation. *See, e.g., Advanced Micro Devices, Inc. v. Concurrent Ventures, LLC*, IPR2025-00223, Paper 9 at 2 (Director June 12, 2025); *Charter Commc’ns, Inc. v. Adaptive Spectrum & Signal Alignment, Inc.*, IPR2025-00087, 2025 WL 1297798, at *8 (PTAB May 5, 2025).

The Board and the Director adopt “a holistic view of whether efficiency and integrity of the system are best served by denying or instituting review.” *Apple Inc. v. Fintiv, Inc.*, IPR2020-00019, Paper 11 at 6 (PTAB Mar. 20, 2020) (precedential) (citing *NHK Spring Co. v. Interi-Plex Techs., Inc.*, IPR2018-00752, Paper 8 (PTAB Sept. 12, 2018) (precedential)). When determining whether to exercise discretion to

deny institution under 35 U.S.C. § 314, the Board and the Director consider six factors:

- (1) whether the court granted a stay or evidence exists that one may be granted if a proceeding is instituted;
- (2) proximity of the court's trial date to the Board's projected statutory deadline for a final written decision;
- (3) investment in the parallel proceeding by the court and the parties;
- (4) overlap between issues raised in the petition and in the parallel proceeding;
- (5) whether the petitioner and the defendant in the parallel proceeding are the same party; and
- (6) other circumstances that impact the Board's exercise of discretion, including the merits.

Fintiv, IPR2020-00019, Paper 11 at 6.

In evaluating and applying the *Fintiv* factors, the Director also may consider the settled expectations of the parties and the extent of the Petition's reliance on expert testimony. *See* Process Memorandum at 2-3.

A. Settled expectations warrant discretionary denial.

Recent Director decisions granting requests for discretionary denial and denying institution have established the significance of settled expectations in this analysis. *See Dabico Airport Sols. Inc. v. AXA Power ApS*, IPR2025-00408, Paper

21 (Director June 18, 2025). Settled expectations alone justify denying the Petition here.

The '020 patent issued on March 5, 2013. Ex. 1001. Discretionary denial is appropriate here because the challenged claims have been in force for more than 12 years. *See iRhythm Techs., Inc. v. Welch Allyn, Inc.*, IPR2025-00378, Paper 10 at 3 (Director June 6, 2025); *Dabico Airport Sols.*, IPR2025-00408, Paper 21 (finding settled expectations where the challenged claims had been in force for eight years); *United Microelectronics Corp. et al. v. Advanced Integrated Circuit Process LLC*, IPR2025-01053, Paper 12 at 2 (Director Oct. 10, 2025) (finding “strong settled expectations for Patent Owner” where “the challenged patents have been in force for eleven, sixteen, fourteen, ten, thirteen, thirteen, and twelve years”). And the fact that “Patent Owner did not previously assert the challenged patents against Petitioner does not defeat Patent Owner’s settled expectations.” *United Microelectronics Corp.*, IPR2025-01053, Paper 12 at 3.

The '020 patent’s longstanding claims, and the parties’ longstanding negotiations history, warrant denial. In the recent *VideoLabs* decision, the Deputy Director denied institution because the challenged claims had been in force for 12 years, creating settled expectations. *Hisense USA Corp. et al. v. VideoLabs, Inc.*, IPR2025-00880, Paper 11 at 2-3 (Director Oct. 10, 2025) (granting discretionary denial after noting that although “[n]o trial date has been set in the parallel

proceeding,” “the challenged patents have been in force for twelve and eleven years, creating settled expectations for Patent Owner” and Patent Owner “has been in contact with Petitioner since December 2022, when Patent Owner sent Petitioner a notice letter regarding Patent Owner’s patent portfolio”); *see also Nkt Photonics Inc. et al. v. Omni Continuum LLC*, IPR2025-00839, Paper 10 (Director Sep. 4, 2025) (finding strong settled expectations and denying institution because “Petitioner appears to have had notice of the challenged patent . . . and was engaged in discussions with Patent Owner about its portfolio until shortly before Patent Owner asserted the challenged patent”). Patent Owner’s negotiations with BOE regarding its patent portfolio—which includes the ’020 patent—began on January 2, 2020. *See, e.g., Ex. 2001 ¶ 49*. Although Patent Owner did not assert the ’020 patent against BOE until April 2025, settled expectations still justify denial. *See, e.g., VideoLabs, IPR2025-00880*, Paper 11 at 2; *see also Astera Mf. Ltd. et al. v. ElectraLED Inc.*, IPR2025-01022, Paper 12 at 2 (Director Oct. 10, 2025) (denying institution even where no parallel proceeding trial date had been set because “the challenged patent has been in force for fifteen years, creating strong settled expectations for Patent Owner, and Petitioner does not provide persuasive reasoning why an inter partes review is an appropriate use of Board resources,” and thus “the considerations that favor discretionary denial outweigh those that counsel against it”); *Apple Inc. v.*

Advanced Coding Techs. LLC, IPR2025-00983, Paper 10 (Director Oct. 3, 2025) (same).

B. The parallel district court proceeding favors discretionary denial.

The posture of the parallel district court proceeding favors discretionary denial, too. First, Petitioner has not moved to stay that proceeding, and the district court is not likely to grant a stay even if Petitioner moves for one. *See AGIS Software Development LLC v. Google LLC*, 2:19-CV-00361-JRG, 2021 WL 465424, at *2 (E.D. Tex. Feb. 9, 2021) (“It has been this Court’s consistent and long established practice to deny motions to stay pending IPR and EPR when the PTAB or PTO have instituted review on less than all asserted claims of all asserted patents because at least one or more originally asserted claims will be unaffected by the outcome of those parallel proceedings and left intact before this Court to be tried.”).

Second, the Board’s final written decision deadline and the district court’s anticipated trial are likely to fall within two months of one another. Even though the Board may issue a final written decision before the district court proceeding concludes, institution would require the Board, the district court, and the parties to invest significant and duplicative resources in parallel validity proceedings.

Patent Owner filed suit against Petitioner and its customers in the United States District Court for the Eastern District of Texas five months before Petitioner filed its Petition challenging the ’020 patent. Petitioner challenges the validity of the

'020 patent in the district court proceedings. *See* Exs. 2005 at 7-10, 2006 at 7-10. Petitioner has not filed a *Sotera* stipulation here. The district court will set a trial date and a schedule this month. Based on the district court's consistent practice and median time-to-trial statistics, Patent Owner expects that the district court will set a trial date in April 2027. *See supra*. If the Board institutes, it will issue a final written decision in March 2027. *See* 35 U.S.C. §316(a)(11).

Patent Owner anticipates that parties will have completed claim construction, fact and expert discovery, and dispositive motions before the Board issues its final written decision. This proceeding and the district court proceedings will progress together, and the Board and the parties will expend resources here only for the district court to decide validity around the same time. *See Omnivision Techs., Inc. v. RE Secured Networks, LLC*, IPR2025-01019, Paper 14 at 2 (Director Oct. 10, 2025) (finding "meaningful investment in the parallel proceeding" even if unclear whether the district court trial would take place before the Board's final written decision deadline); *Advanced Micro Devices*, IPR2025-00223, Paper 9 at 2 ("Even though a district court trial date that occurs after a projected final written decision date reduces the possibility of conflicting decisions, that benefit does not outweigh the efficiencies gained by avoiding parallel proceedings in this instance because of the parties' meaningful investment in the district court proceeding discussed above.").

Thus, the *Fintiv* factors considering the parallel proceeding favor discretionary denial.

C. The Petition relies on extensive expert testimony, which also favors discretionary denial.

Last, Petitioner's reliance on extensive expert testimony favors discretionary denial. *See* Process Memorandum at 2. Petitioner cites a 123-page, 199-paragraph expert declaration throughout the Petition. *See generally* Paper 2 ("Pet."). Petitioner's expert provides 20 paragraphs of "technology overview" and 15 paragraphs describing the "state of the art." *See* Ex. 1002 ¶¶ 36-55, 75-89. Petitioner relies on expert testimony to support the three asserted obviousness grounds, including to support claim construction positions and motivation to combine. *See, e.g.,* Pet. at 17-21, 71-73.

The extensive expert testimony raises credibility issues better resolved by the district court.

CONCLUSION

Discretionary denial is appropriate, and the Director should decline to institute *inter partes* review of the '020 patent.
