Standards

IEEE's work drives the functionality and interoperability of technology that transforms how we live.

IEEE is a leading developer of global standards that support essential technologies—from telecommunications and power generation to AI ethics. Our portfolio of over 2,360 active standards and projects includes the IEEE 802.11™ standards on which Wi-Fi is based. Together with the [IEEE Standards Association \(SA\)](#), IEEE fosters global collaboration and consensus building to create standards that inform policy, drive innovation, and help improve the world.

IEEE Government Engagement Program on Standards

Through the IEEE Government Engagement Program on Standards (GEPS), government bodies can engage with standards development and ensure their priorities are considered. They also gain access to expert knowledge on global technology trends that can impact policy and regulation.

A History of IEEE Standards

[SEE THE FULL TIMELINE ↗](#)

1899: The First Standard

AIEE, one of IEEE's precursor organizations, published the first standard for a wiring table in light and power—a booming industry in the 1890s. Learn how IEEE has driven technology forward for more than 125 years.
