NIS Named 'Fastest Growing Supplier' at WESCO/CSC Conference

HICKORY, N.C. (Nov. 21, 2011) – Network Integrity Systems (NIS) was the recipient of the Fastest Growing Supplier award at the 2011 WESCO Government Summit last week in Scottsdale, Ariz. The award, which NIS also won in 2008, is given to the supplier who achieved the highest percentage of sales growth from 2010 to 2011 and for outstanding customer service in the government market.

During the presentation, Lee Osterman, Communication Supply Corporation Regional Vice President and WESCO General Manager of Government Business, stated that NIS sales grew tenfold from 2010 to 2011.

NIS is the maker of the INTERCEPTOR™ Optical Network Security System, an alarmed PDS that provides physical security for classified networks to the TS/SCI level. As a Smart-PDS, INTERCEPTOR is more cost effective and requires less ongoing maintenance than legacy protection methods.

INTERCEPTOR was developed specifically for information assurance applications, and in part with Department of Defense funding. It has been deployed since 2003 at numerous locations within the Department of Defense, Department of Justice, and Department of Homeland Security, as well as all branches of the United States Military, both CONUS and OCONUS.

INTERCEPTOR is available exclusively through Communications Supply Corporation (CSC), a subsidiary of WESCO International, Inc. (NYSE: WCC), and is part of CSC's Secure(it)™ program focusing on solutions for secure network infrastructure.

About Network Integrity Systems, Inc.

Network Integrity Systems Inc. (NIS) develops and manufactures products that enable organizations to protect their classified networks faster, more economically, and less intrusively than ever before possible with legacy systems. Founded by optical engineers and management personnel from a global fiber optics leader, NIS helps solve key issues associated with the growing need to guard the confidentiality, integrity and availability of National Security Information.
