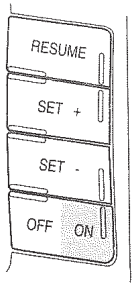
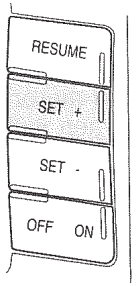
## Setting speed control

The controls for using your speed control are located on the steering wheel for your convenience.

1. Press the ON control and release it.
2. Accelerate to the desired speed.



3. Press the SET + or SET - control and release it.
4. Take your foot off the accelerator pedal.
5. The indicator light on the instrument cluster will turn on.



**Note:**

- Vehicle speed may vary momentarily when driving up and down a steep hill.
- If the vehicle speed increases above the set speed on a downhill, you may want to apply the brakes to reduce the speed.
- If the vehicle speed decreases more than 10 mph (16 km/h) below your set speed on an uphill, your speed control will disengage.

### *Disengaging speed control*

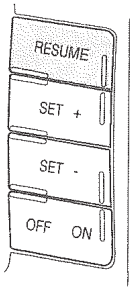
To disengage the speed control:

- Depress the brake pedal.

Disengaging the speed control will not erase previous set speed.

### *Resuming a set speed*

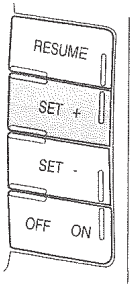
Press the RESUME control and release it. This will automatically return the vehicle to the previously set speed.



### *Increasing speed while using speed control*

There are two ways to set a higher speed:

- Press and hold the SET + control until you get to the desired speed, then release the control. You can also use the SET + control to operate the Tap-Up function. Press and release this control to increase the vehicle set speed in small amounts by 1 mph (1.6 km/h).

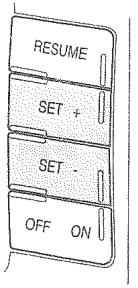


- Use the accelerator pedal to get to the desired speed. When the vehicle reaches that speed press and release the SET + control.

### *Reducing speed while using speed control*

There are two ways to reduce a set speed:

- Press and hold the SET - control until you get to the desired speed, then release the control. You can also use the SET - control to operate the Tap-Down function. Press and release this control to decrease the vehicle set speed in small amounts by 1 mph (1.6 km/h).



- Depress the brake pedal until the desired vehicle speed is reached and press the SET + control.
