Bonerge has recently announced the commencement of clinical trials for its premium ingredients, GlucoSober and BeFisetin. These trials are designed to validate the effectiveness and safety of these products, aiming to offer more reliable options in the dietary supplements market.

With the growing emphasis on health and wellness, consumers are increasingly favoring high-quality dietary supplements. Bonerge is responding to this demand by initiating multiple clinical trials to provide evidence-based ingredients that align with consumer needs.

Highlighted Products in Clinical Trials

BeFisetin: This product boasts a high-quality Fisetin with total flavonoids exceeding 99%, Fisetin content greater than 98%, and impurities less than 1%. Earlier preclinical studies have indicated that [Fisetin](#) can effectively eliminate senescent cells, targeting a key factor in the aging process. The forthcoming clinical trials aim to further explore the potential benefits of BeFisetin to support its market introduction.

GlucoSober: This ultra-pure Dihydroberberine maintains stable quality and is derived from the well-known weight-loss supplement [Berberine](#). While Berberine's bioavailability is less than 1%, Dihydroberberine has demonstrated greater effectiveness. As an ultrapure product, GlucoSober contains a higher concentration of active ingredients. The product will undergo human clinical trials to confirm the benefits of Dihydroberberine.

Bonerge also plans to conduct clinical research on product formulations to examine the synergistic effects of ingredients, catering to personalized demands. Further details on these initiatives will be disclosed in due course.

Rationale Behind Choosing Clinical Trials

Investigating the functions and applications of these ingredients necessitates collaboration among scientists, manufacturers, and brands. As a leading supplier of Dihydroberberine, Bonerge is committed to exploring scientifically proven ingredients that promote health longevity and metabolic health. The company collaborates with top brands to ensure that consumers have access to high-quality products that help maintain balanced blood glucose levels.

About Bonerge

Bonerge is an innovative team and laboratory specializing in ingredients for longevity and metabolic health. The company keenly follows the latest developments in anti-aging science and focuses on developing novel longevity ingredients. Bonerge is guided by 12 hallmarks of aging, with a mission to help people live longer and healthier lives.
