The Most Realistic PC Game of 2026

Match	Document	Document Title	Score
1	8381306	Translating role-based access control policy to resource authorization policy Translation of role-based authoring models for managing RBAC "roles" to resource authorization policy (RAP), such as ACL-based applications, is provided. A generic RBAC system is defined from...	1000
2	US20070283443	Translating role-based access control policy to resource authorization policy Translation of role-based authoring models for managing RBAC "roles" to resource authorization policy (RAP), such as ACL-based applications, is provided. A generic RBAC system is defined from...	939
3	7913084	Policy driven, credential delegation for single sign on and secure access to network resources A credential security support provider (Cred SSP) is provided that enables any application to securely delegate a user's credentials from the client, via client side Security Support Provider...	773
4	US20070277231	Policy driven, credential delegation for single sign on and secure access to network resources A credential security support provider (Cred SSP) is provided that enables any application to securely delegate a user's credentials from the client, via client side Security Support Provider...	730
5	7689716	Systems and methods for providing dynamic network authorization, authentication and accounting Systems and methods for selectably controlling and customizing source access to a network, where the source is associated with a source computer, and wherein the source computer has transparent...	617
6	7499458	Network access system including a programmable access device having distributed service control A distributed network access system in accordance with the present invention includes at	598

		least an external processor and a programmable access device. The programmable access device has a message...	
7	US20060239254	Systems and Methods for Providing Dynamic Network Authorization, Authentication and Accounting Systems and methods for selectably controlling and customizing source access to a network, where the source is associated with a source computer, and wherein the source computer has transparent...	550
8	US20090017789	Point of presence on a mobile network A wireless device with a capacity for high bandwidth connectivity adapted to provide access to the Internet or other WAN for a single user or multiple concurrent users. The wireless access device...	538
9	US20050198125	Methods and system for creating and managing identity oriented networked communication A software application for managing routing of communiqués across one or more communication channels supported by a data-packet-network includes one or more workspaces for segregating...	480
10	US20050117576	Network access system including a programmable access device having distributed service control A distributed network access system in accordance with the present invention includes at least an external processor and a programmable access device. The programmable access device has a message...	457
11	8316128	Methods and system for creating and managing identity oriented networked communication A software application for managing routing of communiqués across one or more communication channels supported by a data-packet-network includes one or more workspaces for segregating...	443
12	7096354	Central key authority database in an ABDS system Managing a database of a central key authority for a plurality of account holders, each account holder having at least one account associated with a public key of a public-private key pair of that...	442
13	US20080059220	BUILDING PLAN COMPLIANCE SYSTEM AND METHOD A system for performing a computerized building code compliance check with an appropriate jurisdiction is disclosed. The system enables a user to connect to a compliance utility by way of the...	439
14	7986686	Techniques for distributing network provider digital content to customer premises nodes Techniques for distributing digital content include receiving provider content over a network connection at a customer premises node located on premises of a first customer. The provider content...	439
15	US20080247401	Remote Access to Home Communication Services A home-link gateway system for providing remote access to contracted telephone services at a home or other physical location is disclosed. The home-link gateway manages communications at the home...	410
16	US20100217837	MULTI-SERVICES APPLICATION GATEWAY AND SYSTEM EMPLOYING THE SAME An intelligent gateway device provided at a premises (home or business) for providing and managing application services associated with use and support of a plurality of digital endpoint devices...	409
17	US20030097573	Central Key Authority Database in an ABDS System Abstract of Disclosure Managing a database of a central key authority for a plurality of account holders, each account holder having at least one account associated with a public key of a...	407
18	7002995	Broadband network with enterprise wireless communication system for residential and business environment The present invention sets forth a network-centric service distribution architecture that integrates a wireless access system in the residence, SOHO, business or public environment through the use...	404
19	8543665	Multi-services application gateway and system employing the same An intelligent gateway device provided at a premises (home or business) for providing and managing application services associated with use and support of a plurality of digital endpoint devices...	399

20	US20020191557	Broadband network with enterprise wireless communication system for residential and business environment The present invention sets forth a network-centric service distribution architecture and method that integrates a wireless access system/service in the residence, SOHO, business or public...	384
21	US20070115898	Use of wireline networks to access 3G wireless services Methods, devices, and computer programs for using a wireline communication network, such as a cable network (306), to access a packet-switched service (21) delivered by a 3G communication network,...	374
22	8250150	Methods and apparatus for identifying and facilitating a social interaction structure over a data packet network A software suite for managing the publishing and consumption of information and payload data across one or more transport protocols supported by a data-packet-network includes a posting...	358
23	8849316	Paging and access via different nodes Signaling-only access may be established with an access node under certain circumstances such as, for example, upon determining that a node is not authorized for data access at the access node. A...	353
24	8442060	Method and apparatus for providing signaling access Signaling-only access may be established with an access node under certain circumstances such as, for example, upon determining that a node is not authorized for data access at the access node. A...	352
25	US20070121612	Techniques for distributing network provider digital content to customer premises nodes Techniques for distributing digital content include receiving provider content over a network connection at a customer premises node located on premises of a first customer. The provider content...	348
26	US20080316960	Regulating network service levels provided to communication terminals through a LAN access point Network services provided by network access points to a plurality of communication terminals are regulated. Subscriber information that defines which of a plurality of network service levels is...	341
27	7944948	Broadband network with enterprise wireless communication system for residential and business environment The present invention sets forth a network-centric service distribution architecture that integrates a wireless access system in the residence, SOHO, business or public environment through the use...	336
28	8184538	Regulating network service levels provided to communication terminals through a LAN access point Network services provided by network access points to a plurality of communication terminals are regulated. Subscriber information that defines which of a plurality of network service levels is...	336
29	6978369	Person-centric account-based digital signature system In a method of managing a database of existing accounts (214) for account holders (202), each account holder (202) has multiple accounts with one or more account authorities (212) for use of a...	333
30	7010002	Broadband network with enterprise wireless communication method for residential and business environment The present invention sets forth a network-centric service distribution architecture and method that integrates a wireless access system/service in the residence, SOHO, business or public...	332
31	US20090047931	METHOD AND APPARATUS FOR WIRELESS ACCESS CONTROL In some aspect restricted access nodes are assigned to a designated common channel while access terminals that are in active communication with a macro access node may selectively be assigned to...	325
32	US20030115151	Person-centric account-based digital signature system In a method of managing a database of existing accounts (214) for account holders (202), each account holder (202) has multiple accounts with one or more account authorities (212) for use of a...	324
33	7453906	Systems and methods for providing automatic network optimization with application variables Systems and methods for automatic network optimization with application variables are	324

		provided. Operation of a protocol stack, such as an SCP stack, relies upon a number of persistent variables,...	
34	US20020191635	Broadband network with enterprise wireless communication method for residential and business environment The present invention sets forth a network-centric service distribution architecture and method that integrates a wireless access system/service in the residence, SOHO, business or public...	320
35	US20090196221	METHOD AND APPARATUS FOR PROVIDING SIGNALING ACCESS Signaling-only access may be established with an access node under certain circumstances such as, for example, upon determining that a node is not authorized for data access at the access node. A...	320
36	US20020022483	Distributed network communication system which allows multiple wireless service providers to share a common network infrastructure System and method for providing access to multiple wireless service providers (WSPs) on a shared network infrastructure. The system includes a plurality of access points (APs) coupled to a network...	320
37	8909211	Remote control of devices utilizing a mobile network Providing for remote control of electronic devices at least in part utilizing a mobile radio access network (RAN) is disclosed herein. A control server is provided that can initiate an OTA message...	319
38	7701912	System and method for concurrently utilizing multiple system identifiers System and method for providing access to multiple wireless service providers (WSPs) on a shared network infrastructure. The system includes a plurality of access points (APs) coupled to a network...	319
39	7069291	Systems and processes for call and call feature administration on a telecommunications network Improved systems and methods for call and call feature setup, administration and processing on PSTN and other telecommunications networks are provided. Calls are set up on a service plane of a...	318
40	US20040176968	Systems and methods for dynamically configuring business processes Systems and methods for dynamic business process configuration are provided that allow developers to introduce points of variances (parameters/policies) at well-defined places in business...	317
41	US20100099396	REMOTE CONTROL OF DEVICES UTILIZING A MOBILE NETWORK Providing for remote control of electronic devices at least in part utilizing a mobile radio access network (RAN) is disclosed herein. A control server is provided that can initiate an OTA message...	317
42	8204502	Method and apparatus for user equipment registration Some embodiments are implemented in a communication system that includes a first wireless communication system and a second wireless communication system that includes a Femtocell access point...	316
43	US20060209795	Broadband network with enterprise wireless communication system for residential and business environment The present invention sets forth a network-centric service distribution architecture that integrates a wireless access system in the residence, SOHO, business or public environment through the use...	313
44	7944844	Methods and apparatus to monitor network layer functionalities Example methods and apparatus to monitor network layer functionalities are disclosed. A disclosed example method includes receiving a first probe packet at an input of a first server, the first...	311
45	8326352	Device, network, server, and methods for providing service requests for wireless communication devices A wireless communication device operable as a digital image capturing device (wireless digital camera) may be used to associate processing information with a captured image. The wireless digital...	310
46	US20090119773	APPARATUS AND METHODS OF CONFIGURABLE SYSTEM EVENT AND RESOURCE ARBITRATION MANAGEMENT Methods, apparatus, and computer-readable media for management and arbitration of	307

		dedicated mobile communication resources for mobile applications are provided. Mobile applications can be given a...	
47	9055511	Provisioning communication nodes Provisioning and access control for communication nodes involves assigning identifiers to sets of nodes where the identifiers may be used to control access to restricted access nodes that provide...	305
48	6952773	Requesting execution of instructions on accounts in ABDS system A method of requesting an account authority to execute an instruction with regard to an account maintained by the account authority includes, (a) for a first account, composing an electronic...	300
49	9167505	Access management for wireless communication Provisioning and access control for communication nodes involves assigning identifiers to sets of nodes where the identifiers may be used to control access to restricted access nodes that provide...	293
50	7853647	Network agnostic media server control enabler Embodiments of the invention provide systems and methods for interacting with a media server on a network and/or protocol agnostic basis. According to one embodiment, a method for controlling a...	290

Search (APD/20010101->20090128) AND (modem ADJ15 wireless) AND (network) AND (memory) AND (forward ADJ15 access) AND (f
