

UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF WASHINGTON

WEPLE IP HOLDINGS LLC,

Plaintiffs,

v.

META PLATFORMS, INC.,

Defendants.

CASE NO.: 2:24-cv-1316

**COMPLAINT FOR PATENT
INFRINGEMENT**

JURY TRIAL REQUESTED

Plaintiff Weple IP Holdings LLC (“Weple”) files this Complaint and demand for a jury trial seeking relief for patent infringement by Defendant Meta Platforms, Inc., (“Meta”).

Plaintiff states and alleges the following:

THE PARTIES

1. Weple IP Holdings LLC is a limited liability company organized and existing under the laws of the State of Texas with a registered address at 5900 Balcones Drive, Suite 100, Austin, TX, 78731.

2. Meta is a corporation organized under the laws of Delaware. Meta is registered to do business in the state of Washington and maintains several business locations within the Western District of Washington, including locations in Bellevue, Redmond, and Seattle.

BACKGROUND

3. Mary Anne Fletcher is an entrepreneur and the innovator behind several social media platforms, such as MeetGreet®, Meet®, and Weple®. Ms. Fletcher is also the sole

1 inventor on 15 issued United States patents directed to social media platforms, including the
2 patents asserted in this action.

3 4. Before her efforts on social media platform development, Ms. Fletcher worked
4 as a professional model, during which time she collaborated with premier fashion and lifestyle
5 brands such as Armani, Versace, Hugo Boss, Tommy Hilfiger, Reebok, Levi's, Evian, and
6 Tiffany & Co. Ms. Fletcher established a substantial following through her visibility in print
7 magazines, commercial advertisements, and fashion shows. Through her work with magazines,
8 designers, photographers, and fashion creatives, Ms. Fletcher appreciated the power and impact
9 of creative media in promoting brands and products. These experiences informed her
10 development of a social media platform that empowered users to create, control, and market
11 their personal image and media content.

12 5. Ms. Fletcher recognized the shortcomings of the existing social media
13 landscape, particularly in mobile engagement, and sought to develop an improved platform that
14 addressed its limitations. For example, existing social media platforms constrained users by
15 offering a limited selection of content creative formats and ways to deliver content to their
16 audience, which hampered creative expression and audience engagement. These platforms
17 often lacked video tools for content creators, particularly live streaming, which is important for
18 real-time engagement with audiences. They also offered inadequate options for users to
19 manage personal promotion and commercialization of their name, image, and likeness. E-
20 commerce integration was lacking, which prevented users from selling merchandise directly
21 through the platforms. Additionally, platforms lacked advertising opportunities, which could
22 provide substantial revenue streams to content creators and social media platform operators
23 alike.

24 6. Ms. Fletcher's solution is a comprehensive platform that facilitates the creation,
25 management, distribution, and monetization of diverse content in a mobile environment. This
26 innovative platform includes features such as advanced video content capabilities, allowing for
27 the embedding of external images and audio to supplement native footage. The platform

1 includes live streaming, along with the ability to notify followers of the initiation thereof, to
2 facilitate real-time audience engagement. In addition, the platform provides multiple media
3 streams with the flexibility to switch between them. User interaction is enabled through
4 commenting, sharing, and bookmarking functionalities. The platform includes a media
5 scheduling feature that allows users to define the time frame for which their content will be
6 accessible, providing effective content management and advertising capabilities. Ms.
7 Fletcher's solution also introduces an e-commerce component, encompassing in-app
8 transactions, targeted advertising, sponsorship models, as well as mechanisms for gifting and
9 donations. Through these features, Ms. Fletcher's platform offers individuals control over the
10 distribution and economic potential of their digital content in ways previously unavailable.

11 7. Recognizing the significant value of her innovative platform, Ms. Fletcher filed
12 a provisional patent application on her inventions in early 2010. This initial filing was
13 followed by a non-provisional patent application a year later, which further described the
14 unique aspects of her inventions.

15 8. Ms. Fletcher then began to develop and market a social media platform she
16 called Weple[®]—an abbreviation reflecting the ethos of “We the People” and the goal of helping
17 to democratize social media platforms for content creators. Weple[®] was designed to embody
18 many aspects of Ms. Fletcher's invention so that users could support one another and generate
19 income while sharing their lives.

20 9. Development of the Weple[®] social media platform faced significant obstacles
21 when prominent platforms like Facebook and Instagram, both of which are controlled by Meta,
22 integrated some of Weple's patented inventions. This eroded the distinctiveness of Weple's
23 offerings and complicated efforts to attract the capital necessary to develop Weple[®] to its full
24 envisioned potential.

THE ASSERTED PATENTS

10. This is a civil action for infringement of U.S. Patent No. 11,734,730 (the “’730 patent”) and U.S. Patent No. 11,966,952 (the “’952 patent”) (collectively, the “Asserted Patents”).

11. The ’730 patent is entitled “Mobile Device Streaming Media Application” and issued on August 22, 2023. The ’730 patent stems from Application No. 17/705,331, filed on March 27, 2022, and Provisional Application No. 61/304,331, filed on February 12, 2010. Weple owns the entire right, title, and interest in and to the ’730 patent. A true and correct copy of the ’730 patent is attached to this Complaint as Exhibit A.

12. The ’952 patent is entitled “Mobile Device Streaming Media Application” and issued on April 23, 2024. The ’952 patent stems from Application No. 18/423,193, filed on January 25, 2024, and Provisional Application No. 61/304,331, filed on February 12, 2010. Weple owns the entire right, title, and interest in and to the ’952 patent. A true and correct copy of the ’952 patent is attached to this Complaint as Exhibit B.

13. The ’730 patent is directed to improved methods of coordinating video message delivery to mobile applications that addressed the shortcomings of platforms existing at the time.

14. The popularity of sharing video content through social media has increased in recent years. The preference for video over other formats has been attributed to it being more engaging and relatively easier to consume. Video enables brands to tell compelling stories, showcase products effectively, and establish an emotional connection with their audience. Statistically, video has shown the ability to attract more shares, likes, and comments, thereby increasing overall engagement with the underlying media content.

15. Before the inventions of the ’730 patent, the video creation capabilities available through social media platforms were limited. The associated video messaging systems for such platforms predominantly functioned through desktop applications, with separate applications needed for creating and viewing content. Video messaging systems often lacked the

1 synchronous display of text and audio within the video messages and interactive capabilities
2 like commenting directly within the video player, thus limiting user engagement. Further, live
3 streaming and video messaging were typically isolated from one another, thereby failing to
4 provide an integrated user experience.

5 16. The '730 patent describes and claims a technological advancement over prior art
6 video messaging methods. The methods of the '730 patent provide a seamless integration
7 within mobile applications for both creating and viewing video messages, also allowing for
8 attached text and audio to be simultaneously presented within video messages, creating a more
9 engaging multimedia experience. The methods also provide commenting capabilities for
10 specific video messages, further allowing audience engagement. In addition, the methods
11 integrate live streaming capabilities with video messaging within the same mobile application
12 and include a notification system to alert users of available live streams within the video
13 messaging application, ensuring users are promptly informed and able to join live sessions.
14 The seamless transition between recorded video messages and live streams within the same
15 application was a significant improvement in user experience over the prior art.¹

16 17. The '952 patent is directed to improved systems and methods of managing and
17 presenting media messages delivered within mobile application feeds, which addressed the
18 shortcomings of platforms existing at the time.

19 18. Before the inventions of the '952 patent, social media platforms delivered user
20 content through media feeds, with some allowing content uploads via mobile applications, but
21 offered users limited control over the airing and distribution of their content. For example, they
22 lacked the functionality for users to determine the availability of their media messages placed
23 in feeds based on scheduled airtimes and expiration information associated with the media
24 messages.

25
26 ¹ For example, Meta recognized the innovation and benefits of live stream integration within
27 the Facebook social media platform. (<https://about.fb.com/news/2016/04/introducing-new-ways-to-create-share-and-discover-live-video-on-facebook/>) (last visited Aug. 21, 2024).

19. The '952 patent discloses innovative systems and methods that address the limitations of the prior art through dynamic curation and selection of in-feed media messages, specifically advertising media messages, based on associated scheduled airtimes and expiration times. These systems and methods afford users control over when their media messages are available for distribution on the social media platform, an option not previously available to users of mobile applications. Media messages can be coordinated into multiple feeds that are then provided to multiple other users of the mobile applications. The inventive concepts of the '952 patent allow for strategic timing of media message releases, aligning them with optimal audience engagement times, which provides content management based on relevance and timeliness, thus enhancing the effectiveness and reach of social media campaigns and promotional efforts.²

JURISDICTION AND VENUE

20. This is an action for patent infringement arising under the patent laws of the United States, 35 U.S.C. §§ 1, *et seq.* This Court has original subject matter jurisdiction over this action pursuant to 28 U.S.C. §§ 1331 and 1338(a).

21. This Court has personal jurisdiction over Meta consistent with the requirements of the Due Process Clause of the United States Constitution and the Washington Long-Arm Statute because Meta has committed acts within this Judicial District giving rise to this action. Meta, directly and through its subsidiaries, agents, and/or intermediaries, has committed and continues to commit acts of infringement in this Judicial District by, among other things, making and using social media platforms that infringe the Asserted Patents. Meta transacts business throughout the United States, including within the state of Washington where Meta also maintains business offices and facilities, which upon information and belief, support employees whose activities are relevant to the accused platforms and functionality at issue in this action.

² For example, the industry recognized the significant impact and innovation of in-feed mobile advertising. (<https://venturebeat.com/mobile/facebook-mobile-ads-boom/>) (last visited Aug. 21, 2024).

1 22. Venue is proper in this Judicial District under 28 U.S.C. § 1400(b) as Meta has
2 committed acts of patent infringement within this Judicial District that have given rise to this
3 action, and Meta maintains business offices and facilities in the Western District of
4 Washington.

5 **PRE-SUIT COMMUNICATIONS**

6 23. Meta owns and operates social media platforms, such as Facebook, Instagram,
7 and Messenger (the “Meta Platforms”). These platforms include mobile applications operating
8 on mobile devices, such as the Facebook mobile application, the Instagram mobile application,
9 the Meta Ads Manager mobile application, and the Meta Business Suite mobile application (the
10 “Meta Mobile Applications”).

11 24. On February 8, 2024, Weple sent a notice letter and infringement claim chart to
12 Meta detailing Meta’s infringement of the ’730 patent through the operation of certain Meta
13 Platforms and Meta Mobile Applications. The letter also explained how Meta could contact
14 Weple to discuss an amicable resolution.

15 25. On May 3, 2024, after the issuance of the ’952 patent, Weple sent a second
16 notice letter and infringement claim chart to Meta detailing Meta’s infringement of the ’952
17 patent through the operation of certain Meta Platforms and Meta Mobile Applications. This
18 letter reiterated Weple’s willingness to discuss a resolution.

19 26. Weple attempted to engage Meta in discussions regarding the Asserted Patents,
20 putting Meta on notice of its infringement. Despite Weple’s efforts, Meta did not respond to
21 Weple’s letters or infringement allegations.

22 27. Meta knew of the Asserted Patents, as well as Weple’s infringement allegations
23 with respect to the Asserted Patents, no later than May 2024.

24 28. Meta does not have a license to the Asserted Patents, either express or implied.
25
26
27

COUNT I

(Infringement of the '730 Patent)

29. Weple restates and realleges all the foregoing paragraphs as if fully stated herein.

30. Meta operates its Facebook and Instagram social media platforms, which include servers that interact with the Facebook and Instagram mobile applications (collectively “the '730 Accused Instrumentalities”). Meta has directly infringed and continues to directly infringe one or more claims of the '730 patent, either literally or under the doctrine of equivalents, by making, using, offering to sell, selling, and/or importing the '730 Accused Instrumentalities. For example, Meta generates revenue from services that it provides through the use of the '730 Accused Instrumentalities to perform methods that directly infringe one or more claims of the '730 patent.

31. Attached to this Complaint as Exhibit A1 is a representative chart that describes how, as a non-limiting example, the elements of claim 1 of the '730 patent are met by Meta's use of the '730 Accused Instrumentalities.

32. Weple has been damaged as a result of Meta's infringement of the '730 patent. Weple is entitled to recover damages adequate to compensate for Meta's infringement, which in no event can be less than a reasonable royalty for the use made of the invention by Meta, together with interest and costs as fixed by the Court.

33. As a result of Meta's infringing acts, Weple has been and continues to be irreparably injured and the remedies available to Weple are inadequate to compensate for that injury. Weple's irreparable injury will continue unless and until Meta is enjoined from infringing the '730 patent.

COUNT II

(Infringement of the '952 Patent)

34. Weple restates and realleges the allegations of all the foregoing paragraphs as if fully stated herein.

35. Meta operates its Facebook, Instagram, and Messenger social media platforms, which include servers that interact with the Facebook, Instagram, and Messenger mobile applications, as well as the Meta Ads Manager and Meta Business Suite mobile applications (collectively “the ’952 Accused Instrumentalities”). Meta has directly infringed and continues to directly infringe one or more claims of the ’952 patent, either literally or under the doctrine of equivalents, by making, using, offering to sell, selling, and/or importing the ’952 Accused Instrumentalities. For example, Meta generates revenue from services that it provides through the ’952 Accused Instrumentalities, which directly infringe one or more claims of the ’952 patent, and uses the ’952 Accused Instrumentalities to perform methods that directly infringe one or more claims of the ’952 patent.

36. Attached to this Complaint as Exhibit B1 is a representative chart that describes how, as a non-limiting example, the elements of exemplary claim 1 of the ’952 patent are met by the ’952 Accused Instrumentalities.

37. Weple has been damaged as a result of Meta’s infringement of the ’952 patent. Weple is entitled to recover damages adequate to compensate for Meta’s infringement, which in no event can be less than a reasonable royalty for the use made of the invention by Meta, together with interest and costs as fixed by the Court.

38. As a result of Meta’s infringing acts, Weple has been and continues to be irreparably injured and the remedies available to Weple are inadequate to compensate for that injury. Weple’s irreparable injury will continue unless and until Meta is enjoined from infringing the ’952 patent.

JURY DEMAND

39. Weple requests a jury trial as to all issues that are triable by a jury in this action.

PRAYER FOR RELIEF

WHEREFORE, Weple respectfully requests that this Court:

A. Enter judgment that Meta has infringed one or more of the claims of the Asserted Patents;

1 B. Enter an order permanently enjoining Meta and its officers, agents, employees,
2 attorneys, and all persons in active concert or participation with any of them, from infringing
3 the Asserted Patents;

4 C. Award Weple all appropriate damages for the infringement of the Asserted
5 Patents, including pre-judgment and post-judgment interest, costs, and all other relief permitted
6 under 35 U.S.C. § 284;

7 D. Award Weple an accounting for acts of infringement not presented at trial,
8 including an award of additional damages for such acts of infringement;

9 E. Enter judgment that Meta's infringement of the Asserted Patents has been
10 deliberate and willful;

11 F. Treble the damages awarded to Weple under 35 U.S.C. § 284 by reason of
12 Meta's deliberate or willful infringement of one or more claims of the Asserted Patents;

13 G. Declare this case to be "exceptional" under 35 U.S.C. § 285 and award Weple
14 its attorneys' fees, expenses, and costs incurred in this action; and

15 H. Award Weple such other and further relief at law or in equity as the Court
16 deems just and proper.

(57) **ABSTRACT**

A system and process for coordinating streaming content or
messages is provided. A network-connected server main-
tains a database containing media content-related data, such
as the text of a message, accompanying media, time of
airing, payment and related comments. A user can view
these feeds or streams of these consciousness messages by
downloading a mobile application or browsing to a website.
The application can also be used to create, schedule and pay
for a media content message.

No. 13/027,191, filed Feb. 14, 2011, which claims priority to U.S. Provisional Application No. 61/304,331, filed Feb. 12, 2010, entitled Mobile Device Prayer Application. The entireties of U.S. patent application No. 17/384,911, U.S. patent application Ser. No. 16/812,495, U.S. Patent Application No. 16/790,953, U.S. patent application Ser. No. 16/157,269, U.S. Patent Application No. 15/273,335, U.S. patent application Ser. No. 15/041,422, U.S. Patent Application No. 14/512,353, U.S. patent application Ser. No. 13/967,414, U.S. Patent Application No. 13/027,191, and U.S. Provisional Application No. 61/304,331 are hereby incorporated by reference herein.

BACKGROUND OF THE INVENTION

Streaming media is multimedia that is constantly received by and presented to an end-user while being delivered by a streaming provider. The name refers to the delivery method of the medium rather than to the medium itself. The distinction is usually applied to media that are distributed over telecommunications networks, as most other delivery systems are either inherently streaming (e.g., radio, television) or inherently non-streaming (e.g., books, video cassettes, audio CDs). The verb 'to stream' is also derived from this term, meaning to deliver media in this manner. Internet television is a commonly streamed medium.

Live streaming, more specifically, means taking the media and broadcasting it live over the Internet. The process involves a camera for the media, an encoder to digitize the content, a media publisher where the streams are made available to potential end-users and a content delivery network to distribute and deliver the content. The media can then be viewed by end-users live.

Consciousness is variously defined as subjective experience, awareness, the ability to experience "feeling," wakefulness, the understanding of the concept "self," or the executive control system of the mind. It is an umbrella term that may refer to a variety of mental phenomena. Although humans realize what everyday experiences are, consciousness itself resists being defined, philosophers note.

Consciousness is the subject of much research in philosophy of mind, psychology, neuroscience, cognitive science and artificial intelligence. Issues of practical concern include how the presence of consciousness can be assessed in severely ill or comatose people; whether non-human consciousness exists and if so how it can be measured; at what point in fetal development consciousness begins; and whether computers can achieve a conscious state.

2

Prayer is a form of religious practice that seeks to activate a volitional rapport to a god or spirit through deliberate practice. Prayer may be either individual or communal and take place in public or in private.

It may involve the use of words or song. When language is used, prayer may take the form of a hymn, incantation, formal creedal statement, or a spontaneous utterance in the praying person. There are different forms of prayer such as petitionary prayers, prayers of supplication, thanksgiving, and worship/praise.

Prayer may be directed towards a deity, spirit, deceased person, or lofty idea, for the purpose of worshipping, requesting guidance, requesting assistance, confessing sins or to express one's thoughts and emotions. Thus, people pray for many reasons such as personal benefit or for the sake of others.

Most major religions involve prayer in one way or another. Some ritualize the act of prayer, requiring a strict sequence of actions or placing a restriction on who is permitted to pray, while others teach that prayer may be practiced spontaneously by anyone at any time.

SUMMARY OF THE INVENTION

In one embodiment according to the present invention, a system and process for coordinating a programmed media stream is provided. Preferably, this content relates to consciousness messages such as prayers, requests for charity, thoughts or similar messages. However, this content can also relate to breaking news, music videos, comedy or similar content. A network-connected server maintains a database containing media content-related data, such as the text of a message, accompanying media, time of airing, payment and related comments. A user can view these feeds or streams of these streams by downloading a mobile application or browsing to a website. The application or website can also be used to create, schedule and pay for media content airtime for a message or program.

BRIEF DESCRIPTION OF THE DRAWINGS

These and other aspects, features and advantages of which embodiments of the invention are capable of will be apparent and elucidated from the following description of embodiments of the present invention, reference being made to the accompanying drawings, in which

FIG. 1 illustrates a media content coordination system according to an embodiment of the present invention;

FIG. 2 illustrates a current media content interface according to an embodiment of the present invention;

FIG. 3 illustrates an about us interface according to an embodiment of the present invention;

FIG. 4 illustrates an airtime purchase interface according to an embodiment of the present invention;

FIG. 5 illustrates an airtime date selection interface according to an embodiment of the present invention;

FIG. 6 illustrates an advanced airtime date selection interface according to an embodiment of the present invention;

FIG. 7 illustrates a media content preview interface according to an embodiment of the present invention;

FIG. 8 illustrates a payment interface according to an embodiment of the present invention;

FIG. 9 illustrates a confirmation interface according to an embodiment of the present invention;

US 11,734,730 B2

3

FIG. 10 illustrates a process of coordinating media content times according to an embodiment of the present invention;

FIG. 11 illustrates a media content airstream interface according to an embodiment of the present invention;

FIG. 12 illustrates a media content sponsorship interface according to an embodiment of the present invention;

FIG. 13 illustrates a process of viewing and interacting with a current message according to an embodiment of the present invention; and,

FIG. 14 illustrates an interface for in app purchases of items according to an embodiment of the present invention.

DESCRIPTION OF EMBODIMENTS

Specific embodiments of the invention will now be described with reference to the accompanying drawings. This invention may, however, be embodied in many different forms and should not be construed as limited to the embodiments set forth herein; rather, these embodiments are provided so that this disclosure will be thorough and complete, and will fully convey the scope of the invention to those skilled in the art. The terminology used in the detailed description of the embodiments illustrated in the accompanying drawings is not intended to be limiting of the invention. In the drawings, like numbers refer to like elements.

Unless otherwise defined, all terms (including technical and scientific terms) used herein have the same meaning as commonly understood by one of ordinary skill in the art to which this invention belongs. It will be further understood that terms, such as those defined in commonly used dictionaries, should be interpreted as having a meaning that is consistent with their meaning in the context of the relevant art and will not be interpreted in an idealized or overly formal sense unless expressly so defined herein.

The terms message, media message or program are used interchangeably in this specification and generally refer to text, audio, video or still images sent across the internet. In one aspect of the present invention, the system can be used for any media content type, such as news, comedy, drama, environmental messages, offers to purchase related items, and similar messages. In another aspect of the present invention, the system is used for consciousness messages, such as prayers, collective thoughts, appeals to charity and inspirational messages.

FIG. 1 illustrates an example media coordination system 100 according to the present invention which allows network connected devices, such as mobile devices 106 (cell phones, portable music players, tables, laptops, etc.), to coordinate times for specific media messages/programs to be streamed to other application users (e.g., a feed of message posts or a stream of real-time media data). Generally, a computer server 102 (e.g., a processor, RAM, a hard drive, an operating system, web serving software and database software) is connected to a wide area network 104 such as the internet or wireless cell phone data network. Mobile devices 106 are also connected to the network 104, allowing for communication to and from the server 102.

As seen in item 220 of the flow chart of FIG. 13, a user either executes the mobile media application on their mobile device or uses a browser to browse to an internet page supplied by the server 102. The application downloads the current media message/program (i.e., a thought or prayer video scheduled for airing at that time) from the server. Alternately, the server 102 may automatically push the current media message or link to the current media message via phone notifications, email or text messages.

4

In one example, delivery of the current media message to the mobile device 106 is performed as a feed that is downloaded as requested by the user. In another example, delivery of the current media message is achieved with a live streaming media file (e.g., streaming audio/video) that provides images, text and/or audio to the user's mobile device. In this respect, the media message stream is similar to a live television station having scheduled media messages as its programming.

In item 222, the mobile application displays the media message data supplied by the server 102. This data may include the text of a media message, an attached or linked-to media file, donation information and media message expiration information (i.e., when the current media message expires causing the mobile application to download a new current media message). Alternately, the media message data may be a live media stream, previously rendered by the server 102, which displays the images, text, audio, video or other items in a common media format (e.g., h.264 mp4 video format). In one preferred embodiment, the media message is a prayer, collective consciousness message, request for charity, environmental or similar message.

In item 224, the user views the media message data in an interface of the mobile application and interacts with the interface. For example, the user may add a comment about the media message, a donation, a greeting card or share a link to the media message via a social network, email, text message or similar communication. The user may also make purchases within the application (e.g., in app purchases, credit cards, Pay Pal, etc.) to buy gift certificates for message air time, greeting cards, or similar in application items.

In item 226, the user can design, upload and pay for a custom media message that is stored and aired from the server 102. The server will similarly air the custom media message at the specified time as the current media message, thereby distributing that media message out to other users of the mobile application and website.

FIG. 10 illustrates a flow chart of an example process for coordinating media messages. As seen in item 190, the mobile application is executed on the mobile device 106 that can download available times that a media message can be scheduled. A user can request availability of a specific time or the mobile application can download a variety of free times.

In item 192, the user selects a time that they would like to have their media message available, the text of their media message, any images or videos that they would like to accompany the media message, and payment information. This data is uploaded to server 102 and stored in a database in item 194.

As seen in item 196, the sever 102 provides media message data according to the scheduled time. This data can be rendered and streamed as a live streaming format, made available for download to each mobile device 106 running the application or can be sent out via a push notification, email or text message. Optionally, the push notification, email or text message can include a link that opens the mobile media message application to that specific media message or to a webpage displaying that media message.

The current media message can also be displayed on any participating websites. For example, an otherwise nonaffiliated website could include code that displays the current media message. In another example, the media message can be posted to a social media site, such as Facebook or Twitter, which allows users to subscribe. In this respect, people visiting websites otherwise unrelated to the server 102 can also view the current media message.

US 11,734,730 B2

5

FIGS. 2-9 illustrate various example aspects and interfaces of the mobile media message application according to the present invention. FIG. 2 illustrates the current media message interface **110** that displays the media message currently scheduled by the server **102**. The current media message interface **110** preferably includes a media message text display **114** that displays the text of the media message specified by person who created the current media message.

Optionally, the current media message interface includes an advertisement banner **112** for displaying advertisements from a downloaded source, such as from Google AdSense or Apple in app advertising. Optionally, the mobile media message application can allow a user the option to include this banner **112** during the media message creation process to financially subsidize the price of posting the media message.

The interface **110** also includes a comments button **111** that displays a comment interface for leaving messages related to the current media message. A past media messages button **113** is also include for displaying a list of past media messages or bookmarked media messages.

Preferably, multiple feeds or streams are available to the mobile application. For example, some streams can be specific breaking news, religion, music, or pets. Selecting the switch stream button **115** allows the user to switch between these streams.

The donate button **117** allows the user to donate money to originator of the media message, thereby allowing users or entities to raise money in addition to soliciting media messages. The buy gift button **119** allows the user to buy items for the author of the current message or another user. Gifts can include virtual greeting cards, gift certificates, message air time, and similar items. The buy air time button **120** displays an interface for creating and purchasing a media message that will be displayed on the application and the learn more button **118** displays an about us interface **122** seen in FIG. 3.

The about us interface **122** preferably includes information about the developer and information **124** about how to pray. A share button **128** allows the user to share specific media message tips with others (e.g., by emailing text of the media message information **124**). The go back button **126** returns the user to the previous screen.

If the user selects the buy airtime button **120** in interface **110**, the buy airtime interface **130** is displayed, as seen in FIG. 4. Title input **132** allows a user to enter a text title for their media message, while text of the media message can be entered in message input **134**. Optionally, the user can attach or add a link to an image, audio and/or video in the media input **136**. This media is uploaded to the server **102** and rendered in to the stream for broadcast at the scheduled time. The next button **138** displays the airtime selection interface **140** as seen in FIG. 5.

The airtime selection interface **140** preferably provides a plurality of selectable time ranges **142** (e.g., check boxes) and their accompanying cost. A minute input **144** allows the user to specify the amount of time the user would like their media message to be displayed as the current media message. Selecting the advanced button **148** displays the advanced airtime interface **150** seen in FIG. 6.

The advanced airtime interface **150** allows the user more control over exactly when the media message will be shown as the current media message. For example, a date interface **152** allows the user to specify a specific day to air the media message, the time interface **154** provides more detailed time ranges, and the time interface allows input of the amount of time the media message will air as the current media

6

message. Selecting the basic button **159** returns the user to the airtime selection interface **140** while selecting the find time button **158** attempts to find an unreserved free time for the media message.

Once the server **102** has found a free time according to the criteria selected by the user, the preview interface **160** is displayed, as seen in FIG. 7. The proposed message date **162** is located at the top of the interface **160**, followed by the preview of the media message **164**. The user can select the go back button **166** to return to a previous interface to correct information or can select the checkout button **168** to display the payment interface **170**, seen in FIG. 8.

The payment interface **170** allows the user to select their desired method of payment. This interface can be used for buying air time on a stream or for any other activity that may require payment (e.g., purchasing gift certificates or greeting cards).

For example, the user can select the in app payment button **172** to cause payment through an "in app" payment system, such as Apple's in app payment system. The user may also enter their credit card information in the credit card input **174** or can select the Paypal button **176** to bring up Paypal login credentials for payment via Paypal. Preferably, the interface **170** includes a plurality of charity inputs **178** (e.g., checkboxes) for specifying donations to specific charities. The user can return to previous interfaces via the go back button **177** or can submit the payment information via the purchase button **179**.

Once the payment information has been submitted and confirmed by the server **102**, the confirmation interface **180** is displayed, as seen in FIG. 9. A confirmation message **182** is displayed at the top of the interface **180** to confirm the exact time the media message will be available. Additionally, a plurality of media message sharing buttons **184** are displayed to allow the user to easily share details (e.g., date, time, hypertext link) to the media message on various calendar, email, text message or social media websites.

FIG. 11 illustrates an alternate media message interface **200** according to the present invention. The interface **200** allows a user or organization to post a media message, media (music, video, image, etc.) and/or request for donations, seen in the media message display **204**. This airstream media message can be purchased through an interface similar to those previously described in this specification. Optionally, an advertiser may sponsor such a stream and post their ad banner in the banner display **202**.

The interface **200** also displays live or regularly updated comments and media messages from users in the live stream display **206**. If a user wishes to comment, add a greeting card (or similar link) or add a message, the add message button **208** can be selected, prompting the user for a text comments and an optional donation amount. Alternately, the user can select the donate button **210** to donate money without adding a comment (e.g., utilizing the payment interface **170**). These comments and donation amounts are transmitted to the server **102**, processed, and then displayed in the live stream display **206** for all users to view.

FIG. 12 illustrates a sponsor interface **210** that allows an advertiser or user to sponsor a specific current media message or airstream media message. A media message selection input **212** downloads and displays from the server **102** a list of media messages and sponsor prices that are available for sponsorship. A specific media message can be selected and the sponsor's ad banner can be uploaded to the server **102** by clicking the add banner button **214**. Once the user is satisfied by their selection, the check out button **168** can be used to pay.

US 11,734,730 B2

7

FIG. 14 illustrates an item purchase interface 230 that allows the user to make in app purchases of items via the item selection interface 232. This allows the user to select a desired item (real or virtual) for purchase, then select the check out button 168, which leads to the previously 5 described payment interface 170.

In one specific example, the present invention can be particularly used to facilitate prayer or collective consciousness. For example, users can purchase air time to display a prayer or collective thought. In another example, a request 10 for donations (e.g., from a person or charity) can be uploaded to the stream to allow users to donate money within the mobile application.

In another specific example, the present invention can be used to purchase airtime and upload ongoing news or informational video. In this respect, a stream may be directed to eye witness news or similar breaking new. 15

In another specific example, a stream can be directed to music videos. Hence, a user can purchase airtime and upload their own music videos that will stream at a specific time and date. 20

In another example, a stream can be directed to short films. Users can produce their own films, purchase airtime, and then upload the films to air on the channel at a specific time. 25

In another example according to the present invention, the server can provide a user or company with their own media stream to control. In this respect, the other users can post messages on this third party controlled stream, allowing the stream creator to designate airtime price, which uploads are approved and additional items for purchase. 30

Although the invention has been described in terms of particular embodiments and applications, one of ordinary skill in the art, in light of this teaching, can generate additional embodiments and modifications without departing from the spirit of or exceeding the scope of the claimed invention. Accordingly, it is to be understood that the drawings and descriptions herein are proffered by way of example to facilitate comprehension of the invention and should not be construed to limit the scope thereof. 35

What is claimed is:

1. A method of coordinating video messages, the method comprising:

providing one or more mobile applications for both viewing and creating video messages;

receiving a plurality of video messages from the one or more mobile applications, wherein the plurality of video messages includes text and audio to be simultaneously presented;

storing the plurality of video messages in a database;

sending to a first one of the mobile applications the plurality of video messages, wherein the first one of 50

8

the mobile applications simultaneously presents the text and the audio with each one of the video messages and provides a comment prompt that, when selected, allows a comment to be added by the first one of the mobile applications to a corresponding one of the video messages when presented;

receiving a notification that a second one of the mobile applications has started a live stream video message; and

streaming the live stream video message to the first one of the mobile applications upon receiving a request from the first one of the mobile applications to receive the live stream video message.

2. The method of claim 1, further comprising maintaining a database containing related comments for the plurality of video messages.

3. The method of claim 1, further comprising causing a textual message associated with the live stream video message to be presented while the second one of the mobile applications streams the live stream video message.

4. The method of claim 3, wherein the textual message originates from the first one of the mobile applications and is delivered to the second one of the mobile applications.

5. The method of claim 1, wherein the first one of the mobile applications includes an interface with a purchase prompt that allows the first one of the mobile applications to submit a purchase request to the second one of the mobile applications.

6. The method of claim 5, wherein the purchase request is for a virtual items made available to the first one of the mobile applications.

7. The method of claim 1, further comprising receiving a request from a third one of the mobile applications to present a particular video message among the plurality of video messages, and causing the particular video message to be presented on the third one of the mobile applications.

8. The method of claim 1, wherein the first one of the mobile applications includes a share prompt that, when selected, shares a link to a particular video message among the plurality of video messages with a third one of the mobile applications.

9. The method of claim 1, further comprising streaming the live stream video message to a third one of the mobile applications and to a fourth one of the mobile applications, and causing a textual message from the first one of the mobile applications associated with the live stream video message to be presented on the third one of the mobile applications and on the fourth one of the mobile applications. 55

Exhibit A1

Exhibit A1 – U.S. PATENT 11,734,730

U.S. Patent 11,734,730		Meta Activity
	Claim 1	
1A	A method of coordinating video messages, the method comprising:	Meta, through both its Facebook and Instagram platforms, performs a method of coordinating video messages through its servers and mobile applications. For example, the Facebook and Instagram mobile applications create video messages that are provided to servers. The mobile applications present, for viewing, video messages received from the servers, which can be, for example, posts, reels, stories, and live streams. They also present a comment prompt associated with video messages and provide notifications when a live stream is available. Further discussion of these and other features that correspond to the claims of the '730 patent, as well as exemplary evidence, is provided herein. <u>Exemplary Sources</u> https://www.facebook.com/help/866249956813928/?helpref=related_topics https://help.instagram.com/110121795815331/?helpref=hc_fnav
1B	providing one or more mobile applications for both viewing and creating video messages;	See Row 1A. The mobile application both creates and presents for viewing video messages, such as through posts, stories, reels, and/or live streams. For example, the mobile application includes a "create reel" option that allows the mobile application to create a reel from a video and publish the reel to a Meta server. The reels can be viewed through mobile applications. The mobile application also provides for live streaming, such as through the "Go Live" feature (Facebook) or the "Live Broadcast" feature (Instagram) of the mobile application. These live streams can be viewed through the mobile application as well. Additional examples are explained in the Facebook Help Center and Instagram Help Center, portions of which are reproduced and/or linked below.

Exhibit A1 – U.S. PATENT 11,734,730

U.S. Patent 11,734,730	Meta Activity
	 This screenshot shows the Facebook Reels help page. On the left is a navigation menu with options: Friending, Facebook Dating, Your Home Page, Messaging, Reels (selected), Watching Reels, Creating Reels, and Managing Your Reels. The main content area is titled 'Reels' and includes a 'Copy link' button. The text explains that Reels are short videos that can consist of video, music, audio, effects, and more. It provides instructions on how to create, share, and watch Reels, and lists three steps: 'Create a reel or find reels to watch', 'Add effects, music, or text to your reel', and 'Change the audience of your reel or set a default audience for your future reels'.  This screenshot shows the Facebook 'Create a reel on Facebook' help page. On the left is a navigation menu with options: Creating an Account, Your Profile, Friending, Facebook Dating, Your Home Page, Messaging, Reels (selected), Watching Reels, Creating Reels, Managing Your Reels, Stories, Your Photos and Videos, and Videos on Watch. The main content area is titled 'Create a reel on Facebook' and includes a 'Copy link' button. It provides instructions on how to create a reel, including the length (up to 90 seconds) and the ability to share publicly or with friends. It also includes a section titled 'Step 1: Recording or Choosing Video Clips' with three steps: 1. From your Feed, tap the menu icon. 2. Tap See More, then tap Reels. 3. Tap Create. The text explains that you can start your reel by recording clips or by adding videos or photos from your phone.

For each video message of the plurality of video messages, the mobile applications simultaneously present any associated text and audio with the video. For example, the mobile applications present the plurality of video messages by presenting a first video message with its associated text and audio, then present a second video message with its associated text and audio, and so on. <u>Exemplary Sources</u> https://www.facebook.com/help/585057775846104?cms_platform=iphone-app&helpref=platform_switcher https://help.instagram.com/1986234648360433/?helpref=hc_fnav https://www.youtube.com/watch?v=E8oabM_OMeA (describing how to edit audio and add text during specific time points within video)
1H	and provides a comment prompt that, when selected, allows a comment to be added by the first one of the mobile applications to a corresponding one of the video messages when presented; The mobile applications provide a comment prompt when presenting a video message. The comment prompt is identified by an icon with the word "Comment" (Facebook) or simply an icon (Instagram). The comment prompt provides an interface that allows a comment to be added by the mobile application and associated with the presented video message. The comments added through the prompt are thereafter available for presentation by mobile applications presenting the video message.

(57) ABSTRACT

A system and process for coordinating streaming content or messages is provided. A network-connected server maintains a database containing media content-related data, such as the text of a message, accompanying media, time of airing, payment, and related comments. A user can view these feeds or streams of these consciousness messages by downloading a mobile application or browsing to a website. The application can also be used to create, schedule, and pay for a media content message.

Figure 4 is a diagram of a user interface for buying airtime. The interface is contained within a rounded rectangular frame. At the top, the title "Buy Airtime" is displayed in a bold font. Below the title, the text "Enter your message:" is shown. The form consists of three input fields: a "Title:" field, a "Message:" field, and an "Image or Video:" field. Each field is represented by a rectangular box. Below these fields are two buttons: "Go Back" and "Next". The interface is annotated with several reference numerals: 130 points to the overall form area, 132 points to the Title input field, 134 points to the Message input field, 136 points to the Image or Video input field, 126 points to the Go Back button, and 138 points to the Next button.

No. 13/027,191, and U.S. Provisional Patent Application No. 61/304,331 are hereby incorporated by reference herein.

BACKGROUND OF THE INVENTION

Streaming media is multimedia that is constantly received by and presented to an end-user while being delivered by a streaming provider. The name refers to the delivery method of the medium rather than to the medium itself. The distinction is usually applied to media that are distributed over telecommunications networks, as most other delivery systems are either inherently streaming (e.g., radio, television) or inherently non-streaming (e.g., books, video cassettes, audio CDs). The verb "to stream" is also derived from this term, meaning to deliver media in this manner Internet television is a commonly streamed medium.

Live streaming, more specifically, means taking the media and broadcasting it live over the Internet. The process involves a camera for the media, an encoder to digitize the content, a media publisher where the streams are made available to potential end-users and a content delivery network to distribute and deliver the content. The media can then be viewed by end-users live.

Consciousness is variously defined as subjective experience, awareness, the ability to experience "feeling," wakefulness, the understanding of the concept "self," or the executive control system of the mind. It is an umbrella term that may refer to a variety of mental phenomena. Although humans realize what everyday experiences are, consciousness itself resists being defined, philosophers note.

Consciousness is the subject of much research in philosophy of mind, psychology, neuroscience, cognitive science, and artificial intelligence. Issues of practical concern include

2

how the presence of consciousness can be assessed in severely ill or comatose people; whether non-human consciousness exists and, if so, how it can be measured; at what point in fetal development consciousness begins; and whether computers can achieve a conscious state.

Prayer is a form of religious practice that seeks to activate a volitional rapport to a god or spirit through deliberate practice. Prayer may be either individual or communal and take place in public or in private.

It may involve the use of words or song. When language is used, prayer may take the form of a hymn, incantation, formal creedal statement, or a spontaneous utterance in the praying person. There are different forms of prayer such as petitionary prayers, prayers of supplication, thanksgiving, and worship/praise.

Prayer may be directed towards a deity, spirit, deceased person, or lofty idea, for the purpose of worshipping, requesting guidance, requesting assistance, confessing sins, or to express one's thoughts and emotions. Thus, people pray for many reasons such as personal benefit or for the sake of others.

Most major religions involve prayer in one way or another. Some ritualize the act of prayer, requiring a strict sequence of actions or placing a restriction on who is permitted to pray, while others teach that prayer may be practiced spontaneously by anyone at any time.

SUMMARY OF THE INVENTION

In one embodiment according to the present invention, a system and process for coordinating a programmed media stream is provided. Preferably, this content relates to consciousness messages such as prayers, requests for charity, thoughts, or similar messages. However, this content can also relate to breaking news, music videos, comedy, or similar content. A network-connected server maintains a database containing media content-related data, such as the text of a message, accompanying media, time of airing, payment, and related comments. A user can view these feeds or streams of these streams by downloading a mobile application or browsing to a website. The application or website can also be used to create, schedule, and pay for media content airtime for a message or program.

BRIEF DESCRIPTION OF THE DRAWINGS

These and other aspects, features, and advantages of which embodiments of the invention are capable of will be apparent and elucidated from the following description of embodiments of the present invention, reference being made to the accompanying drawings, in which:

FIG. 1 illustrates a media content coordination system according to an embodiment of the present invention;

FIG. 2 illustrates a current media content interface according to an embodiment of the present invention;

FIG. 3 illustrates an about us interface according to an embodiment of the present invention;

FIG. 4 illustrates an airtime purchase interface according to an embodiment of the present invention;

FIG. 5 illustrates an airtime date selection interface according to an embodiment of the present invention;

FIG. 6 illustrates an advanced airtime date selection interface according to an embodiment of the present invention;

FIG. 7 illustrates a media content preview interface according to an embodiment of the present invention;

US 11,966,952 B1

3

FIG. 8 illustrates a payment interface according to an embodiment of the present invention;

FIG. 9 illustrates a confirmation interface according to an embodiment of the present invention;

FIG. 10 illustrates a process of coordinating media content times according to an embodiment of the present invention;

FIG. 11 illustrates a media content airstream interface according to an embodiment of the present invention;

FIG. 12 illustrates a media content sponsorship interface according to an embodiment of the present invention;

FIG. 13 illustrates a process of viewing and interacting with a current message according to an embodiment of the present invention; and,

FIG. 14 illustrates an interface for in app purchases of items according to an embodiment of the present invention.

DESCRIPTION OF EMBODIMENTS

Specific embodiments of the invention will now be described with reference to the accompanying drawings. This invention may, however, be embodied in many different forms and should not be construed as limited to the embodiments set forth herein; rather, these embodiments are provided so that this disclosure will be thorough and complete, and will fully convey the scope of the invention to those skilled in the art. The terminology used in the detailed description of the embodiments illustrated in the accompanying drawings is not intended to be limiting of the invention. In the drawings, like numbers refer to like elements.

Unless otherwise defined, all terms (including technical and scientific terms) used herein have the same meaning as commonly understood by one of ordinary skill in the art to which this invention belongs. It will be further understood that terms, such as those defined in commonly used dictionaries, should be interpreted as having a meaning that is consistent with their meaning in the context of the relevant art and will not be interpreted in an idealized or overly formal sense unless expressly so defined herein.

The terms message, media message, or program are used interchangeably in this specification and generally refer to text, audio, video, or still images sent across the internet. In one aspect of the present invention, the system can be used for any media content type, such as news, comedy, drama, environmental messages, offers to purchase related items, and similar messages. In another aspect of the present invention, the system is used for consciousness messages, such as prayers, collective thoughts, appeals to charity, and inspirational messages.

FIG. 1 illustrates an example media coordination system 100 according to the present invention which allows network connected devices, such as mobile devices 106 (cell phones, portable music players, tablets, laptops, etc.), to coordinate times for specific media messages/programs to be streamed to other application users (e.g., a feed of message posts or a stream of real-time media data). Generally, a computer server 102 (e.g., a processor, RAM, a hard drive, an operating system, web serving software and database software) is connected to a wide area network 104 such as the internet or wireless cell phone data network. Mobile devices 106 are also connected to the network 104, allowing for communication to and from the server 102.

As seen in item 220 of the flow chart of FIG. 13, a user either executes the mobile media application on their mobile device or uses a browser to browse to an internet page supplied by the server 102. The application downloads the current media message/program (i.e., a thought or prayer

4

video scheduled for airing at that time) from the server. Alternately, the server 102 may automatically push the current media message or link to the current media message via phone notifications, email, or text messages.

In one example, delivery of the current media message to the mobile device 106 is performed as a feed that is downloaded as requested by the user. In another example, delivery of the current media message is achieved with a live streaming media file (e.g., streaming audio/video) that provides images, text, and/or audio to the user's mobile device. In this respect, the media message stream is similar to a live television station having scheduled media messages as its programming.

In item 222, the mobile application displays the media message data supplied by the server 102. This data may include the text of a media message, an attached or linked-to media file, donation information, and media message expiration information (i.e., when the current media message expires causing the mobile application to download a new current media message). Alternately, the media message data may be a live media stream, previously rendered by the server 102, which displays the images, text, audio, video, or other items in a common media format (e.g., h.264 mp4 video format). In one preferred embodiment, the media message is a prayer, collective consciousness message, request for charity, environmental, or similar message.

In item 224, the user views the media message data in an interface of the mobile application and interacts with the interface. For example, the user may add a comment about the media message, a donation, a greeting card, or share a link to the media message via a social network, email, text message, or similar communication. The user may also make purchases within the application (e.g., in app purchases, credit cards, Pay Pal, etc.) to buy gift certificates for message airtime, greeting cards, or similar in-application items.

In item 226, the user can design, upload, and pay for a custom media message that is stored and aired from the server 102. The server will similarly air the custom media message at the specified time as the current media message, thereby distributing that media message out to other users of the mobile application and website.

FIG. 10 illustrates a flow chart of an example process for coordinating media messages. As seen in item 190, the mobile application is executed on the mobile device 106 that can download available times that a media message can be scheduled. A user can request availability of a specific time or the mobile application can download a variety of free times.

In item 192, the user selects a time that they would like to have their media message available, the text of their media message, any images, or videos that they would like to accompany the media message, and payment information. This data is uploaded to server 102 and stored in a database in item 194.

As seen in item 196, the sever 102 provides media message data according to the scheduled time. This data can be rendered and streamed as a live streaming format, made available for download to each mobile device 106 running the application or can be sent out via a push notification, email, or text message. Optionally, the push notification, email, or text message can include a link that opens the mobile media message application to that specific media message or to a webpage displaying that media message.

The current media message can also be displayed on any participating websites. For example, an otherwise nonaffiliated website could include code that displays the current

US 11,966,952 B1

5

media message. In another example, the media message can be posted to a social media site, such as Facebook or Twitter, which allows users to subscribe. In this respect, people visiting websites otherwise unrelated to the server **102** can also view the current media message.

FIGS. 2-9 illustrate various example aspects and interfaces of the mobile media message application according to the present invention. FIG. 2 illustrates the current media message interface **110** that displays the media message currently scheduled by the server **102**. The current media message interface **110** preferably includes a media message text display **114** that displays the text of the media message specified by the person who created the current media message.

Optionally, the current media message interface includes an advertisement banner **112** for displaying advertisements from a downloaded source, such as from Google AdSense or Apple in-app advertising. Optionally, the mobile media message application can allow a user the option to include this banner **112** during the media message creation process to financially subsidize the price of posting the media message.

The interface **110** also includes a comments button **111** that displays a comment interface for leaving messages related to the current media message. A past media messages button **113** is also included for displaying a list of past media messages or bookmarked media messages.

Preferably, multiple feeds or streams are available to the mobile application. For example, some streams can be specific breaking news, religion, music, or pets. Selecting the switch stream button **115** allows the user to switch between these streams.

The donate button **117** allows the user to donate money to originator of the media message, thereby allowing users or entities to raise money in addition to soliciting media messages. The buy gift button **119** allows the user to buy items for the author of the current message or another user. Gifts can include virtual greeting cards, gift certificates, message airtime, and similar items. The buy airtime button **120** displays an interface for creating and purchasing a media message that will be displayed on the application and the learn more button **118** displays an about us interface **122** seen in FIG. 3.

The about us interface **122** preferably includes information about the developer and information **124** about how to pray. A share button **128** allows the user to share specific media message tips with others (e.g., by emailing text of the media message information **124**). The go back button **126** returns the user to the previous screen.

If the user selects the buy airtime button **120** in interface **110**, the buy airtime interface **130** is displayed, as seen in FIG. 4. Title input **132** allows a user to enter a text title for their media message, while text of the media message can be entered in message input **134**. Optionally, the user can attach or add a link to an image, audio, and/or video in the media input **136**. This media is uploaded to the server **102** and rendered into the stream for broadcast at the scheduled time. The next button **138** displays the airtime selection interface **140** as seen in FIG. 5.

The airtime selection interface **140** preferably provides a plurality of selectable time ranges **142** (e.g., check boxes) and their accompanying cost. A minute input **144** allows the user to specify the amount of time the user would like their media message to be displayed as the current media message. Selecting the advanced button **148** displays the advanced airtime interface **150** seen in FIG. 6.

6

The advanced airtime interface **150** allows the user more control over exactly when the media message will be shown as the current media message. For example, a date interface **152** allows the user to specify a specific day to air the media message, the time interface **154** provides more detailed time ranges, and the time interface allows input of the amount of time the media message will air as the current media message. Selecting the basic button **159** returns the user to the airtime selection interface **140** while selecting the find time button **158** attempts to find an unreserved free time for the media message.

Once the server **102** has found a free time according to the criteria selected by the user, the preview interface **160** is displayed, as seen in FIG. 7. The proposed message date **162** is located at the top of the interface **160**, followed by the preview of the media message **164**. The user can select the go back button **166** to return to a previous interface to correct information or can select the checkout button **168** to display the payment interface **170**, seen in FIG. 8.

The payment interface **170** allows the user to select their desired method of payment. This interface can be used for buying airtime on a stream or for any other activity that may require payment (e.g., purchasing gift certificates or greeting cards).

For example, the user can select the in-app payment button **172** to cause payment through an "in-app" payment system, such as Apple's in-app payment system. The user may also enter their credit card information in the credit card input **174** or can select the PayPal button **176** to bring up PayPal login credentials for payment via PayPal. Preferably, the interface **170** includes a plurality of charity inputs **178** (e.g., checkboxes) for specifying donations to specific charities. The user can return to previous interfaces via the go back button **177** or can submit the payment information via the purchase button **179**.

Once the payment information has been submitted and confirmed by the server **102**, the confirmation interface **180** is displayed, as seen in FIG. 9. A confirmation message **182** is displayed at the top of the interface **180** to confirm the exact time the media message will be available. Additionally, a plurality of media message sharing buttons **184** are displayed to allow the user to easily share details (e.g., date, time, hypertext link) to the media message on various calendar, email, text message, or social media websites.

FIG. 11 illustrates an alternate media message interface **200** according to the present invention. The interface **200** allows a user or organization to post a media message, media (music, video, image, etc.), and/or request for donations, seen in the media message display **204**. This airstream media message can be purchased through an interface similar to those previously described in this specification. Optionally, an advertiser may sponsor such a stream and post their ad banner in the banner display **202**.

The interface **200** also displays live or regularly updated comments and media messages from users in the live stream display **206**. If a user wishes to comment, add a greeting card (or similar link), or add a message, the add message button **208** can be selected, prompting the user for a text comments and an optional donation amount. Alternately, the user can select the donate button **210** to donate money without adding a comment (e.g., utilizing the payment interface **170**). These comments and donation amounts are transmitted to the server **102**, processed, and then displayed in the live stream display **206** for all users to view.

FIG. 12 illustrates a sponsor interface **210** that allows an advertiser or user to sponsor a specific current media message or airstream media message. A media message selec-

US 11,966,952 B1

7

tion input **212** downloads and displays from the server **102** a list of media messages and sponsor prices that are available for sponsorship. A specific media message can be selected and the sponsor's ad banner can be uploaded to the server **102** by clicking the add banner button **214**. Once the user is 5 satisfied by their selection, the check out button **168** can be used to pay.

FIG. **14** illustrates an item purchase interface **230** that allows the user to make in-app purchases of items via the item selection interface **232**. This allows the user to select a 10 desired item (real or virtual) for purchase, then select the check out button **168**, which leads to the previously described payment interface **170**.

In one specific example, the present invention can be particularly used to facilitate prayer or collective consciousness. For example, users can purchase airtime to display a 15 prayer or collective thought. In another example, a request for donations (e.g., from a person or charity) can be uploaded to the stream to allow users to donate money within the mobile application.

In another specific example, the present invention can be used to purchase airtime and upload ongoing news or informational video. In this respect, a stream may be 20 directed to eye-witness news or similar breaking news.

In another specific example, a stream can be directed to music videos. Hence, a user can purchase airtime and upload 25 their own music videos that will stream at a specific time and date.

In another example, a stream can be directed to short films. Users can produce their own films, purchase airtime, 30 and then upload the films to air on the channel at a specific time.

In another example according to the present invention, the server can provide a user or company with their own media stream to control. In this respect, the other users can post 35 messages on this third party controlled stream, allowing the stream creator to designate airtime price, which uploads are approved and additional items for purchase.

Although the invention has been described in terms of particular embodiments and applications, one of ordinary 40 skill in the art, in light of this teaching, can generate additional embodiments and modifications without departing from the spirit of or exceeding the scope of the claimed invention. Accordingly, it is to be understood that the drawings and descriptions herein are proffered by way of 45 example to facilitate comprehension of the invention and should not be construed to limit the scope thereof.

What is claimed is:

1. A method, comprising:

receiving, at one or more servers, a plurality of media 50 messages from one or more mobile applications executable on a corresponding one or more mobile devices, wherein respective ones of the plurality of media messages are associated with a scheduled airtime that indicates when the media message is first available for 55 presentation and expiration information to determine when the media message is no longer available for presentation;

storing the plurality of media messages on the one or more 60 servers;

selecting, for inclusion in a first feed, a first subset of the respective ones of the media messages from among the 65 plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages;

providing the first feed to a first mobile application executable on a first mobile device, the first mobile

8

application configured to present the first feed, wherein presentation of the first feed by the first mobile application includes presentation of an advertisement prompt with a media message included in the first feed, wherein interaction with the advertisement prompt via 5 the first mobile application causes presentation of a first advertisement;

selecting, for inclusion in a second feed, a second subset of the respective ones of the media messages from among the plurality of media messages based on the 10 scheduled airtime and the expiration information of the respective ones of the media messages; and

providing the second feed to a second mobile application executable on a second mobile device, the second 15 mobile application configured to present the second feed, the second feed differing from the first feed, wherein presentation of the second feed by the second mobile application includes presentation of an advertisement prompt with a media message included in the 20 second feed, wherein interaction with the advertisement prompt via the second mobile application causes presentation of a second advertisement.

2. The method of claim 1, wherein the media message 25 included in the first feed is encoded with a link that enables access to a webpage.

3. The method of claim 1, wherein presentation of the first feed by the first mobile application includes presentation of a sharing prompt with the media message included in the 30 first feed, wherein interaction with the sharing prompt via the first mobile application facilitates generation of a link configured to enable access to the media message.

4. The method of claim 1, wherein presentation of the first feed by the first mobile application includes presentation of a bookmark prompt with the media message included in the 35 first feed, wherein interaction with the bookmark prompt via the first mobile application enables the media message to be associated with another bookmarked media message through the first mobile application.

5. The method of claim 1, wherein presentation of the first feed by the first mobile application includes presentation of an item purchase prompt with the media message included 40 in the first feed, wherein interaction with the item purchase prompt via the first mobile application enables presentation of information to initiate purchase of an item.

6. The method of claim 1, wherein the media message 45 included in the feed is a video that includes one or more of an attached image or attached audio that is not native to the video.

7. The method of claim 1, wherein the scheduled airtime of the media message included in the first feed is purchased 50 prior to providing the first feed to the first mobile application.

8. A system, comprising:

one or more servers including memory, machine-readable instructions, and one or more processors, the one or 55 more processors configured to execute the machine-readable instructions to perform operations comprising: receiving, at the one or more servers, a plurality of media messages from one or more mobile applica- 60 tions executable on a corresponding one or more mobile devices, wherein respective ones of the plurality of media messages are associated with a scheduled airtime that indicates when the media message is first available for presentation and expiration information to determine when the media message is 65 no longer available for presentation;

US 11,966,952 B1

9

storing the plurality of media messages on the one or more servers;

selecting, for inclusion in a first feed, a first subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages;

providing the first feed to a first mobile application executable on a first mobile device, the first mobile application configured to present the first feed, wherein presentation of the first feed by the first mobile application includes presentation of an advertisement prompt with a media message included in the first feed, wherein interaction with the advertisement prompt via the first mobile application causes presentation of a first advertisement;

selecting, for inclusion in a second feed, a second subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages; and

providing the second feed to a second mobile application executable on a second mobile device, the second mobile application configured to present the second feed, the second feed differing from the first feed, wherein presentation of the second feed by the second mobile application includes presentation of an advertisement prompt with a media message included in the second feed, wherein interaction with the advertisement prompt via the second mobile application causes presentation of a second advertisement.

9. The system of claim 8, wherein the media message included in the first feed is encoded with a link that enables access to a webpage.

10. The system of claim 8, wherein presentation of the first feed by the first mobile application includes presentation of a sharing prompt with the media message included in the first feed, wherein interaction with the sharing prompt via the first mobile application facilitates generation of a link configured to enable access to the media message.

11. The system of claim 8, wherein presentation of the first feed by the first mobile application includes presentation of a bookmark prompt with the media message included in the first feed, wherein interaction with the bookmark prompt via the first mobile application enables the media message to be associated with another bookmarked media message through the first mobile application.

12. The system of claim 8, wherein presentation of the first feed by the first mobile application includes presentation of an item purchase prompt with the media message included in the first feed, wherein interaction with the item purchase prompt via the first mobile application enables presentation of information to initiate purchase of an item.

13. The system of claim 8, wherein the media message included in the feed is a video that includes one or more of an attached image or attached audio that is not native to the video.

14. The system of claim 8, wherein the scheduled airtime of the media message included in the first feed is purchased prior to providing the first feed to the first mobile application.

15. A non-transitory machine-readable storage medium comprising instructions that, when executed, cause one or more processors of one or more servers to:

10

receive, at the one or more servers, a plurality of media messages from one or more mobile applications executable on a corresponding one or more mobile devices, wherein respective ones of the plurality of media messages are associated with a scheduled airtime that indicates when the media message is first available for presentation and expiration information to determine when the media message is no longer available for presentation;

store the plurality of media messages on the one or more servers;

select, for inclusion in a first feed, a first subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages;

provide the first feed to a first mobile application executable on a first mobile device, the first mobile application configured to present the first feed, wherein presentation of the first feed by the first mobile application includes presentation of an advertisement prompt with a media message included in the first feed, wherein interaction with the advertisement prompt via the first mobile application causes presentation of a first advertisement;

select, for inclusion in a second feed, a second subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages; and

provide the second feed to a second mobile application executable on a second mobile device, the second mobile application configured to present the second feed, the second feed differing from the first feed, wherein presentation of the second feed by the second mobile application includes presentation of an advertisement prompt with a media message included in the second feed, wherein interaction with the advertisement prompt via the second mobile application causes presentation of a second advertisement.

16. The non-transitory machine-readable storage medium of claim 15, wherein the media message included in the first feed is encoded with a link that enables access to a webpage.

17. The non-transitory machine-readable storage medium of claim 15, wherein presentation of the first feed by the first mobile application includes presentation of a sharing prompt with the media message included in the first feed, wherein interaction with the sharing prompt via the first mobile application facilitates generation of a link configured to enable access to the media message.

18. The non-transitory machine-readable storage medium of claim 15, wherein presentation of the first feed by the first mobile application includes presentation of a bookmark prompt with the media message included in the first feed, wherein interaction with the bookmark prompt via the first mobile application enables the media message to be associated with another bookmarked media message through the first mobile application.

19. The non-transitory machine-readable storage medium of claim 15, wherein presentation of the first feed by the first mobile application includes presentation of an item purchase prompt with the media message included in the first feed, wherein interaction with the item purchase prompt via the first mobile application enables presentation of information to initiate purchase of an item.

20. The non-transitory machine-readable storage medium of claim 15, wherein the media message included in the feed

US 11,966,952 B1

11

12

is a video that includes one or more of an attached image or attached audio that is not native to the video.

21. The non-transitory machine-readable storage medium of claim 15, wherein the scheduled airtime of the media message included in the first feed is purchased prior to providing the first feed to the first mobile application. 5

22. The method of claim 1, wherein presentation of the first feed by the first mobile application includes presentation of a comment prompt with the media message included in the first feed, wherein interaction with the comment prompt via the first mobile application enables a comment to be associated with the media message. 10

23. The system of claim 8, wherein presentation of the first feed by the first mobile application includes presentation of a comment prompt with the media message included in the first feed, wherein interaction with the comment prompt via the first mobile application enables a comment to be associated with the media message. 15

24. The non-transitory machine-readable storage medium of claim 15, wherein presentation of the first feed by the first mobile application includes presentation of a comment prompt with the media message included in the first feed, wherein interaction with the comment prompt via the first mobile application enables a comment to be associated with the media message. 20 25

Exhibit B 1

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952		Meta Activity
	Claim 1	
1A	A method, comprising: receiving, at one or more servers, a plurality of media messages from one or more mobile applications executable on a corresponding one or more mobile devices, wherein respective ones of the plurality of media messages are associated with a scheduled airtime that indicates when the media message is first available for presentation and expiration information to determine when the media message is no longer available for presentation;	Meta provides advertising media messages that are delivered to mobile applications across its platforms, including Facebook, Instagram, and Messenger. Meta receives at its servers a plurality of media messages from mobile applications executable on mobile devices. The mobile applications provide for association of media messages with a scheduled airtime that indicates when the media message is first available for presentation and expiration information to determine when the media message is no longer available for presentation. Meta provides for the generation of advertising media messages, which Meta refers to as “ad creatives,” through Meta mobile applications. For example, mobile applications, such as Facebook, Meta Ads Manager, or Meta Business Suite, can generate such advertising media messages for delivery on Meta’s Facebook or Instagram platforms. The advertising media message includes content, such as photos, video, and text, as well as associated information, such as a start time that indicates when the advertising message will be made available for presentation and expiration information that is used to determine when the message will no longer be available for presentation, such as the identified end time or when a budgeted spending amount is reached. The mobile application sends the advertising media message and associated information to Meta servers.

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity
	   The screenshots show the Meta Ads setup process. The first two screenshots show the 'Placements' and 'Daily budget' sections. The 'Placements' section lists Facebook, Instagram, and Messenger. The 'Daily budget' section shows options for \$1, \$2, \$3, \$5, and \$15 per day. The third screenshot shows the 'Schedule & duration' section, where the ad is set to run continuously until March 18, 2022, for a duration of 7 days. The total budget is set to \$5.00.

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity

1B	storing the plurality of media messages on the one or more servers; See Row 1A. The plurality of media messages are stored on one or more Meta servers. For example, the advertising media messages are stored on servers from the time they are submitted from the mobile application and continue to be stored on Meta’s servers so they can be delivered for viewing on a mobile application.

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity
	 Exemplary Sources https://www.facebook.com/business/help/204798856225114?id=649869995454285
1C	selecting, for inclusion in a first feed, a first subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages; See Rows 1A & 1B. The Meta servers provide a first subset of media messages stored on the Meta servers for inclusion in a first feed based on the scheduled airtime and the expiration information associated with the media messages. For example, advertising media messages are included as a subset of the media messages in various feeds provided to mobile applications across Meta technology platforms, including Reels, Stories, and Feeds on both Facebook and Instagram. The advertising media messages are selected for inclusion in the feed based on the begin times and expiration information, such as end times and budgets. Exemplary Sources https://www.facebook.com/business/help/407108559393196?id=369787570424415 https://www.facebook.com/business/ads/ad-budget-schedule/

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity
1D providing the first feed to a first mobile application executable on a first mobile device, the first mobile application configured to present the first feed, wherein presentation of the first feed by the first mobile application includes presentation of an advertisement prompt with a media message included in the first feed, wherein interaction with the advertisement prompt via the first mobile application causes presentation of a first advertisement;	See Row 1C. The first feed is provided to a first mobile application executable on a first mobile device that is configured to present the first feed. The presentation of the first feed by the first mobile application includes presentation of an advertisement prompt with a media message included in the first feed, wherein interaction with the advertisement prompt via the first mobile application causes presentation of a first advertisement. For example, Meta servers provide feeds to mobile applications across all Meta platforms, including Facebook, Instagram, and Messenger. Advertising media messages placed in a feed are displayed with advertisement prompts, such as a “call-to-action” button. Meta offers a range of call-to-action buttons, such as “Learn More” and “Shop Now,” that are presented with the advertising media message. An interaction with the advertising prompt causes the mobile application to present an advertisement, such as an external website, shop, blog, or external mobile app. 

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952		Meta Activity
		<u>Exemplary Sources</u> https://www.facebook.com/business/help/450688792208401 https://www.facebook.com/business/help/410873986524407 https://www.facebook.com/business/m/get-started-meta-advertising https://www.facebook.com/business/help/407108559393196?id=369787570424415 https://www.facebook.com/business/help/t/1052075512053923 ("At your ad's destination, potential customers can learn more about your products and services. That way, they'll be one step closer to making a purchase or doing business with you.")
1E	selecting, for inclusion in a second feed, a second subset of the respective ones of the media messages from among the plurality of media messages based on the scheduled airtime and the expiration information of the respective ones of the media messages; and	See Row 1C. A second subset of the plurality of media messages stored on Meta servers is selected for inclusion in a second feed based on the scheduled airtime and the expiration information associated with the media messages. For example, a mobile application can receive multiple, different feeds. In addition, different mobile applications receive different feeds of media messages that include advertising media messages.

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity
	 The screenshot displays the Meta Ads Manager interface for creating a new ad. The top navigation bar includes 'New Campaign', 'New Ad Set', and 'New Ad'. The 'Ad creative' section on the left allows selecting media (15 placements), primary text, headline, description, and call to action. The right panel shows a preview of the ad on a Facebook feed, featuring a 'Lucky Shrub' sponsored post with a 'Learn More' button. Below the screenshot, the text 'Exemplary Sources' is followed by three URLs: https://ai.meta.com/blog/facebook-feed-improvements-ai-show-more-less/, https://www.facebook.com/business/help/407108559393196?id=369787570424415, and https://www.facebook.com/business/learn/lessons/meta-ads-manager-advertising/.
1F	providing the second feed to a second mobile application executable on a second mobile See Rows 1C and 1D. The second feed, which differs from the first feed, is provided to a second mobile application executed on a second mobile device. The presentation of the second feed by the second mobile application includes the presentation of an advertisement prompt with a media

Exhibit B1 – U.S. Patent No. 11,966,952

U.S. Patent 11,966,952	Meta Activity
device, the second mobile application configured to present the second feed, the second feed differing from the first feed, wherein presentation of the second feed by the second mobile application includes presentation of an advertisement prompt with a media message included in the second feed, wherein interaction with the advertisement prompt via the second mobile application causes presentation of a second advertisement.	message included in the second feed. An interaction with the advertisement prompt via the second mobile application causes presentation of a second advertisement. For example, Meta servers employ programming rules and machine learning techniques to determine the content displayed in a user's Facebook or Instagram feed and provide a feed to a first mobile application that differs from the feed provided to a second mobile application. Advertising media messages placed in a feed are displayed with advertisement prompts, such as call-to-action buttons. Meta offers a range of call-to-action buttons, such as "Learn More" and "Shop Now," that are presented with the advertising media message. An interaction with the advertising prompt causes the mobile application to present an advertisement, such as an external website, shop, blog, or external mobile app. <u>Exemplary Sources</u> https://www.facebook.com/business/ads/ad-targeting https://ai.meta.com/blog/facebook-feed-improvements-ai-show-more-less/ (Oct. 5, 2022) ("...we use deep learning models to generate user and post-level embeddings (sets of numbers), which help predict the types of content a person wants to see more of or less of in their Feeds.")
