Come With Us to the Ultimate Instant Messenger.

Instant Messaging is the most convenient means of communications on the internet today. Users connect to a central server which allows real time message delivery to and from other users. Text, graphics, and even video are utilized to make the IM experience stronger. Instant messaging fills a niche between a phone call and e-mail — it's fast, and not too intrusive.

However, there are more than four different major messaging mediums currently in widespread use, which separates us and complicates this convenient way of communication. Trillian is here to solve the problem, instantly.

Chat with friends; **Manage** different mediums; grab the latest news, weather, stocks and various **information** with our versatile array of **plugins**; all within one new **powerful and professional interface**.

Trillian Pro is a very powerful tool that includes a huge number of features to enhance your IM experience, creating infinite possibilities during your journey on the Internet. It combines the **rock-solid reliability** of Trillian .74 with a powerful new interface for professional to commercial users. Whether you're a user tangled by the complexity of using more than one network, a user who is using only one messenger looking for a better experience, or an Internet user looking for an efficient way to stay updated with the world, Trillian Pro is designed for you.

Trillian Pro v1.0 is packed with over 100 **compelling new features** and fixes — like a brand-new plugin system that extends Trillian's functions from hundreds to infinity, an enhanced Yahoo! medium that enables conferences and of course video (webcam) capabilities, a revamped Connection Manager that lets you manage individual accounts at ease with total control, MetaContacts that efficiently clean up your contact list, and adorable animated emoticons that you'll soon feel lonely without (all of which can be enabled or disabled at your discretion).

Trillian Pro v1.0 also features full technical support, helping you to solve any problems you might have or even run some basic questions by the development team. The souped-up System Tray Alert window, which fades in and out on the bottom-right of your screen like magic, provides instant information of who's going online, details of the latest news headlines, or even which song you are playing right now. Also worth mention is the significantly enhanced Contact List that now allows you to drag-and-drop between online and offline folders, a Trillian MiniBrowser that lets you view AIM HTML Profiles, and a new simplified SkinXML/Stixe format that will let everyone skin Trillian Pro easily!

Chat. No Boundaries.

Trillian's universal connectivity allows you to chat on all major chat networks, including AIM, MSN, ICQ, Yahoo!, and IRC simultaneously. With the minimal Whistler skin and interface, Trillian Pro provides a powerful and

Share your picture with friends, send messages directly, hold a confidential conversation using SecureIM, or send a movie or music file by right-clicking in Windows Explorer. Recall your chatting memories using the Message History function. Don't want to miss the links your friends sent to you? You can use URL Grabber in Shortcuts tab to retrieve all the links you had received (available through certain skins only). Show your humor by formatting your text in an infinite combination of fonts and styles. Want to tell your friend what song you are playing right now? Simply type "/music" when the appropriate plugin is loaded!

Trillian Pro > Mobile Integration

Connect not only to computers.

You can chat with even more people than you expect, by using SMS services. SMS, Short Message Service, is text messaging to & from cellular phones.

ICQ® SMS Messages.

Exchange ICQ SMS messages with over 180 global cellular networks supported!

MSN® Mobile Contacts.

If you have a wireless device — a Web-enabled cellular phone, a pager, a Microsoft Windows CE or Palm OS device — you can set it up to receive instant messages from MSN Mobile Contacts.

Enter in your own phone information and be able to send messages to people who have done the same using this new feature.
