Match	Document	Document Title	Score
1	7724728	Policy-based processing of packets Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for policy-based processing of packets, including mechanisms for managing the policies. A...	1000
2	US20060233173	Policy-based processing of packets Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for policy-based processing of packets, including mechanisms for managing the policies. A...	976
3	6671713	Execution of dynamically configured application service in access method-independent exchange The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	936
4	7580351	Dynamically controlling the rate and internal priority of packets destined for the control plane of a routing device Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for identifying admission control policies and enforcement of these admission control...	897
5	6779000	Access method with process interactive service The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	895
6	6421705	Service provider application program communicating with service provider application process The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	833

7	7246370	PDstudio design system and method A policy developer studio comprising: a meta-policy core of network objects, a policy developer graphical user interface (GUI) tool for providing a front end to a policy language, an output in...	810
8	US20070014275	Dynamically controlling the rate and internal priority of packets destined for the control plane of a routing device Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for identifying admission control policies and enforcement of these admission control...	809
9	US20030110192	PDstudio design system and method A policy developer studio comprising: a meta-policy core of network objects, a policy developer graphical user interface (GUI) tool for providing a front end to a policy language, an output in...	809
10	7535927	Subscription-based services The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	791
11	7082492	Associative memory entries with force no-hit and priority indications of particular use in implementing policy maps in communication devices Methods and apparatus are disclosed for defining and using associative memory entries with force no-hit and priority indications of particular use in implementing policy maps in communication...	786
12	6922705	Access-method-independent exchange with communication request The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	757
13	US20040170172	Associative memory entries with force no-hit and priority indications of particular use in implementing policy maps in communication devices Methods and apparatus are disclosed for defining and using associative memory entries with force no-hit and priority indications of particular use in implementing policy maps in communication...	756

14	US20090300192	Subscription-Based Services The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	706
15	6898654	Method and system for managing bandwidth on a master-slave bus A method for rebalancing bandwidth allocations to peripheral and other devices, particularly for isochronous communications, connected to a computer system via a bus in order to accommodate...	679
16	US20070094597	DYNAMIC GRAPHICAL USER INTERFACE FOR A DESKTOP ENVIRONMENT A method, system, and apparatus are directed to providing a graphical user interface over a network. A first selection of a button within a taskbar at a client is detected. A local menu of...	643
17	6434568	Information services patterns in a netcentric environment A system, method, and article of manufacture are provided for implementing information services patterns associated with a relational database management system in an object-oriented persistence...	623
18	US20090002178	DYNAMIC MOOD SENSING A system that facilitates personalized sensing is provided. The system includes a sensing component that determines one or more user states based in part on a detected context and a mood component...	622
19	6578068	Load balancer in environment services patterns A system and method are provided for distributing incoming requests from a user interface amongst a client and server components for optimizing usage of resources. Incoming requests are first...	618
20	6546413	Access-method-independent exchange using a communication primitive The present invention provides a virtual network, sitting "above" the physical connectivity and thereby providing the administrative controls necessary to link various communication devices via an...	606
21	6332163	Method for providing communication services over a computer network system A system, method and article of manufacture are provided for implementing communication services patterns. A fixed format stream-based communication system is provided and service is delivered via...	588

22	7289964	System and method for transaction services patterns in a netcentric environment The present disclosure provides for implementing transaction services patterns. Logical requests are batched for reducing network traffic. A batched request is allowed to indicate that it depends...	588
23	US20060039354	Systems and methods for client-side application-aware prioritization of network communications The present invention is generally directed towards a remote access architecture for providing peer-to-peer communications and remote access connectivity. In one embodiment, the remote access...	570
24	US20090323516	DIAGNOSING NETWORK PROBLEMS The method collects configuration data about the network, compares it to known good configurations to see if a corrective configuration is available. In addition, the method will review known bad...	561
25	7522521	Route processor adjusting of line card admission control parameters for packets destined for the route processor Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for a route processor adjusting admission control policies for packets destined for the...	544
26	6601234	Attribute dictionary in a business logic services environment A system and method are provided for controlling access to data of a business object via an attribute dictionary. The attribute dictionary, which stores attribute names and values, is dispatched...	537
27	US20040254998	When-free messaging The present invention relates to systems and methods that mitigate the intrusiveness of communications between message senders and receivers while facilitating more courteous, seamless, and timely...	534
28	US20040031052	Information platform An inventive client/server system provides a platform for cable system operators to deliver a full range of sophisticated new products to cable television subscribers. Preferably a middleware...	523

29	US20100088696	<u>MOBILE WIRELESS COMMUNICATIONS SYSTEM PROVIDING DOWNLOADING AND INSTALLATION OF MOBILE DEVICE APPLICATIONS UPON REGISTRATION AND RELATED METHODS</u> A mobile wireless communication system is disclosed herein which may include an application server configured to provide at least one mandatory mobile device application. The system may further...	520
30	6289382	<u>System, method and article of manufacture for a globally addressable interface in a communication services patterns environment</u> A system, method, and article of manufacture are provided for delivering service via a globally addressable interface. A plurality of interfaces are provided with access allowed to a plurality of...	508
31	US20030001846	<u>Automatic personalized media creation system</u> An automatic personalized media creation system provides a capture area for a user where the invention elicits a performance from the user using audio and/or video cues and is automatically...	496
32	7609721	<u>Systems and methods for adjusting the maximum transmission unit for encrypted communications</u> The present invention is generally directed towards a remote access architecture for providing peer-to-peer communications and remote access connectivity. In one embodiment, the remote access...	492
33	6438594	<u>Delivering service to a client via a locally addressable interface</u> A system, method, and article of manufacture are provided for delivering service via a locally addressable interface. A plurality of globally addressable interfaces and a plurality of locally...	475
34	6502213	<u>System, method, and article of manufacture for a polymorphic exception handler in environment services patterns</u> A system, method and article of manufacture are provided for minimizing the amount of changes that need to be made to exception handling logic when new exceptions are added. Exceptions are...	471
35	6571282	<u>Block-based communication in a communication services patterns environment</u> A system and method are provided for transmitting data from a server to a client via blocks. A user query for a solution set is transmitted to a server, which is then used to query a database for...	471

36	7693817	<u>Sensing, storing, indexing, and retrieving data leveraging measures of user activity, attention, and interest</u> Various components and processes are provided to enable data processing on multiple data types where aspects of the history of user activity, attention, interest, location, or other interaction...	467
37	US20060039404	<u>Systems and methods for adjusting the maximum transmission unit for encrypted communications</u> The present invention is generally directed towards a remote access architecture for providing peer-to-peer communications and remote access connectivity. In one embodiment, the remote access...	466
38	6640249	<u>Presentation services patterns in a netcentric environment</u> A system, method and article of manufacture are provided for implementing presentation services patterns. Non-presentation logic executed on a client is assigned to an activity for allowing reuse...	465
39	US20060037072	<u>Systems and methods for network disruption shielding techniques</u> The present invention is generally directed towards a remote access architecture for providing peer-to-peer communications and remote access connectivity. In one embodiment, the remote access...	457
40	US20070014276	<u>Route processor adjusting of line card admission control parameters for packets destined for the route processor</u> Disclosed are, inter alia, methods, apparatus, data structures, computer-readable media, and mechanisms, for a route processor adjusting admission control policies for packets destined for the...	455
41	US20010034771	<u>Network portal system and methods</u> A network portal system includes a web-top manager and a universal content broker system. The web-top manager is configured to receive a content request from a user device, where the content...	453
42	7689485	<u>Generating accounting data based on access control list entries</u> Methods, apparatus, and other mechanisms are disclosed for generating accounting or other data based on that indicated in access control lists or other specifications, and typically using...	450

43	7269664	Network portal system and methods A network portal system includes a web-top manager and a universal content broker system. The web-top manager is configured to receive a content request from a user device, where the content...	450
44	6477665	System, method, and article of manufacture for environment services patterns in a netcentric environment A system, method and article of manufacture are provided for implementing environment services patterns. First, a successfulness of an operation is tested, wherein the operation has pre-conditions...	447
45	6640244	Request batcher in a transaction services patterns environment A system and method are provided for batching logical requests for reducing network traffic. A group of business objects necessary for a transaction are provided and managed in a logical unit of...	444
46	7500009	Rate computations of particular use in scheduling activities or items such as the sending of packets Rate computations are performed such as for use in scheduling activities, such as, but not limited to packets, processes, traffic flow, etc. One implementation identifies an approximated inverse...	442
47	6904460	Reverse content harvester The invention relates to gathering information for a networked directory. In one embodiment, a method for gathering information for a directory on a packet switched network is disclosed. In one...	427
48	US20050198342	Rate computations of particular use in scheduling activities or items such as the sending of packets Rate computations are performed such as for use in scheduling activities, such as, but not limited to packets, processes, traffic flow, etc. One implementation identifies an approximated inverse...	424
49	US20080198159	METHOD AND APPARATUS FOR EFFICIENT AND FLEXIBLE SURVEILLANCE VISUALIZATION WITH CONTEXT SENSITIVE PRIVACY PRESERVING AND POWER LENS DATA MINING The surveillance visualization system extracts information from plural cameras to generate a graphical representation of a scene, with stationary entities such as buildings and trees represented...	419

50	6842906	System and method for a refreshable proxy pool in a communication services patterns environment	417
		A system and method are provided for interfacing a naming service and a client with the naming service allowing access to a plurality of different sets of services from a plurality of globally...
