pathway and significant low-carbon investments are being deployed. The two dimensions are combined into a letter grade to obtain the total score. Note that the CTT only contributes to the total score when TPQ is above

4. The company scores 4 for the quality of its transition plan and 0 for its contribution to the transition, resulting in a total score of C - Inconsequential planning. This indicates that the company meets the conditions set out for a total score of D and, in addition, provides evidence that decarbonisation levers and actions are considered across both the near and long term, while also implementing measures to influence suppliers and investors to reduce upstream GHG emissions. However, there is no evidence that the company is mobilising low-carbon investments through capital expenditure (CapEx) or R&D. The company's Scope 1 and 2 and Scope 3 emissions data for the period 2019-2024 are either not reported consistently for at least four years, or its emissions trajectory is significantly misaligned with the reductions required under the relevant 1.5 °C sectoral pathway. As a consequence, none of the company's targets are aligned with an ambitious 1.5 °C sectoral pathway when past emissions performance and expected sectoral activity growth are taken into account. Disclosing information on low-carbon investments and providing consistent emissions time series that demonstrate significant emissions reductions would move the company to a higher total score.

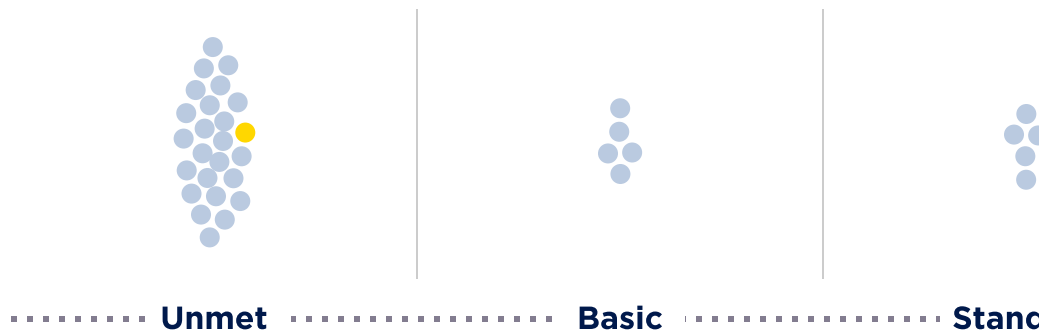

Maturity of climate targets

The degree to which the company sets short- and long-term climate targets, covering key emissions across all operations, with full quantitative disclosure on baselines and reductions.

● **CRRC Corporation**

Investment in climate solutions

The extent to which the company's annual investments are directed toward climate solutions, ideally identified through an established taxonomy or descriptive framework.

● **CRRC Corporation**

Aligning business models

Is the company developing or expanding low-carbon business models, including those beyond its core operations - with clear, quantified commitments for expansion.
