*Attorneys for Defendant
Krisp Technologies, Inc.*

**UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA
SAN FRANCISCO DIVISION**

SANAS.AI INC.,

Plaintiff,

vs.

KRISP TECHNOLOGIES, INC.,

Defendant.

Case No.: 3:25-cv-05666-RS

**DEFENDANT'S ANSWER TO
PLAINTIFF'S PATENT
INFRINGEMENT CLAIMS AND
COUNTERCLAIMS**

DEMAND FOR JURY TRIAL

IPR2026-00272

Krisp Technologies, Inc. v. Sanas.AI Inc.
Patent Owner Exhibit 2002

1 **KRISP’S ANSWER TO COMPLAINT FOR PATENT INFRINGEMENT**
2 **AND KRISP’S COUNTERCLAIMS**

3 Defendant Krisp Technologies, Inc. (“Krisp”), by and through its attorneys, respectfully
4 submits its Answer to Sanas.AI Inc.’s (“Plaintiff” or “Sanas”) Complaint for Patent Infringement
5 (Dkt. 10). Krisp has moved to dismiss Sanas’ claims for misappropriation of trade secret and
6 declaratory judgment claim for co-inventorship, and accordingly, no answer to those claims is
7 required at this time. Except as expressly admitted, Krisp denies each and every allegation and
8 characterization in Sanas’ Complaint. Krisp’s specific responses to the numbered allegations,
9 which correspond to the numbered paragraphs of the Complaint, are set forth below.

10 Krisp is a leader in the Voice AI technology market. Formed in 2017, Krisp developed
11 best-in-class noise cancellation technology that is used today by over a thousand companies to
12 remove background noise, echo, and cross-talk during calls and meetings. Krisp patented its
13 technology, and went to market in 2018 with plan to develop further Voice AI enhancement
14 technologies including accent conversion technology. When Krisp saw that a new company, Sanas,
15 claimed to have already developed “accent translation” technology in 2021, Krisp reached out to
16 see if a partnership with Sanas would be fruitful. Sanas, for its part, was interested in partnering
17 with Krisp in order to integrate its technology into Krisp’s noise cancellation technology, which is
18 a critical foundation for successful accent conversion technology, and thereby gain access to
19 Krisp’s substantial customer base. But after nearly a year, the discussions proceeded only far
20 enough for Krisp to realize that Sanas did not have a quality accent conversion technology to
21 contribute to a partnership. Sanas never provided Krisp with access to its technology, and never
22 provided any confidential information to Krisp regarding its technology. Krisp terminated the
23 discussions due to Sanas’ “limited technology performance and integration visibility, and
24 misalignment in business communication, which will adversely impact our [Krisp’s] customer
25
26
27
28

relationships,” and Krisp completed the development of its own, proprietary, superior accent conversion technology that quickly experienced success in the market. Sanas’ allegations, including its patent infringement allegations against Krisp, are entirely meritless.

However, after the talks between Krisp and Sanas terminated, Sanas was left with only its own inferior accent translation technology and no noise cancellation technology. So Sanas copied Krisp’s patented noise cancellation technology, and then announced that it was giving it away for “free” to attract Krisp’s customers to switch to Sanas so that Sanas could sell its inferior accent translation technology. As alleged herein, Sanas is infringing Krisp’s patented technology, and its actions constitute unfair competition and unfair practices.

INTRODUCTION

1. Krisp lacks knowledge or information sufficient to form a belief as to the truth of the allegations in paragraph 1 and, therefore, denies the same.

2. Krisp lacks knowledge or information sufficient to form a belief as to the truth of the allegations in paragraph 2 and, therefore, denies the same.

3. Krisp lacks knowledge or information sufficient to form a belief as to the truth of the allegations in paragraph 3 and, therefore, denies the same.

4. Krisp states that the website and its content speak for themselves. Krisp denies the remaining allegation in paragraph 4.

5. Krisp states that the website and its content speak for themselves. Krisp denies the remaining allegation in paragraph 5.

KRISP’S COPYCAT TECHNOLOGY

6. Krisp denies the allegations in paragraph 6.

7. Krisp states that the website and its content speak for themselves. Krisp lacks knowledge sufficient to form a belief as to the truth of the remaining allegations of paragraph 7 and, therefore, denies the same.

8. Krisp denies the allegations in paragraph 8.

9. Krisp denies the allegations in paragraph 9.

THE PARTIES

10. Krisp lacks knowledge or information sufficient to form a belief as to the truth of the allegations in paragraph 10 and, therefore, denies them.

11. Krisp admits it is a corporation organized under the laws of the State of Delaware, with a principal place of business at 2150 Shattuck Ave., Suite 1300, Berkley, CA 94704.

JURISDICTION AND VENUE

12. Paragraph 12 alleges legal conclusions to which no response is required. To the extent a response is required, Krisp admits that the Corrected Complaint purports to be a patent infringement action arising under the Patent Laws of the United States, 35 U.S.C. § 271 et seq. Krisp admits that this Court has subject matter jurisdiction over claims of patent infringement pursuant to 28 U.S.C. §§ 1331 and 1338(a), 2201, and/or 2022. Krisp denies that Plaintiff has stated a legally sufficient claim for patent infringement, and further specifically denies any infringement.

13. Krisp does not dispute that this Court has jurisdiction over a meritorious declaratory judgment claim, or that this Court has supplemental jurisdiction over meritorious state law claims alleged. However, Krisp denies that Krisp has alleged a plausible claim for trade secrets misappropriation or for inventorship, and is concurrently moving to dismiss on this basis. Krisp

1 further denies that Plaintiff has stated any legally sufficient claim, and specifically denies any
2 infringement.

3 14. Krisp does not contest that this Court has personal jurisdiction over it for the
4 purposes of this action. Krisp denies that it has committed any acts of infringement in this District
5 or anywhere else. Krisp denies the remaining allegations of paragraph 14.

6 **FACTUAL BACKGROUND**

7
8 15. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
9 the allegations in paragraph 15 and, therefore, denies the same.

10 16. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
11 the allegations in paragraph 16 and, therefore, denies the same.

12 17. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
13 the allegations in paragraph 17 and, therefore, denies the same.

14 18. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
15 the allegations in paragraph 18 and, therefore, denies the same.

16
17 19. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
18 the allegations in paragraph 19 and, therefore, denies the same.

19 20. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
20 the allegations in paragraph 20 and, therefore, denies the same.

21 21. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
22 the allegations in paragraph 21, and, therefore, denies the same.

23
24 22. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
25 the allegations in paragraph 22, and, therefore, denies the same.

23. Krisp admits that Provisional Patent Application #63/185,345 (Real-Time Accent Conversion Model) states that it was filed on May 6, 2021. Krisp lacks knowledge or information sufficient to form a belief as to the truth of the remaining allegations in paragraph 23 and, therefore, denies the same.

Krisp Seeks Sanas' Accent Translation Technology

24. Krisp admits that on September 7, 2021, Robert Schoenfield sent a LinkedIn message to Shawn Zhang. Krisp denies the remaining allegations of Paragraph 24.

25. Krisp admits that it had no direct contact with Sanas prior to September 7, 2021. Krisp is without knowledge or information sufficient to form a belief as to the truth of the remaining allegations in Paragraph 25 and, therefore, denies them.

26. Krisp states that the website referenced and its content speak for themselves. Krisp is without knowledge or information sufficient to form a belief as to the truth of the allegations in Paragraph 26 and, therefore, denies them.

27. Krisp admits that Mr. Zhang did not respond to Mr. Schoenfield's September 7, 2021 LinkedIn message, and admits that Mr. Schoenfield sent a second LinkedIn message to Mr. Zhang on September 8, 2021. Krisp denies the remaining allegations of Paragraph 27.

28. Krisp is without knowledge or information sufficient to form a belief as to the truth of the allegations in Paragraph 28 and, therefore, denies them.

29. Krisp admits that Mr. Baghdasaryan sent an email to Quentin Clark of General Catalyst on September 27, 2021 that stated, among other things, “I saw GC invested in Sanas.ai. Congrats!” and “We are quite interested in Accent Reduction technologies. It’s good to see they are having progress. I would love to connect with the founders and start exploring future

1 partnerships. Would you mind checking with them if there is an interest to connect?” Krisp denies
2 the remaining allegations of Paragraph 28.

3 30. Krisp admits that on October 6, 2021, Mr. Baghdasaryan met over Zoom with Mr.
4 Soderi of Sanas. Krisp further admits that on October 10, 2021, Mr. Baghdasaryan sent an email
5 message to Mr. Soderi and Mr. Serebryakov of Sanas stating “I’ll be in the Bay Area tomorrow
6 (Mon.). Would be happy to meet you after Noon if that works for you. Pls let me know.” Krisp
7 further admits that no meeting occurred on October 10, 2021. Krisp admits that on October 11,
8 2021, Mr. Baghdasaryan responded to Sanas that his “flight got cancelled,” “I won’t be in the US
9 for a couple of months. But we should certainly do another Zoom session, this time a deeper one.
10 The main question we have is how this works in real-time. Experiencing it somehow would be
11 really important for us.” Krisp denies the remaining allegations of Paragraph 30.

12 31. Krisp admits that on October 11, 2021, Mr. Soderi of Sanas wrote an email message
13 to Mr. Baghdasaryan stating “Sounds good. Agreed. We are just piecing together the latest release
14 with a few updates that we can demo live. We will let you know when it’s ready so we can do a
15 deep dive and play around with it:) May I suggest going under NDA for that call? Thoughts?”
16 Krisp further admits that Krisp and Sanas executed a Non-Disclosure Agreement on November
17 18, 2021, which by its express terms, only protected information that the disclosing party
18 designated as “Confidential Information,” which was defined as written information that “is
19 marked ‘Confidential,’ ‘Proprietary’ or in some other manner to indicate its confidential nature,
20 and disclosed oral information that “is designated as confidential at the time of its initial disclosure
21 and reduced to a written summary by Discloser that is marked in a manner to indicate its
22 confidential nature and delivered to Recipient within thirty (30) days after its initial disclosure.”
23 Further, the NDA made clear that “Confidential Information shall not, however, include any
24
25
26
27
28

1 information that (i) was publicly known . . . (ii) becomes publicly known . . . (iii) is in the rightful
2 possession of Recipient without confidentiality obligations at the time of disclosure . . . (iv) is
3 obtained by Recipient from a third party without an accompanying duty of confidentiality . . . or
4 (v) is independently developed by Recipient without the use or reference to Discloser's
5 Confidential Information" Krisp specifically denies that Sanas ever designated any
6 information as "Confidential Information" pursuant to the NDA, and denies the remaining
7 allegations of Paragraph 31.
8

9 32. Krisp admits that Krisp and Sanas explored a possible partnership, but denies that
10 Sanas disclosed any "Confidential Information" under the NDA. Krisp lacks knowledge or
11 information sufficient to form a belief as to the truth of the remaining allegations of Paragraph 32
12 and, therefore, denies the same.

13 33. Krisp admits that Mr. Schoenfield's September 8, 2021 LinkedIn message to Mr.
14 Zhang stated "we have 100's of global contact centers as customers for background noise
15 removal and voice quality enhancements. I would like to explore licensing your tech and share
16 more about our business and customers." Krisp further admits that on September 27, 2021, Mr.
17 Baghdasaryan sent an email to Quentin Clark at General Catalyst stating, in part, "We are quite
18 interested in Accent Reduction technologies. It's good to see they are having progress. I would
19 love to connect with the founders and start exploring future partnerships." Krisp denies the
20 remaining allegations of Paragraph 33.
21

22 34. Krisp admits that it sought to "explor[e] future partnerships" with Sanas, and
23 further admits that Krisp's intention was to go to market with Sanas' technology if the
24 technology met with Krisp's expectations. Krisp denies the remaining allegations of Paragraph
25 34.
26
27
28

1 35. Krisp admits that the parties executed an NDA that, by its express terms, only
2 protected information that the disclosing party designated as “Confidential Information,” which
3 was defined as written information that “is marked ‘Confidential,’ ‘Proprietary’ or in some other
4 manner to indicate its confidential nature, and disclosed oral information that “is designated as
5 confidential at the time of its initial disclosure and reduced to a written summary by Discloser that
6 is marked in a manner to indicate its confidential nature and delivered to Recipient within thirty
7 (30) days after its initial disclosure.” Further, the NDA made clear that “Confidential Information
8 shall not, however, include any information that (i) was publicly known . . . (ii) becomes publicly
9 known . . . (iii) is in the rightful possession of Recipient without confidentiality obligations at the
10 time of disclosure . . . (iv) is obtained by Recipient from a third party without an accompanying
11 duty of confidentiality . . . or (v) is independently developed by Recipient without the use or
12 reference to Discloser’s Confidential Information” Krisp specifically denies that Sanas ever
13 designated any information as “Confidential Information” pursuant to the NDA, and denies the
14 remaining allegations of Paragraph 35.
15

16 36. Krisp admits that in 2021, Krisp had not yet fully developed its own accent
17 translation technology. Krisp denies the remaining allegations of Paragraph 36.
18

19 37. Krisp admits that after the parties signed the NDA, Sanas and Krisp had a phone
20 call in which an Indian actor dialed in during a Zoom meeting with a mobile phone to demonstrate
21 Sanas’ technology. Sanas did not designate the demonstration, or anything else, as “Confidential
22 Information” under the NDA. Krisp admits that on December 1, 2021 there was a meeting
23 including Mr. Soderi, Mr. Serebryakov, Mr. Baghdasaryan, Mr. Minasyan, Mr. Schoenfield, and
24 Ms. Walker. Krisp denies the remaining allegations of Paragraph 37.
25
26
27
28

1 38. Krisp admits that on January 13, 2022, Mr. Baghdasaryan sent an email that stated,
2 in part, the quoted language. Krisp denies the remaining allegations of Paragraph 38.

3 39. Krisp admits that on January 18, 2022, Sanas delayed discussions with Krisp until
4 “after our [fund]raise.” Krisp further admits that Mr. Schoenfield sent an email to Sanas on April
5 13, 2022. Krisp admits that Mr. Shoenfield sent an email to Sanas on June 8, 2022 stating “Thanks
6 again for our alignment call last week” and attaching a “draft of the LOI for your review.” Krisp
7 denies the remaining allegations of Paragraph 39.

8 40. Krisp admits that on June 13, 2022, Mr. Baghdasaryan sent an email to Mr.
9 Serebryakov stating “As discussed, our team will do a technical evaluation to get more comfortable
10 with the quality and readiness of your technology. The goal is to perform this fast-track evaluation
11 until Friday. We assume you have a CLI app that receives an audio file and returns a processed
12 audio file. Such an app would make things faster.” Krisp further admits that this email “There are
13 several things we would like to test” and contained the language quoted in the Paragraph 40
14 thereafter. Krisp denies the remaining allegations of Paragraph 40.

15 41. Krisp admits that Krisp and Sanas had a Slack channel for communicating. Krisp
16 denies that any information exchanged in the Slack channel was designated by Sanas as
17 “Confidential Information” and further denies that any information exchanged was subject to the
18 NDA as implied by Paragraph 41. Krisp denies the remaining allegations of Paragraph 41.

19 42. Krisp admits that on August 16, 2022, Mr. Shoenfield stated in an email to Sanas
20 that “we want to proceed with partnership.” Krisp further admits that this email attached an
21 “updated LOI” and noted that “[a]s this is the first time that we have integrated technology not
22 developed within Krisp, we have technical and market diligence to perform for integration and
23
24
25
26
27
28

1 performance” and that “Krisp needs to ensure we continue to deliver market-leading technology
2 on behalf of our customers.” Krisp denies the remaining allegations of Paragraph 42.

3 43. Krisp admits that on August 16, 2022, Mr. Shoenfield stated the quoted language
4 of Paragraph 43, among other language, in an email to Sanas. Krisp denies the remaining
5 allegations of Paragraph 43.

6 44. Krisp admits that it provided a “partial list of our open questions regarding the
7 technical evaluation,” which included the quoted bullet points reproduced in Paragraph 44, to
8 Sanas. Krisp denies the remaining allegations of Paragraph 44.

9 45. Krisp admits that that on August 18, 2022, Mr. Keshava stated in an email to Mr.
10 Schoenfield, “I would have hoped to add the non competitive clause as it just makes it easier for
11 technology teams to work together but we have an NDA and I am hopeful we can move past it.”
12 Krisp denies the remaining allegations of Paragraph 45.

13 46. Krisp admits that on August 16, 2022, Mr. Keshava stated in an email to Mr.
14 Schoenfield, “Also, I wanted to reiterate the primary reason for both of us to partner should be to
15 assert market dominance and hence would want to be aggressive on 2023 commitments once we
16 do market diligence/validation and POC’s. As long as we can commit to each other on volumes
17 we would chase for next year by end of Dec I am fine with the construct of the partnership.” Krisp
18 admits that on August 17, 2022, Mr. Shoenfield stated in an email to Sanas, “We are aligned on
19 the primary reason for both of us – to get to market and secure a first-mover footprint in the
20 industry.” Krisp denies the remaining allegations of Paragraph 46.

21 47. Krisp admits that on August 21, 2022, Mr. Shoenfield sent an email stating “Arto
22 will lead our technical assessment process and will contact to schedule our teams.” Krisp admits
23
24
25
26
27
28

1 that on August 22, 2022, Mr. Minasyan “[a]dd[ed] Stepan who is Krisp’s chief scientist, to the
2 loop” via email. Krisp denies the remaining allegations of Paragraph 47.

3 48. Krisp admits that on August 23, 2022, Mr. Minasyan sent an email to Sanas and
4 attached a document called “Questions_to_SANAS” that included the quoted language from
5 Paragraph 48. Krisp denies the remaining allegations of Paragraph 48.

6 49. Krisp lacks the knowledge or information sufficient to form a belief as to the truth
7 of the allegations in paragraph 49 and, therefore, denies the same.

8 50. Krisp denies the allegations of Paragraph 50.

9 51. Paragraph 51 fails to identify any specific information or specific communications
10 that Sanas alleges it provided to Krisp, and accordingly Krisp lacks the knowledge or information
11 sufficient to form a belief as to the truth of the allegations in paragraph 51 and, therefore, denies
12 the same.

13 52. Krisp admits that Sanas and Krisp had one phone call in which an Indian actor
14 dialed in during a Zoom meeting with a mobile phone to demonstrate Sanas’ technology. Sanas
15 did not designate the demonstration, or anything else, as “Confidential Information” under the
16 NDA. Krisp denies the remaining allegations of Paragraph 52.

17 53. Paragraph 53 fails to identify any specific information or specific communications
18 that Sanas alleges it provided to Krisp, and accordingly Krisp lacks the knowledge or information
19 sufficient to form a belief as to the truth of the allegations in paragraph 53 and, therefore, denies
20 the same.

21 54. Krisp denies the allegations of Paragraph 54.

Krisp Terminates the Discussions and Copies Sanas' Product

55. Krisp admits that Mr. Keshava sent emails on October 24, 2022 and November 3, 2022. Krisp denies the remaining allegations of Paragraph 55.

56. Krisp admits that on November 4, 2022, Mr. Shoenfield sent an email to Sanas stating, "Things are very busy for us in the market. We have thought this through with our team and came to the conclusion that our two companies are not ready to engage seriously at this stage. The primary reasons are limited technology performance and integration visibility, and misalignment in business communication, which will adversely impact our customer relationships. We hope that this will change in the coming quarters as Sanas technology becomes more stable and Krisp's roadmap and priorities get more aligned with accent technology." Krisp denies the remaining allegations of Paragraph 56.

57. Krisp denies the allegations of Paragraph 57.

58. Krisp denies the allegations in paragraph 58.

59. Krisp admits that it posted a "blog" post on April 27, 2023 titled "Krisp AI Accent Conversion: Get Ready for a Communication Revolution." Krisp denies the remaining allegations of Paragraph 59.

60. Krisp states that the blog post speaks for itself. Krisp denies the remaining allegations in Paragraph 60.

61. Krisp states that the blog post speaks for itself. Krisp denies the remaining allegations in Paragraph 61.

62. Krisp denies the allegations in paragraph 62.

63. Krisp admits that its products are the result of Krisp's own hard work and innovation. Krisp denies the remaining allegations of Paragraph 63.

1 **DIVISIONAL ASSIGNMENT**

2 64. Paragraph 64 alleges legal conclusions to which no response is required.

3 **PATENTS-IN-SUIT**

4 65. Krisp denies any patent infringement or that Plaintiff is entitled to any relief or
5 damages, but admits that Sanas purports to state a cause of action concerning U.S. Patent Nos.
6 11,948,550 (“the ‘550 Patent”), 12,125,496 (“the ‘496 Patent”), 12,131,745 (“the ‘745 Patent”),
7 and 11,715,457 (“the ‘457 Patent”) (together, the “Asserted Patents”).

8 *U.S. Patent No. 11,948,550*

9
10 66. Krisp admits that the ‘550 Patent, on its face, is titled “REAL-TIME ACCENT
11 CONVERSION MODEL.” Krisp denies that the ‘550 Patent was “duly and legally issued,” but
12 admits that the face of the patent identifies an issuance date of April 2, 2024 and lists Mr.
13 Serebryakov and Mr. Zhang as inventors. Krisp lacks knowledge or information sufficient to form
14 a belief as to the truth of the remaining allegations in Paragraph 66, and, therefore, denies the same.

15
16 67. Krisp admits that the ‘550 Patent, on its face, lists 22 claims (3 independent and 19
17 dependent). Krisp denies the remaining allegations of Paragraph 67.

18 68. Krisp denies the allegations in paragraph 68.

19 69. Krisp admits that Exhibit A appears to be a true and correct copy of the ‘550 Patent.

20 *U.S. Patent No. 12,125,496*

21 70. Krisp admits that the ‘496 Patent, on its face, is titled “METHODS FOR NEURAL
22 NETWORK-BASED VOICE ENHANCEMENT AND SYSTEMS THEREOF.” Krisp denies that
23 the ‘496 Patent was “duly and legally issued,” but admits that the face of the patent identifies an
24 issuance date of October 22, 2024 and identifies Shawn Zhang, Lukas Pfeifenberger, Jason Wu,
25 Piotr Dura, David Braude, Bajibabu Bollepalli, Alvaro Escudero, Gokce Keskin, Ankita Jha, and
26
27
28

1 Maxim Serebryakov as the named inventors. Krisp lacks knowledge or information sufficient to
2 form a belief as to the remaining allegations of Paragraph 70, and, therefore, denies the same.

3 71. Krisp admits that the ‘496 Patent, on its face, lists 20 claims (3 independent and 17
4 dependent). Krisp denies the remaining allegations of Paragraph 71.

5 72. Krisp denies the allegations in paragraph 72.

6 73. Krisp admits that Exhibit B appears to be a true and correct copy of the ‘496 Patent.

7
8 U.S. Patent No. 12,131,745

9 74. Krisp admits that the ‘745 Patent, on its face, is titled “SYSTEM AND METHOD
10 FOR AUTOMATIC ALIGNMENT OF PHONETIC CONTENT FOR REAL-TIME ACCENT
11 CONVERSION.” Krisp denies that the ‘745 Patent was “duly and legally issued,” but admits that
12 the ‘745 Patent lists an issuance date of October 29, 2024 and lists Lukas Pfeifenberger and Shawn
13 Zhang as the named inventors. Krisp lacks knowledge or information sufficient to form a belief
14 as to the truth of the remaining allegations in paragraph 74, and, therefore, denies the same.

15 75. Krisp admits that the ‘745 Patent, on its face, lists 20 claims (3 independent and 17
16 dependent). Krisp denies the remaining allegations of Paragraph 75.

17 76. Krisp denies the allegations in paragraph 76.

18 77. Krisp admits that Exhibit C appears to be a true and correct copy of the ‘745 Patent.

19
20 U.S. Patent No. 11,715,457

21 78. Krisp admits that the ‘457 Patent, on its face, is titled “REAL TIME
22 CORRECTION OF ACCENT IN SPEECH AUDIO SIGNALS.” Krisp denies that the ‘457 Patent
23 was “duly and legally issued,” but admits that the ‘457 Patent, on its face, lists an issuance date of
24 August 1, 2023 and identifies Andrei Golman and Dmitrii Sadykov as the named inventors. Krisp
25
26
27
28

1 lacks knowledge or information sufficient to form a belief as to the truth of the remaining
2 allegations in Paragraph 78, and, therefore, denies the same.

3 79. Krisp admits that the ‘457 Patent, on its face, lists 20 claims (3 independent and 17
4 dependent). Krisp denies the remaining allegations of Paragraph 79.

5 80. Krisp admits that Exhibit D appears to be a true and correct copy of the ‘457
6 Patent.

7 81. Krisp lacks knowledge or information sufficient to form a belief as to the truth of
8 the remaining allegations in Paragraph 81, and, therefore, denies the same.

9 82. Krisp lacks the knowledge or information sufficient to form a belief as to the truth
10 of the allegations in paragraph 82 and, therefore, denies the same.

11
12 **KRISP’S WILLFUL INFRINGEMENT OF SANAS’ PATENTS**

13 83. Krisp admits that it has developed AI Accent Conversion technologies, and that it
14 markets and sells them. Krisp denies the remaining allegations of Paragraph 83.

15 84. Krisp denies the allegations in paragraph 84.

16 85. Krisp denies the allegations in paragraph 85.

17 86. Krisp admits that U.S. Patent No. 12,205,609 and 12,223,979, on their face, cite
18 the ‘496 Patent, the ‘457 Patent, Publication Nos. 2022/0358903 and 2024/0347070. Krisp
19 admits that U.S. Patent No. Krisp denies the remaining allegations of Paragraph 86.

20 87. Krisp denies the allegations in Paragraph 87.

21 88. Krisp denies the allegations in Paragraph 88.

22
23 **COUNT ONE: INFRINGEMENT OF U.S. PATENT 11,948,550**

24 89. Krisp incorporates by reference its responses to Paragraphs 1 through 88 of
25 the Complaint and denies that Plaintiff is entitled to any relief or damages.
26
27
28

90. Krisp denies the allegations in Paragraph 90.

91. Krisp states that the website and its content speak for themselves. Krisp denies the remaining allegations in Paragraph 91.

92. Krisp states that the cited blog and video content speak for themselves. Krisp denies the remaining allegations in Paragraph 92.

93. Krisp states that the cited blog and its content speak for themselves. Krisp denies the remaining allegations in Paragraph 93.

94. Krisp admits that it has filed patent applications related to accent conversion technology that it has developed. Krisp denies the remaining allegations in Paragraph 94.

95. Krisp denies the allegations in Paragraph 95.

96. Krisp denies the allegations in Paragraph 96.

97. Krisp denies the allegations in Paragraph 97.

98. Krisp denies the allegations in Paragraph 98.

99. Krisp denies the allegations in Paragraph 99.

100. Krisp denies the allegations in Paragraph 100.

101. Krisp denies the allegations in Paragraph 101.

102. Krisp lacks the knowledge or information sufficient to form a belief as to the truth of the allegations in Paragraph 102 and, therefore, denies the same

COUNT TWO: INFRINGEMENT OF U.S. PATENT 12,125,496

103. Krisp incorporates by reference its responses to Paragraphs 1 through 102 of the Complaint and denies that Plaintiff is entitled to any relief or damages.

104. Krisp denies the allegations in Paragraph 104.

105. Krisp denies the allegations in Paragraph 105.

106. Krisp states that the cited blog speaks for itself. Krisp denies the remaining allegations in Paragraph 106.

107. Krisp states that the cited blog speaks for itself. Krisp denies the remaining allegations in Paragraph 107.

108. Krisp denies the allegations in Paragraph 108.

109. Krisp denies the allegations in Paragraph 109.

110. Krisp denies the allegations in Paragraph 110.

111. Krisp denies the allegations in Paragraph 111.

112. Krisp denies the allegations in Paragraph 112.

113. Krisp denies the allegations in Paragraph 113.

114. Krisp denies the allegations in Paragraph 114.

115. Krisp lacks the knowledge or information sufficient to form a belief as to the truth of the allegations in Paragraph 115 and, therefore, denies the same.

COUNT THREE: INFRINGEMENT OF U.S. PATENT 12,131,745

116. Krisp incorporates by reference its responses to Paragraphs 1 through 115 of the Complaint and denies that Plaintiff is entitled to any relief or damages.

117. Krisp denies the allegations in Paragraph 117.

118. Krisp states that the cited blog speaks for itself. Krisp denies the remaining allegations in Paragraph 118.

119. Krisp denies the allegations in Paragraph 119.

120. Krisp denies the allegations in paragraph 120.

121. Krisp denies the allegations in Paragraph 121.

122. Krisp denies the allegations in Paragraph 122.

1 123. Krisp denies the allegations in Paragraph 123.

2 124. Krisp denies the allegations in Paragraph 124.

3 125. Krisp denies the allegations in Paragraph 125.

4 126. Krisp denies the allegations in Paragraph 126.

5 127. Krisp denies the allegations in Paragraph 127.

6 128. Krisp lacks the knowledge or information sufficient to form a belief as to the truth
7 of the allegations in Paragraph 128 and, therefore, denies the same

8
9 **COUNT FOUR: INFRINGEMENT OF U.S. PATENT 11,715,457**

10 129. Krisp incorporates by reference its responses to Paragraphs 1 through 128 of
11 the Complaint and denies that Plaintiff is entitled to any relief or damages.

12 130. Krisp denies the allegations in Paragraph 130.

13 131. Krisp states that the cited website speaks for itself. Krisp denies the remaining
14 allegations in Paragraph 131.

15 132. Krisp states that the cited website speaks for itself. Krisp denies the remaining
16 allegations in Paragraph 132.

17 133. Krisp states that the cited blog speaks for itself. Krisp denies the remaining
18 allegations in Paragraph 133.

19 134. Krisp denies the allegations in Paragraph 134.

20 135. Krisp denies the allegations in Paragraph 135.

21 136. Krisp denies the allegations in Paragraph 136.

22 137. Krisp denies the allegations in Paragraph 137.

23 138. Krisp denies the allegations in Paragraph 138.

24 139. Krisp denies the allegations in Paragraph 139.

140. Krisp denies the allegations in Paragraph 140.

141. Krisp lacks the knowledge or information sufficient to form a belief as to the truth of the allegations in paragraph 141 and, therefore, denies the same.

COUNT FIVE: DECLARATORY JUDGMENT

(Co-Inventorship and Co-Ownership Over U.S. Patent Nos. 12,205,609 and 12,223,979)

Krisp has moved to dismiss Sanas' co-inventorship claim to Krisp's '609 and '979 Patents, and therefore no answer to Paragraphs 142-149 is required at this time.

COUNT SIX: MISAPPROPRIATION OF TRADE SECRETS

(Violation of the Defend Trade Secrets Act, 18 U.S.C. § 1836)

Krisp has moved to dismiss Sanas' claims for misappropriation of trade secrets, and therefore no answer to Paragraphs 150-159 is required at this time.

COUNT SEVEN: MISAPPROPRIATION OF TRADE SECRETS

(Violation of the California Uniform Trade Secrets Act, Cal. Civ. Code § 3426 et seq.)

Krisp has moved to dismiss Sanas' claims for misappropriation of trade secrets, and therefore no answer to Paragraphs 160-168 is required at this time.

PRAYER FOR RELIEF

Krisp denies that Plaintiff is entitled to any relief in connection with the allegations in its Complaint, including, without limitation, paragraphs A-U in the Prayer for Relief.

DEMAND FOR JURY TRIAL

This paragraph sets forth Plaintiff's demand for a jury trial to which no response is required.

AFFIRMATIVE DEFENSES

Based on information and belief, Krisp asserts the following defenses and reserves the right to amend its defenses and to add additional defenses, including, without limitation, defenses revealed during discovery. Krisp asserts its defenses as set forth below.

First Affirmative Defense: Non-Infringement

Sanas is not entitled to any relief on its patent infringement claims because Krisp does not and has not infringed, induced infringement, or contributorily infringed, directly, indirectly, willfully or otherwise, one or more of the asserted claims of the ‘550, ‘496, ‘745, or ‘457 Asserted Patents literally or under the doctrine of equivalents.

Second Affirmative Defense: Invalidity

One or more of the claims of the ‘550, ‘496, ‘745, and/or ‘457 Patents are invalid and/or unenforceable for failing to satisfy the conditions of patentability set forth in Title 35 of the United States Code, including, without limitation, 35 U.S.C. §§ 101, 102, 103, and/or 112.

Third Affirmative Defense: Limitation on Damages

Sanas’ claim for damages are limited, in whole or in part, pursuant to 35 U.S.C. §§ 284, 286 and/or 287.

Fourth Affirmative Defense: No Injunctive Relief

Sanas is not entitled to injunctive relief as a matter of law and cannot satisfy the requirements applicable to its request for injunctive relief in any form. Sanas cannot demonstrate irreparable harm, as any damages it could demonstrate are remedied by monetary damages.

Fifth Affirmative Defense: Prosecution History Estoppel

Sanas is barred, under the doctrine of prosecution history disclaimer and prosecution history estoppel, from construing the claims of the ‘550, ‘496, ‘745, and/or ‘457 Patents in such a

1 way as they may cover any accused products by reasons of statements made to the United States
2 Patent and Trademark Office during prosecution of the applications which led to the issuance of
3 the '550, '496, '745, and/or '457 Patents.

4 **Sixth Affirmative Defense: Equitable Defenses (Patent Misuse/Unclean Hands)**

5 Sanas is barred from recovery in whole or in part by the doctrines of patent misuse and/or
6 unclean hands to the extent that it has attempted to use the '550, '496, '745, and/or '457 Patents to
7 obtain market benefit beyond that which inures in the statutory patent right. Sanas' maintenance
8 of the present suit in order to obtain market benefit beyond the narrow patent rights reflected in
9 the '550, '496, '745, and/or '457 Patents constitute patent misuse and/or unclean hands.
10

11 **Seventh Affirmative Defense: No Attorneys' Fees**

12 Krisp has a good faith belief that the '550, '496, '745, and/or '457 Patents are invalid, not
13 infringement, and/or unenforceable, and thus Sanas cannot obtain attorneys' fees or costs and
14 cannot demonstrate an exceptional case under 35 U.S.C. § 285.
15

16 **PRAYER FOR RELIEF**

17 WHEREFORE, Krisp respectfully requests entry of judgment that:

- 18 A. Finds in favor of Krisp and against Sanas;
19 B. Denies Sanas' prayer for injunctive relief;
20 C. Finds in favor of Krisp and against Sanas on Krisp's affirmative defenses;
21 D. Finds that the claims of the '550, '496, '745, and/or '457 Patents are invalid;
22 E. Finds that Krisp has not infringed the '550, '496, '745, and/or '457 Patents;
23 F. Declares that this case is exceptional under 35 U.S.C. § 285 in favor of Krisp;
24 G. Awards Krisp its costs and attorneys' fees incurred in this action; and
25 H. Grants such other and further relief as the Court may deem just and proper.

THE PARTIES

2. Upon information and belief, Sanas is a Delaware corporation with its principal place of business at 437 Lytton Ave, Suite 200, Palo Alto, California.

4. This Court has subject matter jurisdiction pursuant to 28 U.S.C. §§ 1331, 1338(a), 2201, and/or 2202 based on the actual controversy between Krisp and Sanas arising under the patent laws of the United States. This Court has supplemental jurisdiction over Krisp's state law claims herein pursuant to 28 U.S.C. § 1367.

5. Krisp began as an idea between long-time friends, Davit Baghdasaryan and Artavazd (“Arto”) Minasyan, back in 2016. Frustrated with constantly experiencing background

1 noise during virtual meetings, Baghdasaryan wondered whether machine learning could be used
2 to solve this problem and mentioned his idea to Minasyan.

3 6. Minasyan was interested. He reached out to another friend, Stepan Sargsyan, and
4 together they began work building noise-cancellation technology. While neither Minasyan nor
5 Sargsyan had a background in machine learning (“ML”) or artificial intelligence (“AI”), both had
6 advanced degrees in physics and mathematics and after six months of research and hard work, they
7 had a prototype.

8 7. When Baghdasaryan experienced the prototype, he was impressed and intrigued.
9 The first iteration was not perfect, but it was a completely new direction in noise cancellation with
10 enormous potential.

11 8. Together, Baghdasaryan and Minasyan founded Krisp (formerly called 2Hz, Inc.)
12 in 2017 with the goal of creating AI-powered, revolutionary voice technologies that enable people
13 to be more effective communicators. Sargsyan joined the company, too, as Chief Scientist.

14 9. In August 2018, Krisp released its AI-powered noise suppression technology for
15 private beta testing. Krisp described the technology as an “easy-to-use but powerful app” that
16 “recognizes your voice and separates it from extraneous noise next to you, leaving only your clean
17 voice.” <https://krisp.ai/blog/private-beta-launch-of-krisp-2/>. In describing the “magic” of the
18 technology, Krisp emphasized the use of “Deep Neural Networks (DNN),” which are a core
19 component of modern AI and ML:
20
21
22

5. Some “magic” underneath

Curious what’s “under the hood” of Krisp? The answer — Deep Neural Networks (DNN).
We designed our own DNN and taught Krisp to recognize what’s noise and what’s a human voice. During
conferencing call Krisp performs its magic on real-time audio and separates background noise from a
human speech by leaving only the latter.

10. Krisp further developed a unique software architecture involving a virtual microphone and on-device noise cancellation. The combination of a virtual microphone and on-device AI, along with enterprise-grade software, was a new and innovative concept.

11. Concurrent with the release of its noise suppression technology, Krisp filed for patent protection. On August 21, 2018, Krisp filed provisional patent application 62/720,702, entitled “Speech Enhancement and Noise Suppression System and Methods,” and the United States Patent and Trademark Office awarded Krisp U.S. Patent No. 11,100,941 on August 24, 2021.

12. Krisp’s unique architecture and on-device noise cancellation technology was so innovative that it was voted as the 2018 “Product of the Year” in Audio & Voice Category by Product Hunt, a platform that hunts for the best innovative product for each industry.

13. Krisp went on to win additional awards for its innovative technology, including a listing on Forbes' America's Most Promising Artificial Intelligence Companies of 2020 (Forbes AI 50), a listing on the TIME List of The 100 Best Inventions of 2020, and two Webby Awards including the "People's Voice Winner" (2021) and the "Best Use of AI & Machine Learning" category (2022).

14. Krisp pioneered the noise cancellation category. In April 2022, software platform G2 announced a new category called “Noise Cancellation Software” where Krisp was the only player.

Krisp Builds on Foundational Noise Suppression Technology

15. Krisp quickly grew to be a market leader in real-time Voice AI technology.

16. Krisp’s work in developing its own best-in-class technologies has been both innovative and continuous. By 2020, Krisp was already building on its foundational noise

1 suppression technology, with a documented technology roadmap in place to develop
2 complementary technologies, including voice quality enhancements and accent conversion. In
3 fact, Krisp demonstrated its intention to develop accent conversion technology to potential
4 investors in 2020.

11
12 17. By at least July 2021, Krisp was developing enhancements using a teacher/student
13 machine learning architecture.

14 Idea

15
16
17
18
19 18. While development of this accent conversion enhancement was underway, Krisp
20 saw that a new company, Sanas, began marketing “real-time accent translation technology,”
21 although no details about the technology were publicly available. Intrigued, Krisp reached out to
22 Sanas to “start exploring future partnerships.” Krisp further made clear that it already had the
23 foundational technology and customers “for background noise removal and voice quality
24 enhancements,” and that Krisp was already “interested in Accent Reduction technologies.”
25
26
27
28

1 19. Between late September 2021 and early June 2022, Krisp and Sanas had a series of
2 introductory calls and planning meetings. During these discussions, Krisp and Sanas got to know
3 each other, discussed a framework for future discussions, and negotiated a Non-Disclosure
4 Agreement (“NDA”) with provisions that could protect “Confidential Information” that might
5 potentially be disclosed during the discussions.

6 20. Krisp and Sanas executed the NDA on November 18, 2021. By its express terms,
7 the NDA only protected information that the disclosing party designated as “Confidential
8 Information,” which was defined as written information that “is marked ‘Confidential,’
9 ‘Proprietary’ or in some other manner to indicate its confidential nature, and disclosed oral
10 information that “is designated as confidential at the time of its initial disclosure and reduced to a
11 written summary by Discloser that is marked in a manner to indicate its confidential nature and
12 delivered to Recipient within thirty (30) days after its initial disclosure.” Further, the NDA made
13 clear that “Confidential Information shall not, however, include any information that (i) was
14 publicly known . . . (ii) becomes publicly known . . . (iii) is in the rightful possession of Recipient
15 without confidentiality obligations at the time of disclosure . . . (iv) is obtained by Recipient from
16 a third party without an accompanying duty of confidentiality . . . or (v) is independently developed
17 by Recipient without the use or reference to Discloser’s Confidential Information” The NDA
18 is Exhibit A to these Counterclaims.

19 21. Sanas never disclosed any information to Krisp designated “Confidential
20 Information” under the provisions of the NDA.

21 22. Furthermore, Krisp’s engagement with Sanas went nowhere. When Krisp proposed
22 to “introduce our engineering teams” in January 2022, Sanas pushed it off to instead focus on its
23 fundraising efforts and “initiate the engineering conversations right after our raise.”
24
25
26
27
28

23. In the meantime, Krisp continued with the development of its own accent conversion technology, including with the utilization of both teacher/student training architectures and “parallel data” methods, long before ever having any substantive discussion with Sanas. This is contemporaneously documented, such as the below examples from Krisp’s internal product development files.

Feb 7, 2022

- 1) Try to give changed F0 aperiodicity and envelop in world, it may improve conversion [Edgar Vardanyan](#)
- 2) Compute F0 after reconstruction and check the quality of F0 conversion [Edgar Vardanyan](#)
- 3) To pass present and previous frames to world and reconstruct (without F0 change) to see if the current world algo is real-time on our frame logic [Levon Galoyan](#)
 - a) Try the same with converted F0 (our linear transformation)
- 4) Algos of WORLD by priority, [Levon Galoyan](#)
 - a) Harvest
 - b) Cheaptrick
 - c) Aperiodicity extraction
 - d) Synthesis
- 5) VAW Gan try reproduce [Liana Grigoryan](#)
- 6) Continue exploring high arousal to low arousal conversion model [Daniel Baghdasaryan](#)

Try from high arousal to low with linear algo and learn parallel network from low to high.
Try to generate an F0 sequence with the [m0](#) network using an ordinary discriminator in this case.

Feb 17, 2022

Chiptreak algo seminar, discussion

- It is real-time
- Small amount of operations

- 1) Try phase vocoder for F0 conversion (Liana, Levon)
- 2) Extract F0s and [mfcc](#) for time warped data (Edgar)
 - a) Pass F0s to Daniel
 - b) Use [mfcc](#) to train parallel data network which takes F0 and [mfcc](#) and returns F0 and [mfcc](#).
- 3) World vocoder further study (Levon)
- 4) C++ run World vocoder on 2048 input to see if it is [realtime](#) and small [cpu](#) usage

5) Compute PESQ scores on [worldvocoder](#) synthesized and its real-time (2048 sample sequence) version [synthesized](#) audios. (Levon, Edgar)

6) Continue working on F0 parallel regression network (Daniel)

Feb 28, 2022

- 1) Study emotion embedding with low dimensional visualizers (e.g. TSNE, Hayk will present)

2) The study of phase vocoder is continuing (Levon, Liana)

3) The arousal model with ER features has one promising checkpoint, Liana will continue to investigate

4) Levon also works on emotion recognition improvements with the Emotional Subclasses method and train relabel

5) [Hifi gan](#) has been investigated by Edgar, it beats all other NN vocoders ([melgan](#), universal gan) both in accuracy and speed.

6) Edgar is working also [parallel net](#) and he is building NN (our ER model's NN) for training it

- a) Try to keep target emo audio same warp only input.

7) Daniel will work on the inference of parallel F0

24. By mid-June 2022, Krisp and Sanas finally agreed to introduce their technical leaders. For Krisp, this was necessary to “do a technical evaluation to get more comfortable with the quality and readiness of your technology.”

25. For example, a Slack channel was set up between Krisp and Sanas. During a brief 7-day period of sporadic communications between June 15, 2022 and June 22, 2022, Sanas never disclosed any confidential information to Krisp through the Slack channel. After June 22, 2022, the Slack channel went dormant.

26. On or about June 23, 2022 Sanas publicly released a “demo” of its technology on its website. <https://web.archive.org/web/20220623161554/https://www.sanas.ai/demo>. Far from a realistic conversion of the speaker’s voice, reviewers of the demo commented that it “sounds like a computer” and is “AI generated and robotic” and “fake.” <https://www.youtube.com/watch?v=bXySZQaCaXE>, <https://www.youtube.com/watch?v=ur28EpG9CR0>.

27. Another month and a half went by, with no substantive discussions between Krisp and Sanas. Given that Sanas had publicly released its demo but had not provided any confidential technical information to Krisp regarding its technology, there was nothing for Krisp to assess.

28. Nevertheless, in August 2022 Krisp agreed to continue discussions about a potential partnership with Sanas, and the parties discussed a “Letter of Intent.” The general framework was that Krisp would evaluate whether Sanas’ accent conversion technology could be integrated with Krisp’s existing noise cancellation technology. If it could, then Krisp could market Sanas’ technology to Krisp’s substantial existing customer base.

29. Krisp’s intention was to go to market with Sanas’ technology if the technology met with Krisp’s expectations. This was reflected in the “Letter of Intent,” and Krisp consistently communicated to Sanas that Krisp’s intention was to have the best accent conversion technology inside the product. But, as Krisp made clear to Sanas, “we have technical and market diligence to perform for integration and performance” of Sanas’ technology before any agreement could be discussed.

30. A call between Sanas and Krisp was scheduled for August 24, 2022. Krisp sent a list of questions to Sanas in advance of the call, but Sanas did not provide any confidential information to Krisp in response.

31. Sanas never identified any information it shared with Krisp during the August 24, 2022 call as “Confidential Information” pursuant to the provisions of the NDA.

32. After the August 24, 2022 call, Krisp asked Sanas to provide its API for evaluation. Sanas never provided it, either.

33. Ultimately, Sanas never provided Krisp with any access to its technology. Krisp, based on what it could learn from Sanas' public demonstrations, was not comfortable with the readiness and performance of the Sanas technology. There was, as a result, no path to partnership. Having concluded that "our two companies are not ready to engage seriously at this stage," Krisp terminated the discussions on November 4, 2022, accurately stating: "The primary reasons are limited technology performance and integration visibility, and misalignment in business communication, which will adversely impact our customer relationships."

34. Throughout this period, Krisp had continued development of its own proprietary technologies. On March 28, 2023, Krisp unveiled its AI Meeting Assistant technology, a non-intrusive tool that transcribes voice conversations in real time across any application and summarizes main points, action items, and meeting notes for sharing and collaboration. And on April 27, 2023, Krisp publicly announced “early access” to its proprietary Krisp AI Accent Conversion technology.

35. A far cry from the “robotic” and “fake” Sanas product, Krisp paired its best-in-market noise cancellation technology with its proprietary accent conversion technology to generate impressive, high quality results. Krisp quickly experienced success in the market and obtained patent protection on its own proprietary accent conversion technology. Even other competitors in the space acknowledge that Krisp’s accent conversion technology is superior to Sanas’:

Krisp vs Sanas

(% of >750 votes pre row)

Metric	Krisp %	Sanas %	Tie %	Winner
Preference	66.8%	9.6%	23.6%	Krisp
Intelligibility	55.8%	6.4%	37.8%	Krisp
Acoustic Quality	66.4%	6.9%	26.7%	Krisp
Accent Softening	39.7%	10.9%	49.4%	Krisp
Naturalness	36.2%	25.8%	38.1%	Krisp

<https://tomato.ai/blog/product/tomato-ai-vs-krisp-sanas-accent-softening-comparison/>.

36. Despite now characterizing Krisp’s April 27, 2023 announcement as a first “hint of [] deception” (Dkt. 10 ¶ 59), Sanas’ own actions contradict the narrative it presents in this lawsuit. Sanas *never* accused Krisp of anything improper in the two years leading up to the filing of this lawsuit. Sanas *never* designated any information as “Confidential Information.” Sanas *never* suggested to Krisp that it believed it had disclosed any “Confidential Information” to Krisp. Sanas *never* accused Krisp of using any purported “Confidential Information.” Sanas *never* requested that Krisp return or destroy any alleged “Confidential Information” even though the NDA expressly provided for such a request. In fact, Sanas’ CEO had a conversation with Krisp’s CEO, Mr. Baghdasaryan, at a conference just weeks before Sanas filed this lawsuit, and during that conversation Sanas *never* mentioned any purported wrongdoing and certainly *never* suggested a lawsuit was coming. To the contrary, Sanas’ CEO invited Mr. Baghdasaryan for a friendly visit to Sanas’ office.

Sanas Copies Krisp’s Noise Cancellation Technology

37. One thing that became abundantly clear during the parties brief exploratory engagement was that Sanas saw immense value in Krisp’s noise cancellation business and customer base. Background noise suppression is a critical foundation for successful accent

conversion technology, because removing or isolating background noise ensures that the accent conversion model receives a clean, uncorrupted vocal signal. In other words, accent conversion technology cannot operate properly without noise cancellation.

38. Sanas did not have its own noise cancellation technology, but understood its importance. Sanas' own mock-ups make clear that Sanas knew, back in 2021, that the noise suppression that Krisp had already pioneered and already had in the market would be vital to accent conversion technology. https://techcrunch.com/2021/08/31/sanas-aims-to-convert-one-accent-to-another-in-real-time-for-smoother-customer-service-calls/?utm_source=chatgpt.com. Sanas' mock-ups even visually resembled Krisp's design, as seen from a comparison of Krisp's already-commercially-available design versus and Sanas' mock-up design from 2021:

39. Not surprisingly, then, Sanas' "primary reason" for partnering with Krisp was to integrate with *Krisp's* noise cancellation technology, and thereby gain access to Krisp's existing customer base to "secure customers" for Sanas' technology.

40. The proposed partnership between Krisp and Sanas was, of course, contingent on Krisp's ability to perform technical and quality diligence for integration and performance of Sanas' technology, which never occurred. The parties' discussions terminated, and Sanas was left with its inferior accent correction technology and no noise cancellation technology.

1 41. Sanas then copied Krisp’s patented noise cancellation technology. In August 2024,
2 Sanas first announced that it was offering noise cancellation technology.

3 42. Krisp was already the established market leader with superior technology, and
4 merely announcing a copy-cat product was not enough. So Sanas added a kicker: Sanas not only
5 took Krisp’s patented noise cancellation technology without permission, but it announced that it
6 was *giving it away for free “forever.”*

We are thrilled to announce a major milestone for the customer service industry: we are offering our cutting-edge Noise Cancellation technology for free, and it’s available now! This groundbreaking decision reflects our commitment to breaking down communication barriers and enhancing the experience of your customers and agents.

Why Free Matters

We believe that this fundamental tool should be accessible to everyone, which is why we’re offering it for free. This move helps contact centers save on operational costs and ensures that all customer calls are noise-free, stress-free, and cost-free forever.

14 43. In short, Sanas stole Krisp’s patented technology, and then it attempted to steal
15 Krisp’s customers by offering to give them Krisp’s technology for free if they switched to Sanas.

16 44. Even further, Sanas affirmatively requires that a customer’s use the Sanas free app
17 is conditioned on the customer not using any Krisp app. Further, Sanas implemented programming
18 so that the Sanas app will refuse to install if the Krisp app (which Sanas calls an “unsupported
19 application”) is on the customer’s system, as illustrated below:
20

45. The above facts tell a clear story. Sanas engaged with Krisp in the hopes that Krisp could successfully market Sanas' inferior technology to Krisp's substantial customer base. When that fell through, Sanas copied Krisp's patented technology and gave it away "for free" to induce Krisp's customers to switch to Sanas so that Sanas could then sell its inferior accent conversion technology.

COUNT ONE: INFRINGEMENT OF U.S. PATENT 11,100,941 (" '941 Patent")

46. Krisp repeats and realleges all preceding paragraphs of this Complaint as set forth herein in full.

47. Krisp is the lawful owner of all right, title, and interest in the '941 Patent entitled "SPEECH ENHANCEMENT AND NOISE SUPPRESSION SYSTEMS AND METHODS" including the right to sue and recover for infringement thereof. The '941 Patent was duly and legally issued August 24, 2021 and lists named inventors Stepan Sargsyan and Artavazd Minasyan. A true and correct copy of the '941 Patent is attached as Exhibit B.

48. The '941 Patent describes speech enhancement and noise suppression systems and methods. Unlike conventional speech enhancement systems that result in an audio signal that still includes noise features, the '941 describes processing audio through a neural network (*i.e.*,

1 machine learning) to compute clean voice coefficients that output an audio file having enhanced
2 speech.

3 49. On information and belief, Sanas directly infringes, either literally or under the
4 doctrine of equivalents, at least method claims 1 and 14 of the '941 Patent by making, using,
5 offering for sale, and selling its "Noise Cancellation" products ("Sanas' Infringing Products").
6 Further, Sanas indirectly infringes at least claim 1 of the '941 patent through active inducement of
7 infringement and contributory infringement, including by supplying Sanas' Infringing Products to
8 third parties that use the claimed method and system. Sanas advertises, offers for sale, and
9 otherwise promotes the Sanas Infringing Products on its website. Sanas has also made, used, and
10 offered for sale its products in the United States in connection with its marketing and
11 demonstration of the Sanas Infringing Products via direct consumer marketing in the United States,
12 and marketing at trade shows including the Customer Contact Week (CCW) trade show in Las
13 Vegas, Nevada. Moreover, on information and belief, Sanas has offered for sale the Sanas
14 Infringing Products to major customers in the United States.
15
16

17 50. Sanas markets, advertises, offers for sale, and/or otherwise promotes the Sanas
18 Infringing Products and does so to induce, encourage, instruct, and aid one or more persons in the
19 United States to make, use, sell, and/or offer to sell the Sanas Infringing Products individually as
20 well as through convoyed sales where the Sanas Infringing Products are part of a functional unit
21 together with other Sanas product offerings. On information and belief, Sanas has done so with
22 knowledge that Krisp's technology is patented or with willful blindness.
23

24 51. Sanas' Infringing Products infringe at least claim 1 of the '941 Patent at least in the
25 exemplary manner described below, which is not intended to limit Krisp's right to allege that other
26
27
28

activities of Sanas infringe the identified claim or any other claims of the ‘941 Patent or any other patents.

52. Sanas’ Infringing Products perform a “method of speech enhancement”:

<https://www.sanas.ai/>

<https://www.sanas.ai/noise-cancellation>

53. Sanas’ Infringing Product “receive[s] an audio file comprising a combination of voice and noise data,” “divide[s] said audio file into a plurality of frames,” and “perform[s] a discrete Fourier transform on each frame of a first subset of said plurality of frames to provide a plurality of frequency-domain outputs” through its use of STFT, or “short-time Fourier

Transform.” STFT applies a Fourier Transform to short fragments of time, *i.e.*, frames taken from a longer signal.

9.2. Defining the STFT

The Short-Time Fourier Transform (STFT) does exactly what it says: it applies the Fourier transform to short fragments of time, that is, frames taken from a longer signal. At a conceptual level, there is not too much going on here: we just extract frames from the signal, and apply the DFT to each frame. However, there is much to discuss in the details.

<https://brianmcfee.net/dstbook-site/content/ch09-stft/STFT.html>

Sanas’ Infringing Product uses STFT:

The Fourier Transform is a tool that decomposes a signal into its frequency components. It shows what frequencies are present in the sound and how strong they are. Instead of viewing sound as a function of time, we view it as a function of frequency. This is the frequency domain.

But speech changes constantly. A static frequency breakdown isn’t enough. So we use a variation called the Short-Time Fourier Transform (STFT). It breaks the signal into small overlapping windows and computes the frequency content of each slice. When we visualize these slices side by side, we get a spectrogram. The human cochlea within the ear performs this operation continuously via the small hairs, each tuned to a small range of frequencies.

<https://www.sanas.ai/blog/reclaiming-the-full-spectrum-of-human-speech-how-we-built-real-time-audio-upscaling-from-low-8khz-to-high-fidelity-16khz>

54. The Sanas Infringing Products “input[] said plurality of frequency-domain outputs of said discrete Fourier transform and a noise model approximation to a neural network”:

We designed **Sanas Speech Enhancement** to predict missing spectral detail while preserving the original signal. It runs in real time, with minimal latency, and adapts across microphones, codecs, and noise conditions. Achieving this level of fidelity under these constraints has never been done before. Real-time reconstruction of high-fidelity speech from 8kHz input sets a new standard for quality, speed, and scalability in the industry.

Figure 2: Sanas Speech Enhancement Simplified Block Diagram

Our system leverages proprietary neural architectures, drawing on principles from U-Nets and advanced real-time vocoding, to reconstruct the information that low-fidelity audio never captured. We identify the statistical patterns that link low-fidelity input to the wide-band speech we expect to hear.

Sanas Speech Enhancement generalizes without needing to rewrite the signal or resynthesize speech from scratch. The final result is a **high-fidelity** output that remains true to the speaker, operating fast enough for real-time interaction.

Figure 2: Sanas Speech Enhancement Simplified Block Diagram

<https://www.sanas.ai/blog/reclaiming-the-full-spectrum-of-human-speech-how-we-built-real-time-audio-upscaling-from-low-8khz-to-high-fidelity-16khz>

55. The Sanas Infringing Products “obtain[] a ratio mask as an output from said neural network” by obtaining a “gain mask” obtained in the “Mask Estimator” module that “predicts” a gain mask. The Sanas Infringing Products obtain a ratio mask as an output from the neural network:

Forward Projection

This module takes a short window of noisy speech and projects it into a high-dimensional latent space. The transformation helps to separate the statistical characteristics of speech and background noise, making it easier to isolate the signal of interest.

Mask Estimator

Inspired by techniques like Wiener filtering, this module predicts a gain mask that suppresses noise in the latent space while preserving speech components. The mask is multiplicative and adapts frame by frame to the incoming signal.

Figure 1: Simplified Noise Cancellation Block Diagram

<https://www.sanas.ai/blog/we-outperformed-the-worlds-top-AI-labs-then-opened-it-to-everyone>

56. On information and belief, the Sanas Infringing Products “comput[e] clean voice coefficients using said ratio mask,” as indicated by Sanas’ use of a gain mask that is “multiplicative” and is used to reconstruct clean audio:

Mask Estimator

Inspired by techniques like Wiener filtering, this module predicts a gain mask that suppresses noise in the latent space while preserving speech components. The mask is multiplicative and adapts frame by frame to the incoming signal.

Inverse Projection

The final module reconstructs the cleaned audio by reversing the latent projection. The output is a denoised segment of speech, which is then stitched together with prior segments to form a continuous, intelligible audio stream.

Figure 1: Simplified Noise Cancellation Block Diagram

<https://www.sanas.ai/blog/we-outperformed-the-worlds-top-AI-labs-then-opened-it-to-everyone>

57. The Sanas Infringing Products “output[] an audio file having enhanced speech and suppressed noise based on said computed clean voice coefficients,” producing a final audio result with speech enhancement and clean speech from noise cancellation:

<https://www.sanas.ai/noise-cancellation>

Sanas Speech Enhancement generalizes without needing to rewrite the signal or resynthesize speech from scratch. The final result is a **high-fidelity** output that remains true to the speaker, operating fast enough for real-time interaction.

Figure 2: Sanas Speech Enhancement Simplified Block Diagram

<https://www.sanas.ai/blog/reclaiming-the-full-spectrum-of-human-speech-how-we-built-real-time-audio-upscaling-from-low-8khz-to-high-fidelity-16khz>

Inverse Projection

The final module reconstructs the cleaned audio by reversing the latent projection. The output is a denoised segment of speech, which is then stitched together with prior segments to form a continuous, intelligible audio stream.

Figure 1: Simplified Noise Cancellation Block Diagram

<https://www.sanas.ai/blog/we-outperformed-the-worlds-top-AI-labs-then-opened-it-to-everyone>

58. Moreover, the Sanas Infringing Products perform a “method of bandwidth expansion,” including “receiving an audio file comprising a combination of voice data and noise data having a first bandwidth” (e.g., 8KHz) and “constructing a frequency spectrum having a second bandwidth based on an output of the neural network and the determined phase, the second bandwidth being greater than the first bandwidth” (e.g., 16KHz) and “outputting an audio file having the second bandwidth based on the audio signals for the plurality of frames.” The Sanas Infringing Products’ “bandwidth expansion” method also comprises “dividing said audio file into a plurality of frames” (e.g., the windowing process of STFT) and “performing a fast Fourier transform to obtain audio features corresponding to the combination of voice and noise data” (e.g., STFT) and “taking an inverse fast Fourier transform of the frequency spectrum to provide an audio signal” (e.g., ISTFT).

<https://www.sanas.ai/blog/reclaiming-the-full-spectrum-of-human-speech-how-we-built-real-time-audio-upscaling-from-low-8khz-to-high-fidelity-16khz>

59. Krisp has complied with the requirements of 35 U.S.C. § 287 with respect to the ‘941 Patent.

60. Upon information and belief, Sanas has been and continues to be willfully infringing the '941 Patent as it has had knowledge of Krisp's patented noise cancellation technology for nearly four years and has chosen to copy Krisp's patented technology.

61. Sanas' infringement of the '941 Patent was and continues to be willful and deliberate, entitling Krisp to enhanced damages.

62. Sanas' infringement of the '941 Patent is exceptional and entitles Krisp to attorney's fees and costs incurred in prosecuting this action under 35 U.S.C. § 285.

63. Sanas' infringement has caused and continues to cause damage to Krisp, and Krisp is entitled to recover damages sustained because of Sanas' wrongful acts in an amount subject to proof at trial.

COUNT TWO: CALIFORNIA UNFAIR PRACTICES ACT
(Cal. Bus. & Prof. Code § 17043)

64. Krisp repeats and realleges all preceding paragraphs of this Complaint as set forth herein in full.

65. As alleged herein, Sanas not only took Krisp’s technology, but it gave it to customers “for free” for the specific purpose of gaining unfair competitive advantage against Krisp and to take customers away from Krisp.

66. Under California Business and Professions Code § 17043 (entitled “Sales Under Cost; Gifts”), “[i]t is unlawful for any person to sell any article or product at less than the cost thereof to such vendor, or to give away any article of product, for the purpose of injuring competitors or destroying competition.”

67. Here, Sanas claims to have developed noise cancellation technology at considerable time and expense, yet then gave it to potential customers for free for the purpose of injuring competitors such as Krisp or destroying competition. The strategy is a “freemium” model where

1 the free noise cancellation is used to attract a large user base that can then be introduced or
2 converted to Sanas' accent translation. By giving away a valuable technology solution at no cost,
3 Sanas gets its foot in the door at contact center and call center customers. At the same time, by
4 removing the cost of the noise cancellation technology, Sanas unfairly targets the ability of
5 competitors like Krisp to sell their own proprietary technology. Even further, Sanas has
6 programmed its technology to condition the use of Sanas' "free" noise cancellation features on the
7 customer *not* using Krisp's patented technology. Sanas' claims that it is "giving back to the
8 industry" are predatory, especially considering that Sanas took the technology from Krisp in the
9 first place.
10

11 68. Moreover, Sanas' offering of its noise cancellation to customers for an unlimited
12 duration and at no cost does not reflect the true value of or cost to maintain and make the service
13 available. Free *trials* are typical for the market, but free and unlimited access to noise cancellation
14 technology is not. For example, Krisp, having operated in the industry since at least 2018, is able
15 to go beyond a preliminary free trial and can competitively offer its customers 60 minutes of free
16 noise cancellation per day. Beyond that threshold, however, the cost of free noise cancellation
17 must be integrated into one of Krisp's several packages starting at \$8/month. Iris Audio, another
18 competitor in the real-time noise cancellation market, similarly offers its IRIS Clarity noise
19 cancellation service for £9.50/month. These examples of typical pricing schemes for real-time
20 noise cancellation make it apparent that Sanas only offers its service at no cost to intentionally
21 divert business from Krisp and other market players.
22
23

24 69. Sanas is and has been for some time engaged in the business of selling noise
25 cancellation technology in California at a price less than the cost and with the purpose of injuring
26
27
28

competitors and destroying competition in the noise cancellation market in violation of the California Unfair Practices Act, California Business & Professions Code § 17043.

70. Sanas was not only aware that its acts would injure Krisp and/or destroy competition in the noise cancellation market, but it also engaged in below-cost sales for the purpose of injuring Krisp or destroying competition.

71. As a result of these acts, Krisp has been injured in the form of lost profits and diminished business value in an amount to be proved at trial.

COUNT THREE: CALIFORNIA UNFAIR PRACTICES ACT
(Cal. Bus. & Prof. Code § 17044 *et. seq.*)

72. Krisp repeats and realleges all preceding paragraphs of this Complaint as set forth herein in full.

73. Sanas has been engaged in the business of selling the noise cancellation technology within the State of California.

74. Sanas has sold noise cancellation technology as a loss leader, such that the effect has been to divert trade from Krisp or otherwise injure Krisp specifically and competition generally, in violation of the California Unfair Practices Act, California Business & Professions Code § 17044.

75. Sanas was not only aware that its acts would divert trade from or otherwise injure Krisp specifically and competition generally in the Voice AI market, but it engaged in loss leader sales for the sole and express purpose of injuring Krisp and competition.

76. As a result of these acts, Krisp has been injured in the form of lost profits and diminished business value in an amount to be proved at trial.

COUNT FOUR: CALIFORNIA UNFAIR COMPETITION LAW
(Cal. Bus. & Prof. Code § 17200 *et. seq.*)

77. Krisp repeats and realleges all preceding paragraphs of this Complaint as set forth herein in full.

78. The conduct complained of herein – including below-cost sales and conditioning the use of Sanas’ technology on not using Krisp’s technology – constitutes unlawful business practices inn that such conduct violates California’s Unfair Trade Practices Act.

79. The anticompetitive behavior of Sanas as describe above is unfair, unconscionable, and unlawful and in any event is a violation of the policy or spirit of the law because it significantly harms and threatens competition.

80. Sanas’ anticompetitive behavior and unfair business practices are part of an ongoing practice, and any purported utility of their conduct is outweighed by the gravity of the consequences to Krisp and the competition.

81. Sanas’ unfair, unconscionable, and unlawful business practices constitute unfair competition in violation of the Unfair Competition Law, California Business & Professions Code § 17200 *et seq.*

82. As a result of Sanas’ unlawful and/or unfair business practices, Krisp has been and will be injured in its business and property through lost income and profits, increased costs, and diminished business value. In addition, Sanas has been unjustly enriched because of these same unlawful and/or unfair business practices through increased profits and Krisp is entitled to restitution as a result thereof.

PRAYER FOR RELIEF

WHEREFORE, Krisp respectfully requests the following relief:

1 1. A judgment that Sanas has infringed, directly and/or indirectly, literally or under
2 the doctrine of equivalents, one or more claims of Krisp's '941 Patent in violation of 35 U.S.C. §
3 271, and that such infringement is willful;

4 2. An order enjoining Sanas from further infringing Krisp's '941 Patent in any way,
5 by itself or in combination with accent conversion technology;

6 3. An award of damages sufficient to compensate Krisp for Sanas' infringement under
7 35 U.S.C. § 284, and an enhancement of damages on account of Sanas' willful infringement;

8 4. A determination that this case is an exceptional case under 35 U.S.C. § 285 and that
9 Krisp be awarded attorney's fees;

10 5. Costs and expenses in this action;

11 6. An award of prejudgment and post-judgment interest;

12 7. A determination that Sanas engaged in below-cost sales in violation of California's
13 Unfair Practices Act, California Business & Professions Code § 17043;

14 8. A determination that Sanas engaged in selling a loss leader in violation of
15 California's Unfair Trade Practices Act, California Business & Professions Code § 17044;

16 9. A determination that Sanas engaged in unlawful and/or unfair business practices in
17 violation of California's Unfair Competition Law, California Business & Professions Code §§
18 17200, *et seq.*;

19 10. Permanently enjoin Sanas from continuing the unlawful acts described above;

20 11. Award Krisp damages as required by statute or, alternatively, restitution caused by
21 Sanas' conduct; and

22 12. Award any other such relief as the Court deems just and proper.
