Everyone Deserves to be Understood

We build Speech AI that removes communication barriers across accents, languages, and noise so every voice is heard clearly.

Who We Are

Founded in 2020, we are pioneers of real-time Speech AI technology. Our patented, market-leading platform breaks communication barriers so everyone can understand and be understood.

Founding Story

Our beginning

It started with a focused mission: help call center agents be understood, regardless of accent. But we discovered a bigger problem: misunderstandings don't just come from accents, they come from language gaps, background noise, and low-quality audio that distorts what people are trying to say. So we expanded our vision and built a unified Speech AI platform designed to remove friction from every conversation. Today, Sanas brings clarity to hundreds of thousands of voices and we're building toward a world where every conversation is heard the way it was meant to be.

2020: An Idea Among Friends

Sanas founded at Stanford University by Shawn Zhang, Max Serebryakov, and Andrés Pérez Soderi after a classmate shares his experience of losing a contact center job due to accent bias.

2021: First Movers

2022: Expansion

Raised \$32 million Series A led by Insight Partners with participation from Google and Assurant Ventures; all seed investors also participate.

2023: More Users in More Cities

Sanas Accent Translation reached commercial scale, with 5,000 contact center agents across 25 cities using the product daily.

2024: Patent Granted

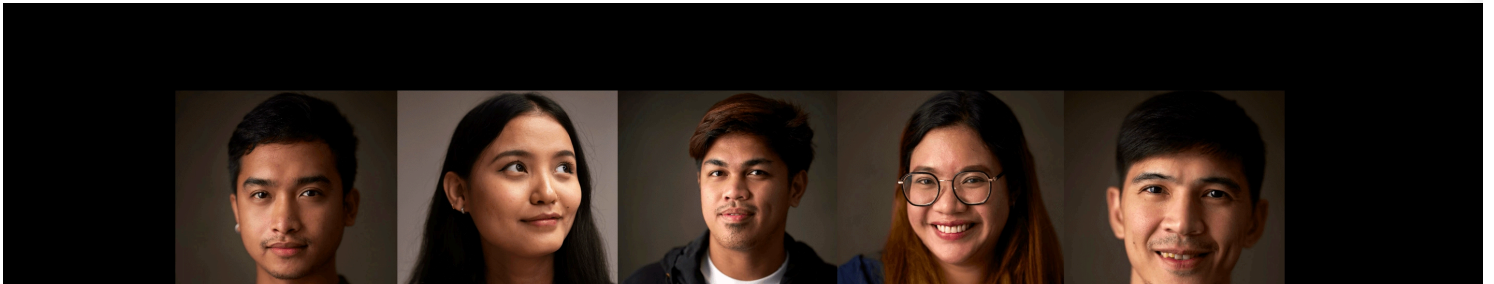

Sanas granted a broad patent for real-time accent conversion AI technology in the United States and India. Product adoption grows to more than 30,000 contact center agents. Launched free Noise Cancellation.

2025: Series B

Raised \$65 million Series B led by Quadrille Capital with strategic investment from Teleperformance and Alorica. The company expands into a unified Speech AI platform, launching Language Translation and Speech Enhancement alongside an SDK for developers. Product adoption surpasses 750,000 users globally.

2026: Product Expansion

Enterprise rollout of Language Translation.

Changing How The World Listens
