Fractus welcomes new licensee, expanding presence in the U.S. smart home market

Date

November 12, 2024

Barcelona, November 12 2024 – Fractus, the antenna technology pioneer based in Barcelona, is pleased to announce the addition of a new licensee, a leader in the home security and smart home industry in the United States. This strategic partnership strengthens Fractus’ position as a trusted innovator of advanced IoT solutions, underscoring the growing adoption of its technology across various markets. This growth not only demonstrates the value of Fractus’s technology but also emphasizes the pivotal role that cellular connectivity plays in the evolution of the IoT industry. This new agreement builds on two earlier deals closed this year with the smart home security giants Vivint and ADT.

Cellular connectivity is crucial for home security but also extends its significance to other IoT-driven sectors, enabling smooth communication and real-time monitoring capabilities. Fractus’s technology empowers companies to exploit the full potential of IoT, not only within the home security segment but also across various industries where connectivity and reliability are key.

"We are excited to welcome a new leader in the smart home sector to our family of licensees," said Jordi Ilario, CEO at Fractus. "This new partnership highlights the growing trust in our technology and the vital role that cellular connectivity plays in shaping the future of IoT."
