Corporate Responsibility Data Tables

[ON THIS PAGE](#) ▼

Environmental Performance Indicators

AMD collects environmental data about AMD locations worldwide and direct manufacturing suppliers representing ~95% of total spend, while making spend-based assumptions using CEDA factors for the remaining manufacturing and non-manufacturing suppliers. The following table provides data on energy use, electricity consumption, greenhouse gas (GHG) emissions, water use, waste generation and compliance.

We received external limited level assurance in accordance with the International Standard on Assurance Engagements (ISAE) 3000 Revised for 2024 data on our Scope 1 and 2 GHG emissions and related performance against our CR goals, as well as Scope 3 GHG emissions for business travel.

Xilinx and Pensando data from the 2022 acquisitions are incorporated into the 2022 and 2023 metrics below. For 2020 and 2021 data, energy and Scope 1 and 2 GHG data from Xilinx and Pensando are included in support of recalculating base year 2020 and 2021 energy use and related operational GHG emissions.¹
