

Under Armour Spine RPM Review

Check out these reviews and videos for the Under Armour spine running shoe and you make the choice what is best for your foot.

Under Armour Spine RPM Running Shoes

WHAT'S IT DO? We asked Tom Brady and Lindsey Vonn what the most elite athletes in the world need from their running shoes. They wanted a shoe that could handle their toughest training days—a perfect combination of lightweight performance and support. Our response is a revolution in footwear inspired by some of the most dynamic motion systems in nature. UA Spine is the only running shoe that gives you lightweight, responsive cushioning without sacrificing stability. It delivers the speed you want and the cushioning you need, no matter how far your run takes you.

Under Armour Spine RPM Review

This is my first UA shoes and this shoes are very comfortable. Has been noticed by my co workers as a very stylish shoes. Tried running with his shoes and performed very awesome. Water realy do repel. Overall, this is worth every penny.

Under Armour Spine RPM Review

Im trying to think back on a pair of shoes i owned that i liked more than my spines and i dont think i can do it. Not only are these shoes good for running, but everyday use as well. I was surprised at how durable the mesh is on the sides of the shoe, and mine have remained unflawed for several months now. i freequently spend 8-10 hours on my feet at a time, the 4d foam footbed keeps me comfortable all day. Plus the available color schemes are SICK!! wish i had 7 different schemes for everyday of the week!

Under Armour Spine RPM Review – THE FUNDAMENTALS

UA Storm footwear uses P2i technology to repel water without sacrificing breathability or adding weight

UA Spine chassis technology creates an incredibly light, flexible feel without sacrificing support

Micro G® foam encapsulated within the chassis delivers unrivaled rebound and energy return

Ripstop, water-resistant upper with seamless structural support at the midfoot and forefoot

Solid rubber outsole provides full ground contact and superior traction, while carbon rubber adds durability in the heel

Full length molded 4D Foam® sockliner and collar conform to your foot's exact shape, eliminating slippage

Weight: 9.45 oz.
