

Microsoft.Resources tags 2019-10-01

Remarks

To learn about applying tags through ARM templates or Bicep files, see [Use tags to organize your Azure resources and management hierarchy](#).

Bicep resource definition

The tags resource type can be deployed with operations that target:

- **Tenant** - See [tenant deployment commands](#)* **Management groups** - See [management group deployment commands](#)* **Subscription** - See [subscription deployment commands](#)* **Resource groups** - See [resource group deployment commands](#)

For a list of changed properties in each API version, see [change log](#).

Resource format

To create a Microsoft.Resources/tags resource, add the following Bicep to your template.

Bicep

```
resource symbolicname 'Microsoft.Resources/tags@2019-10-01' = {  
  scope: resourceSymbolicName or scope  
  name: 'default'  
  properties: {  
    tags: {  
      {customized property}: 'string'  
    }  
  }  
}
```

Property Values
