Comprehensive efficacy data

In addition to compliance (usage) data, efficacy data is essential for a comprehensive assessment of SDB therapy.

ResLink provides valuable insights into treatment efficacy by reporting on significant parameters* such as:

- minute ventilation
- snore
- flattening
- SpO₂
- pulse rate
- pressure response
- leak
- events
- AHI
- respiratory rate

ResLink presents this efficacy information along with integrated oximetry data for simultaneous onscreen viewing and analysis. 30 sessions of efficacy data (and 365 sessions of usage data) are included.

*Parameter availability varies for different devices.
