GuidedSMILE Lite™

3. Pre-Surgical Decisions

GuidedSMILE Lite™

GuidedSMILE Lite: Accessible Full-Arch Guided Treatment

GuidedSMILE Lite™ represents ROE's cost-effective solution for full arch guided dental procedures. This system utilizes a plastic-based design that maintains the core functionality of the premium CHROME GuidedSMILE system while offering enhanced affordability for patients and practices.

Key Features:

- Anchored bite verification
- Guided bone reduction
- Precise anchored site drilling
- Accurate provisional restoration placement
- Comprehensive transfer of surgical and restorative data for final restoration completion

GuidedSMILE Lite™ provides practitioners with a reliable, budget-conscious option that delivers consistent clinical results while expanding access to advanced guided treatment protocols.

An Explanation

GuidedSMILE Lite - An Explanation

Patient Case Study

Patient Case Study 1

- The Fixation Base is delivered via the Pin Guide and remains intact during the entire procedure.
- The Osteotomy guide, Carrier guide, Prosthetic and RAPID appliances are all stacked on press-fit connectors.
- The Carrier guide supports the Prosthetic and the RAPID appliances.
- This is the latest version and has been well received.

Patient Case Study 2

- The Pin Guide delivers the holes for the subsequent components.
- The Fixation Base is used to reduce the bone, then it is removed and the Osteotomy Guide is inserted for drilling and implant guidance, and it is removed.
- The Carrier Guide is seated to delivery the prosthetics.
- Unlike other systems on the market, our prosthetics are not pinned. They do not have to be adjusted and decimated by cutting of connector arms.
- The prosthetic and the RAPID appliances both rest connect to the Carrier guide ready for pick-up.
- This version is more traditional.
