VOCO

Print Resin Allows for Precise Fit to Teeth for Optimal Patient Comfort

INDIAN LAND, SC—V-Print splint comfort is a new biocompatible 3D printing resin for the production of clear, strong, thermoflexible therapeutic splints and night guards that are durable and aesthetic. V-Print splint comfort thermo-flexible resin allows for a precise fit to the teeth for optimal patient comfort. The high flexural strength and excellent wear resistance permits the fabrication of devices as thin as one mm. The easy-to-polish V-Print splint comfort is clear, color-stable, and odorless. All V-Print resins are sedimentation-free and, therefore, do not require shaking or rolling prior to use.

V-Print Splint is part of a large and growing line of 3D printer materials from VOCO and is engineered to work with, as well as validated for, a increasing number of open-source 3D printers that include Asiga, Ackuretta, Dental Wings, Rapidshape, Microlay, MiiCraft, Spera, Straumann, and Solflex. And like all V-Print resins, it is included in the design software from 3Shape and exocad. For more information, call (888) 658-2584, visit the website vocoamerica.com, or email infousa@voco.com.

Evolve Dentistry

Software Enables Easy Capture of Vital Patient Data

BUFFALO—A revolution in patient data, Modjaw 4D captures jaw motion data to create dynamic occlusion. Using a dual-optical camera and patented marking software, clinicians can now easily capture this vital data on any patient. This data can now easily be imported into exocad to create a restoration with improved occlusal performance and comfort. In the same capacity that intraoral scans, implant photogrammetry, and facial scans improved design predictability, jaw motion data is the last piece of the puzzle in creating a 4D moving patient avatar. Modjaw is the missing link in the digital workflow between the practitioner and the laboratory. It

provides a path to brand-new dentistry that is more patient-centric. Evolve Dentistry is now distributing Modjaw throughout North America. For more information, call (888) 839-8006, visit evolvedentistry.com, or email info@evolvedentistry.com.

Ultradent Products

Temporary Resin Engineered for Maximum Usability With Four Solutions in One Syringe

SOUTH JORDAN, Utah—J-Temp Temporary Resin is a premixed, light-cured temporary resin designed for multiple-use cases and maximum ease of use. It is engineered for maximum usability by offering 4 solutions in just one product syringe. Dentists can utilize it for everything from bite ramps and temporary occlusal buildups to building structure for isolation clamping, temporary restorations, and splinting between implant copings.

J-Temp Temporary Resin features a consistency that's viscous enough that it won't run, fluid enough to be self-leveling, and easy enough to manipulate right in the operator. Ultradent recommends using it with the Black Mini tip for simple, precise placement. When it comes to removal, the resin's light-purple color allows for easy identification—making for a seamless experience for the patient and dentist from start to finish. For more information, call (800) 552-5512 or visit ultradent.com.

DMP USA

Composite Solution Provides Enhanced Strength

THE VILLAGES, Fla—Bright Temporary C&B is a self-curing composite for temporary crowns, bridges, inlays, and onlays. C&B is a unique combination of nanosized particles and ideally sized glass filler that provides enhanced composite strength. Its elastic properties provide easy, failure-free placement with the added advantage of the "chameleon effect" that matches shade, opacity,

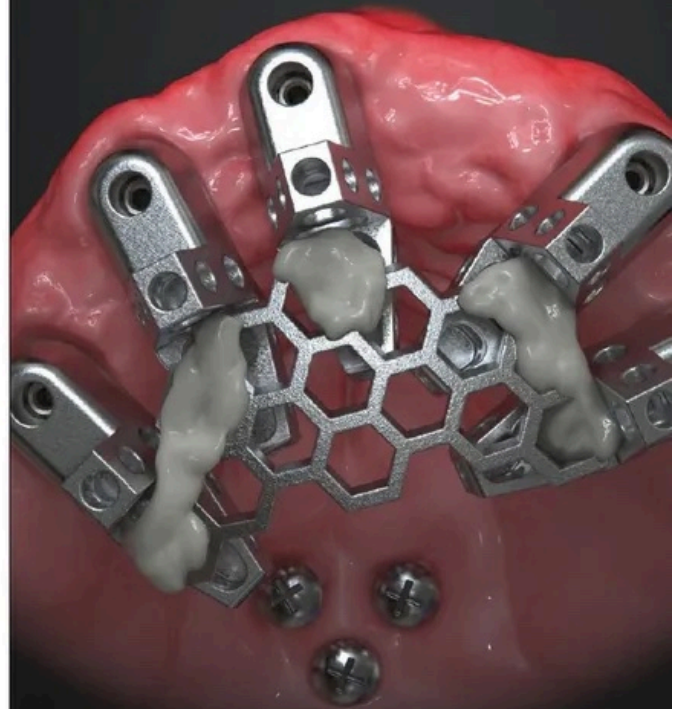

and fluorescence for a natural look. Its big benefits are its short trim and finish time of 3 minutes, which eliminates the need for glazing and polishing. It also offers convenience, with a 1:1 ratio available that is compatible with most dispensing guns. For more information, call (800) 645-2310.
