INNOVATIONS

SPOTLIGHT

Weave

Platform Simplifies Patient Communication

LEHI, Utah—Weave is an all-in-one customer communication platform for dental offices. From the first phone call to the final invoice and every touch-point in between, Weave connects the entire patient journey. It provides dental practices with one platform for texting, phones, payments, scheduling, reviews, and more. With Weave, an office can simplify and automate tasks like payment

reminders, missed call texts, scheduling, and billing, ultimately giving staff more time to focus on patients. Weave has partnerships with the biggest practice management systems in the industry to make its features even more impactful for dental offices. For more information, call toll-free at (888) 912-5387 or visit getweave.com.

Glidewell

Surgical Guides Aid in Delivering Fixed, Screw-Retained Provisionals

NEWPORT BEACH, Calif.—Glidewell's Digital Treatment Planning department is now offering multi-level surgical guides to help clinicians more efficiently provide full-arch implant treatment and immediate provisionalization. With these new surgical guides, clinicians will be able to predictably reduce bone; place full-arch implants; and deliver an immediate, fixed, screw-retained provisional for fully edentulous patients in just one streamlined visit.

Dentists who desire a fully guided surgical procedure for their full-arch cases can digitally upload their scans via Glidewell's DTP portal. The DTP team then develops a treatment plan that is reviewed and approved by the clinician prior to the surgical appointment. This restorative-driven approach ensures that the implants are positioned in the precise locations needed for the desired restoration, and a fixed, screw-retained provisional prosthesis is provided for clinicians who wish to immediately load the implants at the time of surgery. This service joins Glidewell's comprehensive line of digital treatment planning solutions, including tooth-, tissue-, and bone-supported surgical guides. For more information, call (866) 497-3692 or visit glidewell.com/dtp.

Premier Dental

Diamond Bur Packs Offer Procedural Efficiency

PLYMOUTH MEETING, PA—Two Striper Pro Packs are exciting, new procedural diamond bur packs. For 110 years, dental professionals have turned to Premier Dental as a leader in bringing innovative products to market that improve their daily procedures, practices, and patient outcomes. Choose from 4 diamond bur procedure packs. Each pack contains 5 of the most popular diamond bur shapes for crowns and bridges, inlays/onlays, veneers, and operative procedures. Pro Packs are attractively priced, so one can take this opportunity to experience the superior performance and feel of a Two Striper diamond while offering the benefit of procedural efficiency.

Two Striper, distributed by Premier Dental, is preferred by dentists because it stays sharp longer and delivers faster cutting than electroplated brands. This means there is a more efficient workflow and happier patients. Two Striper diamond burs are made from a select grade of natural diamonds with the proprietary P.B.S. brazing process—the best bonding system in the industry (data on file). For more information, call (888) 670-6100 or (610) 239-6000 or visit the website premierdentalco.com.

ArtCraft Dental**Atraumatic Elevators Help Avoid Broken Root Tips**

easier. With these in your arsenal, you no longer have to dread deep broken-root-tip mishaps.

The power is in the double-action tips. Just a small amount of penetration into the PDL space is all that is needed for maximum lateral tooth movement. With Xpanders, you actually achieve both buccolingual movement and mesiodistal movement. The more movement you can get prior to the use of forceps, the less likely it is for root tips to break off. Xpanders tips allow for a stable, 2-point contact between the crest of bone and the neck of the tooth. With simple twisting, one point locks onto the bone, while the other point pushes the tooth laterally, causing buccolingual socket expansion and superior pre-forceps loosening. For more information, call (877) 340-1776 or visit the website artcraftdental.com/xpanders.

Ultradent Products**Universal Composite Designed to Simplify Restorative Process**

SOUTH JORDAN, Utah—Transcend universal composite is a new composite material providing unmatched aesthetics and handling properties. It is designed to simplify the restorative process by allowing dentists to complete most restorations with just one shade of composite. Thanks to Ultradent's Resin Particle Match technology, Transcend composite offers high levels of translucency, allowing for ideal pigmentation and opacification to match the surrounding dentition. The Universal Body shade also has optimal opacity to help block the underlying tooth color, eliminating the need for a blocker shade.

Transcend composite is a nanohybrid formula that combines high strength and easy sculptability, making it ideal for posterior and anterior composite restorations. Its handling properties have been finely tuned to be firm but malleable, allowing it to stay in place without drooping or slumping during manipulation. The material is highly wear-resistant but also less abrasive to opposing dentition than other composites on the market. For more information, call (800) 552-5512 or visit ultradent.com.

Tokuyama Dental America**Composite Boasts Superior Shade Matching, Aesthetics**

ENCINITAS, Calif—OMNICHROMA FLOW, a one-shade flowable composite, follows in the footsteps of OMNICHROMA. OMNICHROMA FLOW is capable of matching any of the 16 VITA Classical tooth shades with a single shade of composite. By eliminating the need to shade match or stock multiple shades of composites, OMNICHROMA FLOW simplifies restorative procedures and allows dentists to reduce their inventory, saving time and cost.

OMNICHROMA FLOW is indicated for Class I through V restorations in anterior and posterior teeth. The following qualities make OMNICHROMA FLOW an excellent choice for dentists looking for great cavity adaption and long-time performance: (1) superior shade matching and aesthetics; (2) excellent mechanical properties, including flexural and compressive strength, as well as high wear-resistance; and (3) low linear shrinkage. Also available is OMNICHROMA BLOCKER FLOW, a supplementary material to aid with shade matching in cases in which not enough tooth structure is left, such as large Class III and IV cases or when staining needs to be blocked out. For more information, call (877) 378-3548 or visit the website located at omnichromaflow.com/us.
