Product feature summary

Practitioners in the field of dentistry know that working on mouths can be challenging. That's why Zyris developed a posterior mouthpiece in a variety of sizes for any patient — from pediatric and X-small to deep vestibule and large. Each Zyris Isolite® mouthpiece with integrated bite block isolates two quadrants at once and retracts the tongue and cheek, while continuously suctioning for moisture control. Engineered from soft, flexible, latex-free polymer, the Zyris Isolite mouthpiece is super comfortable, allowing patients to relax their jaws

throughout the procedure. Size: Medium DV. 10 per package.

- Single-use.** Reduces the risk of cross contamination and complies with infection control protocols
- Highly efficient.** Continuous, hands-free suction limits aerosols and helps dentists work faster and achieve better clinical outcomes
- Dry field.** In addition to multiple suction channels, the rear of the bite block features additional evacuation to significantly reduce pooling in the mouth
- Safety first.** Each posterior dental mouthpiece provides essential airway protection and excellent visibility

Catalog Description

As seen in our print catalog

Dedicated, HVE-based system. Allows user to perform higher daily patient-volume anterior and posterior procedures quickly and easily. Provides shadowless illumination for anterior and posterior procedures. Features 3 brightness levels in both white and true amber “cure-safe” light. Also provides retraction for better visibility, continuous suction for moisture control, airway protection, and a bite block to ensure patient comfort and safety. Dedicated hose. Power vacuum base also serves as a built-in Y-adapter. Autoclavable posterior vacuum light pipes connect to Isolite posterior mouthpieces, and autoclavable anterior adapters connect to Isolite anterior mouthpieces. Cleaning tip connects directly to a portable or chairside cleaning canister. 1-year manufacturer’s warranty.
