INDOOR SLIDES

Our patent-pending “dry-slide” technology is what makes us “Fast as Friction.” Years of development, cutting edge technology and materials, and leveraging the best minds in the business, we’ve created an indoor slide experience that reflects what a water slide can do in speed, movement, and excitement. This innovation of surface technology combined with incredible design results in a one-of-a-kind indoor slide experience!

LAUNCH SLIDE

Exhilarating speed combined with airtime make the Launch incredibly unique. The Launch Slides ranges in size from a 25' entrance down to a 14' entrance. The Launch can also have between a 3' down to a 1' AFF at it's lowest point allowing the higher AFF models to provide for longer launch airtime for the rider. The Launch is covered by U.S. Design Patent No. D973,821.

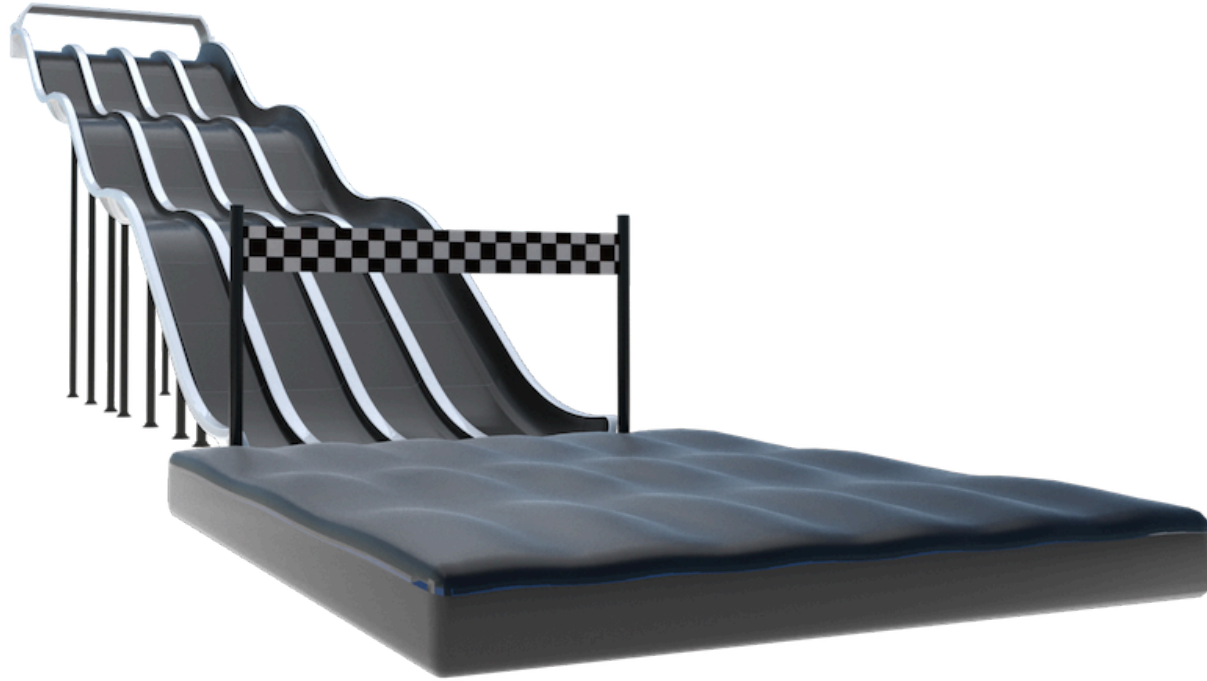

SCOOP SLIDE

Similar to a half pipe you'd find in a skate park or ski slope, the Scoop takes the rider on that exciting path of travel. The Scoop Slide ranges in size from a 25' entrance down to a 17' entrance.

BOWL SLIDE

Exactly how it sounds, the Bowl Slide is a giant bowl! The Bowl Slide ranges in size from a 25' entrance down to a 16' entrance.

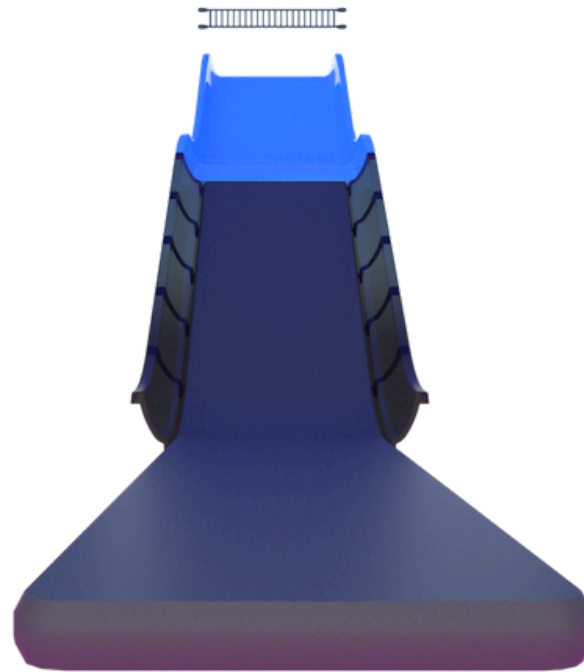

RACE SLIDE

Designed for 4 sliders to race simultaneously!! This slide is impressive and will attract a ton of attention!

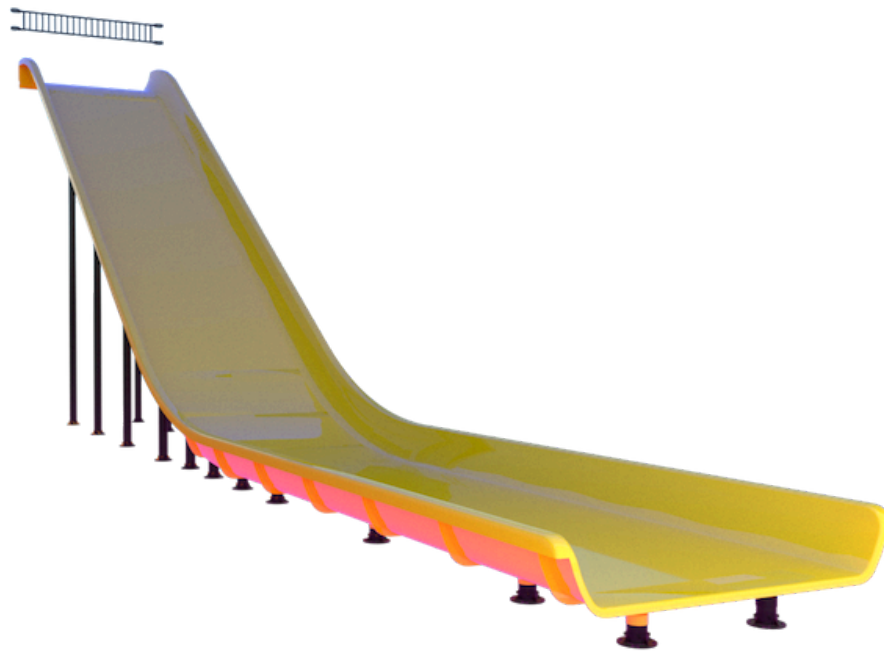

BERM SLIDE

Similar to a berm you'd find on a luge track, this slide takes the slider on a journey of speed combined with banking on the curves for an exciting experience!

LONG JUMP SLIDE

Inspired by the long jump in skiing, our long jump slide initiates the speed in the downward slope then launches the rider at the mid point, where they land on an airtrack on the second down slope.

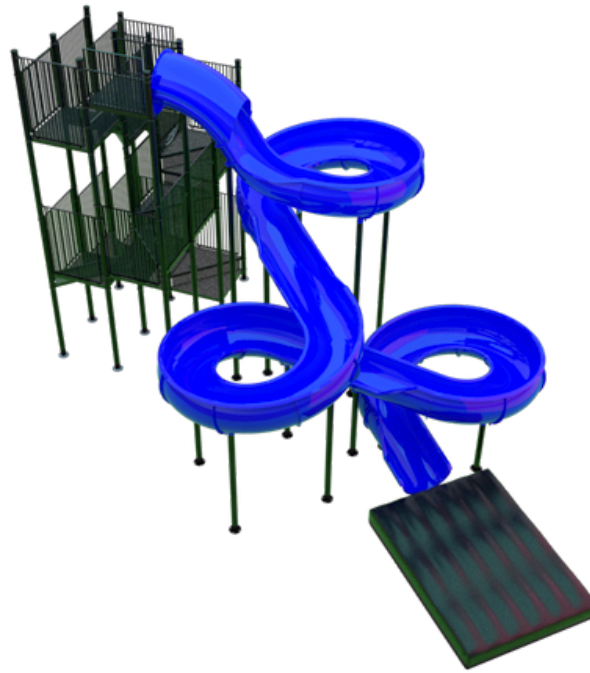

FAMILY SLIDE

This slide is made to be exciting yet fun for multiple sliders at a time. Great speed and run out make this slide exciting and welcoming!

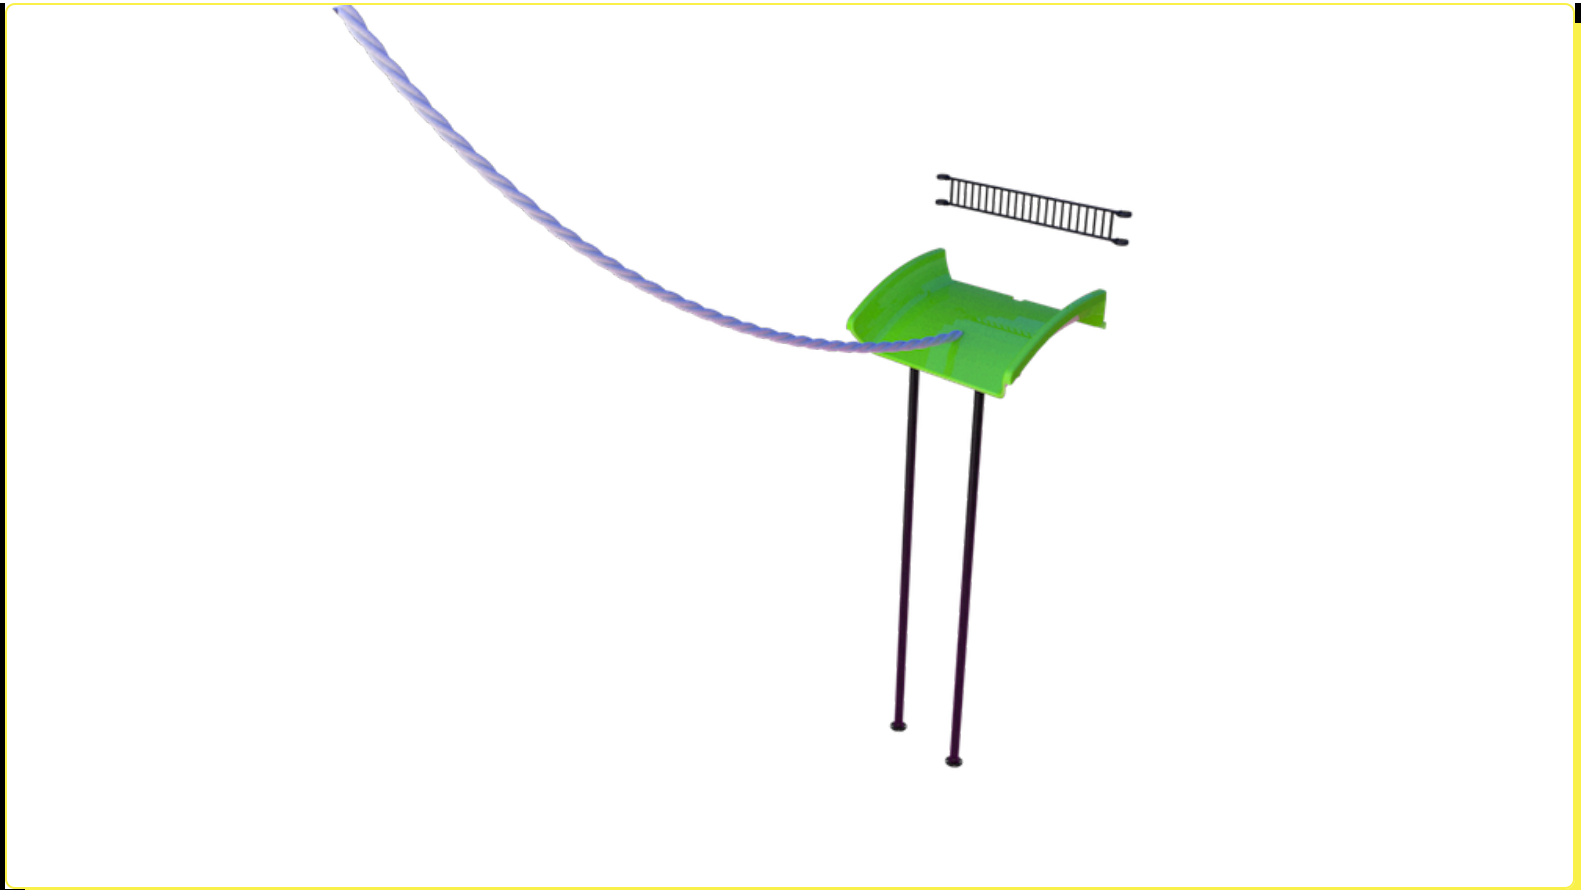

HYBRID SLIDE

This Hybrid is very similar to the Launch slide however this slide can also be placed in facilities with lower clear heights. The overall footprint is smaller in length so it can fit in tighter spaces. This slide gives the slider some great air time!

SWITCHBACK SLIDE

More info coming soon.

ROPE SWING SLIDE

The slider is initially secured into our safety harness which is attached to the rope which is controlled by a pulley system similar to what one uses in rock climbing. The slider proceeds down a very short slide to gain speed then continues their journey airborne on the rope swing. They're then slowly lowered down onto the land bag beneath. This attraction is a show-stopper!
