(57) **ABSTRACT**
Modified PH20 hyaluronidase polypeptides, including modified polypeptides that exhibit increased stability and/or increased activity, are provided. Also provided are compositions and formulations and uses thereof.

11 Claims, 13 Drawing Sheets
Specification includes a Sequence Listing.

1. A method for increasing delivery of a therapeutic agent to a subject, comprising administering to a subject a pharmaceutical composition comprising:

(a) a therapeutic agent; and

(b) a modified PH20 polypeptide comprising an amino acid sequence, wherein:

i. at least 95% of the residues of the amino acid sequence of the modified PH20 polypeptide are identical to the residues in an amino acid sequence selected from the group consisting of SEQ ID NOs: 3 and 32-66 when the sequence of the modified PH20 polypeptide is aligned at positions corresponding to the sequence selected from the group consisting of SEQ ID NOs: 3 and 32-66 to maximize identical residues; and

ii. the amino acid sequence of the modified PH20 polypeptide comprises an amino acid modification at a position corresponding to position 320 with reference to amino acid positions set forth in SEQ ID NO: 3; and

iii. the modification at position 320 is a replacement selected from the group consisting of H, K, R and S.

EX. 1001

Patent Disclosure

'185 Patent

[illegible]

H. Methods of Treatment and Combination Therapy

Provided herein are methods and uses of any of the modified PH20 polypeptides provided herein that exhibit hyaluronidase activity based on its ability to degrade glycosaminoglycan(s) such as hyaluronan. Due to such activity, the modified PH20 polypeptides can be used as a spreading factor to increase the delivery and/or bioavailability of subcutaneously administered therapeutic agents. Delivery of

PGR2025-00039

Similarity To Sequence Is A Common Structural Feature

Ajinomoto Co., Inc. v. International Trade Commission, 932 F.3d 1342 (2019)

“CJ disputes that similarity to the consensus sequence defines a common structural feature, citing several articles as indicating that a promoter closer to the consensus sequence will not always be stronger than one farther from that sequence.”

Ajinomoto Co. v. Int’l Trade Comm’n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

“CJ’s argument both assumes too strict a legal standard and reads too much into its cited references. Adequate written description does not require a perfect correspondence between the members of the genus and the asserted common structural feature; for a functionally defined genus like the one at issue here, we have spoken more modestly of a ‘correlation between structure and function.’”

Ajinomoto Co. v. Int’l Trade Comm’n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

under function-way-result framework:

increased activity of YddG protein at least partly contributed to enhanced resistance of later strains of accused product;

[Taranto](#), Circuit Judge.

Ajinomoto Co., Inc. and Ajinomoto Heartland Inc. (collectively, Ajinomoto) filed a complaint against CJ

1. A soluble human PH20 polypeptide comprising: a modification at a position aligned to position 320 with reference to the amino acid positions set forth in SEQ ID NO: 3, and 19 or less additional amino acid modifications, after alignment with SEQ ID NO: 3 to maximize the number of identical residues, wherein: modifications comprise insertions, deletions, and replacements, and **the modification at position 320 is a replacement selected from the group consisting of H, K, and R.**

15. A method for manufacture of the soluble human PH20 polypeptide of claim 1, comprising:
preparing a plasmid DNA containing a cDNA encoding the soluble human PH20 polypeptide amino acid sequence,
transfecting the plasmid DNA into a host cell;
culturing the host cell under conditions for expression of the cDNA as a protein; and
harvesting the protein from the culture.

As used herein, soluble human PH20 (sHuPH20) includes human PH20 polypeptides that lack a contiguous sequence of amino acids from the C-terminus of human PH20 that includes all or a portion of the glycosylphosphatidylinositol (GPI) anchor sequence (C-terminally truncated PH20 polypeptides) such that upon expression, the polypeptides are soluble under physiological conditions. For example, -53 PGR, EX. 1001, 45:24-30

sheep or cows. Exemplary of such soluble hyaluronidases are soluble human PH20 (SEQ ID NOs: 3 or 32-66). Other soluble hyaluronidases include ovine (SEQ ID NOs:25-27) and bovine (SEQ ID NO:16 or 18) PH20. -53 PGR, EX. 1001, 45:20-23

PGR2025-00053

Petitioner's Arguments About Unclaimed Functions Are Irrelevant

Trials@uspto.gov
571-272-7822

Paper: 13
Date: March 22, 2023

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

Petitioner's Section 112 argument improperly “focuses on certain functional characteristics disclosed in the Specification that are not recited in the challenged claims, and therefore, lacks sufficient merit in the context of the challenged claims.”

Boehringer Ingelheim Animal Health USA Inc. v. Kansas State Univ. Res. Foundation
 (“Boehringer II”) PGR2022-00021, Paper 13, 25-26 (P.T.A.B. Mar. 22, 2023).

35 U.S.C. § 324

Claims Are Enabled

Ajinomoto Co., Inc. v. International Trade Commission, 932 F.3d 1342 (2019)

932 F.3d 1342
United States Court of Appeals, Federal Circuit.

AJINOMOTO CO., INC., Ajinomoto
Heartland Inc., Appellants

v.

INTERNATIONAL TRADE COMMISSION, Appellee
CJ CheilJedang Corp., CJ America, Inc.,
PT CheilJedang Indonesia, Intervenor
CJ CheilJedang Corp., CJ America, Inc.,

patent on E. coli YddG protein disclosed representative
number of species falling within scope of genus of more
potent promoters, as required to satisfy written description
requirement; and

patent on E. coli YddG protein disclosed structural features
common to members of genus, as required to satisfy written
description requirement.

Affirmed

“A specification which contains a statement of the manner and process of using the invention in terms which corresponds in scope to those used in defining the subject sought to be patented must be taken as in compliance with the “how to use” requirement of the first paragraph of 35 U.S.C. § 112 unless there is a reason to doubt the objective truth of the statement.”

In re Brana, 51 F.3d 1560, 1566 (Fed. Cir. 1995).

phrase, “replacing the native promoter with a more potent
promoter,” in patent was limited to removing entire native
promoter and inserting new promoter;

tangential relation exception applied as to presumption of
scope of surrender by amendment during prosecution;

competitor’s product infringed claimed E. coli YddG protein
under function-way-result framework;

increased activity of YddG protein at least partly contributed
to enhanced resistance of later strains of accused product;

1. **A modified PH20 polypeptide**, comprising one or more amino acid modifications in an unmodified PH20 polypeptide, wherein:

the unmodified PH20 polypeptide consists of the amino acid sequence selected from the group consisting of SEQ ID NO: 3, 7 and 32-66;

amino acid modifications are selected from the group consisting of amino acid replacements(s), deletion(s), and/or insertion(s);

the modified PH20 polypeptide comprises **a modification at a position corresponding to position 313 with reference to amino acid positions of SEQ ID NO:3;**

corresponding amino acid positions are identified by alignment of the PH20 polypeptide with the polypeptide having the amino acid sequence of SEQ ID NO:3; and

the modified PH20 polypeptide has **at least 91% sequence identity** to the amino acid sequence selected from the group consisting of SEQ ID NO: 3, 7 and 32-66.

(57) ABSTRACT

Modified PH20 hyaluronidase polypeptides, including
modified polypeptides that exhibit increased stability and/or
increased activity, are provided. Also provided are com-
positions and formulations and uses thereof.

10 Claims, 13 Drawing Sheets

Specification includes a Sequence Listing.

1. A modified PH20 polypeptide comprising an amino acid sequence, wherein:
(a) at least 95% of the residues of the amino acid sequence of the modified PH20 polypeptide are identical to the residues in the amino acid sequence of SEQ ID NO: 35 when the sequence of the modified PH20 polypeptide is aligned at positions corresponding to the sequence set forth in the amino acid sequence of SEQ ID NO: 35 to maximize identical residues, and terminal gaps are treated as non-identical; (b) the amino acid sequence of the modified PH20 polypeptide comprises an amino acid modification at a position corresponding to position 309 with reference to amino acid positions set forth in the amino acid sequence of SEQ ID NO: 3; and (c) the modification at position 309 is a replacement selected from among E, G, H, L, M, N, Q, R, S, and T, and wherein **the modified PH20 polypeptide exhibits increased hyaluronidase activity compared to the hyaluronidase activity of the polypeptide of SEQ ID NO: 3**, measured under identical conditions.

10. A method for manufacture of the modified PH20 polypeptide of claim 1, comprising preparing a plasmid DNA containing a cDNA encoding the modified PH20 polypeptide; transfecting the plasmid into an isolated host cell; culturing the cell under conditions for expression of the modified PH20 polypeptide; and harvesting the modified PH20 polypeptide from the culture.

Claim 1

1. A modified PH20 polypeptide, comprising:

(i) **a hyaluronidase domain** that corresponds to amino acid residues 3-339 with reference to numbering in SEQ ID NO:7; and

(ii) **an amino acid replacement at the residue corresponding to M313** with reference to numbering in SEQ ID NO:7,

wherein the hyaluronidase domain contains **up to 20 modifications**.

PGR2025-00052

As used herein, “modified PH20 polypeptide” or “variant PH20 polypeptide” refers to a PH20 polypeptide that contains at least one amino acid modification, such as at least one amino acid replacement as described herein, in its sequence of amino acids compared to a reference unmodified PH20 polypeptide. A modified PH20 polypeptide can

The sequence and structure of PH20 polypeptides is highly conserved. Sequence identity between and among PH20 proteins from various species is about 50% to 90%. The hydrophobic N-terminal signal sequence of 35 amino acids in length is generally conserved among PH20 hyaluronidase polypeptides. PH20 hyaluronidases contain a common core hyaluronidase domain region of about 340 amino acids in length that corresponds to amino acid residues 38-374 of the precursor human PH20 sequence set forth in SEQ ID NO:6. A mature PH20 polypeptide lacking the signal sequence and containing a contiguous sequence of amino acids having a C-terminal amino acid residue corresponding to amino acid residue 464 of SEQ ID NO:6 (e.g., amino acid residues corresponding to positions 36-464 of the amino acid sequence set forth in SEQ ID NO:6) is the minimal sequence required for hyaluronidase activity (see e.g., U.S. patent application Ser. No. 10/795,095, which is issued as U.S. Pat. No. 7,767,429; see also U.S. Publication No. US20100143457).

ABSTRACT

Modified PH20 hyaluronidase polypeptides, including modified polypeptides that exhibit increased stability and/or increased activity, are provided. Also provided are compositions and formulations and uses thereof.

40 Claims, 13 Drawing Sheets
Specification includes a Sequence Listing.

(51) Int. Cl.
C12N 9/26 (2006.01)
A61K 9/00 (2006.01)

A61K 38/47 (2006.01)
A61K 45/06 (2006.01)

Claims expressly define the modified PH20 polypeptide by amino acid sequence:

- “at least 91% identical” to SEQ ID Nos 3, 7 and 32-66
- specific change to H, K, R, or S at position 320

1. A modified PH20 polypeptide, comprising one or more amino acid modifications in an unmodified PH20 polypeptide, wherein:

the unmodified PH20 polypeptide consists of the amino acid sequence selected from the group consisting of **SEQ ID NO: 3, 7 and 32-66**;

amino acid modifications are selected from the group consisting of amino acid replacements(s), deletion(s), and/or insertion(s);

the modified PH20 polypeptide comprises **an amino acid replacement at a position corresponding to residue 320**, with reference to amino acid positions set forth in SEQ ID NO:3;

the replacement at the position corresponding to residue 320 is selected from the group consisting of H, K, R, and S;

corresponding amino acid positions are identified by alignment of the PH20 polypeptide with the polypeptide having the amino acid sequence of SEQ ID NO:3; and

the modified PH20 polypeptide has **at least 91% sequence identity** to a polypeptide having the amino acid sequence selected from the group consisting of SEQ ID NOs: 3, 7 and 32-66.

“Modified PH20 Polypeptide” Definition

Definitional →

As used herein, “modified PH20 polypeptide” or “variant PH20 polypeptide” refers to a PH20 polypeptide that contains at least one amino acid modification, such as at least one amino acid replacement as described herein, in its sequence of amino acids compared to a reference unmodified PH20 polypeptide. A modified PH20 polypeptide can

Not Definitional →

have up to 150 amino acid replacements, so long as the resulting modified PH20 polypeptide exhibits hyaluronidase activity. Typically, a modified PH20 polypeptide contains 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, or 50 amino acid replacements. It is understood that a modified PH20 polypeptide also can include any one or more other modifications, in addition to at least one amino acid replacement as described herein.

EX. 1001, 43:49-67

Term “PH20” Is Distinct From “Modified PH20 Polypeptide”

'652 Patent

PGR2025-00033

As used herein, PH20 refers to a type of hyaluronidase that occurs in sperm and is neutral-active. PH-20 occurs on the sperm surface, and in the lysosome-derived acrosome, where it is bound to the inner acrosomal membrane. PH20 includes those of any origin including, but not limited to, human, chimpanzee, Cynomolgus monkey, Rhesus monkey, murine, bovine, ovine, guinea pig, rabbit and rat origin. Exemplary PH20 polypeptides, including precursor and mature forms, include those from human (SEQ ID NOs:6 and 7), chimpanzee (SEQ ID NOs:8, 9, 10, 869 and 870), Rhesus monkey (SEQ ID NOs:11 and 12), Cynomolgus monkey (SEQ ID NOs:13 and 14), cow (e.g., SEQ ID NOs:15-18); mouse (SEQ ID NOs:19 and 20); rat (SEQ ID NOs:21 and 22); rabbit (SEQ ID NOs:23 and 24); sheep (SEQ ID NOs:25-27), guinea pig (SEQ ID NOs:28 and 29); fox (SEQ ID NOs: 30 and 31); Gibbon (SEQ ID NOs:856 and 857), Marmoset (SEQ ID NOs:858 and 859) and orang-utan (SEQ ID NOs:860 and 861). Reference to PH20

EX. 1001, 45:59-46:9

EX. 1001, 75:44-47

Petitioner's Expert Invented New, Unsupported Constructions

Merck Expert | Dr. Naismith

43. ... I read the claims as a whole as being directed to modified PH20 polypeptides that (i) contain an amino acid sequence that satisfies the sequence identity claim parameters, (ii) meet the position 313 substitution requirement, and (iii) have folded to adopt the same tertiary fold found in the native state of the wild-type PH20 protein.¹⁵

-46 PGR, EX1133, ¶43

43. ... I read the claims as a whole as being directed to modified PH20 polypeptides that (i) contain an amino acid sequence that satisfies the sequence identity claim parameters, (ii) meet the position 313 substitution requirement, (iii) have folded to adopt the same tertiary structure found in the native state of the wild-type PH20 protein and (iv) are enzymatically active.¹⁵

-04 PGR, EX1133, ¶43

Petitioner's Expert Invented New, Unsupported Constructions

Merck Expert | Dr. Naismith

108. I believe Dr. Hecht more accurately describes why a POSA would have read the claims as a whole as being directed to modified PH20 polypeptides **that are properly folded, and certain of those being enzymatically active**

109. ... I believe that when a POSA considers all of the language used in **certain claims (e.g., claim 5)** and does that in conjunction with the common disclosure, she would have concluded that the claims define a set of modified PH20s that exhibit hyaluronidase activity.

-46 PGR, EX1133, ¶¶108-109

Q. ...The last sentence in **paragraph 109** you say that a POSA: "... when a POSA considers all of the language used in **certain** claims (e.g., claim 5) and does that in conjunction with the common disclosure, she would have concluded that the claims define a set of modified PH20s that exhibit hyaluronidase activity." Right?

A. Yes, that's what this sentence says, and concluded that **the claims, meaning all the claims, define a set of modified PH20s that exhibit hyaluronidase activity.**

Q. Okay, so you're now saying that all of the claims require hyaluronidase activity and not just claim 5?

A. I'm not now saying that, that's what the declaration says.

EX2304, 34:13-35:9

Grounds 1 And 2 Fail For Categories III-IV, and VI

The Claims Are Structure Only

Structural Only Claims: Common Structural Features

The claims define the genus by a common mutation at position 320 and sequence identity to a set number of specific sequences.

POPR at 15-25; POR at 31-44

Merck's claim:

“Visualizing or recognizing the members of the claimed genus here is impossible”

Reply at 10

Structural Only Claims: Petitioner's Expert Can Recognize Genus

Merck Expert | Dr. Hecht

- Q. Okay. I want to be very clear. Can you tell from an amino acid sequence whether that amino acid sequence is 95 percent identical to, for example, SEQ ID 3 or not?
- A. One can do that, yes.
- Q. So an amino acid sequence of a polypeptide gives you enough information to tell whether that amino acid sequence is 95 percent identical to, for example, SEQ ID 3; correct?
- A. The sequence tells you whether, what percentage is identical, yes.
- Q. And the sequence would also tell you whether there's a mutation at position 320; correct?
- A. That it would.

EX. 2076 (Hecht), 203:18-204:10

Petitioner Agrees It Would Have Been Routine To Generate Multiply Substituted Modified PH20s

Merck Expert | Dr. Naismith

Q. Do you agree that the cell culture techniques that were described in the patent would have been routine in 2012?

A. Sorry, were what in 2012?

Q. The cell culture techniques described in the patent?

A. Were what in 2012, sorry?

Q. Would have been routine in 2012?

A. They were within the skill of a POSA 2012, yes.

EX. 2301 (Naismith), 311:23-312:8

Q. So if I gave you an amino acid sequence that had 16 changes in it from wild-type PH20, is it your testimony that you would not know how to make that protein?

A. So, I could make the protein but I would have no way to know whether it was an active form or whether it was inactive, I think I could make it. So sometimes you can't make, you get stalling on the ribosome, so if you gave me a nucleotide sequence, I could make the nucleotide sequence and do the experiment if that is your question. But by the time you get to that large number of mutations there are many reasons that could lead to the protein appearing in a different, entirely different region of structure, unfolded, aggregated, whatever.

EX. 2301 (Naismith), 244:22-245:15; *see also* Pet., 13-16

Grounds 1 And 2 Fail For Categories III-IV, and VI

The Claims Are Structure Only

Idenix Pharmaceuticals LLC v. Gilead Sciences Inc., 941 F.3d 1149 (2019)

941 F.3d 1149
United States Court of Appeals, Federal Circuit.

[IDENIX PHARMACEUTICALS LLC, Universita
Degli Studi Di Cagliari](#), Plaintiffs-Appellants

Affirmed in part and reversed in part.

[Newman](#), Circuit Judge, filed dissenting opinion.

Procedural Posture(s): On Appeal: Motion for Judgment as

Petitioner's Section 112 argument improperly "focuses on certain functional characteristics disclosed in the Specification that are not recited in the challenged claims, and therefore, lacks sufficient merit in the context of the challenged claims."

Boehringer Ingelheim Animal Health USA Inc. v. Kansas State Univ. Res. Foundation
("Boehringer II") PGR2022-00021, Paper 13, 25-26 (P.T.A.B. Mar. 22, 2023).

did not provide meaningful guidance as to which 2'-methyl-
up nucleosides were effective against HCV and only working
examples provided were exceedingly narrow relative to claim
scope:

unpredictability of art of using modified nucleosides to treat
HCV could weigh only in favor of non-enablement of patent;

immense breadth of claim could support finding only of non-
enablement; and

patent providing 18 position-by-position formulas describing
"principal embodiments" of compounds that might treat HCV
did not satisfy written description requirement.

[Prost](#), Chief Judge.

*1153 Idenix Pharmaceuticals LLC and Universita Degli
Studi Di Cagliari (collectively, "Idenix") appeal from the
decision of the U.S. District Court for the District of Delaware
granting judgment as a matter of law ("JMOL") against Idenix
and finding that [U.S. Patent No. 7,608,597](#) is invalid for
lack of enablement. [Idenix Pharm. LLC v. Gilead Scis., Inc.](#),
[2018 WL 922125](#), at *25 (D. Del. Feb. 16, 2018) ("JMOL
Opinion"). Gilead Sciences Inc., ("Gilead") argues that the
patent is also invalid for failure to meet the written description
requirement, and that the district court erred by failing to grant
JMOL on that ground as well. We affirm as to non-enablement

Contraceptive Utility Is Scientifically Credible

- Patent enables use of claimed PH20 variants as contraceptives **in females**
- Sufficient guidance for credible utility
- Prior art established PH20 as contraceptive target and taught known ways to enhance contraceptive effect
 - PH20 was known to play a key role in fertilization
 - Prior studies showed PH20 could induce infertility / contraceptive effects
 - PH20 vaccines were known to generate anti-PH20 antibodies that bind sperm PH20
 - Mucosal delivery could increase antibodies in the female reproductive tract
 - Adjuvants and booster doses could strengthen the antibody response
 - Sialidase could expose sperm-surface PH20 to anti-PH20 antibodies
- Anti-PH20 antibodies could be delivered locally by gels, films, or intravaginal rings

Contraceptive Utility Is Scientifically Credible

- An invention that is at least partially successful in achieving a useful result has credible utility.

In re Brana, 51 F.3d 1560 (Fed. Cir. 1995).

- Petitioner applied a 100% effectiveness standard.

Reply at 39-40

- Petitioner's expert agrees that common contraceptives achieve less than 100% effectiveness.

EX. 2302 (Kelsoe), 131:10-132:19

Contraceptive Utility Is Scientifically Credible

Merck Expert | Dr. Kelsoe

Q. And you would agree that contraceptives have been and are still used today as tools for population control in animals, correct?

A. Contraceptives?

Q. Yes.

A. Yes.

Q. And you would agree that a method for population control in animals would not need to cause complete infertility to be useful –

A. That's my --

Q. You would agree that, as a method for population control, a contraceptive would not need to cause incomplete fertility to be useful, correct?

A. I think that -- and, again, as I described in the sense of ecological control for a species, a 50 percent reduction of the fecundity would have an important and valuable role.

EX. 2302 (Kelsoe), 134:5-135:3 (objections omitted)

Petitioner's Deviation From Patent Teaching Is Insufficient To Disprove Enablement As A Matter Of Law

Johns Hopkins University v. CellPro, Inc., 152 F.3d 1342 (1998)
47 U.S.P.Q.2d 1705

152 F.3d 1342

Attorneys and Law Firms

“A party who wishes to prove that the claims of a patent are not enabled by means of a failed attempt to make the disclosed invention **must show that the patent's disclosure was followed.** Because Sutherland deviated from the teachings of the patent in his failed attempts to make the claimed antibodies, his testimony is **insufficient to disprove enablement as a matter of law.**”

“[I]t is imperative when attempting to prove lack of enablement to show that *one of ordinary skill in the art* would be unable to make the claimed invention without undue experimentation... CellPro's evidence concerning Civilin's subsequent work is **insufficient as a matter of law.**”

Johns Hopkins Univ. v. CellPro, Inc., 152 F.3d 1342, 1360 (Fed. Cir. 1998).

Judgment; Motion for Judgment as a Matter of Law (JMOL) 24, 1997). We affirm-in-part, vacate-in-part, and remand. Directed Verdict.

Patent Owner Also Prevails For All Categories Even If Enzymatic Activity Is Required

Similarity To Sequence Is A Common Structural Feature; WD Does Not Require Perfect Correspondence To Structure

Ajinomoto Co., Inc. v. International Trade Commission, 932 F.3d 1342 (2019)

“CJ disputes that similarity to the consensus sequence defines a common structural feature, citing several articles as indicating that a promoter closer to the consensus sequence will not always be stronger than one farther from that sequence.”

Ajinomoto Co. v. Int’l Trade Comm’n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

“CJ’s argument both assumes too strict a legal standard and reads too much into its cited references. Adequate written description does not require a perfect correspondence between the members of the genus and the asserted common structural feature; for a functionally defined genus like the one at issue here, we have spoken more modestly of a ‘correlation between structure and function.’”

Ajinomoto Co. v. Int’l Trade Comm’n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

under function-way-result framework:

increased activity of YddG protein at least partly contributed to enhanced resistance of later strains of accused product;

[Taranto](#), Circuit Judge.

Ajinomoto Co., Inc. and Ajinomoto Heartland Inc. (collectively, Ajinomoto) filed a complaint against CJ

Claims Are Enabled Even If Enzymatic Activity Is Required

Ajinomoto Co., Inc. v. International Trade Commission, 932 F.3d 1342 (2019)

“From this it follows that the PTO has the initial burden of challenging a presumptively correct assertion of utility in the disclosure. *Id.* at 224, 169 USPQ at 370. Only after the PTO provides evidence showing that one of ordinary skill in the art would reasonably doubt the asserted utility does the burden shift to the applicant to provide rebuttal evidence sufficient to convince such a person of the invention's asserted utility.”

In re Brana, 51 F.3d 1560, 1566 (Fed. Cir. 1995).

“A specification which contains a statement of the manner and process of using the invention in terms which corresponds in scope to those used in defining the subject sought to be patented must be taken as in compliance with the “how to use” requirement of the first paragraph of 35 U.S.C. § 112 unless there is a reason to doubt the objective truth of the statement.”

In re Brana, 51 F.3d 1560, 1566 (Fed. Cir. 1995).

under function-way-result framework:

increased activity of YddG protein at least partly contributed to enhanced resistance of later strains of accused product;

[Taranto](#), Circuit Judge.

Ajinomoto Co., Inc. and Ajinomoto Heartland Inc. (collectively, Ajinomoto) filed a complaint against CJ

Board's Preliminary Construction Of "Modified PH20 Polypeptide" Is Addressed Through Remainder Of The Presentation

- The Board preliminarily construed claims to require "some" hyaluronidase activity.

ID at 15-19

- Patent Owner and Patent Owner's experts addressed the Board's Construction in POR and sur-reply.

POR, 31-44; Sur-Reply, 1-4; EX. 2068, ¶350

- Patent Owner assumed that specification must allow POSAs to reliably distinguish, create, and utilize actives.

POR, 31-44; Sur-Reply, 3-27

- Under the Board's construction, patent provides written description and enablement.

POR, 44-82; Sur-Reply, 3-27

Written Description (Ground 1)

Specification Must Reasonably Convey Possession

Ariad Pharmaceuticals, Inc. v. Eli Lilly and Co., 598 F.3d 1336 (2010)
94 U.S.P.Q.2d 1161

598 F.3d 1336
United States Court of Appeals, Federal Circuit.

ARIAD PHARMACEUTICALS, INC., Massachusetts
Institute of Technology, The Whitehead Institute
for Biomedical Research, and the President and
Fellows of Harvard College, Plaintiffs–Appellees,
v.

Rader, Circuit Judge, filed opinion dissenting-in-part and
concurring-in-part in which Lin, Circuit Judge, joined.

Lin, Circuit Judge, filed opinion dissenting-in-part and
concurring-in-part in which Rader, Circuit Judge, joined.

Procedural Posture(s): On Appeal: Motion for Judgment as
a Matter of Law (JMOL)/Directed Verdict.

“In other words, the test for sufficiency is whether the disclosure of the application relied upon **reasonably conveys** to those skilled in the art that the inventor had possession of the claimed subject matter as of the filing date.”

Ariad Pharms., Inc. v. Eli Lilly & Co., 598 F.3d 1336, 1351 (Fed. Cir. 2010).

statute requiring that patent specification contain a written
description of the invention contained a written description
requirement separate from enablement, and

patent was invalid for failure to provide adequate written
description.

Reversed in part and affirmed in part.

Newman, Circuit Judge, wrote separately, expressing
additional views.

Gajarsa, Circuit Judge, filed concurring opinion.

counsel on the brief were James A. Toupin, General Counsel,
and Raymond T. Chen, Solicitor, United States Patent and
Trademark Office, of Arlington, VA.

Roberta J. Morris, of Menlo Park, CA, for amicus curiae
Roberta J. Morris, Esq., Ph.D.

Kenneth J. Burchfiel, Sughrue Mion, PLLC, of Washington,
DC, for amicus curiae Novozymes A/S. With him on the brief
was John T. Callahan.

Christopher M. Holman, University of Missouri–Kansas City
School of Law, of Kansas City, MO, for amicus curiae Law
Professor Christopher M. Holman.

Common Structural Features, Structure/Function Correlation

Common Structural Features:

1. **Primary Structure:** $\geq 91\%$ identical amino acid sequence.
2. **Key Mutation:** D320 substitution (H, K, R, or S).
3. **For Actives:**
 - Common active site.
EX. 1001, 70:34-54; EX. 2068, ¶¶303; EX. 2070, ¶¶148-206
 - Same catalytic, binding residues.
EX. 1001, 70:34-41; EX. 2068, ¶¶303; EX. 2070, ¶¶148-206
 - Conserved disulfide bridges, essential glycosylation sites.
EX. 1001, 70:14-33; EX. 2068, ¶¶303; EX. 2070, ¶¶214-217
 - Lack of disclosed inactivating changes.
EX. 2068, ¶¶303, 323; EX. 2070, ¶44
 - Tertiary structure: PH20 α - β barrel fold.
EX. 2068, ¶¶289, 316-323; EX. 2070, ¶¶345, 396, 400-420

Patent's Structure/Function Correlations

- Patent provides comprehensive mutagenesis data for all 447 positions.
EX. 1001, 234:15-269:8
- Identifies which positions tolerate substitutions.
EX. 1001, 234:15-269:8; EX. 2068, ¶¶243-247; EX. 2070, ¶¶ 263-428
- Identifies which types of amino acids work at each position.
EX. 1001, 234:15-269:8; EX. 2068, ¶¶243-247; EX. 2070, ¶¶ 263-428
- Enables POSA to reliably predict effects of single and multiple mutations.
EX. 2068, ¶¶305-315, 378-390; EX. 2070, ¶¶343-428
- “Detailed structure/function of virtually each amino acid....”
EX. 1001, 4:58-59

Patent's Informational Content Is Enormous

Halozyme Expert | Dr. Petsko

- Q. So if you look at the entire genus that it has a set of changes that can include up to 21 or 22 mutations, the portion of the genus that is reflected in the dataset is a tiny, tiny fraction of that genus, right?
- A. So the -- what is reflected in the patent is a subset. Okay. Which has a particular number of mutations. A few thousand. Sounds about right.

The real question is: What about the information content? The information content of that particular set of substitutions is enormous. And when combined with the structural information from modeling the PH20 structure, it allows you to visualize and make predictions about much more of the dataset than just what you see here.

Petitioner's Demand For Examples Of Each Species Ignores Informational Content And Misapplies The Law

AbbVie Deutschland GmbH & Co., KG v. Janssen Biotech, Inc., 759 F.3d 1285 (2014)
111 U.S.P.Q.2d 1780

759 F.3d 1285
United States Court of Appeals, Federal Circuit.

[ABBVIE DEUTSCHLAND GMBH & CO., KG](#),
[AbbVie Bioresearch Center, Inc.](#), and AbbVie
Biotechnology, Ltd., Plaintiffs–Appellants,

district court did not abuse its discretion in excluding
evidence of interference proceeding;

district court did not abuse its discretion in trial over written
description requirement by excluding additional testimony
summarizing prosecution arguments made to PTO; and

“It is important not to take the analogy of a plot of land too far in thinking of written description issues because, even if one builds a house only in one corner of the plot, one may still own the whole plot.”

AbbVie Deutschland GmbH & Co., KG v. Janssen Biotech, Inc., 759 F.3d 1285, 1300 (Fed. Cir. 2014).

motion for judgment as matter of law. Owner appealed.

Holdings: The Court of Appeals, [Lourie](#), Circuit Judge, held that:

prior interference ruling by the Board of Patent Appeals and Interferences regarding priority and nonobviousness lacked requisite finality for purposes of collateral estoppel;

asserted patent claims for class of fully human antibodies that were defined by their high affinity and neutralizing activity to known human antigen were invalid for lack of adequate written description;

[James J. Kelley](#), Eli Lilly and Company, of Indianapolis, IN, for amicus curiae Eli Lilly and Company. With him on the brief were [Ted J. Ebersole](#), [Alexander Wilson](#), and [Sanjay Jivraj](#). On the brief for amicus curiae Pfizer Inc. was Jeffrey J. Oelke, White and Case LLP, of New York, N.Y.

Oskar Liivak, Cornell Law School, of Ithaca, N.Y., for amicus curiae Professor Oskar Liivak.

Before [LOURIE](#), [O'MALLEY](#), and [CHEN](#), Circuit Judges.

Concurring opinion filed by Circuit Judge [O'MALLEY](#).

Opinion

[LOURIE](#), Circuit Judge.

How POSAs Would Visualize The Patent Disclosure

Patent Disclosure Makes Multiply Mutating PH20 Predictable

Halozyme Expert | Dr. Petsko

355. Second, the POSA wishing to make multiple modifications but retain activity could select from those positions that best tolerate substitution. The POSA seeking to be conservative in this regard could select positions that tolerated all tested substitutions, as shown in the figures below. A POSA choosing this route has many potential substitution options to consider; as shown below, residues that tolerate all tested substitutions are scattered across the surface of the protein. A POSA would reasonably expect that introducing multiple substitutions at these positions would also not abrogate activity.

EX. 2070, Petsko Decl., ¶355

Patent Disclosure Makes Multiply Mutating PH20 Predictable

Halozyyme Expert | Dr. Petsko

Patent Disclosure Allows Reliable Predictions About Any Species

Halozyme Expert | Dr. Petsko

- Q. So using that dataset, the person could predict which combinations might yield an active form of a mutated PH20 polypeptide let's say with 15 changes to it?
- A. You could, but as I said, you would not tend to do that. A person of skill in the art would tend to only be interested in a much smaller number of mutations, because you can almost certainly get where you want to go that way.
- Q. So a POSA is not interested in trying to practice the entire scope of this genus, they would focus on a portion of it, right?
- A. A POSA would have the capability of both visualizing and practicing the full scope of the claims if they needed to. They could -- that is to say, they could look at any particular type of variant that fit the claim and they could make that variant and they would be able to predict beforehand what that variant might do with a -- in many cases, on a high degree of confidence.
- Q. And they could do that for 1049 -- a number that -- I'm sorry. They can do that for a number of modified PH20 polypeptides that approaches 1049 different sequences?
- A. They can do that for any member of the 1049 sequences that they wish to examine. Okay? A person of skill in the art would do it that way.

EX. 1131 (Petsko), 113:20-114:24 (objection omitted)

Patent Disclosure Makes Modifying PH20 Predictable

Halozyme Expert | Dr. Simpson

“I’m saying that a POSA would have had the information to choose to make a set of PH20 polypeptides that fit the criteria of the claim, and to be able to use them in the manner they intended.

They would be able to visualize the species within the claim.”

“The POSA could then use that information to choose, depending on whether their goal was to have the protein remain active or whether they did not care about having activity retained and had a different experimental goal. They would have information that would allow them to make the 95% identical polypeptide that would meet those criteria for them.”

EX. 1130 (Simpson), 95:5-10; 98:3-10

EX. 2070, Petsko Decl., ¶ 321

Considering Structural Context Is “Common And Expected”

Merck Expert | Dr. Park

“In the year 2011, to consider a mutation, it would have been **very common and expected** for a POSA to generate a model and consider the substitution in that structural context.”

EX. 2077 (Park I), 176:2-5; *see also* Pet., 13-14, 103, 105

POSAs Would Routinely Use Model To Visualize/Practice

Merck Expert | Dr. Park

Q. So what's the purpose of generating a homology model for a protein structure?

A. It allows you to look at the molecule, as opposed to imagining it in your head.

Q. And it's useful to be able to look at the molecule, right?

A. Absolutely.

Q. And you can use homology modeling to predict the impact of substitutions in a protein?

A. A homology model can help you to evaluate the impact of a substitution. Yes.

EX. 2077 (Park I), 53:15-54:5 (objections omitted); *see also* Pet., 13-14, 103, 105

POSAs Would Routinely Use Model To Visualize/Practice

Merck Expert | Dr. Hecht

“Location, location, location. I mean, it’s basically -- one could make a mutation in the abstract of this amino acid to that amino acid. If you do that in the abstract, it’s pretty difficult to say anything intelligent about that. However, if you look at it in the context of its physical chemical environment in the protein and in the context of its homologous environment sequence space, then you’re better able to come up with an assessment of the properties of a potential mutation. And the location of the position of interest matters, and the location of other amino acids in that neighborhood matters.”

EX. 2076 (Hecht), 72:15-73:6

“The core issues in this case deal with making changes in a sequence. And to understand the impact of changes in the sequence, it’s wise to look at the sequence and look at the structure to have a more informed -- to be able to make a more informed analysis of what would the impact be of such changes.”

EX. 2076 (Hecht), 75:10-17; *see also* Pet., 13-14, 103, 105

The Use Of Homology Modeling Was Routine

Halozyne Expert | Dr. Simpson

109. I agree. In fact, as I explain below, before the Hyal-1 crystal structure was published, I generated a homology model of Hyal-1 using the Swiss Model program and using the bee venom hyaluronidase structure as a template. We (my team and I) used the homology model to guide our mutagenesis experiments in which we sought to identify and experimentally confirm residues important to the Hyal-1 mechanism of action.

Petitioner's Expert Agrees Active PH20s Share Same Fold

Merck Expert | Dr. Naismith

- Q. Is it the case that active modified PH20 proteins share a common structure in terms of the native fold of PH20?
- A. So they would have the same fold, there could be differences as I described and we know exist between the bee venom and the human hyaluronidase, both are active enzymes.

EX. 2301 (Naismith), 213:10-18 (objections omitted)

Petitioner's Expert Admits Proper Fold Preserves Structure/Function Relationship

Merck Expert | Dr. Naismith

Q. Okay. So is it fair to say that if you have an active PH20 you expect that that active PH20 has adopted the native fold?

A. You would assume that if it is properly folded, but there could be structural differences. But the fold is quite a broad term. It is relatively a distance high level term. But you would assume that it preserves a structure function relationship and we talked about the bee venom and the human HYAL1. So there are structural differences. So those are different structures ----

Q. Mmm-hmm.

A. ---- and that was noted in the publication. So you can envisage proteins having a proper fold which is, and we have used this term where it is active it is natively folded. But structurally there still could be differences and structural diversity when you start to introduce mutations.

EX. 2301 (Naismith), 95:9-96:4

Petitioner's Arguments Invite Legal Error

Paper No. 22
Filed: August 8, 2025

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

Merck Sharp & Dohme LLC,
Petitioner,

v.

Halozyne Inc.,
Patent Owner.

Case No. PGR2025-00033
U.S. Patent No. 12,049,652

PETITIONER'S REPLY

“What is required is the identity of the particular amino acid sequences that will create the three-dimensional structure.”

Reply at 16

“Performing that experimentation for the size of the sequence space is impossible. This evidence is dispositive to written description and enablement.”

Reply at 9-10

Petitioner's Arguments Invite Legal Error

“The doctrine never created a heightened requirement to provide a nucleotide-by-nucleotide recitation of the entire genus of claimed genetic material; it has always expressly permitted the disclosure of structural features common to the members of the genus.”

Ariad Pharms., Inc. v. Eli Lilly & Co., 598 F.3d 1336, 1352 (Fed. Cir. 2010).

“We are mindful of *Ariad*’s caution that written description does not require ‘a nucleotide-by-nucleotide recitation of the entire genus.’ The purpose of that rule is to allow relatively few representative examples or formulas to support a claim on a structurally similar genus.”

Idenix Pharms. LLC v. Gilead Scis. Inc., 941 F.3d 1149, 1165 (Fed. Cir. 2019) (internal citations omitted).

Lack of Inactivating Changes Is Common Feature; Teaches Structure/Function Correlation

Halozyme Expert | Dr. Petsko

293. This does not mean PH20 is unpredictable or that making and using the claimed modified polypeptides is unpredictable. It means PH20 is generally intolerant to mutations unless those mutations are made in certain places, and the '652 patent teaches where to make mutations to likely retain activity. The '652 patent renders modifying PH20 predictable by identifying these areas that are particularly intolerant to mutation, and those that are tolerant.

EX. 2070, Petsko Decl., ¶ 293

Inactives Data Distinguishes These Facts From *Idenix*

Idenix Pharmaceuticals LLC v. Gilead Sciences Inc., 941 F.3d 1149 (2019)

941 F.3d 1149
United States Court of Appeals, Federal Circuit.
[IDENIX PHARMACEUTICALS LLC, Universita Degli Studi Di Cagliari](#), Plaintiffs-Appellants
v.
GILEAD SCIENCES INC., Defendant-Appellee

Affirmed in part and reversed in part.

[Newman](#), Circuit Judge, filed dissenting opinion.

Procedural Posture(s): On Appeal; Motion for Judgment as a Matter of Law (JMOL)/Directed Verdict.

***1152** Appeal from the United States District Court for the

“The specification, however, provides no method of distinguishing effective from ineffective compounds for the compounds reaching beyond the formulas disclosed in the ’597 patent.”

Idenix Pharms. LLC v. Gilead Scis. Inc., 941 F.3d 1149, 1164 (Fed. Cir. 2019).

finding of non-enablement was supported on basis that patent did not provide meaningful guidance as to which 2'-methyl-up nucleosides were effective against HCV and only working examples provided were exceedingly narrow relative to claim scope;

unpredictability of art of using modified nucleosides to treat HCV could weigh only in favor of non-enablement of patent;

immense breadth of claim could support finding only of non-enablement; and

patent providing 18 position-by-position formulas describing “principal embodiments” of compounds that might treat HCV did not satisfy written description requirement.

Dissenting opinion filed by Circuit Judge [Newman](#).

[Prost](#), Chief Judge.

***1153** *Idenix Pharmaceuticals LLC and Universita Degli Studi Di Cagliari* (collectively, “*Idenix*”) appeal from the decision of the U.S. District Court for the District of Delaware granting judgment as a matter of law (“JMOL”) against *Idenix* and finding that [U.S. Patent No. 7,608,597](#) is invalid for lack of enablement. *Idenix Pharm. LLC v. Gilead Scis., Inc.*, 2018 WL 922125, at *25 (D. Del. Feb. 16, 2018) (“*JMOL Opinion*”). *Gilead Sciences Inc.*, (“*Gilead*”) argues that the patent is also invalid for failure to meet the written description requirement, and that the district court erred by failing to grant JMOL on that ground as well. We affirm as to non-enablement

Similarity to Sequence Is A Common Structural Feature; WD Does Not Require Perfect Correspondence To Structure

Ajinomoto Co., Inc. v. International Trade Commission, 932 F.3d 1342 (2019)

“CJ disputes that similarity to the consensus sequence defines a common structural feature, citing several articles as indicating that a promoter closer to the consensus sequence will not always be stronger than one farther from that sequence.”

Ajinomoto Co. v. Int'l Trade Comm'n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

“CJ’s argument both assumes too strict a legal standard and reads too much into its cited references. Adequate written description does not require a perfect correspondence between the members of the genus and the asserted common structural feature; for a functionally defined genus like the one at issue here, we have spoken more modestly of a ‘correlation between structure and function.’”

Ajinomoto Co. v. Int'l Trade Comm'n, 932 F.3d 1342, 1360 (Fed. Cir. 2019).

under function-way-result framework:

increased activity of YddG protein at least partly contributed to enhanced resistance of later strains of accused product;

[Taranto](#), Circuit Judge.

Ajinomoto Co., Inc. and Ajinomoto Heartland Inc. (collectively, Ajinomoto) filed a complaint against CJ

Misfolding/Aggregation From Mutation Is Rare

Halozyme Expert | Dr. Petsko

“That would not be the case for PH20.”

EX. 1131 (Petsko), 42:6-7

“... usually not the case for most mutation.” and “... it is rare.”

EX. 1131 (Petsko), 40:18-24; 197:6-15

“... not a common consequence”; “If I make, typically, 100 mutations in a protein, okay, one or two might do that. None of them might do that.”

EX. 1131 (Petsko), 48:23-49:8

Parties' Experts Agree Distant Effects Are "Not Very Common" And Mutations Can Be Treated Independently

Merck Expert | Dr. Park

"Distant residues are known to be coupled in some cases, but they're not very common.

So if you introduce a mutation that are far apart from each other, then each mutation can be treated independently and evaluated independently, and one may be able to estimate the combined effect of the two or more mutations, if necessary, and include whether the mutant would be better or worse than wild-type."

EX. 2077 (Park I), 201:7-13

Halozyme Expert | Dr. Petsko

Similarly, Dr. Petsko explained that if two mutations "are separated from each other in the structure there is a high degree of likelihood that they will operate independently."

EX. 1131 (Petsko), 195:5-10

Epistasis Relates To Degree Of Activity, Not Existence Of Activity

Merck Expert | Dr. Naismith

Q. Okay. Is it your testimony – is it your testimony that in order for two mutations to be independent their effects have to be additive?

A. So for them not to have epistasis, for there to be no epistasis the definition is the effects are additive. That is the definition of epistasis.

Q. And so am I understanding “additive” correctly in that if you have one mutation that gives you 100% activity and another mutation that gives you 100% activity, when you combine them you would still have 100% activity?

A. If they were independent of one another, yes.

Q. Okay, and ----

A. Because there is no epistatic effect.

Q. I am trying to understand the additive part?

A. Okay. So it is based on the thermodynamic but then it translates to multiplying the activity measurement; so one times one is one.

EX. 2301 (Naismith), 129:17-130:18 (objections omitted)

Number Of Inactivating Changes Does Not Show Epistasis

Inactivating changes reflect defined structural roles, not unpredictability.

EX. 2070, Petsko Decl., ¶ 339

Enablement (Ground 2)

The *Wands* Factors Weigh In Favor Of Enablement

***In re Wands* factors**

(858 F.2d 731, Fed. Cir. 1988)

- Scope and nature of invention
- Breadth of claims
- Level of skill in art
- State of prior art
- Guidance in specification
- Predictability of field
- Working examples
- Quantity of experimentation required

The Claimed Monopoly Is Extremely Narrow

'652 Patent

Only **Four** D320 variants claimed

Subvariants must share $\geq 91\%$ sequence identity

Inventors Did NOT Claim

All hyaluronan-degrading polypeptides

All modified PH20s

PH20s with any substitution at position 320 other than H, K, R, or S

EX. 1001, 200:42-231:17

Demonstrative Exhibit – Not Evidence

POSAs Were Skilled And State Of Art Was Developed

Petitioner: “a skilled artisan was highly skilled... there was significant knowledge in the public art about hyaluronidases...” Pet. at 76-77

A POSA would know:

- 1 Where the catalytic and substrate binding residues of PH20 were
- 2 Where the disulfide bridges and essential glycosylation sites were
- 3 What the structure of active PH20s were and where the amino acids were positioned in that structure

EX. 1001, 70:9-56; EX. 2068, ¶303; EX. 2070, ¶¶148-217, 263-342

EX. 1001, Tables 3, 5, 9, and 10; EX2070, Petsko Decl., ¶¶263-274

The Guidance In The Disclosure Is Unprecedented

Halozyne Expert | Dr. Simpson

163. This level of structure-function detail for an individual protein of this size was virtually unheard of as of 2012. I am not aware of a comparable project.

164. The data are extraordinarily useful to a POSA seeking to make and use modified PH20 polypeptides.

EX. 2068, Simpson Decl., ¶¶ 163-164

Petitioner Errs In Dismissing Guidance As To What Is Operative, Inoperative

Application of Angstadt, 537 F.2d 498 (1976)
190 U.S.P.Q. 214

“The examples, both operative and inoperative, are the best guidance this art permits, as far as we can conclude from the record.”

“Depriving inventors of claims which adequately protect them and limiting them to claims which practically invite appropriation of the invention while avoiding infringement inevitably has the effect of suppressing disclosure. What the dissent seems to be obsessed with is the thought of catalysts which won't work to produce the intended result. Appellants have enabled those in the art to see that this is a real possibility, which is commendable frankness in a disclosure....The dissent wants appellants to make everything predictable in advance, which is impracticable and unreasonable.”

Application of Angstadt, 537 F.2d 498, 504 (C.C.P.A. 1976).

Petitioner's Expert Admits Inactives Guide Practice Of Invention

Merck Expert | Dr. Park

Q. Would you expect that if you tried to introduce a mutation into a position known to be important for folding, that the -- that the protein would not be able to fold correctly?

A. I would expect that; therefore, I would not try that.

EX. 2077 (Park I), 106:12-17

Predictability:

The Certainty The Law Requires Is Not Greater Than Reasonable

Amgen Inc. v. Sanofi, 872 F.3d 1367 (2017)
124 U.S.P.Q.2d 1354

[4] competitors were not entitled to judgment as matter of law

“Similarly, in *Minerals Separation*, the Court dismissed a challenge to a claimed process for separating metal from mineral ores. 242 U.S., at 270, 37 S.Ct. 82. The record showed that ‘preliminary tests’ were required to adapt the process to any particular ore. *Ibid.* Once more, the Court explained that ‘the certainty which the law requires in patents is not greater than is reasonable.’ *Ibid.* And because the ‘composition of ores varies infinitely,’ it was ‘impossible to specify in a patent the precise treatment which would be most successful and economical in each case.’ *Id.*, at 271, 37 S.Ct. 82.”

Amgen Inc. v. Sanofi, 598 U.S. 594, 611–12 (2023)
(citing *Minerals Separation, Ltd. v. Hyde*, 242 U.S. 261 (1916)).

excluded simply because it post-dated the claims' priority date;

[3] finding of adequate written description could not be permitted merely from finding of ability to make and use;

U.S.C.A. § 112.

Patent Disclosure Makes Modifying PH20 Predictable

Halozyme Expert | Dr. Petsko

- Q. So your opinion is that a POSA could use the data from testing single mutants in the patent to select 15 or 20 substitutions in the PH20 sequence, and you would be able to predict whether that mutated 15 or 20 residue-mutated PH20 will exhibit the activity that you are hoping to get?
- A. My opinion is that you could do so. My opinion is also that you would almost never do so. You would probably rarely, if ever, make that many substitutions. You wouldn't need to.

EX. 1131 (Petsko), 111:9-19

Patent Disclosure Makes Modifying PH20 Predictable

Halozyme Expert | Dr. Simpson

“I’m saying that a POSA would have had the information to choose to make a set of PH20 polypeptides that fit the criteria of the claim, and to be able to use them in the manner they intended.

They would be able to visualize the species within the claim.”

“The POSA could then use that information to choose, depending on whether their goal was to have the protein remain active or whether they did not care about having activity retained and had a different experimental goal. They would have information that would allow them to make the 95% identical polypeptide that would meet those criteria for them.”

EX. 1130 (Simpson), 95:5-10, 98:3-10

Petitioner's Enablement Theory Starts Where No POSA Would

Halozyne Expert | Dr. Simpson

“... no POSA would start with the theoretical maximum number of potential sequence variants as a starting point for making a comparative analysis of what amino acids would retain activity in a PH20 polypeptide.”

EX. 1130 (Simpson), 93:20-24

POSAs Would Not Screen Large Combinatorial Libraries

Halozyme Expert | Dr. Petsko

- Q. Are you saying that, after reading the '600 patent, a POSA would not have tried to make PH20 polypeptides by generating combinatorial libraries of mutants having random combinations of substitutions and screening them for activity.
- A. I am saying that under most of the circumstances I can envision, the POSA would not start that way at all. They would start with a much more focused program making use of the data in the patent.
- Q. Did you find anything in the common disclosure suggesting that they should do the path -- should take the path of making combinatorial libraries and screening them to produce PH20 proteins with multiple mutations?
- A. Didn't suggest that to me. Again, I think as long as you are dealing with a -- with a situation like this where you have a wealth of information at every position in the sequence, you would first start to do it by -- if you -- I'm not -- I don't want to use the word "design" in its broadest sense. But if you understand what I mean by that. You would try to -- you would predict -- you would be able to write down sequences where you could predict what you were likely to see and you would test those first.

EX. 1131 (Petsko), 106:16-107:17

Petitioner Misrepresents Patent Disclosure Re: Screening

'652 Patent

In one example, after the method is performed, any modified hyaluronan-degrading enzymes identified as exhibiting stability, such as increased stability, under a denaturation condition can be modified or further modified to increase or optimize the stability. A secondary library can be created by introducing additional modifications in a first identified modified hyaluronan-degrading enzyme.

In one aspect of the method, the modified hyaluronan-degrading enzymes are tested or screened for hyaluronidase activity in the presence and absence of one or more denaturation conditions or denaturing agent.

EX. 1001, 142:14-26; 134:60-135:32; Pet., 50

Petitioner Commits Legal Error By Relying On Cumulative Time/Effort

Amgen Inc. v. Sanofi, 598 U.S. 594 (2023)
143 S.Ct. 1243, 215 L.Ed.2d 537, 23 Cal. Daily Op. Serv. 4369...

143 S.Ct. 1243
Supreme Court of the United States.

specification did not enable portion of asserted claims directed to class of antibodies with unknown amino acid sequences.

“As Amgen sees it, that court conflated the question whether an invention is enabled with the question how long may it take a person skilled in the art to make every embodiment within a broad claim. We do not see it that way. While we agree with Amgen that enablement is not measured against the cumulative time and effort it takes to make every embodiment within a claim, we are not so sure the Federal Circuit thought otherwise. That court went out of its way to say that it ‘do[es] not hold that the effort required to exhaust a genus is dispositive.’”

Amgen Inc. v. Sanofi, 598 U.S. 594, 615 (2023) (internal citations omitted).

Holdings: In a unanimous opinion, the Supreme Court, Justice Gorsuch, held that:

specification enabled portion of asserted claims directed to 26 exemplary antibodies with identified amino acid sequences, but

infringement. Sanofi replied that it was not liable to Amgen for infringement because Amgen’s relevant claims were invalid under the Patent Act’s “enablement” requirement. That provision requires a patent applicant to describe the invention “in such full, clear, concise, and exact terms as to enable any person skilled in the art ... to make and use the [invention].” 35 U.S.C. § 112(a). Sanofi characterized the methods Amgen outlined for generating additional antibodies

U.S. Patent No. 12,049,652

PETITION FOR POST GRANT REVIEW

“[T]he claim language defines enormous genera: between 10^{59} and 10^{112} distinct polypeptides. Their real-world scope is absurd—to practice the claims’ full scope requires a skilled artisan to make-and-test at least $\sim 10^{59}$ mutants. Simply producing one molecule of each mutant—required to know if each is active or inactive or exhibits increased stability—which for each genera’s many multisubstituted mutants would consume an aggregate mass ($\sim 3.93 \times 10^{37}$ kg) that exceeds the mass of the Earth ($\sim 6 \times 10^{24}$ kg).⁶⁴ Testing every polypeptide within the claims’ scope in search of “active mutants” is impossible—literally. Pet., 25

Petitioner's Deviation From Patent Teaching Is Insufficient To Disprove Enablement As A Matter Of Law

Johns Hopkins University v. CellPro, Inc., 152 F.3d 1342 (1998)
47 U.S.P.Q.2d 1705

152 F.3d 1342

Attorneys and Law Firms

“A party who wishes to prove that the claims of a patent are not enabled by means of a failed attempt to make the disclosed invention **must show that the patent's disclosure was followed.** Because Sutherland deviated from the teachings of the patent in his failed attempts to make the claimed antibodies, his testimony is **insufficient to disprove enablement as a matter of law.**”

“[I]t is imperative when attempting to prove lack of enablement to show that *one of ordinary skill in the art* would be unable to make the claimed invention without undue experimentation... CellPro's evidence concerning Civin's subsequent work is **insufficient as a matter of law.**”

Johns Hopkins Univ. v. CellPro, Inc., 152 F.3d 1342, 1360 (Fed. Cir. 1998).

Judgment; Motion for Judgment as a Matter of Law (JMOL) 24, 1997). We affirm-in-part, vacate-in-part, and remand. Directed Verdict.

WESTLAW © 2026 Thomson Reuters. No claim to original U.S. Government Works.

Contraceptive Utility Is Scientifically Credible

- Patent enables use of claimed PH20 variants as contraceptives **in females**
- Sufficient guidance for credible utility
- Prior art established PH20 as contraceptive target and taught known ways to enhance contraceptive effect
 - PH20 was known to play a key role in fertilization
 - Prior studies showed PH20 could induce infertility / contraceptive effects
 - PH20 vaccines were known to generate anti-PH20 antibodies that bind sperm PH20
 - Mucosal delivery could increase antibodies in the female reproductive tract
 - Adjuvants and booster doses could strengthen the antibody response
 - Sialidase could expose sperm-surface PH20 to anti-PH20 antibodies
- Anti-PH20 antibodies could be delivered locally by gels, films, or intravaginal rings

Contraceptive Utility Is Scientifically Credible

- An invention that is at least partially successful in achieving a useful result has credible utility.

In re Brana, 51 F.3d 1560 (Fed. Cir. 1995).

- Petitioner applied a 100% effectiveness standard.

Reply, 39-40

- Petitioner's expert agrees that common contraceptives achieve less than 100% effectiveness.

EX. 2302 (Kelsoe), 131:10-132:19

Contraceptive Utility Is Scientifically Credible

Merck Expert | Dr. Kelsoe

Q. And you would agree that contraceptives have been and are still used today as tools for population control in animals, correct?

A. Contraceptives?

Q. Yes.

A. Yes.

Q. And you would agree that a method for population control in animals would not need to cause complete infertility to be useful –

A. That's my --

Q. You would agree that, as a method for population control, a contraceptive would not need to cause incomplete fertility to be useful, correct?

A. I think that -- and, again, as I described in the sense of ecological control for a species, a 50 percent reduction of the fecundity would have an important and valuable role.

EX. 2302 (Kelsoe), 134:5-135:3 (objections omitted)

Inactive Mutants Are Inoperative Embodiments

- Even if some variants are inactive, they are merely inoperative
- POSAs can readily identify inactive variants using patent guidance
- Inoperative embodiments do not defeat enablement
- Patent teaches how to distinguish active from inactive

Petitioner's Obviousness Analysis Is Premised On Hindsight

Merck Expert | Dr. Park

- “[A]sked by counsel to report conclusions with respect to position 320” out of 700+ candidate positions he identified through his analysis.

EX. 1004, ¶103

- Declaration discusses position 320 because “counsel ... asked [him] to.”

EX. 2078, 320:10-20; EX. 2076, 87:1-11

Conclusion
